

NEW AMERICAN SUPPLEMENT

TO THE LATEST EDITION OF THE

ENCYCLOPÆDIA BRITANNICA

A STANDARD WORK OF REFERENCE IN

ART, LITERATURE, SCIENCE, HISTORY, GEOGRAPHY,
COMMERCE, BIOGRAPHY, DISCOVERY
AND INVENTION

EDITED UNDER THE PERSONAL SUPERVISION OF

DAY OTIS KELLOGG, D.D.

Formerly Professor of English Literature and History, Kansas State University, etc., etc.

ASSISTED BY A CORPS OF EXPERIENCED WRITERS

ENRICHED BY MANY HUNDRED SPECIAL ARTICLES CONTRIBUTED BY MEN AND
WOMEN OF INTERNATIONAL REPUTATION

Illustrated with over Fifteen Hundred Portraits and Other Engravings

TWENTIETH CENTURY EDITION

REVISED, WITH LARGE ADDITIONS, TO JANUARY 1, 1901

IN FIVE VOLUMES

VOLUME XXVII

F

FOREIGN JUDGMENT—FORESTRY

FOREIGN JUDGMENT, in the United States, a judgment rendered by a tribunal of another nation, or another state of the United States. Such judgments may be proved by producing an exemplified copy of the record of the court, showing the proceedings in the suit in which the judgment was rendered. Judgment in one state may be evidenced in the courts of another state by producing a copy of the proceedings, attested by the clerk and seal of the court wherein the judgment was rendered, together with the certificate of the judge or chief justice of said court that the certificate of the clerk is authentic. The certificate of the judge must be further authenticated by the clerk, who shall certify that such judgment was, at the time of making the certificate, duly commissioned and qualified. Transcripts of records thus exemplified must, under the laws of the United States, have such faith and credit given to them in every court and office within the United States as they would have by law in the courts of the state wherein the judgment was rendered. By the constitution of the United States it is provided that full faith and credit shall be given in every state to the judicial proceedings of the courts of another state. Congress may fix the method of proving such proceedings.

FOREIGN LAWS include the laws of foreign nations, and in the United States, to a limited extent, the laws of another state. Courts will not take judicial notice of foreign laws, and such laws must be proven in some proper manner, in order to give them effect outside of the jurisdiction in which they are in force. The decisions of the courts of the various states are somewhat in conflict as to how far the courts will take judicial notice of the laws of another state. The general rule would seem to be, that the statutes of another state must be proven, and, in the absence of any evidence as to the laws of that state, the common law will be presumed to prevail.

FOREKNOWLEDGE AND FOREORDINATION. See **PREDESTINATION**, Vol. XIX, pp. 668-671.

FORESTALLING. See **AGRICULTURE**, Vol. I, p. 298, and **CORN LAWS**, Vol. VI, p. 412.

FOREST CITY, a town and the capital of Winnebago County, central northern Iowa, on the Burlington, Cedar Rapids and Northern and the Minneapolis and St. Louis railroads, and on Lime Creek. It is the trade center of a farming district, and it has banks, churches and newspapers. Population 1900, 1,758.

FORESTERS, ANCIENT ORDER OF. See **BENEFIT SOCIETIES**, in these Supplements.

FOREST-FLY OR HORSE-TICK, a name given to dipterous insects of the genus *Hippobosca*. These insects are parasitic on horses and cattle.

The insects of the family to which the forest-flies belong are remarkable for their peculiar mode of development. Unlike all other insects, the embryonic and larval stages are passed within the oviducts of the mother. Each female produces but one or two larvæ, which transform to pupæ immediately after birth.

FOREST GROVE, a town of Washington County, northwestern Oregon, on Gale's Creek, and on the Southern Pacific railroad, 21 miles W. of Portland. The Pacific University is situated here, and Tualatin (Congregational) Academy. The country has fertile farms, the produce of which go to a canning factory and the grain-elevators of the town. Population 1900, 1,096.

FOREST OAK, a name sometimes given in commerce to the timber of *Casuarina torulosa* and other species of *Casuarina*, Australian trees. This timber, which is a light yellowish brown, and prettily marked with short red veins, is used for ornamental work.

FORESTRY. The forest area in the United States is, according to a careful estimate made by the chief of the forestry division, United States Department of Agriculture, but little less than 500,000,000 acres. The present annual requirements of forest products in the United States are, approximately, over 24,000,000,000 cubic feet, made up of the following items: Lumber market and manufactures, 5,000,000,000 cubic feet; railroad construction, 100,000,000 cubic feet; wood pulp, 150,000,000 cubic feet; fences, 500,000,000 cubic feet; fuel, 136,718,750 cords; mining timber, 155,000,000 cubic feet. In addition to these items of consumption, forest fires annually destroy the products of hundreds of thousands of acres of forest. At the present rate of destruction, therefore, the remainder of forest lands in the United States cannot long meet the enormous demands on its resources. Some of the most important timbers are already practically extinct; the merchantable white pine of the Northwest and of New England will soon all be cut, while of the long-leaf pine of the South only about 1,500,000,000 cubic feet remain. Various measures for the preservation of the forests have been adopted. In 1885 the state of New York instituted a forest commission, with extensive powers, now, however, much curtailed in its functions. Colorado and New Hampshire have also created forest commissions, while Ohio, Kansas and Pennsylvania have forestry bureaus. For several years a national organization, known as the American Forestry Association, composed of delegates from each of the states, has met annually, the fifteenth annual meeting having been held at Washington, District of Columbia, in December, 1896. In 1872 Congress passed a law, known as

the Timber Culture Act, by the terms of which 160 acres of the public domain could be acquired on the cultivation of ten acres of trees thereon for eight years. After remaining in force for 21 years, and resulting in the entry of almost 50,000,000 acres, this law was repealed.

In 1874 the Nebraska State Board of Agriculture recommended that the second Wednesday of April in each year be designated as a day to be dedicated to the planting of trees. The suggestion was adopted, and now no less than 44 states and territories have made similar provision,—21 by act of legislature, 6 as legal holidays, 5 as holidays for schools. They are as follows: Alabama, Arizona, California, Colorado, Connecticut, Florida, Georgia, Idaho, Illinois, Indiana, Iowa, Kansas, Kentucky, Louisiana, Maine, Maryland, Massachusetts, Michigan, Minnesota, Mississippi, Montana, Missouri, Nebraska, Nevada, New Hampshire, New Jersey, New Mexico, New York, North Carolina, North Dakota, Ohio, Oklahoma, Oregon, Pennsylvania, Rhode Island, South Dakota, Tennessee, Texas, Utah, Vermont, Virginia, West Virginia, Wisconsin, Wyoming. Arbor day is a legal holiday in Kansas, North Dakota, Rhode Island and Wyoming, the day being set by the governor; in Nebraska, April 22d; California, September 9th; Colorado, on the third Friday in April; Montana, third Tuesday in April; Utah, first Saturday in April; and Idaho, on Friday after May 1st.

The interest in this annual observance has been intensified by inviting pupils of public schools to take part in its celebration.

That forests have no influence on the rainfall seems to be well settled. A series of experiments conducted in France under the most favorable conditions for arriving at the truth of the matter decided a question that has been debated by scientists for many years. But while forests may not increase the rainfall of a region, it is a fact that they exert a great influence on the distribution, or "run-off," of the available water-supply. There are two methods of distribution, or run-off; namely, the superficial or surface run-off, and the underground run-off, resulting in springs, which eventually change into open runs, brooks and rivers.

As soon as the soil-cover and upper soil strata are saturated, or especially when the latter are impermeable and the rain continues, either no water, or only a small part, gradually can find entrance into the soil, and the run-off becomes superficial, or if the ground be not sloping, stagnant water results. For every forest there is, therefore, a time when the superficial run-off would be no more impeded than from an open field of similar conditions but for the retardation by the trunks, underbrush and roots. This time, however, occurs later in the forest than on the unforested and especially naked soil, because the water-capacity of the soil-cover, as well as of the protected soil, is greater than that of the naked soil, or that covered with field crops.

Since the forest-cover has a tendency to pre-

serve the granular porous structure of the soil, which is favorable to filtration, and as, moreover, the roots furnish channels for unimpeded drainage, it must have the tendency, other things being equal, to allow a more rapid filtration than the naked, mostly compacted soil.

With regard to the superficial run-off, without any evidence furnished by experiments, we can at once understand that it is impeded by any kind of mechanical obstruction, such as is offered by the vegetation of a meadow or forest. The great number of inequalities which the forest floor offers, in addition to the trunks and stumps and fallen trees, subjects the run-off to many detours, thus retarding its flow and its collection in the open runs and brooks. This retardation is increased by the mechanical obstruction which the crowns of the trees exert upon the rainfall. Every leaf, every twig, breaks the force and retards the fall of the raindrops, allowing those fallen before to penetrate the soil. The devious ways in which it reaches the soil make the flow of water from a forest-covered hill longer in time than if the rain had fallen on a bare slope. This mechanical effect is further favorable to the penetration of water into the soil, as it prevents the rain from compacting the soil, preserving thereby its mellow condition, which is destroyed on the open field by the force of the raindrops. It also allows more time for the absorption of water by the soil. There is, in fact, no influence of the forest of more moment in the distribution of the available water supplies than the mechanical retardation of the "run-off," while in the conservation of supplies the retarding influence upon evaporation is the potent one.

The umbrageous character of forest areas prevents the rapid evaporation that takes place in the open, and the restraint of the otherwise rapid run-off of rainfall prevents freshets, and preserves the equable gauge of adjacent streams. The removal of large areas of forests has resulted in the rainfall rapidly reaching the natural drainage channels, causing floods in streams that reach the other extreme in periods of dry weather for lack of the steady supply before afforded.

FOREY, ELIE FRÉDÉRIC, a French marshal; born at Paris, Jan. 10, 1804; died at Besançon, June 20, 1872. He was educated at Dijon; graduated from the military school at St.-Cyr in 1822; and was engaged in the Algerine campaigns of 1830, 1835 and 1840, returning to France a colonel. He took an active part in the *coup d'état* of December, 1851, and was made general of division and commander of the Legion of Honor in 1852. In the war with Russia he was for a short time in command of the French forces before Sebastopol, and during the Italian war in 1859 defeated the Austrians at the battle of Monte ello. General Forey commanded the French expedition against Mexico, captured the city of Puebla, May 17, 1863, and entered the capital June 10th. For these successes he was made a marshal. On his return to France he had command of an army corps and of the camp of

Chalons. He was a Senator, and was decorated with the grand cross of the Legion of Honor in 1867.

FORFEITURE, the act of depriving a person of property by reason of some illegal act or negligence. Forfeiture for crime is almost entirely abolished in the United States by the constitution and acts of Congress, and when it is permitted, as in the case of treason, only the owner's life estate in the property will be forfeited. The most frequent occurrence of forfeiture is for failure to perform some condition contained in a deed of conveyance or implied by the law. Forfeitures, as a rule, are not favored by the law, and strict proof is necessary.

FORFICULIDÆ. See **EARWIGS**, Vol. VII, p. 613; and **INSECTS**, Vol. XIII, p. 152.

FORKED-BEARD, a popular name applied to European fishes of the cod family, belonging to the genus *Phycis*. The name refers to the forked ventral fins. In United States waters they are known as "hake," but as food-fish they are superior to the true hake.

FORMAL CATEGORIES. See **PSYCHOLOGY**, Vol. XX, p. 80.

FORMALIN OR FORMOL. Under this name a forty-per-cent solution of formaldehyde (CH_2O) has recently been put on the market for use in preserving specimens, such as parts of animals and whole animals, in biological work. It is diluted to one fourth per cent, according to the use to which it is to be put. It is equal to alcohol as a preservative, and very much superior to it in its power of retaining the color and form of specimens.

FORMAN, HARRY BUXTON, a British writer; born in London, July 11, 1842. He entered the service of the postal department, and became the assistant secretary and controller of packet services. It is on account of his literary productions that he is known to English-speaking people. His writings and editions of Shelley and Keats are of the highest order. He published, in addition to *Essays on Shelley*, the Library edition of *The Poetical Works of Percy Bysshe Shelley* (1882), the *Prose Works of Shelley* (1880), and editions of several single works of Shelley. Of Keats, he has published *Works of John Keats in Verse and Prose* (1882); *Letters of John Keats to Fanny Brawne* (1878); and *Poetry and Prose by John Keats* (1890). He was a constant contributor to the best periodicals of the day. Among his miscellaneous editions are *Golp: A Dialogue*, by John Ruskin (1891), and *Joseph and His Brethren*, by Charles Wells (1876).

FORMES, KARL JOHANN, a German singer; born in Mülheim-am-Rhein, Aug. 7, 1810. He appeared in various operas in Vienna, Hamburg, and London, and gained a reputation as a bass singer of unequalled talent. In 1857 he came to the United States, and appeared with much success in the principal cities of the Union. He visited England again in 1888, and sang at Mr. Mann's benefit concert, April 21, and elsewhere. Died in San Francisco, Cal., Dec. 15, 1889.

FORMIC ACID (CH_2O_2), derives its name from the circumstance of its having been first obtained from the *formica rufa*, or red ant. In a concentrated state, it is a fuming liquor with an irritating odor, and occasions vesication if dropped upon the skin. It crystallizes at 47° and boils at about 213° , yielding a vapor which burns with a blue flame. It is a strong reducing agent, at a boiling temperature reducing the salts of silver, mercury, platinum and gold.

FORMOSA, an island off the southeast coast of China; area, 13,541 sq. miles; pop. 1897, 2,728,817. See **FORMOSA**, Vol. IX, p. 415. During the Franco-Chinese war of 1885, when the French, after capturing Kelung, endeavored to conquer the island, the capital was removed to Tai-pak-fu, part of the city of Twatutia, connected with Kelung by rail. In the treaty of May 4, 1895, Formosa was ceded to Japan, together with the Pescadores Islands. Since then the "Black Flags" have risen repeatedly in revolt against those whom they naturally regard as foreign usurpers. On Feb. 1, 1896, Japan formally opened the island to foreign commerce with all powers having commercial treaties with Japan.

FORMS OF ADDRESS. See **ADDRESS, FORMS OF**, in these Supplements.

FORNEY, JOHN WEISS, an American journalist and politician; born at Lancaster, Pennsylvania, Sept. 30, 1817; was apprenticed to a printer in Lancaster, Pennsylvania, 1833. In 1840 he published *The Intelligencer and Journal* of that city, a Democratic paper; in 1845 became surveyor of the port of Philadelphia, and was editor of *The Pennsylvanian*, published in Philadelphia. From 1851 to 1855 he was clerk of the House of Representatives, and in 1856 was elected chairman of the Pennsylvania Democratic State Committee. In 1859 he was again chosen clerk of the House of Representatives, and in 1861 became secretary of the United States Senate. In 1871-72 he became collector of the port of Philadelphia. He was editor of the *Washington Union* in 1851; of the *Philadelphia Press* in 1857; of the *Washington Chronicle* in 1859; and in 1879 of *Progress*, a weekly journal published in Philadelphia, where he died, Dec. 9, 1881.

FORRES, a royal burgh of Elginshire, on the river Findhorn, northeastern Scotland, 5 miles S. of Moray Firth, and 25 E.N.E. of Inverness, with which and Nairn and Fortrose it returns a member to Parliament. On its Castle Hill, a royal residence from 1189 to 1371, stands an obelisk (1857) 65 feet high, to the Crimean hero, Dr. Thomson of Cromarty, while on the wooded Cleeny Hill are a hydropathic establishment, and the Nelson Tower (1806), 70 feet high. Sueno's Stone is a remarkable sculptured monolith, ascribed by Skene to the year 900; the Witch's Stone recalls Macbeth's meeting with the weird sisters near Forres. Public buildings are the Town House, Falconer Museum, Mechanics' Institute and Anderson's Institution. Population, 1891, 3,975.

FORREST, ALEXANDER, an Australian explorer; born at Bunbury, Australia, Sept. 22,

1849. After taking part with his brother John in his journeys, in 1879, he started with Hill to explore the northwestern parts of the Australian continent, an expedition which resulted in the discovery of the fertile pastoral region now called Kimberley District. At the same time the river Fitzroy was ascended for a distance of about 250 miles. This journey was described in *Journal of an Expedition from the De Grey to Port Darwin* (1880).

FORREST, EDWIN, an American tragedian; born in Philadelphia, March 9, 1806; died there

EDWIN FORREST.

Dec. 12, 1872. He made his theatrical *début* as Douglas in Home's tragedy of that name, and then made a professional tour through the Western and Southwestern states. In November, 1826, he played a star engagement at the New York Bowery Theater, commencing in the character of Othello, which was pronounced a signal success. This was followed by other parts acted with no less ability. He left New York a prominent tragedian and a great favorite, to repeat his dramatic triumph in other cities of the Union. After playing for several years, he visited Europe for recreation and study. He returned to the United States in 1831, and continued playing with unabated attraction until the autumn of 1836, when he again sailed for Europe. His first appearance in England was as Spartacus in the *Gladiator*, which was followed by *Macbeth*, *Lear* and *Othello*. In London he married a daughter of John Sinclair, the popular Scottish ballad-singer, and in November of the same year began an engagement in Philadelphia. In 1845, in company with his wife, he again visited London and performed at the Princess's Theatre. Much professional jealousy arose between Forrest and Macready, the favorite tragedian of the British stage, which led to open outbreaks of temper, in consequence of which the American actor lost favor with the British public. In May, 1849, when Macready was playing *Macbeth* at the Astor Place Opera House, New York City, a riot ensued. On this occasion twenty rioters were killed and thirty-six wounded. The actor's marriage with his English wife proved an unhappy one; divorce suits were brought on both sides, that occupied the courts for several years, and were finally decided in the wife's favor. In 1853 Forrest performed at the Broadway Theater for several weeks. In 1865 he became gouty, and one of his arms was slightly paralyzed. Forrest's trip to California in 1866 was unsuccessful. His last theatrical appearance was made at Boston in March, 1871, when he broke down during the engagement. Later, he endeavored to give readings from Shakespeare's plays, but they failed to attract. He had acquired a large fortune, which was estimated, at his death, as amounting to \$1,000,000. He built

a mansion in castellated style on the banks of the Hudson, which was a conspicuous object from the river. He also erected an imposing house in Philadelphia. The Hudson mansion became afterward a convent, and the Philadelphia house a school of design. He had collected a library rich in Shakespeariana, which was destroyed by fire soon after his death. His fortune he left chiefly for the purpose of founding a home for poor and indigent members of his own profession.

FORREST, JOHN, an Australian explorer; born in Western Australia in 1847; entered the Survey Department of Western Australia in 1865, and in 1869 commanded an exploring expedition into the interior in search of Dr. Leichhart and party. In 1870 he commanded an exploring expedition from Perth to Adelaide along the south coast, and proved the practicability of the country for a telegraph line, which was constructed in 1876. In 1874 he commanded an exploring expedition from Champion Bay, on the west coast of Australia, to the overland telegraph line between Adelaide and Port Darwin, without the aid of camels, with horses only, a journey of nearly 2,000 miles. For these services he received the thanks of the governor and the legislative council, and was awarded the gold medal of the Royal Geographical Society of London, May 22, 1876, and was also presented by the imperial government with a grant, in fee, of 5,000 acres of land. He was a member of the executive and legislative councils of the colony; and represented Western Australia at the colonial conference in London, 1887. He published *Explorations in Australia* (1876) and *Notes on Western Australia* (1883, 1884 and 1885).

FORREST, NATHAN BEDFORD, an American soldier; born in Bedford County, Tennessee, July 13, 1821; died at Memphis, Oct. 29, 1877. He became a planter and afterward a slave-dealer; in June, 1861, he raised a cavalry regiment for the Confederacy, and was engaged at Fort Donelson, Shiloh, Murfreesboro and Chickamauga. Becoming a major-general, he commanded at the attack on Fort Pillow, in April, 1864; the works were taken by assault, and the colored troops of the garrison mercilessly slaughtered, no quarter being given. He was promoted lieutenant-general. Gen. J. H. Wilson defeated him in April, 1865, and he surrendered at Gainesville a month later. After the war he engaged in the railroad business.

FORREST CITY, a town and the capital of St. Francis County, eastern Arkansas, 45 miles W. of Memphis, Tennessee, on the Little Rock and Memphis and St. Louis, Iron Mountain and Southern railroads. It has a large canning factory, and ships farm produce and stock. Population 1890, 1,021; 1900, 1,301.

FORRESTER, ALFRED HENRY, better known as "Alfred Crowquill," an English humorist and artist; born in London in 1806; notary public in the Royal Exchange, where the family had been engaged in the same profession for over a century. He began to publish in the magazines when he was only fifteen years of age, and before he had completed his twentieth year had made considerable

progress in drawing, pursuing his artistic studies with the object of illustrating his own works. He published *Leaves from My Memorandum Book*, consisting of selections of his own comic prose and verse, illustrated by himself; and *Eccentric Tales*. He joined the staff of *Colburn's Magazine* in 1828, in which he was associated with the most brilliant wits of the time. He next became connected with *Bentley's Miscellany*, and was the first illustrator of *Punch* and *The Illustrated London News*. He exhibited large pen-and-ink drawings at the Royal Academy; painted in oil; was also a designer and modeler, a specimen of his ability in the latter art being his statuette of the Duke of Wellington, produced a week before the Iron Duke's death. His works include *The Wanderings of a Pen and Pencil*; *Comic English Grammar*; *Comic Arithmetic*; *Phantasmagoria of Fun*; *Bentley Fun*; *A Bundle of Crowquills*; *Magic and Meaning It*; *Railway Raillery*; *St. George and the Dragon*; *Gold: A Poem*; *Absurdities*; *Reproof of the Brutes*. He died in London, May 26, 1872.

FORRESTON, a village of Ogle County, northern Illinois, 95 miles W. of Chicago, on the Chicago, Burlington and Quincy and Illinois Central railroads. Butter and cheese making, farming and shipping are the industries of the neighborhood. Population 1890, 1,118; 1900, 1,407.

FORSHEY, CALEB GOLDSMITH, an American engineer; born in Somerset County, Pennsylvania, July 18, 1812; studied at West Point; became an engineer, and was appointed professor of mathematics and civil-engineering at Jefferson College, Mississippi. He had charge of government surveys in Mississippi and Texas, and was actively engaged in railroad construction for many years. During the Civil War he served on the staff of General Magruder as chief engineer. After the close of hostilities, he re-engaged in railway work, and contributed extensively to technical journals. He died at Carrollton, Louisiana, July 25, 1881.

FÖRSTER, ERNST JOACHIM, a German painter and art-writer; born in Münchengossenstadt, Bavaria, April 8, 1800. He studied theology and philosophy in the universities of Berlin and Jena, but in 1822 abandoned these to devote himself to painting under the instruction of Cornelius. He executed various fresco-pieces in Bonn and Munich. In 1826 he visited Italy and commenced researches in art history, which he subsequently pursued in Germany, France, Belgium and England. The results of his studies are embodied in the publications, *Letters on Painting* (1838); *History of German Art* (5 vols., 1851-60); *Monuments of German Architecture, Sculpture and Painting* (12 vols., 1853-69); biographies of Fra Angelico, J. G. Müller, Raphael and Cornelius. At the time of his death he left two large works unfinished, *A History of Italian Art and Monuments of Italian Painting*. In his researches in Italy he discovered several ancient pictures, notably frescoes of Avanzo in Padua, which he restored. He died at Munich, April 29, 1885.

FÖRSTER, HEINRICH, a German prelate; born

at Grossglogau, Silesia, Nov. 24, 1800. He was educated at the University of Breslau, was ordained priest in 1825, and was, for a time, chaplain at Liegnitz and afterward pastor at Landshut. In 1837 he was attached to the cathedral at Breslau, and in 1853 was chosen to succeed Diepenbrock, prince-bishop of Breslau. He was strongly opposed to the doctrine of papal infallibility, but submitted when it was declared. It was largely due to Förster's efforts that the Prussian government was unsuccessful in its attempt to control ecclesiastical affairs, and for this reason he was suspended from his office in 1875. Among his published works are *Homilien auf die Sonntage des Katholischen Kirchenjahres* (1851); *Der Ruf der Kirche in die Gegenwart* (1852); *Die Christliche Familie* (1854); and *Kanzelvorträge*. He died Oct. 20, 1881.

FORSTER, JOHANN REINHOLD, a German traveler and naturalist; born at Dirschau, Prussia, Oct. 22, 1729. In 1753, having studied for the clerical profession, he became pastor at Nassenhuben, near Dantzie. His works include *Observations Made During a Voyage Round the World* (1778); *Flora America Septentrionalis* (1771); *Zoölogie Rarioris Specilegium* (1781). He died at Halle, Dec. 9, 1798. See FORSTER, JOHANN GEORG ADAM, Vol. IX, p. 418.

FORSTER, WILLIAM, an English philanthropist; born at Tottenham, near London, March 23, 1784. He was of Quaker descent, became a minister of the Society of Friends in 1803, and married Anna, sister of Thomas Fowell Buxton, in 1816. In 1820 he visited the United States; in 1838 settled as a preacher near Norwich, England; in 1843-44 engaged in missionary work in France; and in 1846 visited Ireland, endeavoring to relieve the suffering there caused by famine. In 1849 he was commissioned by the Yearly Meeting of London to present an address on slavery and the slave trade to the rulers of Christian countries. In pursuit of this mission he visited most of the countries on the continent of Europe, and in 1853 went again to the United States, and had interviews with the President and with the governors of several Southern states. Before the completion of his work he died at Holston, Tennessee, Jan. 27, 1854.

FORSTER, WILLIAM EDWARD, a British statesman; born in Dorsetshire, England, July 11, 1819. He was educated at the Friends' school in Tottenham. Engaging in the manufacture of woollens, he made a fortune; and in 1861 entered Parliament for Bradford as an advanced Liberal. After holding several minor offices under Mr. Gladstone, he entered the Cabinet in 1870, and was instrumental in passing the Elementary Education Bill and the Ballot Law. In 1874 he visited the United States, and in 1875 was elected lord rector of Aberdeen University. Mr. Forster accepted, in 1880, the office of Chief Secretary for Ireland in Gladstone's Cabinet. In this capacity he introduced the Compensation for Disturbance Bill, a measure designed to relieve the tenant class. This passed the House of Commons, but was rejected

by the Lords. The land act of 1881 was accompanied by a coercion act, and when the Land League issued its "No Rent" manifesto, Forster retaliated by proclaiming the League as illegal. Under the coercion act he imprisoned Mr. Parnell and a great many members of the Irish Parliamentary party, as well as several priests and private citizens. He became known as "Buckshot" Forster, from an order which he gave to the Royal Irish Constabulary to load their guns with buckshot instead of ball. When the Gladstone Cabinet released the "suspects," Forster resigned, and thereafter opposed all of Mr. Gladstone's remedial measures as being merely concessions to treason. He died in London, April 5, 1886. See also HOME RULE, in these Supplements.

FORSYTH, a city and the capital of Monroe County, central Georgia, on the Central Railroad of Georgia, 60 miles S.E. of Atlanta. It has a large cotton trade and contains Monroe Female College. Population, 1900, 1,172.

FORSYTH, JAMES W., an American soldier; born in Ohio, Aug. 26, 1834; graduated at West Point in 1856, and served on the staffs of McClellan and Sheridan. He was brevetted colonel and brigadier-general in the regular army, became brigadier-general of volunteers, and in 1886 colonel of the 7th U. S. Cavalry, stationed on the frontier. He wrote a *Report of an Expedition up the Yellowstone River* (1875). He was in command at the battle of Wounded Knee, S. Dakota, Dec. 28, 1890; was made brigadier-general in 1894, and major-general in 1897.

FORSYTH, JOHN, an American statesman; born in Virginia, Oct. 22, 1780; died in Washington, District of Columbia, Oct. 21, 1841. He practiced law in Georgia; was elected attorney-general of that state in 1808, and sat in Congress from 1813 to 1818, when he became United States Senator. In 1819 he resigned to become minister to Spain, and negotiated the Florida cession with that country. From 1823 to 1827 he was again in Congress; from 1827 to 1829 was governor of Georgia; and in 1829 was again elected Senator. In 1834 he resigned and served as Secretary of State under Jackson and his successor, Van Buren, until March 3, 1841.—His son, JOHN FORSYTH, was born in Georgia about 1813. He became one of the foremost Democratic editors of the South. From 1856 to 1858 he was minister to Mexico, and in 1861, with Marshall J. Crawford, represented the Confederate States as commissioner to the national government. After the Civil War he was engaged in journalistic work in Mobile, Alabama, until, on account of ill health, he retired. He died at Mobile, Alabama, May 2, 1879.

FORSYTH, WILLIAM, an English barrister; born at Greenock, near Glasgow, in 1812; graduated from and elected a fellow of Trinity College, Cambridge, in 1834; called to the bar at the Inner Temple in 1839; became a queen's counsel in 1857, and was elected to Parliament for Marylebone in 1874, which he represented until 1880. He began publishing works on law in 1827, his first three referring to law in Scotland. His other works

include *Composition with Creditors* (1841); *Law Relating to Simony* (1844); *Hortensius*, a historical essay on the duties of an advocate (1849); *Custody of Infants* (1850); *History of Trial by Jury* (1852); *The Captivity of Napoleon at St. Helena*, from the letters, etc., of Lieutenant-General Sir Hudson Lowe (1853); *Life of Marcus Tullius Cicero* (1864); *Rome and Its Ruins* (1865); *Cases and Opinions on Constitutional Law and Various Points of English Jurisprudence* (1869); *The Novels and Novelists of the Eighteenth Century* (1871); *Letters from Lord Brougham to William Forsyth* (1872); *Hannibal in Italy*, a historical drama (1872); *Essays, Critical and Narrative* (1874); *The Slavonic Provinces South of the Danube* (1876).

FORSYTHIA, a genus of plants of the family *Oleaceæ*, consisting of two species (*F. viridissima* and *F. suspensa*) from eastern Asia, and common in cultivation. They are branching shrubs, with lanceolate or ovate leaves, and covered in early spring (before the appearance of the leaves) with abundant showy yellow flowers.

FORT. See FORTIFICATION, Vol. IX, pp. 421, 433, 434.

FORTALEZA. See CEARÁ, Vol. V, p. 282.

FORT ATKINSON, a city of Jefferson County, southeastern Wisconsin, 30 miles E. of Madison, on Rock River, near Lake Koshkonong, and on the Chicago and Northwestern railroad. It has manufactories of wagons, harrows, brooms, steam wheel-barrows, and of dairy and creamery apparatus, and contains foundries and flouring-mills. Population 1895, 2,815.

FORT BENTON, a city and the capital of Choteau County, central northern Montana, on the Great Northern railroad, 115 miles N.E. of Helena. It is at the head of navigation on the Missouri River. It has an important fur trade, and grazing, mining and agricultural interests. Population 1890, 624; 1900, 1,024.

FORT COLLINS, a town and the capital of Larimer County, central northern Colorado, on the Cache la Poudre River, and on the Union Pacific railroad, 60 miles N.W. of Denver. The region is thoroughly irrigated and is an exceedingly flourishing agricultural district. Flagstone is quarried in the vicinity. The town has good water-power, some manufactories and contains Colorado Agricultural College. Population 1890, 2,011; 1900, 3,054.

FORT COVINGTON, a village of Franklin County, northeastern New York, 15 miles N.W. of Malone, on the Salmon River (navigable), and on the Grand Trunk railroad. It has an academy. Dairying and farming are the principal industries. Population 1900, 822.

FORT DAVIS, a village and the capital of Jeff Davis County, western Texas, on Limbia Creek and 20 miles N.W. of Alpine, the nearest railroad station, on the Southern Pacific. It has two academies and is a stock-raising center. Population 1890, 1,563.

FORT DODGE, a city and the capital of Webster County, Iowa, 90 miles N.N.W. of Des Moines, on the Des Moines River, and on the Mason City

and Fort Dodge, the Illinois Central and the Minneapolis and St. Louis railroads. It has quarries where gypsum, fire-clay and water-lime are obtained, and coal is mined in the vicinity. It contains one of the largest oatmeal-mills in the state, a very good school system, a college and a Roman Catholic seminary. Population 1900, 12,162.

FORT EDWARD, a town of Washington County, central eastern New York, on the Delaware and Hudson River railroad, on the Hudson River and Champlain canal, and on the Hudson River, 28 miles N. of Troy. The river, which is here 900 feet wide, is dammed and affords abundant water-power. Lumber, castings, stoneware and machinery are manufactured. A collegiate institution is situated here. Fort Edward was a point of importance during the French and Indian wars, being at one end of the portage from Crown Point to the Hudson. During the Revolution it was held by the British and Americans in turn. Population 1900, 3,521.

FORTESCUE, HUGH, EARL OF, a British statesman, son of the second earl, who was Lord-Lieutenant of Ireland from 1839 to 1841; educated at Trinity College; entered Parliament, while he was Viscount Ebrington, for Plymouth, as a Liberal, for which constituency he sat until 1852, when he successfully contested Barnstaple. In 1854 he was elected for Marylebone, and in 1859 resigned on being called to the Upper House as Baron Fortescue; in 1861 he succeeded his father, as third Earl of Fortescue. He was Lord of the Treasury (1846-47); secretary of the Poor Law Board (1847-51); and the author of *The Health of Towns* (1844); *Official Salaries* (1852); *Representative Self-Government for the Metropolis* (1854); *Parliamentary Reform* (1859, 1884); and *Public Schools for the Middle Classes* (1864).

FORT GAINES, a town and the capital of Clay County, southwestern Georgia, on the Chattahoochee (navigable) River, and on the Central Railroad of Georgia, 60 miles S. of Columbus. It has a good commercial position, and a large trade in cotton and other products of the country, which it ships by the river. Population 1900, 1,305.

FORT HAMILTON, a village and fort on the east shore of the Narrows, New York harbor, in New Utrecht, Kings County, Long Island. This fort, with Fort Lafayette and the works on Staten Island, directly opposite, are intended for the defense of this entrance to the harbor. Population now comprised in Greater New York.

FORT HOWARD, a city of Brown County, central eastern Wisconsin, on the Fox River, near its mouth, opposite the city of Green Bay, of which it is now a part, and on the Chicago, Milwaukee and St. Paul, the Chicago and Northwestern and the Green Bay, Winona and St. Paul railroads. It has an excellent harbor, an extensive trade, is supplied with water-works, electricity and gas, manufactures great quantities of lumber, and machinery, bricks, boilers and numerous kinds of wooden articles, and has the carshops of the first and last railroads named above. Population now included in Green Bay city.

FORTIN, PIERRE, a Canadian fishery expert; born in Quebec in December, 1823; has held numerous government appointments, and was speaker of the Legislative Assembly in 1875. In the Canadian Parliament he represented Gaspé from 1867 to 1874; sat in the Legislative Assembly 1867 to 1881, and afterward in the Dominion Parliament, as a Conservative. He has devoted special attention to river and marine fisheries throughout the Dominion, and has written elaborate descriptions of marine animals. These treatises were published by the government. He founded the Marine Library of the province of Quebec, and was the first president of the Geographical Society of Quebec.

FORT KENT, a town of Aroostook County, northern Maine, in a heavily timbered region at the confluence of the St. John and Fish rivers. It has good water-power and manufactories of lumber. Population 1890, 1,826; 1900, 2,528.

FORT LEAVENWORTH, a village of Leavenworth County, northeastern Kansas, on the Missouri River. It is an important military post school of instruction for officers, and is a depot of supplies for Western forts. This fort was established in 1827.

FORT LEE, a village of Bergen County, northeastern New Jersey, on the Palisades of the Hudson, opposite One Hundred and Sixtieth Street, New York City. It was formerly a military station, and was captured by General Cornwallis on Nov. 18, 1776, together with its extensive military provisions and stores. Population 1895, 1,617.

FORT MADISON, a city and the capital of Lee County, southeastern Iowa, on the Mississippi River, and on the Atchison, Topeka and Santa Fé, the St. Louis, Keokuk and Northwestern and the Chicago, Fort Madison and Des Moines railroads. It has a state penitentiary, jail, schools and manufactories of sashes, blinds, doors, machinery, castings, beer, furniture, plows, lumber and leather. Population 1890, 7,901; 1900, 9,278.

FORT PAYNE, a city and the capital of De Kalb County, northeastern Alabama, in the Look-out Mountains, on the Alabama Great Southern railroad. Coal and iron are mined, and it has iron-works, rolling-mills, furnaces, fire-clay works and saw-mills. Pop. 1890, 2,698; 1900, 1,037.

FORT PLAIN, a village of Montgomery County, central eastern New York, 12 miles W. of Fonda, on the New York Central and Hudson River railroad, and on the Mohawk River and Erie canal. It has manufactories of brooms, springs and axles, a large furniture factory, knitting, woolen and silk mills, and contains the Clinton Liberal (Universalist) Institute. Population 1890, 2,864; 1900, 2,444.

FORT SCOTT, a city of southeastern Kansas, the capital of Bourbon County, and one of the most important places in the southeastern part of the state. The city is built on a high plateau, 800 feet above the level of the sea, on the south bank of the Marmaton River, near the Missouri

border, 90 miles S. of Kansas City, in the midst of a region rich in bituminous coal, the mining and shipping of which give the city its chief commercial importance. There are also extensive flagstone-quarries and cement-rock deposits in the vicinity. Ten lines of railway furnish an outlet for the mineral products. In 1890 there were ten miles of electric street-railways. The city has a fine park, in the center of which is an artesian well. The United States courthouse and post-office building cost \$150,000. There is a high school and a normal college, the latter having, in 1890, over 700 students, representing 12 states. The chief manufactures are flour, woolen goods, soap, sorghum and beet sugar, carriages, etc. Pop. 1890, 11,946; 1900, 10,322.

FORT SELKIRK, a trading post, Indian village, and Church of England mission, in Yukon territory, Canada, on the west bank of the Yukon, 5 miles below the junction of the Lewes and Pelly rivers. Old Fort Selkirk, across the river, two miles higher up, is in ruins, having been burnt by the Indians in 1852.

FORT SHERIDAN. See **SHERIDAN, FORT**, in these Supplements.

FORT SMITH, a city, one of the capitals of Sebastian Co., Ark., at the western boundary of the state, on the south bank of the Arkansas river, 170 miles from Little Rock, and on the St. Louis, Iron Mountain and Southern and St. Louis and San Francisco railroads. Congress donated to it a military reservation, worth \$750,000, for school purposes. The chief factories are saw-mills, planing-mills, iron foundries, machine-shops, oil-mills, etc. The machine-shops of the St. Louis and San Francisco Railway Company are located here, still further extending the employing capabilities of the place, which are now considerable. It has a large trade in the Indian Territory, and is the seat of the United States district court for the western district of Arkansas, having criminal jurisdiction in the Indian Territory. In 1889 the county erected a courthouse costing \$65,000. Other public buildings are the United States customhouse, courthouse, post-office and jail. Population 1880, 3,099; 1890, 11,311; 1900, 11,587.

FORT SNELLING, a village of Hennepin County, southeastern Minnesota, 6 miles S. of Minneapolis, on the Chicago, Milwaukee and St. Paul railroad. It was founded in 1820, and is an important United States military post. It is interesting as being the oldest settlement in Minnesota. Population 1895, 831.

FORTUNATE ISLES. See **CANARY ISLES**, Vol. IV, p. 795.

FORTUNE, **ROBERT**, a Scottish botanist; born in Berwickshire, Sept. 16, 1813; died April 16, 1880. After serving an apprenticeship as a gardener he obtained employment in the Royal Botanic Gardens at Edinburgh, and afterward in the gardens at Chiswick. In 1842 he was sent by the Horticultural Society of London to collect plants in northern China. After his return he published *Three Years' Wanderings in Northern China* (1847). He subsequently visited China on three separate occasions, to study the methods of tea-cultivation, to carry plants from that coun-

try to India, and to collect seeds and plants for the government of the United States. *Yeddo and Peking* (1863) was written after his fifth and last journey to the East. His other books are *A Journey to the Tea Countries of China* (1852) and *A Residence Among the Chinese* (1857). Fortune was for a few years director of the Botanical Gardens at Chelsea.

FORTUNE BAY, an inlet on the Atlantic, on the southern coast of Newfoundland. See **NEWFOUNDLAND**, Vol. XVII, p. 382. Here, in January, 1878, several Gloucester fishing-vessels were attacked and driven away by residents of Fortune Bay District, in violation of treaty stipulations. Damages to the amount of seventy-five thousand dollars were awarded by Great Britain.

FORTUNY, MARIANO, a Spanish painter; born at Reus, Catalonia, June 11, 1838; died in Rome, Nov. 21, 1874. He studied in the Academy of Barcelona, and by the excellence of some early designs won a prize, which enabled him to go to Rome in 1858. When Spain declared war against Morocco, Fortuny accompanied the expedition to Africa and filled his portfolios with studies of Eastern life. On his return to Europe he renounced classical traditions, and giving full scope to his originality and genius, put on canvas the essence of the materials he had gathered. With name and fame already established, he went from Rome to Paris in 1866, and there his works were introduced to the whole art-loving world. In 1868 Fortuny went to Madrid, and there married Mdle. Madrazo, a daughter of the director of the Royal Museum. In 1870 he took up his residence in Granada, and in 1872 returned to Rome, where he resided until his death. His best-known pictures are *A Spanish Marriage*; *The Serpent-Charmer*; *The Amateur of Prints*; *A Fantasia at Morocco*; *The Sword-Sharpener*; *The Academicians of Arcadia*; *Book-Lover in the Library of Richelieu*; and some others. His *Dancing Arabs* is in Vanderbilt's house, New York. The occasion of his own wedding suggested his famous picture of *A Spanish Marriage*. Besides his work as a painter in oil, he gave considerable attention to etching and to water-colors. See **SCHOOLS OF PAINTING**, Vol. XXI, p. 440.

FORT VALLEY, a town of Houston County, central Georgia, 26 miles S.W. of Macon, on the Georgia Central and Southern railroads. It has a large trade in cotton and other agricultural produce. The surrounding region is considered to be one of the best peach and pear growing districts in the eastern United States. Population 1890, 1,752; 1900, 2,022.

FORT WAYNE, a city of northeastern Indiana, the capital of Allen County (see Vol. IX, p. 469). Fort Wayne is one of the chief cities in the state in population and in manufacturing importance, producing \$9,300,000 worth of manufactured articles annually, giving employment, on an average, to over 6,000 persons. An abundant supply of pure water is obtained from 30 wells, each eight inches in diameter and 55 feet deep, the outflow being 30,000,000 gallons daily. In 1891 there

were 13 public school buildings, a grammar school, with a library of 7,000 volumes, an extensive laboratory, and elaborate scientific apparatus. The Roman Catholics have a large and flourishing academy. The state asylum and school for feeble-minded youth is located at Fort Wayne, and has accommodations for 1,000 pupils. Eight railroad lines meeting here give the city unusual commercial advantages. Its leading manufactures are car-wheels, electrical apparatus, heavy machinery of all kinds, agricultural implements, leather, steam-engines, furniture, etc. Population 1880, 26,880; 1890, 35,393; 1900, 45,115.

FORT WORTH, a city of Texas, the capital of Tarrant County, situated at the confluence of the West, Clear and Trinity rivers, in the northern part of the state, about 175 miles N. of Austin. Next to Dallas, it is the most important railroad center in northern Texas, being on nine different railroads. It is surrounded by a rich agricultural region, producing cotton, grain and fruits. The city has a good water-supply, obtained from two sources, the Clear River and artesian wells, some two hundred in number. In 1890 there were in operation forty miles of electric street-railways. A fine bathing establishment, the Natatorium, costing \$50,000, is one of the institutions of the city. The courthouse and city hall are noteworthy structures, and the Chamber of Commerce building, which cost \$100,000. The high school building, completed in 1891, is a handsome and costly edifice. The Fort Worth University (Methodist) is located here, and the Roman Catholics maintain an academy. There are numerous manufactories, principally of flour, cotton and woolen goods, leather, etc., and rolling-mills, iron foundries, a jute factory, woven-wire factory, stock-yards and pork-packing establishments. These and a few other industries of less importance represent a capital of \$3,100,000, and a force of 2,700 employees. In 1872 there was but one house standing within the present city limits; in 1876, the population was 1,123; 1880, 7,000; 1890, 23,076; 1900, 26,688.

FORTY MILE CREEK, a stream of central eastern Alaska, formed on the slopes of the Alaska Mountains and the Tanana Hills. It takes a very tortuous, but generally northeasterly course, emptying into the Yukon River, in British America, about 15 miles E. of the Alaskan boundary. Considerable coarse gold is found in its bed and those of its tributaries. Length, about 120 miles.

FORUM, in law, any judicial tribunal for the adjustment of controversies, and in its modern significance almost synonymous with court. It is sometimes used technically, signifying the bar of a court. *Forum rei sitæ* is the forum or court having authority to decide a controversy concerning something located within its jurisdiction.

FOSS, CYRUS DAVID, an American Methodist Episcopal bishop; born at Kingston, New York, Jan. 17, 1834. He graduated from Wesleyan University, Middletown, Connecticut, in 1854; for

three years was an instructor in Amenia Seminary, New York; and in 1857 entered the traveling ministry in the New York Conference. In 1857-59 he was stationed at Chester, New York; in 1859-65 was in Brooklyn; and in 1865-75 in several churches in New York City. In 1875 he was chosen president of Wesleyan University, and served in that capacity until 1880, when he was elected and ordained a bishop. He was a member of the general conference in 1872, 1876 and 1880. Bishop Foss contributed to current literature and published several sermons and addresses.

BISHOP FOSS.

FOSSIL. See *Palæontology*, under **GEOLOGY**, Vol. X, pp. 319-325.

FOSSIL FOOTPRINTS, the name given to the impressions of the feet of extinct animals, made on the mud of former geological epochs, which has become hardened into stone. Reptilian and other tracks have been discovered upon the Triassic of Britain, and also in the same formation in Saxony; the impressions of worm-burrows in the Old Red Sandstones; fish-spines in the Carboniferous rocks of Scotland, etc. Imprints of the claws of crustaceans appear upon Silurian and other antique rocks. In America, crustacean impressions occur in the Cambrian of Canada and reptilian footprints in Pennsylvania Carboniferous. Dr. Edward Hitchcock, president of Amherst College, made a minute description of those found in New England, specimens of which are preserved in the famous ichnological collection of that college, which contains over twenty thousand specimens, comprising all the typical specimens found in New England. The collection includes imprints of marsupials, reptiles and amphibia, batrachians, chelonians, fish, thick and narrow toed birds, besides insects and mollusks. The largest bird-tracks indicate an animal similar to the *dinornis* of New Zealand. The track of the largest batrachian is twenty inches long, and very much resembles that of the *Cheirotherium* found in Britain, except that the American example is minus a toe. Important conclusions may be drawn from these impressions as to the contemporaneity of species in palæontological epochs.

FOSSIL FORESTS, an erroneous name given to the petrified remains of trees which have been carried away from their place of growth, and become changed in character. For details as to one of these remarkable deposits, see **ARIZONA**, in these Supplements. Prof. O. C. Marsh has described a truly fossil forest, occurring in Napa County, California, where the trees have been silicified *in situ*. Similar fossil remains occur in the Yellowstone National Park.

FOSTER, SIR BALTHAZAR WALTER, an English physician and statesman; born near Cambridge, in

1840; obtained his medical education at the Royal College of Surgeons, Dublin, in which he became prosector of anatomy in 1859, and in 1864 obtained the degree of M.D. from Erlangen, Germany. In 1891 he was appointed emeritus professor of *materia medica* in Queen's College, Birmingham. He published *The Use of the Sphygmograph* (1866); *Method and Medicine* (1870); *Clinical Medicine* (1874); *How We Die in Large Towns* (1875); *Political Powerlessness of the Medical Profession* (1883); and was the author of the article on *Heart Disease* in *Quain's Dictionary of Medicine*. His medical career is but one side of Sir Walter's activities. He early took an interest in politics, was returned to Parliament for Chester in 1885, as an advanced home-ruler, and was a constant supporter of Mr. Gladstone. In Parliament he had charge of the Allotments and Small Holdings Bill, took a prominent part in securing the passage of the Medical Amendment Act, and was chairman of the National Liberal Federation. He was knighted on the dissolution of 1886. In 1892 he was appointed Parliamentary secretary of the Local Government Board in Mr. Gladstone's fourth Cabinet. He was the first medical man to reach the position of a Cabinet officer, and the event was suitably celebrated by a banquet in November, 1892, at the Hotel Metropole in London.

FOSTER, BIRKET, an English artist; born at North Shields, Feb. 4, 1825. He was educated at Hitchin, Herts. At an early age he showed remarkable talent for drawing, and as pupil to Landsells, wood-engraver, from 1841 to 1846, he produced a large number of subjects for wood-engraving, the earliest for Mr. and Mrs. S. C. Hall's *Ireland* (1843), and many for the *Illustrated London News*. He afterward illustrated Longfellow's *Evangeline*, Beattie's *Minstrel*, and Goldsmith's *Poetical Works*. In 1859 he exhibited the first of many water-colors, *The Mill at Arundel*; in 1860 he was elected an associate and in 1861 a member of the Water-Color Society. He devoted himself chiefly to depicting child-life and rural scenes: and he published *Pictures of Rustic Landscape* (1895). Died in London, March 28, 1899.

FOSTER, CHARLES, an American statesman; born at Tiffin, Ohio, April 12, 1828; became a merchant and banker in Fostoria, Ohio. In 1870 he was chosen to Congress as a Republican, and was three times re-elected. He was a member of the Ways and Means Committee, and was instrumental in bringing to light the Sanborn frauds, and in securing the repeal of the Moiety Law. As chairman of the

CHARLES FOSTER.

visiting committee to New Orleans to examine into the electoral frauds of 1874, he was the author of the report denouncing the acts of both parties. He was twice chosen governor of Ohio, and served

from 1880 to 1884. Under the Harrison administration he served as Secretary of the Treasury.

FOSTER, CLEMENT LE NEVE, an English mining expert; born at Camberwell, March 23, 1841. In 1853 he entered the Collège Communal at Boulogne; studied the sciences at Amiens; in 1857 entered the Royal School of Mines. Upon the suggestion of Professor Huxley, he went to the mining school at Freiburg, and was called from there to the Geological Survey of Great Britain by Sir Roderick Murchison in 1860. Meanwhile, he prepared himself for the science doctorate degree of the London University, and passed brilliantly in 1865. In the same year he accepted the lectureship to the Miners' Association of Cornwall and Devon. In 1867 he made an exploration of the mining capabilities of the Sinai peninsula, and in 1868 visited Venezuela. In 1872 he was appointed an inspector of mines in England, his district being in Cornwall. He was eventually successful in enforcing the regulations framed for the purpose of preventing the excessive loss of life in mines, greatly reducing the percentage of deaths and casualties. In 1890 he was appointed professor at the Royal School of Mines; in 1892 was appointed a commissioner at the Columbian Exposition at Chicago, acting as a judge in the mining department. He translated, from the Dutch of P. H. van Diesk, *Banca and Its Tin Stream-Works* (1867), and wrote *Ores and Ore-Mining*.

FOSTER, ELLEN HORTON, an American lawyer; born in Lowell, Massachusetts, Nov. 3, 1840. She removed to Clinton, Iowa, and was married (in 1859) to E. C. Foster. She was admitted to the bar in 1874, and argued a case in the supreme court the following year. She gained prominence as a lawyer, newspaper editor, lecturer and advocate of woman suffrage and prohibition.

FOSTER, GEORGE CARY, an English physicist; born at Sabden, Lancashire, Oct. 20, 1835; graduated at University College, London, in 1855; afterward studied at French and German universities; in 1862 was appointed professor of natural philosophy in Anderson's College, Glasgow; and in 1865 professor of physics in University College, London. In 1867 he opened the physical laboratory of the University of London, the first of the kind in London. He was the author of the articles on heat and thermodynamics in Henry Watts's *Dictionary of Chemistry and Allied Sciences*; and was the deviser of new methods of measurement in physical research.

FOSTER, GEORGE EULAS, a Canadian statesman; born in New Brunswick, Sept. 3, 1847; graduated at the University of New Brunswick in 1868; studied abroad, at Edinburgh and Heidelberg, and became professor of classics and history in the University of New Brunswick, 1872-79. He was elected to the Dominion Parliament in 1882; became Minister of Marine in 1885; and in 1894 was Minister of Finance in the Dominion Cabinet. While holding the former portfolio he was engaged diplomatically in the Bering Sea and Atlantic fisheries dispute. He was president of

the International Temperance Association and author of *The Prohibitionists' Handbook*.

FOSTER, MRS. ISABELLA H., more familiarly known as FAYE HUNTINGTON, an American authoress; born at Oneida Castle, New York, in 1838; graduated in 1860 at the Oneida Seminary, and became principal of the Home School for Girls at Verona, New York. Among her numerous works are *In Earnest* (1869); *Through Patience* (1869); *Allan Phillips* (1874); *Louisa's Mistake* (1875); *Ripley Parsonage* (1877); *Echoing and Re-echoing* (1878); *Millerton People* (1883); *Could n't Be Bought* (1885); *Stories of Great Men* (1887); *Stories of Remarkable Women* (1887); *A Modern Exodus* (1891); *A Baker's Dozen* (1892).

FOSTER, JOHN GRAY, an American soldier; born at Whitefield, New Hampshire, May 27, 1823; died in Nashua, New Hampshire, Sept. 2, 1874. He was graduated at West Point in 1846; served in the Mexican War, and received the brevets of first lieutenant and captain for gallantry. For a time he was employed on coast survey, and in 1855-57 was assistant professor of engineering at West Point. At the beginning of the Civil War he safely removed the garrison of Fort Moultrie to Fort Sumter, and was brevetted major for these services. In October, 1861, he was made brigadier-general of volunteers, and the same year was brevetted lieutenant-colonel. In 1865 he was brevetted major-general for gallant services in the field during the Rebellion. After the war he served as superintending engineer of various river and harbor improvements. He contributed to periodical literature on engineering topics, and wrote *Submarine Blasting in Boston Harbor*.

FOSTER, JOHN WATSON, an American statesman; born in Pike County, Indiana, March 2, 1836; graduated from the State University of Indiana in 1855; studied law at Harvard, and in 1857 began the practice of law in Evansville, Indiana. At the beginning of the Civil War he entered the Union service as a major, and distinguished himself at Fort Donelson, Shiloh, Knoxville and other battles. In 1869 he was appointed postmaster of Evans-

JOHN W. FOSTER.

ville, and in 1873 was sent to Mexico as United States minister. In 1880 he was transferred to Russia, but in 1881 resigned to attend to private business. In 1883-85 he was minister to Spain. In June, 1892, he was appointed Secretary of State, to succeed Blaine. In 1893 he represented the United States at Paris in the Bering Sea arbitration. In 1895 he acted as commissioner to secure peace between Japan and China; in 1897 as envoy to treat for the preservation of the fur-seal; and in 1898-99 as a member of the Canadian-American joint commission.

FOSTER, JOHN WELLS, an American geologist;

born at Brimfield, Massachusetts, March 4, 1815. In 1835 he was admitted to the Ohio bar, but his leisure moments were spent in the study of science. From 1835 to 1844 he was employed as an assistant in the geological survey of Ohio, and in 1845 visited the Lake Superior region in the interest of several copper-mining companies. In 1847 he was appointed on a geological survey of the Lake Superior region, and the results of his survey, published by Congress in 1852, still remain the authority. For a time after the completion of this work he lived in Massachusetts, where he was active in the formation of the Republican party. In 1858 he went to Chicago, and for a time was land commissioner for the Illinois Central railroad. Mr. Foster was president of the Chicago Academy of Sciences, and in 1869 was president of the American Association for the Advancement of Science. He published *The Mississippi Valley*, an elaborate work (1869); *Mineral Wealth and Railroad Development* (1872); *Prehistoric Races of the United States* (1873). He died in Chicago, June 29, 1873.

FOSTER, JOSEPH, an English genealogist and antiquarian; born at Sunderland, March 9, 1844. He was a nephew of Birket Foster, the artist, and inherited the genealogical talent of his grandfather. When in his eighteenth year he published *The Pedigree of the Fosters of Cold Hesledon in the County Palatine of Durham*. He then devoted his life to genealogical researches of the most laborious and herculean character, the nature of which is indicated by the following partial list of his publications: *Genealogical Account of the Families Descended from Francis Fox of St. Germans, Cornwall* (1872); *Pedigrees of the County Families of England* (commenced 1873); *Stemmata Britannica*, a genealogical account of the untitled nobility (1877); *The Peerage, Baronage and Knighthood of the British Empire* (1879); *Collectanea Genealogica* (1881-84); *Members of Parliament for Scotland, Including Minor Barons* (1882); *Our Noble and Gentle Families of Royal Descent* (1883); *Men at the Bar* (1885); and *Heralds' Visitations* of the counties of York, Durham, Northumberland, Cumberland, Westmoreland and Middlesex.

FOSTER, LAFAYETTE SABINE, an American statesman; born in Franklin, Connecticut, Nov. 22, 1806; died at Norwich, Connecticut, Sept. 19, 1880. He was graduated from Brown University in 1828; practiced law in Connecticut; and edited the *Norwich Journal* in 1835. In 1839-40, and again from 1846 to 1848, he sat in the legislature as a Whig, and for two years was speaker. He was mayor of Norwich in 1851; twice unsuccessful as a Whig candidate for the governorship, and in 1854 was again elected to the assembly, and chosen speaker. In May, 1854, he was elected to the United States Senate, and re-elected in 1860, serving until March, 1867. He joined the Republican party in 1856, and supported the Union cause during the war. In 1865 he was president *pro tem.* of the Senate, and became acting Vice-President of the United States when Andrew Johnson succeeded to the Presidency. In 1870

he again became a member and speaker of the Connecticut assembly, and in June was elected to the state supreme bench by the legislature. He supported Greeley for the Presidency in 1872, and was defeated as a Democratic candidate for Congress two years later. From 1870 to 1876 he was a judge of the state supreme court.

FOSTER, SIR MICHAEL, English physiologist; born at Huntingdon, March 8, 1836; educated at University College, London; became professor of physiology there, and then at Cambridge University, and was secretary of the Royal Society. He wrote *Report on Modern Microscopes and Recent Improvements in Microscopical Apparatus* (1867); *Primer of Physiology* (1874); *A Text-Book of Physiology*, which has gone through many editions since first published; and, with F. M. Balfour, *The Elements of Biology* (1874). He was knighted in 1899.

FOSTER, RANDOLPH SINKS, an American Methodist Episcopal bishop; born in Williamsburg, Ohio, Feb. 22, 1820. He received his education at Augusta College, Kentucky, and in 1837 entered the itinerant ministry of the Methodist Episcopal Church in the Kentucky Conference. Later he was transferred to Ohio, and in 1850 to New York. Up to 1857 he had held pastorates in Hillsboro, Portsmouth, Lancaster, Springfield, Cincinnati,

BISHOP FOSTER.

New York and Brooklyn. In 1856-58 he was president of the Northwestern University, Evanston, Illinois. For some time afterward he was pastor in New York and Sing Sing, and in 1868 was delegate to the British Wesleyan Conference. The same year he became professor of systematic theology in Drew Theological Seminary, Madison, New Jersey, and two years later was appointed president. In 1872 he became bishop of the Methodist Episcopal Church, and afterward made episcopal visitations in Norway, Sweden, Denmark, Germany, Switzerland, Italy, India, and South America. He published *Objections to Calvinism as It Is* (1849); *Christian Purity* (1851; revised ed., 1869); *Ministry for the Times* (1852); *Theism* (1872); *Beyond the Grave*; *Centenary Thoughts for the Pulpit and Pew of Methodism* (1884); and *Studies in Theology* (1886).

FOSTORIA, a city and railroad center of Seneca County, northwestern Ohio, on five railroad lines, 12 miles W. of Tiffin. It has natural-gas wells of great value, glass-works, flouring-mills, and other manufactories. The city has developed rapidly. Pop. 1890, 7,070; 1900, 7,730.

FOUCAULT CURRENTS, a name given to the eddy currents of electricity set up in a mass of metal when it is in a varying magnetic field. See *Induction in Masses of Metal*, under ELECTRICITY, Vol. VIII, p. 82.

FOULA. See ORKNEY, Vol. XVII, p. 846.

FOULARD, a light fabric of flexible silk, without twill, used principally for ladies' dresses. It was originally imported from India, but is now made also in the south of France.

FOULWEATHER, CAPE, a point of land on the Pacific Coast, 4 miles N. of Yaquina Bay, at lat. 44° 39' N., long. 124° 7' W.

FOUNDATIONS. See BUILDING, Vol. IV, pp. 452, 456; and BRIDGES, Vol. IV, p. 326.

FOUNDER OR LAMINITIS, a common trouble among horses, affecting the laminae of the feet, which are attacked with fever. Severe lameness ensues, and is accompanied by intense pain, and the exudation of blood or lymph between the sensitive laminae. The fore feet are more often affected than the hind feet. Sometimes the trouble extends to the muscles of the legs and chest, which become affected as in rheumatism. The causes of the trouble are overdriving or overloading; exposure to cold drafts or drinking cold water when the animal is heated or exhausted; disturbance of the digestive apparatus from improper feeding; diseases of the lungs; or improper shoeing. Prompt treatment is necessary. The shoes should be removed, a deep, comfortable bed provided, so as to encourage the horse to lie down, to relieve the pressure on the feet. Laxatives should be at once administered, and tincture of aconite, twenty drops to a dose, should be given at repeated intervals. The feet should be poulticed with bran. The hydropathic packing (sponge saturated with arnica) is also useful. Mash, roots, grass or hay should be fed to the animal; and water with a little cream of tartar should be at hand at all times. In summer the animal should be turned out to grass. Chronic cases are hardly curable, and in this, as in most other similar troubles, prevention is better than cure.

FOUNDRY PRACTICE. See IRON AND STEEL, in these Supplements.

FOUNTAIN-PEN. See PEN, Vol. XVIII, p. 484.

FOUQUIERA, a genus of Mexican trees or shrubs of the order *Tamariscineae*, resinous and brittle, having leafless branches and stems, and bearing brilliant crimson flowers.

FOURCROYA, a genus of plants of the order *Amaryllidaceae*, nearly allied to *Agave*, but with stamens shorter than the corolla. The species are all tropical. The leaves yield a fiber similar to the pita flax obtained from the species of the *Agave*.

FOURDRINIER, HENRY AND SEALY, British paper-makers, two brothers who brought to perfection the paper-making machine. They were born in London, Henry in 1766, and were stationers there, inheriting their father's business. Early in the century, about 1804, they had established a mill in Hertfordshire, which they made an experimental workshop in perfecting the machine. They spent \$300,000 in the work and became bankrupt. Others infringed their patents, and, though the government, in 1840, voted the brothers a compensation amounting to \$35,000,

Henry died in destitute circumstances. An annuity was purchased for his family by those engaged in the paper trade. The benefit derived from the introduction of their invention was estimated to amount to \$2,500,000 annually. Henry died in 1854 and Sealy in 1847. See PAPER, Vol. XVIII, p. 219.

FOUR EVANGELISTS, part of a larger group of islands known as the Twelve Apostles, which lie off the west entrance of the Strait of Magellan, southern Chile. The eight other islands, with which they are classed as above, are about fifteen miles farther out into the Pacific.

FOUR LAKES, a chain of deep lakes, Mendota, Monona, Wanbesa and Kegonsa, in Dane County, southern Wisconsin, connected by short outlets. The state capital, Madison, is situated between the first two. Lake Mendota is the largest, being 6 miles long by 4 wide. Lake Monona is 6½ miles long by 2 wide. The other two are about half the size of the first two. Their outlet is through the Yahara River into the Rock River.

FOURNI ISLANDS, a group of about twenty small islands in the Grecian Archipelago, between Nicaria and Samos, off the western coast of Asiatic Turkey. The largest of these is about five miles in circuit.

FOURTH, in music, an interval including four degrees of the scale. The interval of the perfect fourth contains two whole tones and one semitone; a diminished fourth, one whole tone and two semitones; and the superfluous or augmented fourth, three whole tones. The perfect fourth is the second most perfect consonance after the octave, and the next to the fifth.

FOWLER, a city and the capital of Benton County, northwestern Indiana, 27 miles N.W. of Lafayette, on the Cleveland, Cincinnati, Chicago and St. Louis railroad. Surrounding the place are fertile farms. The products of the city are agricultural implements and furniture. Population, 1,285; 1900, 1,429.

FOWLER, CHARLES HENRY, an American Methodist Episcopal bishop; born at Burford, Canada, Aug. 11, 1837. He graduated at Genesee College, Lima, New York, in 1859, and in 1861 at Garrett Biblical Institute, Evanston, Illinois. The same year he was admitted into the Rock River conference, and was appointed to churches in Chicago till 1872, when he was chosen president of Northwestern University. In 1876 he was elected editor of the New York *Christian Advocate*, and, in 1880 became one of the corresponding secretaries of the Missionary Society of the Methodist Episcopal Church. In 1884 he was elected and ordained bishop.

FOWLER, SIR JOHN, an English civil engineer; born at Sheffield in 1817; assisted in the construction of the London and Brighton and other railway lines, and was afterward engineer of the Manchester, Sheffield and Lincolnshire group of railways, besides many other lines, including the original "Underground" or Metropolitan railway, London. River-improvement and the construction of large docks also occupied his attention,

and he was knighted in 1885 for his services as consulting-engineer in the public works in Egypt; but his greatest work is the Forth Bridge, completed in 1890, designed by him and Sir Benjamin Baker. For this work he was created a baronet. He was president of the Institution of Civil Engineers in 1866. Died at Bournemouth, Nov. 20, 1898.

FOWLER, ORSON SQUIRE, an American phrenologist; born at Cohocton, New York, Oct. 11, 1809; died Aug. 18, 1887. He was graduated at Amherst College in 1834; became a lecturer on phrenology, health, hygiene, self-culture and social reform; published many works on these subjects, which were issued from New York, where he established a publishing-house in conjunction with his brother, Lorenzo F. Fowler. The brothers located eventually in Manchester, Massachusetts. Their publications include *Memory and Intellectual Improvement* (1841); *Physiology, Animal and Mental* (1842); *Matrimony; or, Phrenology Applied to the Selection of Companions* (1842); etc.—His brother, LORENZO NILES FOWLER, also a phrenologist; born at Cohocton, New York, June 23, 1811. He was educated at Amherst College, and entered, with his brother, upon phrenological investigations. He edited the *Phrenological Journal*, and published, with his brother, the works mentioned. He spent the last 35 years of his life in London. He died in West Orange, New Jersey, Sept. 3, 1896.

FOWLER, SAMUEL, an American mineralogist and geologist; born near Newburgh, New York, Oct. 30, 1799; studied medicine and removed to Franklin, New Jersey, where he practiced. He was active in local politics; was sent to the state senate, and twice to Congress, during the administration of President Jackson. As a mineralogist he attained much fame, his contributions appearing in many scientific publications. The mineral, *fowlerite*, named in his honor, was discovered by him; and he is credited with naming the iron and zinc ore *franklinite*, which he first brought to general notice. He died at Franklin, New Jersey, Feb. 20, 1844.

FOWLER, THOMAS, an English philosophical writer; born at Burton Stather, Lincolnshire, Sept. 1, 1832; graduated at Merton College, Oxford, in 1854; elected to a fellowship in Lincoln College in 1855, and became professor of logic in the university in 1873, holding the position until 1879. He was elected president of Corpus Christi College in 1881; and next year received the honorary degree of LL.D. from Edinburgh. He was the author of *Elements of Deductive Logic* (9th ed. 1887); *Elements of Inductive Logic* (6th ed. 1892); *Progressive Morality* (1884); *The Principles of Morals* (1886, 1887); and of biographies of Locke, Bacon, Shaftesbury and Hutcheson; and *History of Corpus Christi College* (1893). He contributed the articles HUTCHESON and SHAFTESBURY to this ENCYCLOPÆDIA.

FOWLERITE. See MINERALOGY, Vol. XVI, p. 417.

FOWLER'S SOLUTION. See ARSENIC, Vol. II, p. 634.

FOX, SIR CHARLES, an English engineer: born at Derby, March 11, 1810; was first employed by Ericson, and appointed by Robert Stephenson assistant engineer of the London and Birmingham Railway Company. He was largely employed in the construction of railways (many of them of the narrow-gauge design), bridges and tunnels. He constructed, from Sir Joseph Paxton's plans, the Crystal Palace for the exhibition of 1851 in London, and also the Crystal Palace at Sydenham. He died at Blackheath, June 14, 1874.

FOX, GUSTAVUS VASA, an American naval officer; born at Saugus, Massachusetts, June 13, 1821; died in New York City, Oct. 29, 1883. He entered the navy in 1838 as midshipman, and served until 1856, when he resigned, with the rank of lieutenant. He then accepted the position of agent of the Bay State Woolen Mills, at Lawrence, Massachusetts. At the beginning of the Civil War he was appointed assistant secretary of the navy, and his services in this position were very valuable, especially in planning the capture of New Orleans and the opening of the Mississippi. Soon after the war he was sent on a special mission to Russia, to convey to the czar the congratulations of the United States Congress on his escape from assassination. Captain Fox subsequently became manager of the Middlesex Mills.

FOX, MARGARETTA AND KATHARINE, two American spiritualistic mediums: born, respectively, in 1836 and 1839, in Bath, Canada. Margarett, in 1888, confessed to having practiced deception, but afterward retracted the confession. She claimed to have married Dr. Kane, the Arctic explorer, whose correspondence with her she published after his death (*The Love Life of Dr. Kane* [1865]). She died in Brooklyn, N. Y., March 8, 1893. Katharine continued the séances until 1888; was married to Henry D. Jencken in 1873; and died in New York city, July 2, 1892. For descriptions of their methods, see SPIRITUALISM, Vol. XXII, pp. 405, 407.

FOX, WILLIAM JOHNSON, an English orator and politician; born at Uggheshall, his father's small farm, near Wrentham, Suffolk, in 1786. His father removed to Norwich to engage as a weaver, and the boy was sent to Homerton College, London, to be trained as an Independent minister, but was soon attracted to Unitarianism, and became a leader of the English rationalists. He was one of the most powerful orators in favor of the repeal of the Corn Laws, his speeches being quoted by M. Guizot as the most finished productions on the subject. His *Letters of a Norwich Weaver-Boy* contributed much to the promotion of free trade. He was elected to Parliament in 1847, and sat until 1863. He died in London, June 3, 1864. He published three volumes of sermons and a work entitled *The Religious Ideas*, and edited *The Monthly Repository*.

FOXBORO, a village and township of southern Norfolk County, eastern Massachusetts, 21 miles S.W. of Boston, on the New York, New Haven and Hartford railroad. It has large manufacturing industries. Straw hats, bonnets, carpet-linings, soap and spring-beds are made in the town-

ship. There is a granite-quarry here. Population of township in 1890, 2,933; of town in 1900, 3,266.

FOXGLOVE. See DIGITALIS, Vol. VII, p. 237.

FOXHOUND. See HOUND, Vol. XII, p. 314.

FOX-HUNTING. See HUNTING, Vol. XII, p. 394.

FOX INDIANS. See *Sacs*, under INDIANS, Vol. XII, p. 832.

FOX ISLANDS. See ALEUTIAN ISLANDS, Vol. I, pp. 479, 480.

FOX RIVER, the name of two streams rising in Wisconsin. (1) The Fox River, or Pishtaka, rises in Waukesha County, southwestern Wisconsin, flows south to Aurora, Illinois, then southwest to the Illinois, which it enters at Ottawa. (2) The Fox River, or Neenah, rises near the southern boundary of Green Lake County, first flows west to Portage City, then, after a tortuous but generally northeast course of about 250 miles, empties into Green Bay, in Lake Michigan. Near its headwaters it approaches within one and a quarter miles of the Wisconsin River, with which it is connected, at Portage City, by a canal, which thus unites the Mississippi and Lake Michigan.

FOX-SHARK OR THRESHER. See SHARK, Vol. XXI, p. 777.

FOXTAIL-GRASS, a common name given to various grasses with brush-like spikes, notably species of *Alopecurus*, *Setaria*, and *Andropogon*. The common "foxtails" are a species of *Setaria* from the Old World, but several of them cultivated and naturalized in the United States; as, *S. glauca* "common foxtail"; *S. viridis*, "green foxtail," or "bottle-grass"; and *S. Italica*, "Italian millet," or "Bengal grass."

FOYERS, a small river of Inverness-shire, Scotland; rises in Monadhliadh Mountains, flows north into Loch Ness eight miles N. E. of Fort Augustus; noted for its cascades; the lower fall, 90 feet high, is the finest cascade in Britain.

FOYLE, RIVER. See DONEGAL, Vol. VII, p. 361.

FRACTIONS. See ALGEBRA, Vol. I, pp. 529-33; ARITHMETIC, Vol. II, p. 529.

FRACTURES. See SURGERY, Vol. XXII, p. 681, and in these Supplements; also PATHOLOGY, Vol. XVIII, pp. 366-67.

FRAGA, a town of Huesca province, Spain, on the Cinca river, 18 miles S.W. of Lerida, in a fertile and well-tilled plain; is the site of an old fortress, where, in 1134, the Moors defeated ALFONSO I of Aragon (q. v., Vol. I, p. 617). Pop. 7,158.

FRAGONARD, JEAN HONORÉ, a French genre and decorative painter; born at Grasse, April 5, 1732; was a pupil of Chardin and Boucher; gained the *grand prix de Rome* in 1752; went to Rome on a pension. On his return to Paris he became much in request as a portrait-painter. His pictures are to be seen in many of the museums in France and elsewhere. In Nov., 1898, fourteen of his finest works, including a series of five panels representing the *Romance of Love and Beauty*, after lying hidden for over a century in an old farm cottage at Grasse, were unearthed, and exhibited and sold in London. He died in Paris, Aug. 22, 1806.—His son, ALEX-

ANDER EVARISTE FRAGONARD, also a historical painter, was born at Grasse in 1780. He was a pupil of David; was also a sculptor, and received the decoration of the Legion of Honor in 1819. He died in Paris, Nov. 10, 1850.

FRAMINGHAM, a township in Middlesex County, Massachusetts, comprises the villages of Framingham Center, South Framingham and Saxtonville. It has the oldest normal school in America. Among the articles manufactured here are carriages, woolen and straw goods and shoes. Population of town in 1900, 11,302.

FRA MONREALE. See ROME, Vol. XX, p. 801; and CONDOTTIERI, Vol. VI, p. 256.

FRANC, a French silver coin which forms the unit of the French monetary system, its value being about 9½d. English money, or 19 cents of United States. The franc is divided into 100 centimes; but the old division into 20 sous, valued at 5 centimes each, is still made use of in common life. There are, in France, silver coins of ½, ⅓, 1, 2 and 5 francs, and gold pieces of 5, 10, 20, 50 and 100 francs. See MONEY, Vol. XVI, pp. 730, 731, note; 732, note.

FRANÇAIS, FRANÇOIS LOUIS, a French artist; born at Plombières, in the Vosges, Nov. 17, 1814. He was sent to Paris, and engaged to a publisher, who was the means of obtaining employment for him at the glass-works at Choisy-le-Roy, where he learned painting on glass. He returned to Paris, and shortly afterward entered the studio of Gigoux, where he learned to draw on wood and also the art of lithography. In 1837, after many misgivings, he sent to the Salon, in association with M. H. Baron, a picture, *A Song Under the Willows*, a landscape with figures, in Lombard costume of the sixteenth century. He exhibited at the Salon with increasing success for some years, and then went to Italy, where he spent three years. In 1853 he exhibited *The End of the Winter*, which was bought for the Luxembourg; in 1855 his *Path Through the Corn* was purchased by the state, for which, at the same time, he received a medal of the first class from the Salon. In 1857 he produced what he regarded as his finest work, *A Fine Winter's Day*; in 1861 *View at Bas Meudon*; and in 1863 *Orpheus*. He exhibited regularly at the salon, his later works including *Morning at Chinon* and *Last Days of Autumn in the Vosges* (1884); *Views in the Vicinity of Clisson* (1889); *A Misty Morning in the Vicinity of Paris* (1890); *Source of Evening* (1891). He was promoted an officer of the Legion of Honor in 1867; and elected to the Academy of Fine Arts in 1890. Died May 28, 1897.

FRANCE. For the geography, history, government and productions of France from its earliest settlement to the close of the year 1879, see Vol. IX, pp. 505-686. After the resignation of Marshal MacMahon, and the election of M. Grévy to the Presidency, the Republican party, under the leadership of the eloquent Gambetta, instituted various measures of doubtful expediency. The Communards were rehabilitated; the church was irritated by violent measures; the Tunis expedition was entered upon; and the peasant

proprietors, the true conservative power in France, became distrustful of their chosen representatives. Gambetta's accession to the Premiership was not calculated to allay the general distrust, and his death (1882) left his party without a leader, and the people without an idol. Owing to the vacillating policy of the Ministry, French influence in Egypt was greatly weakened, and the Tonquin expedition and embroilments with China increased the general feeling of distrust. Accusations of jobbery and malversations brought against the son-in-law of M. Grévy led to the resignation of the latter, Dec. 2, 1887. In his message to the Senate and Chamber of Deputies he declared that they had practically summoned him to resign, and he yielded in order to avoid the possible consequences of a conflict between Parliament and the executive. M. Marie François Sadi-Carnot was elected President of the republic, and a new ministry formed, with M. Tirard as president of the Council.

The political situation became still further disturbed about this time by the efforts of General Boulanger, who was supported in his schemes of personal political aggrandizement by the three reactionary parties—the Orleanists, the Imperialists and the Legitimists. General Boulanger had proved a very efficient Minister of War, and by his patriotic utterances and the reforms he introduced in the treatment of the privates and non-commissioned officers, became a sort of popular idol among all classes. He was a convenient figure-head for a movement of discontent with the situation and a desire for a revision of the constitution; and the rational, practical and undoubtedly liberal parliamentary institutions which the third republic had implanted in France seemed to be in serious jeopardy.

In the French Senatorial elections of Jan. 5, 1888, the Republicans lost three seats, and early in April a new ministry was formed, with M. Floquet as president of the Council. General Boulanger was elected to the Chamber of Deputies from the Department du Nord, April 15th, by over 96,000 majority, and at once became the leader of the opposition to the government. After a stormy debate, a motion by General Boulanger for the dissolution of the Chamber was rejected by that body, July 12th, and a vote of censure passed upon him, whereupon he resigned; but at the election in Paris, which took place Jan. 27, 1889, he was re-elected by a majority of 54,432. On February 14th, Premier Floquet tendered the resignation of the Cabinet, and a new Cabinet, with M. Tirard as Premier, was announced February 21st. By a resolution adopted April 4th, the French Chamber decided to prosecute General Boulanger for threatening the peace of the republic. The trial began before the High Court of the Senate August 8th, and resulted in the conviction of the General, together with Count Dillon and Henri Rochefort, of conspiracy and attempt at treason. They were condemned to transportation and imprisonment in a fortified place; but General Boulanger escaped

to England. His connection with a plot for the restoration of the Orleanists was proved, and in 1891 he committed suicide.

Within the four years following the downfall of Boulangism, France underwent numerous changes of ministries, and her institutions suffered from many strains. The failure of the Panama canal scheme led to the prosecution of the Comte de Lesseps (q. v.) and his son; of Gustave Eiffel (q. v.) and of many politicians and ex-ministers; a few of them (the two Lesseps and Eiffel included) were convicted of bribery and corruption in January, 1893, and sentenced to imprisonment and fine. The Comte de Lesseps was spared the imprisonment on account of poor health and age, and died December, 1894. While driving through the streets of Lyons, on Sunday, June 24, 1894, President Carnot was assassinated by an Italian anarchist, Cesario Santo. His successor in the Presidency was M. Casimir-Perier, who resigned after being little more than six months in office. M. Felix Faure (q. v.) was then elected President by the National Congress, in its regular session at Versailles, early in 1895. The passage of the amnesty bill enabled those who had been sentenced on account of the Boulanger plot to return, among the first to take advantage of the amnesty being M. Henri Rochefort. A Chinese loan of \$75,000,000 was raised in France on the guaranty of the Russian government. June 17th the Russian ambassador invested the President with the insignia of the Order of St. Andrew. An act was passed, July 14th, to reorganize the council of the Legion of Honor, so as to free the order from any suspicion of undue influence. The Ribot ministry, formed Jan. 26, 1895, resigned October 28th of the same year and was succeeded by a Cabinet, of which M. Bourgeois was the Premier. The Bourgeois Cabinet remained in power until April 23, 1896, when it was in turn succeeded by a Ministry led by M. Meline. The latter held office till June, 1898, when his administration was overturned, and was replaced by a Radical ministry under M. Brisson. The general election, held in the previous month (May, 1898), showed a notable increase in the numbers of the Radicals and Socialists elected, and the Moderate Republicans were no longer able to hold their own against the combined forces of the opposition. The strength of parties in the Chamber at this juncture was as follows: Moderates, 254; Rallied, 40; Radicals, 178; Socialist Radicals, 57; Reactionaries, 44; and Anti-Semites, 10. In Oct. (1898) M. Brisson's ministry, therefore, fell, and was succeeded by one of "Republican Concentration," under M. Dupuy. To M. Dupuy, in turn, there succeeded in June, 1899, a Cabinet under M. Waldeck-Rousseau, including representatives from almost all parties. At the present time of writing (Oct. 1900) it is still in power.

The Presidency of the French Republic had in the interval changed hands, owing to the death (Feb. 1899), of M. Faure, who in 1895 had succeeded M. Casimir-Perier. M. Faure's successor was M. Émile Loubet, a Moderate party man, with

Radical tendencies, who had at one time been Prime Minister and President of the Senate. Under M. Loubet's rule, France has enjoyed a period of comparative internal quiet, if we except the agitations and excitements incident to the famous Dreyfus case (q. v., in these Supplements under DREYFUS). Externally the Republic has had little, meanwhile, to disturb its repose, save for the diplomatic contentions with Great Britain, owing to France's Anglophobic thwarting policy in the Upper Sudan, afterwards happily annulled by the delimitation of territory, by mutual agreement (Mar. 1899), following the Marchand incident at Fashoda. Antananarivo, capital of Madagascar, surrendered to the French, Sept. 30, 1895. A treaty was signed, which provided for a French protectorate over the island. This was changed in June, 1896, and Madagascar was formally annexed to France.

In the summer of 1900 the capital of the Republic was greatly occupied by its engrossing interest in the Paris Exposition, which see, under PARIS EXPOSITION, in these Supplements.

The area of France is 204,092 square miles, and the population in April, 1896 (exclusive of her dependencies), 38,517,975; density per square mile, 188.7. The population of France increases very slowly, owing to the low rate of births. The average number of births per marriage was (1881-85) about 3; in 1891 it was 2.1. Of the total population in 1891, 50.35 per cent. were females. The birth-rate for all France, in 1898, was 22.1 per 1,000 inhabitants; the death-rate in the same year was 21.2. The number of divorces is rapidly increasing. The population of the chief cities of France, according to the Census of 1896, was as follows: Paris (the capital) 2,536,834; Lyons 466,028; Marseilles 442,239; Bordeaux 256,906; Lille 216,276; Toulouse 149,963; St. Etienne 136,030; Roubaix 124,661; Nantes 123,900; Le Havre 119,470; Rouen 113,219; Reims 107,963.

Colonies and Dependencies. The foreign possessions of France, (including Algeria and Tunis, Madagascar [acquired in 1896], Dahomey, Congo, French Guinea, Senegal, Sudan, and the Sahara Region in Africa, French India and Indo-China, Cochin-China, and the lately acquired territory of Tonking, Kwang Chi Wan, and the Laos Protectorate), may be roughly estimated to have an area of 3,740,000 square miles, with a population of about 56 millions. Their administration is directed or controlled by the Ministry of the Colonies, which in 1894 was organized as a separate department. Most of them enjoy some measure of self-government and have, in some instances, elective councils to assist the governor. Few of the colonies have a revenue sufficient to defray the cost of administration. They moreover entail heavy burdens on the ministries of war and marine.

Religion and Public Instruction. All religions in France are on a legal equality, every sect being entitled to a grant from the State if its numbers exceed 100,000. But the Roman Catholics form the large majority of the population. Primary education is free and obligatory; it is also admirably

organized. Secondary education is supplied in over 400 schools specially organized for that purpose, with about 100,000 pupils; and there are also many technical schools, such as the Conservatoire des Arts et Metiers at Paris (with 18 evening courses on the applied sciences and social economy), the École des Hautes Études Commerciales, etc.; besides 15 universities. The number of students attending the universities in the faculties of law, medicine, science, letters, pharmacy, etc., was in 1899 26,499. The government appropriation for the year 1900 for instruction and fine arts amounted to \$44,089,545.

Finance. The budget estimates of the revenue of the Republic, including those of Algeria, for 1900 were \$704,626,650, and the estimated expenditures, 704,523,200. The national debt of France, consolidated and floating, amounted, on Jan. 1, 1899, to \$5,989,660,200.

Money, Weights, and Measures. The *Franc* of 100 *centimes* is of the value of 19c U. S. cy., $9\frac{1}{2}d.$ or 25.225 francs to the pound sterling.

Gold coins in common use are 20 and 10 franc pieces. The 20 franc gold piece weighs 6.4516 grammes .900 fine, and thus contains 5.80645 grammes of fine gold. Silver coins are 5, 2, 1, and half franc pieces and 20-centime pieces. The 5-franc silver piece weighs 25 grammes .900 fine, and thus contains 22.5 grammes of fine silver. The franc piece weighs 5 grammes .835 fine, and contains 4.175 grammes of fine silver. Bronze coins are 10 and 5 centime pieces.

There is a double standard of value, gold and silver, the ratio being theoretically $15\frac{1}{2}$ to 1. Of silver coins, however, only 5-franc pieces are legal tender, and of these the free coinage has been suspended since 1876.

The present monetary convention between France, Belgium, Italy, Switzerland, and Greece is tacitly continued from year to year, but may be denounced by any of the contracting States, and, if denounced, will expire at the end of the year, which commences on January 1, following the denunciation. According to its terms, the five contracting States have their gold and silver coins respectively of the same fineness, weight, diameter, and current value, and the allowance for wear and tear in each case is the same.

The monetary system of the Union has been adopted, either wholly or partially, in Spain, Rumania, Bulgaria, Servia, Russia, Finland, and many of the South American States.

Gramme	= 15.43 gr. tr.	Mètre	. . . = 39.37 inches.
Kilogramme	= 2.205 lbs. av.	Kilomètre	. . . = .621 mile.

Tonneau	= 2,205 lbs.	Stère	
Litre, Liquid	= 1.76 pint.	Hectare	. . . = 2.47 acres.
Hectolitre	} Liquid = 22 gallons.	Kilomètre Carré	. . . = 386 sq. m.
		} Dry = 275 bushels	

Defence. The military forces are organized on the basis of laws voted by the National Assembly in 1872, supplemented by further organization laws passed in 1873, 1875, 1882, 1887, 1889, 1890, and 1892. These laws enact universal liability to military service. Substitution and enlistment for money are forbidden, and it is ordered that every Frenchman not declared unfit for military service

may be summoned, from the age of 20 to that of 45 years, to enter the active army or the reserves. By the law of 1882, supplemented by that of 1888, the yearly contingent must serve three years in the active army, six in the reserve, six in the territorial army, and ten in the territorial reserve. The active army is composed of all the young men not otherwise exempted, who have reached the age of twenty; and the reserves of those who have passed through the active army. Neither the active army nor its reserve is in any way localized, but drawn from and distributed over the whole of France. On the other hand, the territorial army and its reserve are confined to fixed regions, determined from time to time by administrative enactments. According to the budget for 1900, the peace strength of the whole French army is composed of 540,405 men, of whom 26,847 are officers. These include the men in the gendarmerie and in the Garde Républicaine. Besides these there is a force in Algeria of 60,102 men (2,309 officers), and in Tunis of 15,968 men (584 officers) — a grand total of 616,475 men (of whom 29,740 are officers).

In addition to this grand total, the territorial army numbers about nine hundred thousand men and officers. Taking into account the various classes of reserves, France has a war force of about two and one-half millions of men at her disposal; and, taking account of the various classes of able-bodied men whose services have been dispensed with, the total number amounts to 4,350,000 trained soldiers.

The French effective navy, in 1898, comprised 19 1st-class, 10 2nd-class, and 7 3rd-class battleships, 14 coast-defence vessels; 13 1st-class, 17 2nd-class, and 10 3rd-class cruisers; 21 torpedo gunboats; and 125 1st-class, 78 2nd-class, and 43 3rd-class torpedo boats; besides a number of submarine boats, completed or building. A large sum (about $22\frac{1}{2}$ million dollars), was in 1899, according to the new navy programme, appropriated for new constructions, and for new armaments and boilers for the older battleships. Among the torpedo craft recently launched is the *Narval*, which is a submersible boat, propelled on the surface by an oil motor, and below water by electricity, while the engine can be used during ordinary flotation for the charging of the electric accumulators.

Products. Of the total area of France (52,921,578 hectares), 8,397,131 hectares are under forests and 36,977,098 hectares under all kinds of crops, fallow and grasses. The production of wine in 1898 amounted to 31,730,000 hectoliters, and the value of the crop of chestnuts, walnuts, olives, and plums was about \$40,220,000. On Jan. 1, 1895, the number of farm-animals in France were: horses, 2,807,042; cattle, 12,879,240; sheep, 20,721,850; pigs, 6,038,372; goats, 1,484,921. Silk culture is carried on in 27 departments, giving employment to 123,288 persons. In 1898 the raw silk exported amounted in value to \$18,066,510; the value of the silk manufactures exported from France into England alone was in 1898 over 62 million dollars.

The mineral and metal products for 1897 were, in tons: Coal and lignite, 30,797,900; pig-iron, 2,484,200; iron ore, 4,582,000; finished iron, 784,000; steel, 1,325,213.

On Jan. 1, 1899, the French mercantile navy consisted of 14,406 sailing-vessels, of 414,673 tons, and with crews, 67,583; 1,209 steamers, of 485,617 tons, and crews numbering 20,627. In 1898, of the sailing-vessels, 150, of 14,824 tons, were engaged in the European seas, and 271, of 178,307 tons, in ocean navigation; of the steamers, 244, of 186,407 tons, were engaged in European seas, and 174, of 269,606 tons, in ocean navigation. The rest were employed in the coasting trade, in port service, or in the fisheries. Of the sailing-vessels and steamers, 13,720 were not over fifty tons.

The total amount of coin put into circulation by France from 1795 till Jan. 1, 1900, was 9,565,473,070 francs gold, and 5,060,606,240 francs silver. The French money coined in 1898 amounted to 218,326,540 francs, of which 1,000,000 francs were bronze.

In 1898 the total imports amounted to \$894,500,000, and the exports to \$702,180,000. The principal articles of import were wine, raw wool, cereals, raw silk, raw cotton, timber and wood, hides and furs, oil-seeds, coffee, coal and coke, fruits, cattle, sugar, woolen, silk, and cotton textiles and flax. The principal articles of export were woolen, cotton and silk textiles, wine, raw silk and yarn, raw wool and yarn, small ware, leather goods, linen and cloth, metal goods (tools), cheese and butter, spirits, sugar, skins and furs, and chemical products.

In 1899 there were 23,576 miles of railroad, including 1,700 miles belonging to the State, and 62,952 miles of telegraph lines in France, and 237 miles of pneumatic tubes in Paris. On Dec. 31, 1899, the length of tramways worked was 2,319 miles.

The following is a list of the Sovereigns and Governments of France, from the accession of the House of Bourbon:

HOUSE OF BOURBON	SECOND REPUBLIC
Henri IV 1589-1610	Provisional Government, Feb.—Dec. 1848
Louis XIII., "le Juste" 1610-1643	Louis Napoleon 1848-1852
Louis XIV., "le Grand" 1643-1715	
Louis XV. 1715-1774	
Louis XVI. (+ 1793) .. 1774-1792	
FIRST REPUBLIC	EMPIRE RESTORED
Convention..... 1792-1795	Napoleon III. (died 1873) 1852-1870
Directoire..... 1795-1799	
Consulate..... 1799-1804	
EMPIRE	THIRD REPUBLIC
Napoleon I. (+ 1821) .. 1804-1814	Government of National Defence 1870-1871
HOUSE OF BOURBON RESTORED	Louis A. Thiers, Pres 1871-1873
Louis XVIII 1814-1824	Marshal MacMahon " 1873-1879
Charles X. (+ 1836) ... 1824-1830	F. J. P. Jules Grévy " 1879-1887
	M. F. Sadi Carnot " 1887-1894
HOUSE OF BOURBON-ORLEANS	Casimir-Perier (June—Jan.) 1894-1895
Louis Philippe (+ 1830) 1830-1848	Félix Faure 1895-1899
	Émile Loubet 1899-

FRANCE, JACQUES ANATOLE THIBAUT, a French poet and novelist; born in Paris, April 16, 1844. He was the son of a bookseller; studied at Stanislas College; devoted his spare time to literary work; became attached to the library of the

Senate in 1876, and wrote for several Parisian journals. In 1868 he published a biographical study of *Alfred de Vigny*, which was followed by *Les Poèmes Dorés* (1873); *Les Noces Corinthiennes* (1876); *Jocaste* and *Le Chat Maigre* (1879); *Le Crime de Sylvestre Bonnard, Membre de l'Institut*, which received the award of the French Academy (1881); *Les Désirs de Jean Servien* (1882); *Abeille* (1883); *Le Livre de Mon Ami* (1885); *Nos Enfants* (1886); *Balthazar* (1889); *Thais* (1890); *Le Lis Rouge* (1893); *Histoire Contemporaine*; *L'Île d'Amour* (1899); etc. He was elected an Immortal in 1896.

FRANCE, LITERATURE OF. See FRANCE, Vol. IX, pp. 637-83.

FRANCESCA. See PIERO DE FRANCESCHI, Vol. XIX, p. 82.

FRANCHISE, a special privilege granted to an individual by the government, whereby rights are conferred which do not belong to the citizens by common right. A very common instance of such grant is the franchise or charter granted by the state to certain persons, authorizing them to engage in business as a corporation. Such method of conducting business cannot be assumed so as to make available the immunities of stockholders of a corporation and the other advantages attaching to this method of transacting business, except by special privilege of the legislature, which is extended by means of a charter. In many states it is unlawful to assume the functions or name of a corporation without a charter. City governments have the power to grant certain franchises within the limits of the city, such as the use of the streets for street-railways, electric wires, drainage, and other purposes of public use. The constitution of the United States forbids Congress or any state to abridge the right of suffrage for any reason of "race, color, or previous condition of servitude"; otherwise the right is regulated by the laws of the several states. In many states a limited right, and in some states the full right, is accorded to women. The states may impose disqualifications, as in case of paupers, criminals, etc.

FRANCILLON, ROBERT EDWARD, an English novelist; born at Gloucester, March 25, 1841; graduated at Trinity Hall, Cambridge, in 1862; and was admitted to the bar at Gray's Inn in 1864. He engaged in journalism in London, was on the editorial staff of the *Globe*, and wrote for *All the Year Round* and other periodicals. His first novel was *Grace's Engagement*, which ran in *Blackwood's Magazine* (1868). His works include *Earl's Dene* (1871); *Pearl and Emerald* (1872); *National Characteristics* (1872); *Olympia* (1874); *A Bad Bargain* (1879); *Queen Cophetua* (1880); *Quits at Last* (1883); *Face to Face* (1884); *King or Knave* (1888); *Fack Doyle's Daughters* (1894); *Ropes of Sand*; *Gods and Heroes*; etc.

FRANCIS I, King of the Two Sicilies; born at Naples, Aug. 19, 1777. After becoming Duke of Calabria in 1799, he succeeded his father, Ferdinand I, in 1825, the latter having consolidated the states under one government, known as the Two Sicilies. Francis, though he had, previous to his accession, made an attempt at constitu-

tional government, proved an oppressive ruler. He died in Naples, Dec. 8, 1830.

FRANCIS II, the last king of Naples, known as "Bombino"; born in Naples, Jan. 16, 1836; succeeded his father, Ferdinand II ("Bomba"), in 1859; and married, in the same year, Marie of Bavaria, sister of the late empress of Austria. He became noted for cruelty to state prisoners and for oppression of his subjects. In 1860 the Sicilians rose in insurrection; Garibaldi defeated the royalist troops in every battle, and Francis fled. He died at Arco, in the Tyrol, Dec. 27, 1894, and was buried there.

FRANCIS, DAVID ROWLAND, an American statesman; born at Richmond, Madison County, Kentucky, Oct. 1, 1850.

DAVID R. FRANCIS.

In 1866 he went to St. Louis and attended the Washington University, where he graduated in 1870. On leaving the university he at once became shipping clerk to Shryock and Rowland; and, seven years later, launched out for himself in the grain commission business, in which he continued, as president of the D. R. Francis and

Brother Commission Company. In 1883 he was elected vice-president of the Merchants' Exchange, and the following year president, after a bitter contest. He entered politics in 1884, when he was delegate-at-large to the national Democratic convention at Chicago, where he was an enthusiastic supporter of Cleveland. Next year he was nominated for mayor on the one hundred and eighty-fourth ballot. He was elected by a majority of thirteen hundred over an opponent who had, four years previously, run up a majority of fourteen thousand. In 1888 he was nominated for governor. The election resulted in favor of Francis, but by a narrow majority. When his term of office had expired, ex-Governor Francis retired from active politics. At the Democratic convention of 1896 he took a decided stand for gold. On the resignation of Hoke Smith from the Cabinet, President Cleveland, on Aug. 24, 1896, announced his choice of ex-Governor Francis to fill the vacant seat, that of Secretary of the Interior. President Cleveland, at the commencement of his second administration, had Francis in view for a Cabinet position, but the opposition in Missouri against the ex-governor was too strong.

FRANCIS, JAMES BICHENO, an American hydraulic engineer; born at Southleigh, Oxfordshire, England, May 18, 1815; emigrated to the United States in 1833; engaged in railway surveys in the East, and in 1834 was engaged in the hydraulic improvements of Lowell, Massachusetts. In 1837 he was appointed chief engineer on the locks and canals on the Merrimack River. He was the originator of many improvements in hy-

draulic works, the results of his experiments being embodied in *Lowell Hydraulic Experiments*, published in 1855, republished in 1868, and again in 1883. He also wrote *The Strength of Cast-iron Columns* (1865); was president of the American Society of Civil Engineers, 1880 to 1881, and was a member of the commission appointed to examine into the Johnstown flood. He died in Boston, Sept. 18, 1892.

FRANCIS, JOHN MORGAN, an American journalist and diplomatist; born at Prattsburg, New York, March 6, 1823; apprenticed to a printer; in 1843 became editor of the *Wayne Sentinel*, published at Palmyra, New York; in 1845 an editorial writer on the *Rochester Advertiser*; and the next year on the *Troy Budget*, of which he became editor and part proprietor. In 1851 he established the *Troy Times*. In 1851-55 he was city clerk of Troy; was a member of the New York constitutional convention (1867-68); was appointed by President Grant United States minister to Greece in 1871, resigning in 1873; was minister to Portugal (1882-84); and to Austria-Hungary (1884-85). Died in Troy, N. Y., June 18, 1897.

FRANCIS, JOHN WAKEFIELD, an American physician and medical writer; born in New York City, Nov. 17, 1789; apprenticed to a printer; graduated at Columbia College in 1809; graduated in medicine at the College of Physicians and Surgeons in 1811; was associated with Dr. Hosack in editing the *American Medical and Philosophical Register*, a quarterly which had an existence of four years. He was professor of materia medica in the College of Physicians and Surgeons; then in Columbia College; and continued professor when these two institutions were united. In 1816 he went to Europe. On his return he resumed his professorial duties at Columbia and then at Rutgers College, an institution formed by the professors of Columbia, who had resigned in a body. Rutgers College was continued until 1830, when it was closed by the legislature. His services were much sought after in all medical, literary and typographical societies. His published works include a wide range of subjects. Among them are *Notice of Thomas Eddy*; *The Anatomy of Drunkenness*; and *Old New York; or, Reminiscences of the Past Sixty Years* (1857, enlarged with a memoir, 1855). He died in New York City, Feb. 8, 1861.

FRANCIS, JOSEPH, an American inventor; born in Boston, March 12, 1801. He early developed a genius for boat-building, receiving a prize from the Massachusetts Mechanics' Institute for a fast rowboat. He furnished lifeboats to the government from his yard in New York City. In this class of boats he made many radical improvements. His "hydrogen lifeboat" was of wood, fitted with copper air-tubes. Later he replaced the wood with iron, and was thus the first to produce a metallic floating vessel. He also had the spaces at the bow and stern made into air-tight compartments. In 1842 he produced the corrugated metallic life-car. The government refused to countenance this design, but he placed a boat,

so constructed, on the coast of New Jersey, near Long Branch, in 1849; and in January, 1850, it was the means of saving 200 persons from the ship *Ayrshire*. This boat is now preserved as a relic in the National Museum at Washington. Mr. Francis invented numerous life-saving devices, which have been adopted by the American and foreign governments. He has received many foreign decorations and medals, as well as diplomas, from life-saving societies abroad. Congress voted him its thanks and awarded him a medal, which was struck in 1888. He published *Life-Saving Appliances* (1885). He died at Cooperstown, Otsego Lake, New York, May 10, 1893.

FRANCIS FERDINAND, of Austria, the heir to the throne of Austria; born at Gratz, Dec. 18, 1863. He is the eldest son of Archduke Charles Louis (brother to the Emperor Francis Joseph of Austria) and the Princess Maria Annunciata, daughter of King Ferdinand II of Naples. He inherited the fortune of his relative, the Grand Duke of Modena, taking the name of Este on doing so. His father became heir presumptive to the throne on the suicide of the Emperor's son, Prince Rudolf, which occurred January 30, 1889. But the Archduke Charles Louis renounced his rights of succession to his son, Francis Ferdinand. The latter, on thus becoming heir to the throne, renounced his fortune and name of Este to his younger brother, the Archduke Otho, who was born April 21, 1865. The Archduke Francis Ferdinand started on a tour of the world in 1892, and was everywhere warmly received, but he is seldom seen in society.

FRANCIS JOSEPH I, Emperor of Austria and King of Hungary; born Aug. 18, 1830, and succeeded to the throne of Austria, Dec. 2, 1848, on the abdication of his uncle, Ferdinand I. In April, 1854, he married the Princess Elisabeth, daughter of Duke Maximilian Joseph of Bavaria. Their son, the Crown Prince Rudolf, born in 1858, married in 1881, the Princess Stéphanie of Belgium, and committed suicide Jan. 30, 1889. The heir presumptive to the throne is

FRANCIS JOSEPH I.

FRANCIS FERDINAND (q.v., above). Francis Joseph, on ascending the throne, promised to govern as a constitutional monarch, but almost immediately dissolved the National Assembly and assumed absolute power. Rebellion in Hungary was put down with the help of Russia, and the Italian provinces were held by the iron hand of Radetsky. The Austrian Emperor remained neutral during the Crimean War. In 1855 he signed a concordat with the pope, giving the clergy full power over education. In 1859 occurred the war with France and Italy, when Francis Joseph took the field in person. The de-

cisive Austrian defeats of Magenta and Solferino led to the treaty of Villafranca, by which Austria lost Lombardy. In the spring of 1864 the Austrians and Prussians combined to rob Denmark of the Schleswig-Holstein duchies, and the quarrel over the spoils led, in June, 1866, to war between Austria and the combined forces of Prussia and Italy. The Seven Days' War, which ended at Sadowa, broke the power of Austria. By the treaty of Prague, Francis Joseph gave up to Italy all Venetia and the fortresses of the Quadrilateral, and surrendered to Prussia the duchies and all claim to control in Germany. In 1865 the Emperor adopted a policy of conciliation toward Hungary, and on June 8, 1867, he was crowned king of that country. A more liberal form of government was granted to the dual monarchy, a civil marriage bill was passed, and in July, 1870, the concordat was suspended. Since that time Francis Joseph has reigned as a constitutional monarch, though his Empire has long been distracted by race-strifes and by the acrimonious struggles of political parties. On Dec. 2, 1898, the Austro-Hungarian people celebrated the jubilee of their monarch's accession to the throne; but to the Emperor the fête was sadly marred in consequence of the tragic death of his wife, by the hand of an assassin-anarchist at Geneva in the previous September.

FRANCO-GERMAN OR FRANCO-PRUSSIAN WAR. See GERMANY, Vol. X, pp. 503-505, 465, 466; and ALSACE, Vol. I, p. 637.

FRANCONIA MOUNTAINS, a cluster of the White Mountains, in Grafton County, New Hampshire, separated from the rest by the White Mountain Notch. The scenery is very fine, and the region is full of beautiful little lakes. The highest point is Mt. LaFayette (5,290 feet).

FRANK, FRANZ HERMANN REINHOLD, a German theologian; born at Altenberg, March 25, 1827. After studying at Leipsic he was appointed a professor at Erlangen. He was noted for his theological works, which include *Die Theologie der Konkordienformel* (1858-65); *System der Christlichen Gewissheit* (1870-73, translated into English and published in 1886); *System der Christlichen Sittlichkeit* (1884-87); *Vademecum für Angehende Theologen* (1892).

FRANKALMOIN. See REAL ESTATE, Vol. XX, pp. 305-307.

FRANKFORT, a city and the capital of Clinton County, central Indiana, 40 miles N. W. of Indianapolis, on four separate railroad lines. It is in a fertile farming region, receives its gas-supply from natural wells, publishes six newspapers, has car-shops, but its principal industries are farming and shipping. Population 1900, 7,100.

FRANKFORT, a city of Marshall County, northeastern Kansas, on the Vermilion River and on the Missouri Pacific railroad, 68 miles W. of Atchison. It is in a grain-raising section, has good water-power, and a manufactory of washing-machines. Population 1900, 1,167.

FRANKFORT, a city of Franklin County, central northern Kentucky, county and state

capital, situated on the Kentucky River (navigable) and on the Kentucky Midland and Louisville and Nashville railroads, 60 miles E. of Louisville. It is in a region noted for its scenery, and has beautiful drives. Its educational institutions include good public schools, a young ladies' seminary, a school for training feeble-minded children and the Kentucky Military Institute. In the neighborhood are raised fine thoroughbred trotting-horses. The manufactories of the town include those of cotton goods, lumber, twine, whisky, pottery, barrels and carriages. Population 1890, 7,892; 1900, 9,487.

FRANKFORT, a village of Benzie County, northwestern Michigan (Lower Peninsula), on Lake Michigan, and on the Ann Arbor railroad, 28 miles N. of Manistee. It is situated in a fruit-growing district, has excellent transportation facilities and a good harbor. It has numerous and large lumber, shingle and planing mills. Its mineral springs, too, have some repute. Population 1900, 1,465.

FRANKFORT, COUNCIL OF. See CREEDS, Vol. VI, pp. 562, 563.

FRANKING PRIVILEGE, a right enjoyed by government officers of sending letters and packages by mail free. The privilege belonged to members of the British Parliament from about 1660 till 1840, and, owing to the high rate of postage, was greatly abused. It was abolished on the establishment of penny postage. In America it was first granted by Congress in 1776, to private soldiers actually in service, and was gradually extended to Senators, members of Congress, secretaries, bureau officers, postmasters, delegates, etc. The matter thus franked covered not only letters and newspapers, but also public documents, executive papers and printed matter, the privilege being practically unlimited. Various partial reforms were, from time to time, attempted by legislation, and on Jan. 31, 1873, an act was passed entirely abolishing the franking privilege. But by act of March 3, 1875, the franking privilege was restored to members of the existing Congress, enabling them to send free the public documents, seeds and reports of the Agricultural Department. By act of Feb. 27, 1877, special stamps were provided, but in March of the same year these were abolished, and official "penalty envelopes" (three hundred dollars penalty for their use for private matter) authorized, in which all public documents might be sent free by Senators, Representatives, the secretary of the Senate and the clerk of the House. In 1879 the use of penalty envelopes was extended to all officers of the government, except pension agents. Special franking privileges were granted to Lucretia R. Garfield, widow of President James A. Garfield, and to Julia D. Grant, widow of Ulysses S. Grant, by which all mail matter carried to or sent by them under their respective written autographs is carried free during their natural lives. By act of Jan. 12, 1895, the franking privilege was further extended to the Vice-President, to all members and members elect of Congress, and to

all delegates and delegates elect to Congress. These may send any mail matter free to any government official, and may send free, to any person, correspondence not exceeding one ounce in weight. But every such letter must have upon the envelope the word *free* and the name and initials of office of the person holding the frank. The frank holds good for Mexico and Canada, but for no other foreign countries.

FRANKLAND, EDWARD, an English chemist; born near Lancaster, Jan. 18, 1825. He was appointed professor of chemistry in Owens College in 1851, Bartholomew's Hospital in 1857, the Royal Institution in 1863, the Royal College of Chemistry in 1865, and the Normal School of Science, South Kensington, in 1881. The latter position he resigned in 1885. He was elected a fellow of the Royal Society in 1853, a corresponding member of the French Academy in 1866, and afterward of other learned bodies. He collected many of his papers in *Experimental Researches in Pure, Applied and Physical Chemistry* (1878), and published manuals, lectures, and works on lighting, sanitation, etc. Died in London, Aug. 13, 1899.

FRANKLAND, PERCY FARADAY, an English chemist, a son of Edward Frankland; born at South Hampstead, Oct. 3, 1858; educated at the Royal College of Science, South Kensington, at Würzburg University and at London University. In 1880 he was appointed demonstrator of chemistry in the Royal School of Mines; in 1889 he came professor of chemistry in University College, Dundee, Scotland, which is now an integral part of the University of St. Andrews. His chief work has been in the chemical and hygienic applications of bacteriology. He demonstrated the efficacy of a sand-filter for water, the result of his experiments being embodied in a paper, *Water Purification: Its Biological and Chemical Basis*, published by the Institution of Civil Engineers. He devoted great attention to the chemical changes effected by micro-organisms, especially in regard to nitrification and denitrification. In 1892 he delivered a course of Cantor lectures, his subject being *Recent Contributions to the Chemistry and Bacteriology of the Fermentation Industries*. In 1894 he was appointed to the chair of chemistry at Mason College. He was the author of *Our Secret Friends and Foes*, published in the Romance of Science Series; *New Micro-organisms Obtained from the Air* (1887); and *Micro-organisms in Water*, a large work produced, in conjunction with his wife, in 1892.

FRANKLIN, a city and the capital of Johnson County, south-central Indiana, 21 miles S. of Indianapolis, on the Cleveland, Cincinnati, Chicago and St. Louis and Pittsburg, Cincinnati, Chicago and St. Louis railroads. It has a college, expensive school buildings, saw-mills and flouring-mills. Population 1890, 3,781; 1900, 4,005.

FRANKLIN, a town and the capital of Simpson County, central southern Kentucky, 51 miles N. of Nashville, on the Louisville and Nashville railroad, in a farming and stock-raising section. It has two colleges (one for men and one for

women), a woolen factory, a tobacco factory, planing and flour mills. Population 1900, 2,166.

FRANKLIN, a town and the capital of St. Mary's Parish, central southern Louisiana, on the Bayou Teche and the Southern Pacific railroad, 85 miles W. of New Orleans. It is in a great sugar belt. Steamers can ascend the river, and the place has good trade facilities; its exports are, mainly, sugar, oranges and cotton. Population 1890, 2,127; 1900, 2,692.

FRANKLIN, a town of southern Norfolk County, eastern Massachusetts, 28 miles S.W. of Boston, on the New England railroad, it contains Deane Academy, a public library, manufactories of pianos, straw, cotton and woolen goods, a canning factory and a foundry. Population 1890, 4,831; 1900, 5,017.

FRANKLIN, a village of northern Merrimack County, central New Hampshire, 24 miles above Concord, on the Boston and Maine and Franklin and Tilton railroads, and at the union of the Pemigewasset and Winnepesaukee rivers, which unite here to form the Merrimack. It has a paper-mill, woolen-mills, machine-shops and wood-working shops. Pop. 1890, 4,085; 1900, 5,846.

FRANKLIN, a village of Warren County, southwestern Ohio, 35 miles N.N.E. of Cincinnati, on the Miami River, and on the Cincinnati, Jackson and Mackinaw and Cleveland, Cincinnati, Chicago and St. Louis railroads, and on the Miami and Erie canal. It has five paper-mills, two wood-pulp mills, and three large tobacco warehouses, besides a few smaller factories. Population 1890, 2,729; 1900, 2,724.

FRANKLIN, a city and the capital of Venango County, northwestern Pennsylvania, situated on the Allegheny River, at the mouth of French Creek, and on the Western New York and Pennsylvania, the Lake Shore and Michigan Central and other railroads. It has oil-refineries, machine-shops, carriage factories, flour-mills, forging-mills, planing-mills, and other industries. The streets are paved and the city has a good system of sewers. Population 1890, 6,221; 1900, 7,317.

FRANKLIN, a town and the capital of Williamson County, central Tennessee, on the Harpeth River, 18 miles S. of Nashville, and on the Louisville and Nashville railroad. It contains a Masonic temple, Tennessee Female College and Harpeth Male Academy; among its business establishments are carriage manufactories, steam cotton-gins, a planing-mill, flour-mills and a furniture factory. Two battles of the Civil War were fought here—April 10, 1863, and Nov. 30, 1864. Population 1900, 2,180.

FRANKLIN, BATTLE OF. After the Chattanooga campaign had ended, and General Grant had been made commander-in-chief of the Federal armies, General Sherman withdrew his army from Hood's front and started upon his march to the sea. Lee was confronting Grant at Richmond, and, to hold all the country which had been wrested from the Confederacy between the Mississippi and Chattanooga, Sherman had left Thomas with a force only slightly exceeding 20,000 men. These

men were scattered at various points in the region indicated, and to operate against them Hood had a force numbering more than twice as many. His army had been reinforced, and the Confederate government was contemplating a move on the Ohio, and an invasion of the territory held by the Union troops. In addition to Hood's army, Kirby Smith had been ordered to bring up his command from west of the Mississippi, in order to force to a successful conclusion this invasion. The value of a Confederate victory at this time would have been particularly great, as it would, it is believed by many, have had the effect of securing an alliance between the French, who were then occupying Mexico, and the Confederate States, if, indeed, it had not secured the co-operation of other European powers. The bulk of Thomas's army under General Schofield, numbering 18,000 men, was strung out in a line 50 miles in length, reaching from Pulaski to Centerville, on Duck River. General Schofield had received instructions from General Thomas, in the event of Hood's attempt to turn his flank, to fight at Columbia; but if the attack was made in another direction, to fight at Pulaski. Between Hood and Nashville the only Union forces were four small cavalry brigades. Thomas's object was to delay Hood until he could concentrate the Union army at some given point and receive reinforcements both of recruits and of the army in Missouri under the command of A. J. Smith. The outlook for the Federal army was very serious, for there was not only a great disparity of numbers, but, on account of the scattered condition of Thomas's troops and the number of important posts to be held, it was a work of great difficulty, owing to the state of the weather and condition of the roads, to move troops to any common point. Hood lay on the south bank of the Tennessee, in command of the crossing at Florence. He advanced to the north bank, and, pushing forward, forced Schofield back on Columbia, and, while feigning a direct attack upon the Union front, threw seven divisions of infantry and a heavy force of cavalry over Duck River, and succeeded in attaining the Union rear. The destruction or capture of the Union army seemed certain, but the errors of Hood's division commanders and the determined resistance of General Stanley's (Federal) command enabled Schofield to fall back upon Franklin, to which point he was directed by General Thomas to retire. After crossing the river, Hood moved at daybreak, with his seven divisions, to Spring Hills, twelve miles in Schofield's rear, and on his line of retreat to Franklin. As Hood entered the place from the west, General Stanley, with one division of the old army of the Cumberland, came up from the south. Schofield's troops were strung out for a distance of twelve miles, and encumbered with wagon trains. Stanley made a gallant fight from early in the afternoon till seven p. m., holding the Confederates in check for seven hours, giving Schofield time to bring up his scattered forces. As night fell, however, matters did not seem improved for the Union

forces, for there were seven divisions of the Confederate army on its front and flank and two in its rear. But, under cover of Stanley's determined stand, the army succeeded in retreating in safety as far as Franklin, where a stand was made, a portion of the Union army facing about, and where was fought one of the most remarkable conflicts of the entire four years. The Union forces were posted in a single intrenched line, with only one brigade in reserve, and with two brigades stationed in the open field, covered by a slight breastwork a third of a mile in front of the main line. Their flanks rested on the Harpeth River, and the intention was to cover the crossing of the trains, and to hold the enemy in check until night should allow the whole force to withdraw under cover of darkness. When Hood's army came up, it was formed in column of attack, and at once moved down in good order and in overwhelming numbers on the Union position. The two advanced brigades were enveloped and brushed away—forced back over the intrenchments, both armies amalgamating in a confused mass. Federal batteries were seized and turned so as to enfilade the Union lines. Fortunately, one of the retreating brigades, as it was driven over the parapet, turned, and, firing a volley upon the Confederates, manned part of the vacated works. Then the reserve brigade was ordered to charge by its immediate commanding officers, and, although suffering fearfully, drove the Confederates at the point of the bayonet back over the works. The Union guns were retaken and turned on the Confederates with fearful effect. Several times did Hood's charging columns endeavor to dislodge the Federals, but in vain, and when night fell upon the scene Hood had lost over seventeen hundred men killed, including five generals, and four thousand wounded, among whom were six generals. The Union loss was stated to be fifteen hundred.

The remainder of the army having crossed the river by this time, the forces which had been engaged in the conflict were, under cover of darkness, withdrawn within the defenses of Nashville, where, a short time after, Hood was totally defeated by Thomas. The date of the battle of Franklin was Nov. 30, 1864.

FRANKLIN, STATE OF. See TENNESSEE, Vol. XXIII, p. 178.

FRANKLIN, THOMAS LEVERING, an American clergyman; born in Philadelphia, April 10, 1822; graduated at Trinity College, Hartford, in 1841; ordained a deacon in the Protestant Episcopal Church in 1844; was on missionary committees in New York state, and active in promoting the building of churches and rectories; filled important pastorates in the church, and, later, had charge of the City Mission, Philadelphia. He founded, in 1866, the Jane Grey School, at Mount Morris, New York, and was its rector from 1866 to 1870. He published *The Creed*, tracts on *Divorce*, and was editor of *The Episcopal Register* for six years.

FRANKLIN, WILLIAM, the last royalist governor of New Jersey; born in Philadelphia in 1729. He was the illegitimate son of Benjamin Franklin,

who, marrying the year after the birth of his son, took the latter into his home and brought him up. In the French war of 1744-48, the son took an active part, and rose to be a captain before he came of age. He then occupied local offices, and accompanied his father to England, where he became acquainted with Lord Fairfax (see FAIRFAX, JOHN CONTEE, in these Supplements), upon whose recommendation he was made governor of New Jersey in 1762. He then became a Tory, and throughout the Revolution remained loyal to his British patrons. The new American government declared him an enemy of the country and put a guard over him. In 1782 he went to England, Great Britain granting him compensation for his losses, and a handsome pension. He died in England, Nov. 17, 1813. See also FRANKLIN, Vol. IX, p. 718.

FRANKLIN, WILLIAM BUEL, an American soldier; born in York, Pennsylvania, Feb. 27, 1823; graduated at West Point in 1843, and was assigned to the corps of topographical engineers. He was brevetted lieutenant for gallantry at Buena Vista, and became captain in 1857. In May, 1861, he was appointed colonel of the Twelfth United States Infantry; received a brigadier-general's brevet in June, 1862, and that of major-general in March, 1865. He became brevet brigadier-general of volunteers in May, 1861, and brigadier-general in July, 1862. He commanded a brigade at Bull Run, and led the Sixth Army Corps through the peninsula. He was engaged at South Mountain, and commanded the left grand division at Fredericksburg, Dec. 13, 1862. Burnside removed him for alleged insubordination, but the President did not approve the order of removal, and Burnside resigned his command. Franklin was given command of the Nineteenth Army Corps, took part in the Red River expedition, and was wounded, April, 1864, and obliged to leave the army. He resigned in 1866 and engaged in the manufacture of firearms. In 1880 he became president of the board of managers of the National Soldiers' Home. He was United States commissioner to the Paris exposition of 1889, and that year received the insignia of grand officer of the Legion of Honor.

FRANKLIN AND MARSHALL COLLEGE, an institution for the higher education of men, situated at Lancaster, Pennsylvania, and controlled by the German Reformed Church. It is a continuation of two older institutions: Franklin College, founded in 1787, at Lancaster, Pennsylvania, and named for Benjamin Franklin, who largely endowed it, and Marshall College, established in 1836 at Mercersburg, Pennsylvania, by the Reformed Church. The two institutions were consolidated in 1852, under the present name. A theological seminary is conducted in connection

GEN. WILLIAM B. FRANKLIN.

with the collegiate course. The endowment of the college in 1895 was about \$490,000 and the

THE ACADEMY, FRANKLIN AND MARSHALL COLLEGE.

income about \$12,000. In 1895 there were 325 students in attendance, with 22 in the faculty and a library of 29,000 volumes.

FRANKLINIA, an old generic name given to *Gordonia pubescens*, a shrub or small tree of Georgia and Florida, of the family *Ternstroemiaceæ*, allied to the camellias and tea-plants. It is much prized as an ornamental evergreen, and for its beautiful, large white flowers.

FRANKLIN ISLAND, off the coast of Knox County, central southern Maine, lies on the west side of the entrance of St. George's River. There is a brick lighthouse at its northern point. Lat. 43° 53' 31" N., long. 69° 22' 10" W.

FRANKLINITE. See IRON, Vol. XIII, p. 287; MINERALOGY, Vol. XVI, p. 386; and ZINC, Vol. XXIV, p. 784.

FRANKLIN LAKE, in Elko County, north-eastern Nevada, on the east side of the East Humboldt Mountains. It is nearly fresh, very shallow, and has no outlet. The tule (*Scirpus validus*) grows abundantly in the lake.

FRANKLINVILLE, a village of Cattaraugus County, southwestern New York, on the Allegheny River, and on the Western New York and Pennsylvania railroad, 42 miles S. S. E. of Buffalo. It is the center of a large dairying district; has a coffin factory, saw and grist mills, a creamery and canning factory. The village has city water and electric lights. Population 1890, 1,021; 1900, 1,360.

FRANK-MARRIAGE. See SETTLEMENT, Vol. XXI, p. 694.

FRANK-PLEDGE, a custom prevailing in England before the Norman Conquest, whereby the freemen of a neighborhood were responsible for the good conduct of each other. Ten men formed an association, called a tithing, in which the ten were answerable each for the others, so that if one committed an offense, the other nine were liable for his appearance to make reparation. Should the offender abscond, the members of the tithing, if unable to clear themselves from participation in the crime, were compelled to make good the penalty.

FRANKS, SIR AUGUSTUS WOLLASTON, English archæologist; born at Geneva in 1826; graduated

at Trinity College, Cambridge, in 1849. In 1851 he entered the service of the British Museum; and in 1866-96 was keeper of the department of British and Mediæval antiquities and ethnography. He presented to the Museum his unique collection of Chinese and Japanese porcelains and pottery, and his specimens of Italian majolica and other wares. He was regarded as one of the greatest authorities on the arts of the Renaissance and Oriental ceramics, and was president of the Society of Antiquaries. He published *Ornamental Glazing Quarries* (1849); *Recent Excavations and Discoveries on the Site of Ancient Carthage* (1860); edited *Horæ Ferales*, by J. M. Kemble (1863); *Japanese Pottery* (1880). Died in London, May 21, 1897.

FRANZ, ROBERT, a German composer; born at Halle, June 28, 1815; studied under Schneider at Dessau, and in 1843 published a set of twelve songs which won the warm praises of Schumann, Mendelssohn, Liszt and other masters. He was organist of a church at Halle, and was very active in the department of church music. He was also professor in the Conservatory of Music, and conducted large concerts. He published over 250 songs for single voices, a Kyrie, and several chorals and four-part songs, besides arrangements of the masterpieces of Bach and Handel. In 1877 he was obliged by deafness to give up his various positions, and to discontinue his musical work. He died in Halle, Oct. 24, 1892.

FRANZOS, KARL EMIL, a German author; born, of Jewish parentage, Oct. 25, 1848. His chief power as a writer lay in ethnographical description, especially in the form of romance. His works have been translated into almost every European language. The translations of *The Jews of Barnow* and *A Fight for the Right* attracted special attention in England.

FRASER, ALEXANDER, a British artist, was born in 1827, at Woodcockdale, near Linlithgow. Early showing a taste for art, he received his first instruction from his father, an able amateur. His first appearance in the Scottish Academy Exhibition was with a figure-picture, *A Gipsy Girl in Prison*. But he soon abandoned the figure for landscape. Among his works of this class are *The Margin of the Forest*; *In Glen Arnan*; *Trout Stream in the West Highlands*; etc.

FRASER, ALEXANDER CAMPBELL, a Scottish metaphysician; born at Ardchattan, Argyleshire, Sept. 3, 1819, and educated at the universities of Glasgow and Edinburgh. He became a Free Church minister; from 1850 to 1857 he was editor of *The North British Review*; in 1856 succeeded Sir William Hamilton in the chair of logic and metaphysics at Edinburgh University; and in 1859 became dean of the faculty of arts. In 1856 he published *Essays in Philosophy*. His edition of Berkeley's works, in four volumes, with dissertations and annotations, a life of the bishop and an account of his philosophy was issued by the Clarendon Press in 1871; *Selections from Berkeley* in 1874; and in 1881 his monograph on *Berkeley* was published in Blackwood's Philosophical Classics, to which series he also contributed *Locke*

(1889). The article on JOHN LOCKE, in this ENCYCLOPÆDIA, was written by him.

FRASER, CHRISTOPHER FINLAY, a Canadian politician; born in Brockville, Ontario, in 1839; admitted to the bar in 1865, entered the legislature of Ontario in 1872; was provincial secretary and registrar; and in 1874 became commissioner of public works.

FRASER, DONALD, a Scotch Presbyterian minister; born at Inverness, Scotland, Jan. 15, 1826; graduated at Aberdeen University in 1842; studied theology at Knox College, Toronto, Canada, and at New College, Edinburgh; was Presbyterian minister at Montreal from 1851 to 1859; at Inverness, Scotland, from 1859 to 1870; and Marylebone Church, London, 1870. He was the author of *Leaves from a Minister's Portfolio* (1858); *Synoptical Lectures on the Books of Holy Scripture* (1886); *The Church of God and the Apostacy* (1872); *Thomas Chalmers* (1881); *The Speeches of the Holy Apostles* (1882); *Metaphors in the Gospels* (1885); *Sound Doctrine* (1892).

FRASER, JAMES, an English bishop; born at Prestbury, near Cheltenham, in 1818; died Oct. 22, 1885. He graduated at Lincoln College, Oxford, in 1839, and in 1840 was elected to a fellowship at Oriel. Ordained in 1846, he held the living of Cholderton, Wiltshire, from 1847 to 1860, and that of Ufton Nervet, near Reading, from 1860 to 1870. In 1870 he was consecrated bishop of Manchester. He was, for some years, commissioner of education, and published valuable reports on elementary education in England, on the educational systems of the United States and Canada, and on the employment of children. He also published a number of sermons, and two volumes appeared posthumously (1887).

FRASER, SIMON. See LOVAT, LORD, Vol. XV, p. 27.

FRASER, THOMAS RICHARD, an English medical scientist; born at Calcutta, Feb. 5, 1841; graduated at the University of Edinburgh in 1862; next year was appointed assistant to the professor of materia medica in that university; and, after various medical appointments, succeeded to the chair, on the death of Sir Robert Christison in 1877. In 1878 he became professor of clinical medicine, and in 1880 dean of the medical faculty. His activity has lain chiefly in the direction of investigating the physiological effects of medicinal substances, with the object of establishing accurate procedure in the treatment of disease. The results of his researches have been published in scientific journals, the titles of some of them being *Characters, Actions and Therapeutic Uses of Physostigma Venenosum* (1863); *The Physiological Action of Physostigma* (1866); with Professor Crum Brown, *On the Connection between Chemical Constitution and Physiological Action* (1868); *Researches on the Antagonism between the Actions of Physostigma and Atropia* (1870); *The Dyspnea of Asthma and Bronchitis: Its Causation and the Influence of Nitrites Thereon* (1887); *Strophanthus Hispidus: Its Natural History, Chemistry and Pharmacology* (1889); etc.

FRASER RIVER. See COLUMBIA, BRITISH, Vol. VI, p. 169; and PACIFIC OCEAN, Vol. XVIII, p. 116.

FRATERNAL INSURANCE SOCIETIES. See FRIENDLY SOCIETIES, Vol. IX, pp. 780-785; and BENEFIT SOCIETIES, in these Supplements.

FRATERNITY OF MODERN WOODMEN. See BENEFIT SOCIETIES, in these Supplements.

FRATTA-MAGGIORE, a town of central Campania, southern Italy, 6 miles N.W. of the city of Naples, has extensive rope-works, and furnishes great quantities of strawberries, also silkworms. Population, 10,800.

FRAUDS, STATUTE OF. The English statute known as the Statute of Frauds has been enacted, as to most of its provisions, in almost every state of the United States. The object of the statute is to require that contracts of certain kinds, or some memorandum thereof, shall be made in writing, so that the great opportunities which were formerly open for the practice of fraud concerning such contracts shall be avoided. This statute has been fully discussed and carefully considered in all its details by the courts in the various states of the United States, and by the English courts. The effect of the statute is very beneficial. See FRAUD, Vol. IX, p. 726.

FRAUDULENT CONVEYANCES, such conveyances as are made with the intent to avoid some duty, and which have the effect or tendency to defraud another. Thus when one makes a voluntary conveyance, or one without valid consideration, of all his estate, or sufficient thereof, to defeat or delay his creditors, the conveyance will be considered fraudulent, and will be set aside at the suit of a creditor, and such estate held to the payment of debts. In the United States it is generally held that a conveyance made upon a good consideration, that is, love and affection, and the like, will be held valid as between the parties and as to creditors whose debts were incurred subsequent to the conveyance and with notice thereof, but will be set aside as to subsequent creditors without notice of the conveyance at the time of extending the credit, and as to all creditors whose claims were incurred prior to the conveyance. In many states conveyances made for a valuable consideration are considered fraudulent, if the consideration is wholly inadequate, and the purchaser will be held for the balance of the value of the estate. Fraud will generally be presumed when no valuable consideration passes, and sufficient property is not retained with which to pay all debts. The English statutes on this subject have been extensively adopted throughout the United States, and many decisions have been rendered by the courts in both countries concerning them. See FRAUD, Vol. IX, p. 726.

FRAXINELLA, the common name of *Dictamnus Fraxinella* or *D. alba*, a plant of the family *Rutaceæ*, native of southern Europe and cultivated for ornament. It is an herb with woody base, with ash-like leaves, terminal clusters of large purple or white flowers, and the whole plant with a strong aromatic fragrance.

FRAZER, JOHN FRIES, an American scientist; born in Philadelphia, July 8, 1812. He acted as laboratory assistant to Prof. Alex. D. Bache, and was afterward connected with the Pennsylvania survey. He studied medicine and law, and in 1844 he became professor of chemistry and natural philosophy in the University of Pennsylvania, with which he was connected until his death. From 1850 to 1866 he edited the Franklin Institute *Journal*. He was a member, secretary and vice-president of the American Philosophical Society, and one of the original members of the National Academy of Sciences. He died in Philadelphia, Oct. 12, 1872.—His son, **PERSIFOR FRAZER**, also a chemist, was born in Philadelphia, July 24, 1844; served in the United States army and navy during the Civil War, and in 1869 became connected with the United States Geological Survey. In 1870 he was appointed professor of chemistry in the University of Pennsylvania, and later held a similar position in the Franklin Institute. In 1882 he received the degree of doctor of sciences from the University of France. He was a member of many home and foreign scientific societies.

FRAZIER'S FARM, BATTLE OF, occurred during the Civil War in the United States, June 30, 1862. Early in the morning, the army of the Potomac, under McClellan, crossed White Oak Swamp, in the eastern portion of Henrico County, Virginia, while a part of the army in advance had reached the James River. The Confederates, under Generals Jackson and Longstreet, in two columns, had designed and endeavored to intercept McClellan, who was advancing along the Quaker Road. Longstreet hastened along, but found, when he reached the junction of the Quaker and Newmarket roads, that the enemy was there in possession. Longstreet, anxious to pierce McClellan's line, without waiting for Jackson, attacked McCall's division. He failed in his design, though the attack was made with great impetuosity. McClellan reached Malvern Hill, and was able to re-establish communication with the James River the next day.

FRECHETTE, LOUIS HONORÉ, a Canadian journalist; born in Quebec, Nov. 16, 1849. He was for many years connected with the press of Canada. He resided in Chicago from 1866 until 1871; returned to Canada, and was elected in that year to the Dominion Parliament for the county of Levis. In 1884 he became chief editor of *La Patrie*, Montreal. He is known as a graceful poet. His two volumes, *Les Fleurs Boréales* and *Les Oiseaux de Neige*, were "crowned" by the French Academy in 1880. Among his other works are, poems: *La Voix d'un Exilé* (1869); *Pêle-Mêle* (1877); *La Légende d'un Peuple* (1887); *Les Feuilles Volantes* (1892); prose: *Lettres à Bastille* (1871); *Histoire Critique des Rois de France* (1893); *Lettres sur l'Éducation* (1893); and *Vieux Cartons* (1893).

FRECKLES. See ANATOMY, Vol. I, p. 897.

FREDEGARIUS. See NARSES, Vol. XVII, p. 234, note.

FREDERIC, HAROLD, novelist and journalist; born in Utica, N. Y., Aug. 19, 1856; received a grammar-school education, and at the age of 12 went to work upon a farm. In 1876 he became a proofreader on the *Utica Observer*, and in 1882 was called to the editorship of the *Albany Journal*. In 1884-98 he was the London correspondent of the *New York Times*, a position which he filled with signal ability. He wrote *Seth's Brother's Wife* (1887); *The Lawton Girl* (1890); *In the Valley* (1890); *William II* (1891); *The Young Emperor* (1892); *The New Exodus: A Study of Israel in Russia* (1892); *The Return of the O'Mahony* (1892); *The Copperhead* (1893); *Marsena* (1894); *The Damnation of Theron Ware (Illumination)* (1895); *March Hares* (1896); *Gloria Mundi* (1898); *The Deserter, and Other Stories* (1898); *The Market Place* (1899). Died at Henley, Eng., Oct. 19, 1898.

FREDERICK, a city and the capital of Frederick County, north-central Maryland, 32 miles N.W. of Washington, on the Pennsylvania and Baltimore and Ohio railroads. The surrounding country is fertile and hilly, and has copper and iron mines and slate and limestone quarries. It has two seminaries for women, Frederick College (founded 1797), and a state deaf and dumb asylum. Near here are two battlefields, Monocacy and South Mountain. In Mount Olivet cemetery is buried Francis S. Key, who was a native of the county. Its industries are shipping, canning, lumber, planing and tanning and the manufacture of coaches, shoes, flour, hose and spokes. Population 1890, 8,193; 1900, 9,296.

FREDERICK, EMPRESS. See FREDERICK III, below, in these Supplements.

FREDERICK III, King of Prussia (Frederick I of Germany), familiarly known as "Unser Fritz" while he was the Crown Prince of Prussia. He was the son of Emperor William I of Germany, and was born at Fötsdam, Oct. 13, 1831. He was an interested witness of the scenes of the revolution of 1848, and it is more than probable that to the influence exerted by these scenes was due his liberal spirit in after years. In 1861 his father ascended

FREDERICK III.

the throne of Prussia as William I, and he was at that time a general in the army, having, all through his life, been the subject of thorough military training. He had previously married (in 1857) Princess Victoria Adelaide (born Nov. 21, 1840), the eldest daughter of Queen Victoria of England. The issue of this marriage was seven children, the eldest being the present Emperor William II, who was born in 1859. Frederick took part in the war of 1866 between Denmark and the coalition of Prussia and Austria, and also commanded one of the armies of invasion in the subsequent war between Austria and Prussia, and took a leading part in the decisive

battle of Sadowa. During the Franco-Prussian war of 1870 he commanded the army corps which invaded France through the territories of Alsace and Lorraine, and for his distinguished services he was made field-marshal general, the highest military dignity known to the Prussian service. After the war was over he returned to Berlin and was engaged in civil duties, assisting his father in the administration of the affairs of the empire (of which he had become, by the crowning of his father as Emperor, the Prince Imperial), and at this period of his life spent considerable time in foreign travel. He was not in sympathy with the extreme policy of Bismarck, but their amicable relations suffered no serious interruption. In his domestic relation he was plain, unostentatious, a good husband and a kind father, and although his entire life had been spent in the midst of soldierly and military surroundings, he was disinclined to war and was an ardent advocate of peace. He was universally beloved for his sterling qualities, and, during his last illness, was the object of more sympathy and tender solicitude than it had ever before been the lot of any sovereign to receive. In March, 1888, on the death of his father, the Emperor William I, he ascended the imperial throne, and his brief reign of three months has a melancholy interest on account of his sufferings, borne with such heroic fortitude. He was never formally crowned, on account of his physical inability to undergo the fatigue incident to the ceremony, and he died at Berlin, June 15, 1888.

FREDERICK CHARLES NICHOLAS, a prince and field-marshal of Germany; born in Berlin, March 20, 1828; and died June 15, 1885. He was the eldest son of Prince Charles, brother of the Emperor William I. Frederick Charles entered the Prussian army when a boy, served in the first Schleswig-Holstein war, commanded the right wing in the second Danish war, and defeated the Austrians at Königgrätz in 1866. He commanded the Second Army Corps in 1870, drove Bazaine back into Metz, and received the surrender of that fortress, Oct. 27, 1870. Thence he marched on Orleans, which he captured, defeated General Chanzy at Le Mans, and broke up the army of the Loire. He was known as the "Red Prince," from the fact that he always wore a red hussar uniform. His daughter, Louise Margaret, married the Duke of Connaught, son of Queen Victoria, in 1879.

FREDERICK HENRY ISLAND, a Dutch island off the southwestern coast of Papua, and separated from it by Dourga Strait. Lat. 8° S., long. 138.5° E. Area, about 400 square miles. The population is very small.

FREDERICKSBURG, the county seat of Gillespie County, southern central Texas, 85 miles W. of Austin, on a tributary of the Colorado River. It has flour and saw mills, an ice factory, cotton-gins and a flourishing trade in corn and wheat. It is high and healthful in situation. Population 1890, 1,532.

FREDERICKSBURG, BATTLE OF. After the battle of Antietam, the sentiment of opposition

in the North to General McClellan, who had failed to follow up the advantages (barren though they were) resulting from that battle, culminated in his dismissal, and subsequent supersession by Gen. A. E. Burnside as commander of the army of the Potomac. Although General Burnside had announced his incapacity for the command of so large an army, he was forced to accept, and December, 1862, found him encamped on the north bank of the Rappahannock River, with his headquarters at the Lacy House, in Stafford County. Lee's army lay on the south bank, some distance from the town of Fredericksburg, but on the first intimation that Burnside was about to attempt to cross the river he promptly advanced to the town and massed his army on the hills which surround the town in a crescent shape, the convexity, pointing to the town, being occupied by the center of Lee's army, while the left, which receded to the southwest, was held by Longstreet. Jackson held the right with 30,000 men, with Stuart on his extreme right guarding Hamilton's Crossing—a point on the range surrounding the town, which could only be approached from the river by crossing the Richmond, Fredericksburg and Potomac railroad and the narrow-gauge railroad cut—these two features of the surface of the country adding to the natural strength of the position of the Confederate army on the right. General Burnside determined to cross the river and assault Lee's army, despite the fact that valuable time had been lost by him, and Lee had had time to render his position impregnable. His division commanders and subordinates, generally, it is claimed, tried to dissuade him from making so rash an attempt, but all to no purpose. On November 7 he commenced his attempts to lay a pontoon bridge at the west end of the town, over the river, at a point between the cotton-mills, on the south bank of the river, and the Falmouth Heights, on the north. Sharpshooters in the town, however, prevented the accomplishment of this scheme, thus giving Lee additional time to perfect his arrangements, and it was not until a force had been sent across the river (at the suggestion of General Hunt), which cleared the town of Confederates, that the laying of the pontoons was successfully accomplished. In the mean time the town had been severely bombarded by the Federal batteries on Falmouth Heights, but all to no avail, so far as dislodging the Southern sharpshooters was concerned. Another bridge was simultaneously thrown over the river, at Hamilton's Crossing, to the east of the town, and then the assaulting army—divided into three divisions, under the command of Sumner, Hooker and Franklin—crossed the river and advanced on Lee's position. The crossing occupied two days, and on Dec. 13, 1862, under the cover of a dense cloud of fog and drizzle, the battle was begun.

The town of Fredericksburg lies, as has been before incidentally mentioned, at the foot of a low, crescent-shaped ridge, which rises from the rear or southern portion of the corporate limits with some abruptness, and then stretches out into

a broad table-land, extending far to the south and west. On the extreme left of Lee's army lay the Rappahannock, while on the extreme right was Hazel "run"—a small creek, or "branch," as it is called in the Southern country. Immediately in front of Lee's center lay the town, between which two points was a canal full of water, and south of the canal was a roadway winding along the side of the hill, and along the side of this road ran a stone wall or fence, behind which was posted a strong body of Confederates. To the rear of this wall, and on the top of the hill, at this point called Marye's Heights, was massed a heavy force of Confederate artillery.

Sumner and Hooker led their divisions over the pontoons on the Confederate left, while Franklin, on whom devolved the opening of the battle, crossed on the lower or eastern pontoon, and began the attack by assaulting Jackson, his men having to charge up the slope and across the railroad tracks in the face of a murderous fire. They made a gallant fight, but flesh and blood could not stand the terrific storm they encountered. The artillery of the Southern army was so stationed that it could fire over the heads of its own infantry with terrible effect, while the Union army was almost entirely deprived of the use of its artillery, the danger to their own men by its use being far greater than that to which the enemy was exposed from their fire. At the same time, the Confederate infantry, being in a position almost impregnable, had no hard task to repel the assaults which were repeatedly made by the Union forces. Meade led the charge of Franklin's division, and although he put forth almost superhuman efforts and received reinforcements, it was of no avail; nothing could be accomplished, and after having thousands of his men slaughtered, he withdrew from the fight, having accomplished nothing and lost the flower of the Federal army. On the center the slaughter of the Union troops was terrible. Sumner's division deployed through and to the west of the town, and advanced against the position held by Pickett's men. In their course they had to charge over the canal and then up a long incline to the top of the hill. About half way up the hill they encountered the fire from the troops behind the wall mentioned before. Division after division was thrown against this point, and men were mown down like grass before the sickle. One brigade,—the Irish brigade of Meagher,—in particular, suffered severely. These brave men were again and again ordered to charge and dislodge the Confederates behind the stone wall, the artillery, in the mean time, playing on them in one continuous fire. The task was hopeless, and after three fourths of the troops so engaged had been killed, the order was given to desist. When the day was over it was found that the Federals had lost over 14,000 men, while the Confederate loss had been only about 5,000.

On the next day Burnside proposed to renew the assault, and it was only at the earnest solicitations of his subordinates that he desisted.

Shortly after this battle he was, at the unanimous request of his generals of division, removed from command, and General Hooker was made his successor. Everything taken into consideration, this battle is one of the most remarkable fought during the entire course of the war. It has long been a bone of contention among the military authorities as to the circumstances which led Burnside to determine to give Lee battle under these conditions. He certainly could not have hoped to carry a position so strong as was that of the Confederate commander, and the whole affair is enshrouded with an air of mystery.

FREDERICKTOWN, a town, the capital of Madison Co., Mo., 105 miles S. of St. Louis. The famous Mine la Motte lead-mines are in the vicinity. Pop. 1890, 917; 1900, 1,577.

FREDERICK WILLIAM, Grand Duke of Baden; born at Karlsruhe, Sept. 9, 1826; succeeded his father as regent in 1852, and assumed the title of Grand Duke in 1856. On Sept. 20, 1856, he married Louise, the only daughter of William I of Prussia. He assisted Prussia materially in the war of 1870-71. In 1855, by his order, the Jesuits were excluded from the duchy.

FREDONIA, a city, the capital of Wilson Co., Kan., 105 miles S. of Topeka, in an agricultural and stock-raising district, which also produces limestone, slate, building-stone, fire-clay, and coal, and has a salt spring. Pop. 1900, 1,650.

FREDONIA, a village of Chautauqua Co., N. Y., 3 miles from Lake Erie; has been lighted by natural gas for over 40 years; has water-works, a state normal school, built by the village, costing \$100,000, an academy established in 1824, a carriage factory, and felt-pad factory. Grape-cuttings and garden-seeds are raised for sale. The first Patrons of Husbandry grange was organized here. Pop. 1890, 3,399; 1900, 4,127.

FREDRIKSHALD, a picturesque seaport town in Smaalene province, Norway, on the Idde fjord, 57 miles S. S. E. of Christiania; famous for its fortress Fredriksteen, at the siege of which Charles XII of Sweden was killed, Dec. 11, 1718. Has sugar-refining, linen, and tobacco factories, and trades in lumber and iron. Pop. 1891, 11,217.

FREDRIKSTAD, a town in Smaalene province, Norway, at the mouth of the Glommen, 48 miles S. of Christiania; was formerly a fortress; manufactures nails and exports timber. Pop. 1891, 12,451.

FREE BAPTISTS. See **BAPTISTS IN THE UNITED STATES**, in these Supplements.

FREEBENCH. See **BENCH**, Vol. III, p. 556.

FREEBERG, a village of Snyder Co., Pa.; has a musical college; the chief industries of the vicinity are farming and ore-mining.

FREE CHURCH OF ENGLAND, a Protestant Episcopal organization, founded in 1844, and enrolled in chancery, in England, in 1863, "originated as a counteracting movement to the Oxford Tractarians." It is free from state control, and therefore claims the liberty of entering a parish where ritualistic practices prevail and establishing a liturgical service, on the basis of the evangelical party in the national church, with which

its ritual is practically identical. It is governed by convocation and bishops consecrated, in the line of the Canterbury succession, by the Right Rev. Bishop Cummins, who founded the Reformed Episcopal Church of America in 1873, when he resigned his connection with the Protestant Episcopal Church, while claiming, on its own grounds, the indelibility of his orders. See REFORMED EPISCOPAL CHURCH, in these Supplements.

FREE CONGREGATIONS. See GUSTAVUS ADOLPHUS UNION, Vol. XI, p. 335.

FREEDMAN. See SLAVERY, Vol. XXII, p. 133.

FREEDMEN'S BUREAU, a bureau of the War Department in the United States, established by act of March 3, 1865, to look after the needs growing out of the abolition of slavery. To meet the grave questions raised by this state of things, the act gave the bureau the management of confiscated or of abandoned lands, and of all matters relating to freedmen and refugees in any district under the jurisdiction of the army. The bureau was in charge of a commissioner, who was appointed by the President and confirmed by the Senate, Gen. O. O. Howard receiving the appointment. The powers of the bureau were afterward enlarged to embrace "the care of all refugees and freedmen so far as to enable them to become practically self-supporting United States citizens." The Freedmen's Bureau was but a temporary expedient, closing in 1869 with its temporary need. Its educational work was continued until 1870. During its existence the expenditures of the bureau were about \$8,000,000, or including the bounty and prize-money secured for the freedmen, the total amount handled exceeded \$20,000,000.

FREEHOLD, a town and the capital of Monmouth County, central New Jersey, 24 miles E. of Trenton, on the Pennsylvania and Jersey Central railroads. It has machine-shops, a planing-mill, iron foundry, and an underwear factory employing four hundred persons. It has modern city conveniences, electric and gas lights, water from an artesian well, and sewers. It has a fine monument, erected in 1884 to commemorate the battle of Monmouth, July 28, 1778. Population 1890, 2,932; 1900, 5,254.

FREE-LANCES, roving companies of knights and men-at-arms, who, after the Crusades had ceased to give them employment, wandered from state to state, selling their services to any lord who was willing to purchase their aid in the perpetual feuds of the middle ages. They played their most prominent part in Italy, where they were known as *Condottieri*.

FREELAND, a village of Luzerne County, northeastern Pennsylvania, 15 miles S. of Wilkesbarre, on the Lehigh Valley railroad. The surrounding country, of which it is the shipping and business center, is devoted to agriculture and mining. Its industries are lumber-planing and machine-making. It is supplied with electricity and city water. Population 1900, 2,394.

FREEMAN, EDWARD AUGUSTUS, a British historian, regius professor of modern history at Oxford, was born at Harborne, Staffordshire, England, Aug. 2, 1823, and died in Alicante, Spain, March 16, 1892. He was elected scholar of Trinity College, Oxford, in 1841; fellow, in 1845; filled the office of examiner in the School of Law and Modern History in 1857-58, and again in 1863-64, and in the School of Modern History in 1873. He was created honorary D.C.L.

EDWARD A. FREEMAN.

by the University of Oxford at the installation of the Marquis of Salisbury in 1870, and honorary LL.D. by the University of Cambridge in 1874. He was the recipient, also, of many other honorary degrees from Continental universities; had conferred upon him a number of knightly orders and decorations; in 1877 had the distinction paid him of being made honorary member of the Imperial University of St. Petersburg, and was corresponding member of the Historical Society of Massachusetts. He wrote much on historical, parliamentary and architectural subjects, and contributed largely to periodicals on cognate topics. He was a Liberal in English politics, and in 1868 contested Mid-Somerset in that interest in the House of Commons, but without success. In 1884 he became regius professor of modern history at Oxford, and the recognized leader, among English historians, of what is termed the Teutonic school of English historical writers, which makes much of Teutonic influence as an element in the life and thought of the English people. He was also a stickler, to an almost pedantic extent, for the truth of history, and was unsparing in his denunciation of picturesque historical writing, such as characterized the work of James Anthony Froude, his successor in the chair of modern history at Oxford. Though himself learned and accurate as a writer, and influenced in his labors by high ideals, Freeman lacked the insight and breadth of view possessed by some historians who had not his industry and extent of knowledge. Though a voluminous writer on historical subjects, he will remain best known by his monumental work, in five volumes, which appeared during the years 1867-76, on the *History of the Norman Conquest*. Much less ambitious, though for educational purposes equally important, works are his *Old English History* (1869) and his *General Sketch of European History* (1872). Valuable, also, are his Rede lectures, delivered at Cambridge in 1872, on *The Unity of History*, his treatise on the *Growth of the English Constitution* (1872), and his *Historical Geography of Europe* (1881). The more important of his other works are four series of *Historical Essays* (1872-82); *The Reign of William Rufus and Henry I*

(1882); *Comparative Politics* (1873); *English Towns and Districts* (1883); *History of Sicily* (1891-92); *William the Conqueror*, in the Twelve English Statesmen Series; and *Sicily: Phœnician, Greek and Roman*, in the Story of the Nations Series. Besides these works, Dr. Freeman published a number of lectures on historical, antiquarian and topographical subjects, including *Lectures to American Audiences* (1883); a study of *George Washington* (1888); a quasi-political work on the Church of England, *Disestablishment and Disendowment* (1874); *Studies of Travel in Greece and Italy* (2 vols.); *Some Impressions of the United States* (1883); *Greater Greece and Greater Britain* (1888); *The Ottoman Power in Europe* (1877); and *Methods of Historical Study* (1886). His writings on architecture embrace a work on *Church Restoration* (1846); a *History of Architecture* (1849); *Window Tracery in England* (1850); *Llandaff Cathedral* (1851); and *Historical and Architectural Sketches*, chiefly Italian (1876). *The Life and Letters of Prof. E. A. Freeman*, edited by W. R. Stephens, dean of Winchester (2 vols.), appeared in 1894.

FREEMAN, JAMES, an American Unitarian clergyman; born in Charlestown, Massachusetts, April 22, 1759. He was educated in the Episcopal Church, but adopted Unitarian tenets, and was the first American minister of that persuasion, his church, called the "King's Chapel," the oldest Episcopal Church in Boston, becoming the first Unitarian Church in New England. Harvard made him D.D. in 1811. He died at Newton, Massachusetts, Nov. 14, 1835.

FREEMAN, JAMES EDWARD, an American artist; born in Nova Scotia in 1808; died in England in 1884. He became an associate of the National Academy of Design in New York in 1831 and an academician two years later. He painted principally portraits and *genre* pictures. Among his works are *The Beggars*; *The Savoyard Boy in London*; *Young Italy*; etc. He published, in London, a *Portfolio of Italian Sketches*.

FREEMAN, JAMES MIDWINTER, an American clergyman and author; born in New York City, Jan. 29, 1827; was graduated at the Wesleyan University in 1866, and became a pastor in the Methodist Episcopal Church. In 1872 he was appointed editor and secretary of the Methodist Episcopal Sunday School Union and Tract Society. Besides his books for young people, he published *Hand-Book of Bible Manners and Customs* (1874); *The Use of Illustrations in Sunday School Teaching*; *A Short History of the English Bible* (1879); *Book of Books* (1880); etc.

FREEMANTLE, a town and the chief port of Western Australia, at the mouth of Swan River, at lat. 32° 3' S. It is 10 miles S.W. of Perth, and has daily steamboat connections with it. Its harbor is as yet but an open roadstead, but improvements are projected. Population, 5,600.

FREE METHODISTS, a sect originated in 1860, at Pekin, New York, by friends of two ministers expelled at the Genesee conference. The sect disclaims episcopacy. It has, however, an elective

superintendent, who serves four years. Congregational singing, without the aid of instrumental music, is enforced. Free seats in the church are maintained; extempore preaching is the rule, and quiet apparel and plain living are cardinal virtues; while the doctrine of Christian perfection is insisted upon. The churches number over 950, and the membership, mostly in western New York, Illinois and Michigan, about 23,000. The members maintain a journal, *The Free Methodist*, published in Chicago.

FREE PORT, a port at whose wharves the vessels of all nations can load and unload free of customs duties and commercial charges, with the exception of the usual harbor dues. A free port is thus, from the commercial point of view, an open harbor, in contradistinction to one that is closed to all vessels except those of the country in which it is situated, and from the administrative point of view, financially a foreign territory within the state to which it politically belongs. In the middle ages free ports were established for the purpose of attracting trade to particular maritime centers, especially by Italy, France, Spain, Austria and Portugal, at the period when the exploitation of their colonies for the benefit of the mother-country was the ruling principle in the commercial policy of those states. At the end of the eighteenth and the beginning of the nineteenth century free ports acquired a position of peculiar importance during the years in which prohibitive and protectionist measures were in force. Since then, however, they have decreased both in importance and in number. At the present time their chief use is that of *entrepôts* for facilitating the more convenient interchange and distribution of commodities destined for more or less distant markets. To all intents and purposes, their utility has been destroyed by the rival system of bonded warehousing, which has always prevailed in England and the United States in preference to the other system. In 1889 the only free ports remaining in Europe were Trieste and Fiume in Austria, and Hamburg and Bremen in Germany; but both Trieste and Fiume were on the point of being abolished as free ports, while in Hamburg and Bremen since 1888 only a restricted area has been maintained as a free port. Among free ports outside of Europe are Hongkong, Menado in Celebes, Singapore, Georgetown (Penang), Amboyna, Banda, Ternate, St. Thomas (on the island of the same name in the West Indies), and Livingstone in Guatemala.

FREEPORT, a city of Stephenson County, northern Illinois (see FREEPORT, Vol. IX, p. 752). It has excellent railroad facilities, being at the western terminus of a division of the Chicago and North-Western railroad, at its junction with the Illinois Central, and on the Chicago, Milwaukee and St. Paul railroad, and on the Pecatonica River, which supplies water-power. Freeport College (Presbyterian), established here in 1872, is a flourishing institution. The city is largely engaged in trade and manufactures, and its growth, though not rapid, is substantial. Its manufactures include those of wheels, carriages, bicycles, wind-mills, coffee-grinders, castings and vinegar; the Illinois Central rail-

road car-shops are located here. Population 1880, 8,515; 1890, 10,189; 1900, 13,258.

FREEPORT, a village of Queens County, Long Island, New York, on the South Side railway, and 24 miles from Brooklyn. Oyster-planting and fishing are the chief industries. Population 1900, 2,612.

FREEPORT, a borough of Armstrong County, central western Pennsylvania, on the Allegheny River (navigable), and on the Pennsylvania railroad, 25 miles N.E. of Pittsburg. It has good educational advantages, an academy, manufactories, a tannery, grist-mills, saw and planing mills, three large distilleries, producing 200 barrels of whisky daily. The place is lighted with gas. Population 1900, 1,754.

FREE SILVER, a prominent issue of the Presidential campaign of 1896. For a discussion of the entire question, see **BULLION**, Vol. IV, pp. 518, 519; **EXCHANGE**, Vol. VIII, pp. 784-796; **MONEY**, Vol. XVI, pp. 720-738; **SILVER**, Vol. XXII, pp. 69-74; and **COINAGE LAWS, COINS AND COINAGE; CRIME OF 1873; and FINANCES OF THE UNITED STATES**, in these Supplements.

FREE-SOIL PARTY, THE, an American political party, whose cardinal principle was opposition to the extension of slavery in the United States. It was organized at Buffalo, New York, in 1848, and comprised the Liberty party, the Barnburners (antislavery Democrats of New York) and antislavery Whigs. Their first candidate was Martin Van Buren, but he received no electoral votes and but 291,000 popular votes. In 1852 it nominated John P. Hale, who met with no better success, and in 1856 it became part of the Republican party.

FREE SONS OF ISRAEL, INDEPENDENT ORDER OF. See **BENEFIT SOCIETIES**, in these Supplements.

FREEWILL. See **ETHICS**, Vol. VIII, p. 608; **PREDESTINATION**, Vol. XIX, p. 670.

FREEZING. See *Calorimetry*, under **HEAT**, Vol. XI, pp. 556, 557; **ICE**, Vol. XII, pp. 611-621; and **ICE-MACHINES and REFRIGERATING APPARATUS**, in these Supplements.

FREGELLÆ. See **PONTECORVO**, Vol. XIX, p. 454.

FREI OR FREY, EMIL, a Swiss statesman and diplomat; born at Arlesheim, Oct. 23, 1838. While temporarily in the United States in 1861, he enlisted in the Union army as a sergeant, was captured at Gettysburg and suffered privations in Libby Prison. Returning home after the war, he was sent as minister of Switzerland to the United States (1882-87), and was elected President of the Swiss Republic, Dec. 14, 1893, for one year.

FREIGHT, literally, that which is "fraught or faded," is by custom understood to be the price paid for the use of a ship, or a portion of a ship, for the transport of goods; also the goods so transported. In the United States it is extended to refer to goods transported by land on railroads, the cars in which the goods are carried being called "freight-cars," and the price paid for transporting the same, "the freight." The phrases to "ship goods," and putting goods "on board" the freight-cars, show the derivative connection. For the law, etc., relating to freight, see **CHARTER-PARTY**, Vol. V, p. 433; **CARRIER**, Vol. V, p. 138; **BILL OF LADING**, Vol. III,

p. 674. In the United States the common-law principle has not been changed.

FREIGHT-CARS. See **RAILROADS**, in these Supplements.

FREIGHT POOLS. See **RAILROADS**, in these Supplements.

FRÉJUS, COL DE, the pass in the Cottian Alps, under which the Mont Cenis tunnel was cut, 14 miles from the Mont Cenis road, which reaches a height of 6,860 feet. The tunnel was excavated by France and Italy during the years 1861-70. See **TUNNELING**, Vol. XXIII, p. 624.

FRELINGHUYSEN, FREDERICK, an American statesman, grandson of a Dutch pastor who emigrated to New Jersey in 1720; was born in 1753, graduated at Princeton, and was admitted to the bar in 1774. He raised a corps of artillery and took part in the battles of Trenton and Monmouth Courthouse; and he was a member of the Continental Congress in 1778 and 1782-83, and a United States Senator in 1793-96. In 1794 he was made a major-general of militia. He died in 1804.

FRELINGHUYSEN, FREDERICK THEODORE, an American lawyer; born at Millstone, New Jersey, Aug. 4, 1817; graduated at Rutgers College in 1836; called to the bar in 1839. He practiced law and held minor offices in New Jersey, and in 1861 became attorney-general of that state. From December, 1866, to March 4, 1869, he served as United States Senator. In 1870 he was nominated and confirmed as minister to England, but declined the appointment. In July, 1871, he was again elected to the United States Senate, and served until 1877. He was a strong Republican; voted for the conviction of Andrew Johnson, supported the Civil Rights Bill and was an ardent protectionist. He was a member of the Hayes-Tilden Electoral Commission. On Dec. 12, 1881, he became Secretary of State in President Arthur's Cabinet, and held office until March 4, 1885. He died at Newark, New Jersey, May 20, 1885.

FRELINGHUYSEN, THEODORE, an American statesman; born at Millstone, New Jersey, March 28, 1787. He studied law and practiced in New Jersey, and from 1817 to 1829 was attorney-general of that state. In 1829 he was chosen United States Senator, and served until 1835. Afterward he was mayor of Newark, and in 1839 became chancellor of the University of New York. In May, 1834, he was nominated for Vice-President by the Whigs, Henry Clay heading the ticket. In 1850 Mr. Frelinghuyesen became president of Rutgers College, which position he held until his death. He died at New Brunswick, New Jersey, April 12, 1861.

FRELINGHUYSEN, THEODORUS JACOBUS, an American clergyman; born at Lingen, now in Prussia, in 1691; was ordained to the Dutch Reformed ministry, and preached two years in his native country. In 1720 he went to the United States, becoming pastor of a church at Raritan, afterward New Brunswick, New Jersey. He secured the recognition of the independence of his church in America, and was regarded as one of the greatest of American divines. He had five sons, who became ministers, and two daughters, who married ministers. He died in 1747.

FREMANTLE, WILLIAM HENRY, an English religious writer; born in 1831; the second son of the late Lord Cottesloe; educated at Balliol College, Oxford; a fellow of All Souls in 1855-63; appointed, in 1865, to the rectory of St. Mary's, Marylebone, London; select preacher at Oxford in 1878-80; Bampton lecturer at Oxford in 1882; and in the same year was appointed to the canonry residentiary in Canterbury Cathedral. He published *The Influence of Commerce upon Christianity* (1854); *The Doctrine of Reconciliation to God by Jesus Christ* (1870); *The Gospel of the Secular Life* (1882); *The World as the Subject of Redemption* (Bampton lectures, 1885); *The Present Work of the Anglican Communion* (1888); etc.

FRÉMIET, EMMANUEL, a French sculptor; born in Paris, Dec. 15, 1824; studied under his uncle, François Rude; passed many years at the medical clinic, making anatomical casts, etc., for the museum at Orfila. Exhibited his first work, *Gazelle*, a plaster study, at the Salon in 1843. His *chef d'œuvre* was *Chien Courant Blessé*, acquired for the Luxembourg in 1850. His *Le Cheval à Montfaucon* also created a sensation, and was purchased for the state in 1853. In 1868 he produced an equestrian statue of *Napoleon I* for the city of Grenoble. The statue of *Jean d'Arc*, erected in the Place des Pyramides, Paris, was finished in 1874; *St. Grégoire de Tours* (1878); *St. Michel* (1879); *Le Grand Condé*, an equestrian statue (1881); *Charles V*, a bust in marble (1882); *St. Louis* (1887); *Velasquez*, an equestrian statue (1890); *St. Georges* (1891), etc. He succeeded Louis Barye in 1875 as master of drawing in the Museum of Natural History at Paris. He received numerous medals, and was promoted to be officer of the Legion of Honor in 1878.

FREMY, EDMOND, a French chemist; born at Versailles, Feb. 28, 1814; studied under Gay-Lussac; became professor of chemistry in the Museum of Natural History, Paris, 1850, and at the Polytechnique in 1857. He wrote *Traité de Chimie*, and *Encyclopédie Chimique* (commenced 1881). He died at Paris, Feb. 3, 1894.

FREMONT, a village of Newaygo County, central western Michigan, on the Chicago and West Michigan railroad, 25 miles N.E. of Muskegon. It contains a tannery, lumber and stave mills and a chair factory. South of this village is Fremont Lake, a pleasant summer resort. Population 1900, 1,331.

FREMONT, a city and the capital of Dodge County, central eastern Nebraska, on the Fremont, Elkhorn and Missouri Valley, the Union Pacific and the Sioux City and Pacific railroads. It is a great market for cattle, horses, hogs and sheep. It has a normal and a business college, water-works, gas and electric lights, telephone system, pork-packing houses, planing-mills and flouring-mills. Population 1890, 6,747; 1900, 7,241.

FREMONT, a city and the capital of Sandusky County, northern Ohio, situated on the Sandusky River, at the head of navigation, 30 miles E. of Toledo by rail, on the Lake Shore and Michigan Southern, the Lake Erie and Western and other railroads. It has normal and business schools and street-railways, gas and electric lights, and city water. Steamers ply between the city and the prin-

cipal ports of Lake Erie, and it has manufactories of woolens, butter and cheese, spikes, shears, boilers, barrels, sashes and blinds; has flour-mills and engineering-works. Pop. 1890, 7,141; 1900, 8,439.

FRÉMONT, JOHN CHARLES, an American pioneer, soldier and politician; born at Savannah, Georgia, Jan. 21, 1813. He was of French descent. In 1830 he graduated at Charleston College, and in 1833 received the appointment of teacher of mathematics on the sloop-of-war *Natchez*; two years later he was made professor of mathematics in the United States navy. In 1839 he was commissioned lieutenant in the corps of topographical engineers, and

JOHN C. FRÉMONT.

in 1842 conducted a geographical survey of the then almost unknown region between the Missouri River and the Pacific Ocean. In May, 1843, he set out on a still longer expedition from the Rocky Mountains to the Pacific Coast. On his return in 1844, he was brevetted captain, and in the spring of 1845 was sent to explore the Great Western Basin and the maritime region along the Pacific, an expedition that resulted in the acquisition of California to the United States. These achievements brought him general notoriety, and he became popularly known as the "Pathfinder." During his absence from the Pacific Coast, war was declared between the United States and Mexico, and General Kearney was sent to take possession of California. Frémont refused to obey some orders of the general, who was his military superior, was placed under arrest and ordered to report at Washington. He was tried by court-martial, found guilty, and ordered to be dismissed from the service. President Polk sustained a part of the sentence, but remitted the penalty, and Frémont resigned his commission. In October, 1848, he fitted out, at his own expense, a large expedition, with the object of finding a practicable route over the mountains to California. After many hardships, he and his party reached Sacramento in the spring of 1849. Here he bought a large estate containing rich gold-mines. In 1850-51 he was United States Senator from California. In 1853 he led a fifth expedition along the line of the fourth, and in 1855 he settled in New York City. In 1856 he was the first candidate of the Republican party for President of the United States and was defeated. When the Civil War began, Frémont was made major-general, in command of the Western Department, his headquarters being at St. Louis. Here, without authority, he issued a proclamation freeing the slaves in his district, which was not confirmed by the government. Frémont was recalled from the West thereafter and placed in command in western Virginia. Here he was outgeneraled by the Confederate commander "Stonewall" Jackson. When General Pope was placed in command of all the forces in western Virginia, Frémont resigned his commission and took no further active part in the

war. In 1864 the Cleveland convention nominated him for the Presidency, but he withdrew his name. Subsequently he devoted himself mainly to the promotion of a Southern railroad across the continent, and spent much time in Europe for this purpose. In connection with this enterprise he was charged with irregularities in France, was tried while absent, found guilty and sentenced to fine and imprisonment, but, as he was absent, the penalty could not be enforced. From 1878 to 1881 Frémont was governor of Arizona territory, and later he practiced law in New York City. On Oct. 19, 1841, Frémont was secretly married to Jessie, daughter of Senator Thomas H. Benton of Missouri. In May, 1890, Congress placed him on the retired list of the army, with the rank of major-general, and on July 13, 1890, he died. His publications include a *Report of the Exploring Expedition to the Rocky Mountains in 1842, and to Oregon and North California in 1843-44* (1845); *Col. J. C. Frémont's Explorations*, an account of all five of his expeditions (2 vols., 1859); and *Memoirs of My Life* (1886).

FRENCH, ALICE, an American writer, better known as "Octave Thanet"; born at Andover, Massachusetts, about 1860. She attracted much attention by her realistic magazine stories, which were collected in *Knitters of the Sun* (1884). Her other works include *Expiation* (1890); *Otto the Knight, and Other Stories* (1890); *We All* (1891); *Stories of a Western Town* (1893); *An Adventure in Photography* (1893); and *The Heart of Toil* (1898).

FRENCH, BENJAMIN FRANKLIN, an American historian; born in Richmond, Virginia, June 8, 1799. He contributed largely to magazines, and published *Biographia Americana* (1825); *Memoirs of Eminent Female Writers* (1827); *Historical Annals of North America* (1861); and other works. He died in New York City, May 30, 1877.

FRENCH, DANIEL CHESTER, an American sculptor; born at Exeter, N. H., April 20, 1859; studied in Italy; passed a few years in Washington, and then settled in Florence, where he produced *The Minute-Man of Concord*, an heroic statue in bronze, which was unveiled at Concord, Mass., in 1875. Others of his works are *Peace and War*, a colossal group now in the custom house at St. Louis, Mo.; similar groups for the City Hall in Philadelphia and the post office in Boston;

DANIEL C. FRENCH.

ton; *Elsie Venner*; *The May Queen*; a life-size statue of Governor Chuse of Michigan, for the National Memorial Gallery at Washington; *Death and the Sculptor*; the colossal *Statue of the Republic* at Chicago in 1893; and *Erin and Her Children*, a bronze group for the J. B. O'Reilly monument in Boston.

FRENCH, MAJOR-GENERAL J. D. P., one of the most alert and vigorous fighting generals the English had in the war with the Boers in South Africa, was born in 1852 and in 1874 entered the

army as an Hussar officer. In 1883 he was made major, and in the following year served in the Nile Expedition, and accompanied Sir H. Stewart's column in the attempt to rescue General Charles G. ("Chinese") Gordon at Khartum. In 1889 he reached the rank of Colonel. Ten years later he obtained the command of the cavalry division in the war against the South African republics, with the rank of Lieut.-General. He won the victory of Elandslaagte in Natal, and in 1900 was made Major-General in recognition of his services in relieving Kimberley. He afterwards did some admirable work in the war: with his cavalry division he helped to enclose General Cronje and compel his surrender; he also took an active part in the operations around Bloemfontein and Wepener, and later on in pursuing fleeing columns of Boers in the Orange State and in the Transvaal.

FRENCH, WILLIAM HENRY, an American soldier; born in Baltimore, Maryland, Jan. 13, 1815; graduated at West Point in 1837; entered the artillery, and served in the Seminole and Mexican wars. In 1861 he was appointed brigadier-general of volunteers, and served in the army of the Potomac during the peninsular campaign. He commanded a division at Antietam and Fredericksburg, and in October, 1862, became major-general of volunteers. He served in the campaign of the Rappahannock, and commanded the Third Army Corps at Mine Run. In May, 1864, he was mustered out of the volunteer service, and from 1865 until 1880 served in the United States artillery. He was retired under the rule, when lieutenant-colonel, in 1880. He died in Baltimore, May 20, 1881.

FRENCH AND INDIAN WAR. See UNITED STATES, Vol. XXIII, pp. 733, 734.

FRENCH BERRIES, a name given to berries of *Rhamnus*, or "buckthorn," which are dried and shipped from the Mediterranean region for the yellow dye which they yield.

FRENCH BROAD RIVER, rises in Transylvania County, western North Carolina, near the Blue Ridge, flows northward into Tennessee, thence northwest, then west, joining the Holston River to form the Tennessee three miles above Knoxville.

FRENCH CONGO, extending along the south Atlantic coast from about lat. 5° S. to 2° N. See AFRICA, in these Supplements.

FRENCH GUINEA. See AFRICA, in these Supplements.

FRENCH HORN, a keyed brass musical instrument of the trumpet class. It has a slender twisted tube which expands into a bell-shaped opening. It is provided with mouthpieces of various lengths, for the purpose of securing variation of key, and is also provided with valves and keys. It has a compass of about four octaves, and was originally used as a hunting-horn, but it has long been successfully used as an orchestral instrument.

FRENCH INDIA. The French possessions in India, as established by the treaties of 1814 and 1815, consist of five separate towns, which cover an aggregate of 50,803 hectares (about 200 square miles), and were on Dec. 31, 1895, accredited with the following populations:

Pondichery	49,052
Karikal.....	19,172
Oulgaret.....	57,724
Villenour.....	49,932
Nédoukadou	24,256
Shandernagar	24,050
Bahour.....	31,818
La Grande Aldée.....	16,048
Mahé.....	8,011
Yanaon.....	5,011
Total.....	286,883

Of this total, less than one thousand are Europeans. The colonies are divided into five dépendances and ten communes, having municipal institutions. The governor of the colony resides at Pondichery. The colony is represented by one Senator and one Deputy. Local expenditure (1897), \$403,292; expenditure of France (budget, 1899), \$59,324. The chief exports from Pondichery are oil-seeds. The imports in 1898 were \$923,200, and the exports \$3,387,400.

FRENCH INDO-CHINA. Under this designation the French dependencies of Cochin China, Tonkin, Anam, and Cambodia have, to a certain extent, been incorporated. There is a superior council of Indo-China, which fixes the budget of Cochin China, and advises as to the budgets of Anam, Tonkin, and Cambodia. In 1887 the French possessions in Indo-China, including Anam and Cambodia, were united into a customs union. In 1893-96 nearly 110,000 square miles of Siam, to the east of the Mekong, were annexed by France, so that the French territory extends from the Mekong river to the Chinese border. The total area is about 284,950 square miles, and the population about 21,500,000. In 1894 there were 64 miles of railway completed. By treaty with China in 1895, the right was secured to extend this railroad into China. The country is ruled by a governor-general appointed by France. The seat of the government is at Hanoi, in Tonkin; population 80,000.

FRENCH LICK, a township of Orange County, central southern Indiana, on the Louisville, New Albany and Chicago railroad. Twelve saline sulphur springs are situated in a pleasant valley of this township, and the waters are useful for the cure of some diseases.

FRENCHMAN'S BAY, an arm of the ocean extending thirty miles into Hancock County, southeastern Maine, with a width of about ten miles. Mount Desert Island shelters the bay on the southwest side.

FRENCH PROPHETS. See CAMISARDS, Vol. IV, pp. 743-745.

FRENCH PURPLE. See ARCHIL, Vol. II, p. 379.

FRENCH RIVER, a stream with several channels, from one to four miles wide, which forms the outlet of Lake Nipissing, northern Ontario, Canada. Its length is about eighty miles; direction, west-southwest. It empties into Georgian Bay. It is very swift and has many rapids, but it is the channel of a considerable fur trade.

FRENCH SOUDAN. See AFRICA, in these Supplements.

FRENCH SPOILIATION CLAIMS. Claims arising out of damages inflicted by French privateers upon the ships and cargoes of United States citizens, between 1790 and 1800, while the French were at war with England. The United States remained neutral, while France claimed that under the treaty of 1778 (Jay's treaty) they were bound to assist France. Failing to do so, France retaliated by seizing and converting to her own uses some twelve hundred American vessels sailing on the high seas. The American losses were estimated at some twenty million dollars. France claimed damages many times as great because of failure by the United States to fulfill treaty obligations. In 1801 a convention of representatives from both countries agreed to a mutual surrender of claims, those of the United States being fixed at about five million dollars. The agreement was ratified and the United States government thus assumed the spoliation claims. The responsibility for indemnifying the claimants was virtually denied by the government until in 1848 Congress finally passed a bill authorizing payment of the claims. It was vetoed by President Polk. A similar bill was later vetoed by President Pierce. January, 1885, Congress passed a bill, signed by President Cleveland, providing for the presentation of the claims to the court of claims for adjudication as to their validity, and in 1891 Congress began to make appropriations for the payment of the claims as they were adjudicated.

FRENCHTOWN, a manufacturing borough of Hunterdon County, northwestern New Jersey, on the Delaware River, and on the Pennsylvania railroad, 27 miles N.W. of Trenton. Among the articles made here are iron and brass castings, regalia, sashes and blinds, distilled liquors and carriages. Population 1900, 1,020.

FRENCH WEST AFRICA. See AFRICA, in these Supplements.

FRENEAU, PHILIP, an American poet; born in New York City, Jan. 21, 1752. He was of French descent, and was graduated at Princeton in 1771. In 1776 he visited the West Indies, and in 1778 went to the Bermuda Islands. In 1780, during the war of the Revolution, he again sailed for the West Indies, when he was captured by a British cruiser. After the return of peace, Freneau became, in succession, editor of a newspaper and captain of a ship that plied between New York, the West Indies and the Southern states. He contributed to the *United States Magazine* and the *Freeman's Journal*, and in 1790 became editor of the *New York Daily Advertiser*. Later he was appointed translator for the State Department, and at the same time assumed the editorship of the *National Gazette*. He next became editor of the *Jersey Chronicle*, and in 1797 of the *New York Time-piece and Literary Companion*; but his connection with this paper was brief. Freneau published *A Poem on the Rising Glory of America* (1771); *Voyage to Boston* (1774); *General Gage's Confession* (1775); *The British Prison-Ship* (1781); *The Poems of Philip Freneau, Written Chiefly During the Late War* (1786); *A Journey from Philadelphia to New York, by Robert Slender, Stocking-Weaver* (1787); *The Miscellaneous Works of Mr. Philip Freneau*

(1788); *The Village Merchant* (1794); *Poems Written between the Years 1668 and 1794* (1795); *Letters on Various Interesting and Important Subjects, by Robert Slender* (1799); *Poems Written and Published During the American Revolutionary War* (1809); *A Collection of Poems on American Affairs* (1815); and a translation of Abbé Robin's *Voyages and Travels* (1783). He died near Freehold, New Jersey, Dec. 18, 1832.

FRENTANI. See SAMNITES, Vol. XXI, pp. 128, 248.

FREPPEL, CHARLES EMILE, a French theologian; born in France, June 1, 1827; entered the priesthood, and in 1870 became bishop of Angers. He was returned to the Chamber of Deputies as a Legitimist in 1881 and re-elected in 1885. He wrote a criticism on Renan's *Vie de Jesus*, and many histories of the saints and fathers of the church. He died in Paris, Dec. 22, 1891.

FRERE, CHARLES THÉODORE, a French painter; born in Paris, June 24, 1815; died in 1888. He studied art with Coignet and Roqueplan, and made his first public appearance at the exhibition of 1834. In 1836 he went to Algeria, was present at the taking of the city of Constantine by the French in October, 1837, and afterward visited the East. His pictures are chiefly representations of Oriental scenes. Among the more famous of these are the *Halt of the Arabs*, which was bought by the French government in 1850; *A Harem at Cairo*; *Ruins of Karnak*; *The Island of Phile*; *The Caravan of Mecca*; *The Nile—Evening*; and *The Desert—Noon*.

FRERE, SIR HENRY BARTLE EDWARD, an English colonial officer; born in Wales, March 29, 1815. He was educated at Bath and at Haileybury College, and entered the Indian civil service in 1833. In 1847 he became British resident at Sattara, and three years later chief commissioner of Sind. During the Mutiny in 1857 he succeeded in keeping his own province in subjection and assisted his colleagues in adjoining provinces. In 1862 he was appointed governor of Bombay, which post he held until his return to England in 1867. In 1872 he was employed on a successful mission to Zanzibar for the suppression of the slave trade, and in 1877 was appointed governor of the Cape, and high commissioner for the settlement of affairs in South Africa. There being considerable difference of opinion among English statesmen with regard to the ratification of Sir Bartle's course in the Zulu war, he was recalled by the government in 1880. He subsequently devoted himself to the duties entailed upon him by the presidency of various learned societies, and to the promotion of missionary work. He published several works on Indian and African subjects. He died at Wimbledon, May 29, 1884. A statue was erected to his memory on the Thames Embankment, London.

FRÈRE, PIERRE ÉDOUARD, a French painter, "the laureate of the poor"; born in Paris, Jan. 10, 1819; died at Ecouen, May 23, 1886; studied under Delaroche, and first exhibited in the Salon of 1843. Most of his pictures represent the amusements and occupations of country children, and they are characterized by much grace and purity of feeling. His best-known works are *The Little Gourmand*;

Boys Going from School; *Girls Going from School*, *The Road to School*; *The Orphan's First Prayer*; and *Preparing for Church*. The last is in the Corcoran Gallery at Washington.

FRERE—ORBAN, HUBERT JOSEPH WALTHER, a Belgian statesman; born at Liège, April 24, 1812; was called to the bar of his native city, and acquired a high reputation among the Liberal party. Liège returned him to the Belgian Chamber as its Representative in 1847. He was Minister of Public Works and then Minister of Finance in that year; and began the reform of the corn laws in Belgium, before Sir Robert Peel reformed the corn laws in England. Frère-Orban was a Cabinet minister (with but short intervals) for nearly half a century; he was the founder of the Banque Nationale and of the Caisse d'Épargne, and during his various administrations much was done to advance the country; octrois were abolished; education extended; the salt tax repealed; the great camp on the Escaut, which insures a free landing to Belgium's ally, was established; and many laws passed for the regulation of labor, and for promoting the welfare of both capitalists and workmen. The Emperor of Austria conferred on him, in May, 1881, the grand cross of the Order of St. Stephen. Died in Brussels, Jan. 2, 1896.

FRESENIUS, KARL REMIGIUS, a German chemist; born at Frankfort-on-the-Main, Dec. 28, 1818; after studying at Bonn and Giessen he became assistant to Liebig; was appointed professor of chemistry at Wiesbaden in 1845, where he established a laboratory in 1848. He founded the *Zeitschrift für Analytische Chemie* in 1862, and wrote *Anleitung zur Qualitativen Analyse* (1841); *Anleitung zur Quantitativen Analyse* (1846); *Geschichte der Chemie* (1873). Died at Wiesbaden, June 11, 1897.

FRESNILLO, a mining town of Zacatecas state, central Mexico, which lies 7,200 feet above sea-level, at the foot of the argentiferous Cerro de Proaño, on the Mexican railroad, 35 miles N. of Zacatecas City. It has amalgamation-works and silver and copper mines. Population, 15,000.

FRESNO, an enterprising city of central California, the capital of Fresno County, about 20 miles E. of the San Joaquin River and 40 miles N. of Tulare Lake, on the Southern Pacific railroad. The region around is devoted to sheep-raising, wheat, fruit-growing and wine and raisin making. The city has a street-railway, gas and electric lights, city water and a sewer system. The city is abundantly supplied with electricity for lighting and motive purposes through water-motors, which receive their power from the falls of the San Joaquin River, 30 miles away. Population 1890, 10,818; 1900, 12,470.

FREUND, HERMANN ERNST, a Danish sculptor; born near Bremen, Oct. 15, 1786; studied at the Art Academy, Copenhagen, winning the gold prize medal, which gave him the opportunity of going abroad for further study. At Rome he met and received encouragement from Thorwaldsen and produced his *St. Luke* and *Mercury*. On the revival of the interest in Scandinavian literature after his return home, he directed his attention patriotically to the production of works representing the rich mythology of his native country. Among his more

noted works in this department was his Ragnarock frieze, executed for the Christiansborg palace. He died June 30, 1840.

FREUND, WILHELM, a German philologist; born, of Jewish parents, Jan. 27, 1806, at Kempen, in Posen. Having studied at Berlin and Breslau (1824-28), he taught at Breslau, Hirschberg, in 1848-51, and at Gleiwitz in 1855-70, and finally settled down at Breslau to a life of literary activity. His principal work is a *Wörterbuch der Lateinischen Sprache* (4 vols., 1834-45), on which the best-known Latin-English dictionaries are based. Besides this he wrote a number of school books, especially on the Greek and Roman classics, and some on philology.

FREY. See ÆSIR, Vol. I, p. 210.

FREY, EMIL. See FREI, EMILE, in these Supplements.

FREYCINET, CHARLES LOUIS DE SAULCES DE, a French statesman; born at Foix, Nov. 14, 1828, and educated at the École Polytechnique, in Paris. Appointed in 1864 an ordinary engineer of the first class, he was until 1870 a member of the council of Tarn-et-Garonne. In October, 1870, Gambetta appointed him his subordinate in the War Department. Elected to the Senate in 1876, he became Minister of Public Works in 1877, and Premier in 1879, with the

portfolio of Foreign Affairs. He resigned in 1880, but formed a ministry again in 1882 and in 1886, and in 1889 he became Minister of War under Tirard. In 1890 he became, for the fourth time, Premier and Minister of War. On Feb. 19, 1892, the Freycinet ministry resigned. This ministry is noted as the longest in power since the formation of the present republic. Its government was wise and strong. It crushed the Boulangist conspiracy, held in check anarchy and socialism, and won a respect for republicanism before unknown in France. Under Freycinet the French army grew, until today it is the most complete organization for war ever known. Freycinet published several works on engineering, sanitation, etc., of acknowledged excellence. In 1878 he was elected a member of the Academy of Sciences, in 1891 of the French Academy, and an officer of the Legion of Honor.

FREYTAG, GUSTAV, a German writer; born July 13, 1816, at Kreuzburg, in Silesia; studied at Breslau and Berlin, and from 1839 till 1847 was a lecturer on German language and literature in the former university. In 1848 he settled at Leipsic, where he edited the *Grenzboten* until 1870. In 1879 he made his home at Wiesbaden. His dramas, *Die Valentine* (1847), *Graf Waldemar* (1850), and *Die Journalisten* (1853), proved brilliant successes; but his greatest achievement in literature is undoubtedly *Soll und Haben* (1855; 30th ed. 1885), a realistic novel of German commercial life, which was trans-

lated into English under the title of *Debit and Credit* (1858). Others of his works are *Die Verlorene Handschrift* (1864; Eng., *The Lost Manuscript*, 1865); and the series (1872-81) called *Die Ahnen* (*Our Ancestors*), a series of stories illustrating German history from the earliest times; *Die Technik des Dramas*; the *Life of Karl Mathy*; *Doctor Luther* (1883). Some of these works have been translated into English by Mrs. Malcolm. Died at Wiesbaden, April 30, 1895.

FRIAR-BIRD. See HONEY-EATER, Vol. XII, p. 139.

FRIDAY, the sixth day in the week. In Roman, Eastern and Anglican churches all Fridays, except when that day happens to be Christmas day, are observed as fast-days, in memory of the crucifixion, though this event is more appropriately commemorated on Good Friday, the Friday before Easter. Among Mohammedans, Friday is the day of assembly, or Sabbath. It is believed by them to have been instituted by divine command, as being the day upon which Adam was created and received into Paradise, the day on which he was expelled therefrom, the day upon which he is said to have repented, and the day upon which he died. According to the same belief, it will also be the day of resurrection. Black Friday is so known in the Western Church, because on that day the vestments of the clergy, as well as the covering of the altar, are black. Any Friday is also so called that has been marked by a great calamity, as Friday, Sept. 24, 1869, in New York City, when a sudden financial panic overwhelmed the country. A similar panic occurred on Friday, Sept. 18, 1873, in New York City. It used to be the common day on which criminals were hanged. Hence the phrase, "hangmen's day," refers still to Friday. Much superstition surrounds Friday, in the minds of those who are inclined to pay heed to such things. It was considered a bad day to commence any undertaking; sailors would not go to sea on Friday; and to spill salt on Friday was a particularly bad omen. Golden Friday, or Holy Friday, is a Friday in an Ember week. See ASTROLOGY, Vol. II, p. 741; CALENDAR, Vol. IV, p. 665; and SABBATH, Vol. XXI, p. 125.

FRIEDLAND, VALENTIN. See TROTZENDORFF, Vol. XXIII, pp. 588, 589.

FRIEDLÄNDER, LUDWIG, a German archæologist and philologist; born at Königsberg, July 24, 1824; educated at the universities of Königsberg, Leipsic and Berlin; made a tour of scientific investigation in Italy (1853-54); became professor of classics and archæology at the University of Königsberg in 1859. He made important contributions to Homeric literature and classical archæology. His best-known work is *Darstellung aus der Sittengeschichte Roms*. (3 vols., 1865-70). He is recognized as an authority on the description of the ruins of ancient Rome.

FRIEDRICH, JOHANN, a German Roman Catholic theologian; born in Franconia in 1836. He was a leader with Döllinger in the Old Catholic movement. He became a professor of theology at Munich in 1865; assisted at the Vatican Council in 1870, and subsequently, in life and labors, was identified with the Old Catholics.

M. DE FREYCINET.

FRIEDRICHRODA, a town of Thüringen, central eastern Germany, a popular and favorite summer resort in the beautiful Schilfwasser valley, just below the Thüringerwald, 13 miles S.W. of Gotha by rail. The Duke of Gotha's handsome country seat, Reinhardsbrunn, is situated here, on the site of the old abbey of that name, which was destroyed in the Peasant War. The town has bleaching establishments and large laundries, supplied from Magdeburg, Berlin and Hamburg. Population, 3,146.

FRIEND, a village of Saline County, southeastern Nebraska, on the Burlington and Missouri River railroad, 28 miles W.S.W. of Lincoln. It is situated in a very rich farming section, and has large grain-elevators, and a creamery which has a reputation for the fine quality of its products. Population 1890, 1,347; 1900, 1,200.

FRIENDLY SOCIETIES. See Vol. IX, pp. 780-785; and BENEFIT SOCIETIES, MUTUAL, in these Supplements.

FRIENDS, SOCIETY OF, IN THE UNITED STATES. For general article describing the origin, history, doctrine, etc., see QUAKERS, Vol. XX, pp. 147-153. As an ecclesiastical association, the affairs of the Society are conducted in preparative, monthly, quarterly and yearly meetings, corresponding, in some measure, to the classis, synod, etc., of other religious bodies. Every congregation has its "elders" and "overseers," the former watching over the spiritual welfare and the latter attending to matters of discipline, or the rules that have been adopted, from time to time, as occasion demanded. The overseers also act as arbitrators to adjust grievances and prepare business to be transacted at the monthly meeting, which is composed of representatives from a number of convenient preparative meetings. To the monthly meeting is delegated executive power; e.g., power to approve and acknowledge ministers and teachers, to control membership, regulate marriage; manage the finances, etc. From their decisions appeal lies to the quarterly meeting, composed of delegates from two or more monthly meetings. The quarterly meeting is an advisory body, and prepares questions of appeal for the yearly meeting, which is composed of delegates from the quarterly meetings, and is the final authority in all matters pertaining to the organization. The yearly meeting usually covers a state or other convenient district. There were, in 1894, fourteen yearly meetings in the Orthodox branch and seven in the Hicksite. There is no union of the various yearly meetings into one general executive head.

During the Revolutionary War the first division of the Society in America occurred over the contention as to aiding or not aiding in the struggle for independence. The majority, true to the doctrines and rules of the body, refused to take any part in warfare, but a minority of about one thousand withdrew from the Philadelphia meeting, became known as "Free Quakers," and maintained their organization for many years, a remnant being still represented in the Philadelphia Apprentices' Library. The division into Orthodox and Hicksite (see Vol. XX, p. 149) is still maintained, the former number-

ing (in 1895) 88,158 members, scattered as follows:

YEARLY MEETINGS.	MEMBERS.	YEARLY MEETINGS.	MEMBERS.
New England -----	4,389	Iowa -----	10,642
Philadelphia -----	4,513	Western (Indiana) --	15,195
New York -----	3,808	Indiana -----	18,182
Oregon -----	1,777	Kansas -----	10,583
Canada -----	1,064	Baltimore -----	1,122
North Carolina -----	4,998	California -----	1,202
Wilmington (Ohio) --	5,099	Mexico -----	500
Ohio -----	5,084		

The Hicksites numbered, in 1890, 21,992 members in 213 churches. Both of these have relaxed more or less from the ancient rigid discipline, and modified the old doctrine. When, in 1837, Joseph J. Gurney came to New England, his preaching was considered by the ultra-orthodox minority as unsound, and was especially condemned as "too evangelical" by one John Wilbur of Rhode Island, who was consequently "disowned" by the Greenwich yearly meeting in 1843. A considerable number of Friends followed Wilbur, and these have since been known as Wilburites, but called themselves Primitive Friends, indicating their adherence to the primitive customs of the Society. In 1890 these numbered 4,329 members, in 52 organizations.

Progressive Friends, a small, independent body in Chester County, Pennsylvania, require no religious test for membership, have a paid ministry and are especially devoted to social reforms. The strife between the adherents to old customs and the friends of progress and change, which caused the divisions of the past, still manifests itself, and causes, sometimes temporary, sometimes what bids fair to be permanent, disruptions. A recent innovation, that of a supported ministry, has been adopted by ten yearly meetings of the Orthodox branch. In some instances men and women meet in single assembly, each having equal voice in all the affairs of the meeting. In the Iowa yearly meeting of 1894, for the first time, representatives of both sexes united in one meeting, with a single presiding officer, having assistants of both sexes. The conservative element, however, vigorously opposes these changes, and further division is likely to result. The principal educational institutions of the society are Haverford College, for men only (Orthodox), near Philadelphia, founded in 1832, and having, in 1895, 17 instructors, 98 students and a library of 31,600 volumes; and Swarthmore College, the chief representative of the liberal or Hicksite branch, is ten miles south of Philadelphia, is co-educational, was established in 1870, and had, in 1895, 20 instructors, 176 students and a library of 16,500 volumes. Bryn Mawr College, for women, was founded by an Orthodox Friend, and its trustees are members of that body. There are also colleges at Richmond, Indiana; Oskaloosa, Iowa; Wilmington, Ohio; and Newberg, Oregon. Denominational schools of lower grade are abundant. Foreign missionary work is carried on in India, China, Japan, Syria, Madagascar and Jamaica. Among the periodicals published by the Society are *The Friend*; *The Christian*

Worker; The Friends Review (Orthodox); and *The Friends' Intelligencer* (Hicksite).

See Sewell's *History of the Quakers*; Janney's *History of Friends*; F. Storrs Turner's *The Quakers*.

FRIENDSHIP, a village of Allegany County, southwestern New York, at the junction of the New York, Lake Erie and Western and the Central New York and Western railroads. It is the seat of Baxter's Musical University, and has an academy, a sash and blind factory, and a cheese-box factory. Chief business, farming and cheese-making. Population 1890, 1,369; 1900, 1,214.

FRIENDS OF GOD. See MYSTICISM, Vol. XVII, p. 133.

FRIEZE. See ARCHITECTURE, Vol. II, p. 464.

FRIEZE, HENRY SIMMONS, an American educator; born in Boston, Sept. 15, 1817; died in Detroit, Michigan, Dec. 7, 1889. He graduated from Brown University in 1841, and became professor of the Latin language and literature in the University of Michigan in 1854, which position he held at the time of his death. He also twice acted as temporary president. Dr. Frieze collected in Europe the casts and the engravings that formed the nucleus of the present museum of art, and in many other ways was instrumental in the development of the university.

FRIGG. See ÆSIR, Vol. I, pp. 209-211.

FRINGE TREE, the common name of *Chionanthus*, a genus of plants of the family *Oleaceæ*, consisting of small trees or large shrubs, natives of America, the West Indies and New Holland. The popular fringe tree, or snow-flower, found in the United States sometimes attains the height of thirty and forty feet, has opposite, oval leaves six or seven inches long, and numerous snow-white flowers in paniced racemes. The limb of the corolla is divided into four long linear segments; the fruit is an oval drupe. The tree is frequently cultivated as an ornamental plant.

FRINGILLIDÆ. See FINCH, Vol. IX, pp. 191-193.

FRISCHES HAFF ("Fresh-water Bay"), a lagoon on the coast of Prussia, southeast of the Gulf of Danzig, about 50 miles in length, 4 to 11 miles broad and 332 square miles in area. It was once entirely walled off from the Baltic by a narrow spit of land, through which a passage 1,247 feet wide and 14½ feet deep was cut in 1510, during a violent storm. The Haff is 10 to 16 feet deep.

FRISIAN LANGUAGE AND LITERATURE. See FRISIANS, Vol. IX, pp. 788, 789.

FRITH, WILLIAM POWELL, an English artist; born in 1819, at Studley, near Ripon. At the age of twenty he exhibited his first picture at the British Institution, a portrait of one of the children of his preceptor. In 1845 he became A.R.A., and in 1852 was made an Academician. His two great pictures, *The Derby Day* and *The Railway Station*, have been engraved many times, and some of his productions, such as *Coming of Age; English Merrymaking; The Village Pastor*; and *Life at the Seaside*, are almost equally well known. In 1866 he exhibited *Before Dinner at Boswell's Lodgings in Bond Street*, which work was sold in 1875 for £4,567, up to that date

the highest price ever given at auction for any picture during the artist's lifetime. From that time Mr. Frith constantly exhibited both illustrations of literature and pictures after the manner of his old successes. Of these, *The Private View of the Royal Academy* (1881) was the most ambitious. His Hogarthian series, *The Road to Ruin* (1878), is also well known. Mr. Frith published his *Autobiography* in 1887, and *Further Reminiscences* in 1888. He was made a member of the academies of Vienna, Belgium and Sweden. By his own desire, he was placed on the list of retired Royal Academicians, in 1890.

FRITILLARY, a corruption of *Fritillaria*, a genus of plants of the "lily family," commonly cultivated for their showy flowers.

FRITSCHÉ, FRANZ VOLKMAR, a German philologist and scholar; born at Steinbach, Saxony, Jan. 26, 1806. He was the son of Christian Friedrich Fritsche, the theologian; studied at the University of Leipsic, and became professor of poetry and eloquence at Rostock in 1828. He published studies on the dialogues of Lucian, the monodies of Euripides, and was the author of *Quæstiones Aristophanes* (1835); *De Datalensibus atque de Babylonis* (1831); etc. He died at Rostock, March 17, 1887.

FROBISHER BAY, an inlet opening westward, near the mouth of Davis Strait, into the territory called by Frobisher Meta Incognita, at the southern end of Baffin Land. It is about two hundred miles long by above twenty wide, with rugged mountainous shores. It was, till Hall's voyage, called Frobisher Strait, being erroneously regarded as a passage into Hudson Bay.

FROEBEL, JULIUS, a German politician and author, nephew of Friedrich Froebel who founded the kindergarten system, was born at Griesheim, Germany, July 16, 1805, and studied in the universities of Munich, Jena and Berlin. He was professor of mineralogy at Zurich from 1833 to 1844; afterward edited a radical political paper; removed to Prussia, but was obliged to leave, for political reasons; took part in the revolution of 1848, and was elected to the German Congress at Frankfurt; was arrested and condemned to death for an attempt to excite a revolution in Vienna, but was pardoned. He subsequently traveled for several years in Central America, Mexico and California, returning to Germany as a naturalized American citizen. In 1862 he was an editor in Vienna; in 1867 founded the *Süddeutsche Presse* in Munich, which he edited until 1873, when he was made consul of the German Empire at Smyrna, and in 1876 was transferred to Algiers in the same capacity. Among his publications are *System der Sozialen Politik* (1847); *Aus America* (1857); *Theorie der Politik* (1861-64); *Die Gesichtspunkte und Aufgaben der Politik* (1878); *Die Realistische Weltansicht und die Utilitarische Civilisation* (1881); *Ein Lebenslauf* (1890). He died at Zurich, Nov. 7, 1893.

FROG, RAILROAD, a section of a rail, or of several rails combined, placed at a point where it is necessary for two lines to cross, or at the point of a switch from the main track to a siding or to another line. There are various kinds of frogs. In the *plate*

frog, the rails are riveted to a plate placed underneath; in the *bolted frog*, the rails are connected by bolts passing through the webs, cast iron filling up the space between; in the *keyed frog*, the rails are kept together with clamps capable of being tightened by wedges. The frog may have a spring attachment, by means of which the jar of the train as it passes over it is reduced. *Crossing-frogs* are those used where the tracks cross each other; when the angle is great there is an inner rail to serve as a guard. The name of this device is taken from its resemblance to the frog of a horse's hoof.

FROGMORE, an English royal palace and mausoleum in the park of Windsor, Berkshire. The palace, purchased by Queen Charlotte in 1800, has been one of the dwelling-houses of the Prince of Wales since 1861. The mausoleum, a Romanesque edifice, cruciform in shape and surmounted by an octagonal dome, is consecrated to the memory of the Prince Consort, whose remains were transferred to it on Dec. 18, 1862.

FROG-SPAWN, a name sometimes applied to certain algæ which occur in slimy masses.

FROG-SPITTLE, a name popularly applied to a frothy substance often seen on the leaves and stems of plants. It is sap which has been caused to exude by larvæ of various hemipterous insects. Close examination reveals these larvæ in the mass of sap.

FROHSDORF, a village in Lower Austria, 30 miles S. of Vienna, on the river Leitha, and near the frontiers of Hungary. It is celebrated for its splendid castle, which acquired a kind of political importance through its having been, from 1844 to 1883, the rendezvous of the elder Bourbon party and the residence of the Comte de Chambord.

FROLICH, LORENTZ, a Danish painter and engraver; born at Copenhagen, Oct. 25, 1820. In 1840 he visited Munich and Dresden, and was a pupil of Bendemann; visited the Tyrol and reached Rome in 1850; went to Paris and entered the school of Couture. In 1856 he executed for the town of Flensburg, *Waldemar II*, and *Frédéric IV Recevant le Serment des Schleswigois*. He then undertook the illustration of some of the work of the chief Danish authors, including the *Histoire du Danemark* of Fabricius and *Le Contes de Hans Christian Andersen* and *Le Mythologie Scandinave*. He exhibited at the Salon, in 1863, *L'Amour et Psyché*; *Arrivée de la Reine Dagmar en Danemark* (1868); and at the Paris Exposition in 1878 the designs of *La Légende de l'Émigration des Longobards*.

FRONDE, WAR OF. See FRANCE, Vol. IX, p. 572.

FRONTAL BONE. See ANATOMY, Vol. I, p. 824.

FRONTENAC, LOUIS DE BUADE, COMTE DE, a French colonial governor of Canada, was born in 1620; died in Quebec, Nov. 28, 1698. He served in Holland under the Prince of Orange; at 23 was appointed colonel of a regiment in Normandy, and at 26 was made a brigadier. Having served in Italy, Flanders and Germany with marked success, he was appointed governor of New France (as the Canadian possessions were then called) in 1692. Frontenac modeled his government upon the old feudal pattern, and brought upon him a severe rebuke from the king of France. He quarreled with

the Jesuits, then all-powerful in Canada, and had a dispute with the governor of Montreal. Duchesneau was sent to Canada to administer the civil affairs of the province, Frontenac being allowed to retain the command of the army. Their relations became critical; Duchesneau sided with the Jesuits, while Frontenac violently opposed. The quarrel continued until both were recalled in 1682. In 1689, when the Iroquois were threatening Montreal, Frontenac was sent back. Though an old man, he was able to revive the courage of the colonists and to gain the respect of the Indians. He sent three war parties of French and Indians against the English, and finally repulsed Sir William Phips before Quebec in 1690. In 1696 he led an army into the heart of New York and laid waste Onondaga and Oneida. This, with the successes of Iberville, in Newfoundland, and on Hudson Bay, restored the fallen fortunes of the French. Though of a quarrelsome temper, Frontenac gained the respect and affection of the Indians by his conciliatory spirit and firmness.

FRONT ROYAL, a town and the capital of Warren County, northern Virginia, in the Shenandoah valley, on the Southern railroad, 64 miles W. of Washington, District of Columbia. It has a foundry and tannery, and wagon, furniture, tack, handle and cigar factories, and it also ships considerable farm produce. Population 1900, 1,005.

FROST. See METEOROLOGY, Vol. XVI, p. 849; and GEOLOGY, Vol. X, pp. 265, 280.

FROST-BITE. See SURGERY, Vol. XX, p. 683.

FROSTBURG, a village of Allegany County, western Maryland; located on a plateau between Dan's and the Great Savage Mountains, 1,792 feet above sea-level, and over the coal-basin of western Maryland. It is on the Cumberland and Pennsylvania railroad, mines coal, and has a fire-brick manufactory and foundries. Population 1900, 5,274.

FROTHINGHAM, ELLEN, an American translator; born at Boston, March 25, 1835, a daughter of Nathaniel Langdon Frothingham, the theological writer. She earned fame by translating Lessing's works, *Laocoon*, and *Nathan the Wise*, and Goethe's *Hermann and Dorothea*.

FROTHINGHAM, NATHANIEL LANGDON, an American clergyman and author; born in Boston, July 23, 1793. For a while he was an instructor in Harvard University, and from 1815 to 1850 was pastor of the First Congregational Church (Unitarian), in Boston. He contributed to various religious periodicals; and published, besides many sermons, *Deism or Christianity* (1845); *Sermons in the Order of a Twelvemonth* (1852); and *Metrical Pieces, Translated and Original* (1855). He died in Boston, April 4, 1870.

FROTHINGHAM, OCTAVIUS BROOKS, an American author, son of Nathaniel Langdon Frothingham; born in Boston, Nov. 26, 1822; graduated at Harvard in 1843, and in 1847 was ordained pastor of the North Church (Unitarian), at Salem, Massachusetts. In 1855-59 he was pastor in Jersey City, New Jersey, and in 1860-79 had charge of the Third Unitarian Congregational Church, New York City. In 1881 he withdrew from specific connec-

tion with any church, and devoted himself to literature. Mr. Frothingham has contributed to various periodicals, and published, besides more than 150 sermons, *Stories from the Lips of the Teacher* (1863); *Stories from the Old Testament* (1864); *Child's Book of Religion* (1866); *The Religion of Humanity* (1873); *Life of Theodore Parker* (1874); *Transcendentalism in New England* (1876); *The Cradle of the Christ* (1877); *Life of Gerrit Smith* (1878); *Life of George Ripley* (1882); and *Memoir of William Henry Channing* (1886). He died in Boston, Nov. 27, 1895.

FROTHINGHAM, RICHARD, an American historian; born in Charlestown, Massachusetts, Jan. 31, 1812. For years he was proprietor, and from 1852 to 1865 managing editor, of the *Boston Post*. In 1839, 1840, 1842, 1849 and 1850 he was a member of the Massachusetts legislature, and from 1851 to 1853 was mayor of Charlestown. For several years he was treasurer of the Massachusetts Historical Society. He published *History of Charlestown* (1848); *History of the Siege of Boston* (1849); *The Command of the Battle of Bunker Hill* (1850); *Life of General Joseph Warren* (1865); *Tribute to Thomas Starr King* (1865); and *Rise of the Republic* (1871). He died Jan. 29, 1880.

FROUDE, JAMES ANTHONY, an English historian, youngest son of the archdeacon of Totnes; born at

JAMES A. FROUDE.

Dartington, Devonshire, April 23, 1818. He was educated at Westminster and Oriel College, Oxford, and was elected a fellow of Exeter College in 1842. He took deacon's orders in 1844, published *Shadows and Clouds* in 1847, which showed his revolt from the Oxford leaders, and in 1848 *The Nemesis of Faith*, in which the solemnity and sadness

of religious skepticism are relieved by a singularly tender and earnest humanity. The book was written with great power, and cost Froude his fellowship, and an educational appointment in Tasmania. He afterward endeavored to suppress both these works. For the next few years he employed himself in writing for *Fraser's Magazine* and the *Westminster Review*, and in 1856 issued the first two volumes of his *History of England from the Fall of Wolsey to the Defeat of the Spanish Armada*, completed in 12 volumes in 1869. In this work Froude displays supreme literary ability, but, like Macaulay, who, in the art of making history as fascinating as fiction, is his only rival, he is a man of letters first and a historian afterward, and his taillure as a dispassionate judge of historic events has sadly impaired the permanent value of his work. His views of men and motives are always distorted by being seen through nineteenth-century spectacles, and these, moreover, spectacles of his own. Four volumes of brilliant essays and papers, entitled *Short Studies on Great Subjects*, appeared between 1867 and 1882. He became rector of St. Andrew's University in 1869, and received the degree of LL.D. His next history, in

three volumes (1871-74), was *The English in Ireland in the Eighteenth Century*. In 1874, and again in 1875, Froude visited the South African colonies on a mission from the home government, and published his impressions in *Two Lectures on South Africa*, in 1880. As Carlyle's literary executor, Froude edited his *Reminiscences* in 1881, Mrs. Carlyle's *Letters* in three volumes in 1882, and Carlyle's own *Life* in four volumes (1882-84). In these volumes he gives a distorted view of the Chelsea sage, that aroused much deserved censure upon Froude. Among his several later works are *The Two Chiefs of Dunboy*, published in 1889, a historical romance of Irish life toward the close of the eighteenth century; a *Life of Lord Beaconsfield*, in 1890; *Divorce of Catharine of Aragon* (1891); *Life and Letters of Erasmus* (1894). In 1892 he succeeded E. A. Freeman (q.v., in these Supplements) as regius professor of modern history at Oxford. He died at Salcombe, Devonshire, Oct. 20, 1894.

FROUDE, WILLIAM, an English naval engineer, brother of James Anthony Froude; born in 1810; educated at Oriel College, where he took a first class in mathematics in 1832, and became known as one of the most skilled masters of applied mathematics in modern times. He served on Lord Dufferin's committee on the designs upon which ships of war have been constructed, and also upon the committee to report upon the stability of the turret-ship *Inflexible*. His labors included investigations on wave-resistance, the oscillations of ships, the usefulness of bilge-keels, frictional air and wave-making resistances, the ratio of effective to indicated horse-power, and on the best form of screw-propellers and rudders. While on a cruise to the Cape of Good Hope, he died at St. Simon's Town, May 4, 1879.

FRUCTIDOR, the name of a month in the French Republican calendar of 1792-1806, covering the days from August 18th to September 16th. See FRANCE, Vol. IX, p. 606.

FRUIT-CULTURE. See HORTICULTURE, Vol. XII, pp. 268-278.

FRUIT-PIGEON (*Carpophaga*) a genus of brilliantly colored pigeons of large size, found in the islands of the Indo-Pacific. They feed on fruits, hence the name.

FRUITPORT, a summer resort and center of a fruit region in Muskegon County, central eastern Michigan, at the mouth of Grand River, on the Chicago and West Michigan railroad, eight miles S. of Muskegon. It has Spring Lake magnetic mineral well, a muriated sodic saline spring. Population 1890, 300; 1900, 311.

FRUIT TREE. See BOTANY, Vol. IV, pp. 148-153.

FRUSTUM. See MENSURATION, Vol. XVI, pp. 23-26.

FRY, SIR EDWARD, an English jurist; born at Bristol, in the county of Somerset, Nov. 4, 1827. He was educated at Bristol and University colleges, and in 1851 graduated with honors at the University of London. Choosing the legal profession for his vocation, he was called to the bar at Lincoln's Inn in 1854 and became a queen's counsel in 1869. In April, 1877, he was appointed a judge of the chancery division of the High Court of Justice, and re-

ceived the honor of knighthood. In April, 1883, he was appointed one of the Lords Justices of Appeal and was sworn of the Privy Council. His chief title to fame was his masterly and lucid *Treatise on the Specific Performance of Contracts, Including Those of Public Companies* (1858), which has entered upon many editions in England and America and is the standard text-book on specific performance in every Anglo-Saxon court. His other works include *The Doctrine of Election* (1864); *Essays on the Accordance of Christianity with the Nature of Man* (1867); *Darwinism and Theology* (1872); and *British Mosses* (1892).

FRY, JAMES BARNET, an American soldier; born at Carrollton, Illinois, Feb. 22, 1827; graduated at West Point in 1847, fought in Mexico, and was adjutant at West Point from 1854 to 1859. He became assistant adjutant-general in March, 1861, and was chief of staff to General Irwin McDowell and Gen. D. C. Buell. On March 17, 1863, he became provost marshal-general of the United States, which position he held until August, 1866. His *Final Report* in connection with this bureau was published as a Congressional document in 1866. He received a major-general's brevet in 1865 and retired from active service in June, 1881. He published *Sketch of the Adjutant-General's Department, United States Army from 1775 to 1875* (1875); *History and Legal Effects of Brevets in the Armies of Great Britain and the United States* (1877); *Army Sacrifices* (1879); *McDowell and Tyler in the Campaign of Bull Run* (1884); *Operations of the Army under Buell* (1884); and *New York and the Conseription* (1885). He died in Newport, R. I., July 11, 1894.

FRY, WILLIAM HENRY, an American musician and journalist; born in Philadelphia, Pennsylvania, Aug. 10, 1815; died in Santa Cruz, West Indies, Dec. 21, 1864. He received an education at Philadelphia and Emmittsburg, Maryland, and in 1839 became employed as a writer for his father's newspaper, the *Philadelphia Gazette*. In 1835 he began a thorough study of music, and wrote, for full orchestra, four overtures that were performed in public. In 1845 he produced his English opera, *Leonora*, in New York and Philadelphia. In 1846 Fry was engaged as European correspondent for the *New York Tribune* and some other journals. He remained abroad until 1852, when he returned to New York City to become musical editor of the *Tribune*. He wrote the music to an ode for the opening of the New York Industrial Exhibition of 1853, delivered a number of lectures on musical subjects, and also produced two symphonies, *The Breaking Heart* and *A Day in the Country*.

FRYE, WILLIAM PIERCE, an American statesman; born at Lewiston, Maine, Sept. 2, 1831; graduated at Bowdoin College, Maine, 1850; studied and practiced law; was a member of the state legislature in 1861-62 and 1867; was mayor of the city of Lewiston in 1866-67; was attorney-general of the state of Maine from 1867 to 1869; was elected a member of the National Republican Executive Committee in 1872, re-elected in 1876. In 1880 he was elected a trustee of Bowdoin College; received the degree of LL.D. from Bates College in July, 1881, and the same degree

from Bowdoin College in 1889. He was a Presidential elector in 1864; was a delegate to the National Republican conventions in 1872, 1876 and 1880; was elected chairman of the Republican State Committee of Maine in place of J. G. Blaine, resigned in November, 1881; was elected a Representative in the Forty-second, Forty-third, Forty-fourth, Forty-fifth, Forty-sixth and Forty-seventh Congresses; was elected to the United States Senate as a Republican to fill the vacancy occasioned by the resignation of James G. Blaine, appointed Secretary of State; took his seat March, 1889, and was re-elected in 1883, again in 1891, and for a fourth time in 1895, his term expiring March 3, 1901.

FRYKEN, a chain of lakes in Wermland, southern Sweden, stretching from north to south over a distance of about 40 miles and discharging into Lake Wener by the Nors. They are surrounded by some of the finest scenery in Sweden.

FRYXELL, ANDERS, a Swedish historian; born Feb. 7, 1795, in Dalsland; died in Stockholm, March 21, 1881. He took priest's orders in 1820, and in 1828 became rector of a gymnasium in Stockholm. From 1847 until his death he devoted himself entirely to literary pursuits. His reputation rests upon *Narratives from Swedish History* (46 vols., 1832-80). These narratives, largely biographical in form, soon obtained popularity in Sweden, and parts of them have been translated into almost all European languages. Another work, *Conspiracies of the Swedish Aristocracy* (4 vols., 1845-50), was intended as a reply to the accusations urged against that class by Geiger and others, and involved Fryxell in a keen controversy with the Democratic-Liberal party in Sweden. Besides these works he wrote a *Contribution to the History of the Literature of Sweden* (9 vols., 1860-62).

FUCA OR JUAN DE FUCA, STRAIT, a passage separating the state of Washington from Vancouver Island, and connecting the Pacific Ocean with the Gulf of Georgia. It contains several islands, one of which, San Juan, became the subject of a dispute between Great Britain and the United States, the question being whether it belonged to Washington (then a territory) or to British Columbia. In 1872 the Emperor of Germany, as arbiter, decided that the line of boundary should be run through the Strait of Haro, west of San Juan, thus awarding that island to the United States, and it and several neighboring islands now form a county of Washington.—

JUAN DE FUCA was a Greek navigator, born in Cephalonia, his real name being Apostolos Valerianos. He was for many years in the service of Spain. When he discovered the strait which bears his name, he believed it to be a passage between the Atlantic and the Pacific oceans. He died at Zante, in 1602. See also WASHINGTON, Vol. XXIV, p. 387.

FUCACEÆ, a group of coarse olive-green seaweeds, belonging to the *Phaeophyceæ*. Numerous species are known, growing mostly in salt water. Some attain a great size, as, for example, the well-known "gulf-weed" (*Sargassum bacciferum*), which is met with in large floating masses in all oceans. The common "kelps" are members of this group. *Fucus*

vesiculosus, with thallus buoyed up by bladders, is the common form of the Atlantic coast of the United States.

FUCHSIN OR **SOLFERINO**, a magnificent dye furnished by rosaniline hydrochloride, or magenta. All varieties of the different shades of magenta are salts of the colorless base rosaniline, which is obtained by precipitating, with an excess of ammonia, a solution of the pure hydrochloride, crystals of colorless needles and plates being obtained. The dye was discovered by a Frenchman (Renard), and named by him from *Fuchs* (fox), the German equivalent of his own name. It is used in dyeing silk and wool. It is commercially known as *aniline red*, or *rubin*.

FUCINO OR **FUCINUS LACUS**. See **CELANO**, Vol. V, p. 286; and **TUNNELING**, Vol. XXIII, p. 623.

FUCUS. See **ALGÆ**, Vol. I, pp. 507-509.

FUENTES DE ONORO, a small village of Salamanca, central western Spain, on the Portuguese frontier, 14 miles W. of Ciudad Rodrigo. This place is celebrated as the scene of one of the important battles of the Peninsular War, between the French under Massena and the English under Wellington. Population, 1,400.

FUERTEVENTURA. See **CANARY ISLES**, Vol. IV, p. 800.

FUGHETTO AND **FUGUE**, in music. See **MUSIC**, Vol. XVII, pp. 82, 83.

FUGITIVE SLAVE LAWS. See **UNITED STATES**, Vol. XXIII, pp. 747, 751, 768, 770.

FUHKIEN OR **FUHKEEN**. See **CHINA**, Vol. V, p. 636.

FUJI SAN OR **FUSIYAMA**. See **JAPAN**, Vol. XIII, p. 571, and note.

FULDA, a town of Hessen-Nassau, central eastern Germany, on several railways, and on the Fulda River, 53 miles N.E. of Frankfurt. It has a cathedral, built after the style of St. Peter's at Rome, and was from 1734 to 1803 the site of a university, and of a famous mediæval monastery, for which see **FULDA**, Vol. IX, pp. 812, 813.

FULGENTIUS, FABIVS CLAUDIVS GORDIANVS, SAINT, known, on account of his writings, as the "Augustine of the sixth century"; born at Telepte, on the estate of his father, in the province of Byzacene, in Africa, A.D. 468. He was intended for the public service, but after being, for a short time, procurator fiscal of the province, he retired to a monastery, and became noted for his ascetic conduct. He visited Rome in A.D. 500, and on his return to Africa founded a monastery. In A.D. 508 he became bishop of Ruspe, or Ruspina. He was noted for his defense of the Roman Catholic Church against Arianism. The Vandals having gained a temporary ascendancy, their king, Thrasimund, consequently exiled the bishop to Sardinia. On the death of this king, Fulgentius was restored to his see and enjoyed peace for the remainder of his life, a period of ten years, his death occurring in A.D. 533. He was distinguished for his piety and for his virtue. His works, written in Latin, included treatises on the Trinity, predestination, faith and Arianism. He had opinions similar to those of Augustine, and imitated his style. His name appears in Roman

Catholic calendars on the first day of January, the supposed day of his death.

FULGURITES OR **FULMINARY TUBES** are tubes of vitrified sand originating from the action of lightning. They are found in sand-banks and sandy soils, and vary from a quarter of an inch to two inches and a half in diameter. Internally their surface is glassy, and hard enough to scratch glass, and produce fire when struck with steel. They are usually vertical in the sand, becoming narrower downward, and sometimes branched.

FULHAM, a suburb of London, on the Thames, 4½ miles W.S.W. of Charing Cross. It has a palace, the summer residence of the London bishops. It returns one member to Parliament. Population 1891, 188,877.

FULLER, GEORGE, an American portrait-painter; born in Deerfield, Massachusetts, in 1822; died March 21, 1884. He studied painting under Henry Kirke Brown, was elected an associate of the National Academy, and exhibited largely from 1873 until his death. He was especially remarkable as a colorist. Among his works are *Romany Girl*; *And She Was a Witch*; *Quadroon*; *Winifred Dysart*; *Turkey Pasture in Kentucky*; *By the Wayside*; *Arcthusa*, purchased for \$6,000 by the Art Museum of Boston; *Psyche*; *H. K. Brown* (a portrait); etc.

FULLER, MELVILLE WESTON, an American jurist; born in Augusta, Maine, Feb. 11, 1833; graduated at Bowdoin College in 1853. He studied law at Bangor, Maine, and at Harvard, and in 1855 began practice in his native city. Here he edited the *Augusta Age*, became president of the common council, and in 1856 city attorney. In the last-named year he removed to Chicago, where, for thirty-two years, he conducted a highly successful law practice. Mr. Fuller was a member of the Illinois constitutional convention in 1862, and of the Illinois house of representatives in 1863. A strong Democrat, he served as a delegate to all the national conventions from 1864 to 1880, inclusive. President Cleveland nominated him chief justice of the United States supreme court, April 30, 1888, and he was confirmed by the Senate July 20th, and took the oath of office October 8th following.

MELVILLE W. FULLER.

FULLER, SARAH MARGARET. See **OSSOLI, SARAH MARGARET FULLER, MARCHIONESS**, Vol. XVIII, p. 57.

FULLERTON, a town and the capital of Nance County, eastern central Nebraska, on the Loup River, and on the Union Pacific railroad. It is the seat of Nebraska Wesleyan University. Population 1890, 1,200.

FULLERTON, LADY GEORGIANA, a British writer of religious novels, daughter of the first Earl Granville; born in Staffordshire, Sept. 23, 1812; died at Bournemouth, Jan. 19, 1885. In 1833 she married

Alexander Fullerton, and two years afterward published her first story, *Ellen Middleton*. Under the influence of the Tractarian movement she became, in 1844, a convert to Roman Catholicism. The rest of her life was devoted to charitable works and the composition of religious stories, among which were *Grantley Manor*; *Constance Sherwood*; *A Stormy Life*; *Mrs. Gerald's Niece*; and *Gold-digger, and Other Verses*.

FULLING. See WOOL, Vol. XXIV, p. 661.

FULMINATES. See EXPLOSIVES, Vol. VIII, p. 808.

FULMINIC ACID has never been isolated, but its formula is $H - O - N = C$. It is one of the few substances in which carbon is bivalent. Its salts are very explosive. See EXPLOSIVES, Vol. VIII, p. 808.

FULTON, a town in Fulton township, Whiteside County, northwestern Illinois, opposite Clinton, Iowa, on the Mississippi River; an important railroad junction, and the depot of much grain from Wisconsin, Minnesota and northwestern Illinois. It has a large elevator, carriage, pipe, and stoneware factories, and is the seat of Northern Illinois College. Population 1890, 2,099; 1900, 2,685.

FULTON, a city of Fulton County, southwestern Kentucky, on the state boundary, five miles N. of Union City, on the Mobile and Ohio railroad. It contains two seminaries, and establishments where cotton-ginning and wool-carding are carried on, and where wagons, tobacco, lumber and flour are manufactured. Population 1890, 1,818; 1900, 2,860.

FULTON, a city and the capital of Callaway County, east-central Missouri, on the Chicago and Alton railroad, 28 miles N.W. of Jefferson City. It contains Westminster College, state asylums for the deaf and dumb and for the insane, and two state institutions under Presbyterian control. The neighborhood abounds in coal and fire-clay, and cattle-raising and farming are extensively carried on. The city has fine water-works. Population 1890, 4,314; 1900, 4,883.

FULTON, a village of Oswego County, northern central New York, on Oswego River, 12 miles S.E. of Oswego, and on the Delaware, Lackawanna and Western railroad. It has good water-power, a seminary, an academy and several factories, among them those of flour, buckwheat, edged tools, paper, firearms, pulleys and paper-mill machinery. Population 1890, 4,214; 1900, 5,281.

FULTON, JUSTIN DEWEY, an American clergyman; born at Earlville, New York, March 1, 1828; became a Baptist minister in 1853. He held pastorates in St. Louis, Sandusky, Ohio; Albany, New York; Boston and Brooklyn. He was a voluminous author, a strong temperance man, and a bitter opponent of Roman Catholicism. He received the degree of D.D. from the University of Rochester in 1871; and was the author of *The Roman Catholic Element in American History* (1859); *Life of Timothy Gilbert* (1864); *Woman as God Made Her* (1867); *The Way Out* (1870); *Show Your Colors* (1881); *Rome in America* (1884); etc.

FULTONVILLE, a village of Montgomery County, central eastern New York, on the Mohawk

River and on the Erie canal, 40 miles W. of Albany, directly opposite Fonda, on the West Shore railroad. It has steam-mills, a grain-elevator, a foundry and machine-shops. Population 1900, 977.

FULVIA, a bold and ambitious woman of Rome, the daughter of M. Fulvius Bambalio of Tusculum. She was thrice married: first to P. Clodius, by whom she had a daughter, afterward the wife of Octavianus; secondly, to C. Scribonius Curio; and thirdly, to Marc Antony, by whom she had two sons. In the conscription of 43 B.C., planned by the triumvirate, Octavianus, Antony and Lepidus, Fulvia acted with great wantonness, gloating over the head of Cicero, who had fallen under the vengeance of Antony. She loved her husband Antony, but was of a most jealous disposition, and when Antony was in Egypt, she induced Lucius Antony, her husband's brother, to take up arms against Octavianus, whom she feared, and also to endeavor to withdraw Antony from Egypt. Lucius, however, was defeated by Octavianus, and was compelled to surrender the following year (40 B.C.). Fulvia met Antony at Athens and was cruelly treated by him; she went to Sicyon in despair, and died the same year. After her death Antony married Octavia, sister of Octavianus, this marriage facilitating the reconciliation of Antony with Octavianus.

FUMIGATION, the cleansing or medicating of the air of an apartment by means of vapors, employed chiefly for the purpose of detaching infectious poisons from clothing and furniture. Most of the methods of fumigation formerly employed have little real value, and are to be looked on chiefly as grateful to the senses; as, for instance, the burning of frankincense. For the really active processes, see DISINFECTANTS, Vol. VII, p. 258.

FUNCHAL. See MADEIRA, Vol. XV, p. 179.

FUNDAMENTAL, in music. See MUSIC, Vol. XVII, pp. 100, 101.

FUNDS. See NATIONAL DEBT, Vol. XVII, p. 245.

FUNDY, BAY OF. See NEW BRUNSWICK, Vol. XVII, p. 373.

FÜNEN OR FÜHNEN (Dan., *Fyen*), the largest of the Danish islands after Zealand, is separated from Jutland and Schleswig, Germany, on the west by the Little Belt, and from Zealand on the east by the Great Belt. With the islands of Langeland, Arø, Taasinge and the included islands, it forms the two administrative districts of Odense and Svendborg. Area of Fünen, 1,135 square miles; population 1893, 206,528.

FUNGICIDES, preparations used for combating or preventing the fungous diseases which attack plants or animals. The diseases of plants are mostly known and classified, but new diseases appear, from time to time, that baffle the knowledge of the scientist. Any unknown disease attacking plants is commonly classed as of fungous origin, and to be treated with fungicides. The recent rapid increase in the knowledge of fungi, their origin and propagation, and the damages they inflict, led to extensive experiments to discover, if possible, some easily applied inexpensive antidote that should prove fatal to the fungi without injuring the plant or the fruit

growing upon it. These experiments have demonstrated the efficacy of certain solutions of copper and lime, or of copper and ammonia, and of potassium sulphide, in destroying the fungi before these are developed upon the leaf or fruit-bud, or of preventing their appearance upon grains by treating the seeds prior to seeding or planting. The destruction of the fungi after full development, without, at the same time, destroying or seriously injuring the plant, seems to be extremely difficult, or impossible, and the remedy ordinarily used in such instances is the total destruction of the plants affected. The application of fungicides varies with

gether 20 pounds of resin, $4\frac{1}{2}$ pounds of caustic soda (98°), 3 pints of crude fish-oil, and 15 gallons of water, until the resin is thoroughly dissolved. When used, the mixture is further diluted with about 10 parts of water. The wash is applied in January or February, again in two weeks, and a third time in August. To prevent smut in wheat, oats or barley, the seed is dipped in hot water for 15 minutes; the water must be above 130° , so as to kill the fungous spores, and never rise above 135° , lest the grain be injured. Before its hot-water plunge the grain is first warmed by immersion in hot water of a lower temperature.

The following table gives some of the principal fungous diseases, with times of treatment, the fungicides to be used, indicated by number, referring to formulas *ante*.

	FIRST APPLICATION.	SECOND APPLICATION.	THIRD APPLICATION.	FOURTH APPLICATION.
Apricot or almond shot-hole fungus.	No. 2, when leaves unfold.	Same in 10 or 12 days.	Same, 14 days later.	Same, 14 days later.
Apple-scab.	No. 1, when fruit-buds are unfolding.	Same, when flower-clusters are expanding.	Same, when petals are falling.	Same, when fruit is $\frac{1}{2}$ inch in diameter, if needed.
Cherry-leaf blight.	No. 1, after foliage is fully developed.	Same, 14 days later.	Same, 14 days later.	Same, 14 days later.
Cherry or plum black-knot.	No. 1, just before leaves appear.	Same, 2 weeks later.	Same, 2 weeks later.	Same, 2 weeks later.
Grape black-rot.	No. 1, before buds open.	Same, when leaves are $\frac{1}{2}$ grown.	Same, just before blooming.	No. 2, 4 weeks after blooming.
Grape downy mildew.	No. 1, when buds first open.	Same, when leaves are $\frac{1}{2}$ grown.	Same, when in bloom.	Same, when fruit is $\frac{1}{2}$ grown.
Peach-curl.	No. 1, before buds unfold.	Same, when leaves are $\frac{1}{2}$ grown.	Same, 2 weeks later.	Same, 2 weeks later.
Pear scab.	No. 1, when fruit-buds open.	Same, just before blooming.	Same, when petals fall.	
Plum, prune and peach leaf rust.	No. 2, when in full leaf.	Same, 3 weeks later.	Same, 2 weeks later.	
Potato rot or blight.	No. 1, when plants are 6 inches high.	Same, 2 weeks later.	Same, 2 weeks later.	Same, 2 weeks later.
Quince fruit-spot and leaf-blight.	No. 1, after blossoms fall.	Same, 2 weeks later.	Same, 2 weeks later.	Same, 2 weeks later.

the occasion and the disease—either by dusting powder upon the plants, as in *Oidium*, or powdery mildew on grapes, treated by dusting with sulphur when the vine is in full bloom, or by spraying a liquid solution over the affected plants, either by hand or by the aid of pumps especially designed for the purpose. Sometimes the treatment is by covering the plant with a tent of light cloth, and passing under the tent the fumes of burning fungicides. This method is rarely practicable, and belongs rather to the insecticide remedies.

The principal fungicides in use are,—

No. 1. *Bordeaux mixture*. Made of copper sulphate, 6 pounds; strong, fresh lime, 4 pounds; water, 22 gallons. The sulphate to be dissolved in a portion of the water, the lime slacked separately, and then slowly added when the mixture is ready for use, either by sprinkling or spraying.

No. 2. *Ammoniacal copper carbonate*. Copper carbonate, 5 ounces; ammonia (26°), 3 pints; water, 50 gallons. Dissolve the carbonate in the ammonia and add the water.

No. 3. *Potassium sulphide*. Composed of $2\frac{1}{2}$ ounces of potassium sulphide to 5 gallons of water; used as a spray for mildew on greenhouse plants, for apple and pear scab, celery-leaf blight, etc.

No. 4. *Corrosive sublimate solution*. Made by adding $2\frac{1}{2}$ ounces of corrosive sublimate to 15 gallons of water. This is used for prevention of potato-scab, the potatoes, before planting, being soaked in the solution for an hour or more. The solution is poisonous and dangerous.

No. 5. *Resin wash*, which is much used to destroy the sooty mold on orange trees, is prepared by boiling to-

FUNGUS. See MORPHOLOGY, in these Supplements.

FUNSTON, EDWARD H., an American statesman, was born in Clarke County, Ohio, in 1836. Educated in the common schools, New Carlisle Academy and Marietta College, he entered the army in 1861 as lieutenant in the Sixteenth Ohio Battery. Mustered out in 1865, he located in Kansas, and was a member of the Kansas house of representatives from 1873 to 1875, of which he was speaker in 1875. He was elected state senator in 1880 and was made president *pro tem.* of the senate. He was a member of the Forty-eighth to the Fifty-second Congresses, inclusive, as representative of the Second district of Kansas. He failed to secure a renomination in 1894.

FÜRBRINGER, MAX, a German anatomist; born at Wittenberg, Jan. 30, 1846; studied at the universities of Jena and Berlin; engaged in special work under the most noted anatomists of Germany. He became anatomical assistant to Gegenbauer; extraordinary professor of anatomy at Heidelberg; professor of descriptive and comparative anatomy and embryology and director of the anatomical institute at Amsterdam in 1879-88, after which he was appointed professor at Jena. His most important work is *Untersuchungen zur Morphologie und Systematik der Vögel* (1888), which is recognized as the

great standard work on the subject of the anatomy and morphology of birds. He also wrote monographs on the bones and muscles of the extremities of the serpentine saurian, on the comparative anatomy of the shoulder muscles, and on the growth and development of the nerve plexus.

FURFURAMIDE, FURFURINE AND FURFUROL. When starch, sugar or bran is acted upon by dilute sulphuric acid and peroxide of manganese, the distillate contains not only formic acid, but also a small quantity of an essential oil, which, after being purified by redistillation, is colorless, has a fragrant odor somewhat resembling that of bitter almonds, and when dissolved in cold sulphuric acid forms a beautiful purple liquid. This oil is termed furfurol. Its formula is $C^4H^3O.CO.H$, and it belongs to the class of aldehydes.

FURLONG, a land measure; literally, a "furrow long." See **WEIGHTS AND MEASURES**, Vol. XXIV, p. 489.

FURNACE. See **IRON**, Vol. XIII, pp. 291-327.

FURNACE, ELECTRIC. See **CHEMISTRY**, in these Supplements.

FURNACE PRACTICE, BLAST. See **IRON AND STEEL**, in these Supplements.

FURNACES. The increased demand for furnaces for the heating of dwellings and other buildings has caused the development of a very large number of styles of furnaces and heaters, operating mostly by steam, hot water, hot air or electricity, and consuming coal or gas as fuel. The use of steam for such heating is mostly confined to large buildings, it being generally conceded that for dwellings and buildings of moderate size a simpler system is superior.

The hot-air furnaces are probably the most common for this purpose. The most recent patterns consist, usually, of a fire-pot and grate, surmounted and partly surrounded by a radiator, the whole being incased with either brick or sheet-iron, to keep in the heat. From within this casing large pipes are led to the different rooms to be heated, dampers serving to cut off the heat from any pipe or pipes as desired, and registers being located at the ends of the pipes in the rooms served, to regulate the entrance of heat at the terminal points of the system. Of this type of furnace is the Boynton, having a patent draft-regulator, draw-center grates, cast-iron radiator made in one solid piece, and minor conveniences; the Ridgway, having a revolving open fire-pot, made in sections, to allow of expansion and contraction without cracking, and revolved on balls to reduce friction; the Magee, having a central pipe in the radiator; the Carton, designed for using soft coal; the Hub, having large perpendicular pipes outside of the radiator; the Peninsular, having duplex grate and annular shaking-ring, as also a damper for turning all the draft directly into the smoke-pipe when starting a fire.

The hot-water system of heating operates on the principle that hot water is lighter than cold, and will always rise to the top, while the colder and heavier water descends, thus producing a constant circulation through pipes distributed in a building. The same class of furnaces may be used as with the hot

air, with the necessary changes in mechanism to provide for heating the water. There is no danger from pressure, as with steam, and the heat in the pipes is maintained much longer after the fire is out than with any other system. It is also cheaper than steam-heating. In the Boynton hot-water furnace a series of horizontal pipes are set above the fire-pot, so that the heat circulates on all sides of them. The hot water is distributed from the top of the furnace, and the return-pipes enter below. Tests made with a hot-water furnace and a hot-air furnace of the same make, for a period of four months, under as nearly similar conditions as possible, indicated a saving of fuel with the hot-water service of 33 per cent.

Gas-furnaces are built for both hot-air and hot-water heating. A common type of hot-air gas-furnace consists of an upright drum for the burners. At the top of the drum is a hollow dome-like ring, through which the heated air passes, turning downward through a series of corrugated pipes to a lower hollow outlet ring, connecting with the pipes through which the heat is to be distributed through the building. The drum and pipes are all incased within a casing to retain the heat. The lower part of the furnace-drum is lined with fire-brick, and as the highly heated products of combustion rise into the upper ring or dome, the forced draft created draws in what air is necessary for the complete combustion of the gas. When such a gas-furnace is arranged for heating by the hot-water system, a series of pipes or rings is arranged so as to secure a large heating-surface for the water that flows through.

Electric heaters are made in several different designs, a common form consisting of a framework of thin cast-iron, with outer castings having numerous projections for radiating the heat. Within are coils of resistance-wire. The amount of heat depends upon the strength of the current turned through the heater. A three-foot heater, on a 110-volt circuit, will consume anywhere from five to twenty amperes, under ordinary conditions. In heating a building in this manner, no furnace at all is required. The heaters are simply distributed where wanted, and connected by wires, so that the current may be turned on and off, like that of an incandescent electric lamp.

C. H. COCHRANE.

FURNEAUX ISLANDS, a group of British islands in Bass's Strait, off the north coast of Tasmania, or Van Diemen's Land, lat. 40° S., long. 148° E.; discovered in 1773 by the English navigator, Furneaux. They are numerous, the largest being 35 miles in length and 10 in breadth. The soil is sandy and the vegetation feeble.

FURNES, a small town, the westernmost of Belgium, near Dunkirk. Four important lines of canal meet at this town, and it has tanneries and linen manufactures, as well as a considerable trade in horses, cattle, hops and cheese. Population, 5,322.

FURNESS, HORACE HOWARD, an American scholar; born in Philadelphia, Nov. 2, 1833; son of Dr. W. H. Furness. He was graduated at Harvard in 1854; traveled three years in Europe, and in 1859 was admitted to the Pennsylvania bar. He was

a diligent student of Shakespeare, and undertook the editing of a new *variorum* edition of the works of the

HORACE H. FURNESS.

Bard of Avon. He received the honorary degree of Ph.D. from Göttingen for his Shakespearean erudition. Of this edition he published *Romeo and Juliet* (1871); *Macbeth* (1873); *King Lear* (1880); *Othello* (1886); *The Merchant of Venice* (1888); *As You Like It* (1890); *The Tempest* (1892). This labor of Dr. Furness was received with the most enthusiastic praise in literary circles in all lands. Of the Variorum edition, *Blackwood's Magazine* said: "America has the honor of producing the very best and most complete edition of our great national poet." Of Dr. Furness it said: "The editor combines with the patience and accuracy of the textual scholar an industry which has overlooked nothing of value that has been written about Shakespeare by the best German and French as well as English commentators and critics; and, what is of no less account, he possesses in himself a rare delicacy of literary appreciation and breadth of judgment, disciplined by familiarity with all that is best in the literature of antiquity as well as of modern times, which he brings to bear in his notes with great effect." Other British critical journals gave him equal praise.

FURNESS, WILLIAM HENRY, an American clergyman; born in Boston, April 20, 1802; graduated at Harvard College in 1820, and in 1825 ordained to the first Unitarian church in Philadelphia, Pennsylvania, where he remained until 1875, when he retired from the ministry. From 1845 to 1847 he edited an annual called *The Diadem*. He was the author of *Remarks on the Four Gospels* (1836); *Jesus and His Biographers* (1838); *A History of Jesus* (1850-53); *Domestic Worship* (1842); *Julius, and Other Tales*, from the German (1856); *The Veil Partly Lifted and Jesus Becoming Visible* (1864); besides translations of works of German theologians and poets. He received the degree of doctor of letters from Columbia College in 1887. He died in Philadelphia, Jan. 30, 1896.—His son, WILLIAM HENRY FURNESS, JR., a portrait-painter, was born in Philadelphia, May 21, 1828. After being employed as a clerk for a short time, his artistic instincts asserted themselves, his expertness being most evident in crayon-work. He went abroad and studied at Munich, Dresden and Venice. On his return to America he had his studio at Boston. Among those who sat to him were Lucretia Mott, Edith May, Charles Sumner, Dr. Furness, John W. Field, Hamilton Wilde and others. He died at Cambridge, Massachusetts, May 4, 1867.

FURNISS, HARRY, a British caricature artist; born March, 1854, at Wexford, Ireland, of English parents. He was educated in Dublin, and began drawing for periodicals and magazines at a very early age. Mr. Furniss went to London at the age

of 19, and from that time on was engaged in illustrating. For many years he was a regular contributor to the *Illustrated London News*, mostly depicting the lighter side of every-day life, but occasionally acting as a serious "special" for that paper. In the latter capacity he made a sketching tour of the distressed parts of England in the winter of 1878, and followed political campaigns through the country, etc. His first drawing in *Punch* appeared in 1880, and he joined the regular staff four years after; at this time his *Punch Parliamentary Views* were collected and published in an *édition de luxe*. His principal works in *Punch* are *Parliamentary Scenes, and Sketches of Members*, with few exceptions drawn direct in the Houses and finished in the studio. Besides his work in *Punch* he has illustrated the following works, published from the same office: F. C. Burnand's *Happy Thoughts*; A'Beckett's *Comic Blackstone*, colored plates; and Burnand's *Incomplete Angler*. He contributed drawings to nearly all the chief magazines in London, Harper's in America, and others, and to numerous papers, the *World* and *Vanity Fair* among them. He also brought out books for children, with colored pictures, entitled *Romps*. In 1890 he was elected a fellow of the Institute of Journalists. In 1894 he retired from the staff of *Punch*, and established a weekly journal called *Lika Joko*. On the abandonment of *The Pall Mall Budget*, the weekly edition of William Waldorf Astor's *Pall Mall Gazette*, on the death of the latter's wife, whose favorite journal it was, Mr. Furniss purchased the plant of the defunct paper and brought out *The New Budget*, making it in every respect a fac-simile of the former. *Lika Joko* was discontinued at the end of the year.

FURNIVALL, FREDERICK JAMES, an English philologist; born Feb. 4, 1825, at Egham, in Surrey; received his education at private schools at Englefield Green, Turnham Green and Hanwell, at University College, London (1841-42), and Trinity Hall, Cambridge (1846-49). He was called to the bar in 1849, but devoted his life mainly to the study of Early and Middle English literature, and established numerous societies, of which he was director, for promoting the study of special works: The Early English Text, 1864; the Chaucer, 1868; the Ballad, 1868; the New Shakespeare, 1873; the Wyclif, 1882; the Browning, 1881; and the Shelley, 1885. Through his societies Dr. Furnivall raised and expended over forty thousand pounds in printing early MSS. and rare books. He was also one of the founders of the Working Men's College, and taught there for many years, besides being a captain in its volunteer corps and president of its boat-club. He was one of the first builders of narrow wagger-boats, in 1845, and introduced sculls instead of oars into fours and eights. Dr. Furnivall edited a large number of early English and other works, among which may be mentioned Walter Map's *Queste del Saint Graal*; *Percy's Folio MS. of Ballads and Romances*; *The Babies' Book*; Harrison's *England* (1577-87); *Caxton's Book of Curtesye*; a six-text print of Chaucer's *Canterbury Tales* (a very valuable aid to the study of Chaucer), and parallel text editions of the poet's *Minor Poems* and *Troilus*

and *Cressida*, etc. To these may be added several of the Shakespeare quartos in fac-simile, and the introduction to a one-volume edition of the works called *The Leopold Shakspeare*.

FURRUCKABAD. See FARRACKHABAD, Vol. IX, p. 42.

FÜRSTENBURG, FRIEDRICH EGON VON, an Austrian primate; born at Vienna, Austria, Oct. 8, 1812. He belonged to one of the princely families; became prince-archbishop of Olmütz in 1853, and in 1879 was made a cardinal priest, with the title of prince-assistant to the Holy See. He was a member of the imperial House of Lords and a councillor of state. Died in Hochwald, Moravia, Aug. 19, 1892.

FURY AND HECLA STRAIT, in lat. 70° N., long. 85° W., separates Melville Peninsula from Cockburn Island, and connects Fox Channel with the Gulf of Boothia. It was discovered by Parry in 1822, and named after his ships.

FUSAN, one of the three open ports of Corea, on the southeast shore of the peninsula, at the mouth of Nak-Forq River, and practically a Japanese settlement under a treaty of 1876. The trade is almost entirely in Japanese hands, and in 1888, of 2,614 foreigners, the Japanese numbered 2,595. The imports in 1887 (chiefly Manchester goods, salt and Japanese wares) were valued at \$659,000, the exports (rice, beans, hides, etc.), excluding specie, at \$394,000. There are good custom stores, and regular communication by steamers with Shanghai, Nagasaki and Vladivostok, and by telegraph with Seoul.

FUSARA, LAKE OF, a small lake of Campania, central Italy, 11 miles W. of Naples, called by the Romans Acherusia Palus. It is near the site of the ancient Cumæ, and during the Roman Empire its banks were studded with villas. Numerous remains of massive buildings, houses and tombs are still to be seen in the neighborhood. The water of the lake is brackish. Oysters have been cultivated here since the time of the Romans.

FUSEE. See WATCH, Vol. XXIV, p. 394.

FUSIBILITY. See METALS, Vol. XVI, pp. 66, 67.

FUSILIERS, formerly soldiers armed with a lighter fusil, or musket, than the rest of the army, but at present all regiments of foot carry the same pattern of rifle. Fusilier is therefore, simply a historical title borne by a few regiments of the British army.

FUSIYAMA. See *Fuji San*, under JAPAN, Vol. XIII, p. 571.

FUSTEL DE COULANGES, NUMA DENIS, a French historian; born in Paris, March 18, 1830; died Sept. 12, 1889. After filling several chairs successively at Amiens, Paris and Strasburg, he was transferred in 1875 to the École Normale, at Paris, and became a member of the Institute in the same year. His earlier writings, *Mémoire sur l'Île de Chio* (1857) and *Polybe; ou, La Grèce Conquise par les Romains* (1858), had hardly prepared the reading

public for the altogether exceptional importance of his brilliant book, *La Cité Antique* (1864; 10th ed. 1885), which threw a flood of fresh light on the social and religious institutions of antiquity. The work was crowned by the French Academy, as was also his profoundly learned and luminous *Histoire des Institutions Politiques de l'Ancienne France* (vol. 1, 1875).

FUSUS, a genus of gasteropodous mollusks nearly allied to *Murex*, having a spindle-shaped shell. There are many tropical and subtropical species. The northern forms once included in the genus are now distributed in other genera.

FUTA JALLON. See GAMBIA, Vol. X, p. 59.

FUTTEHPOOR. See FATHIPUR, Vol. IX, p. 50.

FUTURE ESTATE, an estate which is to take effect in the future, either at some specified time or upon the happening of a certain contingency. This class of estates includes remainders, reversions and other estates which do not exist in the present, but are only in expectancy.

FUTURE LIFE. See ESCHATOLOGY, Vol. VIII, pp. 535-538.

FYAN, ROBERT W., an American lawyer; born in Bedford County, Pennsylvania, March 11, 1835, and removed to Marshfield, Missouri, in 1858. He was an officer in the United States army during the American Civil War; was circuit attorney of the fourteenth judicial circuit in 1865 and 1866, and judge of the same circuit from April, 1866, to January, 1883, when he resigned. In politics a Democrat, he was a member of the Missouri constitutional convention of 1875; was elected a Representative from the Thirteenth Congressional district of Missouri to the Forty-eighth Congress, and in 1890 and 1892 was elected from the same district, but retired in 1894.

FYFFE, CHARLES ALAN, an English historian; born at Blackheath, Kent, December, 1845; graduated from Balliol College, Oxford, in 1868; traveled on the Continent; was at the battle of Sedan in 1870, and sent the first account of the decisive struggle to *The Daily News*, London. He was called to the bar in 1876, but did not practice regularly, preferring literary pursuits. He wrote a *History of Greece*, published in 1875 in Macmillan's History Primers Series, and later an elaborate work, *A History of Modern Europe*, covering the period from 1792 to 1878 (3 vols., 1880-90). He also published a treatise on *The Land Question*. He died by suicide, in a condition of depression caused by a false charge, Feb. 19, 1892.

FYFFE, JOSEPH, an American naval officer; born at Urbana, Ohio, July 26, 1832; entered the navy Sept. 9, 1847, and after successive promotions was made commodore, Feb. 28, 1890, and rear-admiral, July 10, 1894. He was retired six days afterward. Of his 47 years' service he was on sea service 18 years. He died at Pierce, Nebraska, Feb. 25, 1896.

G

GABRO—GADSDEN

GABRO. See **GEOLOGY**, Vol. X, p. 235.

GABINIUS, AULUS, a Roman ruler and governor. The time of his birth is not known. He was tribune in 66 B.C., prætor in 61, consul with L. Piso in 58, and proconsul to Syria in 57. While tribune he proposed the celebrated Gabinian laws (see **ROME**, Vol. XX, p. 763). While in Syria he went over to Egypt and restored to power Ptolemy Auletes, who had been removed by order of the Roman Senate and by the Sibylline Books. He received for this act ten thousand talents from Auletes. Upon his return to Rome in 54 B.C., he was arrested for treason in disobeying the decree of the Senate, and for bribery. He was acquitted of the charge of treason, but was sent into exile for the acceptance of a bribe. He was restored by Cæsar in 49 B.C., and sent by that general to Illyricum, where he died, in 48 B.C.

GABLENZ, LUDWIG CARL WILHELM, BARON VON, an Austrian general; born in Jena, July 19, 1814. His first military service was in the army of Saxony. He engaged in the Austrian service as captain in 1833, and became colonel in 1848. He was for several years employed in the government executive and diplomatic service. He next attracted public attention by his conduct at the battles of Solferino and Caoriana in 1859. He was made lieutenant-marshal in 1863, and commanded the Austrian wing of the Prusso-Austrian army in the Schleswig-Holstein campaign against the Danes in 1864. He was, for a time, governor of Holstein, and after seeing active service in 1866 in the Austro-Prussian war, and negotiating the terms of peace with Prussia, retired from the army until 1867, when he again took the field, and in 1869 became the commanding general of Hungary. He retired permanently in 1871. Crazed by financial losses, he killed himself at Zurich, Jan. 28, 1874.

GABOON. See **AFRICA**, in these Supplements.

GABORIAU, ÉMILE, a French novelist; born at Saujon, in Charente-Inférieure, in 1835; died in Paris, Sept. 28, 1873. He had been a contributor to some of the smaller Parisian papers, when he leaped suddenly into fame with his story, *L'Affaire Lerouge* (1866), a novel having for its subject crime and detectives. He followed this with numerous stories of a similar character. Among them the more popular are *Le Crime d'Orçival* (1867); *La Dégringolade* (1876); and *La Vie Infernale* (1870).

GABRIEL CHANNEL, between Tierra del Fuego and Dawson's Island, is about 25 miles in length, and varies in width from two to three miles at the extremities to half a mile midway.

GACHARD, LOUIS PROSPER, a Franco-Belgian historian; born in Paris, March 12, 1800; died at Brussels, Dec. 24, 1885. He spent the greater part of his life as keeper of the archives at Brussels. He edited, from the national archives of Belgium and

Spain, the correspondence of William the Silent, Philip II, Margaret of Austria, and the Duke of Alva, and wrote *The Disturbances at Ghent under Charles V* (1846) and *The Retirement and Death of Charles V* (1855), besides other books dealing with the history of Belgium.

GADE, NIELS WILHELM, a Danish musical composer (1817-90). See **BENNETT, SIR WILLIAM**, Vol. III, p. 574.

GADES. See **CADIZ**, Vol. IV, p. 626.

GAD-FLY, a name usually applied to the true horse-fly (*Tabanus*), but sometimes to the bot-flies (*Æstrus*). See **HORSE-FLY**, in these Supplements.

GADIDÆ. See **ICHTHYOLOGY**, Vol. XII, p. 691; and **COD**, Vol. VI, pp. 103, 104.

GADOW, HANS FRIEDRICH, a German-British ornithologist; born in Cracow, Galicia, March 8, 1855; studied at Jena, Berlin and Heidelberg; attained such distinction in his native country that he was called to Cambridge University, England, to lecture on the morphology of vertebrata; was also appointed Strickland curator for the university. He published a number of treatises in British scientific journals and in the reports of the London Zoölogical Society. Volumes 8 and 9 of the British Museum *Catalogue of Birds* were edited by him, and on the anatomy of birds he became a recognized authority.

GADSDEN, a town and the capital of Etowah County, northeastern Alabama, on the Coosa River, and on the Gadsden and Attalla Union, the Louisville and Nashville and other railroads. Yellow pine lumber is here extensively manufactured, and in the vicinity coal and iron are found. Population 1890, 2,901; 1900, 4,282.

GADSDEN, CHRISTOPHER, an American patriot and Revolutionary general; born in Charleston, South Carolina, in 1724; died there, Aug. 28, 1805. He received his education in England. From 1741 to 1745 he was a clerk in a counting-house in Philadelphia, and then made a second visit to England. After his return to America he engaged in business on his own account and accumulated a small fortune. In 1765 he was a delegate to the first Colonial Congress, which adopted the Declaration of Rights, and in 1774 to the first Continental Congress. At the beginning of the Revolutionary War he entered the army as a colonel, and in September, 1776, was promoted to the rank of brigadier-general. For a time he was lieutenant-governor of South Carolina, and was a framer of the state constitution. He signed the capitulation when Charleston was taken by Sir Henry Clinton in 1780, and, refusing a parole, was imprisoned for 42 weeks. In 1782 he was elected governor of South Carolina, but declined the office, on account of his age.

GADSDEN, JAMES, an American soldier, grandson of the preceding; born in Charleston, South

Carolina, May 15, 1788; died there, Dec. 25, 1858. He served in the War of 1812 as lieutenant-colonel of engineers, and in 1818 in the Seminole campaign. In 1822 he retired from the army, and settled in Florida as a planter. In 1824 he became a member of the territorial council, was a commissioner to remove the Seminoles from northern to southern Florida, and in 1853 was made minister to Mexico. During his term of office in Mexico he negotiated for an extension of the Mexican boundary, and the purchase by the United States of what is known as the "Gadsden Purchase," including the present lands of Arizona and New Mexico.

GADSDEN PURCHASE, a name given to that portion of New Mexico and Arizona purchased from Mexico under a treaty negotiated by General James Gadsden for the United States, Dec. 30, 1853. The government paid \$10,000,000 for the territory, which comprised an area of 45,535 square miles. This land lies south of the Gila River.

GADWALL OR GRAY DUCK (*Chanletasurus streperus*), a bird of passage found in all countries of the northern hemisphere. It is highly prized as food.

GAGE, LYMAN J., an American banker; born at De Ruyter, Madison County, New York, June 28, 1836. When he was ten years old his parents removed to Rome, N. Y. At the age of eighteen he entered the Oneida Central Bank as office-boy and general utility clerk. In October, 1855, he came to Chicago to seek his fortune. In August, 1858, he entered the service of the Merchants' Savings, Loan and Trust Company, and in 1861 was appointed cashier. At the

LYMAN J. GAGE

organization of the Bankers' Clearing-House he was elected manager. This appointment he declined, but filled the duties of manager until a suitable appointment could be made. In August, 1868, he accepted a proposal from the First National Bank of Chicago. In 1882, upon the reorganization of the First National Bank, he was elected vice-president, and subsequently president. He was the first president of the Bankers' Club, and in 1883 became president of the Commercial Club of Chicago. In 1883 he was chosen president of the American Bankers' Association, which office he held for three successive terms. His services in behalf of the Columbian World's Exposition were great, and he was elected president in May, 1890, but declined reelection in 1891. He was president from 1894 to 1895 of the Civic Federation, which labored assiduously for municipal reform in Chicago. In 1897 he was chosen Secretary of the Treasury by President William McKinley. See also **LAW AND ORDER SOCIETIES**, in these Supplements.

GAGE, MATILDA (JOSLYN), American reformer; born in Cicero, New York, March 24, 1826; married, in 1845, to Henry H. Gage of Cicero; became well

known as an advocate of the abolition of slavery, and of woman suffrage. She edited the *National Citizen* from 1878 to 1881; and wrote *Woman as an Inventor* (1870); *The History of Woman Suffrage* (3 vols., 1881-86), in association with Susan B. Anthony and Elizabeth C. Stanton; and *Woman, Church, and State* (1893). Died at Chicago, March 18, 1898.

GAGE, SIMON HENRY, an American physiologist; born in Maryland, New York, May 20, 1851. He graduated from Cornell University, and, after a term of service as instructor, was appointed, in 1889, associate professor of physiology there. He has published *The Microscope and Histology* (1881), and, in connection with R. G. Wilder, *Anatomical Technology* (1882).

GAGE, THOMAS, an English missionary and author; born, according to some authorities, in Surrey, England, according to others, in Limerick, Ireland, about 1597; died in Kingston, Jamaica, in 1655. He was educated for the Roman Catholic priesthood in the order of the Dominicans in Spain. He went to Mexico with a party of friars, and was placed in charge of a wealthy parish, where he devoted himself to getting riches rather than to his ministry. When he had accumulated a large fortune he deserted his people, and after a roundabout journey through Central America, sailed from Costa Rica for England. There he renounced Catholicism and wrote an account of his adventures in Mexico and a description of the Spanish possessions. This account, entitled *English-American Description of the West Indies* (1648), attracted much comment and was translated into several languages. Until the time of its publication no information about Mexico and the West Indies had been permitted by Spain to be published. Desiring to secure some of the riches described in Gage's book, Cromwell fitted out an expedition against the West Indies, under Admirals Penn and Venables. This expedition captured the island of Jamaica, but gained no strong foothold. Gage accompanied the expedition in the capacity of guide.

GAGERN, HEINRICH WILHELM AUGUST F., a German statesman; born at Bayreuth, Aug. 20, 1799. He was one of the founders of the student movement of 1815-19. After holding office under the government of Hesse-Darmstadt down to 1848, he became, in that year, one of the leading politicians of the Frankfort parliament, of which he was elected president. He was a strong advocate of German unity, and was in favor of Prussia for the central state. In 1849 he resigned his position, and shortly after retired to private life. He engaged in politics again in 1859, this time against Prussia in the conflict with Austria. Pensioned in 1872, he died at Darmstadt, May 22, 1880.

GAIKWAR'S DOMINIONS. See **BARODA**, Vol. III, pp. 380, 381.

GAIL, JEAN BAPTISTE, a French Greek scholar; born in Paris, July 4, 1755; died there, Feb. 5, 1829. For twenty years he was professor of Greek literature in the College of France. From 1815 until his death he was curator of Greek and Latin manuscripts in the Royal Library. He was made a member of the Institute in 1809. He published editions

of *Theocritus* (1792); *Anacreon* (1793); *Xenophon* (1815); *Thucydides* (1807); and a *Greek Grammar*. (1798).—His son, JEAN FRANÇOIS GAIL, was born in Paris, Oct. 28, 1795; died there, April 22, 1845. He assisted his father for a number of years, and afterward became professor of Greek literature at the St. Cyr Military Academy. He published a number of works on Greek customs and several editions of the Greek writers. Among his publications are *Nature of Bacchus-Worship in Greece* (1821) and three volumes of *Geographi Græci Minores* (1831).

GAILLARD, EDWIN SAMUEL, an American physician; born in South Carolina, Jan. 16, 1827; died in Louisville, Kentucky, Feb. 1, 1885. He was graduated at the University of South Carolina in 1845, practiced in New York and Baltimore, and served in a professional capacity in the Confederate army. In 1865 he began practice in Richmond, Virginia, and established the *Richmond Medical Journal*. In 1868 he removed to Louisville, Kentucky, and continued the publication of the *Journal* there. He established the *American Medical Weekly* in 1874; became professor in the Medical College of Virginia, and afterward in the Louisville Medical College, of which he was the first dean.

GAINES, EDMUND PENDLETON, an American soldier; born in Culpeper County, Virginia, March 20, 1777; died in New Orleans, June 6, 1849. He entered the army in 1799, became major, then colonel, and in 1814 brigadier-general. The same year he was brevetted major-general for gallant conduct at Fort Erie, where he was severely wounded. He also received the thanks of Congress, with a gold medal. He was afterward active against the Seminoles in Florida, and in 1836 conducted an expedition against Osceola, in which he was again severely wounded. He was noted for simplicity and uprightness of character.

GAINES'S MILL, a hamlet in Virginia, in Hanover County, noted as the scene of a bloody battle between the Federal and the Confederate troops, during the efforts to capture Richmond by the former, under McClellan, June 27, 1862. This battle is known under the three names, Gaines's Mill, first Cold Harbor and Chickahominy. The Confederates were commanded by General Lee, and the Federal troops in the field were in command of General Fitz-John Porter. On the 26th of June the Confederate forces had been repulsed with great loss at the battle of Mechanicsville. The Federal troops, however, on account of heavy reinforcements to the Confederates, fell back six miles to a safer position on the Chickahominy, near Cold Harbor and Gaines' Mill. The next day a general engagement along the whole of the Federal line took place; but the brunt of the fighting was borne by Porter's division. All day the Confederate attacks were repulsed, but at dusk a final assault was made, which broke the center of the Federal line and caused the whole force to fall back across the Chickahominy and burn the bridges behind them. On account of this retreat, McClellan was forced to change his base of supplies to the James River. This was one of the "seven days" battles. The

loss to the Federals was about seven thousand killed and wounded, and to the Confederates something greater.

GAINESVILLE, a winter health-resort of Alachua County, northeastern Florida, and the capital of the county, on the Florida Central and Peninsular, the Florida Southern and other railroads. It contains a state normal school. It is in the fruit belt, growing oranges especially. It has several hotels for the accommodation of Northern visitors. Population 1890, 2,790; 1900, 3,633.

GAINESVILLE, a city and the capital of Hall County, northeastern Georgia, situated on the summit of the Chattahoochee Ridge, that divides the waters of the Gulf and the Atlantic. It is on the Southern and the Gainesville, Jefferson and Southern railroads, 50 miles N.E. of Atlanta. It has mills, machine-shops, car-shops, Gainesville College and Georgia Seminary; and its springs, which are chalybeate, limestone and freestone, make it popular as a health-resort. Population 1890, 3,202; 1900, 4,382.

GAINESVILLE, a city and the capital of Cooke County, northern Texas, eight miles S. of Red River and 62 miles N. of Fort Worth, on the Gulf, Colorado and Santa Fé and Missouri, Kansas and Texas railroads. It contains educational institutions, and the chief business of the people is stock-raising and grain and cotton growing. The manufactures are chiefly those of ice, brick, flour, castings, soap and brooms. Population 1890, 6,594; 1900, 7,874.

GAIRDNER, JAMES, a British historian; born in Edinburgh, March 22, 1828; attended lectures in the university there, and at 18, as a clerk, entered the Public Record Office in London, where he became assistant keeper in 1859. He distinguished himself by the rare combination of profound erudition, patient accuracy and judicial temper which he showed in the editing of a long series of historical documents. Among his publications are *Memorials of Henry VII* (1858); *Letters and Papers Illustrative of the Reigns of Richard III and Henry VII* (1863); *Gregory's Chronicle of London* (1876); and *Three Fifteenth-Century Chronicles* (1880).

GAIRDNER, WILLIAM TENNANT, a Scotch physician; born in Edinburgh, Nov. 8, 1824. He graduated M.D. at Edinburgh in 1845. He was appointed by the crown, in 1862, to the chair of practice of medicine in Glasgow University; was president of the Medical Association there in 1888, and physician in ordinary to the Queen for Scotland. He contributed many valuable papers to medical journals, and published important medical works, among which are *Clinical Medicine* (1862); *Public Health in Relation to Air and Water* (1862); *Medical Education, Character and Conduct* (1883); *Modern Views of Insanity* (1885); and *Lectures on Tabes Mesenterica* (1888).

GAISFORD, THOMAS, a British Greek scholar; born in Ilford, Wiltshire, England, Dec. 22, 1779; died at Oxford, June 2, 1855. He graduated from Christ Church, Oxford, in 1804. He was appointed professor of Greek literature at Oxford in 1811, and in 1831 became dean of Christ Church. He was a prolific and accurate writer. Among his works are, in addition to various editions of Greek authors,

Poeta Græci Minores (4 vols., 1820-23); *Lexicon of Suidos* (1834); and *Etymologicon Magnum* (1848).

GALANTHUS. See SNOWDROP, Vol. XXII, p. 201.

GALATEA. See NEREUS, Vol. XVII, p. 346.

GALAXY OR THE MILKY WAY. See ASTRONOMY, Vol. II, p. 818.

GALA WATER, a stream of Edinburgh, Selkirk and Roxburgh shires, southeastern Scotland, rising among the Moorfoot Hills, and winding 21 miles S.S.E. past Stow and Galashiels, where, after a total descent of 800 feet, it falls into the Tweed, a little below Abbotsford and 2½ miles W. of Melrose. In its valley, the ancient Wedale, Skene locates the scene of one of Arthur's battles.

GALE OR SWEET-GALE. See GALEWORTS, in these Supplements.

GALENA, a city and the capital of Jo Daviess County, northwestern Illinois, situated on the Fevre River, six miles from its entrance into the Mississippi. By railroad it is 19 miles E.S.E. of Dubuque, and 133 W.N.W. of Chicago. Steamboats can ascend the river to Galena, which is about 100 miles by water above Davenport, Iowa. The principal exports are lead (mined and smelted in the vicinity), zinc, zinc ore, dairy products, grain and packing-house products. The town is beautifully situated on high bluffs, and is well laid out. It has good schools and a convent. Galena was for a long time the residence of ULYSSES S. GRANT; q.v., in these Supplements. Population 1890, 5,635; 1900, 5,005.

GALENA, a city of Cherokee County, Kansas, two miles from the eastern and six from the southern boundary of the state, on the Kansas City, Fort Scott and Memphis railroad. Large quantities of lead and zinc are mined here, and the city has stamping and smelting works. Population 1900, 10,155.

GALENA ORE. See LEAD, Vol. XIV, pp. 374, 375.

GALEOPITHECIDÆ. See MAMMALIA, Vol. XV, p. 401.

GALERITES, a genus of sea-urchins found as fossils in the chalk formations. The generic name, signifying a helmet, refers to the conical shape of the test, or shell. The mouth occupies the center of the lower surface; the vent is near the margin. They are related to the well-known "sand-dollars," and resembled them, except that the shells of *Galerites* were not of so disk-like a shape.

GALERIUS. See MAXIMINUS, Vol. XV, p. 644.

GALES, JOSEPH, an American journalist; born in England in 1760; died in Raleigh, North Carolina, Aug. 24, 1841. He published the *Register* in Sheffield, England, for several years, and in 1793 sold his journal and came to the United States. He then edited the Philadelphia *Independent Gazetteer*, in which he published the first stenographic reports of the Congressional proceedings. In 1799 he removed to Raleigh, North Carolina, and founded the *Register*, which he continued to publish until obliged to retire by age, when he turned his attention to African colonization, and until his death was a leader in the American organization.—His son, JOSEPH GALES, also a journalist, was born in Eckington, England, April 10, 1786; died in Washington, District of Columbia,

July 21, 1860. In 1807 he became connected with the Washington *National Intelligencer*, and in 1810 succeeded to the sole proprietorship. In 1812 he formed a partnership with William Winstone Seaton, and in 1813 the *Intelligencer*, which had previously been a triweekly paper, became a daily. Mr. Gales continued his connection with this journal until his death. The *Intelligencer* files form an important part of the authentic documents relating to United States history. Especially is this true of the Webster-Hayne debate record, published in full in its columns.

GALESBURG, a city of Knox County, northwestern Illinois, 53 miles W.N.W. of Peoria, 164 miles W.S.W. of Chicago, on four branches of the Chicago, Burlington and Quincy railroad. It is surrounded by fertile prairies, has a very large trade, and is noted for its educational institutions, among them Lombard (Universalist) University and Knox (Congregationalist) College. It has several foundries and machine-shops, and manufactories of brooms, corn-planters, carriages, etc. Coal is mined in the vicinity. Population 1890, 15,264; 1900, 18,607. See also Vol. X, p. 24.

GALESVILLE, the capital of Trempealeau County, Wisconsin, on Beaver Creek. It has Gale College, a flour-mill, stove-works and a barrel factory. Population, 1900, 862.

GALEWORTS, a name applied by some botanists to species of the family *Myricaceæ*, or sweet gales. They are resinous, often fragrant, shrubs, with small, naked flowers in catkins, and a small fruit commonly coated with wax. *Myrica Gale* is the sweet-gale of the northern bogs. *M. cerifera* is the bayberry, or wax myrtle, of the Atlantic coast, whose nuts are thickly incrustated with greenish or white wax; and *Comptonia asplenifolia* is the well-known sweet-fern of sterile soils, with sweet, aromatic fern-like leaves.

GALIGNANI, JOHN ANTHONY AND WILLIAM, two Parisian publishers; born in London; the former, Oct. 13, 1796; the latter, March 10, 1798. Their father was a native of Italy, and was the founder of an English library at Paris in 1800. He published there an English *Monthly Repertory*, and in 1814 founded the famous *Galighani's Messenger*. The sons continued the publication of the *Messenger*, and made it an important medium for advocating cordiality between England and France. They founded, at Corbeil, near Paris, a hospital for distressed Englishmen, and in 1889 the Galignani Home, for decrepit members of the printing and bookselling trades, was opened at Neuilly. The elder died Dec. 30, 1873, and the younger Dec. 12, 1882.

GALILEE. See ARCHITECTURE, Vol. II, p. 465.

GALION, a city of Crawford County, northern central Ohio, 64 miles N. of Columbus, on the New York, Lake Erie and Western and the Cleveland, Cincinnati, Chicago and St. Louis railroads. It has the railroad-shops of the New York, Lake Erie and Western railroad, foundries, and wheel and carriage factories. Grain is extensively raised in the neighborhood. Population 1890, 6,326; 1900, 7,282.

GALIPOT, a name given to the hardened turpentine which collects upon the stems of pine trees,

and which is, to some extent, an article of commerce in France.

GALLAGHER, WILLIAM DAVIS, an American poet and journalist; born in Philadelphia, Aug. 21, 1808. In 1830 he became editor of the *Xenia (Ohio) Backwoodsman*; in 1831, of the *Cincinnati Mirror*; in 1836, of the *Cincinnati Western Literary Journal and Monthly Review*; in 1838, of the *Hesperian*, a monthly miscellany of general literature, and at the same time was manager of the *Columbus (Ohio) State Journal*; and from 1839 to 1850 was connected with the *Cincinnati Gazette*. In the latter year he became the confidential clerk of Thomas Corwin, Secretary of the United States Treasury, and during the Civil War was again employed in the Treasury Department. At the close of the war he retired to Louisville. For a few years from 1854, Mr. Gallagher was an editor of the *Louisville Daily Courier*. He published three volumes of poems under the name of *Erato* (1835-37), and also *Selections from the Poetical Literature of the West* (1841); and *Miami Woods, A Golden Wedding, and Other Poems* (1881).

GALLAIT, LOUIS, a Belgian historical painter; born in Tournay, March 10, 1810; became famous by pictures on subjects from Dutch history, such as *The Abdication of Charles V* (1841); *Alva Viewing the Dead Bodies of Egmont and Horn* (1851); and *The Plague of Tournay* (1882), which last the Brussels Museum purchased for \$24,000. He also painted *Forgotten Sorrows* and *The Family of a Prisoner*. Some fine examples of his work are in the Walters Gallery, Baltimore. He was, perhaps, the leader in modern Belgian art. Died in Brussels, Nov. 20, 1887.

GALLA OX OR SANGA, a remarkable variety of ox inhabiting Abyssinia. The chief peculiarity of this animal is the extraordinary size of the horns, which rise from the forehead with an outward and then an inward curve, producing a figure of a lyre, and finally curve a little outward at the tip, to which they taper gradually.

GALLATIN, a city and the capital of Daviess County, northwestern Missouri, on Grand River, and on the Wabash and the Chicago, Rock Island and Pacific railroads, 55 miles by the former E.N.E. of St. Joseph. The vicinity furnishes lumber and agricultural advantages. Population 1900, 1,780.

GALLATIN, a town and the capital of Sumner County, central northern Tennessee, 26 miles N.E. of Nashville, on the Louisville and Nashville and the Chesapeake and Nashville railroads, and three miles N. of the Cumberland River. It contains cotton, woolen and carriage factories, flour-mills, a foundry and a manufactory of agricultural implements. Population 1890, 2,078; 1900, 2,409.

GALLATIN MOUNTAINS AND RIVER. See YELLOWSTONE NATIONAL PARK, Vol. XXIV, p. 737.

GALLAUDET, THOMAS HOPKINS, an American educator; born in Philadelphia, Dec. 10, 1787; died in Hartford, Connecticut, Sept. 9, 1851. He studied theology at Andover, and was licensed to preach in 1814, but after examining the methods in use at the establishments in Europe for teaching the deaf and dumb, devoted himself to the education of that class in the United States. He founded the first Ameri-

can institution for deaf mutes at Hartford, Connecticut, and was its president from 1817 to 1830, when he resigned because of impaired health. In 1838 he became chaplain of the Connecticut Insane Asylum. Among his works are *Sermons Preached to an English Congregation in Paris* (1818); *Bible Stories for the Young* (1850); and *Youth's Book of Natural Theology*. He edited, also, *American Annals of the Deaf and Dumb*. (See DEAF AND DUMB, Vol. VII, p. 11.)—His son, THOMAS GALLAUDET, born in Hartford, Connecticut, June 3, 1822, became a clergyman. In 1850 he was ordained deacon of the Protestant Episcopal Church, and the following year became priest. In 1852 he founded St. Ann's Church for Deaf Mutes, in New York City, and in 1885 the Gallaudet Home for Deaf Mutes, on the Hudson River, near Poughkeepsie. He contributed to the *American Annals of the Deaf and Dumb*, and to other periodicals.—Another son, EDWARD MINER GALLAUDET, born in Hartford, Feb. 5, 1837, followed in his father's footsteps, and in 1856 became a teacher in the Hartford Asylum for Deaf Mutes. In 1857 he organized the Columbian Institution for the Deaf, Dumb and Blind at Washington, District of Columbia, becoming its principal the same year. In 1864 he was made president of the National Deaf Mute College, and the following year professor of moral and political science. In 1880 he attended the international congress of instructors of deaf mutes, held at Milan, Italy, and in 1883 was president of the convention of American instructors at Jacksonville, Illinois. In 1886 he visited England on the invitation of the British government, and gave the royal commission on the education of the deaf, dumb and blind information regarding the system pursued by the United States. He was the author of a popular *Manual of International Law* (1879).

GALL-BLADDER. See DIGESTIVE ORGANS, Vol. VII, p. 231.

GALLE, JOHANN GOTTFRIED, a German astronomer; born at Pabsthaus, Germany, June 9, 1812. He studied at the universities of Wittenberg and Berlin, and afterward became a teacher at Guben and in Berlin. In 1835 he was made an assistant in the newly founded observatory in Berlin. Here he enjoyed the instruction of the celebrated astronomer, Encke. At the end of 1839 Galle discovered three new comets, for which he was awarded the Lalande prize. On Sept. 23, 1846, Galle received a letter from the French astronomer Leverrier, requesting him to examine a certain part of the sky for an unknown planet, and that very evening he discovered the planet Neptune (see ASTRONOMY, Vol. II, p. 813), marking an era in the history of astronomy. Galle continued to make further discoveries, and in 1851 was made professor of astronomy and director of the observatory at Breslau. He has published a number of articles on astronomy in several scientific journals, but especially in the *Astronomische Nachrichten*.

GALLENGA, ANTONIO CARLO NAPOLEON, an Italian historian; born at Parma, Italy, Nov. 4, 1810. He was educated at the University of Padua, and after a short literary career became involved in the

revolution of 1831, and was obliged to leave the country. After eight years spent in travel in France, the United States and other countries, he became a citizen of England in 1839. He was given the chair of Italian literature in University College, London, in 1843. He returned to Italy to participate in the revolution of 1848, was again obliged to flee, but returned to Italy in 1854, obtained favor, and was a member of the Piedmontese and Italian Parliaments from 1854 to 1864. He published, in 1854, a *History of Piedmont*, containing political statements which caused him trouble with the authorities. He also wrote *Italy, Past and Present* (1841-49); *The Blackgown Papers* (1845); *The Pope and the King* (1879); and *Italy, Present and Future* (1887). Died in Llandogo, Monmouth Co., Eng., Dec. 17, 1895.

GALLEON, a large ship formerly used by the Spaniards to carry home the gold, silver and other wealth contributed by the Mexicans and South American colonies. Galleons were armed, and had usually three or four decks, with bulwarks three or four feet thick, and stem and stern built up high, like castles. They were large, clumsy structures, and the easy prey of pirates and hostile navies.

GALLEYS. See SHIP, Vol. XXI, pp. 805-809.

GALLI, the priests of the goddess Cybele, or Agdistis, known in Rome as Rhea. See CYBELE, Vol. VI, p. 744; PHRYGIA, Vol. XVIII, p. 853.

GALLICAN CHURCH, the term applied to the Catholic Church in France, to distinguish the more or less independent attitude which it formerly occupied toward the Roman see. From the very foundation of the Western Empire the pope exercised a regulating power over civil as well as ecclesiastical affairs. Yet there was far less absolutism practiced in Gaul than in Rome. Constant struggles against the extension of papal power in France led to the pragmatic sanction of Saint Louis (see FRANCE, Vol. IX, p. 543), and brought on, in the time of Louis XIV, a convention, which resulted in the partial separation of the French or Gallican Church from the Church of Rome. The Church of France was never obliged to declare itself independent of papal rule, as the Church of England had done, but the beliefs upon which Bossuet and other Gallicans acted led to substantially the same doctrines as had directed the actions of the English bishops. The churches of France had been, from earliest times, designated as Gallican. In ancient times, in the rule of Louis IX, a liturgy had been adopted, which is known as the Gallican Liturgy. For a history of the later Gallican Church events, see BOSSUET, Vol. IV, p. 71; CONCORDAT, Vol. VI, p. 241; and LITURGY, Vol. XIV, p. 707.

GALLIFET, GENERAL GASTON A. A., Marquis de, French Minister of War, was born in Paris Jan. 23, 1831. He entered the army in 1848, saw service in the Crimea and in Mexico, and in 1867 was given command of the 3rd Reg't of Chasseurs d'Afrique. During the second siege of Paris he commanded a brigade and showed much severity to the Commune prisoners. He subsequently served in Africa, and in 1875 was made a general. In 1887 he obtained the Grand Cross of the Legion of Honor. He has since acted as member of the

council of war and in June 1899, when the Waldeck-Rousseau ministry was formed, he was made minister of war. He has a European reputation as a distinguished cavalry officer and is an authority on cavalry manœuvres.

GALL-INSECTS. See GALLS, Vol. X, pp. 45, 46.

GALLINULE. See MOOR-HEN, Vol. XVI, p. 808.

GALLIOT, a Dutch vessel carrying a main and a mizzen mast, and a large gaff-mainsail. Galliot's of four hundred to five hundred tons burden were formerly used as bomb-vessels. This vessel is a direct modification of the ancient Roman galley, and at one time carried twenty oars.

GALLIPOLIS, a city and the capital of Gallia County, southeastern Ohio, on the Ohio River, midway between Cincinnati and Pittsburg, with which it is connected by a line of packet-boats. It is on the Columbus, Hocking Valley and Toledo and the Kanawha and Michigan railroads. The city contains foundries, woolen-mills, furniture factories, planing-mills, lumber-mills, leather-goods factories and a broom factory. Pop. 1890, 4,498; 1900, 5,432.

GALLISONNIERE, AUGUSTIN FELIX ELIZABETH BARRIN, COUNT DE, a French soldier; born in Anjou, France, in 1742. He served at first in the navy, but changed to the army, and so distinguished himself in the Hanoverian campaign as to be rewarded, in 1789, with the office of grand seneschal of the sword, the highest position among the nobility. He was president of the Three Estates, and the leader of the nobility in the Constituent Assembly at the beginning of the Revolution. Although he took arms against the Revolutionists, he was active in Bonaparte's service in 1801. He retired from active service in 1815, at which time he held the rank of lieutenant-general. He died March 2, 1828.

GALLITZIN, DEMETRIUS AUGUSTINE, an American Roman Catholic missionary; born in The Hague, Holland, Dec. 22, 1770; died in Loretto, Cambria County, Pennsylvania, May 6, 1841. At the time of his birth his father was Russian ambassador to Holland, and was the head of one of the most influential of Russian families. His mother was a daughter of Frederick the Great's field-marshal, Schmettau. After serving a short time in the Austrian army, he was sent to America. Much against the will of his parents, in 1796 he was ordained a priest of the Roman Catholic Church at Baltimore, Maryland, and after traveling through various states of the Union as a missionary, settled in Cambria County, Pennsylvania, and purchased a large tract of land to be given to Roman Catholic families. He named his colony Loretto, and through his efforts the wilderness in which he settled was transformed into a thriving community.

GALLIVATS, large rowboats, formerly, and still to some degree, used on the Malabar coast. They rarely exceed seventy tons, carrying two masts with high triangular sails. The Malay pirates employ these swift but somewhat frail vessels.

GALLON, a unit of liquid measure. See WATER, Vol. XXIV, pp. 399, 400; WEIGHTS AND MEASURES, Vol. XXIV, pp. 505, 507, 517.

GALT, a city of Waterloo County, central southern Ontario, on the Grand River, and on the Canadian Pacific and the Grand Trunk railroads, 70 miles W.S.W. of Toronto. It is surrounded by a wealthy farming region; has large public schools and a collegiate institute; is supplied with city water, gas and electric lights. Flour and oatmeal mills, lumber-mills, and woolen and knitting factories are some of its industries: in the working of iron the city is one of the first in Ontario. The river supplies abundant water-power. Population 1891, 7,535.

GALT, SIR ALEXANDER TILLOCH, a Canadian statesman, was born in Chelsea, England, Sept. 6, 1817, and at an early age emigrated to Canada. In 1849 he was elected member for Sherbrooke, and from 1853 he sat in the Canadian Parliament till 1872, when he resigned. In 1858-62, in 1864-66, in 1867 and in 1869, he was Minister of Finance. In 1875 he was appointed a commissioner for Great Britain under the treaty of Washington of 1871, and more recently he acted as a member of the Halifax Fisheries Commission. From 1880 to 1883 he was High Commissioner for Canada in England; in 1881 was delegate for Canada at the Paris International Monetary Conference, and in 1883 a member of the Executive Committees of the International Fisheries Exhibition. He died in Montreal, Sept. 19, 1893.

GALTON, FRANCIS, an English explorer and anthropologist; born at Duddeston, Warwickshire, in 1822, a grandson of Erasmus Darwin, and cousin of Charles Darwin. He was educated in Birmingham and London, and graduated at Trinity College, Cambridge, in 1844. In 1846 he traveled in North Africa, and in 1850 explored lands in South Africa. Mr. Galton was author of *Meteorographica* (1863), the first attempt to chart the progress of the elements of the weather on a large scale, and through which the existence and theory of anti-cyclones was first established. In later years he published the following works, bearing more or less directly on heredity and on the measurement of the various faculties: *Hereditary Genius: Its Laws and Consequences* (1869); *English Men of Science: Their Nature and Nurture* (1874); *Inquiries into Human Faculty and its Development* (1883); *Natural Inheritance* (1889); *Finger-Prints and Hereditary Genius* (1892); *Deciphering of Blurred Finger-Prints* (1893); and several memoirs on composite portraiture.

GALVA, a city of Henry County, northwestern Illinois, 45 miles S. E. of Rock Island, on the ridge dividing the Illinois and Mississippi River basin. It is located in a rich coal region, on the Chicago, Burlington and Quincy and the Rock Island and Peoria railroads. It manufactures iron, pumps, agricultural tools, and brooms. Population 1890, 2,409; 1900, 2,682.

GAVANIC BATTERY. See ELECTRICITY, Vol. VIII, pp. 92, 93.

GALVANIZED IRON, plate iron coated with zinc, which renders it less liable to be affected by moisture and subject to corrosion. See IRON, Vol. XIII, pp. 357, 358.

GALVANOMETER. See ELECTRICITY, §§ 51-53, in these Supplements.

GALVESTON, a city and the capital of Galveston County, southeastern Texas, the most important port of the state. It has unexcelled transportation facilities. It has regular lines of steamers with New York, Morgan City, Indianola, and with Liverpool, Bremen, and other foreign ports. In manufacturing it has grown greatly. The 1890 census shows that the capital of its various manufactories amounted to \$5,100,000; that these employed 1,900 persons, paying \$1,200,000 wages to them, and that the value of the merchandise produced amounted to \$5,700,000. The most important industries are cotton presses, flour mills, cotton-seed oil mills, foundries, and iron works and breweries. The city is supplied with city water from an artesian well, and has gas and electric light plants. For its extensive shipping trade, Galveston has been largely aided by the National government in the construction of sea-walls, jetties, and wharves; but in spite of these the city is constantly exposed to the cyclones and tidal storms which periodically sweep across the gulf, and, dashing over the sea front of the city, do grievous injury to life and property. Disaster, in this respect, may almost be said to be invited, in consequence of the low-lying situation of the town (it is nowhere more than six feet above the sea-level), built on a narrow sand bar or spit of land that encloses Galveston bay and separates it from the Gulf of Mexico. Notwithstanding its drawbacks of situation, the city has become a great seaport and entrepot of the railways, and the chief cotton exporting point in the United States. It has also become a great depot for the shipping of lumber, hog and dairy products, eggs and poultry. The value of its inward and outward trade now amounts to close upon a hundred million dollars per year.

On September 8th and 9th, 1900, Galveston suffered a crowning disaster, the result of a destructive tornado and inundation by the waters of the Gulf, which swept over and submerged the city, causing a most calamitous loss of life and destruction of property. The appalling nature of the visitation may be gathered from the fact that over 3,000 lives are believed to have been lost, many of the citizens being either buried under their wrecked homes or drowned in the storm of waters that temporarily submerged the city. In many instances, entire families fell victims to the violence of the elements. The destruction to property has been estimated as not short of \$10,000,000. Devastating traces of the hurricane were also found throughout the State of Texas, but especially in the towns and villages adjacent to the Bay of Galveston and along the shores of the Gulf. The calamity evoked the greatest sympathy and aid of the entire nation, and thus gave heart to the stricken people of Galveston to enable them, as far as possible, to repair their terrible losses and address themselves to the task of rebuilding their city. Pop. (1890), 29,084; 1900 (before devastation of the city, in Sept. of that year), 37,789. See GALVESTON, Vol. X, p. 53.

GAMBETTA, LÉON, a French statesman; born in Cahors, France, April 3, 1838. After obtaining a collegiate education, he studied law in Paris, where he early became imbued with Republican doctrines and hatred of the Napoleonic system of suppression of liberal thought.

In 1869 he was elected to the Chamber of Deputies from the Paris district. In 1870, when the constant defeats of the French by the Prussians resulted in the abolition of the

Napoleonic dynasty and the institution of the republic, Gambetta was made Minister of the Interior. He took charge of the troops in the field and did his utmost to stop the invasion. He refused to participate in the convention for the ratification of the peace treaty. From 1871 to 1875 he was busy in reorganizing the shattered Republican forces. As leader of the Republicans he forced the resignation of MacMahon in 1879, and in 1880 was elected president of the Chamber of Deputies. His great idea at this time was the substitution of the *scrutin de liste*, or vote by departments, for the *scrutin d'arrondissement*, or district-voting. In November, 1881, he was selected Premier and president of the Council. His ministry lasted but a few weeks, on account of the ultra-radical reforms proposed by himself. On Nov. 27, 1882, he died in Paris, his death being the result of an accident. He was at that time in the height of his power, and, in all probability, would have been the next President of the republic.

GAMBLING. See BETTING, Vol. III, pp. 618, 619; LOTTERIES, Vol. XV, p. 11; and WAGER, Vol. XXIV, pp. 305, 306. See ROUGE-ET-NOIR and ROULETTE, in these Supplements.

GAMBRELL, JAMES BARTON, an American clergyman and educator; born in Anderson County, South Carolina, Aug. 21, 1841. He graduated from the University of Mississippi, and served in the Confederate army during the whole of the Civil War. He entered the ministry of the Baptist Church in 1867, and held many important offices in that denomination, among them editor of *The Southern Baptist Record*. He was chosen president of Mercer University, Georgia, in 1893.

*GAME-LAWS. Laws for the preservation of game, more or less adapted to the purpose for which they are intended, have been enacted in all the states and territories, with the exception of Mississippi. Broadly speaking, they are drawn with the object of preventing the killing or capture of game during the breeding season, and until such time as the young are sufficiently mature to secure their own living.

In a country so vast as the United States, the breeding seasons and conditions vary so widely that

a law which would be applicable to one locality would be entirely inappropriate to another. It is therefore obviously impossible that there could be any uniformity in legislation of this character throughout the country. So it has come about that the laws of one state bear no relation to those of another, each commonwealth having enacted for itself regulations to meet the requirements of its local conditions, without any reference to the laws of other states. It is therefore necessary for the sportsman who would keep within the pale of the law (as all true sportsmen wish to do), that before crossing the boundary of a state he should inform himself of the close seasons and other regulations regarding the killing of game that there exist, for in all probability they will widely differ from those of his own state.

It is an interesting fact, in relation to game-laws, that in nearly every state they have been enacted at the instance of dwellers in cities, their influence on legislation being brought to bear through the medium of gun-clubs, and other associations of like character. Up to the present time the preservation of game has been considered a matter of comparatively small importance, in the eyes of rural communities; indeed in some localities such laws are looked upon as being, more or less, an infringement of personal liberty, and the breaking of them considered, at most, a venial offense.

That the state has a right to regulate the time during which game may be killed and the manner of its killing, is undoubted. The argument used by certain agitators against game-laws, that when game is on land individually owned, it is the personal property of the land-owner, to do with as he will at all times and in all seasons, as he would with his chickens or his hogs, is entirely untenable. As legitimate would be the contention that a stream of running water passing through land is the personal property of the land-owner, to be diverted, dammed, or poisoned as might suit his particular purpose, without considering the right of those below him. The stream flows through the land of one to the land of another, and is the property of no individual, but of the people as a whole, and can be made use of by individuals only under certain restrictions. Game birds, fishes and quadrupeds pass likewise from place to place, and are the property of the community, and are therefore entirely proper objects for protection, so that they may be made of the greatest use to the greatest number.

It is a truism that no law can be successfully enforced unless the sentiment of the community is in favor of it; so it should be the duty of every true sportsman, by example and precept, to bring home to the people the great benefits that would result to the public, as a whole, were reasonable game-laws everywhere strictly enforced. The absence of such a sentiment has led to the practical extermination of that splendid game-bird, the prairie-chicken, in the Eastern states, and throughout the West, of that noble animal, the bison, which, within the memory of many men not now beyond middle age, roamed in countless thousands over the great trans-Missouri plains.

LÉON GAMBETTA.

The loss to the nation by the wanton destruction of the bison is almost incalculable. Not only has a vast source of food-supply and valuable hides been swept away, but the opportunity for indulging in one of the most delightful, healthy and manly sports is denied this and all future generations. The people, as a whole, were ruthlessly robbed, by a handful of ignominious "pot-hunters" for their own sordid ends.

But above and beyond the purely economic advisability of preventing the extermination of wild food-animals, there are certain broad moral and patriotic reasons for their preservation, which should be accorded due weight.

The pursuit of game, more than any other form of amusement, inures its votaries to toil and hardship, quickens the perceptions, steadies the nerves and sharpens the powers of observation. It cannot be doubted, that the larger the number of such men a nation possesses, the better fitted it is to meet and repel attack. Where such a class exists, there is ready at hand a body of men, self-reliant by habit, athletic, hardened by exposure and accustomed to the handling of firearms, from which at once to recruit soldiers of the best quality. Too much weight cannot be given to this circumstance, particularly by a country like the United States, which has a comparatively small standing army to depend upon in time of need.

To-day, because of the practical disappearance of big game in the Eastern states, a general knowledge of the use of the rifle, which stood the country in such good stead in Revolutionary days, is a thing of the past in that section. In the central states, as deer and turkey are becoming scarce, a similar condition is fast approaching; and even in the far West, as big game is being thinned out and driven to the more inaccessible regions, that weapon is being daily less and less used. It depends upon the enactment and enforcement of intelligently framed laws for the preservation of game whether or not the shot-gun is in its turn, also, to fall into disuse, and the race of hardy sportsmen, so valuable to the country, to disappear. In short, the subject of game-preservation and game-laws is far from being (as it is too often considered) one merely of moment to a self-interested clique of sportsmen, but, on the contrary, is a matter of vast national concern, worthy the deepest consideration of all patriotic legislators.

On pages 1363, 1364 is a tabulated statement of the close seasons for the principal game birds, beasts and fishes throughout the United States. In many states there are numerous local regulations, regarding which it would be well for the sportsman to inquire into, but which it is unnecessary to here set forth. Attention is called to some of the more important, particularized below. It may here be stated that in almost all states there are regulations prohibiting the exportation of game from the state, and in many states the shooting of wild-fowl between sunset and sunrise is not allowed.

California. The quail referred to are those that are locally known as the valley quail. The close season for mountain-quail is February 15th to August 15th.

Florida. In many counties there are special laws modifying the period of close season.

Idaho. Killing of all quadrupeds mentioned, excepting deer and antelope, prohibited until after Sept. 1, 1897. Thereafter, close season as indicated.

Indian Territory. The United States Statutes of 1878, section 2137, provides that every person, other than an Indian, who, within the limits of any tribe with whom the United States has existing treaties, hunts, etc., any game, except for subsistence, shall forfeit all guns, etc., and be liable to fine of \$500.

Maine. Many local laws modify close seasons.

Maryland. There are so many local laws that the quotation of the close season under state statutes is apt to be misleading. The reader is therefore specially warned.

Michigan. The close season for ruffed grouse in the Upper Peninsula is January 1st to October 1st.

Mississippi. No state law.

New Jersey. There are two sets of laws, one referring to the northern and another to the southern part of the state; hence the statement of two distinct close seasons, in some instances.

New York. In certain counties the killing of quail is prohibited until 1898.

North Carolina. Numerous county regulations modifying state law.

Oregon. Special prohibition from killing any pheasant or quail east of the Cascade Mountains.

Tennessee. Special county regulations regarding the close season for deer and turkey.

Virginia. Many special county regulations.

HENRY F. GRIERSON.

GAMETE, a name given to the sexual cells of plants. In the lower plants (certain algæ and fungi), the two gametes which unite in the sexual act are similar; but in most of the higher plants the gametes become differentiated into male and female, the former (spermatozoids or antherozoids) being very small and active, the latter (oöospheres) being relatively very large and passive. In the seed-plants the oöosphere retains its character, but the male gamete becomes adapted to transfer by the pollen-tube.

GAMETOPHYTE, the name given to that phase in the life-history of plants which produces the gametes, or sexual cells. It is usually applied only to the plants above thallophytes, in which alternation of generations becomes distinct. In such cases the gametophyte, bearing the sex-organs, is quite distinct from the sporophyte, bearing the asexual spores, the two alternately producing each other. In moss-plants the gametophyte is the leafy phase, and hence the most conspicuous; in the fern-plants it is much reduced, the sporophyte having become the leafy phase, but it is quite independent; while in the seed-plants it becomes so much reduced as to be parasitic upon the large sporophyte, and its presence is very much concealed. See ALTERNATION OF GENERATIONS and MORPHOLOGY, in these Supplements.

GAMING, the act of two or more parties in playing games of chance for money or other thing of value, whereby one shall lose and the other gain. Governed by the same rules is betting upon the result of some game, act or event in which the parties laying the bet may not be actually participating. In many of the states of the United States, gaming, as well as most other forms of gambling, is prohibited by statute, especially in public places. The keeping of public gaming-houses is also prohibited in most states, and is made punishable by

fine or imprisonment, or both; it is also indictable at common law. Gambling contracts are, as a rule, void. Contracts concerning board of trade and stock speculations have often been held to be gambling contracts. Statutes forbidding gambling and the keeping of gambling-houses are constitutional. See GAMES, GAMING, Vol. X, pp. 66-67.

GAMMARUS, a genus of amphipod crustaceans, consisting of marine and fresh-water species; often called beach fleas and sandhoppers, but these terms are commonly applied to all amphipods. They are abundant, and important in the food supply of fishes.

GAMTOOS. See CAMTOOS, these Supplements.

GAMUT, the diatonic scale. Figuratively, the whole range; as the entire *gamut* of experience.

GANGLIA. See ANATOMY, Vol. I, pp. 867-79; and PHYSIOLOGY, Vol. XIX, pp. 23-43.

GANGRENE. See MORTIFICATION, Vol. XVI.

GANNETT, EZRA STILES, an American Unitarian clergyman, born May 4, 1801, in Cambridge, Mass. In 1824 he was chosen assistant to William Ellery Channing, in Boston, whom in 1842 he succeeded in the pastorate. He edited the *Christian Examiner*, 1844-49. Died near Boston, Mass., Aug. 28, 1871.

GANNETT, HENRY, an American topographer; born in Bath, Maine, Aug. 24, 1846. After graduating at Harvard College and the Lawrence Scientific School, he remained at Harvard as assistant in the observatory (1870-71). He entered the government service in 1872, and was appointed chief topographer of the Geological Survey in 1882. His most important publication is his *Dictionary of Altitudes* (1891). He was a contributor to this ENCYCLOPÆDIA.

GANNETT, WILLIAM CHANNING, an American Unitarian clergyman, son of Ezra Stiles Gannett; born in Boston, Mass, March 13, 1840. After graduation from Harvard in 1860, he entered the Unitarian ministry, and held pastorates at various points in the East and Northwest. He published a *Biography of Ezra Stiles Gannett* (1875); *A Year of Miracle* (1881); and, in junction with Jenkin Lloyd Jones, *The Faith That Makes Faithful* (1888).

GANOIDS. See ICHTHYOLOGY, Vol. XII, p. 634.

GARCIA Y INIGUEZ, CALIXTO, a Cuban revolutionary leader; born at Holguin, Santiago province, Cuba, Oct. 14, 1836. He was by profession a lawyer.

In 1868, at the beginning of the "Ten Years' War," he gave up his extensive plantations and joined the revolt against Spanish rule, which had been begun by Céspedes on October 10 of that year. The insurrection had been carried on with varying success, when, on Sept. 3, 1873, Garcia,

with 20 men, was surprised by 400 Spanish troops. After fighting vainly against these odds, Garcia, preferring death to surrender, placed his pistol beneath his chin, fired upward, and fell unconscious. The Spaniards carried his body to Manzanillo, where he revived and finally recovered. The bullet had passed through his mouth and emerged from his forehead, leaving a scar which

CALIXTO GARCIA.

he carried to his grave. His life was spared by the Spanish government, but he was imprisoned at Valencia and Santofia, in Spain. On the conclusion of the peace of Zanjon in 1878, Garcia, at the request of General Campos, was liberated, and he went to New York. In August, 1879, with a few followers, he returned to Cuba and began the "Little War," but was defeated and again taken prisoner. His life was again spared, and he was taken to Madrid, where for the next sixteen years he lived under police supervision, supporting his family, consisting of wife and six children, by teaching French and English. In September, 1895, revolution having again broken out in Cuba, he left Madrid secretly, and made his way to Paris and thence to New York, where he arrived in November. He at once organized a filibustering expedition, which, however, came to grief; and, while fitting out another, he was arrested by the United States government and compelled to give bail in \$2,500. Before the date fixed for his trial, however, he, in March, 1896, sailed on the *Bermuda* and landed near Baracoa, in Cuba, where he issued a bombastic proclamation. During the ensuing irregular warfare Garcia's principal feat of arms was the capture of Guaimaro, in December, 1896. During the siege of Santiago by the United States troops in June and July, 1898, Garcia, with his band of insurgents, coöperated with General Shafter, and when the city surrendered he was incensed because he was not placed in its command, and on General Shafter's refusal he withdrew to Holguin, July 17. He returned, however, on September 23, and was enthusiastically received by the inhabitants. In December, 1898, he was appointed the head of a commission elected by the Cuban assembly which met at Santa Cruz del Sur, to visit Washington and discuss with President McKinley the question of the future of Cuba. There, in consequence, no doubt, of the sudden change of climate, he was attacked by pneumonia, and died Dec. 11, 1898.

GARCIN DE TASSY, JOSEPH HÉLIODORE SA-GESE VERTU, a French Orientalist; born at Marseilles, Jan. 20, 1794; died in Paris, Sept. 2, 1878; studied Oriental languages under Silvestre de Sacy; was appointed professor in the Institute in 1838; published *Peculiarities of the Mussulman Religion in India* (1832); *History of Hindu and Hindustani Literature* (1837); *Philosophic and Religious Poetry Among the Persians* (1864); and *Rhetoric and Prosody of the Languages of the Mussulman of the Orient* (1873).

GARDEN, ALEXANDER, a British naturalist; born in Edinburgh about 1730; died in London, April 15, 1791. In 1752 he began the practice of medicine in Charleston, S. C., and in 1754 he became a professor in King's (now Columbia) College; in 1773 a member of the Royal Society of London; and later vice-president. He adhered to the royal cause in the Revolution, and went to England in 1783. His property in South Carolina was confiscated, but afterward was restored to his son. He published numerous works on botanical and zoölogical subjects. The botanical genus *Gardenia* was named by Linnæus after him.

GARDEN CITY, capital of Finney Co., Kansas:

has a United States land-office and a system of water-works; manufactures flour and brooms; ships cattle and produce; is the center of the irrigation-works of southwestern Kansas. Population 1900, 1,590.

GARDEN CITY, a village of Queens Co., Long Island, N. Y., about 18 miles E. of New York city; founded by A. T. Stewart; is the seat of the Protestant Episcopal bishop of Long Island. The Memorial Cathedral of the Incarnation (Protestant Episcopal) is a fine example of Gothic architecture, and the Memorial School (St. Paul's), for boys, among the most complete school institutions in the country. There is also a female seminary. Each of the ecclesiastical buildings is surrounded by an extensive park of its own.

GARDENIA, a genus of Oriental plants belonging to the family *Rubiaceæ*, or madders. They are shrubs or small trees, with bright green leaves, large and showy, usually very fragrant flowers, and large berries. *G. florida*, the Cape jasmine, from China, is a favorite exotic house-plant, with white flowers and orange-colored berries.

GARDINER, a city of Kennebec Co., Maine, on the Cobsossa river, at its junction with the Kennebec, and on the Maine Central railroad, 12 miles below Augusta. The Cobsossa supplies abundant power, having a fall of 130 feet in the last mile of its course. The city manufactures lumber, paper, furniture, sashes, shoes, wool, castings, and machinery, and does a very large ice business, supplied from the Kennebec. It has a public library, water-works, and an electric-lighting plant. Population 1890, 5,491; 1900, 5,501.

GARDINER, SAMUEL RAWSON, an English historian, chiefly of the period of the Civil War and the times of the first two Stuart kings; born at Ropley, Hampshire, March 4, 1829, and educated at Winchester and Christ Church, Oxford, from which he graduated in 1851. For some time he held the professorship of modern history at King's College, London, but resigned it in 1885, when elected fellow of All Souls', Oxford, that he might pursue more freely his historical studies. Here he devoted himself with great industry and ardor to the preparation of the series of works which elaborately treat of the era of the Civil War and Commonwealth, and to the editing, for the Camden Society, of miscellaneous political documents, family papers, and Parliamentary debates, which throw much historical light on the period. In 1882 a civil-list pension was granted to him by the crown, in recognition of his valuable contributions to the history of England; and in 1894, on the death of the historian Froude, he was appointed regius professor of modern history at Oxford. His *History of the Great Civil War* (3 vols., 1886-91) is distinguished by a masterly grasp of facts and impartial and sober judgments. He also published a *History of England from 1603 to 1642* (10 vols., 1883-84), which embraces the substance of several earlier works dealing with the periods of James I and Charles I. His other works are *The Thirty Years' War* (1874); *The First Two Stuarts and the Puritan Revolution* (1875), both issued in the Epochs of Modern History series; and *A Student's History of England, from the Earliest Times to*

1885 (1890). In 1890 he edited, for the Clarendon Press, the *Constitutional Documents of the Puritan Revolution*, with an admirable introduction, a work which forms a useful companion to Bishop Stubbs's *Select Charters*. He has also published two volumes of a *History of the Commonwealth and Protectorate* (1894, 1897); *Cromwell's Place in History* (1897); and *What Gunpowder Plot Was* (1897). In conjunction with J. Bass Mullinger, he wrote, in 1881, an *Introduction to the Study of English History*, with authorities. —His wife, BERTHA MERITON GARDINER, published, in Longman's Epochs of Modern History series, a meritorious manual on *The French Revolution*.

GARDINER'S ISLAND, east of Long Island, belongs to Suffolk Co., N. Y.; area, 3,300 acres. Its surface is undulating pasture land. Here treasures were dug up, reputed to have been buried by Captain Kidd in 1699. There is a lighthouse at the northern end, lat. 41° 8' 18" N., long. 72° 8' 13" W., with a fixed light 30 feet above sea-level.

GARDINI, MADAME ETELKA GERSTER, vocalist; born at Kaschau, Hungary, June 16, 1857. The director of the Conservatory of Music at Vienna happened to hear her sing once in a religious procession, and advised her to study vocal music under Madame Marchesi. Gerster profited by her instruction for three years. On Jan. 8, 1876, she made her *début* at Venice, in *Rigoletto*, with wonderful success. After this she took up the parts of Ophelia, Lucia, Amina, and Marguerite. In March, 1877, she appeared in Berlin, where she met with unexampled success. In St. Petersburg and Moscow she sang before the Tsar and Tsaritsa, and received special favors from the latter. She appeared in London in 1877-80; and in 1878 and 1880-83, sang in the United States, where she was much applauded. Her voice was a pure soprano. Gerster was married to Pietro Gardini in May, 1877.

ETELKA GERSTER.

GARDNER, a village of Worcester Co., Mass., a flourishing manufacturing center on the Otter river and on several branches of the Fitchburg railroad. Two hundred different varieties of chairs are manufactured here, giving employment to 2,000 men, the annual product being valued at over \$2,000,000. Population 1890, 8,424; 1900, 10,813.

GARDNER, AUGUSTUS KINSLEY, an American physician; born in Roxbury, Mass., July 13, 1812; graduated at Harvard in 1844. After three years spent in European study, he began the practice of his profession in New York city. He was extraordinarily successful, especially in the treatment of the diseases of women and children. He published *A Medical Student in Paris* (1848), and *Causes and Treatment of Sterility* (1850). He was a pronounced humanitarian. New York owes to him many of its public drinking-fountains, and his efforts in importing and domesticating insect-eating birds were of incalculable benefit to the city and the state. Died in New York, April 7, 1876.

GARDNER, CHARLES K., an American soldier;

born, in 1787, in Morris County, New Jersey. He joined the United States army in 1808; served in the War of 1812; was promoted lieutenant-colonel in 1815, and adjutant-general of the northern division of the army in 1817. He was assistant postmaster-general under Jackson, auditor of the Post-Office Department under Van Buren, and postmaster at Washington under Polk. He published a *Dictionary of Commissioned Officers in the United States Army from 1789 to 1853* (1853). He died in Washington, District of Columbia, Nov. 1, 1869.

GARDNER, GEORGE, a British botanist; born in Glasgow, Scotland, in May, 1812. He spent five years, beginning with 1836, in travel in Brazil. He explored the principal streams of that country, and made an excellent collection of the flora of the region, securing many new species. He went to Ceylon in 1844 as superintendent of the Botanical Gardens. He published, in 1846, *Travels in the Interior of Brazil*, and numerous pamphlets. He died in Ceylon, at Neura Ellia, March 10, 1849.

GARFIELD, JAMES ABRAM, an American statesman, twentieth President of the United States;

born in Orange, Cuyahoga County, Ohio, Nov. 19, 1831. His father died when he was a child, and he was obliged, as soon as he was able, to assist his mother in the support of the family in the log-cabin home. He received his early schooling during the winter terms of the district school. But he gained much more knowledge from his constant reading. He worked his way as a carpenter through

JAMES A. GARFIELD.

the Chester (Ohio) Seminary. The year before (1848) he had worked as tow-boy on the Ohio canal. In 1851 he entered Hiram College, Ohio, which, at the time, was the principal Western educational institution of the Campbellite Church, to which the Garfields belonged. Here he remained three years, during which time he supported himself by giving instruction in some of the preparatory classes. He entered the junior class of Williams College, Massachusetts, in 1854, and graduated in 1856. He returned to Hiram College as teacher of Latin and Greek, and in 1857 became the president of the institution. While exercising the duties of his office he studied law and began to take an interest in politics, lending his support to John C. Frémont. He was elected state senator in 1859, and in 1861, when the Civil War began, organized a regiment from among his students and was assigned to duty at the head of a brigade in Kentucky. He was ordered by General Buell to expel the Confederates under Marshall from Kentucky. He ended a successful campaign by the decisive battle of Middle Creek, Jan. 10, 1862, where, with 1,100 men, he defeated an army of 5,000. For this victory he was commissioned a brigadier-general by Lincoln, and as such took part in the second day's fighting at

Shiloh. He was engaged in the siege of Corinth, but while directing some of the engineering operations was taken sick and sent home, July 30, 1862. Two months later he reported at Washington and was assigned to court-martial duty. The most important case tried by him was that of General Fitz-John Porter. In 1863 he returned to the army of the Cumberland and was appointed chief of staff by General Rosecrans. He distinguished himself at the battle of Chickamauga, and for his services was made major-general. He was at this time elected to Congress from the nineteenth district of Ohio. He now began a legislative career equally as brilliant as his military record. He was a prominent member of the committee on military affairs; chairman of the committee on banking and currency, and of the appropriations committee; was a member of the electoral commission in 1877, and that year was elected a Senator. He was nominated for the Presidency of the United States at the Republican convention in Chicago, June, 1880, and elected after a hard contest. He had been in office but four months when, July 2, 1881, he was shot by a half-crazed assassin, Charles J. Guiteau, in the Baltimore and Potomac depot at Washington. He lingered until September 19th. He was buried in Cleveland, Ohio, September 26th. Monuments have been erected to his memory in different states.

Although successful in every line of life, he gained his positions only by hard struggles, and in some cases sharp fighting against acrimonious opposition. His reputation was attacked in the Crédit Mobilier scandal, his sincerity often questioned, and his power denied. He gained his points at times by great sacrifices, and the defeat of Conkling and Platt and their consequent resignation severed his long friendship with them. But he always stood for what to his mind was right, and did not permit his heart to overrule his judgment.

GARGANO, PROMONTORY OF, a peninsula of southern Italy, extending thirty miles into the Adriatic Sea, eastward, from the northern end of Apulia. It has two ranges of mountains, that on the north side being noted for its honey, even in the time of Horace. The southern range is barren. See also APULIA, Vol. II, p. 216.

GARGARON, a peak of Mount Ida, southern Troja, Asia Minor, 10 miles N.W. of Adrimyttium. Its modern name is Kaz-Dagh. The town GARGARA is supposed to have been founded at the summit of the mountain, where there is a large inclosure, but later to have been colonized from Miletus and removed to the foot of the mountain.

GARGET, a name sometimes given to the common poke, or pokeweed (*Phytolacca decandra*), also sometimes called soko. The root (garget-root, or poke-root) is acrid-poisonous; the very young leaves are sometimes used as a pot-herb, but with considerable danger, and the abundant dark crimson-purple berries are used for coloring, though the color is not permanent.

GARGOYLE. See ARCHITECTURE, Vol. II, p. 465.

GARIBALDI, GIUSEPPE, an Italian soldier and patriot; born in Nice, July 4, 1807. He began a

busy life as a sailor, and while in command of a vessel visiting various ports of Italy, formed acquaintances among the leaders of the Italian Liberals. In 1834 he became so involved in the unsuccessful revolutionary movement that he was obliged to flee to France. He went to South America, and served in the Uruguayan army against Buenos Ayres. He returned to Italy in 1848, and assisted in the defense against Austria. In 1849 he was in command of the

GIUSEPPE GARIBALDI.

forces against France and Austria. He was eventually defeated, and obliged to seek safety in the United States. There he remained as a candle-maker in New York until 1854, when he returned to his native home and settled on the island of Caprera. In 1859 he again took up arms, and after fighting at Marsala and Palermo, declared himself Dictator of Sicily. He then captured Naples, and remained in power until Nov. 9, 1860, at which time Sicily was annexed to Italy, when he again retired to private life. He took part in the unfortunate expedition of 1862, and was severely wounded. In 1866 he made his last struggle for Italy, but was defeated at Mentone. He assisted the French against the Prussians in 1870, and in 1875 became a member of the Italian Parliament. He was an extremely radical legislator, and an uncompromising republican. He died in Caprera, June 1, 1882. See, for detailed accounts of the Garibaldian campaigns, ITALY, Vol. XIII, pp. 487-491.

GARIGLIANO, a river of southern Italy, rising in the Abruzzi, southern Latium, west of the former Lake of Fucino, and flowing, after a generally southerly course of 90 miles, into the Gulf of Gaeta. It is navigable below Pontecorvo.

GARLAND, AUGUSTUS HILL, an American statesman and jurist; born in Covington, Kentucky, June 11, 1832. He was admitted to the Arkansas bar in 1853, and in 1861, although he had been opposed to secession, was a member of the provisional congress that met in Montgomery, Alabama. He was a member of the first Confederate Congress, and at the close of the Civil War was a Confederate Senator. In 1867 he was elected to the United States Senate, but was not allowed to take his seat. In 1874 he was elected governor of Arkansas, and in 1876 was sent to the United States Senate. He served as Senator from 1877 to 1885, when President Cleveland appointed him Attorney-General of the United States. Mr. Garland's term of office expired with Mr. Cleveland's retirement from the Presidency in March, 1889, whereupon he engaged in the practice of law in Washington, D. C. Died there, Jan. 26, 1899.

GARLAND, HAMLIN, an American author; born in 1860, in the La Crosse Valley, Wisconsin. His boyhood was spent in a picturesque *coulée*, subsequently described in his stories. His family removed to Iowa, whose prairies form the scenes of

many of his tales. After a local education he spent two years in travel and teaching, and followed the "boom of 1883" to Dakota. He went to Boston and contributed forceful work to the *Transcript* and *Arena*. In 1893 he published *Main Travelled Roads: Six Stories of the Mississippi Valley*, the merits of which obtained an introduction from William Dean Howells and an extensive circulation. *Prairie Folks; or, Pioneer Life on the Western Prairies, in Nine Stories*, and *Prairie Songs*, followed in the same year, and went to establish his fame as a typical Western author. His *Crumbling Idols: Twelve Essays on Art* (1894), was a scholarly and delicate work. His other works were *A Spoil of Office; Rose of Dutcher's Cooley* (1895); *Ulysses S. Grant, His Life and Character* (1898); *Jason Edwards, and A Little Norsk* (1898); and *The Spirit of Sweetwater* (1898).

GARLAND, LONDON CABELL, an American educator; born in Lovingsston, Virginia, March 21, 1810. He graduated at Hampden-Sidney College in 1829. He was professor of chemistry in Washington College, Virginia, from 1830 to 1833; president of Randolph-Macon College from 1835 to 1847; professor of mathematics in the University of Alabama from 1847 to 1866; president of the University of Alabama from 1855 to 1866. He was appointed professor of astronomy and physics in the University of Mississippi and remained there until 1875, when he became chancellor of Vanderbilt University, Tennessee, and at the same time occupied the chair of physics. He published, in 1841, a *Trigonometry, Plane and Spherical*. He died in Nashville, Tennessee, Feb. 12, 1895.

GARNEAU, FRANÇOIS XAVIER, a Canadian historian; born in Quebec, June 15, 1809. He was admitted as a notary in 1830. Subsequently he was clerk of the legislative assembly, member of the council of public instruction, and from 1845 till his death, city clerk of Quebec. He was the author of *History of Canada, from the Discovery to Our Own Time* (1852) and *A Voyage to England and France in the Years 1831-33*. He died in Quebec, Feb. 3, 1866.

GARNETT, HENRY HIGHLAND, an American negro clergyman; born, in slavery, in Kent County, Maryland, in 1815. He taught school in Troy, New York, was licensed to preach in 1842, and then was pastor of a Presbyterian church in Troy for nearly ten years. In 1850-53 he lectured on slavery in Europe, and then went to Jamaica as a missionary for the United Presbyterian Church of Scotland, but returned to the United States on account of failing health. In 1855 he became pastor of Shiloh Presbyterian Church, in New York City, and in 1865 accepted a call to a church in Washington, District of Columbia. In 1869 he was chosen president of Avery College, but resigned soon afterward and returned to Shiloh Church. In 1881 President Garfield appointed him minister and consul-general to Liberia, and in November he sailed for Africa. A few months after his arrival he succumbed to the climate, at Monrovia, Feb. 14, 1882.

GARNETT, a city and the capital of Anderson County, central eastern Kansas, 45 miles N.W. of Fort Scott, on the Pottawattomie River, and on the Missouri Pacific and the Atchison, Topeka and Santa

Fé railroads. Cheese and furniture are made here, and the city contains a college, which is under United Presbyterian control, and very good public schools. Population 1900, 2,078.

GARNETT, JAMES MERCER, an American Anglo-Saxon scholar; born in Aldie, Virginia, April 24, 1840. After graduating at the University of Virginia, he studied in the Universities of Berlin and Leipsic. He took part in the Civil War, in the Confederate army. He was instructor in English in various colleges until 1882, when he was appointed to the chair of English language and literature in the University of Virginia. He wrote a number of translations of Anglo-Saxon writings; among them, *Beowulf's Fight at Finnsburg* (1882); *Anglo-Saxon Poems* (1889); and *Selections in English Prose from Elizabeth to Victoria* (1891).

GARNETT, RICHARD, an English author; born in Lichfield, England, Feb. 27, 1835. His father, the Rev. Richard Garnett, was an eminent author and philologist, and one of the librarians of the British Museum. The younger Garnett was appointed assistant keeper of that great library when his father died in 1850. From 1875 until 1884 he was superintendent of the reading-room. In 1884 he gave up all else to devote his time to the museum catalogue. He wrote numerous contributions to periodicals, and two volumes, one a collection of tales, *The Twilight of the Gods* (1888), and *Carlyle* (1883). He published, also, *Relics of Shelley* (1862); *Selections of Shelley's Poems* (1880); *Letters* (1882); and *Iphigenia in Delphi* (1890). He contributed the article on AUGUSTAN HISTORY to this ENCYCLOPÆDIA, and numerous other articles.

GARNETT, ROBERT SELDEN, an American soldier; born in Essex County, Virginia, Dec. 16, 1819; graduated at West Point in 1841; distinguished himself in Mexico as aide-de-camp to General Taylor; was for two years commandant of cadets at West Point, and commanded an expedition to Puget Sound in 1856. At the outbreak of the war he joined the Confederacy, received a brigadier-general's commission and was killed in battle at Carrick's Ford, Virginia, July 13, 1861.

GARNIER, JEAN LOUIS CHARLES, French architect; born in Paris, Nov. 6, 1825; gained the grand prize at the École des Beaux-Arts in 1842, and continued his studies in Greece and Italy. The new Paris Opera House was built from his design and under his direction (1861-75). He also built the theater and gambling-house at Monte Carlo, and the Nice observatory. He was an officer of the Legion of Honor, a member of the Academy of Fine Arts and of the Institute of France. He wrote *Progress of Art* (1869); *The Theater* (1871); *A Monograph on the Observatory at Nice* (1890); and *Human Habitations* (1891). Died in Paris, Aug. 4, 1898.

GARNIER-PAGES, LOUIS ANTOINE, a French author and statesman; born in Marseilles, July 18, 1803. In 1830 he took part in the revolution at Paris, and was afterward elected to the Chamber of Deputies as a Republican. In the provisional government of 1848 he was Minister of Finance. But he was soon forced to retire into private life, because he insisted on extra taxation in order to save the

state from bankruptcy. In 1869 he was again elected to the Corps Legislatif. When the Germans besieged Paris he took part in the defense of the city. Among his writings are *History of the Revolution of 1848* (1862) and *The Opposition and the Empire* (1872). He died in Paris, Oct. 31, 1878.

GARNISHMENT, a legal proceeding for the purpose of reaching personal property, such as money or goods, which belong to a debtor, but which are at the time in the possession of a third person. The person in whose possession such goods are at the time, and against whom the garnishment proceeding is begun, is termed the garnishee. He is required to appear in court upon a day mentioned, and answer, usually under oath, as to what amount he may have owed the debtor on whose account he is garnished, or what money, goods, etc., belonging to such debtor he may have held at the time summons was served upon him, or since said time. He is required to retain possession of any property which is subject to garnishment which he had in his possession when service was had upon him, or which comes into his hands since service and before the hearing, so that he may have such property subject to the order of court.

Garnishment proceedings are governed entirely by statute in the various states, but, as a rule, such proceedings are allowed either as an auxiliary to an attachment suit, in which case the garnishee is served with a copy of the attachment writ and required to hold any property belonging to the debtor until the final hearing of the attachment against the principal defendant, or by an independent suit which may be begun by the creditor in the name of his debtor against the garnishee. This latter proceeding can be generally maintained only after judgment against the principal debtor. The former proceeding can only be had when some statutory grounds exist for attachment against the principal debtor.

Garnishment is a very efficient remedy, by reason of the prompt manner in which property of the debtor in the hands of others may be reached and held to await the outcome of the suit. Judgment can be had against the garnishee only for the amount in his hands, if he appears and discloses what that amount is. If not, judgment will go against him for the full amount of the claim against the principal debtor. If the garnishee held more than the amount of the debt, the balance goes to the principal debtors. See also EXEMPTION LAWS, in these Supplements.

GAROFALO OR IL GAROFALO. See TISTO, Vol. XXIII, p. 409.

GAR-PIKE (*Belone*), a genus of bony fishes in the family *Scombrocidae*, not far from the true pikes (*Esocidae*). They have long bodies, and both jaws are prolonged into a slender beak, beset with roughnesses and widely set teeth. They swim actively, with an undulating motion, near the surface, and catch small fishes in their jaws. The common gar-pike (*B. vulgaris* or *B. belone*) is frequent off British coasts, and is sometimes called greenbone, from the color of the bones (especially after cooking); gore-bill, from its characteristic beak; or mackerel-guide,

because it visits the coasts just before the mackerel. About fifty species are known, from tropical and temperate seas, some twice as long as the British species. See also *Lepidosteus*, under ICHTHYOLOGY, Vol. XII, p. 687.

GARRETSON, JAMES EDMUND, an American physician; born in Wilmington, Delaware, Oct. 4, 1828. He was graduated at the University of Pennsylvania in 1859. He began to practice in Philadelphia, and from 1861 to 1863 was lecturer on anatomy, from 1866 to 1869 lecturer on surgery, in the University of Pennsylvania, and in 1879 became dean of the Dental College of Philadelphia. He published *System of Oral Surgery* (1869); *Thoughts and Thinking* (1873); *Brushland* (1882); and *Nineteenth Century Sense* (1887).

GARRETT, JOHN WORK, an American railroad president; born in Baltimore, July 31, 1820; was best known as president of the Baltimore and Ohio railroad, holding that office from 1858 until his death. He was also interested in ocean steamship navigation. He organized and built up the present extensive Baltimore and Ohio system. He died in Deer Park, Garrett County, Maryland, Sept. 26, 1884.—His son, ROBERT GARRETT, was born in Baltimore, April 9, 1847; became connected with railroad affairs at an early age, and in 1884 succeeded his father as president of the Baltimore and Ohio railroad. Previously he had served as president of the Valley Branch, third vice-president of the Baltimore and Ohio, and first vice-president of the system. When he assumed the presidency, the financial troubles of the road were just beginning. Succeeding losses and expenses, and the purchase, without his consent, of the Baltimore and Ohio telegraph lines by Jay Gould, served to unbalance his mind for a time, and to prevent him from active participation in the management of the road after 1887. He died in Deer Park, Maryland, July 29, 1896.—His sister, MARY ELIZABETH G., was a well-known philanthropist and promoter of higher education for women; a liberal patron of Bryn Mawr, and in 1892 donated over three hundred thousand dollars to found, in connection with Johns Hopkins Hospital, a medical college where women as well as men should be admitted.

GARRETTSVILLE, a village of Portage County, northeastern Ohio, on a division of the New York, Lake Erie and Western railroad, 37 miles E.S.E. of Cleveland. It has machine-shops, and rake, table and pail factories, and a factory of maple-syrup making machinery. Population 1900, 1,145.

GARROD, SIR ALFRED BARING, a British physician; born in Ipswich, England, May 13, 1819. After his graduation from the University of London in 1842, he received various important appointments in the London medical colleges and hospitals. His discovery of uric acid in the blood of patients suffering from gout brought him considerable fame. He published *Conversion of Benzoic Acid into Hippuric Acid in the Animal Economy* (1843); *Condition of the Blood in Cholera* (1849); *Gout and Rheumatic Gout* (1860); and other works on medical topics.

GARROD, ALFRED HENRY. See ORNITHOLOGY, Vol. XVIII, pp. 39-41, 47.

GARROT, a name given to a European sea-duck of the genus *Glaucionetta*. This name is not used in America. The North American variety is known as the golden-eye, on account of the yellowish color of its eyes.

GARROTE, a mode of execution practiced in Spain and the Spanish colonies. Originally it consisted in simply placing a cord around the neck of the criminal, who was seated on a chair fixed to a post, and then twisting the cord by means of a stick inserted between the post and the back of the neck, till strangulation was produced. Afterward a brass collar was used, containing a screw, which the executioner turned till its point entered the spinal marrow where it unites with the brain, causing instantaneous death.

GARTER, ORDER OF. See KNIGHTHOOD, Vol. XIX, pp. 122-23.

GARY, JAMES A., American manufacturer and financier; born in Uncasville, Conn., Oct. 22, 1833, and taken to Howard County, Maryland, with his parents in 1840. Having graduated at Allegheny College he entered his father's counting-room in 1854, and in 1861 became a partner in the business at Alberton. On the death of his father in 1870 he became the head of the firm. Mr. Gary has extensive banking and financial interests, and his cotton mills are thought to be the largest in the world. For many years he has been conspicuous as a leader in Republican politics, but never held office until appointed Postmaster-General on March 5, 1897.

GAS, HEATING BY. See FURNACES, in these Supplements.

GASCONADE, a river of southeastern Missouri, rising in two forks, in Webster and Wright counties, and winding 200 miles northeastward, through a hilly and picturesque country, till it joins the Missouri River, 35 miles below Jefferson City. It is navigable as far as Arlington, about half its length.

GAS-ENGINE. See STEAM-ENGINE, Vol. XXII, pp. 522-526.

GAS OR GASOLINE MOTORS. See MOTORS, in these Supplements.

GASPARIN, AGÉNOR ÉTIENNE, COMTE DE, a French author and publicist; born at Orange, France, July 10, 1810. His father, Comte Adrien É. P., was, in 1836, Secretary of the Interior, and Agénor at that time was employed under his father. In 1842 he was elected to the Chamber of Deputies. Although a member of the nobility of France, Comte Gasparin favored many liberal measures, being moved thereto by his Protestant principles. During the revolution of 1848 he was in the East. He did not favor the empire established by Napoleon III. For this reason he removed to Switzerland, and lectured at Geneva on social, religious and historical subjects. An enemy to slavery, he expressed the warmest friendship for the cause of the American Union during the Civil War, and published two works on the subject: *Les États Unis en 1861: Un Grand Peuple qui se Relève* (1861) and *L'Amérique devant l'Europe* (1862) translated and published under the titles *Uprising of a Great People* and *America before Europe*. Count Gasparin also published several works on

French Protestantism, spiritualism, the family, moral liberty, and the *Life of Innocent III* (1874). His philanthropic labors in behalf of French refugees who flocked to Geneva hastened his death, which occurred May 14, 1871.

GASPÉ, a cape, peninsula and bay in Gaspé County, Canada, at the extreme eastern part of Quebec. The cape, which ends the promontory, lies at lat. 58° 43' N., long. 64° 14' E. It rises 690 feet above sea-level, a bleak, towering cliff. Just south of the cape is Gaspé Bay, which extends 15 miles inland to the northwest, is about 4 miles wide and is separated from the Gulf of St. Lawrence by Gaspé Peninsula, which extends southeast, and is formed by the Dartmouth River, the Gulf of St. Lawrence and Gaspé Bay. The name is sometimes applied to the whole promontory, comprising Gaspé and Bonaventure counties.

GAST, FREDERICK AUGUSTUS, an American Reformed Church theologian; born in Lancaster, Pennsylvania, Oct. 17, 1835. He received his collegiate instruction at Franklin and Marshall College, Pennsylvania; entered the ministry of the Reformed Church, and was active in pastoral work until 1874, when he became professor of Hebrew and Old Testament theology in the Lancaster Theological Seminary. He was a constant contributor to the *Reformed Quarterly Review* and other church periodicals. Among his articles were *Origin of Old Testament Religion* (1876); *Claims of the Semitic Languages* (1881); *The Pre-semitic Babylonians* (1885); and *The Mystery Language* (1888).

GASTEROMYCETES, a sub-order of fungus. See FUNGUS, Vol. IX, p. 833.

GASTEROPODA, a division of mollusks, including (all) snails and slugs. See MOLLUSKA, Vol. XVI, pp. 632, 641-645.

GATACRE, LIEUT.-GENERAL SIR WM. FORBES, K. C. B., in command of the 3rd army division in South Africa in the Boer war, was born in 1843, and entered the army in 1862. In 1874 he passed the Staff College, and was for four years (1875-79) instructor of military surveying at the Royal Military College. In 1888 he was with the Hazara Expedition, served in Burma; was made a C. B. and received medal and clasp for services in Chitral; commanded a division in the Sudan during the advance on Khartoum and Omdurman, and was mentioned in despatches and received the thanks of both Houses of Parliament. In 1898 he was created a K. C. B. In 1899 he was appointed by the British military authorities to a command in South Africa, with the rank of Lieut.-General, and frequently distinguished himself in the war. He has the reputation of being an excellent though too daring general.

GASTRULA. See ZOÖLOGY, Vol. XXIV, p. 811; MORPHOLOGY, Vol. XVI, p. 842.

GATES, MERRILL EDWARDS, an American educator; born in Warsaw, New York, April 6, 1848. He attended the University of Rochester and graduated at that institution in 1870. He was president of Albany Academy from 1870 to 1882; of Rutgers College from 1882 to 1890; and became the head of Amherst College in 1890. He was appointed a

member of the United States Indian Commission in 1884. He contributed valuable articles to current periodicals and delivered a number of addresses, which have been published. Among his articles are *Sidney Lanier*; *Land and Law as Agents in Educating Indians*; and *The Debt the School Owes the State*.

GATES, SIR THOMAS, a colonial governor of Virginia, prominent in the seventeenth century. His name first appears when the second charter of Virginia was given to a company on May 23, 1609. The officers therein named were West, De la Warr, Somers, Newport, Dale, Wainman and Sir Thomas Gates as lieutenant-general. The colonization of Virginia thereafter became greatly stimulated, and money was contributed in aid of the purpose, and nine vessels, with nearly six hundred emigrants, left Europe for America, under Newport, Somers and Gates. They sailed in May, 1609. Only seven ships reached Virginia; one, with its passengers, was lost at sea; the other, that conveyed Gates, was stranded at one of the Bermuda Islands. Here Gates and his companions improvised two small vessels in the course of nine months, and set sail for their original destination, which they reached on May 24, 1610. They found the Virginia colony in a condition of anarchy and neglect, and its numbers reduced by sickness and famine to about fifty individuals. Gates and the colonists then decided to abandon the settlement and sail coastwise for Newfoundland in four remaining pinnaces that still floated on the river, and seek a passage to England. But no sooner had they begun their voyage than they encountered Lord de la Warr, who, ascending the river on June 9, 1610, with new colonists and fresh supplies, persuaded Gates and his party to return to Jamestown. Lord de la Warr had promised to send to the council an early report of the condition of the colony, and for this purpose dispatched Sir Thomas Gates to England, who, with great energy, gathered means and recruits, and in August, 1611, reached Jamestown safely, with six vessels and about three hundred colonists. He assumed the functions of governor, established divine worship, law and order, and in 1611 made new settlements in Henrico. In March, 1612, a third patent was granted to the company by the crown, that, for the time being, gave them control of the Bermuda Islands, and all other islands within three hundred leagues of the Virginia shore. Sir Thomas Gates returned to England in 1614 in the interest of the colonists. Of his subsequent history we have no record.

GATESVILLE, a city and the capital of Coryell County, east-central Texas, 82 miles N. of Austin, on Little River, and on the terminus of a branch of the St. Louis Southwestern railroad. It is engaged in farming, stock-raising and produce-shipping, being in a rich district. Located here is a state house of correction. Population 1880, 434; 1890, 1,375; 1900, 1,865.

GATINEAU, a river of Quebec, in Canada, which has its origin in a chain of lakes lying immediately north of lat. 48° N., and west of long. 75° W., and, after a south-southwesterly course of four hundred

miles, enters the Ottawa River a mile below Ottawa City.

GATLING, RICHARD JORDAN, an American inventor; born in Hertford County, North Carolina, Sept. 12, 1818. At the age of twenty he invented a screw for propelling steamers, and later a machine for sowing rice and wheat. In 1850 he invented a hemp-brake; in 1857, a steam-plow; and then a machine for transmitting power by means of compressed air. His fame is based, however, upon his invention of the revolving battery which bears his name. It consists of a number of breech-loading rifled barrels, made to revolve around a common center, and fed with cartridges by a hopper. The new gun, with ten barrels, is capable of firing twelve hundred shots per minute. In 1866 it was adopted into the United States service. It has also been adopted by several European governments. More recently he invented an improved method of casting large steel cannon, a torpedo and gun boat, and a pneumatic gun for discharging high explosives which has been subjected to severe tests.

GATSCHE, ALBERT SAMUEL, a Swiss-American ethnologist; born in St. Beatenberg, Switzerland, Oct. 3, 1832. He studied in Neuchâtel, Bern and Berlin, and after engaging in researches concerning the etymology of Swiss dialects, he went to England, and in 1867 to America. In connection with the United States Geological Survey he made a study of the languages and customs of the North American Indians. He contributed a number of valuable papers to the reports of the survey. He became connected with the Smithsonian Institution in 1879. His principal work is embodied in volume 2 of *Contributions to North American Ethnology*, published by the government in 1890.

GAUCHOS, a mixed race. See ARGENTINE REPUBLIC, Vol. II, p. 493.

GAUGAMELA, VILLAGE OF, scene of a decisive battle, where the Persians were overthrown. See ALEXANDER THE GREAT, Vol. I, p. 482.

GAUGE OF RAILWAYS. See RAILWAY, Vol. XX, p. 241.

GAULEY, mountains and a river of central West Virginia. The mountain chain, in Kanawha and Fayette counties, extends from the Kanawha River, near Charleston, eastward for about thirty miles, divided near the middle into two ridges. Between these two ridges flows the Gauley River. It rises in Pocahontas County, in the Black Mountains, flows west past the eastern Gauley Mountains, then turns south and flows into the New River, which beyond this point is called the Great Kanawha. The Gauley River has a course of about 75 miles.

GAULT OR GALT. See GEOLOGY, Vol. X, pp. 357-359.

GAULTHERIA, a genus of shrubby and trailing plants of the family *Ericaceæ*, or heaths. They have alternate, broad and often spicy evergreen leaves and a berry-like fruit. *G. procumbens*, known as creeping wintergreen, boxberry and checkerberry, with nodding, white flowers in the axils of the leaves, is the common species of the Atlantic region, whose persistent red berries and leaves yield the oil of wintergreen. *G. Shallon*, a more robust form, with

flowers in racemes, is the common species of the Pacific region.

GAUR OR GAYAL is a wild ox (*Bibos gaurus*) found in the Indian jungles. The animal is dark brown in color, except the legs, which are white below the knees. Many naturalists believe this animal to be the ancestral stock of the domesticated gyal. The wild gyal inhabits the mountainous regions. Some naturalists consider it a separate species; but it is highly probable that most, if not all, of the Indian wild cattle are local races of the genus *Bibos*.

GAUSS'S THEOREM. See ELECTRICITY, § 19, in these Supplements.

GAUTAMA OR GOTAMA, name of Sidhartha, the Buddha. See BUDDHISM, Vol. IV, pp. 425 et seq.

GAVAZZI, ALESSANDRO, an Italian patriot evangelist; born in Bologna, Italy, March 21, 1809; entered the order of the Barnabites in 1825. He became professor of rhetoric in the University of Naples. In 1848 he delivered an oration on the patriots who had fallen at Milan, and was made chaplain-general of the forces by Pope Pius IX, who at that time favored the Liberal movement. But the pope went over to the Reactionaries and recalled the Roman legion from Vicenza, and Gavazzi fled to Tuscany and Genoa. On his return to Rome he was arrested, but was freed when the pope fled and the Republican government was established. The French captured Rome in July, 1849, and Gavazzi escaped to London, where he taught Italian and lectured against Romanism. Subsequently he visited Scotland, the United States and Canada, and in the latter country his orations against Roman Catholicism gave rise to riots. In 1860 he participated in the Garibaldian expedition to Palermo; in 1870, revisited England; and in 1873 made a tour in the United States. He published his *Orations* (1851); *No Union with Rome* (1871); *Recollections of the Last Four Popes* (1859), and *The Priest in Absolution* (1877). He died in Rome, Jan. 9, 1889.

GAVIÆ, a group of birds, composed of the gulls. It is equivalent to the superfamily *Laroidæ* of some authors. Both of above groups are equivalent to the order *Longipennes*, without the petrels. Authors who use either of the first-mentioned terms place the petrels in another group.

GAVIAL OR NAKOO. See CROCODILE, Vol. VI, p. 593.

GAVILIAN OR SIERRA MORENA, a branch of the Coast Range, in California, just south of San Francisco, extending through the counties of San Mateo and Santa Cruz. The highest point is Mt. Pacheco, 2,845 feet high.

GAY, CLAUDE, a French botanist; born in Draguignan, March 18, 1800. After studying zoölogy in Paris and Asia Minor and Greece, he went to Chile, in 1828, to study the flora of that country. From 1833 to 1843 he made an exploration of Chile for the government. He gathered zoölogical and botanical specimens, and also collected historical data. He returned to France, and from 1856 to 1858 traveled in Russia, Tatar and the United States. He published *A Scientific and Political History of Chile* (1851); *The Mines of Peru as Compared with Those*

of Chile (1855); and *Report to the Academy of Sciences on the Mines of the United States* (1861). He died in Paris, April 6, 1863.

GAY, EBENEZER, an American Unitarian clergyman; born in Dedham, Massachusetts, Aug. 26, 1696; died in Hingham, Massachusetts, in 1787. In 1718 he became pastor of the church at Hingham, where he remained till his death, preaching in the same pulpit within three months of seventy years. He published many sermons, of which one, *The Old Man's Calendar*, obtained a wide circulation. This was preached on his eighty-fifth birthday. He was one of the founders of American Unitarianism.

GAY, EDWARD, an American artist; born in Ireland in 1837; came to the United States when a boy; studied at Carlsruhe and Düsseldorf, and in 1867 opened a studio in New York. He contributed regularly, both to the National Academy and the exhibitions of the Water-Color Society, and was successful in landscapes. Among his paintings are *Mountain Stream* (1860); *Ready for the Reapers* (1875); *Oyster-beds in Pelham Bay* (1885); and *Salt Marshes* (1885).

GAY, SIDNEY HOWARD, an American author; born in Hingham, Massachusetts, in 1814. In 1842 he became a lecturing agent for the American Antislavery Society, and from 1844 to 1857 was editor of the New York *Antislavery Standard*. He then became connected with the *Tribune*, and from 1862 to 1866 was managing editor. From 1867 to 1871 he was editor of the Chicago *Tribune*, and from 1872 to 1874 was on the editorial staff of the New York *Evening Post*. He was an ardent abolitionist; wrote a *History of the United States* (1881) in conjunction with William Cullen Bryant, and was the author of a *Life of James Madison* (1884). He died June 25, 1888, in New Brighton, Staten Island.

GAY, WINCKWORTH ALLAN, an American artist; born in Hingham, Massachusetts, Aug. 18, 1821. He studied in Italy and France, and traveled in Egypt, China and Japan. Among his pictures exhibited at the National Academy in New York are *Mackerel Fleet, Beverly Coast, Massachusetts* (1869); and *The Doge's Palace, Venice* (1875). His *Windmills of Delfshaven, Holland*, was at the Centennial Exhibition at Philadelphia in 1876.

GAYARRÉ, CHARLES ÉTIENNE ARTHUR, an American historian; born in New Orleans, Louisiana, Jan. 9, 1805. After several years of study in New Orleans and Philadelphia, he was admitted to the bar in 1829; was elected to the Louisiana legislature in 1830; appointed deputy attorney-general of the state in 1831, and in 1833 presiding judge of the New Orleans city court. In 1835 he was elected to the United States Senate, but impaired health prevented his taking his seat. In 1844 he again became a member of the state legislature, and was re-elected in 1846. The same year he was appointed secretary of state, and again in 1850, retaining the office till 1857. He supported the Confederacy during the Civil War, at the close of which he became reporter of the state supreme court. He was the author of many historical works; among them, *History of Louisiana* (1866); and two novels, *Fer-*

nando de Lemos (1872); and *Aubert Dubayet* (1882). He died in New Orleans, Feb. 11, 1895.

GAYARRE, JULIAN, a Spanish tenor singer; born in Pamplona, Navarre, in 1850; died in Madrid, Jan. 2, 1890. His voice early attracted the attention of Professor Eslava, who took him to Madrid. His career was most successful. The leading European cities lauded him as the greatest tenor of his age, and many thought him the equal of Mario. Though lacking somewhat in dramatic talent, he had true musical sensibility, and was able to interpret Wagner and other dramatic composers.

GAY-FEATHER, a local name for certain species of *Liatris*, a handsome genus of the family *Compositae*, with slender erect stems, narrow alternate leaves and spiked or racemed heads of showy purple flowers. The species are more generally known as button snake-roots or blazing-stars.

GAY HEAD, a promontory of Dukes County, southeastern Massachusetts, forming the western portion of the island of Martha's Vineyard. Its rocks abound with Miocene fossils. The inhabitants are chiefly Indians, who live by farming and fishing. Here is a revolving light, raised 170 feet above the sea, at lat. 41° 21' 52" N., long. 70° 49' 57" W. Population 1900, 173.

GAYLORD, a village and the capital of Otsego County, northern Michigan (South Peninsula), on the Mackinaw division of the Michigan Central railroad, 50 miles S. of Mackinaw. It is in a farming and lumbering district, has lumber-mills and a potash factory. Population 1900, 1,561.

GAZELLE. See ANTELOPE, Vol. II, p. 101.

GEAR, JOHN HENRY, an American public man; born in Ithaca, New York, April 7, 1825; removed to Iowa in 1838, and in 1843 engaged in business at Burlington, of which city he was mayor in 1863. He was three times elected to the state general assembly, and served two terms as speaker of the house. In 1878-79, and again in 1880-81, he was governor of the state, and was elected to the Fiftieth and Fifty-first Congresses by the first Iowa district, as a Republican. In 1892 he was elected to the Fifty-third Congress, and in 1895 became United States Senator.

GEARY, JOHN WHITE, an American soldier and statesman; born near Mount Pleasant, Westmoreland County, Pennsylvania, Dec. 30, 1819. He studied civil-engineering and law, and was admitted to the bar, but never practiced. During the Mexican War he was lieutenant-colonel of the Second Regiment of Pennsylvania, and for services rendered in the field was made first commander of the City of Mexico, and colonel of his regiment. In 1849 he was appointed first postmaster of San Francisco, and in 1850 was made mayor of that city. In 1856 he was appointed territorial governor of Kansas, and held the office one year.

GENERAL GEARY.

At the beginning of the Civil War he raised the Twenty-eighth Pennsylvania Volunteers, and during the war commanded in several engagements, notably Chancellorsville, Gettysburg and Lookout Mountain. He was with Sherman in the march to the sea. He several times won distinction, and attained the rank, by brevet, of major-general. In 1866 he became governor of Pennsylvania, and held the office to within two weeks of his death. He died in Harrisburg, Pennsylvania, Feb. 8, 1873.

GEARY, THOMAS J., an American lawyer and public man; born in Boston, Massachusetts, Jan. 18, 1854; removed with his parents to California in April, 1863; studied law, and was admitted to the bar in 1877, and engaged in the practice of his profession; was elected district attorney of Sonoma County in 1882, and served two years; was elected, as a Democrat and American, to the Fifty-first and Fifty-second Congresses, and was re-elected to the Fifty-third Congress. While in Congress he drew up and introduced the Chinese Exclusion Act of 1892.

GEDDES, JAMES LORRAINE, a British soldier; born in Edinburgh, Scotland, March 19, 1827; served in India under Gough, Napier and Campbell, and in 1857 settled in Iowa. He enlisted as a private in an Iowa volunteer regiment in August, 1861, was rapidly promoted to brigadier-general, and did good service at Memphis and Mobile. After the war he had charge of the Blind Asylum at Vinton, Iowa, and was connected with the Iowa College of Agriculture in Story County. He was the author of several popular war-songs; among them, *The Stars and Stripes* and *The Soldier's Battle Prayer*. He died in Ames, Iowa, Feb. 21, 1887.

GEEZ LANGUAGE. See ETHIOPIA, Vol. VIII, pp. 612, 613.

GEFFCKEN, FRIEDRICH HEINRICH, a German writer on international law; born in Hamburg, Dec. 9, 1830. He entered the diplomatic service, and among other positions, held that of resident minister in London. He was appointed professor of public law at Strasburg in 1872 and remained there until 1882. In 1888 he gained considerable notoriety by his publication of *The Emperor Frederick's Diary, 1870-71*. He was tried for high treason, but acquitted. Among his legal writings are *The Coup d'État of 1851*, and several volumes on the *Alabama* question, the constitution of the German confederation, and the question of the Danube. He died in Munich, April 30, 1896.

GEFFRARD, FABRE, a Haitian President; born in Anse Veau, Haiti, Sept. 19, 1806. In 1821 he enlisted as a private soldier in the Haitian army, and rose by successive promotions to a captaincy. In 1843 General Herard Rivière appointed Geffrard lieutenant-colonel, and he was soon afterward appointed colonel. In 1844 he became brigadier-general and commander of Jacmel. In 1845 he was appointed general of division, and in 1850 was created Duke of Tabaro. In 1859 he headed a revolt against Soulouque's government and became President of Haiti. In 1867 his government became unpopular, and there was a revolt under Salnave.

Geffrard, seeing that resistance was useless, took refuge on board a French vessel and went to Jamaica, where he died, in Kingston, Feb. 11, 1879.

GEGENBAUR, CARL, a German anatomist; born in Würzburg, Aug. 21, 1826. He received his education at the university of his native city, and instructed there from 1853 to 1855. From 1855 to 1872 he was medical professor at the University of Jena, and in 1872 became professor of anatomy at Heidelberg. He was a recognized authority on comparative anatomy. He became editor in 1876 of the *Morphologisches Jahrbuch*. His principal publications are his *Outlines of Comparative Anatomy* (1878) and *Human Anatomy* (1890).

GEHENNA, the Greek form of the Hebrew *Gehinnom*, or Valley of Hinnom. This valley, or rather narrow gorge, lies south and west of the city of Jerusalem. Here Solomon built a high place for Molech (1 Kings xi, 7), and indeed Gehenna seems to have become a favorite spot with the later Jewish kings for the celebration of idolatrous rites. It was here that Ahaz and Manasseh made their children pass through the fire, "according to the abomination of the heathen"; and at its southeast extremity, specifically designated Tophet ("place of burning"), the hideous practice of infant-sacrifice to the fire-gods was not unknown (Jer. vii, 31). When King Josiah came forward as the restorer of the old and pure national faith, he "defiled" the Valley of Hinnom by covering it with human bones, and after this it appears to have become "the common cesspool of the city, into which its sewage was conducted, to be carried off by the waters of the Kedron, as well as a lay-stall, where all its solid filth was collected. Hence it became a huge nest of insects, whose larvæ, or 'worms,' fattened on the corruption." It is also said that fires were kept constantly burning here to consume the bodies of criminals, the carcasses of animals, and whatever other offal might be combustible. Among the later Jews, *Gehenna* and *Tophet* came to be symbols for hell and torment, and in this sense the former word is frequently employed by Jesus in the New Testament, e.g., Mark ix, 47, 48. See ESCHATOLOGY, Vol. VIII, pp. 536, 537.

GEIKIE, SIR ARCHIBALD, a Scottish geologist, and director-general of the Geological Survey of Great Britain; born in Edinburgh in 1835, and educated at the high school and the university of his native city. In 1855 he was appointed to the Geological Survey; in 1867 he became director of the survey of Scotland, and three years later was first occupant of the new chair of geology and mineralogy in the University of Edinburgh. In 1882 he resigned the chair, and was succeeded by his brother, Professor James Geikie, having, in the previous year, been appointed director-general of the Geological Survey of the United

SIR ARCHIBALD GEIKIE.

Kingdom and director of the Museum of Practical Geology in London. In 1890 and 1892 he was successively president of the Geological Society and president of the British Science Association, and in 1891 was knighted for his services to geological science. He published numerous geological articles, contributed to the magazines and to the transactions of learned societies. He was also a prolific author of works on geology and physical geography, and of memoirs of notable scientists. The chief of these are *The Story of a Boulder* (1858); *Life of Edward Forbes* (1861), written with the late Professor George Wilson; *The Phenomena of the Glacial Drift of Scotland* (1863); *A Student's Manual of Geology* (with the late Prof. J. Jukes); *Class-Book of Physical Geography* (1877); *Outlines of Field Geology* (1879); *Text-Book of Geology* (1884); *Class-Book of Geology* (1886); *Life of Sir Roderick Murchison* (2 vols., 1875); *Memoir of Sir A. C. Ramsay*, of the Geological Survey (1894); *The Ancient Volcanoes of Britain* (1897); *The Founders of Geology* (1897); and *Types of Scenery, and their Influence on Literature* (1898). He wrote the elementary treatise on geology in the Science Primers. As a writer, Sir Archibald had the gift of lucidity, and the faculty of treating abstruse topics in a popular manner. He paid a quasi-professional visit to the United States, and wrote for *Macmillan's Magazine* two interesting papers on *The Bad Lands of Wyoming* and *The Geysers of the Yellowstone*.

GEIKIE, JAMES, a Scottish geologist, and Murchison professor of geology and mineralogy in the University of Edinburgh; born in Edinburgh in 1839, and educated at the high school and the University of Edinburgh. He was a younger brother of Sir Archibald Geikie and related to the Rev. J. Cunningham Geikie, the divine and author. In 1861 he joined the Geological Survey staff, and rose to be local director of the survey in Scotland. In 1882 he resigned the latter position to accept the geological chair in the university, as successor to his brother. Professor Geikie was one of the founders of the Royal Scottish Geographical Society, and member of numerous British and foreign scientific societies; he was also the author of a number of papers dealing with Palæozoic and Pleistocene geology and physical geography. His most important work is *The Great Ice Age, and Its Relation to the Antiquity of Man* (1874; 3d ed. 1894), which has been reprinted in the United States and is widely known for its original research and able treatment of its attractive theme. In 1881 he published a geological sketch, entitled *Prehistoric Europe*, and in 1886 a work on the *Outlines of Geology*. In 1887 he edited the *Songs and Lyrics of H. Heine and Other German Poets*, and in 1893 returned to his special theme in *Fragments of Earth-Lore*.

GEIKIE, JOHN CUNNINGHAM, a Scottish divine and religious writer; born at Edinburgh, Oct. 26, 1824. The son of a clergyman, he early studied for the ministry, and held pastorates in the Presbyterian and Congregational churches in Canada and in England. In 1876 he entered the Church of England, and had clerical charges at Dulwich, Barnstaple and Norwich, England, and for a time preached to an English congregation in Paris. His early writings

embrace *The Backwoods of Canada* and *Entering on Life*, books for young men, as well as a number of works of an educational character. In 1875 appeared a thoughtful work on *The English Reformation*, which ran through many editions. This was followed by his *Life and Words of Christ*, which first appeared in 1876, and of which thirty-two editions have been published, besides several reprints in the United States. The work, which is the rival of Dean Farrar's *Life of Christ*, is distinguished for its scholarship and learning, and, as befits its theme, is less rhetorical than that of the perhaps better-known life by the Dean of Westminster. This was followed by *Old Testament Characters* (1877); a series of six volumes entitled *Hours with the Bible; or, The Scripture in the Light of Modern Discovery and Knowledge* (1880-85); *A Short Life of Christ* (1885); *The Holy Land and the Bible* (1887); a series of *New Testament Hours* (1893); *Landmarks of Old Testament History* (1894); and *The Bible by Modern Light* (1894). Died in London, Oct. 6, 1898.

GEISLER PUMP. See MERCURIAL AIR-PUMP. Vol. XVI, p. 30.

GELATINO-BROMIDE PROCESS. See PHOTOGRAPHY, in these Supplements.

GELDERLAND, a province in the central western part of the Netherlands, bounded by Zuyder Zee, Germany and the provinces of North Brabant, South Holland, Utrecht and Overijssel. The Rhine, Yssel, Waal and other rivers run through the province, and along their banks the soil is fertile, and produces tobacco, rye, wheat and buckwheat, and fine cattle are also raised. Area, 1,965; population 1895, 534,737.

GELEE. See CLAUDE OF LORRAINE, Vol. V, pp. 814, 815.

GELIDIUM, a genus of red sea-weeds, said to be utilized in the building of the edible birds'-nests so much prized by the Chinese. These and allied species are largely used for food in the East, as yielding wholesome jellies. *Gelidium* is one of the genera which yields the well-known jelly agar-agar, much used as a culture-medium in biological laboratories.

GEMBLOUX OR GEMBLOURS, a town of Belgium, province of Namur, 10 miles N.E. of the city of Nemur, celebrated as the scene of the victory of Don John of Austria over the United Netherlands in 1578. A state agricultural establishment is located here. Population, about 3,000.

GEMMÆ, in botany, a name given to certain special organs for vegetative multiplication. The gemmæ most commonly observed are those of certain liverworts (*Marchantia* and *Lunularia*), in which they are flat, many-celled bodies, which develop from the surface of the thallus within a little cup or crescentic sac (cupule), and upon germination give rise to a new thallus. Multicellular gemmæ of similar character occur, also, in certain mosses (*Tetraphis*) and pteridophytes (*Trichomanes* and *Lycopodium*), while those of simpler

Thallus of *Marchantia*, showing three cupules containing gemmæ. (Original.)

structure occur in other groups, usually known under other names.

GENEALOGIES, AMERICAN. Unmoved by the cynical inquiry of the poet Horace as to the utility of pedigrees, and dating their researches at least as far back as the golden age of Revolutionary days, Americans have, of late years, evinced a decided inclination for that most fascinating of pursuits, genealogy. One of the chief factors so moving them has undoubtedly been the establishment of colonial and Revolutionary societies (q.v., in these Supplements). Limited as membership in these is to lineal descendants of those heroes who welded the nation in the slow fires of revolution, the anxiety to deduce a pedigree from so honorable an origin has been natural and widespread. The pioneer work was monumental, and will long survive Durrie, Savage, Chester, Waters, and the members of the New England Historical and Genealogical Society, who did it. Their researches threw valuable light on many a forgotten record, and revealed many valuable historical data upon colonial times and ways.

Representing, as the Pilgrims did, the flower of English yeomanry, with family escutcheons bright with great deeds, rather than gaudy with the trappings of discreditable nobility, some with title deeds antedating the Norman Conquest, investigation went back beyond Elizabethan days. Slowly the searchers began to publish the results of their labors. To-day hardly a distinctively American family exists which does not possess a printed record of its ancestors and their achievements. The *Bulletin* of the Boston Public Library for 1891 discloses over 1,700 family genealogies stowed among the shelves of that model institution. Records of Revolutionary days have formed the subjects of especial attention in the thirteen original states, and have been published at state or private expense. Rolls of Revolutionary soldiers, preserved in the archives of the Federal or state governments, have been searched, indexed or printed, and many books have been devoted to the deeds of heroes doomed otherwise too soon to be forgotten.

The custom of keeping careful family records has become more general, and a distinctively American method has been introduced. The old English method of making a pedigree with long lines and great waste of space has given way to a simple and closely printed statement of descent, wherein the use of different sizes and styles of type, and the judicious employment of numerals for reference purposes, have not only made the American system universal in the United States, but have insured its adoption by the English-speaking race.

Many family associations have been formed, and reunions of kinsmen at stated intervals are of frequent occurrence. An impetus has been given to the study of heraldry, and a most interesting and harmless pursuit has become one of the recreations of many a busy man's leisure moments.

The literature on the subject is varied, as well as voluminous. Nearly every public library has been compelled to respond to the frequent demands made by readers for family histories and genealogical works. The collections of the Boston Public Library,

Lenox Library in New York, and Chicago Public Library, are noteworthy and extensive.

A brief and by no means exhaustive list of standard genealogical works must include Amory's *Our English Ancestors*; Anderson's *Genealogy and Surnames* (1865); J. O. Austin's *Genealogical Dictionary of Rhode Island* (1887); Bardsley's *English Surnames*; Bergen's *Early Settlers of Kings County, New York*; Bond's *Genealogies of Early Settlers of Watertown, Waltham and Weston, Massachusetts*; C. Bridger's *Index to Printed Pedigrees* (1867); Burke's *Landed Gentry of Great Britain and Ireland*; Burnett's *Popular Genealogists*; Burn's *Parish Registers in England*; *The Clans of Scotland*; Coleman's *Index to Printed Pedigrees* (1866); Cussan's *Handbook of Heraldry*; D. S. Durrie's most valuable *Bibliographia Genealogica Americana* (1886); W. H. Egle's *Pennsylvania Genealogies* (1880); Fairbairn's *Crests of Families in Great Britain and Ireland*; Farmer's *Genealogical Register of the First Settlers of New England* (1829); Gatfield's *Books and MSS. Relating to Heraldry and Genealogy*; *The Genealogist* (1877 to date); Goodwin's *Genealogical Notes of Some of the First Settlers of Connecticut and Massachusetts* (1856); Green's *Historic Families of Kentucky* (1889); Haines's *Manual of Monumental Brasses*; Hayden's *Virginia Genealogies*; J. Camden Hotten's excellent and indispensable *Lists of Emigrants from Great Britain, 1600-1700* (1874); Hughes's *American Ancestry*, 3 vols. (1887); Littell's *Family Records of the Passaic Valley*; Lowers's *Patronymica Britannica*; Marshall's *Index to Pedigrees in the Herald's Visitations*; the same author's invaluable *Genealogist's Guide to Printed Pedigrees* (1885); *The New England Historical and Genealogical Register* (1847 to date); *The New York Genealogical and Biographical Record* (1870 to date); Nicholas's *County Families of Wales*, 2 vols.; O'Hart's *Irish Pedigrees*; Pearson's *First Settlers of Albany County, New York*; W. P. W. Phillimore's excellent work, *How to Write the History of a Family* (1887); Rupp's *Thirty Thousand Names of Immigrants in Pennsylvania, 1727-1776*; Walter Rye's *Records and Record-Searching* (1888); Savage's monument of industry, *The Genealogical Dictionary of New England*, 4 vols. (1861), and O. P. Dexter's *Index to Savage* (1884); Sims's *Index to Pedigrees and Arms in Herald's Visitations*, and his most useful *Manual for the Genealogist, etc.* (1888); Talcott's *Genealogical Notes of New York and New England Families* (1883); Tanquay's *Dictionnaire Généalogique des Familles Canadiennes*, 6 vols. (1871-88); Taylor's *Great Historic Families of Scotland*; Walford's *County Families of the United Kingdom*; H. F. G. Waters's *Genealogical Gleanings* (1885); Whitmore's *American Genealogist*, 2 vols. (1875); and Wyman's *Genealogies of Charlestown, Massachusetts*.

GENERAL, an officer of the general staff of an army. A commander-in-chief or lieutenant-general would, in the field, usually command several army corps, a major-general one corps or a division, and a brigadier-general a brigade. These assignments are arbitrary, and generally changed by conditions. In the British army the number holding each rank is unlimited, while in the United States the law allows of but one lieutenant-general, three major-generals and six brigadier-generals. The rank of general in the United States was created by Congress in 1866, and bestowed on General Grant; afterward conferred on Sherman, and died with Sheridan in 1891. The pay, in the United States, of a general is \$13,500 a year; lieutenant-general, \$11,000; major-general, \$7,500; brigadier-general, \$5,500.

GENERAL ASSEMBLY. See PRESBYTERIANISM, Vol. XIX, pp. 676 et seq.

GENERAL BAPTISTS. See BAPTISTS IN THE UNITED STATES, in these Supplements.

GENERAL CONVENTION, THE, the governing body of the Protestant Episcopal Church in the United States. This body first met in Philadelphia in 1785, as the result of a general call of delegates

from the middle and Southern states to form a union, and to agree upon some general method of government to take the place of the discipline and supervision exercised before the Revolution by the Church of England. These delegates were joined, in 1789, by the delegates from the New England states, headed by Bishop Seabury. In 1785 a constitution was adopted, substantially the same as that in use to-day. By its provisions, the general convention consists of two bodies or houses, the house of bishops, who sit in secret session, and the house of deputies, composed of four clerical and four lay delegates from each diocese. The consent of both houses is necessary to the enactment of any legislation. The senior bishop presides over the house of bishops, and the presiding officer of the deputies is elected from the body. The General Convention has power to form new dioceses, to try bishops, enact canons and to revise the prayer-book. It is convened every three years, at some appointed place.

GENERAL THEOLOGICAL SEMINARY, the leading educational institution of the American

GENERAL THEOLOGICAL SEMINARY.

Protestant Episcopal Church, located in New York City. This school was organized in 1817, and classes first assembled in 1819. It was moved to New Haven, Connecticut, in 1820, but returned to New York in 1822, being located (1896) between Ninth and Tenth Avenues, on Chelsea Square. In 1895 there were 14 in the faculty, 150 students and a library of 25,000 volumes. From its organization up to and including the year 1895 its graduates numbered 1,294. It has an endowment of about \$1,000,000.

GENERATION, SPONTANEOUS. See ABIOTHESES, Vol. I, p. 49.

GENERATIONS, ALTERNATION OF, an interesting complication in the life-history of many plants and animals, the organism producing offspring which are unlike itself, but which in turn give rise to forms like the original parents. See REPRODUCTION, Vol. XX, pp. 429-431.

GENERATOR, NEW THERMOELECTRIC. Henry B. Cox is the inventor of a new thermoelectric generator, which is claimed to be a commercial success, and well suited to the furnishing of currents of low voltage. Machines are being built which consume 2½ feet of gas per hour, and can be arranged to deliver 1 volt and 45 amperes, or 2 volts and 22 amperes, or 11 volts and 4 amperes, etc. The ther-

moelectric couples used in these generators are subjected to the most elaborate tests in process of manufacture, in order to secure those of highest resistance. The element is built up of successive rings of the tested cast couples, and all parts are carefully insulated. Terminal wires are then brazed to the pole-pieces, and the entire element clamped in position. Another resistance-test is then taken, after which the interior is lined with a plastic cement that adheres very closely when dry and vitrified, and has practically the same degree of expansion and contraction as the integral part of the element. Then follow more resistance-tests and more cementing. A metallic jacket is used to form the exterior walls, and to complete a chamber for the water-back, as a constant supply of water has to be maintained. A bracket and gas-burner are also added, and a series of iron deflectors are used to distribute the heat evenly. A number of other thermoelectric generators have been invented within a few years, but all appear to be still in the experimental stage, or of no commercial value.

C. H. COCHRANE.

GENESEE CANAL. See CANAL, in these Supplements.

GENESEE RIVER, a river of western New York, which rises in Potter County, Pennsylvania, flows northward through New York and enters Lake Ontario. It is about 120 miles in length, is navigable for lake vessels for five miles, has falls at Rochester and Portageville, and its valley is a beautiful and fertile region.

GENESEO, a city of Henry County, northwestern Illinois, 23 miles E. of Rock Island, on the Mississippi River, and on the Chicago, Rock Island and Pacific railroad. It is a shipping-point for stock and grain, and an enterprising manufacturing town. Among the articles produced are wagons, furniture, tubs, pails, flour and agricultural implements. The Northwestern Normal School and a collegiate institute are located here. Population 1900, 3,356.

GENESEO, the county seat of Livingston County, central western New York, on the Genesee River, and on the New York, Lake Erie and Western railroad. It has a state normal school, a public library containing ten thousand volumes, water-works and gas. Its manufactories include those of lumber, flour, mittens and gloves, machinery and canned goods. Population 1890, 2,286; 1900, 2,400.

GENEST OR GENET, EDMOND CHARLES, a French diplomatist; born in Versailles, Jan. 8, 1765; died in Schodack, New York, July 14, 1834. In 1789 he was sent to St. Petersburg as *chargé d'affaires*, and in 1792 was appointed minister to the United States. He was cordially welcomed by the American people, but when he denounced the American government for remaining neutral in the troubles between France and England, and went so far as to issue commissions to privateers, ordering that their prizes should be tried and condemned by French consuls in the United States, Washington demanded and obtained his recall. Genest decided not to return to France, and was naturalized and settled in the state of New York. He married a daughter of Governor Clinton in 1794, and, later, a

Miss Osgood. He made translation of several Swedish and Norse writings; among them, a *History of Eric XIV.*

GENEVA, a city and the capital of Kane County, northeastern Illinois, on Fox River, 35 miles W. of Chicago, and on the Chicago and Northwestern and two other railroads. It has excellent water-power, which is utilized in glucose and other factories. It has a foundry and expensive school buildings. Population 1890, 1,692; 1900, 2,446.

GENEVA, a city and the capital of Fillmore County, southeastern Nebraska, 60 miles W.S.W. of Lincoln, on Turkey Creek, and on the Burlington and Missouri Valley and the Fremont, Elkhorn and Missouri Valley railroads. Grain, cattle and hogs are the principal products of the region. It has a creamery, canning factory, foundry and machine-shop. Population 1890, 1,580; 1900, 1,534.

GENEVA, a town of Ontario County, western New York, at the north end of Seneca Lake, about 16 miles E. of Canandaigua. By rail it is 26 miles W. of Auburn, and 50 miles E.S.E. of Rochester. It is situated on high ground, and is the seat of Hobart College, of the state agricultural experiment station, of Delancey Divinity School, and of Delancey School for Girls. Steamboats ply daily between Geneva and Watkins, which is about 36 miles distant, at the head of the lake. It has important optical-works, bending-works and manufactories of engines, boilers and steam-heating apparatus. Its nurseries are well known, and are very extensive, occupying about ten thousand acres, giving employment to over one thousand men, and shipping over one million dollars' worth of stock annually. Population 1890, 7,557; 1900, 10,433.

GENEVA, a village of Ashtabula County, northeastern Ohio, 45 miles N.E. of Cleveland, on the Lake Shore and Michigan Southern and the New York, Chicago and St. Louis railroads. It contains a normal school and manufactories of agricultural tools, electrical goods, mattresses and fur goods. It is in a grape-growing region, and is somewhat of a summer resort. Population 1900, 2,342.

GENEVA, a village of Walworth County, southeastern Wisconsin, on Geneva Lake, and on the Chicago and North-Western railroad. It has a ladies' seminary and a flouring-mill. The region produces much grain and some cattle. Population 1900, 2,585.

GENEVA BIBLE, also called "BREECHES BIBLE." See ENGLISH BIBLE, Vol. VIII, p. 387.

GENEVIEVE, CANONS OF SAINT. See GENEVIEVE, SAINT, Vol. X, p. 152.

GENGHIS KHAN. See JENGHIZ KHAN, Vol. XIII, p. 620.

GENII, among the ancient Romans, corresponding to the *dæmon* of the Greeks, were protecting spirits, who were supposed to accompany every created thing from its origin to its final decay, like a second spiritual self. They belonged not only to men, but to all things, animate and inanimate, and more especially to places. The genius of an individual was represented by the Romans as a figure in a toga, having the head veiled and the cornucopia or patera in the hands, while local genii appear under the figures of serpents eating fruit set before

them. See DEMONOLOGY, Vol. VII, pp. 60-64; MANES, Vol. XV, pp. 477, 478; and PENATES, Vol. XVIII, pp. 488, 489.

GENIPAP, the many-celled edible berry of *Genipa Americana*, a West Indian and South American plant of the family *Rubiaceæ*, or madders. The fruit is as large as an orange, whitish green, and with pleasant flavor.

GENOA, a village of Ottawa County, northwestern Ohio, 13 miles S.E. of Toledo, on the Lake Shore and Michigan Southern railroad. It has limestone-quarries and lumber-mills. Its manufactures are washboards, wooden bowls, stoves, barrels and hoops. It has a German and graded schools. Population 1890, 839; 1900, 824.

GENOA, GULF OF, a large indentation in the northern shore of the Mediterranean, north of Corsica. Between the towns of Oneglia on the west and Spezzia on the east, its width is nearly 90 miles.

GENOA, THOMAS ALBERT VICTOR DE SAVOY, DUKE OF, nephew of King Victor Emmanuel; born Feb. 6, 1854. After receiving an English education at Harrow School, he went through a regular course of study in the Marine College at Genoa, and came out an officer of the royal Italian navy, in which capacity he was intrusted with the command of the *Vettor Pisani*, a corvette of the first rank, bound on a voyage round the world. The vessel completed her cruise in 1880, and the Duke's journal of the voyage was published at the close of that year.

GENRE-PAINTING, a term in art originally used to indicate simply any class or kind of painting, and was always accompanied by a distinctive adjective, as *genre historique*, historical painting. It has now, however, come to be applied to scenes from familiar or rustic life especially characterized by the introduction of human figures.

GENS D'ARMES OR GENDARMES, a title, in France, originally applied to the king's horse-guards only, but afterward to all men liable to military service, and later to the body of nobles and gentry serving under the kings of France. In the present century it denotes the armed and uniformed police. They are all picked men, and are usually selected from the military forces for their courage and good character.

GENTILE DE FABRIANO. See FABRIANO GENTILE DA, Vol. VIII, p. 841.

GENTLEMEN-AT-ARMS (formerly called the GENTLEMEN PENSIONERS), the body-guard of the British sovereign, and, with the exception of the Yeomen of the Guard, the oldest corps in the British service. It was instituted in 1509, by Henry VIII, and now consists of a captain, a lieutenant, a standard-bearer, a clerk of the cheque and forty gentlemen. The pay is issued from the privy purse. Until 1861 the commissions were purchasable, as in other regiments; but, by a royal command of that year, this system was abolished, and commissions as Gentlemen-at-Arms have since only been given to military officers of service and distinction. The attendance of the Gentlemen-at-Arms is required only at drawing-rooms, levees, coronations and similar important state ceremonies. The appointment, which is in the sole gift of the crown, on the recommendation of the commander-

in-chief, can be held in conjunction with half-pay or retired full-pay, but not simultaneously with any appointment which might involve absence when the officer's services are required by the sovereign.

GENTRY, MEREDITH POINDEXTER, an American statesman; born in Rockingham County, North Carolina, Sept. 15, 1809; became a member of the state legislature of Tennessee in 1835, and was elected to Congress in 1839, as a Whig. Although a large slaveholder, he voted in favor of the reception of antislavery petitions. He served in the Twenty-seventh, Twenty-ninth, Thirtieth, Thirty-first and Thirty-second Congresses, and opposed the war with Mexico. After the election of Lincoln he went with the South, and sat in the Confederate Congress. He died in Nashville, Tennessee, Nov. 2, 1866.

GENUS. See SPECIES, Vol. XXII, p. 372.

GENZANO, a town of Italy, 18 miles S.E. of Rome, on the Appian Way. An annual flower festival, called the *Inforata di Genzano*, is held here on the eighth day after Corpus Christi, and attracts many visitors. Population, 5,306.

GEODES (Gr., "earthly"), rounded hollow concretions, or indurated nodules, either empty or containing a more or less solid and free nucleus, and having the cavity frequently lined with crystals. They are sometimes called "potato-stones," on account of their size and shape. See MINERALOGY, Vol. XVI, p. 370.

GEOGRAPHICAL BOTANY. See DISTRIBUTION, Vol. VII, p. 286.

GEOGRAPHIC NAMES, THE BOARD ON, a board organized by the executive department of the United States government, Sept. 4, 1890, for the purpose of obtaining uniformity of usage in regard to geographic nomenclature and orthography, particularly in maps and charts issued by the various departments and bureaus. All unsettled questions concerning geographic names which arise in the departments are referred to this board, the decisions of which are to be accepted as the standard authority in such matters.

The Royal Geographical Society of England adopted, in 1886, the following rules, which were the same that were previously in use in the orthography of the British admiralty charts. These rules apply only to the geographical names of the countries which do not write in Roman characters. In Spanish, Portuguese and Italian names, and in the names of all other countries that use Roman characters, the native spelling will be preserved. Nor, in any case, will a change be made in the spelling of names which long usage has rendered familiar to English readers. The true native sound of the word, as it is locally pronounced by educated people, is to be taken as the basis of the spelling, without regard to the finer inflections of the accent, a reasonable approximation to the sound being all that is deemed necessary. Vowels are to receive their Italian sound, and consonants have their English pronunciation. No accent is to be used but the acute, and this only where it is demanded by a particular stress upon a syllable. Every letter is to be sounded. When two vowels come together, each should be sounded, though their pronunciation in the combinations *ai*,

au, *ei*, *eu*, etc., is often so rapid that they appear as one sound only. Hindu names will be accepted as they are spelled in Hunter's *Gazetteer*. The sounds of the several letters of the alphabet are as follows:

A as in *father*.

E as in *benefit* or *eh*.

I as in *seen* or English *ee*. Thus, *Fiji*, not *Feejee*, is the correct spelling.

O as in *mote*.

U as in *flute*.

All vowels are shortened in sound by doubling the following consonant. The vowel is to be doubled only when there is a distinct repetition of the sound, as in *Nuulua*.

Ai corresponds to English *i*, as in *ice*.

Au corresponds to English *ow*, as in *how*.

Ao is slightly different from *au*, as in *Macao*.

Ei has the sound of the two Italian vowels, but is frequently slurred and resembles *ey* in *they*. Example, *Beirut*.

The consonant sounds are as follows:

B, D, L, M, N, P, R, S, T, V, W and Z, as in English.

C is to be always soft, but usually should be replaced by *S*, which it so closely resembles.

Ch always soft, as in *church*.

F as English *f*. Ph should not be used for *f*. Write *Haifong*, not *Haiphong*.

G is always hard. Soft *g* is given by *j*.

H is to be always pronounced when given.

J as English *j*. Dj should never be used for *j*.

K as English *k*. This letter should always be used for hard *c*. Example, *Korea*, not *Corea*.

Kh is the Oriental guttural, as in *Khan*.

Gh is another guttural, as in Turkish *dagh*, or *ghazi*.

Ng has two sounds—one as in English *finger*, the other as in English *singer*.

Q should never be used.

Qu is given as *Kw*. Example, *Kwangtung*.

Y is always a consonant, as in *yard*. It should never be used as a terminal, but be replaced by *i* or *e*.

GEOMORI, a class of Attic citizens. See GREECE, Vol. XI, p. 96.

GEOPHAGISM, the habit of eating clay or earth of any kind. People who make use of earth in their food are found in almost all parts of the globe. The Indians in the Hudson Bay region, the Ottomac Indians of South America, certain people in Lapland, West Indian blacks, and some negroes and low whites in the southern United States are more or less addicted to clay-eating. A ferruginous clay, *bergmehl* and a form of steatite are among the earths eaten. In Lapland *bergmehl* is mixed with the bread. Practicers of geophagism are known also as "clay-eaters," "sand-hillers," etc.

GEORGE, a division of the western province of Cape Colony, Africa, on the south coast, 220 miles E. of Cape Town. It contains two thousand six hundred square miles, and about eleven thousand inhabitants. It is valuable chiefly for its pasturage and timber. The town of George stands six miles north of the coast, and has a population of over two thousand. On the coast is the port of Mossil Bay.

GEORGE I, CHRISTIAN WILLIAM FERDINAND ADOLPHUS GEORGE, King of the Hellenes, second son of Christian IX, King of Denmark; born in Copenhagen, Dec. 24, 1845, and served for some time in the Danish navy. After the abdication of Otho I, the late King of Greece, in 1863, the vacant throne was tendered to Prince Christian, who, with the concurrence of his own family and the consent of the Great Powers, accepted and began to reign as King George I, on June 6, 1863. Since the year 1876, when active

GEORGE I.

trouble broke out in the Balkan Peninsula, King George's position has been very difficult; but as yet he has maintained it without going to war. His country gained a considerable addition of territory by the decision of the conference which followed the Congress of Berlin. In 1886, after the revolution at Philippopolis and the Servo-Bulgarian war, Greece (under a rash minister, M. Delyannis) was for declaring war against Turkey, and was stopped only by the firm attitude of England. He was married at St. Petersburg to the Princess Olga, daughter of the Grand Duke Constantine, Oct. 27, 1867.

GEORGE, HENRY, an American political economist; born in Philadelphia, Pennsylvania, Sept. 2, 1839. As a boy he was apprenticed on a sailing-vessel, went to California, and engaged in journalism there; was one of the founders of the *San Francisco Post*; in 1876 was appointed state inspector of gas-meters, and in 1879 trustee of the San Francisco Free Library. In the same year he published *Progress and Poverty*, which at once won a wide circulation and created univer-

HENRY GEORGE.

sarial interest. He went to New York in 1880, and in 1881 published *The Irish Land Question*. In the same year he visited England and Ireland, and in 1883-84 and in 1884-85 he visited England and Scotland. He made speeches which produced a marked effect on discussions of the land question. In 1886 he was a candidate for mayor of New York, on the United Labor Party ticket, receiving 68,110 votes, against 90,552 for Abram S. Hewitt, the Democratic candidate, and 60,435 for Theodore Roosevelt, the Republican candidate. He then founded the *Standard* a weekly newspaper, which he published and edited until 1890. He was also the author of *Social Problems* (1883); *The Land Question* (1884); and *Protection or Free Trade* (1886). He advocated absolute free trade, holding that the

revenues of the government should be derived solely from land, by a tax on land values; that the unearned increment of land value belonged to the state which created it. To further his theory he organized single-tax clubs in all parts of the country. In 1897 he was the candidate of the Thomas Jefferson Democracy for mayor of Greater New York, but died suddenly of cerebral apoplexy on Oct. 29th, four days before election day. His son, Henry George, Jr., was chosen to run in his father's place, but was defeated.

GEORGE, JAMES ZACHARIAH, an American soldier and public man; born in Monroe County, Georgia, Oct. 20, 1826; removed to Mississippi, served in the Mexican War, and practiced law until the outbreak of the Rebellion. He commanded a Confederate cavalry regiment during the Civil War, and in 1875 became chief justice of the state supreme court. He was elected United States Senator in 1880, 1886, and 1892. Died in Mississippi City, Miss., Aug. 14, 1897.

GEORGE, LAKE, sometimes called Lake Horicon, a beautiful sheet of water in northeastern New York, extending from southwest to northeast, 36 miles long and from 1 to 3 miles wide, 310 feet above sea-level; 400 feet is its greatest depth; it contains 300 islands, and has an outlet into Lake Champlain. On its shores stood Forts George and William Henry. It is a favorite summer resort.

GEORGES, KARL ERNST, a German Latin lexicographer; born in Gotha, Germany, Dec. 26, 1806. He studied at Leipsic and Göttingen. He published a *German-Latin Lexicon* (1882; seven editions); a *Wörterbuch der Latein-Wortformen* (1891); and a *Latin-German Dictionary* (1882; ten editions). The last-named work is regarded as the leading Latin-German lexicon of to-day. He died in Gotha, Aug. 27, 1895.

GEORGE'S CHANNEL, SAINT, the name applied to the south portion of that arm of the Atlantic which separates Ireland from Britain. At its northern extremity it is 64 miles in width, and at its southern about 62; its length from northeast to southwest is about 100 miles.

GEORGETOWN, a town and the capital of Clear Creek County, northern central Colorado, situated in a valley of the Rocky Mountains, 51 miles W. of Denver, on two branches of Clear Creek and on the Union Pacific railroad. It is in an extensive silver region, and has large reduction-works. Population 1890, 1,927; 1900, 1,418.

GEORGETOWN, a town and the capital of Sussex County, southern Delaware, on the Philadelphia, Wilmington and Baltimore railroad, 32 mile S.S.W. of Dover. Business, principally farming and canning. Pop. 1800, 1,353; 1900, 1,658.

GEORGETOWN, a town and the capital of Scott County, central northern Kentucky, 12 miles N. of Lexington, on the Cincinnati, New Orleans and Texas Pacific railroad. It is in the center of the "blue-grass country," and the business of the vicinity is farming and stock-raising. The town contains a college, two female seminaries, other schools, and has good water-power. Population 1890, 3,400; 1900, 3,823.

GEORGETOWN, a village and the capital of Brown County, southwestern Ohio, seven miles from the Ohio River, 42 miles E.S.E of Cincinnati, on the Cincinnati, Georgetown and Portsmouth railroad. It contains a woolen-mill and flour-mill. The business of the vicinity is chiefly tobacco-raising. Population 1890, 1,473; 1900, 1,529.

GEORGETOWN, a town and the capital of Georgetown County, eastern South Carolina, on Winyaw Bay, and is a terminus of the Georgetown and Western railroad. It has direct communication with New York by schooner lines, is located in a great turpentine region, and the village contains lumber and rice mills. Population 1900, 4,138.

GEORGETOWN, a town and the capital of Williamson County, southeastern central Texas, 25 miles N. of Austin, on the Austin and Northwestern railroad. The region is healthful and picturesque, and the village contains the Southwestern University. The town's manufactures are furniture, saddles, harness, plows and wood-work. Population 1900, 2,790.

GEORGETOWN, a port of entry, now incorporated in the city of Washington, District of Columbia, on the Potomac River, three miles N.W. of the capital, on the Baltimore and Ohio railroad and on the Chesapeake and Ohio canal. The heights are occupied by elegant villas, and command a fine view of the country around. Here are located a number of educational institutions, including Georgetown University (1789). Pop. 1890, 14,046; 1900, 14,549.

GEORGETOWN UNIVERSITY, an institution of learning maintained by the Jesuit order of the Roman Catholic Church, located at Georgetown, District of Columbia. It was founded in 1789, but the work of instruction did not begin until 1792. The institution was granted a charter by Congress in 1815. In addition to the regular collegiate course there are maintained a large preparatory department and schools of law and medicine. The two professional schools are established in Washington, District of Columbia. The preparatory course is connected with the collegiate work, and the two form a continuous seven years' course of study. In 1895 there were 85 instructors, 725 students and a library of 70,000 volumes. Including the year of 1894, there had graduated 2,808 students.

GEORGIA, according to the census of 1900, had a population of 2,216,329, composed of 978,357

whites, 858,815 negroes, and 181 Chinese, Japanese and Indians. The rank of the state, in the relative number of inhabitants, was twelfth. In 1890 the population was 1,837,353, the increase for the decade being within a small fraction of 21 per cent. The area of the state is 58,980 square miles, or 38,000,000 acres. The density of population is 37.5 to the square mile; the seven chief cities of the state

had but 242,362 inhabitants, or only 9.84 per cent of the population; the proportion of males and females was 919,925 of the former and 917,428 of the latter; the percentage of native and foreign born citizens was 99.34 of the former and 0.66 of the latter; the number of negroes 858,815, an increase of 133,682 in the preceding ten years. The resources of Georgia are more varied than those of any of the other Southern states. Chief among the wealth-producing industries stands agriculture. The grains, grasses and fruits of all kinds flourish, and embrace everything for the food of man and beast not tropical. The variations in soil and climate are extreme. As typified in plant-life, the banana, orange and fig find a congenial home in the southern part, and on the northern mountain peaks are found plants of the Arctic zone. The variety of products adapted to the soil and climate of Georgia was known to the original colonists, and as early as 1732, fine crops of rice, corn, peas, potatoes, pumpkins, cabbage and indigo were grown, and a silk superior to that of Italy was produced.

In January, 1895, the number and value of farm animals in the state, as estimated by the United States Department of Agriculture, were as follows: Horses 107,044, value \$5,458,470; mules 161,204, value \$10,470,828; milch cows 309,615, value \$4,811,417; oxen and other cattle 557,645, value \$4,505,380; sheep 402,946, value \$537,530; swine 1,934,892, value \$6,825,119. Total value, \$32,668,744. The estimated annual production of the principal crops is as follows: Cotton, from 800,000 to 1,100,000 bales; corn, 30,000,000 bushels; oats, 5,000,000 bushels; wheat, 3,000,000 bushels; sweet potatoes, 5,000,000 bushels; Irish potatoes, 2,500,000 bushels; rice, 35,000,000 pounds. Under the most favorable conditions the following extreme yields to the acre have been recorded: Seed-cotton, 6,917 pounds, in Washington County; corn, 137 bushels, in Spalding County; oats, 137 bushels, in Wilkes County; wheat, 65 bushels, in Dekalb County; sweet potatoes, 800 bushels, in Berrian, Crawford and Richmond counties; Irish potatoes, 420 bushels, in Wilkes County; upland rice, 100 bushels, in Early and three other counties; cane syrup, 700 gallons, in Bulloch County; clover hay, 16,000 pounds, in Dekalb County; pea-vine hay, 10,720 pounds, in Spalding County; corn forage, 27,130 pounds, in Greene County; Bermuda grass hay, 13,953 pounds, in Greene County; sugar, 21 barrels, in Bulloch County. Rye, barley, tobacco and sugar-cane are extensively and profitably grown, in addition to the above. The inducements to the truck-farmer are greater than in any other section of the country. The increase in this branch of agriculture has been such as to warrant the prediction that it will soon be first in importance and value. Over 100,000 acres are devoted to the culture of watermelons, requiring over 10,000 cars to carry the product to market, and the supply could be increased manifold without affecting the demand. In horticulture, Georgia stands first among the states of the South, and among the greatest producers of any section. The census reports of 1890 showed the amount of the principal orchard products (in bushels) to be as follows, for the year 1889: Apples

SEAL OF THE STATE OF GEORGIA.

whites, 858,815 negroes, and 181 Chinese, Japanese and Indians. The rank of the state, in the relative number of inhabitants, was twelfth. In 1890 the population was 1,837,353, the increase for the decade being within a small fraction of 21 per cent. The area of the state is 58,980 square miles, or 38,000,000 acres. The density of population is 37.5 to the square mile; the seven chief cities of the state

2,113,055; apricots, 2,233; cherries, 10,173; peaches, 1,490,633; pears, 113,868; plums and prunes, 49,668. The production for each year since that given has increased to a large extent, in peaches alone the acreage having been more than doubled. Grapes, figs, Japanese persimmons, mulberries, blackberries, strawberries, all grow prolifically and are largely cultivated, immense amounts going to the markets of the North so early as to command very high prices. In the extreme southern portion of the state, oranges, lemons, pine-apples and bananas are cultivated. Among a number of other products of the soil of Georgia are peanuts, raised in large quantities; the tea-plant, trees nearly a half-century old being found in Liberty, Talbot and other counties of the southern and southeastern portions of the state; besides quinces and other fruits of many varieties.

The timber interests of the state are extensive, and the cutting of lumber and the making of tar, turpentine and general naval stores are among the leading industries of the southern portion of the state, the annual returns from the former approximating \$18,000,000, and from the latter \$4,000,000.

In manufactures hardly a line remains unrepresented. In cotton and woollens Georgia had, in April, 1895, 73 mills, operating 668,578 spindles, 15,357 looms and 1,809 cards. Some of the mills have a capital stock of more than \$1,000,000, and the total capital invested in the plants alone exceeds \$25,000,000. In 1890 the number of bales of cotton consumed in the mills was almost 150,000, the number of employees exceeded 10,000, and the wages paid amounted to \$2,366,086. The long staple sea-island cotton of Georgia excels all other kinds grown, and its reputation is world-wide. In 1880 there was not a single cottonseed-oil mill in the state, while in 1895 there were 20 mills, paying \$1,400,000 annually for the seed used, and producing a principal product valued at \$1,800,000. In the fiscal year ending June 30th the collections of internal revenue within the state amounted to \$413,287.44. The sources were distilled spirits, tobacco, fermented liquors and oleomargarine. The tobacco factories numbered 66, the distilleries 268. Georgia is among the largest producers of commercial fertilizers, and the largest consumer. In 1890 the number of factories was 44; 1,328 laborers were employed, and wages paid aggregated \$484,889. The total value of the product was \$5,826,034. Phosphate rock is reduced to acid phosphate, cottonseed meal being largely used to supply the nitrogen. In foundry and machine shops, in the manufacture of cotton-gins and of wagons and farm implements, in canning factories and in the manufacture of clothing, in patent medicines, in printing and publishing, great advances have been made within a few years, the growth of the last-named industry from 1890 to 1896 being from an output of \$500,000 to \$3,000,000. This is but a fair index of the stimulus and growth of all lines named, as well as of many of minor importance and value.

Gold is profitably mined in northern Georgia, having been known to exist, and mined to some extent, from the time of the earliest settlements. Sin-

gle mines send annually to the United States mint over \$100,000 worth of the precious metal. About 300 men are employed in the mines of one locality, that of Dahlonega, and the industry is in every way calculated to increase. Lead, silver and copper are also found in many parts of the state, many of the minerals used as pigments, existing in large beds. Iron ores, red ores, manganese, corundum, marble, limestone, slate, mica, sandstone, tripoli, lithographic stone, zinc and tin are also found. The asbestos deposits are large and profitably worked; the coal region of the state embraces three of the extreme northwestern counties, and bauxite, the mineral ore from which aluminium is derived, has never been found in commercial quantities in the United States, except in Arkansas and in the Coosa valley, in Georgia and Alabama. Extensive deposits of this ore are constantly being discovered, and two companies are engaged in taking out the Georgia product, pronounced superior to any other

STATE CAPITOL, ATLANTA.

yet found. Fourteen miles east of the city of Atlanta is found the largest deposit of granite in the world. In a comparatively level country, solitary and alone, rising to the height of 1,686 feet, stands a solid mountain of granite, without soil, and almost bare of vegetation. The granite is admirably adapted to paving purposes, and many of the principal cities of the United States have adopted it as the standard stone, and are constantly using it. In 1880 the entire product of the state in paving-stone was \$13,000, and only ten or twelve hands were employed. In 1895 the number of employees was in excess of 1,000, and the value of the product approximated \$1,000,000. In the production of marble the state ranks second only to Vermont, the output of Georgia marble for 1894 being nearly 500,000 cubic feet.

The assessed valuations of property in the state in 1894 were: Real estate and railroad property, \$285,613,778; personal property, \$143,399,145; total, \$429,012,923. This does not include the property of railroads exempt from *ad valorem* taxation, estimated at about \$20,000,000. The tax rate was \$4.37 per thousand dollars.

The total net state debt was, in 1895, \$7,954,500, which includes the bonds of the Western and Atlantic railroad, which is the property of the state. The receipts from all sources for the same year were almost \$3,000,000.

In 1884 Georgia had but 22 banking institutions operating under the state law; in 1894 there were 118 such institutions. In 1884 the aggregate capital of the state banks was \$4,142,000; in 1894 this had increased to \$11,642,911. There were in the state, in 1884, 15 national banks, with a capital of \$2,436,000; in 1894 the number had increased to 27, with a capital of \$3,666,000. Only 14 places and 14 counties had banks in 1884, while, in 1894, 71 places and 63 counties had incorporated banks. A correspondingly large increase has been made in the number and amount of capital employed in private banks, in trust and loan companies, and in building and loan associations.

In 1894 the railroad mileage of the state was 5,102, exclusive of side-tracks and private lines. The gross earnings of the different roads for the year were \$17,208,824, as against \$8,419,626 in 1879, when the mileage was but 2,525. During a part of this period of 15 years, when the mileage and gross earnings were increased over 100 per cent each, Georgia exceeded every other state in the number of miles of railroad constructed. There has been expended for road-bed and equipment, for the different lines now in operation, over \$157,000,000, and there is a total investment of over \$172,500,000.

The school census of 1893 showed, white children 315,040, and negroes 289,931, a total of 604,971, between the ages of 10 and 18 years. The school fund for the year named was \$1,058,532.52. Schools are maintained throughout the state for five months in each year, and illiteracy is fast disappearing under the excellent system and liberal expenditure of money.

Normal schools are amply sustained by state appropriations, and all sections of the state are represented in the large attendance of teachers. In the way of higher education, the state is making rapid strides. Thirty-three colleges, universities and institutes are maintained for the white pupils of the state, while six are devoted to the needs of the negro youths, who show a high appreciation of the privileges. The State University at Athens has a large attendance, as have other institutions established by the commonwealth, and made branches of the university. The principal of these are the North Georgia Agricultural College, the South Georgia and the Middle Georgia Military and Agricultural colleges, the West Georgia Agricultural and Mechanical College, the Georgia School of Technology, the Georgia Normal and Industrial College, the State Industrial College for Colored Youth, and the State Normal School. The total enrollment of students at the institutions named is nearly two thousand. Mercer University at Macon has a large enrollment, and is very prosperous financially.

The state charitable and penal institutions are well conducted, under the most modern systems, and are liberally sustained by legislative appropriations. The State Lunatic Asylum at Milledgeville is conducted at an annual expense of about \$175,000; had, in 1894, an average of 1,709 patients, and is one of the best-conducted institutions of its kind in the South. The School for the Deaf and Dumb at Cave Spring had, in 1894, an average of 130 pupils.

The Academy for the Blind at Macon averages about one hundred inmates. The state maintains no penitentiary, but leases out the convicts, of whom there are about two thousand. Statistics of the jails, workhouses, almshouses and various benevolent institutions throughout the state make a very creditable showing, and evidence the advancement made by the people of Georgia in all matters pertaining to education and social elevation, as well as the ability of all classes to support themselves.

There are about 7,000 churches in the state, the Baptists being the leading denomination, with almost 4,000 church buildings. The Methodists come next, with about 2,500; the Presbyterians have about 200, and the Catholics 65. Other denominations are Protestant Episcopalians, Congregationalists, Disciples, Lutherans, Spiritualists and Universalists, the total church membership in the state being estimated at about 750,000.

There are 137 counties in Georgia, and newspapers are published in 129 of them. Cities, towns and villages in which papers are published number 172, of which 116 are capitals. Of the 321 papers published in the state, 27 are daily, 256 weekly, 3 semimonthly, 34 monthly and 1 bimonthly.

The principal cities and towns of the state, together with the census of 1900, are as follows: Atlanta, the capital, 89,872; Savannah, 54,244; Augusta, 39,441; Macon, 23,272; Columbus, 17,614; Athens, 10,245; Brunswick, 9,081; Rome, 7,291; Americus, 7,674; Thomasville, 5,322; Griffin, 6,857; Albany, 4,606; Marietta, 4,446; Waycross, 5,919; Milledgeville, 4,219; Gainesville, 4,382; Cartersville, 3,135; La Grange, 4,274; Dalton, 4,315. The increase in population of the cities named above within the 10 years from 1890 to 1900 was more than 60 per cent, and the population of Atlanta increased more than 37 per cent.

The following is a list of the governors of Georgia since the adoption of the United States constitution in 1788, with the years during which they occupied the office: George Walton, 1789-90; Edward Telfair, 1790-93; George Mathews, 1793-96; Jared Irwin, 1796-98; James Jackson, 1798-1801; David Emanuel, 1801; Josiah Tatnall, 1801-02; John Milledge, 1802-06; Jared Irwin, 1806-09; David B. Mitchell, 1809-13; Peter Early, 1813-15; David B. Mitchell, 1815-17; William Rabun, 1817-19; Mathew Talbot, 1819; John Clarke, 1819-23; George M. Troup, 1823-27; John Forsyth, 1827-29; George R. Gilmer, 1829-31; William Lumpkin, 1831-35; William Schley, 1835-37; George R. Gilmer, 1837-39; Charles J. McDonald, 1839-43; George W. Crawford, 1843-47; George W. B. Towns, 1847-51; Howell Cobb, 1851-53; Herschel V. Johnson, 1853-57; Joseph E. Brown, 1857-65; James Johnson, 1865; Charles J. Jenkins, 1865-67; Gen. T. H. Ruger, 1867-68; (military governor, see GEORGIA, Vol. X, pp. 434-438); Rufus B. Bullock, 1868-72; James Milton Smith, 1872-77; Alfred H. Colquitt, 1877-82; Alexander H. Stevens, 1882-83; Henry D. McDaniel, 1883-86; John B. Gordon, 1886-90; William J. Northen, 1890-95; William Y. Atkinson, 1895.

GEORGIA, GULF OR STRAIT OF, a body of water

between southwestern British Columbia and Vancouver Island. Its length is about 120 miles; width, from 10 to 20 miles. It contains many islands, and is connected with the Pacific Ocean by Queen Charlotte Sound on the north and the Strait of Juan de Fuca on the south.

GEORGIA, UNIVERSITY OF, a non-sectarian educational institution for men only, located at Ath-

GEORGIA UNIVERSITY BUILDING.

ens, Georgia, and founded in 1785. All of the state educational institutions are included under the title University of Georgia, and include the normal school; five agricultural colleges; schools of law, technology and medicine; and the school of liberal arts, known as Franklin College. Women are conditionally admitted to the classes of the agricultural departments. A tuition fee is charged in the professional schools, but instruction is free in all others. In 1895 there were at the College of Liberal Arts 20 instructors, 237 students and a library of about 25,000 volumes. The same year the total attendance at the whole university was 1,542.

GEORGIAN BAY, the northeastern part of Lake Huron, in the province of Ontario, Canada. It is partly separated from the rest of the lake by a peninsula called Cabot's Head, and by the Great Manitoulin Island. It is about 120 miles long and 50 miles wide.

GEOTROPISM, a term in plant-physiology applied to the effects of the stimulating directive action of gravity. Geotropism is *negative* when its action results in directing a member in a direction opposed to that of the action of gravity, as in the case of primary stems; it is *positive* when it results in directing a member in the same direction as that of the action of gravity, as in the case of primary roots. This action of gravity has nothing to do with the weight of parts, but is a stimulus, affecting irritable regions of tissue. See DIAGEOTROPISM, in these Supplements.

GEPHYRÆA. See ANNELIDA, Vol. II, p. 70.

GERANOMORPHÆ, a family of birds, established by Huxley, composed of the cranes and rails. The group is nearly equivalent to the groups *Alectorides*, *Gruioideæ* and *Paludicolæ* of other authors.

GERBILLE, a name applied to rodents of the subfamily *Gerbillinæ*, in the rat family (*Muridæ*). The gerbilles somewhat resemble the ordinary rats. They are remarkable for their long hind limbs,

which enable them to progress rapidly by jumping. Their dwellings are underground burrows, in which they store quantities of food. The gerbilles are most numerous in Africa, but some are found in southern Asia and Europe.

GERFALCON OR GYRFALCON. See FALCON, Vol. IX, p. 3.

GERKI, a town of the Sokoto country, in the Soudan, Africa, at about lat. $12^{\circ}40' N.$, long. $9^{\circ} W.$ It is surrounded with walls, and is noted for the thievishness and laziness of its inhabitants, who are chiefly Fulahs and Mohammedans. Population, 15,000.

GERMAIN, ANTOINE HENRI, a French statesman; born at Lyons, France, Feb. 19, 1824; founded the Cr dit Lyonnais, of which he was chairman. In 1869 he entered the National Assembly as a Liberal, acting with the Left Center, and became recognized as a high authority on financial questions, opposing the financial policy of the republic. He published a number of works on political economy and finance; among them, *The Financial Situation of France in 1886* (1886) and *Parliamentary Finances* (1885).

GERMAN EAST AFRICA AND GERMAN WEST AFRICA. See AFRICA, in these Supplements.

GERMANIUM, a metallic element discovered in 1885 by Dr. Winckler in a silver ore, argyrodite, of which it forms about six per cent; symbol, Ge; atomic weight, 72.3. It has a melting-point about $1650^{\circ} F.$ ($900^{\circ} C.$); is oxidized when heated in air; crystallizes in octahedra; has a perfectly metallic luster, and is of a grayish white color. The new metal was named after Germany. Fifteen years before its discovery its existence was asserted by Mendeleeff.

GERMANO, SAN, a beautiful and prosperous town of Italy, situated at the base of Monte Casino, in the province of Terra di Lavoro, about 50 miles N.N.W. of Naples. It contains handsome public edifices, and is surrounded by the remains of monuments and buildings of high antiquarian interest; it is built on the site and from the ruins of the ancient Volscian town Casinum, or Casca. The district of San Germano is highly cultivated and beautiful. Population, 8,766. See MONTE CASINO, Vol. XVI, p. 778.

GERMAN SOUTHWEST AFRICA. See AFRICA, in these Supplements.

GERMANTOWN, a former borough of Pennsylvania, included since 1854 in the limits of Philadelphia, forming the twenty-second ward. Here an attack by Washington, on the British camp, in the early morning of Oct. 4, 1777, was repulsed, the Americans losing 1,000 men, the British 600. Population included in that of Philadelphia city.

GERMANY. For the geography, history, productions, government, language, literature and earlier statistics of Germany and German states, see Vol. X, pp. 447-547. The following statistics are obtained from the latest government reports, and all figures are, in general, those of the 1895 budgets.

Population. The following are the official fig-

ures giving the returns for Dec. 1, 1890, and Dec. 2, 1895:

STATES OF THE EMPIRE.	POPULATION, Dec. 1, 1890.	POPULATION, Dec. 2, 1895.
Prussia (with Heligoland).....	29,957,397	31,855,123
Bavaria.....	5,594,982	5,818,544
Württemberg.....	2,030,522	2,081,151
Baden.....	1,657,867	1,725,464
Saxony.....	3,502,084	3,787,688
Mecklenburg-Schwerin.....	578,342	597,430
Hesse.....	992,883	1,039,020
Oldenburg.....	354,008	373,739
Brunswick.....	403,773	434,213
Saxe-Weimar.....	326,091	339,217
Mecklenburg-Strelitz.....	97,978	101,540
Saxe-Meiningen.....	223,832	234,005
Anhalt.....	271,903	293,298
Saxe-Coburg-Gotha.....	206,513	216,603
Saxe-Altenburg.....	170,864	180,313
Lippe-Detmold.....	128,495	134,854
Waldeck.....	57,281	57,766
Schwarzburg-Rudolstadt.....	85,863	88,685
Schwarzburg-Sondershausen.....	75,510	78,074
Renss-Schleiz.....	119,811	132,130
Lippe-Schaumburg.....	39,163	41,224
Reuss-Greiz.....	62,754	67,468
Hamburg.....	622,530	681,632
Lübeck.....	76,485	83,324
Bremen.....	180,443	196,204
Alsace-Lorraine.....	1,603,506	1,649,986
Total.....	49,428,470	52,279,901

Of the total population in 1895, 49.9 per cent lived in towns of 2,000 inhabitants or more, an increase of 8.3 per cent over 1885. The most recent occupation census gives the number of persons in the empire engaged in agriculture and cattle-raising as 18,068,663, out of a total of 51,770,284; in forestry, hunting, and fishing, 432,664; in mining, metal-works, etc., 20,253,241; in trade and commerce, 5,966,846; in domestic and other service, 886,807; in the professions, 2,835,014; without occupation or profession, 3,327,069. Of the 486,190 persons of foreign birth resident in Germany, Dec. 2, 1895, the nationalities were as follows:

Austria and Hungary.....	222,952
Russia.....	26,559
Netherlands.....	59,743
Switzerland.....	44,875
France.....	19,619
Denmark.....	28,146
Great Britain and Ireland.....	15,290
Sweden and Norway.....	11,001
Luxemburg.....	11,755
Italy.....	22,693
Belgium.....	8,947
Other European countries.....	3,316
United States.....	15,788
Elsewhere.....	4,416

The great majority of German emigrants sail from German ports and Antwerp. In 1897 the total number of emigrants, excluding those who sailed from French ports, was 23,220. From 1820 to 1897 the number of emigrants to the United States was 5,250,000. There are in Germany 28 cities of over 100,000 inhabitants. Their populations on Dec. 2, 1895, were:

Berlin.....	1,677,304
Hamburg.....	625,552
Munich.....	497,397
Leipsic.....	399,963

Breslau.....	373,169
Dresden.....	336,440
Cologne.....	321,504
Frankfort-on-the-Main.....	229,279
Magdeburg.....	214,424
Hanover.....	209,535
Diüsseldorf.....	175,985
Königsberg.....	172,796
Nuremberg.....	162,386
Chemnitz.....	161,017
Stuttgart.....	158,321
Altona.....	148,944
Bremen.....	141,894
Stettin.....	140,724
Elberfeld.....	139,337
Strasbourg.....	135,608
Charlottenburg.....	132,377
Barmen.....	126,092
Dantzic.....	125,605
Halle-on-the-Saal.....	116,304
Brunswick.....	115,138
Dortmund.....	111,232
Aachen.....	110,551
Krefeld.....	107,245

Area and Agriculture Products. The total area of the empire in 1895 was 208,830 square miles. According to the census of 1893, 91 per cent of the total area was productive, the principal crops being wheat, rye, barley, hay, oats, and potatoes. The heaviest yields are of potatoes and hay; rye, oats, wheat, and barley coming next in order. Beetroot (both sugar and fodder) is now largely grown, and, manufactured, has become a profitable industry. In 1893 about 26 per cent, or 34,347,000 acres, was in forest, from which domains Prussia alone receives a revenue of \$20,000,000. In the various states of the empire there were, in 1897, eighteen and a half million cattle, fourteen million swine, eleven million sheep, three million goats, and four million horses.

Mining and Manufactures. Marvelous has been the development, in recent years, of German manufacturing industries, and the consequent expansion of her commerce. This is in part due to the mining wealth of the country, and to the activities of her people in raising it and turning it to account. The value of the minerals, chiefly coal and iron ore, raised in Germany and in the Grand Duchy of Luxemburg in the year 1898, was close upon \$235,000,000. The chief seats of the German iron manufacture are in Prussia, Alsace-Lorraine, Bavaria, and Saxony. Steel is made in Rhenish Prussia. Saxony is the leading state in the production of textiles, but Westphalia and Silesia also produce linen; Alsace-Lorraine, Württemberg, and Baden produce cotton goods. Woolens are manufactured in several Prussian provinces; silk in Rhenish Prussia, Alsace, and Baden. Beetroot sugar is an important manufacture in Prussia, Brunswick, and Anhalt; glass, porcelain, and earthenware in Silesia, Thuringia, and Saxony; clocks and woodenware in Württemberg and Bavaria; and beer in Bavaria and Prussia.

The total value of the productions of the foundries of all kinds in the empire was, in 1897, in the neighborhood of \$132,956,000. Of finished iron there was produced in the same year nearly eight million metric tons, of the value of 252 million dollars. This output came from 1,566 establishments producing finished iron, including steel works. This trade, in its various stages, gave

employment during the year (1897) to 241,787 men, besides 37,991 iron-miners. Coal and lignite mining gave employment to 376,231 hands. The fisheries, deep sea and inland, engaged 32,199 persons; the exports, in 1898, of fresh fish was valued at over one and a half million dollars. In 1897-98, the number of breweries was 7,542, and the output for the year was close upon fifteen thousand million gallons. The average annual beer consumption, per head of the population, has been for the past twenty years 22 gallons. In 1897-98, there were besides 60,779 distilleries in operation.

Railways, Shipping, and Ship Construction. Of recent years German shipbuilders have won great triumphs, especially in the construction and plying of the mammoth ocean liners that cross the Atlantic. In such magnificent vessels as the *Kaiser Wilhelm der Grosse* and the *Deutschland*, Germany is surpassing, for power and speed, both English and American shipbuilders, and making great strides towards the monopoly of the ocean passenger trade of the better class. In this respect, the enterprise of the Hamburg-American Steamship Co. and of the North German Lloyd Co., are to be commended. Germany's merchant navy, including both steamers and sailing vessels, now (1899) numbers 3,713 ships, with a net tonnage of 1,639,552; the number of sailors of the merchant navy employed was, in 1899, 43,146. The total length of the canals in the empire was, in 1897, 1,452 miles, including the Kaiser Wilhelm canal, connecting the North Sea and the Baltic, 61 miles in length. This canal, which cost nearly 40 million dollars to build, was opened for traffic in June, 1895. It has a depth of 29 ft. 6 in. There is also a project on foot, though temporarily blocked in the Prussian Landtag, to construct a canal to connect the Elbe with the Rhine, utilizing, in part, the present Dortmund-Ems canal. In 1899 there were 31,150 miles of railway, almost wholly owned by the imperial or state governments, completed and open for traffic throughout Germany. The empire had, in 1898, 76,418 miles of telegraphs in operation.

Education. Education in Germany is general and compulsory, the school age being from six to fourteen. The total number of children of school age, in 1890, was 8,694,887. The number of elementary schools, in 1891, was estimated at 56,560, with about 7,925,000 pupils and 120,000 teachers. In 1895 the number of secondary schools, including the gymnasia, realschulen, etc., was 986. There are 21 universities in the empire, the theological faculties in most of which being Protestant. The notable institutions are Berlin, Leipsic, Bonn, München, Breslau, Göttingen, Strasburg, Halle, Heidelberg, Tübingen, Königsberg, Kiel, Freiburg, and Jena.

Department of Justice. In terms of judicature acts in 1877 and 1879, a uniform system of law courts was adopted throughout the empire not later than Jan. 1, 1879, though, with the exception of the Reichsgericht, all courts are directly subject to the government of the special state in which

they exercise jurisdiction, and not to the imperial government. The appointment of the judges is also a state, and not an imperial, function. The empire enjoys uniform codes of commercial and criminal law; a uniform code of civil law was adopted and came into force in 1900.

The lowest courts of first instance are the *Amtsgerichte*, each with a single judge, competent to try petty civil and criminal cases. There were, in 1895, 1,924 *Amtsgerichte* in the empire, or one for every 25,690 inhabitants. The *Landgerichte* exercise a revising jurisdiction over the *Amtsgerichte*, and also a more extensive original jurisdiction in both civil and criminal cases, divorce cases, etc. In the criminal chamber five judges sit, and a majority of four votes is required for a conviction. Jury courts (*Schwurgerichte*) are also held periodically, in which three judges preside; the jury being 12 in number. There are 172 *Landgerichte* in the empire, or one for every 287,374 of the population. The first court of second instance is the *Oberlandesgerichte*. In its criminal senate, which also has an original jurisdiction in serious cases, the number of the judges is seven. There are 28 such courts in the empire. The total number of judges on the bench in all the courts above mentioned is 7,601. In Bavaria alone there is an *Oberste Landesgericht* with 18 judges, with a revising jurisdiction over the Bavarian *Oberlandesgerichte*. The supreme court is the *Reichsgericht*, which sits at Leipsic. The judges, 84 in number, are appointed by the emperor on the advice of the *Bundesrath*. The court exercises an appellate jurisdiction over all inferior courts, and also an original jurisdiction in cases of treason. It has four criminal and six civil senates.

Government. The German empire is a confederation of German States under the presidency of the emperor (William II, of Hohenzollern, King of Prussia). The government is administered under the act of 1871, as described in Vol. X, p. 463. Under that law the legislative period was three years. By the law of March 19, 1888, the duration of the legislative period was extended to five years; this law came into force in the legislative period beginning in 1890. The legislative functions of the empire are vested jointly in the Reichstag (397 deputies) and the *Bundesrath*, or Federal Council (58 members), both of which meet in annual session, convoked by the emperor. The *Bundesrath* represents the individual States of Germany, while the Reichstag represents the German nation. The presiding officer of the former is the chancellor of the empire (resigned, 1900) Prince Hohenlohe-Schillingsfürst. The chief officer of the Reichstag is the president of the body, who is elected by the deputies. The minister in charge of foreign affairs is (1900) Count von Bülow.

The Imperial Secretaries of state number 12, including the Chancellor. They do not form a "cabinet," but act independently of one another, under the general supervision of the Chancellor. They are the executive heads severally of the imperial departments, *viz.*: Foreign Affairs; Home Office; Admiralty; Ministry of Justice; Treasury;

Post-Office; Railways; Exchequer; Invalid Fund; Imperial Bank; Debt Commission. Salary of each of the department secretaries \$9,000.

Political Parties. The Reichstag being the focus of German political life, it may be well here to note the political complexion of the body as the result of the last general election (in June, 1898). In that election the strength of the various parties (some twelve in number) was as follows: Centre, or Clerical party, 103; Social Democrats, 56; Conservatives, 53; Free Conservatives, 21; National Liberals, 48; Advanced Radicals, 30; Moderate Radicals, 13; Poles, 14; Anti-Semites, 12; South German People's Party, 8; Agrarians, 5; and a miscellaneous group of Hanovarian Guelphs, Alsations, Bavarians, and others. Compared with previous parliaments, the Social Democrats, in the 1898 elections, made considerable gains; but the Centre were, with its voting allies, still left with the balance of power in their hands. The total number of qualified electors was officially returned at 11,200,000, and of voters 7,600,000, or about 67 per cent. Of the important measures discussed by the Reichstag during the recent sessions, the chief was the army bill, which came near bringing on a political crisis in the country. An agreement, which was really a compromise, was finally come to (March, 1899), which will permit the effective strength of the army, within the coming five years, to reach 495,500 men, on a peace footing. The anti-strike bill, designed to suppress and punish the agitators and promoters of strikes, was another disturbing measure, which was finally thrown out of the House, the Liberals and Social Democrats both strongly opposing it. Another contentious matter, though finally agreed to, was the bill to extend for 20 years the privileges of the Imperial Bank in regard to regulating the discount rates of private banks of issue.

Colonies and Dependencies. The last sixteen years have seen Germany put forth great effort to acquire abroad protectorates, dependencies, and what in diplomatic jargon is termed "spheres of influence." Colonies, in the English sense of the term, they can hardly be said to be; but they may yet attain to that status, and in the meanwhile they are tributary to her now large and rapidly advancing foreign commerce. Their field is confined to Asia and Africa, including in the latter German Southwest and East Africa, Togoland, situated on the Slave Coast, and the Kamerun region, with a coast line of 200 miles on the Bight of Biafra. Her Asian possessions proper are the port and district of Kiau-Chau, on the east coast of the Chinese Province of Shan-tung, which in 1897 was seized by Germany and transferred to it by treaty in the following year. The area of the protectorate is about 200 square miles, exclusive of the bay. Within 100 miles of the port are extensive coal fields, which, by agreement, are to be worked by German capital. The other dependencies of the empire are situated in the Pacific, or, more technically, in Micronesia and Oceania. They include, in the latter, the islands of Savaii and Upolu, the largest of the Samoan or Navigator group. These

possessions, in 1899, were acquired under an Anglo-German agreement, accepted and ratified by the United States, which at the same time secured Tutuila and other of the Samoan island group. The German dependencies in the Pacific embrace Kaiser Wilhelm's Land, Bismarck Archipelago, and the Solomon, Marshall, Caroline, Palaos (Pelew), and Marianne islands. The territorial area of the African and Asiatic dependencies of the empire is over a million square miles, with an estimated total population of between 14 and 15 millions. Their affairs are administered by imperial governors, commissioners, and deputy commissioners. Those in Africa have already a large export trade, chiefly of palm oil, caoutchouc, cacao, gum, copra, and ivory. The Pacific island protectorates produce, besides coffee, cotton, and tobacco, a variety of valuable timber, such as ebony, sandal wood, and bamboo. Among other of the island products are tortoise-shell and mother-o'-pearl, together with copra, the dried kernel of the cocoanut, from which a valuable oil is expressed.

Finance and Commerce. The revenues of the empire are derived from customs and excise levies, from the profits of the postal, telegraph, and State railway systems, and from federal contributions by the individual States. The revenue for the fiscal year, 1899-1900, was \$381,547,000, and the expenditure \$387,920,000. At the end of March, 1898, the total funded debt amounted to \$545,560,000, and the unfunded debt to \$30,000,000. The latter is represented by imperial treasury bills. The funded debt bears 3 and 3½ per cent. interest. As a set-off to the debt of the empire there exists a variety of invested funds, such as the fund for invalids, which at the above date amounted to \$103,000,000. The war treasure fund, \$30,000,000 in amount, is not invested, but preserved in gold at Spandau.

The imports for the year 1898 were in value \$1,359,919,000, while the exports amounted to a little more than a thousand million dollars. The chief exports of the empire are of coal and coke, beet sugar, woolen fabrics, mixed silk and cotton cloth, hosiery, hats, drapery goods, and small wares, paper, leather goods, and aniline dyes. The chief imports consist of wheat, rye, barley, horses, raw hides, raw silk, raw cotton, wool, coffee, petroleum, etc. Since 1879 Germany has been protectionist in her commercial policy. The duties levied in 1898 amounted in value to \$128,831,000, or 18.1 per cent. of the value of the imports subject to duty.

The Army. A further increase of the German army was effected by a reorganizing act, which came into force Oct. 1, 1899. The army on a peace footing consists now (1900) of 23,730 officers and 572,699 men, including paymasters, veterinary officers, armorers, and saddlers, with 120,000 horses and 2,000 guns. On a war footing, Germany is prepared to place more than 4,000,000 trained men in the field, fully armed. No official statement respecting the army is issued, and therefore the above figures are to some extent estimates. Under the new military law of 1899 there will be, at the

end of 1902, 625 battalions of infantry, 482 squadrons of cavalry, 574 batteries of field artillery, 38 battalions of foot artillery, 26 battalions of pioneers, 11 battalions of army service troops, and 23 battalions of train. The length of service in the standing army is six years, two of these with the colors in the infantry, and three in the cavalry and horse artillery, and the remainder of the six years in the reserve. After quitting the reserve of the active army the soldier passes five years in the Landwehr and seven in its reserve. A new quick-firing field gun has just been provided for the artillery, by which the German gunners expect to be able to fire at least five aimed rounds a minute. Germany has 17 fortified places of the first class, serving as fortified camps, and 19 other fortresses. The infantry is armed with the Mauser rifle, of the 1888 model, with five cartridges in the magazine, and having a calibre of 7.864 millimetres. The army is divided into the Corps of Guards and 22 army-corps, the latter being subject to five so-called Armeekorps-Inspektionen. The fortified places are all connected with each other by means of underground telegraphs, while strategical railway lines lead from the principal military centres toward the frontiers.

The Navy. The imperial navy was reorganized in 1889. The chief command was separated from the administration and vested in a naval officer, while the immediate direction of affairs was transferred to the Reichsmarineamt, having at its head, under the Chancellor, the naval Secretary of State. The naval officer has to do with the training and efficiency of the *personnel*, etc., while the Secretary of State deals with dockyards, arsenals, supplies, etc. Germany has two ports of war—Kiel and Wilhelmshaven, the one on the Baltic, the other on the North Sea, connected, since June, 1895, by the Kiel canal. The year 1898 was an important one in the history of the German navy, as it marked the beginning of a definite shipbuilding policy and programme, despite the opposition of an unwilling Reichstag. The policy then foreshadowed was that Germany should possess 24 battleships, 32 various cruisers according to class, 11 despatch vessels, 4 gunboats, and 113 torpedo-boats. The policy at length formulated in the decision to build seven battleships in the first three years, and five in the second three. On the launching (Oct., 1899) of the *Kaiser Karl der Grosse*, the Emperor hinted at a further programme, which would give the empire three new battleships every year for six years. These will be of the *Brandenburg* and of the *Beowulf* class, and on them great defensive and offensive power will be wrought. The new armored cruisers are of 10,000 and 11,000 tons displacement. They are the *Fürst Bismarck*, and *Kaiser Wilhelm der Grosse*, while the new protected cruisers are the *Freya*, *Hertha*, *Victoria Luise*, *Hansa*, *Vineta*, and the *Gazelle*. The growth of the empire in military and naval strength, it will be seen, is keeping pace with its industrial and commercial expansion. In 1899-1900, the navy consisted of 16 battleships, 19 port-defence ships, 21 cruisers, 4 torpedo

gun boats, and 138 torpedo craft. The *personnel* for 1899-1900 consisted of 1,118 executive officers, 5,193 petty officers, 142 surgeons, 1,119 warrant officers, and 19,679 men and boys. The sailors of the fleet and marines are raised by conscription from among the seafaring population, who, on this account, are exempt from service in the army. The total seafaring population of Germany is estimated at eighty thousand, of whom forty-eight thousand are serving in the merchant navy at home and six thousand in foreign navies. Germany subsidizes, as auxiliary merchant cruisers, seven vessels, four of the Hamburg-American Steamship Company and three of the North German Lloyd Company.

HISTORY. The history of modern Germany ends in Vol. X, p. 514, with the departure from Berlin of Prince Bismarck, who, unable to endure the thought of being ruled instead of ruling, had resigned the Chancellorship, and now retired to private life at Friedrichsruhe, whence he was to view, in exile, the coming dissensions within the state, and realize that, although he had been its creator, his help was no longer necessary to the continuance of the German Empire. April 15, 1890, Emperor William II announced to the Reichstag the appointment of General Leo von Caprivi de Caprera, one of the great generals of the war of 1870, to succeed Bismarck as Chancellor and Premier of the Council. The general feeling that Bismarck's retirement would be an impediment to the national growth and prosperity of the empire was without foundation. Caprivi announced his plan to continue so far as possible the government principles of Bismarck. The official press, however, was discontinued, an action which was, on the whole, favorably received. During the years 1890-91 the International Labor Congress for the betterment of the laboring classes of European countries was held in Berlin; the Samoan treaty with the United States ratified; the triple alliance extended for three years; and the beginning of the imperial agitation for an increase in the army was begun. The celebration of the anniversary of the birth of Count Von Moltke was followed shortly, April 24, 1891, by the death of the great strategist. April 1, Bismarck's birthday was a time of great rejoicing, and marked by a note of congratulation by the Emperor. Strained relations were said to exist between the Emperor and the "Iron Chancellor," and this act of the Emperor was greeted with approval as indicating a rapprochement. Probably the most significant event in 1891 was the Emperor's visit to various foreign countries, particularly to England and Russia. His cordial reception in both countries tended to establish existing friendly relations more firmly. August 10th of the same year, the twentieth anniversary of the restoration of the empire was celebrated with befitting national festivities. September 21st witnessed the relaxation of the severe passport regulations applied in Alsace-Lorraine. Emperor William II had conducted himself in a manner entirely different from that expected by the Liberals and socialists. While

supporting monarchy and military power, he had shown a strong disposition to rule in the interests of the people. Early in 1892 he advocated the passage of a primary education bill, making religious instruction compulsory in the elementary schools of Prussia, in order to prevent children from growing up atheists. This bill excited intense opposition from all parties, and was withdrawn. The most significant political act of the year was the affront given Bismarck by the Emperor of Austria in refusing the ex-Chancellor an audience. The occasion was the visit of Bismarck to Vienna at the time of the marriage of his son, Count Herbert Bismarck, June 21, 1892, when the strained relations of Bismarck and Emperor William II prevented the Austrian emperor from recognizing Bismarck other than as a private citizen. This affront was resented by Bismarck, and attributed by him to the influence of Emperor William. Upon his return to Germany, in several published interviews Bismarck so severely criticised the Emperor as to cause an outburst of public reproach from the Conservatives, and talk of treason. Thus the breach between the Emperor and Bismarck was widened.

In 1892 the "Guelph fund," which had been the occasion of much Parliamentary debate and strife among the leaders, was turned over to the Duke of Cumberland. This fund consisted of about \$12,000,000, and represented the value of the estates of the King of Hanover, which were confiscated as a result of the battle of Langensalza, June, 1866. By an act in 1873 this fund was to be restored to the King as soon as he renounced all claim to Hanover. This the King refused to do during his life, and his claim descended to the Duke of Cumberland, who finally renounced his claim to Hanover and received the accumulated fund. During the first half of the year 1893, the whole empire was agitated by the discussions of the army bill, which, as put forward by the government, demanded additional taxation and increased numbers of recruits. The strongest opposition felt by the Emperor since his accession was developed. Amendment after amendment was defeated, and finally the whole bill refused by the Reichstag, May 6th. Emperor William immediately dissolved the Reichstag and called a new election. The new body was, by a small majority, in favor of the government, and July 15th the bill was passed. A convention of finance ministers of the various states was called at Frankfort, to consider means for carrying out the provisions of the bill. December 1st was marked by the repeal of the decree against the Jesuits, which expelled the members of that order from the empire in 1873. The year ended with the various political parties in a state of disruption over commercial treaties, but with the government in a stronger position than at its beginning. The reconciliation of the Emperor William and Bismarck, January 26th, was an auspicious beginning for 1894. Bismarck, by invitation of the Emperor, paid the latter a visit in Berlin. This was the signal for popular rejoicing, which was renewed on February 19th, when

the Emperor returned the visit. October 26th, Chancellor Caprivi resigned his office as the result of a disagreement between the Emperor and himself in regard to methods of repression of the socialists. Caprivi favored moderation, while the Emperor inclined towards suppression. The majority of the Council, the Agrarians and Bismarck sided with the Emperor, and the only course open to Caprivi was retirement. Prince Hohenlohe-Schillingsfürst, governor of Alsace-Lorraine, was appointed to the Chancellorship. With his ministry came the revival of many questions, which during Caprivi's government were suppressed. Prominent among these questions were the anti-revolutionary measures against socialists, anarchists, etc. A general national quiet, however, coming from the change in ministers, prevailed during the remainder of the year. The only break occurred when, at the opening of the Reichstag, December 5th, in the new Parliament house, cheers for the Emperor were proposed by the Chancellor and refused by the socialists, an act considered by many treasonable. An effort was made to indict the offending members, but the movement was not approved in the House,—a sign of the growing toleration of free speech and action. The new Parliament building is the finest structure in the empire. It was erected at a cost of over \$7,000,000. The corner-stone was laid in 1884 by Emperor William I. In January, 1895, the anti-revolutionary bill was rejected by the Reichstag. April 1st, the eightieth birthday of Bismarck was celebrated by the whole nation, delegations from all parts of the empire paying their respects. June 19th the Kiel canal, known officially as the Kaiser Wilhelm canal, was formerly opened in the presence of representatives of the governments of the world. This canal connects the Baltic and North seas, and was constructed at a cost of over \$39,000,000. On Aug. 18, the 25th anniversary of the surrender of the French at Sedan was celebrated. The last quarter of 1895 was marked by the retaliatory measures against the United States for the duty placed by the latter on German sugar. Prohibitive acts were put in force against American beef, and American insurance companies were debarred from doing business in Germany. Jan. 18, 1896, the 25th anniversary of the founding of the empire, was celebrated as a national holiday.

During the five years following the resignation of Bismarck, great internal improvements were effected. The international relations were strengthened; the military power was enforced and the navy reorganized; the German possessions in Africa were more clearly defined by treaties with France; and the state, as a whole, grew and prospered.

During the session of 1899 sharp contests took place between the government and the Agrarians in the Reichstag, partly over canal schemes, and partly over the Emperor's special measure for the restriction of strikes. The latter measure was thrown out of the Chamber. The bill sanctioning expenditure on the canal to connect the Rhine and the Elbe was finally agreed to. During the year the Dortmund-Ems canal was completed and

opened for traffic (Aug., 1899). The canal, which has a length of 160 miles, cost \$20,000,000 to construct. A bill submitted in the Reichstag to increase the peace strength of the army evoked much discussion and considerable opposition. It was finally passed, however, the government being conceded most of its demands. In November, the programme of increased naval construction came before the Chamber. By the measure it was proposed in the early years of the new century, to nearly double the efficiency of the German navy. The government's wishes in this respect were in the main adopted. The renewal of the Imperial Bank charter for a time created a division in the House, but was at length agreed to. The treaty with Spain was also endorsed by the Reichstag for the acquisition of the Caroline, Pelew, and Ladrones islands in the Pacific. The cost of the acquisitions was 25 million francs. The protracted wrangling over the succession to the throne of Lippe-Detmold was settled during the year.

In Oct. 1900, Germany and Great Britain formed what may be termed an alliance on the Chinese question. The compact provides for agreement in policy and concerted action by the two Powers in present conditions and in all prospective contingencies, whether any other Powers shall adopt a similar policy or not, and in case any other shall adopt and pursue an antagonistic policy these two nations "reserve to themselves the right to come to a preliminary understanding regarding the eventual step to be taken for the protection of their own interests." The terms of the policy include, first, the open door, which is to be maintained in China for the benefit of all countries without distinction; secondly, that neither Power shall aggress on the territorial integrity of the Chinese empire or sanction partition of it by any other Power; and thirdly, that if any other Power seeks to close the open door or to violate the integrity of Chinese territory, Britain and Germany will act together as may seem best to meet the exigencies of the case. The United States, it is understood, regards with satisfaction the compact between these two great Powers. G. M. A.

GÉRÔME, JEAN LÉON, a French historical painter; born at Vesoul, Haute-Saone, May 11, 1824. While studying at the École des Beaux-Arts, Paris, he also enjoyed the instruction of the celebrated Delaroche, with whom he went to Italy in 1844, and there exhibited his first picture, *A Cockfight*, which brought him a third-class medal. Gérôme traveled in the East in 1853, and often returned there for subjects for his canvases. His picture, *The Age of Augustus*, was purchased by the French government in 1855. In 1863 he was made a professor of painting at the École des Beaux-Arts. Many

JEAN L. GÉRÔME.

of his works are well known through reproductions. Among them are *Cæsar and Cleopatra*; *Slave Market in Rome*; *The Promenade of the Harem*; *Bacchus and Cupid*; *Greek Interior*; *The Gladiators*; and *Chariot Race*. His *Sword Dance* is in the Vanderbilt collection, New York; and his famous *Christian Martyrs*, on which he worked for 20 years, is in the Walters Gallery, Baltimore. He executed fine work in sculpture, his best production in that line being *Pygmalion and Galatea*.

GERONIMO, an Apache Indian chief, of whose early history nothing is known. For a long time his band had been committing depredations, and finally an expedition under General George Crook was sent in pursuit. On March 25, 1886, terms were made with the chief and his band, who were sent to Fort Bowie, but they escaped on March 29. The expedition was pronounced a failure, and, on his request to be relieved, General Crook was succeeded by General Miles. Pursuit was made until the exhausted band of Geronimo was compelled to come to terms, Sept. 4, 1886; and the chief, with 14 companions, was sent to Fort Pickens, Fla. For his later history, see APACHES, *ante p. 202*.

GERRARA OR GUERRARA, an oasis of Algeria, in the Wadi-Mزاب, lat 32° 55' N., long. 4° 25' E.; is a trading-station with the neighboring tribes, who bring here for sale horses, ivory, gold-dust, and ostrich-feathers. Pop. 1891, 3,732.

GERRY, ELBRIDGE, an American statesman; born in Marblehead, Massachusetts, July 17, 1744. He entered commercial life at an early age, soon acquired a considerable fortune, and in 1773 began a public career as a member of the general court of Massachusetts Bay. In 1776 he was chosen to the Continental Congress, and signed the Declaration of Independence. He did not favor the constitution, claiming that it gave too much power to the national government. He was a member of Congress till 1780, and again from 1783 to 1785. He then accepted a seat in the Massachusetts legislature, and in 1789 was elected to the first National Congress as an Anti-federalist, and re-elected in 1791. In 1797 he was sent on a commission to France with Marshall and Pinckney, and from 1810 to 1812 was governor of Massachusetts. He was then elected Vice-President of the United States, and held the office at the time of his death, in Washington, District of Columbia, Nov. 23, 1814.

GERRY, ELBRIDGE THOMAS, an American lawyer; born in New York City, Dec. 25, 1837; graduated at Columbia in 1857; studied law, and attained note in his profession, being especially known as the possessor of one of the finest private law libraries in the country. In 1870 he became counsel for the Society for the Prevention of Cruelty to Animals, and in 1879 was chosen president of the Society for the Prevention of Cruelty to Children, an organization in which he took a cordial interest. He was a member of the state constitutional convention in 1867, and has been widely known as commodore of the New York Yacht Club.

GERRYMANDER, in American politics, an arbitrary apportionment of the political divisions of a state, so contrived by the dominant party as to give a larger majority to their side. The term is connected with a fancied resemblance of the outline of the Essex district of Massachusetts, formed in 1811, to a *salamander*. It was at that time thought that an unfair apportionment had been made at the instigation of Governor Gerry. Hence the term *gerrymander*.

GERSAU, a village of Schwyz canton, northeastern Switzerland, on Lake Lucerne, 7 miles W. of Schwyz, in a beautiful region. Its whey and grape cures have a considerable reputation, and its climate is very mild, and for these reasons it has grown to be quite a health-resort. From 1390 to 1798, Gersau, including a little surrounding territory, was an independent state. Population 1895, 1,771.

GERSTER, ETELKA. See GARDINI, MADAME, in these Supplements.

GERVAO, a name given to *Stachytarpheta Jamaicensis*, a West Indian and South American plant of the family *Verbenaceæ*, or vervains, whose leaves are reputed to possess valuable medicinal properties, and are also used to adulterate tea.

GERYON or GERYONES, a three-headed monster, son of Chrysaor and Callirrhoe; said to have been king of the fabulous island, Erytheia (originally supposed to lie off the coast of Epirus, but later identified as Gades, or one of the Balearic Islands), on which he kept a herd of fine oxen, guarded by a giant and the two-headed dog, Arthrus. This herd Hercules took from Geryon, thereby performing his tenth task. By some authorities, Geryon is said to have had three bodies and three heads. It was while searching for Geryon's oxen that Hercules, arriving at the confines of Europe, the Straits of Gibraltar, erected there two pillars (Calpe and Abyla), hence called the Pillars of Hercules.

GESNERIACEÆ, a family of plants closely related to the *Scrophulariaceæ*, including numerous species, mostly herbs, chiefly of tropical America. They are frequently noted for the beauty of their flowers, notably *Gloxina*, *Achimenes* and other common inmates of our greenhouses.

GESTE, CHANSONS DE. See FRANCE, Vol. IX, pp. 641-643.

GETÆ. See DACIA, Vol. VI, p. 758.

GETHSEMANE, a place at the foot of Mount Olivet, about three quarters of a mile N.W. of Jerusalem. A garden or orchard attached to this place was a favorite resort of Christ and his disciples. The exact spot is not now known, but the garden is pointed out to travelers, at a place where a few ancient olive trees stand. Historically, Gethsemane is best known as the scene of Christ's retirement the night before the crucifixion. The Latin priests have inclosed what in their minds is Gethsemane, while priests of other churches designate a place outside the Latin walls. Gethsemane is frequently mentioned in the New

Testament, as in Luke xxii, 39; John xviii, 2; and Matt. xxvi, 36.

GETTY, GEORGE WASHINGTON, an American soldier; born in Georgetown, District of Columbia, Oct. 2, 1819. He entered the army in 1840, immediately after his graduation from West Point, and was appointed first lieutenant of artillery in 1845, captain in 1853, major in 1863, colonel of the Thirty-seventh Infantry in 1866, and was transferred to the Third Artillery in 1871. He served on the northern frontier during the Canada border disturbances in 1840, in the war with Mexico in 1847-48, in Florida in 1849-50, and during the Civil War, with the army of the Potomac, in the Virginia peninsular campaign. He received the brevets of lieutenant-colonel, colonel, brigadier-general and major-general, United States army. In 1877 he commanded the troops along the Baltimore and Ohio railroad during the riot, and was retired from service in 1883.

GETTYSBURG, a borough and the capital of Adams County, central southern Pennsylvania, 36 miles S.W. of Harrisburg. It may be reached by the Philadelphia and Reading or the Western Maryland railroads. It contains two granite-yards and carriage manufactories. There are several educational institutions, among which are Pennsylvania College and Lutheran Theological Seminary, and there is, also, an orphan's homestead. The National Cemetery here was dedicated by President Lincoln, Nov. 19, 1863, and it has a central monument costing \$50,000. There are 3,580 Union soldiers buried here. In 1863 the famous battle of July 1st, 2d and 3d was fought in the vicinity. Population 1900, 3,495.

GETTYSBURG, BATTLE OF, was fought July 1-3, 1863, between the Federal forces under General George Gordon Meade and the Confederate troops under General Robert E. Lee. After the battle of Fredericksburg, and Hooker's sudden withdrawal of the Union army from its position (q.v., under FREDERICKSBURG, in these Supplements), no general engagements took place, and the two armies, separated by the Rappahannock, faced each other throughout May, 1863. Cavalry encounters had taken place at various points on either flank of the armies. Previous to this time the warfare in the Eastern states, with the exception of Antietam, had been south of the Potomac. Lee decided to assume the offensive, and advance his troops into Northern territory. Accordingly, he ordered, for the 1st of June, a general movement, aimed at Washington and the cities of Maryland and Pennsylvania. This northward movement of his whole army would leave the road to Richmond open to Hooker; but if Hooker took advantage of that opening, he, in turn, would leave Washington unprotected. Lee divided his army into three, practically four, divisions, and placed them in command of Ewell, Longstreet, A. P. Hill, and the fourth (the cavalry) under J. E. B. Stuart. The Confederate army began its march June 1st, and advanced up the Shenandoah valley without meeting opposition until it reached Culpeper Courthouse (June 9th), where Buford,

with a force of Union cavalry, met Ewell's advance guards, and at Winchester, on the 13th, when Milroy was met. Neither of these detachments attempted to offer resistance, but gave Hooker knowledge of Lee's movements. June 17th, Hooker had his army in position near Thoroughfare Gap, where his cavalry met Stuart and drove that general back into the valley. Ewell advanced toward Harrisburg, Pennsylvania, through Carlisle and York, but retired from Carlisle through Columbia. The farthest north reached was Carlisle (June 27th). In the mean time Hill and Longstreet advanced by way of Hagerstown, and Stuart's cavalry started on a long raid through Hanover and Carlisle, which took from Lee this strong arm of his fighting force. The Confederate forces were stretched from Hanover, south of York, to Chambersburg, north of Hagerstown. Hooker crossed the Potomac on the 26th, and marched north through Frederick, where he was superseded in the command by Meade. The Federal forces were in Maryland, near Emmitsburg and Manchester, with the exception of the cavalry, which was watching Stuart.

Between the two wings of the Confederates, and north of the Union army, lay Gettysburg, which was to be the scene of the battle. Gettysburg lies in the valley of the Cumberland, but at a point where the country is cut by valleys of small streams, which have, on either side, inclosing ridges from one half to a mile apart.

Through this valley run roads leading to the different towns of the adjoining counties, most of them centering in Gettysburg. To the west of the town is Seminary Hill, a ridge three miles in length, upon which stands a theological school. To the south of Gettysburg is a series of ridges and hills, intersected by ravines and gullies. The point of these hills farthest west is a little to the north of the general trend, and, with its connecting ridges, forms a curve or outward bend. Joining this curved part is a long line of hills, which end in two prominences, and finally in open country. The extreme western point of the curve is known as Culp's Hill, the two prominences as Little and Big Round Top, and the long connecting ridge as Cemetery Hill. Between Little Round Top and Cemetery Hill, filling a gap in the long line, is a ridge, which stands out in the valley, and is known as Peach Orchard. Near Big Round Top is Devil's Den, a small knoll, and Rock Creek. These hills and ridges are wooded, and in some portions very steep and rocky.

Lee advanced Hill's corps from the northwest, Longstreet's from Chambersburg on the west, and Ewell's from Carlisle on the northeast. Lee concentrated his forces on Seminary Hill, extending his line so as to cover the town of Gettysburg and Culp's Hill, confronting Cemetery Ridge. Meade moved his forces from the southeast, south and southwest. Reynolds was in the advance, with the First Corps, closely followed by Howard, with the Second. Buford's cavalry, in its skirmishing, encountered Longstreet's advancing di-

vision from Chambersburg, and held the Confederates until Reynolds came up. Reynolds posted his men along Seminary Hill and on Oak Hill, the north end of the Seminary Ridge. The Confederates attacked the line, but were repulsed with losses. Reynolds, however, lost his life in the first of the fighting. Howard came up and took command, extended the line to include Cemetery Hill, and sent a part of his command to check Ewell's advance on the north of Gettysburg. This latter detachment was driven back through the town to the fortifications of Howard, on Cemetery Hill. Howard took possession of Culp's Hill and fortified it. This ended the work of the first day, but it served to indicate that the battle, which Meade had desired to fight in the Pipe Creek valley, farther south, was to be fought at Gettysburg. Both generals hastened to concentrate their troops. Longstreet's division came up in the night. The various corps of the Union army hastened to the front, and were assigned positions along Cemetery Hill, Peach Orchard and the Round Tops. The last corps to arrive was Sedgwick's (the Sixth), and was sent to Big Round Top. Sickles placed his brigade on Peach Orchard and Devil's Den, on an exposed front, which was sure to attract to it an immediate attack. The second day's fighting did not begin until four o'clock in the afternoon. Longstreet's forces were sent against the two Round Tops and Sickles's fortifications on Peach Orchard, and Sickles was driven back to a point even with the line on Cemetery Hill. The Union forces held Little Round Top only after severe fighting. At the same time Ewell had assaulted Culp's Hill, which had been fortified by Ruger and Geary. His attack was unsuccessful. On this second day the artillery had played an important part. The third day's battle was opened with a sharp artillery fire from over 220 guns, 140 belonging to the Union army and about 80 to the Confederates. Charges were made along the whole line, and the fighting was general throughout the day. Ruger and Geary recovered the ground lost the day before. The culminating movement of the day, and of the three days' battle, was Pickett's charge on the Union left and center. This charge was across the valley, in the face of a cross artillery and infantry fire, and was met with such murderous volleys as to break the charging line and decide the battle for the Union, Lee, with his rear carefully guarded, retreating that night through Maryland, across the Potomac. This battle, in the opinion of many critics, was the military high-water mark of the Confederacy, and from its close until Appomattox the wave of Confederate success steadily receded. As to the numbers engaged, no exact information is obtainable. Lee had about 88,000 men, and Meade about 87,000. The Union killed, wounded and missing were about 23,000; the Confederate, about 26,000.

GEUM, a genus of *Rosaceæ*. Two species are common natives of Britain, *G. urbanum*, the wood-avens, or herb-bennet, and *G. rivale*, water-avens. The so-called *G. intermedium* is usually regarded

as a mere hybrid of these two species. Both are aromatic, tonic, and astringent, and of old repute among herbalists; the rootstock of *G. urbanum* was formerly gathered in early spring to impart its clove-like flavor to ale, and is still used in the preparations of liqueurs. There are several species in North America, *G. vernum* being one of the earliest spring flowers.

GHALCHA LANGUAGE, language of Kafir tribes. See **KAFIRISTAN**, Vol. XIII, p. 822.

GHARA, the name of the Sutlej river in the Punjab, India, from its confluence with the Beas to its junction with the Chenab; 300 miles long; from 200 to 500 yards wide; nowhere fordable.

GHARDAIA, the chief town of the Mزاب Confederation in the Algerian Sahara, built on the slope of a hill on the right bank of the Wadi Mزاب, in 32° 29' N. lat.; 3° 54' E. long. Pop. 1896, 30,324.

GHAWAZIS. See **EGYPT**, Vol. VII, p. 727.

GHENT, TREATY OF, Dec. 24, 1814, between the United States and Great Britain, ending the war of 1812. See **UNITED STATES**, Vol. XXIII, p. 759.

GHERRARDI, BANCROFT, an American naval officer, was born in Jackson, Louisiana, Nov. 10, 1832; entered the navy from Massachusetts, as midshipman, in 1846, and served on the *Ohio*, of the Pacific squadron, till 1850, entering the Naval Academy in 1852. He became master and lieutenant in 1855, and at the beginning of the Civil War was on the *Lancaster*, of the Pacific squadron. He was made lieutenant-commander in 1862, and took part in the engagement with Fort Macon in that year. In 1863-64 he successively commanded the gunboat *Chocorna* and the steamer *Port Royal*, of the West Gulf blockading squadron. In the latter vessel he took part in the battle of Mobile Bay, and distinguished himself for coolness and courage. He was promoted to commander in 1866, to captain in 1874, to commodore in 1884, and in 1885 served on the board of examiners for promotion. In 1886 he was made commandant of the Brooklyn navy-yard, and in 1887 he became rear-admiral. Rear-admiral Gherardi was appointed to supervise the grand review of the naval forces of the world at Hampton Roads, in April, 1893. He was placed on the retired list, Nov. 10, 1894.

REAR-ADMIRAL GHERARDI.

GHIKA, HELENA, PRINCESS. See **KOLTZOFF-MASSALSKY**, in these Supplements.

GHIKA FAMILY, an Albanian house founded in the seventeenth century by George Ghika, who was made hospodar of Wallachia in 1657. From that time on his family has furnished many of the patriot rulers of Wallachia and Roumelia. In the nineteenth century three members have been especially prominent: Alexander (1795-1862), Gregory (1807-57), and John, who died in 1881.

GHIZEH OR GIZEH. See **ARCHITECTURE**, Vol. II, pp. 385-387.

GHOST. See **APPARITIONS**, Vol. II, pp. 202 et seq.

GHOST-DANCE. The Indians of North America are naturally superstitious. Their primitive religions, augmented by the Christian teachings, which they but half understood, developed in the minds of some of the tribes the belief that when the Messiah came he would bring with him all the warriors who had died. This doctrine originated, no doubt, in the early part of the nineteenth century, and in their war-dances and other ceremonies the Indians dedicated a certain portion of the orgies to the spirits of the departed who were to return. This doctrine seemed not to have had any firmer hold upon the Indian mind than any other superstition until, in June, 1889, it seemed suddenly to become a ruling thought. This was taken advantage of by certain artful "medicine-men" to stir up the Indians of the Northwest against the whites. It was given out that the advent of the Messiah was at hand, and that with him were coming the dead warriors and herds of buffaloes. It was also foretold that the whites were to be swallowed up by the earth and the Indians left in possession of all the land. This was first announced by a Shoshone "medicine-man" in the Big Horn Valley, in Montana, whose predictions were followed by those of other prophets among the Sioux, Pintes, etc. It was commanded that all the tribes should assemble and dance continuously for five days, at the expiration of which the Messiah would appear. These dances began, and were known first as "dances of death," but later as "ghost-dances." Chiefs took advantage of the excitement to arouse the warriors to arms, and soon it was feared that the fanaticism would result in an Indian outbreak. The United States troops were called out, and checked the uprising after several bloody encounters, which resulted in the suppression of the Indians, the deaths of several chiefs, including Sitting Bull, the leader of the Sioux, and of a number of United States officers and men. The "ghost-dance" is a circular dance which usually attains its height in the night, when the fires are lit and the warriors encircled by the women and children. During the whole dance ghost-songs, together with prayers, are uttered. The dancers become dizzy and exhausted from the circular motion until they fall in a trance, during which they claim to see the spirits or ghosts of their dead friends. The ghost-dance is continued by all the nomadic tribes at certain stated intervals.

GHOST-MOTH (*Hepialus humuli*), a large European moth. The wings are white underneath and brown above. The insect has a peculiar hovering flight, alternately exposing the upper and lower surfaces, so that when seen at a distance it seems to periodically vanish. This peculiarity gave the name. The larvæ bore in the stalks and roots of many plants.

GIANNI, LAPO, an Italian lyric poet, about whose life we have little information. He was a companion of Dante. See **ITALY**, Vol. XIII, p. 502.

GIANNOTI, BONATO, an Italian historian; born in Florence, Nov. 27, 1492; died in Rome in 1573. He was a contemporary of Machiavelli, but far less able and influential, both as a statesman and writer. He took a prominent part in republican movements, and was banished from Florence. He was a favorite companion of Cardinals Ridolfi and Tournon, and served Pius V in Rome. He wrote *Della Repubblica de' Viniziani* (1530); *Della Repubblica Fiorentina* (1531); a comedy, *Il Vecchio Amorososo* (1536); and other works.

GIBBES, ROBERT WILSON, an American physician and historian; born in Charleston, South Carolina, July 8, 1809. He was graduated at South Carolina College in 1827, and from 1827 to 1835 was assistant professor of geology and chemistry in that institution. He engaged in journalism in Columbia, South Carolina, as editor of the *Daily South Carolinian*. He served the Confederacy during the Civil War as surgeon-general of South Carolina. He had made a collection of minerals and works of art, but this was destroyed at the time of the burning of Columbia in 1865. He published a number of scientific articles; among them, *Monograph on Fossil Squalida*. His historical work centered in his *Documentary History of the American Revolution, Relating Chiefly to South Carolina* (1853). He died in Columbia, South Carolina, Oct. 15, 1866.

GIBBITES, the followers of John Gib, a Scottish fanatic who came into notice about 1681. The Gibbites, or, as they were otherwise known, "Sweet Singers," renounced all existing creeds and customs, and pretended to return to the original purity of paradise. Their ideas concerning primitive manners, manifested by discarding clothes, and their intemperate notions of feasting, soon led to such debauchery as to oblige the authorities to put a stop to their practices.

GIBBON, a tailless ape. See APE, Vol. II, pp. 150, 151.

GIBBON, JOHN, an American soldier; born near Holmesburg, Pennsylvania, April 20, 1827. He entered the army in 1847, immediately after graduation from West Point, and served till the close of the Mexican War. In 1854-57 he was assistant instructor of artillery at West Point, and was quartermaster there in 1856-59. In 1859 he became captain in the Fourth Artillery, chief of artillery in General McDowell's division in 1861; in 1862 was made brigadier-general of volunteers, and in 1864 major-general. He took part in the battles of Fredericksburg and Gettysburg, and in the fighting before Petersburg. In 1866-69 he was colonel of the Thirty-sixth Infantry; and in 1869-86 of the Seventh Infantry. He commanded the column that rescued Reno from the Sioux under Sitting Bull, in 1876. In 1877, with 191 men, he defeated over 500 Nez Percés warriors, under Chief Joseph, in the Big Hole Valley, Mont., killing over 200 of the Indians. In 1886 he was promoted brigadier-general; and retired April 20, 1891. He wrote *The Artillerist's Manual* (1859). Died in Baltimore, Feb. 6, 1896.

GIBBONS, ABIGAIL (HOPPER), an American

philanthropist; born in Philadelphia, Pennsylvania, Dec. 7, 1801; died in New York City, Jan. 10, 1893. She was a daughter of Isaac T. Hopper, an abolitionist; married James Sloan Gibbons in 1833, and early became interested in the reform movements of the time, giving particular attention to the condition of women and children. She was instrumental in the act of the legislature of New York establishing the State Reformatory for Women and Girls, and was one of the directors of the Diet Kitchen Association, of the Isaac T. Hopper Home and of the Women's Prison Association.

GIBBONS, JAMES, an American Roman Catholic churchman; born in Baltimore, Maryland, July 23, 1834. In 1861 he was ordained priest, and became assistant priest at St. Patrick's Church, Baltimore, Maryland. A few months later he became pastor of St. Bridget's Church, and then was transferred to the cathedral, and appointed chancellor of the archdiocese. In 1868 he was made vicar apostolic of North Carolina, with the rank and title of bishop, and in 1872 was assigned to the see of Richmond, Virginia, then vacant. In 1877 he was appointed coadjutor to Archbishop Bailey of Baltimore, and in the same year succeeded him. In 1886 Archbishop Gibbons became a cardinal, being the second American to receive this honor. He published *The Faith of Our Fathers* (1876) and *Our Christian Heritage* (1889).

CARDINAL GIBBONS.

GIBBONS, JAMES SLOAN, banker, writer, and philanthropist; born in Wilmington, Del., July 1, 1810. He was for some time a merchant in Philadelphia, and from 1835 until his death a banker in New York city. He wrote the famous war-song, *We Are Coming, Father Abraham*, and two works of value, *The Banks of New York and the Panic of 1857* (1858) and *The Public Debt of the United States* (1867). He is remembered on account of his benefactions. Died in New York, Oct. 17, 1892. His wife was ABIGAIL (HOPPER) GIBBONS (q. v.), with whose efforts for women he was in sympathy, and whom he aided financially.

GIBBONS, WILLIAM, an American physician and writer; born in Philadelphia, Pennsylvania, Aug. 10, 1781; father of James Sloan Gibbons. He graduated at the University of Pennsylvania in 1805, and practiced in Wilmington, Delaware, until his death. He was a "Friend," and devoted much of his time to the interests of the society. He published *Exposition of Modern Scepticism*, a pamphlet, and several articles, under the name "Vindex." He died in Wilmington, Delaware, July 25, 1845.

GIBBS, ALFRED, an American soldier; born in Sunswick, Long Island, April 22, 1823; a brother of Oliver Wolcott Gibbs. He graduated

at West Point in 1846, and took part in the Mexican War. In 1848-60 he was on frontier duty in California and New Mexico. He served under General Sheridan, in the cavalry, throughout the Civil War. At the close of the war he had attained the rank of brevet major-general. From 1866 to 1868 he was major of the Seventh United States Cavalry. He died in Fort Leavenworth, Kansas, Dec. 26, 1868.

GIBBS, JOSIAH WILLARD, an American philologist; born in Salem, Massachusetts, April 30, 1790. He graduated at Yale in 1809. From 1811 to 1815 he was a tutor in Yale College, and for some years at Andover, where he devoted himself to the study of Hebrew and Biblical literature. From 1824 until his death, he was professor of sacred literature in the Theological School of Yale College. He published *Philological Studies, with English Illustrations* (1856); *Teutonic Etymology* (1860); and translations of Gesenius's *Hebrew Lexicon of the Old Testament* (1824); and *Manual Hebrew and English Lexicon* (1828). He died in New Haven, Connecticut, March 25, 1861.

GIBBS, OLIVER WOLCOTT, an American chemist; born in New York City, Feb. 21, 1822. He graduated in 1845 at the College of Physicians and Surgeons in New York, and then studied chemistry for three years in Germany. From 1849 to 1863 he was professor of physics and chemistry in the College of the City of New York, and in 1863 became professor of chemistry and physics in Harvard University. In connection with his work he made valuable discoveries in organic chemistry, and was active in general scientific work. He constantly contributed to scientific periodicals, and was one of the editors of *The American Journal of Science*.

GIBEL OR PRUSSIAN CARP (*Cyprinus gibelio*), a small fresh-water fish, common in Europe. It is an excellent food-fish.

GIBSON, CHARLES DANA, an American illustrator and artist. He made his *début* in *Life*, in a very modest way, March 25, 1886, when he had therein a little sketch, *The Moon and I*, representing a small dog confined by a chain and baying the moon. He became famous with his creation of the American girl. His series of sketches in which he depicted this charming character received wide notice. The

London *Chronicle*, in 1892, noticed his delicate work, comparing it with that of Du Maurier, and saying that Gibson "followed effects of nature, while Du Maurier ignored them." In March, 1892, an exhibition of Gibson's *Life* sketches was made at Sanchez and Miller's Gallery in New York City. In October, 1893, he made a visit to Europe, on the eve of which his New York friends banqueted him at the Player's Club. In 1894 a *Collection of Eighty-*

four Drawings by C. D. Gibson was published, and again in 1895 a collection of his drawings was made at Keppel's Gallery, New York City, among them being *Canoeing*; *Reading the Will*; and *Going in to Dinner with the Duke of Sloppy Weather*. In 1896 another collection of his drawings appeared in book-form. The secret of the original, if any, of his favorite model of the American girl has been well kept. Many guesses have been made, but all apparently incorrect.

GIBSON, JOHN MUNRO, a British Presbyterian clergyman; born in Whithorn, Scotland, April 24, 1838. He studied in Glasgow, Scotland, and afterward at Knox College and the University of Toronto, Canada. He began his pastoral work in Montreal, Canada, in 1864, and in 1874 was transferred to the Chicago Second Presbyterian Church, and in 1880 to St. John's Wood Presbyterian Church, in London, England. He was prominent in the church organization; and in 1891 was moderator of the English synod. He published *The Ages before Moses* (1879); *The Foundations* (1880); *The Mosaic Era* (1881); and *Christianity According to Christ* (1890).

GIBSON, RANDALL LEE, an American soldier and public man; born in Spring Hill, Kentucky, Sept. 10, 1832. He was graduated at Yale in 1853, and spent the next two years in Germany. He engaged in sugar-planting in Louisiana, and at the beginning of the Civil War enlisted as a private in the Confederate army, served as colonel of the Thirteenth Louisiana Infantry, and was promoted major-general. Chosen to Congress in 1872, he was not allowed to take his seat. Elected again in 1874, he served until 1882, when he was chosen Democratic United States Senator from Louisiana, and was re-elected in 1888. He died before the expiration of his second term, in Hot Springs, Arkansas, Dec. 15, 1892.

GIBSON, WILLIAM, an American surgeon; born in Baltimore, Maryland, in 1788. After graduating at Princeton in 1806, he studied in Scotland, at the University of Edinburgh. He practiced his profession in Baltimore until seventy years of age, when he retired to Newport, Rhode Island. He was professor of surgery in the University of Pennsylvania from 1819 to 1849. He published *Principles and Practice of Surgery* (1824); *Rambles in Europe* (1839); and *Eminent Belgian Surgeons and Physicians* (1841). He died in Savannah, Georgia, March 2, 1868.

GIBSON, WILLIAM HAMILTON, an American illustrator and author; born in Sandy Hook, Connecticut, Oct. 5, 1850. He was a student at the Brooklyn Polytechnic Institute, and in 1870 became connected with *The American Agriculturist* and *Hearth and Home*, as an illustrator of articles upon subjects in botany. He afterward contributed illustrations to various journals, but did not become generally known until his work began to appear in *Harper's Magazine*, where his exquisite designs and technique placed him among the foremost of American artists. His first illustrations in *Harper's* appeared in connection with Mrs. Conant's *Birds and Plumage*. He illustrated

E. P. Roe's *Nature's Serial Story*, and wrote, with illustrations by his own hand, *Camp-Life in the Woods* (1876); *Pastoral Days* (1881); *Highways and Byways* (1883); *Happy Hunting Grounds* (1886); *Strolls by Starlight and Sunshine* (1891); *Sharp Eyes* (1892); and *Edible Toadstools and Mushrooms* (1896). He was, in his later years, a popular lecturer on botanical themes, and a sympathetic delineator of plant-life. He died in Washington, Connecticut, July 16, 1896.

GIBSON, WILLIAM HARVEY, an American soldier; born in Jefferson County, Ohio, in 1822. He was admitted to the bar of Ohio in 1841, and took an active part in state and national politics. At the beginning of the Civil War he held the office of state treasurer, which he resigned to enter the Union army as colonel. He took part in the Western campaigns and attained the rank of brevet brigadier-general. He returned to the practice of law and participated in political campaigns as a Republican. He died in Tiffin, Ohio, Nov. 22, 1894.

GIBSON CITY, a town in Ford County, northwestern Illinois, on the Illinois Central, the Lake Erie and Western and the Wabash railroads, 32 miles E. of Bloomington. It is in an agricultural district; has a fence factory, iron-works, canning factory, brick and tile factory, cigar factory and oil-works. Population 1890, 1,803; 1900, 2,054.

GIDDINGS, a village and the capital of Lee County, southeastern central Texas, 50 miles E. of Austin, on the Houston and Texas Central and the San Antonio and Aransas Pass railroads. Coal, iron and gypsum are found in the neighborhood, and cattle are raised. There are manufactures of dentists' supplies, bricks and soda-water. Population 1890, 1,203.

GIDDINGS, JOSHUA REED, an American statesman; born in Athens, Pennsylvania, Oct. 6, 1795. He was admitted to the Ohio bar in 1820, and in 1826 was elected to the legislature, serving one term. In 1838 he was chosen, as a Whig, to Congress, and for twenty years was a member of that body. He was an active abolitionist, and as early as 1841 maintained in Congress that slavery was a crime. He opposed the annexation of Texas and the compromise measures of

JOSHUA R. GIDDINGS.

1850. From 1861 to his death he was United States consul-general in Canada. Mr. Giddings published a volume of his speeches (1853), and wrote *The Rebellion: Its Authors and Causes*, issued posthumously (1864). He died in Montreal, Canada, May 27, 1864.

GIERS, NICHOLAS CARLOVITCH DE. See DE GIERS, NICHOLAS CARLOVITCH, in these Supplements.

GIFFORD, ROBERT SWAIN, an American ar-

tist; born on the island of Naushon, Buzzard's Bay, Massachusetts, Dec. 23, 1840. He spent several years in Holland, studying under Albert van Beest. He settled first in Boston, and later permanently in New York City. He is a landscape-painter of considerable merit, and attracted early attention both by his oil-paintings and pictures in water-color. Among the latter are *Deserted Whaler* (1867); *An Autumn Day on the Sea-Shore* (1869); and *Evening in Sahara* (1877). Among his oil-paintings are *Mount Hood, Oregon* (1870); *Passenger-Boats on the Nile* (1874); *Cedars of New England*; and *The Border of the Desert* (1877).

GIFFORD, SANDFORD ROBINSON, an American landscape-painter; born in Greenfield, New York, July 10, 1823. He devoted himself to portrait-painting from 1842 to 1846, when he turned to landscapes. Among his paintings are *Morning in the Adirondacks* (1867); *Sunset on the Sweetwater, Wyoming* (1874); and *Sunset, Bay of New York* (1878). His *Ruins of the Parthenon* is in the Corcoran Gallery at Washington, District of Columbia. He died in New York City, Aug. 29, 1880.

GIGNOUX, FRANÇOIS REGIS, a French landscape-painter; born in Lyons, France, in 1816; died in Paris, Aug. 6, 1882. He studied under Delaroche at the Paris School of Fine Arts. From 1844 to 1870 he was in Brooklyn, New York, and in 1851 became a member of the Academy of Design, and was the first president of the Brooklyn Art Academy. He returned to France in 1870, and there resided until his death. His paintings include *Virginia in Indian Summer*; *Niagara by Moonlight*; *The Dismal Swamp*; and *Mount Washington*. He was especially effective in winter scenes, and his *Niagara in Winter* displays his work to good advantage.

GIGOUX, JEAN FRANÇOIS, a French painter; born at Besançon, Jan. 8, 1809. After studying at the École des Beaux-Arts, Paris, he exhibited his first picture in 1831. His subjects are chiefly historical, as *The Death of Cleopatra* and the *Taking of Ghent*, and religious, as *The Baptism of Christ*, and the *Last Ecstasy of St. Mary Magdalene*. He also painted portraits, among them those of Lamartine, Houssaye and Taillandier; and was successful in his decoration of churches, especially in that of St. Gervais, Paris. He died Dec. 10, 1894, in Besançon.

GILA MONSTER (*Heloderma suspectum*), a large poisonous lizard of Arizona, New Mexico and Texas. It is dusky brown, mottled with orange and occasional pinkish spots. It attains a length of about three feet. It is greatly feared, but overestimated. Experiments show that it secretes a powerful poison, causing death very quickly to small animals, but its bite is not necessarily fatal to man.

GILA RIVER rises in the southwestern part of New Mexico, in the Sierra Madre, flows generally westward, and joins the Colorado River in Yuma County, Arizona, at the southeastern extremity of California. Its total length is variously estimated at from five hundred to six hundred

miles. Gold and silver are found near this river in Arizona, and the ruins of an ancient civilization abound in its lower valley. Its chief tributaries are the Rio Verde, Rio Santa Cruz and the Rio San Pedro.

GILBERT, CHARLES CHAMPION, an American soldier; born in Zanesville, Ohio, March 1, 1822. He graduated at West Point in 1846, and served in the Mexican War. He was assigned to frontier duty until the beginning of the Civil War, when he was stationed in Kentucky and Tennessee. He was inspector-general of the army of the Ohio and of the Cumberland, and later in command of the army of Kentucky. He had attained the rank of brigadier-general at the close of the war. He remained in the army as colonel, and was retired in 1886.

GILBERT, CHARLES HENRY, an American zoölogist; born in Rockford, Illinois, Dec. 5, 1859. He studied at Butler University and the University of Indiana. He was appointed professor of zoölogy in the University of Cincinnati in 1844, and held a similar position in Indiana University and in Leland Stanford University, California. He made a special study of fishes, and is the author of a number of papers relating to this branch of science; the best-known article being one written in conjunction with David Starr Jordan, entitled *Synopsis of the Fishes of North America* (1882).

GILBERT, GROVE KARL, an American geologist; born in Rochester, New York, May 6, 1843; graduated at the university there in 1862. After serving on several important surveying expeditions, he became, in July, 1879, geologist to the United States survey and, in 1889-92 was chief geologist of the United States. He was president of the American Society of Naturalists and vice-president or member of several scientific societies, and wrote papers on the geology of the Rocky Mountains and the Black Hills, and two papers, *Lake Bonneville* (1890) and *Geology of the Henry Mountains* (1877).

GILBERT, SIR JOHN, an English painter; born at Blackheath, near London, England, in 1817. He exhibited pictures, both in oil and water-color, at the leading English galleries since 1836, and became a Royal Academician and president of the Royal Society of Painters in Water-Colors. As an illustrator of books, pictorial newspapers, etc., his name was familiar, and he contributed to the *Illustrated London-News* for many years. Most of the best editions of the British classics have been illustrated by him, including an edition of Shakespeare. His favorite subjects were historical ones. Among his paintings are *Don Quixote and Sancho Panza*; *Murder of Becket*; and *Morning of Agincourt*. Died at Villers-sur-mer Oct. 6, 1897.

GILBERT, JOHN GIBBS, an American actor; born in Boston, Massachusetts, Feb. 27, 1810. On Nov. 28, 1828, he began a series of tragic performances at the old Tremont Theater, in his native city, where he appeared in the rôles of Jaffier, Sir Edward Mortimer, and Shylock. After having played in Western and

Southwestern theaters for four years, he returned to Boston. In 1847 he joined the company of the Princess Theater, in London, where he played in standard English comedy, appearing at first as Sir Robert Bramble in the *Poor Gentleman*. In 1848 he returned to the United States, and performed at the Park Theater and at the Bowery Theater. In 1851 he went to Philadelphia for five years; in 1856 and 1857 was in Boston; from 1858 until 1862 performed in Philadelphia, and afterward made his home in New York City. He was most popular in Sir Peter Teazle, Job Thornberry and Old Dornton. He died in Boston, Massachusetts, June 17, 1889.

GILBERT, SIR JOHN THOMAS, Irish historian; born in Dublin in 1829. He was secretary of the public record office of Ireland from 1867 to 1875; a member of the Royal Irish Academy, its professor of archæology and its librarian. He published *A History of the City of Dublin* (1859); *Celtic Records and Historic Literature of Ireland* (1861); *Historic Documents of Ireland* (1870); *History of Affairs in Ireland from 1641 to 1652* (1881); and *History of the Irish Confederation and the War in Ireland* (1888). Died in London, May 23, 1898.

GILBERT, JOSEPH HENRY, a British chemist; born at Hull, England, Aug. 1, 1817; studied at Glasgow University, at University College, London, and at Giessen, Germany—at the last-mentioned place under the celebrated Liebig. After taking his doctorate at Giessen he was appointed instructor in University College, London, in 1840. He conducted a course of experiments and researches in agricultural chemistry and the physiology of farm animals, the results of which have been published in a series of valuable papers. He became professor of rural economy in Oxford in 1884.

GILBERT, WILLIAM SCHWENCK, an English dramatist; born in London, Nov. 18, 1836. He was educated at Great Ealing School, and received the degree of B.A. from the London University in 1857. From that time to 1862 he was clerk in the Privy Council office, and in 1864 he was admitted to the bar. For many years afterward he was on the editorial staff of *Fun*, in the columns of which his *Bub Ballads* first appeared. His stage-work began with a Christmas burlesque, *Dulcamara* (1866), which was followed by a succession of dramas, burlesques, comedies and operas. Among his fairy comedies are *The Palace of Truth* (1870); *Pygmalion and Galatea* (1871); *The Wicked World* (1873); and *Broken Hearts* (1876). Among his comedies are *Sweethearts* (1874) and *Engaged* (1877). His other plays include *Charity*; *Gretchen*; *Comedy and Tragedy*; etc. In 1876 appeared his comic opera, *Trial by Jury*, in which he was as-

WILLIAM S. GILBERT.

sociated with Sir Arthur Sullivan. In conjunction with the latter he also produced *The Sorcerer*; *H. M. S. Pinafore*; *The Pirates of Penzance*; *Patience*; *Iolanthe*; *Princess Ida*; *The Mikado*; *Ruddigore*; *The Yeomen of the Guard*; *The Gondoliers*; and *The Grand Duke* (1896).

GILBERTINES, an order of monks. See **GILBERT**, SAINT, Vol. X, p. 593.

GILBERT ISLANDS, a group of 16 inhabited islands, of coral formation, in Micronesia, near lat. 3° 20' N. and long. 175° E., claimed by Great Britain. Area, 166 square miles; population 1891, 35,200. Its products are coconuts, taro and pandanus. See also **MICRONESIA**, Vol. XVI, pp. 256, 257.

GILCHRIST, ALEXANDER, a British writer, biographer of William Blake; born in Newington Green, England, in 1828. He was educated at University College, London, and was called to the bar in 1849, but never practiced. He devoted himself to literary criticism, and after collecting, in Yorkshire, materials for a life of Etty, the painter, he settled in Guildford in 1853. The *Life of Etty* appeared in 1855. The following year he moved to Chelsea and began work upon his *Life of Blake*. Before it was completed he died, Nov. 30, 1861. Mrs. Blake, with the aid of W. M. Rossetti, finished the biography in 1863, and in 1880 issued a second edition, with a memoir of her husband.

GILDER, an American family of prominence, especially in the field of literature. The father, **WILLIAM HENRY**, a clergyman, was born in Philadelphia, Pennsylvania, Sept. 17, 1812; died at Brandy Station, Virginia, April 13, 1864. He entered the ministry of the Methodist Church in 1833. He published the Philadelphia *Literary Register* in 1840, and in 1842 founded the Bordentown (New Jersey) Bellevue Seminary, afterward the Flushing (Long Island) Bellevue College. During the Civil War he served as chaplain until his death, from smallpox.—His eldest son, **WILLIAM HENRY**, an Arctic explorer, was born in Philadelphia, Pennsylvania, Aug. 16, 1838. He served throughout the Civil War, attaining the brevet of major. He was with Lieutenant Schwatka on the King William's Land polar expedition of 1878, and was with the *Rodgers* in 1881, and crossed from Bering Sea, through Siberia, to the

Russian telegraph line, to communicate with the United States government. He afterward traveled in Tonquin and Europe, acting as correspondent of the New York *Herald*. He was the author of *Schwatka's Search* (1881) and *Ice-Pack and Tundra* (1883).—**RICHARD WATSON**, an American poet and critic, second son of William Henry, Sr.,

RICHARD WATSON GILDER.

was born in Bordentown, New Jersey, Feb. 8, 1844. In 1865 he became an editor, of the Newark (New

Jersey) *Advertiser*, and three years later, with Newton Crane, established the Newark *Morning Register*. Mr. Gilder, in 1870, accepted the associate editorship of *Scribner's Monthly* (now *The Century Magazine*), of which, on the death of Dr. Holland in 1881, Mr. Gilder was made editor-in-chief. In addition to his editorial and literary labors, Mr. Gilder took an active interest in all public matters. He was one of the founders of the Society of American Artists, the American Copyright League, the Author's Club and the Free Art League. He published six volumes of poems: *The New Day* (1875); *The Poet and His Master* (1878); *Lyrics* (1885); *The Celestial Passion* (1887); *Two Worlds, and Other Poems* (1891); and *The Great Remembrance* (1893).

—**JEANNETTE LEONARD**, daughter of William Henry, Sr., was born Oct. 3, 1849, in Flushing, Long Island. In 1881 she established the *Critic*, in New York City, and edited and managed that journal, in conjunction with her brother, **JOSEPH B.** (born June 29, 1858, in Flushing, Long Island). Miss Gilder was literary correspondent for several Western papers, among them the *Chicago Tribune*, and was co-editor of *Authors at Home* (1888), with her brother, Joseph B., and with Helen Gray Cone in *Pen Portraits of Literary Women* (1887). She was also the editor of *Representative Poems of Living Poets, American and English* (1886).

GILDERSLEEVE, BASIL LANNEAU, an American educator; born in Charleston, South Carolina, Oct. 23, 1831. He graduated at Princeton College in 1849, and studied in Germany, at Berlin, Bonn and Göttingen for four years. In 1856 he was chosen professor of Greek in the University of Virginia, where he remained till 1876. Upon the establishment of Johns Hopkins University, he was appointed professor of Greek there. Professor Gildersleeve for a time edited the Baltimore *American Journal of Philology*, and published six Latin text-books, and also editions of *Persius* (1875); *Justin Martyr* (1877); and the *Olympian and Pythian Odes of Pindar* (1885).

BASIL L. GILDERSLEEVE.

GILES, CHAUNCEY, an American Swedenborgian clergyman; born at Charlemont, Massachusetts, May 11, 1813; entered Williams College, but, on account of ill health, was compelled to leave before completing his course. He became a teacher, and in 1853 was ordained a clergyman of the New Jerusalem Society, and preached in Cincinnati for 10 years, in New York City for 15 years, and then became pastor in the first New Jerusalem Society in Philadelphia. In 1858 he was elected president of the Urbana University, and in 1863 became ordaining minister of the church, which office is functionally equivalent to that of bishop in other churches. In 1875 he was

erected president of the General Convention of the church of the New Jerusalem Society, which office he held until his death, which occurred at West Philadelphia, Nov. 6, 1893. He was editor, for several years, of the *New-Church Messenger* and of the *Children's New-Church Magazine*. He published more than two hundred sermons in tract-form. His *Man as a Spiritual Being* (1868) was translated into several languages.

GILES, HENRY, an American Unitarian minister; born at Craanford, Wexford County, Ireland, Nov. 1, 1809. He was educated at Belfast as a Roman Catholic, but abandoned that faith and became a Unitarian. He preached in Greenock, Scotland, 1835-37, and then three years in Liverpool, England. In 1840 he went to the United States, and soon became eminent as a lecturer. He contributed to many periodicals, and published *Lectures and Essays* (1850); *Christian Thought on Life* (1851); *Illustrations of Genius* (1854); *Human Life in Shakspeare* (1868); etc. He died in Boston, July 10, 1882.

GILFERT, AGNES, an American actress, was best known to the stage as Agnes Holman; born in England in 1793; died in Philadelphia, Pennsylvania, April 19, 1833. She made her *début* at the Haymarket Theatre, in London, as Belvidera, in Otway's *Venice Preserved*, and in 1812 went to New York City. In 1815 she married Charles Gilfert.

GILFILLAN, JAMES, an American jurist; born in Scotland, March 9, 1829; went to the United States with his parents in 1830. He practiced law in New York state, and in 1857 removed to Minnesota. He served in the campaign against the Sioux Indians in 1862-63, and afterward in the Civil War. In July, 1869, he became chief justice of the state supreme court for one year; was appointed to the same office in 1875 and held the position by election until his death. He annotated the first twenty volumes of the *Minnesota State Reports*. He died in St. Paul, Minnesota, Dec. 16, 1894.

GILL, DAVID, a Scotch astronomer; born in Aberdeenshire, June 12, 1843; was educated at Marischal College of Aberdeen University. He became associated with Lord Lindsay (now Earl of Balcarres), who had erected a magnificent observatory at Dunecht House, in Aberdeenshire, and under his patronage he observed the transit of Venus at Mauritius in 1874. In 1877 he was chief of an expedition to the island of Ascension to determine the solar parallax from observations on Mars. In 1881 he was appointed astronomer royal at the Cape of Good Hope. Through his labors the observatory there has become famous throughout the astronomical world. He published numerous reports on the solar and stellar parallaxes, the transit of Venus and other astronomical phenomena. He was made LL.D. of Aberdeen and Edinburgh, and a fellow of the Royal Society.

GILL, THEODORE NICHOLAS, an American naturalist; born in New York City, March 21, 1837. In 1863 he became an assistant in the Smithsonian

Institution, and in 1879 was assigned the task of preparing the reports of the institution. He was, for some years, senior assistant librarian of Congress. From 1884 to 1887 he was professor of zoölogy in the Columbian University, Washington, District of Columbia. He published a great number of scientific papers, of which some of the more important are *Prodrome of a Monograph of Pinnipeds* (1866); *Primary Subdivisions of the Cetaceans* (1871); *Arrangement of the Families of Mollusks* (1871); *Arrangements of the Families of Fishes* (1872); *Arrangements of the Families of Mammals* (1872); *Catalogue of the Fishes of the East Coast of North America* (1875); *Bibliography of the Fishes of the Pacific Coast of the United States to the End of 1879* (1882); *Scientific and Popular Views of Nature Contrasted* (1882).

GILLAM, BERNHARD, an American cartoonist; born at Banbury, England, Oct. 28, 1856; when a child, he removed with his father, a furnaceman, to New York City, and became absorbed in art when he was 14 years of age. His start was accomplished by his approaching Henry Ward Beecher with a portrait of the great divine, who obtained for the diffident artist the privilege of exhibiting the portrait in the show-window of a popular Brooklyn store. Here he received, as a result, many orders for similar portraits. He secured a place on *Frank Leslie's Illustrated Weekly* in 1879; after the death of Mr. Leslie, went to the *Graphic*; and during the Garfield-Hancock campaign made cartoons for *Harper's Weekly*, being associated with the famous Thomas Nast. His work brought him into note, and he was soon on the staff of *Puck*, at the largest salary, it is alleged, ever earned by a cartoonist. Perceiving that there was room for another humorous paper of different politics, in 1886, with W. J. Arkell, he purchased *Judge*, which at once became very popular. After enjoying the success of his venture for ten years, Mr. Gillam died, prematurely, at Canajoharie, New York, Jan. 19, 1896.

GILLESPIE, WILLIAM MITCHELL, an American civil engineer and author; born in New York City in 1816; graduated at Columbia College in 1834; went to Europe, remaining ten years, and on his return in 1845, was appointed professor of civil-engineering at Union College, which position he retained until his death, which occurred at New York City, Jan. 1, 1868. His works include *Rome as Seen by a New Yorker* (1845); *Roads and Railroads* (7th ed. 1854); *Principles and Practice of Land-Surveying* (6th ed. 1858); and, edited by Cady Staley, a *Treatise on Leveling, Topography and Higher Surveying* (1871).

GILLET, EZRA HALL, an American author; born at Colchester, Connecticut, July 5, 1823; graduated at Yale in 1841, and at Union Theological Seminary in 1844, when he was ordained pastor of the Presbyterian Church in Harlem, New York, and in 1868 was appointed professor of political economy, ethics and history in the University of New York. He wrote much for various periodicals, and published *The Life and Times of John Huss* (1863); *Life-Lessons in the*

School of Christian Duty (1864); *History of the Presbyterian Church in the United States of America* (1864); edited *England Two Hundred Years Ago* (1866); *Ancient Cities and Empires* (1867); *God in Human Thought* (1874); *The Moral System* (1874); etc. He died at Harlem, Sept. 2, 1875.

GILLISS, JAMES MELVIN, an American astronomer; born in Georgetown, District of Columbia, Sept. 6, 1811; died at Washington, District of Columbia, Feb. 9, 1865. He entered the service of the United States navy in 1827. He became connected with the Coast Survey, organized the first working observatory in the United States in 1838; in 1842 superintended the construction of a naval observatory completed in 1845, and in 1848 went to Chile to make observations for the determination of the solar parallax, etc. Among his works are a report on astronomical phenomena observed in Chile, 1849-52, and on the total solar eclipse observed in Peru, September, 1858. In 1862 he was promoted to the rank of captain in the navy. He was one of the originators of the National Academy of Sciences.

GILLMORE, QUINCY ADAMS, an American soldier; born in Black River, Lorain County, Ohio, Feb. 28, 1825. He graduated at the United States Military Academy in 1849; was assigned to the engineers; served three years at Hampton Roads; appointed instructor at West Point, and later treasurer and quartermaster at the Academy, in which capacity he was serving at the outbreak of the Civil War.

QUINCY A. GILLMORE.

In 1856 he was promoted first lieutenant in the engineering corps; was appointed captain in 1861; engineer-in-chief of the Port Royal expedition under General Sherman; brevetted lieutenant-colonel United States army, in 1862. While on sick leave he assisted in organizing and forwarding to the front no fewer than sixty regiments of New York volunteers. He was assigned to important commands in Kentucky the same year; brevetted colonel in 1863; in June was given command of the Department of the South; a month later, of the Tenth Army Corps; was brevetted brigadier-general, and then made major-general of volunteers. He directed the operations against Fort Sumter, Fort Wagner and Battery Gregg; planted and operated the famous "Swamp Angel" on Morris Island, and won the praise of General Halleck for his scientific work. In 1864 he commanded the Tenth Army Corps on the James River; later commanded two divisions of the Nineteenth Army Corps, in the defense of Washington; and in 1865 was again in command of the Department of the South. Subsequently he was appointed engineer-in-chief of the fortifications and harbor and river improvements on the Atlantic coast south of New York. In 1863 he was promoted major; in 1874, lieutenant-

colonel, and in 1883, colonel. He was the author of several works on engineering, etc. He died in Brooklyn, New York, April 7, 1888.

GILL-OVER-THE-GROUND. See GROUND-IVY, in these Supplements.

GILMAN, a town of Iroquois County, north-eastern Illinois, 81 miles S.S.W. of Chicago, on the Illinois Central, the Toledo and Warsaw and the Gilman, Clinton and Springfield railroads. It is in a corn region, but considerable fruit and stock are raised. It has a public library and a nursery, and manufactures tiles, linseed-oil, brooms, and cheese and butter. It is provided with city water. Pop. 1890, 1,112; 1900, 1,441.

GILMAN, ARTHUR, an American educator and author; born in Alton, Illinois, June 22, 1837; educated in St. Louis and New York, and received an honorary degree of master of arts from Williams College. In 1870 Mr. Gilman became connected with the Riverside Press at Cambridge, Massachusetts; and in 1871 became one of the editors of the American Tract Society. In 1876 he and his wife formulated a plan, which afterward developed into the Society for the Collegiate Instruction of Women, better known as the Harvard Annex. Mr. Gilman contributed to the periodicals and wrote many books on historical and literary subjects. He published *First Steps in English Literature* (1870); *History of the American People* (1883); *Rome from the Earliest Times to the End of the Republic*, in Story of the Nations Series (1885); *The Saracens, from the Earliest Times to the Fall of Bagdad*, in Story of the Nations Series (1886); etc. His most ambitious work is an edition of Chaucer, based upon the famous Ellsmere text.

GILMAN, CAROLINE HOWARD, an American authoress; born in Boston, Oct. 8, 1794. At the age of sixteen she wrote her first poem, entitled *Jephthah's Rash Vow*, and this was followed by *Jairus's Daughter*. In 1819 she married Dr. Samuel Gilman, and from that year until 1870 resided in Charleston, South Carolina, and then went to Cambridge, Massachusetts. From 1830 to 1839 she edited *The Rosebud* (afterward *The Southern Rose*), a magazine for children, from which were republished two volumes of *Recollections* and other selections, which became popular favorites. She died at Washington, District of Columbia, Sept. 15, 1888.

GILMAN, DANIEL COIT, an American educator, was born in Norwich, Connecticut, July 6, 1831; graduated at Yale in 1852. From 1856 until 1860 he was superintendent of schools in New Haven; state superintendent of schools in Connecticut (1865-66); librarian of Yale (1856-65); professor of physical and political geography at Sheffield Scientific School (1863-72); presi-

DANIEL COIT GILMAN.

dent of the University of California (1872-75); and in 1875 became president of Johns Hopkins University, in Baltimore, Maryland. He was elected to membership in various scientific societies, and was chosen president of the American Social Science Association in 1879; in 1876 he received the degree of LL.D. from Harvard, and from Columbia in 1887. President Gilman published many magazine articles, reports, and addresses. He prepared the biography of *James Monroe* for the American Statesman Series (1883); edited the writings of Francis Lieber (1881); and wrote *University Problems* (1898).

GILMAN, NICHOLAS PAINE, an American editor and author; born at Quincy, Illinois, Dec. 21, 1849; graduated at Harvard Divinity School in 1871; was a professor at Antioch College (1878-81); became editor of *The Literary World* (1888), and of *The New World*, Boston, in 1892. He was secretary of the Association for Promoting Profit-Sharing, and published *Profit-Sharing between Employer and Employee* (1889), advocating this system as "one of the most promising methods of securing the peaceful and fruitful union of the productive forces of modern industry."

GILMAN, SAMUEL, an American author; born at Gloucester, Massachusetts, Feb. 16, 1791; graduated at Harvard in 1811; studied theology; was for two years mathematical tutor in Cambridge; and in 1819 became, on his ordination, pastor of the Unitarian Church at Charleston, South Carolina, remaining there until his death, which occurred at Kingston, Massachusetts, Feb. 9, 1858. Many of his contributions to the magazines were collected and published under the title, *Contributions to Literature: Descriptive, Critical and Humorous, Biographical, Philosophical and Poetical* (1856). He was the author of *Memoirs of a New England Village Choir* (1829); *Pleasures and Pains of a Student's Life* (1852); and a poem, *The History of a Ray of Light*. He was a conspicuous worker in the temperance cause.

GILMER, GEORGE ROCKINGHAM, an American jurist; born in Wilkes (now Oglethorpe) County, Georgia, April 11, 1790; began the practice of law at Lexington; and in 1813 became a lieutenant in the Forty-third United States Infantry. This regiment served in the war with the Creek Indians, and was disbanded in 1815, after the war with Great Britain. After serving in the state legislature he was elected to Congress in 1821, as a Democrat; was again a member of the state legislature, and again in Congress (1827-29). He was governor of Georgia (1829-31); served in Congress (1833-35); and served a second time as governor (1837-39). He was a Presidential elector on the Hugh L. White ticket in 1836, and on the Harrison ticket in 1840. He was a trustee of Georgia University for thirty years, and was the author of *Georgians*, a work that furnishes details of the early settlers (1855). He died at Lexington, Georgia, Nov. 15, 1859.

GILMORE, JAMES ROBERTS, an American author; better known as "Edmund Kirke"; born in

Boston, Sept. 10, 1823. He became a partner in a counting-room before he was of age, and in 1848 became the head of a cotton and shipping firm in New York City, from which he retired before the beginning of the Civil War. In 1862 he founded the *Continental Monthly*, but soon discontinued his connection with it. In 1873 he again engaged in business, but retired in 1883, and devoted himself to literature. Among his books are *Among the Pines* (1863); *Adrift in Dixie* (1863); *My Southern Friends* (1863); *Down in Tennessee, and Back by Way of Richmond* (1864); *Patriot Boys and Prison Pictures* (1865); *Among the Guerrillas* (1866); *On the Border* (1867); *The Rear-Guard of the Revolution* (1866); *John Sevier as a Commonwealth Builder*, a sequel to the former (1887); *The Advance Guard of Western Civilization* (1888). In July, 1864, he, with Colonel Jaquess, was intrusted by President Lincoln with an unofficial mission to Jefferson Davis with the object of bringing about a peace, the mission eliciting from the Confederate government the declaration that no terms could be concluded which did not secure the independence of the Confederate States. This had the effect of obliterating the peace desire in the North. Lincoln offered Gilmore the post of minister to Switzerland, in acknowledgment of his services, but the office was declined.

GILMORE, PATRICK SANSFIELD, an American musical conductor; born near Dublin, Ireland, Dec. 25, 1830; was a member of the brass band at Athlone which played instrumental parts during mass at the Catholic Church. He proceeded to the United States in 1849, and soon became a band-master in Boston, playing in concerts and circuses. He went to Salem, where he remained four years, returning to Boston with the record of having successfully conducted over one thousand band concerts, and organized, in the latter city, in 1858, what became famous in America and Europe as Gilmore's Band. On the outbreak of the Civil War he and his men volunteered with the Twenty-fourth Massachusetts Regiment. In 1864 he was placed in charge of all the bands of the Gulf by General Banks. In 1869 and 1872 he organized the peace jubilee in Boston, the largest musical festival ever held, in which more than twenty thousand people and two thousand musicians, aided by some of the best military bands from Europe, took part. Mr. Gilmore removed to New York City, became band-master of the Twenty-second Regiment, and inaugurated the famous popular concerts which were given in Gilmore's Garden. During the Centennial Exposition in Philadelphia in 1876, his band furnished music daily in the Main Hall. In 1878 he gave concerts at the Paris Exposition, winning distinguished honors. During this year he visited most of the leading European cities. On his return to America, during several successive summers his band gave concerts at Manhattan Beach, Coney Island. In New York City his band of one hundred pieces ushered in the four hundredth anniversary of the discovery of America by Columbus, which celebration took place in front of the

City Hall, in the presence of an audience of thirty thousand people. He was chosen musical director of the World's Columbian Exposition, the appointment reaching him just two days before his death, and regarded by him the greatest honor any musician had ever received. Among his compositions are *Good News from Home; When Johnny Comes Marching Home; The Voice of the Departing Soul; or, Death's at the Door;* and the anthems *Columbia*, which he fondly hoped would become national, and *Ireland to England*. He died in St. Louis, Sept. 24, 1892.

GILPIN, HENRY DILWOOD, an American jurist and author; born in England, April 14, 1801; removed to Pennsylvania and practiced law in Philadelphia. He became successively United States attorney for Pennsylvania, solicitor of the Treasury, and in 1840 Attorney-General of the United States. By authority of Congress he supervised the publication of the papers of James Madison (purchased by the government from Mrs. Madison for thirty thousand dollars), which appeared in 1840. He wrote many biographies of the signers of the Declaration of Independence. He died in Philadelphia, Jan. 29, 1860.

GILROY, a city of Santa Clara County, central California, on the Southern Pacific railroad, 70 miles S.E. of San Francisco. The city is lighted with gas, supplied with good water, and has manufactories of flour and tobacco. It is surrounded by fertile land, and farming and dairying are carried on in the vicinity. Population 1000, 1,820.

GILTHEAD (*Sparus aurata*), a name often applied to a fish found in European and African seas, and allied to the scup of New England waters. The name is sometimes given to the connor (*Crenilabrus*) of United States coasts.

GIMBALS (Lat., *gemellus*, "a twin"), two circular brass hoops used for suspending the compass-box on board ship, so that it may always rest horizontally, unaffected by the ship's motion. The outer hoop is attached to a box or other fixed object, while the inner is constructed so as to allow it to move freely within the outer, to which it is attached by two pivots, at the extremities of a diameter. The compass-box is attached to the inner hoop by two similar pivots at right angles to the former. Thus the compass moves freely in two directions at right angles to each other, always retaining its horizontal position, however the vessel may roll or pitch.

GINGILIE-OIL, a name often given to the bland fixed oil obtained by expression from the seeds of *Sesamum Indicum*. See OILS, Vol. XVII, p. 746.

GINGKO, a large tree of the gymnospermous family *Taxaceæ*, with straight, erect trunk and conical head, and fan-shaped leaves somewhat notched at the end, long-stalked, smooth, yellowish green, with numerous minute dichotomously branching ribs. The fruit is a sort of drupe, about an inch in diameter. The nut, with thin shell and farinaceous kernel, is sold for food in China, resembling an almond in flavor, with a little mixture of sourness, which is removed by boiling or roast-

ing. It is called the maiden-hair tree, from the shape of its leaves, which resemble those of the maiden-hair fern, and is very commonly cultivated for ornament. The other members of this family are fossil, and this would probably have become extinct but for its cultivation in China and Japan, especially in the temple gardens, where it is regarded as a sacred tree.

GIOJA DEL COLLE, a commercial town of Italy, in the province of Bari, 23 miles S. of Bari. It is believed to have been founded in the sixth century, and very valuable Græco-Roman coins and ancient vases have been found in its neighborhood. Population, 14,213.

GIOLITTI, GIOVANNI, an Italian statesman; born in 1842; became a doctor of laws; was Director of Customs in 1876; entered Parliament in 1882; was Minister of Finance in 1890, under Crispi, but brought about the fall of the Crispi ministry, and became himself Premier in May, 1892, holding office until Nov. 25, 1893, when his ministry fell as a result of the Banco Romano scandal. Giolitti submitted, Dec. 15, 1894, to the Chamber of Deputies a sealed envelope containing charges apparently implicating Premier Crispi in the same affair. These charges were characterized by Crispi as a tissue of lies; and Giolitti afterward fled to avoid arrest, but returned to Rome, Feb. 27, 1895, to meet accusations brought against him of the abstraction of papers from the archives and of illegal possession of letters of Signor Crispi. Giolitti demanded trial by the Senate, and the court of cassation sustained his appeal. This practically had the effect of quashing proceedings against him.

GIOVANNI A TEDUCCIO, SAN, a town in central Campania, Italy, three miles E. of Naples, situated near the seashore, in a fertile plain. Its neighborhood is well cultivated, and embellished with beautiful villas. Population, 11,116.

GIRARD, a city and the capital of Crawford County, southeastern Kansas, whose chief trade is with stock-raisers and farmers. It has good railroad facilities, being on five roads, among them the Atchison, Topeka and Santa Fé and the Kansas City, Fort Scott and Memphis railroads. It has coal-mines. Population 1900, 2,473.

GIRARD, CHARLES, a French naturalist; born at Mülhausen, Alsace, 1822; became an assistant to Agassiz at Neuchâtel, and followed him to the United States in 1847. Professor Girard was connected with the Smithsonian Institution for many years, and published numerous works on natural history, geology and other scientific subjects. His writings include *Essay on the Classification of Nemertes and Planariæ* (1850); *A Monograph of the Cottoids* (1851); *Contributions to the Natural History of the Fresh-Water Fishes of North America* (1851); *Contributions to the Fauna of Chili* (1856); *Herpetology of the United States Exploring Expedition, 1838-42* (1859).

GIRARD COLLEGE, an institution of learning, founded in Philadelphia by the philanthropist, Stephen Girard, "mariner and merchant," as he called himself in his will; for an account of

whom, see Vol. X, p. 621. The chief of his many benefactions was for the provision of a "permanent college" for educating and training "as great a number of poor male white orphan children as can be trained in one institution." He intended the college to accommodate at least three hundred children, and left the minutest

MAIN BUILDING, GIRARD COLLEGE, PHILADELPHIA.

instructions in his will for the construction of the buildings, which he desired to be absolutely fire-proof. The main building was erected in accordance with his design, and it is one of the finest specimens of Greek architecture in America (see ARCHITECTURE, in these Supplements). The provisions he made for the orphans to be admitted into the institution were that they—

"Shall be there fed with plain but wholesome food, clothed with plain but decent apparel (no distinctive dress ever to be worn), and lodged in a plain but safe manner. They shall have suitable and rational recreation and exercise. They shall be instructed in the various branches of a sound education, comprehending reading, writing, grammar, arithmetic, geography, navigation, surveying, practical mathematics, astronomy, natural, chemical and experimental philosophy, the French and Spanish languages (I do not forbid it, but I do not recommend the Greek and Latin languages), and such other learning and science as the capacities of the several scholars may merit or warrant. I would have them taught facts and things, rather than words and signs. And, especially, I desire that, by every proper means, a pure attachment to our republican institutions, and to the sacred rights of conscience as guaranteed by our happy constitution, shall be formed and fostered in the minds of the scholars."

The teachers were to be selected on account of their merit, and not through favor or intrigue. The scholars were, upon graduation, to be bound out as tradesman, according to the custom of the time. Then came the following provision, which has caused universal comment: "I enjoin and require that no ecclesiastic, missionary or minister, of any sect whatsoever, shall ever hold or exercise any station or duty whatever in the said college; nor shall any such person ever be admitted for any purpose, or as a visitor, within the premises appropriated to the purposes of said college." In making this restriction he did not mean to reflect upon any sect or person, but desired to keep the scholars and the institution "free from the excitement which clashing doctrines and sectarian controversy are apt to produce." The provision may be explained by

the fact that at the time the will was drawn sectarianism ran high in Philadelphia, and Girard's mind was directed to its baneful influences. The college prospered from the start. In 1832 the value of the estate left for its endowment amounted to between \$2,000,000 and \$3,000,000; in 1895 the total value of the college estate amounted to \$14,921,828, and the net income was \$1,050,880.22. The total number of scholars at the end of the year 1895 was 1,524. One of the excellent features of the college is its military discipline. The boys are under the instruction of a United States officer, and their training is complete and regular. Notwithstanding the apparently prohibitory provisions as to the exclusion of clerical persons, it is a remarkable fact that thorough religious instruction is given in the college, though by laymen, attendance on chapel and Sunday school being obligatory. Hundreds of applicants for admission are always on the waiting-list. The scope of the instruction keeps pace with modern requirements. Some of the nation's ablest men received their start at Girard College. See PHILADELPHIA, Vol. XVIII, p. 740.

GIRARDIN, ÉMILE DE, a French journalist and politician, the illegitimate son of General Alexandre de Girardin and Madame Dupuy. He was born in Paris, June 22, 1806. Until 1827 he bore the name of Delamothe. After 1827 he assumed the name of his father, who acknowledged him in 1847. His first attempt in literature was a novel, *Émile*, in which he pleaded the cause of illegitimate children. After the July revolution in 1830, he published the *Journal des Connaissances Utiles*, which soon attained a sale of 120,000 copies. In 1836 he founded the one-cent newspaper, *La Presse*, an Orleanist journal with a conservative tendency. As his rivals accused him of receiving subsidies from the government, he got into quarrel with Armand Carrel, editor of *La Nationale*, which culminated in a duel. Carrel was fatally wounded and died. After this Girardin occupied himself ardently with politics, both as a journalist and a Deputy, and gradually became a decided Republican. When Louis Napoleon was elected to the Presidency, Girardin promoted his cause; but he was strongly against the *coup d'état*, and was rewarded with a short period of exile. In 1856 Girardin sold his share in *La Presse*, but became its editor again in 1862. Soon afterward he became the editor of *La Liberté* and managed this paper till 1870. He excelled all his fellows in braggadocio on the outbreak of the Franco-Prussian war. In 1874 he founded *La France*, and both in its pages and in *Le Petit Journal* supported the republic. His political ideas were given to the world in a number of brochures. He died at Paris, April 27, 1881. In 1831 he married DELPHINE GAY. See GIRARDIN, MADAME ÉMILE DE, Vol. X, p. 621.

GIRNAR, a sacred mountain in eastern India, in the peninsula of Kathiawar, Bombay province, 10 miles E. of Junagadh. It is a bare pile of granite, rising to the height of 3,500 feet above the sea, and, as a holy place of Jainism, is covered

with ruined temples. One group contains 16 temples, nearly 3,000 feet above the sea.

GIRTY, SIMON, an American leader of Indians; born in Pennsylvania about 1750; was for several years a prisoner among Indians, and served under Lord Dunmore as a spy. In 1777 he joined the savages, who were aiding the British troops, became a leader, and won infamous notoriety by encouraging them to torture and murder their prisoners, among them Colonel William Crawford and General Richard Butler. It was variously believed that he was killed at the battle of the Thames in 1813, or died in Canada in 1815.

GIST, CHRISTOPHER, an American scout; born in North Carolina. He was employed as a surveyor by the Ohio Company to trace the course of rivers and mark the mountain passes of the northwestern territory. On Oct. 31, 1750, he crossed the mountains, and in 1751 reached the great Miami River. On March 1st of that year Gist descended the river to its union with the Ohio, ascended the valley of the Kentucky River, discovered a pass, and returned home by way of Roanoke. In 1753 Gist settled on a plantation in Pennsylvania, near the Youghiogeny River. At the end of that year he acted as a guide to Washington, who had been sent by Governor Dinwiddie of Virginia to make a journey to Lake Erie. On their return the two were fired on by some Indians, but escaped unhurt. A fort was located where Pittsburg now stands, on the favorable report of the two travelers, which was taken by the French and named Fort Duquesne. From this point Gist's history is unknown.

GIUDICI-EMILIANI, PAOLO, an Italian author, born at Mussomeli, Sicily, June 13, 1819; died at Hastings, England, Sept. 8, 1872. At the age of sixteen he unwillingly entered a convent, where he devoted himself to the study of literature. He subsequently quitted the life of a recluse and fled to Tuscany, where he began his principal work, *La Storia della Letteratura Italiana*. About this time he received a legacy from his friend Emiliani, whose name he adopted, and was thus enabled to pursue his studies at leisure. He became professor in the University at Pisa in 1849, and in 1861 was made secretary to the Academy of Fine Arts in Florence, succeeding Niceolini, and in 1867 was elected to the Italian Parliament. Other of his writings are *Storia dei Municipii Italiani* (1851); and *Storia delle Belle Arti in Italia*.

GIULIANI, GIAMBATTISTA, an Italian scholar; born at Canelli, in Piedmont, June 4, 1818; died in Florence, Jan. 11, 1883. He was appointed professor of mathematics at the Clementine College at Rome (1837); then of philosophy at the Lyceum at Lugano (1839); of rhetoric at the University of Genoa (1848); and of Italian literature at Florence (1860). He made a profound study of Dante, and in 1845 published his celebrated *Saggio di un Nuovo Commento della Commedia di Dante Allighieri*. He was, for a time, censor of the press, and performed the duties of the office with much liberality. He published

many works concerning Dante and the Italian language, among them being *Sul Vivente Linguaggio della Toscana*; *Le Norme di Commentare la Divina Commedia*; and *Metodo di Commentare la Divina Commedia*. He also published a critical and annotated edition of all the works of Dante.

GIVIN, WILLIAM MCKENDREE, a United States Senator; born in Sumner County, Tennessee, Oct. 9, 1805; died in New York City, Sept. 3, 1885. His father was a Methodist clergyman. Young Givin received a good education, read law, and thereafter studied medicine, taking his degree in 1828. He went to Clinton, Mississippi, and was appointed, by President Jackson, United States marshal for the district of Mississippi. In 1840 he was elected to Congress. On the accession of President Polk he was appointed to superintend the building of the new customhouse in New Orleans. In 1849, on the election of General Taylor, he resigned his place to seek his fortune in California. Here he became at once active in favor of a state government, and was chosen a member of the convention held in Monterey to frame its constitution. In December, 1850, Dr. Givin was chosen United States Senator, was re-elected in 1854, and served until March 3, 1861. At the beginning of the Civil War he was arrested as a pronounced sympathizer with the Confederates and kept in durance until 1863. The following year he spent in Paris, in the interest of the Southern Confederacy. At the conclusion of the war, Dr. Givin returned to California.

GLACIAL DRIFT. See BOULDER-CLAY, in these Supplements.

GLADDEN, WASHINGTON, an American clergyman; born at Pottsgrove, Pennsylvania, Feb. 11, 1836; graduated at Williams College (1859); ordained pastor of the State Street Congregational Church in Brooklyn (1860), and was pastor in Morristania, New York (1861); North Adams, Massachusetts (1866-71); Springfield, Massachusetts, (1875-83); and of the First Congregational Church at Columbus (1883). He was on the editorial staff of the *New York Independent* (1871-75); editor of *Sunday Afternoon* (1878-80); and department editor of *Our Day*. He received the degree of D.D. from Roanoke College (1884), and LL.D. from the University of Wisconsin (1881). He published *Amusements: Their Uses and Abuses* (1867); *Plain Thoughts on the Art of Living* (1868); *From the Hub to the Hudson* (1869); *Working-People and Their Employers* (1876); *Being a Christian* (1876); *The Christian Way* (1877); *Was Bronson Alcott's School a Type of God's Moral Government?* (1877); *The Lord's Prayer* (1880); *The Christian League of Connecticut* (1883); *Things New and Old in Discourses of Christian Truth and Life* (1883); *The Young Men and the Church* (1885); *Applied Christianity* (1886); *Burning Questions on the Life That Now is and That Which is to Come* (1889); *Who Wrote the Bible?* (1891); and, later, *Tools and the Man; Property and Industry under the Christian Law*; and *The Cosmopolis City Club*.

GLADSTONE, WILLIAM EWART, a British statesman, orator and author, was born in Liverpool, England, Dec. 29, 1809, his father, Sir John Gladstone, being a well-known merchant of that city. Mr. Gladstone is of Scotch descent on both sides. He was educated at Eton, and at Christ Church, Oxford, from which he graduated in 1831. As a member of the Oxford Union De-

WILLIAM EWART GLADSTONE.

bating Society, he early showed his skill in dialectics, and gave promise of rare gifts as a debater and orator, which he was subsequently to manifest, in a remarkable degree, in moulding the political history of his country. From that mimic parliament he passed, in 1833, to the House of Commons, having been elected, in the Conservative interest, for the borough of Newark at the general election of December, 1832. Here, in the Reform Parliament of the era, he strengthened the Tory ranks by proving himself a strong opponent of all advanced measures of political reform, which he was, in later years, to espouse. So strong at this time was his Toryism, that we find him, in the Parliament that voted twenty millions sterling for the manumission of the slaves, if not hostile to their emancipation, at least opposed to an immediate and indiscriminate enfranchisement. In other respects the young orator made a favorable impression, the House being taken by his manner, as well as by his diction and fluency. His power as a debater, and even at this early stage of his career his parliamentary capacity, commended him to the notice of Sir Robert Peel, who, on taking office at the close of 1834, appointed Gladstone Junior Lord of the Treasury, and, after some shifting of the scenes, when Peel had formed a stable government, he offered Gladstone the offices of vice-president of the Board of Trade and Master of the Mint. He was at the same time (1841) sworn a member of the Privy Council, and, two years later, succeeded to the presidency of the Board of Trade.

In these several capacities, and at a time of great economical change, heavy were the burdens which fell upon Mr. Gladstone, in explaining and defending the policy of the government. The revision of the tariff of 1842 was almost entirely the result of his labors; and that it passed both Houses with but little alteration was due to its author's mastery of details, coupled with his knowledge of commercial affairs and their underlying economic principles. In 1845 he succeeded Lord Stanley (the late Earl of Derby) as Secretary of State for the Colonies; but owing to the attitude he assumed toward the religious questions of the time, and especially that of the Maynooth grant, he resigned office and his seat for Newark, and for a while remained out of Parliament. His reason for opposing, for a time, the

Maynooth College endowment was, that the proposed measure ran counter to the views he had enunciated in *The State in Its Relations with the Church*, a work from his pen, which he had just published, and which embodied much of the high religious Toryism that marked his opinions at this era. From this attitude he in time swerved, as he also swerved from the convictions which he early held on the subject of protection and other high-and-dry characteristics of the Tory reactionism of the period.

In 1847 Mr. Gladstone was elected to represent Oxford University in Parliament, a connection which he maintained without a break until 1865. The transition from the Tory to the Liberal now began to show itself, in his supporting the proposal to admit Jews to Parliament, in his defense of the free-trade policy of his chief, Sir Robert Peel, and advocacy of the repeal of the navigation laws, as well as in the change that came over his views on the colonial policy of the imperial country. His strong humanitarianism also began at this time to influence his political convictions, as his speeches in the session of 1850 manifest, during the debate on Greece and the claims of British subjects against that power, and in his strenuous remonstrances with the court of Naples on its inhuman treatment of political offenders.

Sir Robert Peel's death in 1850 paved the way for a still ampler career for Mr. Gladstone, and for greater successes as a Parliamentary debater. The first of his famous oratorical successes was gained in 1852, during the debate on Mr. Disraeli's budget of that year, which led to the defeat of the Derby-Disraeli ministry and the coming into power of Lord Aberdeen's coalition government of Whigs and Peelites. This was the beginning of the long rivalry in the political arena of the two great Parliamentary athletes,—Mr. Disraeli and Mr. Gladstone,—a rivalry which lasted for almost a quarter of a century. In Aberdeen's ministry, which lived on till the Crimean War broke up the coalition, Mr. Gladstone held the office of Chancellor of the Exchequer. During his period of office, he inaugurated a new era of finance in his first budget, by relieving the nation of much irritating taxation, and bringing forward, at the same time, a favorable scheme for the gradual reduction of the national debt. In Palmerston's administration (1855), Mr. Gladstone continued, for a few months, to hold the finance ministership, but resigned it, owing to the Premier's resisting Mr. Roebuck's motion for a Sebastopol inquiry, though he continued to give the government a general support. In the winter of 1858-59, he accepted, under Lord Derby's second ministry, a special mission to the Ionian Islands, to arrange certain difficulties which had arisen in the administration of that dependency, soon to be made over to Greece. Lord Palmerston having returned to power in 1859, Mr. Gladstone resumed his former post of Chancellor of the Exchequer, and brought forward one of his notable financial measures, giving effect to

the commercial treaty with France, and providing for the repeal of the paper duty, which the House of Lords, for a while, foolishly sought to veto. For some years his master hand guided the national finances, and brought an era of un wonted prosperity to the country. But one mistake he made at this period—a mistake which he afterward confessed to be an error of judgment—in his expressing his conviction, in a speech at Newcastle, that Jefferson Davis had succeeded in making the Southern States, then in revolt from the American Union, an independent nation.

Palmerston's death, in 1865, which called Lord John Russell to the Premiership, made Mr. Gladstone leader in the House of Commons. The general election of that year severed Mr. Gladstone's connection with the representation of Oxford University, and drove him to South Lancashire for a seat. In the following year Lord Russell's second administration was defeated in committee on its Reform Bill, and Lord John, with Mr. Gladstone and his colleagues, resigned. Mr. Gladstone's fight for reform was, however, not without effect, for Mr. Disraeli, in the incoming administration, introduced and carried a Conservative measure (the Reform Bill of 1867) which has since been expanded until it has become practically household suffrage in cities and boroughs. Mr. Disraeli, on his accession to office (1868), met defeat on Mr. Gladstone's resolutions in regard to Irish Church disestablishment, and Mr. Gladstone, in 1869, became, for the first time, Prime Minister. In the elections of that year he had lost his seat in South Lancashire, but was returned for Greenwich.

Ireland and Irish affairs now began to interest Mr. Gladstone, probably owing to the Fenian disturbances of 1867, and the rising discontent of the sister island in the United Kingdom. The immediate result was the Irish Church Disestablishment Act, "one of the most remarkable legislative achievements of modern times." This was followed by Mr. Forster's Elementary Education Act, by a measure (the Ballot Act) for the protection of voters, by an act to abolish religious tests at the universities, by the abolition of the system of purchase in the army, and by the Irish Land Act of 1870. But reform under Mr. Gladstone seemed to be going faster at this period than the House or the country cared to follow; consequently, his measure known as the Irish University Bill of 1873 was defeated by three votes, and Mr. Gladstone tendered his resignation. In the following year, when Mr. Disraeli came back to power, Mr. Gladstone withdrew from the leadership of the Liberal party and occupied himself, for a time, in literary and historical studies. Besides these interests, he embroiled himself in ecclesiastical controversy, chiefly with reference to papal infallibility, a dogma then enunciated at Rome, and against which he hurled his famous brochure, *The Vatican Decrees in their Bearing on Civil Allegiance*, and its complementary work, *Vaticanism: An Answer to Replies and Reproofs*.

Mr. Gladstone's polemical fervor, about this time (1876), broke into flame over the bloodshed in Bulgaria, and the atrocities committed by the Turks in the East. Happily, Russia interposed on behalf of the oppressed Eastern nationalities, and her sword effected what diplomacy had failed to accomplish. Throughout this and other disquietudes of the period Mr. Gladstone's voice and pen were potent agencies in turning the tide of public opinion against Mr. Disraeli's bizarre imperial policy, and, as the result of the revolution in political feeling, Mr. Disraeli (now Lord Beaconsfield) was beaten at the polls, and Mr. Gladstone and his Liberal Cabinet succeeded to office (1880), with an unprecedentedly large majority at their backs. The early sessions of the new Parliament were chiefly occupied with harassing legacies from its predecessor, and the rudely obtrusive Irish question, the wrangling over which made a mockery of the nation's great deliberative assembly. The refusal of the House to admit Mr. Bradlaugh as a member, without taking the conventional oath, served to augment the worries of the hour. Distress in Ireland added to the cup of Mr. Gladstone's troubles, since it emboldened the Irish Nationalists, incited by the Land League, to resort to acts of unseemly menace and rowdiness in the Commons, and to deeds of violence in Ireland, which reached a climax in the Phoenix Park murders (1882), and brought upon the ill-starred island the severities of the Coercion Act, and other repressive government measures for the prevention of crime. In spite of the turbulent state of the country and the seditious acts of Irish "Invincibles," Mr. Gladstone was able to put on the statute book his beneficial measure of a second Irish land bill, which, however, failed to please Mr. Parnell and his Home Rule following. The Boer war of 1880, and the Egyptian war of 1882, with its issuing conflict in the Soudan and the pitiful death of General Gordon, added further to the embarrassments of Mr. Gladstone's administration during the years 1883-85, though the routing of Arabi Pasha's forces by Lord Wolseley at Tel-el-Kebir and the chivalrous conduct of the British troops in the Soudan did much to placate aggrieved public opinion.

The sessions of 1884-85 were chiefly taken up with domestic legislation, and notably with a new Franchise Act—a bill for extending household franchise to the counties; and thus completing, as it has been said, the democratizing of the British constitution. With the Franchise Bill was coupled a new Redistribution Bill, a further beneficent measure of reform, both of which became law in 1885. Soon after these bills passed both Houses, Mr. Gladstone's second administration was overthrown by a vote on the budget, and Lord Salisbury succeeded, for a few months, to power. A division of the new House on an amendment to the address rendered the Salisbury administration a short-lived one, and Mr. Gladstone formed his third ministry, and signaled his return to power by declaring himself in favor of Home Rule,—a declaration which split the Liberal party in two

and curtailed his lease of office. On introducing his Home Rule bill (1886), its second reading in the House was rejected by a majority of thirty, and an appeal to the country was equally fatal to Mr. Gladstone and the measure. An overwhelming majority of Conservatives and Unionist Liberals was returned, and Lord Salisbury became, for the second time, Prime Minister, Aug. 3, 1886.

The issue of the elections, despite Mr. Gladstone's great and commanding personality, was, as a matter of course, bitterly disappointing to the Gladstonians and their redoubtable chief. It was, however, the penalty which their leader was to pay for his loyalty to the Irish cause,—a cause which, as has been shown, lost to the party many of its most influential members, who, under the name of Liberal-Unionists, now supported Lord Salisbury's administration, one of its number, Mr. Goschen, taking charge, in the Tory government, of Mr. Gladstone's old portfolio of the Chancellorship of the Exchequer. But Mr. Gladstone, as a Parliamentary tactician of the first order, pursued his course, heedless of recalcitrants, and stood firm in his resolve to befriend Ireland and do justice to her cause. He relaxed nothing of his activity, and continued ably to lead his party in opposition, until the wheel of fate turned once more in his favor, when he, in his eighty-third year, became, for the fourth time, Prime Minister. On Feb. 13, 1893, the "old Parliamentary hand" introduced a second Home Rule Bill, which, in character and scope, varied little from the earlier measure, save on the question of Irish representation at Westminster. On September 1st, the bill was at length passed by the Commons by a vote of 301 to 267. Seven days later, the measure having been forwarded to the Upper House, the Lords rejected it by a vote of 419 to 49.

This second defeat of Mr. Gladstone's chivalrous attempt to conciliate Ireland snapped the link which bound the great Parliamentarian to public life. The retirement of the illustrious leader of the Liberal party in modern England, though not unexpected, fell like a thunderbolt upon the country which had so long known his governing hand. To public regret at the occurrence was added much and kindly sympathy with Mr. Gladstone's failure of hearing and eyesight, which, for a time, painfully marked the strain which, of recent years, had been put upon him, as it marked the increasing infirmities of age. In Lord Rosebery he had named his own successor, and to his youthful colleague he confided the fortunes of his party, the veteran statesman finally withdrawing from political office. This act was followed by the relinquishing of his seat in Parliament, and by the announcement that he would not seek re-election.

Mr. Gladstone's retirement forms an epoch in English history; for, whatever may be thought of his Irish policy, or of the few mistakes he made in legislation, the abandonment of public life by one of the most illustrious of Englishmen, who for more than fifty years had taken a commanding part in the political affairs of the nation, could

not fail to leave its impress on the age. Nor was it remarkable that the event, when it took place, should become, for the time, the theme of world-wide comment, since Mr. Gladstone's figure is essentially a unique one in the history of the century. Indeed, were it possible to unite the combined talents of a score of the more prominent public men whom he left on the Parliamentary stage, one could not, as has been aptly said, make a Gladstone. Nor is there an enemy who would honestly question the purity of his motives, the beneficence of his acts, or the lofty elevation of his character. At times his hold upon the masses of his countrymen was extraordinary; and while the glamour of his name was always a potent force among his admirers, no one, of this age at least, surpassed him in the gifts of Parliamentary oratory, or was more effective as an expounder and debater. Added to all this, it must be said of him that he was on the whole the best representative of the English nation's political conscience, and an exalted type of its political morality.

But Mr. Gladstone's remarkable gifts were not alone political, although not always with the same success did he venture into other fields of labor, while bringing to his task his characteristic earnestness and industry. His contributions to literature covered a wide and varied field, and embraced disquisitions of much learning concerning Homer and Greek mythology, political treatises, essays in Biblical interpretation, tracts on ecclesiastical and theological subjects, together with autobiographical reminiscences and gleanings from a long, arduous, and active life. His chief published writings are *The State in Its Relations With the Church* (1838); *Two Letters on the State Persecutions of the Neapolitan Government* (1851); *Studies on Homer and the Homeric Age* (1858); *Financial Statements* (1863); *A Chapter of Autobiography* (1868); *Juventus Mundi* (1869); *The Vatican Decrees Bearing on Civil Allegiance* (1874); *Vaticanism* (1875); *Homeric Synchronism* (1876); *Bulgarian Atrocities* (1876); *Primer of Homer* (1878); *Gleanings of Past Years* (7 vols., 1879); *Special Aspects of the Irish Question* (1886); *Landmarks of Homeric Study* (1890); *Speeches* (1892); *The Romanes Lecture*, an academic sketch (1892); *The Impregnable Rock of Holy Scripture* (1892); a Letter on *Female Suffrage* (1892); an edition of Bishop Butler's Works, *Analogy and Sermons* (1896); *Subsidiary Studies to the Works of Bishop Butler* (1896); and an *Introduction to the People's Bible History*, an American work (1896). He died at Harwarden Castle, May 19, 1898; and was buried in Westminster Abbey with public honors.

G. MERCER ADAM.

GLAGOLITIC ALPHABET. See SLAVS, Vol. XXI, p. 150, and note.

GLAISHER, JAMES, a British meteorologist; born in London, of Scottish parents, April 7, 1809. In 1829 he was appointed assistant in charge of the meteorological observations on the mountains of Galway and Limerick; from 1833 to 1836 was assistant at the Cambridge Observatory; in 1836 was appointed assistant in the astronomical de-

partment of the Royal Observatory, Greenwich; and in 1840 was superintendent of the magnetical and meteorological department, created that year. He held this appointment until his retirement from public life in 1874, during which time he published quarterly and annual reports, compiled from the voluntary observations of about sixty meteorologists throughout England. In 1849 he was elected an F.R.S. He founded the Royal Meteorological Society, of which he was secretary and president in 1867. He was president of the Royal Microscopical Society and of the Photographic Society of Great Britain. He made 29 balloon ascensions for scientific purposes, in one of which he attained the greatest height ever reached, upward of seven miles. He published *Report on the Meteorology of London in Relation to the Cholera Epidemic of 1853-54* (1855); *Report on the Meteorology of India in Relation to the Health of the Troops* (1863); *Hygrometrical Tables* (1845); *A Memoir on the Radiation of Heat from Various Substances*, published in *The Philosophical Transactions* (1848); *Travels in the Air* (1871). He completed the calculations of the fourth, fifth, and sixth millions of the *Factor Tables*, begun in 1814 by Burckhardt, who calculated the first three millions, and which was continued, from the seventh to the ninth inclusive, by Dase, in 1862 and 1863, Mr. Glaisher publishing his three volumes to complete the work, in 1879-83.

GLANDS. See NUTRITION, Vol. XVII, pp. 671-667.

GLANIOSTOMI, an order of ganoid fishes, including the sturgeons (*Acipenseridae*). The barbels which surround the mouth suggest the name. The skin is armed with bony shields. The term is equivalent to *Chondrostei*.

GLASGOW, a town and the capital of Barren County, southwestern central Kentucky, on the Louisville and Nashville railroad, 32 miles E. of Bowling Green. It manufactures lumber, wagons, woodwork, tobacco and plows, and refines oil. It ships large quantities of oil, lumber and tobacco. Population 1900, 2,019.

GLASGOW, a city of Howard County, northern central Missouri, on the Missouri River, 72 miles above Jefferson City, and on the Wabash and the Chicago and Alton railroads. It has a public library, with 5,000 volumes, the Pritchett Institute and Morrison Astronomical Observatory. It is the shipping-point of the truck, tobacco and flour raised and made in the neighborhood. Population 1890, 1,781; 1900, 1,672.

GLASGOW. Little material change is to be noticed in the commercial metropolis of Scotland since the date of publication of the account found under GLASGOW, Vol. IV, pp. 638-646. The census of 1891 returned the population of the Parliamentary burgh as 564,981. The Redistribution of Seats Act assigned seven members of Parliament to Glasgow, the divisions each returning one member being Blackfriars and Hutchestoun, Bridgton, Camlachie, Central, College, St. Rollox and Tradeston. A new bridge across the Clyde at Rutherglen was commenced June 13,

1895. It has 3 arches, the center one with a span of 100 feet, and cost \$320,000. A central railway (underground) was opened for traffic Nov. 1, 1895, designed to afford rapid transit to all parts of the city. Four basins and a graving-dock at Cessnock, costing \$6,250,000, were rapidly nearing completion in 1896. The water-works system was improved with a new reservoir at Craigmaddie, having an area of 86¼ acres and a storage capacity of 700,000,000 gallons. The water comes from Loch Katrine. In 1893 the buildings and grounds of the University of Glasgow were enlarged by the addition of North Park House and grounds for the use of lady students. A chair of naval history was added in 1883, and one of history and pathology in 1893. In the matter of municipal good government, Glasgow takes high rank, and in no respect more so than in relation to street-cars. The first lines were opened in 1872, and the lease then made terminated in 1894. By its terms, the company was required to pay the corporation (1) the annual interest charge on the full amount of the city's investment; (2) a yearly sum for a sinking-fund large enough to clear the entire cost of the lines at the expiration of the lease; (3) a renewal fund of four per cent per annum on the cost of the lines, out of which they were to be kept in condition, and reserved to the city in perfect order and entirely as good as new in 1894; and (4) a mileage rental of \$750 per street mile. The total capital invested by the city in this enterprise was about \$700,000. The sinking-fund amounted to a little more than \$1,000,000, which covers cost of the original system. There remained the cost of newer lines. The renewal fund placed the system in perfect repair, and the city received in rental money a sum amounting to about \$225,000. The company, in the mean time, earned good dividends and paid off its indebtedness. In 1896 the tramways of Glasgow yielded the municipal treasury a large income, and required no public expenditure.

GLASGOW UNIVERSITY. See UNIVERSITIES, Vol. XXIII, pp. 843, 854.

GLASS (see GLASS, Vol. X, pp. 647-673) is now manufactured in the United States as follows:

The value of the annual production of all kinds is about \$25,000,000. In hollow-ware articles there is very little foreign competition, because buyers of bottles usually have special molds, and find it more convenient to buy from near-by manufacturers. Only the fancy cologne and cut-glass caster-bottles, decanters, etc., are imported, chiefly from France. Of common druggists' ware, as prescription-bottles, stoppered bottles and graduated bottles, the United States exports largely to England, and to some extent, also, to France.

Of table-glass, the United States produces articles fully equal to the English and French, except in a few styles.

In window-glass (not plate) the American manufacturers command the market, except where the English crown-glass and the cheapest styles of

German window-glass are yet preferred. In fine plate-glass, glass for optical instruments and Bohemian glassware, the French, English and German manufacturers are considerably ahead of the Americans. Yet there is something like \$2,500,000 worth of these kinds of glass produced yearly in this country.

The chief centers of the manufacture of glass in the United States are western Pennsylvania and southern New Jersey. Of the Pennsylvania glass about sixty-five per cent comes from Allegheny County, chiefly from Pittsburg. There are also glass factories at several places in New York state, at Lenox, Massachusetts; New Albany, Louisville and Jeffersonville, Indiana; Findlay, Ohio, and at Crystal City and St. Charles, Missouri.

Pressed-glass made by means of a lever-press is an American invention, first introduced at the Centennial Exposition in Philadelphia in 1876. It has enabled manufacturers to offer, for common use, glassware of graceful forms and beautiful designs, in imitation of the more costly cut-glass.

The sand-blast is now much used in carving, edging and drilling glass. The invention of this process has added greatly to the economical uses of glass. By its means glass can be cut in any form, holes drilled in it, figures edged or carved on it in low or high relief, etc. As a consequence, plate-glass is largely introduced in more recent furniture, as for small shelves at bank-tellers' desks, cashiers' desks in stores, in ticket-offices, in hand-mirrors, as dial-plates in clocks, for door-panels, etc. These various new applications cause a steady increase in the manufacture of the finer qualities of plate-glass in America. In 1875 there were but two plate-glass factories in the United States. In 1886 the Pittsburg Plate Glass Company built the Tarentum works, and in 1890 the Ford City works, these being the largest factories of the sort in the world. In 1895 the output of American plate-glass was 18,000,000 square feet of merchantable glass.

The introduction of natural gas worked great changes in the Pittsburg field between 1883 and 1885, all the hollow-ware factories finding it an economy to use the new fuel. In the melting-furnaces gas is introduced at each end of the furnace, and mixes with air, which has previously been heated by passing through flues in the brickwork. The combustion, taking place in the melting-chamber, produces an intense and easily regulated heat. The blowing-furnaces make use of a large form of Bunsen burner. Since 1885 most of the window-glass factories in the gas-field have also made use of the natural gas.

The Siemens tank-furnace, for replacing the pot-furnace, has been the principal mechanical improvement introduced within the past decade. It is now used by the larger factories in south Jersey. Many manufacturers there, finding themselves at a disadvantage in competing with the factories in the natural-gas region, have tried petroleum as a fuel, and find it economical in the glory-holes for

melting and for annealing. There is, also, an unmistakable tendency toward new machine processes to supplant hand-work.

C. H. COCHRANE.

GLASS, LUMINOUS. In the manufacture of luminous glass, a phosphorescent powder is mingled with the glass while in a fused state, in the proportion of five to twenty per cent of mass of glass. After the composition has been duly puddled or mixed, it is converted into different articles by the ordinary processes. While the material is still warm and plastic, it is sprinkled with the powder, which becomes readily incorporated into the surface of the article by pressure, and the constant effect of luminosity or iridescence is readily produced.

GLASS, WIRE, the common name given to an article of manufacture consisting of a combination of wire-netting and glass. The process known as the Schuman process was patented in 1892. In this process there are four rollers which pass over the molten glass, which is poured on a table fixed in the floor. The rollers pass over the glass successively, the wire-netting, however, being fed in automatically between the first and second rollers. The wire-netting is heated red-hot, slides down an inclined iron table and is pressed deep into the glass by the second roller that follows. The third roller smooths the glass over the wire, and the fourth roller prevents the glass from curling up behind the roller in front. The next process is annealing, after which the glass is trimmed.

GLASS-CRABS, a name applied to the transparent larvæ of certain tropical marine crustacea, particularly to the larvæ of the spiny lobster, *Palinurus*, and its allies. These larvæ were formerly supposed to be adult forms, and were placed in the separate genus, *Phyllosoma*.

GLASSITE DENOMINATION. See GLASS, JOHN, Vol. X, p. 637.

GLASS-SNAKE. See LIZARD, Vol. XIV, p. 735.

GLASS-SPONGE, the common name of the sponges of the family *Hexactinellida*. The skeleton consists of silicious six-rayed spicules united into a lace-work. Some forms have long glass filaments, which serve to anchor the animals. Most of the species of glass sponges are fossil. Among the living forms may be mentioned the "Venus's flower-basket" (*Euplectella*) and the common glass-rope sponge (*Hyalonema*). Both are from the deep waters of the Indo-Pacific. See SPONGES, Vol. XXII, p. 421.

GLASSWORT, a common name given to species of *Salicornia*, a genus of *Chenopodiaceae*, common in salt-marshes. Several species grow abundantly on the shores of the Mediterranean, and as they contain a large quantity of soda, were formerly of importance in making *barilla*, along with the species of saltwort. *S. herbacea* is the common species of the United States, being a low, leafy, fleshy and jointed plant, with flowers sunken in the fleshy spikes.

GLAUCOMA, a disease of the eyeball. See OPTHALMOLOGY, Vol. XVI, p. 783.

GLAUCONITE, a mineral found in Tertiary greensands and chloritic marls. Its composition is: Silica, 46 to 56 per cent; ferruginous oxide, 20 to 25 per cent; potash, 5 to 13 per cent; water, 0 to 10 per cent. See MINERALOGY, Vol. XVI, p. 415.

GLAUX, a genus of primulaceous plants, represented by a single species, *G. maritima*. It is a little, fleshy perennial, growing in saline localities in Europe, Asia and North America, and is often called sea-milkwort.

GLAVE, EDWARD JAMES, a young English explorer of African wilds, identified with Stanley's later journeys. After persistent application, in 1883 he joined Stanley at Leopoldville, on the Lower Congo, and, being filled with indomitable courage and an instinctive love of adventure, by his own choice was assigned to the wildest district in the country, with the object of establishing a new station, remaining for three years, until the Congo Free State was founded. Having successfully performed this arduous task, he returned to England, remaining, however, but a few months, when he joined the Sanford exploring expedition, establishing himself one hundred miles beyond his former station. During this experience he dwelt among the most savage cannibalistic tribes and murderous Arab slave-dealers without a single white companion. Again he returned to England in 1889, and shortly after visited America on a lecturing tour. In 1890 he conducted an expedition to Alaska, penetrating into an unknown interior, with but a single companion, his pack-horses being furnished with snowshoes, and the trip marked by many exciting incidents, afterward described in the *Century Magazine*, September, 1892. His final journey was undertaken in the interests of that periodical, Mr. Glave, in May, 1893, sailing for Zanzibar in order to traverse Central Africa by way of the Great Lakes and the Congo. After incredible hardships the young explorer neared the mouth of that river, when, at the missionary station of Underhill, he was stricken with fever, to which he shortly succumbed, dying in May, 1895. Thus ended a career replete with manly daring, and no less with exalted endeavor, it being Mr. Glave's paramount object to enlighten the civilized world regarding the iniquities of the African slave trade. He was a man of rare sweetness and nobility of nature, eliciting the most implicit trust from his native followers, and from Stanley the warmest friendship and admiration.

GLEDITSCHIA, a genus of leguminous trees, of which there are five or six species of North America, northern Asia and Africa. It is represented in the United States by the honey-locust or three-thorned acacia (*G. triacanthos*), and by the water-locust (*G. aquatica*). The former is a large tree, having compound leaves, large flat pods filled with a sweet pulp between the seeds, and inconspicuous flowers. It is widely cultivated for shade and as a hedge-plant. The timber is hard

and durable. The other North American species is a smaller tree growing in swamps in the Eastern United States.

GLEIG, GEORGE ROBERT, a Scotch clergyman and author; born at Stirling, April 20, 1796. After being educated at Glasgow and Balliol College, Oxford, he served under the Duke of Wellington, in Spain, in 1813. In 1814 he also served in America, but was wounded at the capture of Washington. Returning to England, he graduated at Oxford and took ecclesiastical orders. He became curate of Ash in 1822, and afterward rector of Ivy Church. In 1846 he was appointed chaplain-general of the army, which office he resigned in 1875. In 1848 he became a prebendary of St. Paul's. As he interested himself in the education of the soldiers, he was also made inspector-general of the military schools. Gleig tells his early adventures in an amusing book, *The Subaltern* (1825). He was the author, also, of *History of the Bible* (1830); *British Military Commanders* (1831); *History of British India* (1831); *Life of Sir Thomas Munro* (1849); *Memoirs of Warren Hastings* (1841); *Military History of Great Britain* (1845); *Story of the Battle of Waterloo* (1847); *Life of Lord Clive* (1848); *India and Its Army* (1857); *The Life of the Duke of Wellington* (1862); *Life of Sir Walter Scott* (1871); *History of the Reign of George III to the Battle of Waterloo* (1873); etc. He died at Winchfield, Hampshire, July 9, 1888.

GLENCOE, a village and the capital of McLeod County, south-central Minnesota, situated on Buffalo River, and on the Chicago, Milwaukee and St. Paul railroad. It has a seminary, grain-elevators, and plenty of water and timber. Its activity is chiefly commercial. Population 1890, 1,649; 1900, 1,780.

GLENCOE, a valley in Argyleshire, Scotland, the scene of a brutal massacre of the Clan Macdonald, by Captain Campbell of Glenlyon and 120 men, on the night of Feb. 1, 1692, after they had been hospitably entertained by McIan, chief of the clan. Sixty men were slaughtered; three fourths of the members of the clan in the glen fled, but many of the women and children perished in the violent snowstorm that was raging at the time. The massacre was the result of vengeful resolve on the part of the Master of Stair, who took advantage of the technical fact that the submission of the clan to William and Mary had been, by intrigue, delayed, and not received until January 6th, which was six days after the time arranged for receiving the submission of the recalcitrant clans. In consequence of this Stair induced the king to grant a warrant for the "extirpation" of the clan, which was intrusted to Campbell of Glenlyon, and literally carried out, as stated. See SCOTLAND, Vol. XXI, p. 518; and STAIR, Vol. XXII, p. 445.

GLENDIVE, a village and the capital of Dawson County, northeastern Montana, on the Yellowstone River and on the Northern Pacific railroad, 78 miles N.E. of Miles City. It has steamboat traffic on the river, and ships grain and stock, ex-

tensively raised in the vicinity. Population 1896, about 1,200.

GLENS FALLS, a village of Warren County, central eastern New York, on the Hudson River, and on the Delaware and Hudson railroad, 9 miles S. of Lake George. It has a famous cave, lime, black marble, water-power, water-works, an electric street-railway, and electric-light plants, gas-works, soldier's monument, two opera-houses, Glens Falls and St. Mary's academies, and a ladies' seminary. Its manufactories include an iron foundry, machine-shops, paper-mill, stone-sawing mill, brick and terra-cotta works, lime-kilns, and several turning, planing and saw mills. Population 1890, 9,509; 1900, 12,613.

GLENWOOD, a city and the capital of Mills County, southwestern Iowa, on Key Creek, and on the Chicago, Burlington and Quincy railroad, 9 miles E. of Plattsmouth, Nebraska. Its principal industry is the canning and shipping of vegetables and fruit raised in the vicinity. It has city water from an artesian well, and has electric lights. Population 1890, 1,890; 1900, 3,040.

GLENWOOD SPRINGS, a village and the capital of Garfield County, northwestern Colorado, at the junction of the Eagle and Grand rivers, on the Colorado Midland and the Denver and Rio Grande railroads, 60 miles W.N.W. of Leadville. It has thermal springs, which are resorted to by numbers of health-seekers. Coal and iron ore are plentiful. It is the supply-point for the Grand River Valley. Pop. 1900, 1,350.

GLIOMA. See OPHTHALMOLOGY, Vol. XVI, p. 784.

GLIRES, a Linnæan name, equivalent to *Rodentia*. See MAMMALIA, Vol. XV, pp. 415-420.

GLISSON, FRANCIS, an English anatomist; born at Rampisham, Dorsetshire, in 1597; graduated at Cambridge and Oxford; in medicine, at Cambridge, in 1634; and became professor of anatomy in the College of Physicians in London. He was distinguished as an investigator, and discovered and described a structure named after him, "Glisson's capsule," a sheath of areolar tissue surrounding the branches of the portal vein, the hepatic artery and the hepatic duct. He died in London, Oct. 14, 1677. See ANATOMY, Vol. I, p. 811; and PATHOLOGY, Vol. XVIII, p. 373.

GLISSON, OLIVER, an American naval officer; born in Ohio in 1809; entered the navy in 1825; was promoted through the various grades to commander in 1885; captain in 1862; commodore in 1866; rear-admiral in 1870, and was retired in 1871. He was on sea duty 22 years. In 1862 he commanded the steamer *Mount Vernon* of the North American blockading squadron, and saved the transport *Mississippi*, which had run aground on Frying Pan Shoals, off the coast of North Carolina, with General Butler and fifteen hundred men on board. He commanded the steam-sloop *Mohican* in pursuit of the privateer *Alabama*, and took part in the attacks on Fort Fisher (December, 1865, and January, 1866), commanding the third division of the fleet. Afterward he commanded the League Island station and as rear-

admiral the European squadron. He died at Philadelphia, Nov. 20, 1890.

GLOAG, PATON JAMES, a Scotch clergyman; born at Perth, May 17, 1823, educated at the universities of St. Andrew's and Edinburgh, and afterward occupied various pulpits. He wrote *On the Assurance of Salvation* (1853); *The Primeval World* (1858); *Practical Christianity* (1866); *A Critical and Exegetical Commentary on the Acts of the Apostles* (1870); *Introduction to the Pauline Epistles* (1874); *The Messianic Prophecies* (1879); *The Life of Paul* (1881); *Exegetical Studies* (1884); *Introduction to the Johannine Writings* (1891); *Subjects and Modes of Baptism* (1891); *The Life of St. John* (1892); etc.

GLOBE, THE RELIEF (or "Model of the Earth"), gives a representation of the solid earth as it would appear if all its water were removed. It shows not only the continents and islands as defined by their coast-lines, but their forms under water, and the varying depths of the ocean-bed. The globe was invented by Thomas Jones of Chicago.

This globe is strictly a model, or the solid earth (with all its water removed) in miniature, and is without mathematical lines or political boundaries, but accurately represents all mountain chains, plateaus, river systems, lake regions, and valleys and depressions.

"The Model" shows that the bases of continents as revealed by soundings have outlines quite different from the coast-lines as shown by maps, because outside of the coast-line is shown the "continental shelf," or that part of the seabottom which lies between the shore and the line of one-hundred-fathom soundings, from which the descent to the deep ocean-bed is more or less abrupt.

It shows such peculiarities of the ocean-bed as the banks of Newfoundland; the central ridge which traverses the basins of the North and South Atlantic, the plateau upon which the North Sea rests; the upward slope of the Arctic basin from a depth of 15,900 feet off the coast of Greenland to only 162 feet depth at Bering Strait. It shows, in the bed of the Pacific, great submarine plateaus, which, in places, approach within six hundred feet of the surface; also such great depressions as the trough between Kamchatka and Japan, where the profound depth of 27,930 feet was found by the United States ship *Tuscarora*. It also shows, as a startling contrast, that the bed of the Sea of Okhotsk (lying just westward) rises 27,300 feet above the great trough mentioned. The depths of the ocean are taken from soundings made by expeditions sent out by the United States and the governments of Europe.

"The Model" is regarded as a new and scientific departure in the study of physical geography, being helpful not only to the beginner and student, but to the scientist. It has been adopted by Cornell College and many other educational institutions, and the Royal Geographical Society of London has given it a prominent place in their map-room. The scale of height and depth upon

the "Model" is necessarily different from the distance scale, for if shown in actual proportion, the differences of elevation and depression would be too slight for touch or perception. It is made of pure copper, is twenty inches in diameter, and mounted upon a stand. The finish of the ocean-beds is light copper bronze; that of the land bodies, a greenish bronze.

GLOBE-AMARANTH, a name given to *Gomphrena globosa*, an Oriental plant of the family *Amaranthaceæ*, or amarantths. It is a low-branching plant, with oblong leaves, and dense, round heads of crimson to white flowers. It is also known as bachelor's-buttons. Several species of *Gomphrena* are natives of the Mexican border region.

GLOBE-FLOWER, the common name of *Trollius*, a small northern genus of *Ranunculaceæ*, with a globe-like cluster of large, showy sepals inclosing the small, inconspicuous linear petals. The common yellow globe-flower (*T. Europæus*) is one of the finest ornaments of moist grounds in elevated districts of northern Europe and in the Alps. It is cultivated in flower-gardens. The orange globe-flower (*T. Asiaticus*) is also common in gardens. *T. laxus*, the species indigenous in North America, and found in northern and high mountain swamps, has spreading and pale sepals, so that its flower by no means resembles a yellow globe, as in the first-named species.

GLOBIGERINA OOZE. See FORAMINIFERA, Vol. IX, pp. 378, 379.

GLOBULINS, a group of proteid substances closely allied to albumen, but differing from it in that they are not soluble in water unless it contains a small proportion of a neutral salt, and that they are precipitated by carbonic acid, and (except vitellin) by a saturated solution of common salt. The most important globulins which occur in animal tissue are: Globulin (proper) or crystallin, in the crystalline lens of the eye; fibrino-plastin, or paraglobulin and fibrinogen in blood, serous fluids, etc.; myosin, in muscle; vitellin, in the yolk of egg. Precisely similar bodies occur, also, in the vegetable kingdom.

GLOMMEN, the largest river of Norway. See NORWAY, Vol. XVII, p. 575.

GLORIOSA, a genus of *Liliaceæ*, of which the best-known species, *G. superba*, a native of India, is a herbaceous perennial with a weak stem, alternate simple leaves terminating in tendrils, and very beautiful flowers finely colored with red and yellow. The rootstock is poisonous, but is washed for its starch-like manioc.

GLORIOSO ISLANDS, a small group 120 miles N.W. of the northern end of Madagascar, not permanently inhabited, claimed by Great Britain.

GLOUCESTER, a city and port of entry of Essex County, northeastern Massachusetts, 28 miles N.E. of Boston, situated on the south side of the peninsula of Cape Ann, and connected by railroad with the principal cities and towns of the seaboard and interior. It is supplied with city water, electricity and gas, and has large hotels for summer guests, as it has a splendid beach, and is

quite a resort. Its interests are almost entirely commercial. No town in the United States is so largely engaged in domestic fisheries, the tonnage aggregating at least 35,000 tons, the vessels being over 400 in number, and the "catch" amounting in favorable seasons to 10,000,000 pounds. There are 5,000 men employed in mackerel and cod fisheries. Situated here is a United States piscicultural station. Of the ports of Massachusetts, only Boston surpasses Gloucester in foreign imports. The harbor is one of the best on the coast, and is accessible at all seasons for vessels of the largest class. The capital invested in manufactures here is about \$3,000,000. These employ, on an average, 2,000 persons, who receive \$900,000 in wages annually. The value of the products amounts to about \$5,000,000 annually. Of these industries the most important, after the fisheries, are the manufactures of mullage and paste, nets and seines, awnings, tents and sails, and granite-quarrying. Gloucester was occupied as a fishing-station as early as 1624, being the first settlement made on the north shore of Massachusetts Bay. Population 1890, 24,651; 1900, 26,121. Ever since 1765, when it was 3,763, the population has been steadily though slowly increasing. See also Vol. X, pp. 691, 692.

GLOUCESTER CITY, Camden County, southwestern New Jersey, on the Delaware River, and on the Atlantic City and the West Jersey railroads, three miles S. of Camden. It is connected by steam-ferry with Philadelphia. Gingham, print-cloths and calicoes are made here. The cotton-mills here employ over 1,200 hands. It is also extensively engaged in river and bay fishing. It has fair-grounds and a race-track, which are much used. Population 1880, 5,347; 1890, 6,564; 1900, 6,840.

GLOVERSVILLE, a city of Fulton County, central eastern New York, situated on the Cayadutta River. It was incorporated a city in 1890. A board of trade was organized in 1889. There are sixty miles of streets, mostly broad, and paved with cedar blocks, the principal ones being traversed by horse-cars. The Fonda, Johnstown and Gloversville railroad passes through the city, and connects with the New York Central and West Shore roads, and with the Erie canal at Fonda. The water-supply is abundant, brought by gravity from reservoirs three miles from the city. The fire and police departments are efficient. The assessed valuation of the city in 1890 was \$4,000,000, with no city debt. There is one national and one private bank, and a building and loan association. Two electric plants furnish lights for the streets and business houses and power for manufacturing purposes. In the department of education the citizens have been provided with good opportunities. The Union Free School building, erected in 1888, is a substantial three-story edifice. There is a free library containing 9,000 volumes, and a reading-room with daily and weekly papers and magazines. A great variety of industries is carried on here, and the city is particularly noted for the manufacture of buckskin and other gloves

and mittens, the annual product of the factories being valued at over \$15,000,000. Population 1880, 7,133; 1890, 13,864; 1900, 18,349.

GLOW-WORM. See PHOSPHORESCENCE, Vol. XVIII, p. 814.

GLUCOSE, STARCH OR GRAPE SUGAR. (See GLUCOSE, Vol. X, p. 695.) The term *grape sugar* is often restricted to the solid varieties of the sugar made from corn-starch, while the liquid varieties alone are designated "starch sugar" or "glucose." The manufacture of glucose has long flourished in Europe.

In America this industry has only recently been introduced; and, in spite of the prejudice as to the healthfulness of glucose, its manufacture has spread so rapidly that there are over thirty factories in the United States, capable of using about 50,000 bushels of corn per day. When corn is low in price, and cane sugar, molasses and barley are high, all the factories are in full operation. When the opposite conditions prevail, all the glucose factories are idle. The glucose of commerce is thick and tenacious, of a slightly yellowish tint, although nearly colorless, and with a specific gravity, at 20° C. or 68° F., of 1.412. Its sweetness varies with different specimens. If the manufacture has been well conducted, grape sugar made from corn-starch is, when new, of a pure white color, but gradually assumes a yellowish tint. It is hard and brittle, and dissolves more slowly in water than cane sugar. Of the two, cane sugar is the sweeter, while grape sugar leaves a faint but perceptible bitter taste in the mouth.

Glucose is chiefly used in the manufacture of table-syrups and confectionery, in the brewing of beer and ale, and in the manufacture of artificial honey. Sometimes it is also used as food for bees. Brewers conceal the fact of its employment, and confectioners do not like to speak of their use of glucose. For making artificial honey, the combs are manufactured of paraffine, and their cells filled with pure glucose by machinery. It looks white and inviting, but is less sweet than genuine honey. As it can be sold at less than half the price of the genuine article, and sweetened by the addition of cane sugar, a good deal of artificial honey has been manufactured. In the form of bleached grape sugar, glucose was formerly mixed with table-sugar. It is also used in the manufacture of condensed milk.

In 1884 a committee of the National Academy of Sciences submitted a report on glucose, in response to a request made by the Commissioner of Internal Revenue. Their report declared that the sweetening-power of grape sugar is about two thirds that of cane sugar. Many experiments were made by the committee with reference to the healthfulness of glucose, on account of the sulphuric acid used in its manufacture, it being taken internally in various conditions; in all cases it was found to be harmless and unobjectionable.

GLUCOSIDES. See CHEMISTRY, Vol. V, p. 572.

GLUE, MARINE, a cementing composition used in ship-building for covering seams in ships' decks after being calked. In hot climates it is preferred

to tar for this and other purposes, where the materials are exposed to the influence of the wet. It consists of India rubber cut very small, and digested at a gentle heat in a closed vessel with coal-tar naphtha until it is dissolved, when powdered shellac is added, and the digestion continued until it is also dissolved.

GLUME, a term applied to the characteristic scale-like bracts in the inflorescences of grasses. The inflorescences of sedges are also sometimes spoken of as *glumaceous*, but their glume-like bracts are usually called *scales*.

GLYCOGEN. See NUTRITION, Vol. XVII, pp. 680-682.

GLYCOSURIA. See DIABETES, Vol. VII, p. 147.

GLYPTODON, an extinct armadillo. See MAMMALIA, Vol. XV, p. 388.

GNELINA, a genus of Oriental trees, of the family *Verbenacea*, or vervains. They furnish fine timber, resembling teak, but closer in grain, and lighter.

GMUNDEN, a town of Upper Austria, 159 miles W. of Vienna by rail. It lies 1,439 feet above sea level, amid the grandest scenery of the Salzkammergut, at the lower end of the Traunsee, or Lake Gmunden, above which towers the Traunstein. With numerous hotels and villas, it is a favorite summer bathing-place. Salt-mines employ many of the inhabitants. Population, 6,631.

GNEISS. See GEOLOGY, Vol. X, p. 236.

GNEIST, RUDOLF VON, a German jurist; born in Berlin, Aug. 13, 1816; died there, July 21, 1896. He studied jurisprudence at Berlin. In 1841 he was made assessor in the superior court (Kammergericht), and was successively assistant judge of the same court and of the supreme tribunal, until, in 1850, he resigned these positions in order to devote himself exclusively to teaching law. From 1867 to 1884 he was a member of the Prussian Lower House; in the Imperial Parliament he sat from 1875 to 1877. In 1875 he was called to the bench as a senior judge of the Supreme Court of Prussia and a member of the Privy Council. In the Prussian Chamber of Deputies, acting with the National Liberals, and in the Imperial Parliament, he advocated a greater amount of self-government of the people, more attention to the welfare of the working-classes, reform of the judicial and penal systems and the adoption of more liberal usages, like those in England. He was nominated by Emperor William I instructor to Prince William, now William II of Germany. His works include the famous *Das Heutige Englische Verfassungs und Verwaltungsrecht* (1867); *Verwaltung, Justiz, Rechtsweg* (1869); *Englische Self-Government* (1871); *Vier Fragen zur Deutschen Strafprozessordnung* (1875); *Gesetz und Budget* (1879); *Die Preussische Finanzreform* (1881); *Englische Verfassungsgeschichte* (1882). His writings deal chiefly with constitutional law in England and Germany, with politico-historical subjects, and with current questions of practical politics in Germany.

GOAJIRA OR GOAGIRA, a peninsula of South

America, the northernmost land of the continent. It was for a long time claimed by Venezuela, but in 1891 it was awarded to Colombia, since the former country held no actual jurisdiction over it. It consists mostly of low, flat lands. Its products are cattle, horses, hides, cheese and hammocks. Area, 5,800 square miles. Population, almost entirely uncivilized Indians, about 30,000.

GOAT ISLAND, an island 70 acres in area which divides the current of Niagara River just above its falls. It is 900 feet from the American shore, with which it is connected by a bridge.

GOAT-MOTH (*Cossus ligniperda*), a large moth common throughout Europe and Asia. It measures three inches across the wings, and has a thick, heavy body. The general color is yellowish gray, marked with irregular black lines. The caterpillar feeds on the leaves of willows and poplars, often destroying the trees. It lives three years before metamorphosis takes place.

GOAT'S-BEARD (*Tragopodon*), a genus of plants of the family *Compositæ*. The common goat's-beard (*T. pratensis*), also known by the name *Go-to-bed-at-noon*, is an erect biennial plant, an abundant native of Britain. The roots, if taken before the flower-stems shoot up, and boiled, resemble asparagus in flavor, and are said to be nutritious. Salsify, or oyster-plant (*T. porrifolium*), also a native of Britain, is cultivated in gardens for the sake of its esculent roots. In the United States the name is applied to *Spiræa Aruncus*, a rosaceous perennial herb of the North-eastern states, with compound leaves, lanceolate toothed leaves, and diœcious whitish flowers in a long compound panicle. *Astilbe decandra*, a species of *Saxifragaceæ*, which somewhat resembles *Spiræa Aruncus*, is called false goat's beard.

GOAT'S-RUE, a name given in Europe to *Galega officinalis*, a plant of the family *Leguminosæ*, sometimes cultivated, like lucerne (especially in Switzerland), as a forage plant, on account of the great bulk of produce which it yields. Its peculiar smell is not relished by cattle unaccustomed to it. In America the name is given to *Tephrosia Virginiana*, another leguminous plant, otherwise known as hoary-pea and catgut. It is a silky herb, with simple leafy stems, leaves with numerous leaflets, and a terminal cluster of large yellowish-white and purple-dotted flowers.

GOBAT, SAMUEL, a Swiss bishop of the Protestant Church at Jerusalem; born at Cremine, Switzerland, in 1799; died at Jerusalem, May 12, 1879. In the Mission-house at Basel he prepared himself for the work of a missionary, from 1821 to 1824. After studying Arabic and Ethiopian in Paris he entered the service of the Church Missionary Society, and was sent to Abyssinia. But as that country was in a state of war, he stopped at Cairo for three years. In 1830 he was allowed to enter Abyssinia, and soon gained the good will of some of the prominent inhabitants. They gladly received from him an Amharic translation of the Gospels. On the renewal of the war in Abyssinia he returned to Europe. A second missionary journey, undertaken in 1835, was fruitless, on ac-

count of his severe illness. In 1839 Gobat became principal of the Missionary College at Malta, where he translated the Bible into several Oriental languages.

GOBBE OR VOANDZON (*Voandzeia subterranea*), a leguminous annual of tropical Africa whose young pod is thrust into the ground in the same manner as that of *Arachis hypogæa* (the peanut). The rich, oily seeds ("Angola peas") are wholesome and agreeable when boiled. The young pods also are used like French beans.

GOBELINS TAPESTRY. See TEXTILES, Vol. XXIII, pp. 212, 213.

GOBINEAU, JOSEF ARTHUR, COMTE DE, a French diplomatist and author; born at Bordeaux in 1816. His first diplomatic service was as secretary of the French legation at Bern, in 1851. He was next sent as ambassador to Persia in 1861, to Greece in 1864, to Brazil in 1869, to Sweden in 1872, and in 1877 he resigned and retired. Gobineau was much given to study wherever he found himself. Among his published works are *Essai sur l'Inégalité des Races Humaines* (1855), and *Histoire des Perses* (1869). Besides his literary pursuits he was also active in various philosophic and philanthropic endeavors. He died in Paris, Oct. 17, 1882.

GOD. See THEISM, Vol. XXIII, pp. 234-249.

GODARD, BENJAMIN LOUIS PAUL, a French composer; born at Paris, Aug. 18, 1849; entered the Conservatoire in 1863, studying harmony under Reber. He left the Conservatoire and became a viola-player, at the same time assiduously devoting himself to composition, producing much charming work. He orchestrated Schumann's *Kinderscenen*; produced a *Concerto Romantique* (1876); and in that year, bracketed with Theodore Dubois, carried off the prize at the musical competition of the municipality of Paris, his composition being entitled *Tasso*, which remains his greatest work. Among his other compositions are *Scènes Poétiques* (1879); *Diane*, a dramatic poem (1880); *Symphonie Orientale* (1883); *Les Elephants* (1884). His more recent works include *Jocelyn*; *Les Guelfes*; and *Ruy Blas*. He died at Paris, Jan. 12, 1895.

GODDARD, ARABELLA, an English pianist; born at St. Servan, near St. Malo, in Brittany, Jan. 12, 1838; and received lessons from Kalkbrenner, Thalberg and Macfarren. She made her *début* at the grand national concerts in London in 1850, and in 1854-56, performed with great success as a classic player in the principal cities of France, Germany and Italy. In 1857-58 she played in London all the last sonatas of Beethoven, as well as many other masterpieces by Clementi, Dussek, Mozart, Mendelssohn and other composers. In 1860 she married J. W. Davison, a musical critic. She took her farewell of the British public in 1873, and then made a tour to Australia, the Sandwich Islands and the United States, returning to England in 1876.

GODERICH, a port of entry and chief town of the county of Huron, central western Ontario, Canada, situated on Lake Huron, at the termi-

nus of the Buffalo and Goderich division of the Grand Trunk railway, 78 miles N.W. of London. It has a good harbor, and communicates by steamer with the various lake ports. It has eight valuable salt-wells, extensive lake-fisheries and manufactories of woollens, machinery, boots and shoes, etc. Population 1891, 3,839.

GODET, FREDERIC LOUIS, a Swiss clergyman; born at Neuchâtel, Oct. 25, 1812; educated in his native town and at Bonn and Berlin; ordained a minister of the Reformed Swiss Church in 1836; was assistant pastor at Velangin, and became preceptor of the Crown Prince of Prussia in 1838; appointed professor of exegetical and critical theology in the theological school of the national church in 1850, and to the same position in the independent faculty of the church at Neuchâtel (1873). Among his noted works are *Histoire de la Réformation et du Refuge dans le Canton de Neuchâtel* (1859); *Commentaire sur l'Évangile de Saint Jean* (1863, 1865); *Commentaire sur l'Évangile de Luc* (1871); *Commentaire sur l'Épître aux Romains* (1879); *Commentaire sur la Première Épître aux Corinthiens* (1886); *Conférences Apologetiques* (1869); *Études Bibliques* (1873); etc. Many of these were translated into English and published in London and New York.

GODFREY OF BOUILLON. See CRUSADES, Vol. VI, p. 624.

GODFREY, THOMAS, an American inventor; born in Bristol, Pennsylvania, in 1704; died in Philadelphia, in December, 1749. He worked as a glazier, and studied mathematics, acquiring Latin in order that he might read mathematical works in that language. In 1730 he made an improvement in Davis's quadrant, which, after considerable delay, was laid before the Royal Society of London. A similar invention was, about the same time, presented by John Hadley, the vice-president of the society, and both claimants being declared entitled to the honor of invention, each received a prize of £200. The instrument is called Godfrey's or Hadley's quadrant, and is still in general use.

GODKIN, EDWIN LAWRENCE, an American journalist; born in Moync, County Wicklow, Ireland, Oct. 2, 1831; graduated at Queen's College, Belfast, 1851. He was a correspondent of the London *Daily News* in Turkey and the Crimea in 1854-56, and then went to the United States as a correspondent of the same journal. He was admitted to the New York bar in 1859, and from 1862 to 1865 was correspondent of the London *Daily News* and an editorial

EDWIN L. GODKIN.

writer for the New York *Times*. In the latter year he became editor of *The Nation*, and in 1881, when it was made the weekly issue of the *Evening Post*, he became an editor and proprietor of

the joint publication. He wrote a *History of Hungary* (1856); *Government*, in the American Science Series (1871); *The Problems of Municipal Government* (1894); *Reflections and Comments* (1895); and *Some Unforeseen Tendencies of Democracy* (1897).

GODMAN, JOHN D., an American physician and author; born at Annapolis, Maryland, Dec. 30, 1794. He was a printer and a sailor, and fought at the bombardment of Fort McHenry in 1814; next year commenced to study medicine, and in 1818 graduated in medicine at the University of Maryland, and practiced in Philadelphia. In 1821 he became professor of surgery in the Medical College of Ohio, and began the publication of the Cincinnati *Western Quarterly Review*. In 1822 he returned to Philadelphia, and two years later became an editor of the Philadelphia *Journal of Medical Sciences*. In 1826 he was made professor of anatomy and physiology in Rutgers Medical College, New Jersey, but resigned the following year on account of failing health. He wrote many articles for various periodicals, and published several works on natural history, anatomy and other subjects, being the author of *American Natural History* (1823-28). He also made a translation of Levasseur's *Account of Lafayette's Progress Through the United States*. He died at Germantown, Pennsylvania, April 17, 1830.

GÖDÖLLÖ, a market town of Hungary, 15 miles N.E. of Pesth, with a royal castle and park presented by the Hungarians, in 1867, to their king, the Emperor of Austria-Hungary. Here, April 7, 1849, the Austrian forces were defeated by the Hungarians. Population, 3,940.

GODON, SYLVANUS WILLIAM, an American naval officer; born at Philadelphia, June 18, 1809. He was appointed midshipman in 1819, promoted lieutenant in 1836, commander in 1855, and captain in 1861. He commanded the *Molican* in the attack on Port Royal under Admiral Dupont; in 1863 was promoted commodore and commanded the fourth division of Admiral Porter's fleet (on the *Susquehanna*) at both bombardments of Fort Fisher, December, 1864, and January, 1865. At the close of the war he was made rear-admiral. He commanded the South Atlantic squadron in 1866-67, and was commandant of the Brooklyn navy-yard in 1868-70. In 1871 he was retired on account of age. He died at Blois, France, May 10, 1879.

GODOY, MANUEL DE, "Prince of the Peace." See ALCUDIA, Vol. I, p. 471.

GOD'S TRUCE. See TRUCE OF GOD, Vol. XXIII, pp. 590, 591.

GODTHAAB. See GREENLAND, Vol. XI, p. 170.

GODWIN, PARKE, an American editor; born in New Jersey, Feb. 25, 1816; graduated at Princeton in 1834, and was admitted to the bar in Kentucky, but never practiced. From 1837 to 1853, excepting one year, he was connected with the New York *Evening Post*, assisting his father-in-law, William Cullen Bryant. In 1843 he issued the *Weekly Pathfinder*. He contributed largely to the *Democratic Review*, and was also an

editor of *Putnam's Monthly*. In 1865 he again became connected with the *Evening Post*. He wrote *Popular View of the Doctrines of Charles Fourier* (1844); *Construction Democracy; Vala: A Mythological Tale* (1851); *A Handbook of Universal Biography* (1851); *History of France* (1861); *Out of the Past* (1871); and an edition of Bryant's writings, with a complete biography (1883-84).

GOEBEL, JULIUS, a German philologist; born at Frankfort-on-the-Main, May 23, 1857; educated at the universities of Leipsic and Tübingen. He went to the United States and became instructor in German literature and philology at Johns Hopkins University (1888), and professor of Germanic literature and philology at Leland Stanford Junior University (1892). He edited *Belletristisches Journal*, New York City (1888-92); and wrote *Ueber die Zukunft Unseres Volkes in Amerika* (1883); *Ueber Tragische Schuld und Suchne* (1884); *Zur Deutschen Frage in Amerika* (1886); etc.

GOEBEN, AUGUST VON, a German soldier; born at Stade, Hanover, Dec. 10, 1816; entered the army in 1833, but desiring more active service, joined the Carlists in Spain, he was wounded and taken prisoner, and confined in jails in Cadiz and Saragossa. On his return to Germany he wrote an account of the Carlist war in *Four Years in Spain* (1841), and received a reappointment in the army, being on the staff of the Crown Prince, afterward Emperor William I, in 1849-55, in the latter year becoming chief of the staff of the Sixth Army Corps. For his success in the war against Denmark he was appointed, in 1864, lieutenant-general and commander of the Thirteenth Division. In the Franco-German war he commanded the Eighth Corps at Saarbruck and Metz; and also of the Army of the North, which was victorious over the French, under General Faidherbe, at St. Quintin, Jan. 19, 1871. Besides the work noted above, he wrote *Letters of Travel and Camp* (1863). He died at Coblenz, Nov. 13, 1880.

GOERTZ, GEORGE HEINRICH, BARON VON, a German political adventurer who became financial minister to Charles XII of Sweden (q. v., Vol. V, pp. 421, 422). He was born of a noble family of Holstein, and served many royal masters. On his return from imprisonment after his defeat at Pultowa, Charles, in passing through Stralsund, a city of what was then Swedish Pomerania, met Von Goertz. The baron succeeded in securing the entire confidence of the king, and was soon placed at the head of the Swedish finances, which were at a very low ebb, on account of Charles's military campaigns. Goertz propounded a scheme which met the approval of the King, the plan, for "re-establishing the currency," being to issue copper dalers instead of ingots, which dalers, bearing the king's stamp, were made legal tenders. As the coins were light, and therefore "well adapted for carrying in the pocket," the Baron thought they would circulate at their nominal value without any trouble. They were about the size of a modern American twenty-five cent piece, were stamped "1 daler silvermynt," and were overvalued nearly a hundred times. In no instance,

except by the government, were they accepted at their face value. There was no limit placed upon their coinage. The result was, that immediately the public found their sources of revenue excessively reduced, while the government was unable to sustain such a fiduciary issue, or compel the people to receive it at its fictitious value. This system, coupled with the previous issue of base silver coins, heavy copper plates and paper notes, to none of which were any limits prescribed, continued in force until the death of Charles, which occurred at the siege of Frederikshald, Dec. 11, 1718. The king's sister, Ulrica Elenora, ascended the throne and immediately promulgated a decree whereby the paper notes were wholly abolished, and the copper dalers reduced by successive steps. Charges were drawn up against Baron Goertz, and to appease the hatred of the public he was condemned to death, and beheaded at Stockholm, March 3, 1719. Baron Goertz is described as an "enthusiast," and as a "financier of the visionary kind." He received no personal benefit, however, from his wild scheme of finance.

GOES, JOANNES ANTONIDES VAN DER, a Dutch poet. See ANTONIDES, Vol. II, p. 138.

GOESSMANN, CHARLES ANTHONY, a German-American chemist; born in Naumberg, Germany, June 13, 1827. He was educated in the Fritzlar Gymnasium and at the University of Göttingen. After spending five years as assistant in the Göttingen chemical laboratories, he removed to the United States in 1857, and for the succeeding five years was connected with the New York salt industries. He was appointed professor of chemistry in Rensselaer Polytechnic Institute in 1862; in 1869, took a similar position in the Massachusetts Agricultural College. He contributed numerous articles on chemistry and allied subjects to scientific periodicals, principally to the *Annalen der Chemie und Pharmacie*.

GOETTLING, KARL WILHELM, a German philologist and historian; born at Jena, Jan. 19, 1793; died there, Jan. 20, 1869. He was educated at Jena and Berlin. In 1815, he became professor in the gymnasium at Rudolstadt; in 1819, director of the gymnasium at Neuwied; in 1822, professor extraordinary, and in 1832, professor in the University of Jena. He visited Italy, Sicily and Greece in connection with his archæological and historical studies. His works include *Das Geschichtliche im Nibelungenliede* (1814); *Nibelungen und Ghibellinen* (1817); *Geschichte der Römischen Staatsverfassung* (1840); *Gesammelte Abhandlungen aus dem Classischen Alterthum* (1851, 1863); etc.

GOFF, NATHAN, an American lawyer; born in Clarksburg, West Virginia, Oct. 9, 1843. Educated at the University of New York in 1861; entered the United States army, and in 1863 was appointed major of the Fourth Virginia Cavalry. He was made prisoner and confined in Libby prison; and afterward became brigadier-general of volunteers. He was admitted to the bar in 1865, and served a term in the West Virginia legislature; acted as district attorney from 1868 to 1881, and resigning the latter office to accept the Secre-

taryship of the Navy, vacated by Richard W. Thompson. Mr. Goff was a member of Congress, as a Republican, from 1884 to 1888. In the election for governor, in 1888, he was elected by a plurality of 106 votes, but, owing to the failure of the speaker to declare the result, the election was contested, the case went into the courts, and the Democratic candidate, A. Brooks Flemming, was eventually declared governor. In 1892 Mr. Goff was appointed judge of the circuit court of appeals.

GOFFE, WILLIAM, a British regicide; born in England about 1605; died in Hartford, Connecticut, in 1679. He was early trained to follow a business career, but entered the Parliamentary army, where, in 1665, he rose to be major-general. He was a member of Parliament in 1654, and again in 1656, and was one of the commission who condemned Charles I to death. When Charles II was called to return, Goffe, with Whalley, his father in law, set out for America. On July 27, 1660, they arrived at Boston, and settled at Cambridge. A reward was offered for their arrests, and the two retired from Cambridge to New Haven, where for a time they remained. In 1664 they removed to Hadley. They were several times seen during their stay at New Haven, but lived concealed from the pursuit of the crown officers. During King Philip's War the town of Hadley was bravely defended by the regicide Goffe, who, according to tradition, appeared mysteriously and repulsed a desperate onslaught of the Indians. It is believed Whalley died at Hadley in 1675. Goffe, in 1679, went to Hartford, where he shortly afterward died.

GOFFSTOWN, a manufacturing village of Hillsboro County, southern New Hampshire, on the Piscataquog River, and on the Boston and Maine railroad, 15 miles S. of Concord. It has lumber-mills and a machine-shop. The surrounding country produces hay, oats and dairy products chiefly. Population 1890, 1,981; 1900, 2,528.

GOGRA OR GHOGRA, a river of eastern India, which rises in the Himalaya Mountains, in lat. $30^{\circ} 28' N.$, long. $80^{\circ} 12' E.$, flows south and southeast, entering the Ganges in about lat. $25^{\circ} 46' N.$, long. $84^{\circ} 40' E.$ It is navigable throughout the year. Length, 600 miles.

GOLCONDA, a village and the capital of Pope County, southern Illinois, on the Ohio River. Farming, mining and manufacturing are the chief occupations of the vicinity. There are several mills and a lead and a kaolin mine. Population 1890, 1,174; 1900, 1,140.

GOLD AND GOLD-MINING.—*Distribution.* The occurrence of native gold *in place*, and available for working, has, until recently, been thought to be chiefly confined to veins of quartz which intersect metamorphic rocks. These metamorphic rocks are mostly argillaceous, chloritic and talcose schists. Sometimes, but less commonly, the veins were found to intersect hornblende and mica schists, and even gneiss, diorite and porphyry, and, still more rarely, granite. Quartzite is also the native rock of many regions traversed by gold-bearing quartz veins. This

belief, that gold occurs more frequently in quartz veins than elsewhere, is correct; but within the past few years some very marked exceptions have been brought to light. The districts known as Gilpin and Clear Creek, named from their respective counties, in Colorado, show only quartz veins intersecting metamorphic rocks, known as *true fissures*; while at Aspen and Leadville, in the same state, both gold and silver are found in conjunction with lead sulphides and carbonates in limestone deposits; and at Cripple Creek the prevailing rock is a sort of gray, volcanic breccia, which is penetrated by dikes of more recent lavas, ascending through fissures. The ore-deposits occur chiefly in connection with the dikes, and are held to be later enrichments, through a process of leaching, or gathering by the aid of salts, which have a great solvent power as to gold.

Where the intersecting formations are numerous and diverse, the natural leaching-process is best facilitated, and the gold is slowly gathered from the surrounding rocks and precipitated in crystals and masses in conjunction with the dike fissures. This same leaching-process is also regarded as explanatory of the ore-deposits of quartz veins known as *true fissures*, as distinguished from dikes. The mineral of the Cripple Creek district is both native gold and in the form of gold tellurides, and the ores are of unusually high grade, the present output averaging nearly three ounces to the ton. Their high character is shown by the statement that the chief of the Australian milled ores average about 9 pennyweights per ton; the Californian, about 6 to 7; the Clear Creek and Gilpin, 6 to 8; the Homestake (Black Hills), 3 to 5; while the Witwatersrand mines, which made the Transvaal district of South Africa but lately the leading gold-producing country of the world, accomplish their wonderful results with conglomerates that average only 11 pennyweights to the ton.

Production. The output of Cripple Creek for 1895 was about \$8,000,000, and that of the Rand mines more than four times as great; while the total output for the world during 1895 was \$203,120,590, of which \$167,610,998 was produced by four countries, the United States coming first, with \$44,870,998; Africa coming second, with \$44,750,000; Australasia coming third, with \$44,000,000; Russia coming fourth, with \$33,990,000. India, China and Mexico produced about \$6,000,000 each, while the remaining \$17,000,000 was mined in comparatively small amounts in many countries throughout the world.

The increase of the world's output over that of 1894 was about \$24,000,000, and the increase in the United States was over \$5,000,000. It is predicted that Africa and the United States will soon exceed \$50,000,000 each in their production, and Australasia is not likely to be very far behind.

The mines of the Rand district, which are near Johannesburg, in the Transvaal country, are embraced within a strip of territory about three miles wide by seventeen long, and the remainder of

Africa, outside of this district, produced less than five million dollars in 1895.

There are important discoveries reported from Mashonaland and Matabeleland, and a large number of claims located, but the amount of their production is yet unimportant. The reasons given are their inaccessibility, and especially the difficulty of transporting machinery.

In the United States, the three states of California, Colorado and Montana produced about forty million dollars in 1895, which bears about the same ratio to the entire output that the Rand district does to the African. The remainder is divided between nine or ten Western states and territories, besides Georgia and the Carolinas.

Mining. In the mining of quartz and other rock ores, the facilities of to-day are better than those of a few years ago, owing rather to improvements in methods than to radical changes. Ore bodies are still drilled and blasted, and worked by pick and shovel, but mechanical improvements are doing much to revolutionize the industry. The use of compressed air, and especially of electricity, seems destined to bring about wonderful changes in the near future. There are now many mines which make use of electricity in one form or another, and at least one, at Silver Lake, Colorado, has recently been fully equipped with electric apparatus, the power for which is transmitted from the Animas River, three miles away. Not only the lighting, but the drilling, hoisting, pumping, crushing, and even the working of fans and air-compressors, are performed by electricity. Mines which are very damp interpose obstacles to the successful working of electrical apparatus, and, thus far, marked success has been experienced only where conditions are favorable. Experiments are also being made in the operation of amalgamating and gold-saving devices, and the first beginnings in electric ore-smelting are started. The latter have not yet advanced far enough to be called thoroughly successful.

Extraction. The ultimate problem of gold-extraction is the treatment of low-grade ores, and especially of low-grade sulphuret ores, which are more numerous by far than all others. While this problem cannot yet be said to have been entirely solved, such advance has been made as to justify the prediction of its triumphant outcome. Just now, the interest of a large part of the gold-mining world is centered upon two different methods of treating the low-grade sulphurets, both of which, in numerous instances, are very successful. One is known as the "chlorination" and the other the "cyanide" process. Chlorine gas and cyanide of potassium being ready solvents of gold, the principle is much alike in both processes, different kinds of apparatus, of course, being required.

One method of chlorinating, called the "Haycraft electrolytic process," is as follows: The ore is crushed and conveyed to an iron tub, beneath which a furnace keeps the contents at the boiling-point. Water containing a small percentage of

salt is mixed with the ore, and vertical revolving arms descend into the tub and keep the contents continually stirred. The arms are fitted with carbon shoes, forming the anode from which the current passes through the liquor to the bottom, where a pan of quicksilver forms the cathode. The current decomposes the salt, and the sodium passes to the mercury, the chlorine rising and absorbing the gold, which forms gold-chloride. The pulp continuing to circulate in the pan, the chloride of gold comes under the operation of electrolysis and is in turn decomposed. The chlorine, being liberated, seeks other gold, and the gold passes to the mercury and produces amalgam. In the end the contents are washed out of the tub, and the gold is freed from the amalgam by retorting. Chlorination of one sort or another has been used for a number of years, but the most marked success is recent. The great success, however, has been with simple sulphurets, like iron pyrites. As high as 98 per cent of the gold in concentrated sulphurets has been saved by chlorination, with a total cost, including mining, milling and chlorinating, of about \$2.50 per ton of ore mined. That, however, which chlorination has thus far failed of accomplishing is the treatment of complex sulphides, such as galena and zinc-blende. These must still be treated by smelting, and combinations with copper ores are necessary. In treating by cyanide, the method known as the "Siemens-Halske electric process of precipitation" is thus briefly described: After the ore has been crushed and collected into vats or tubs and subjected to solutions of cyanide of potassium, which dissolve the gold, the cyanides containing the gold are leached away into other tubs. A current is then introduced through an anode of iron plates, and the cathode is formed of broad, thin sheets of lead at the bottom. The electrolysis enables the lead to act upon and absorb the gold from the chlorides. After the operation has continued for a long time, the lead is collected and the gold separated by cupelling. The reasons for the choice of lead as a cathode are said to be four in number: (1) the precipitated gold will unite with it; (2) lead can be rolled into thin sheets; (3) it is an easy metal from which to recover gold; (4) it is not more electro-positive than the anode, and thus prevents return currents from being generated. At the Russell mine, in Montgomery, North Carolina, one hundred tons a day are treated by cyaniding, and 85 to 90 per cent of the gold saved, at a stated cost of 90 cents to \$1 per ton. The ores of almost the entire Rand district, in Africa, are treated by the Siemens-Halske process. For certain qualities of ore, cyaniding is regarded as more satisfactory, and at the same time cheaper, than chlorination. It is no better able to treat complex sulphurets, however, than the other method. The dissemination of gold throughout the world is so wide, that traces of it may be found in a larger part of the rocks and soils, in sea-water, and even in considerable quantity in coal strata. (See GOLD, Vol. X, pp. 740-753.)

Placers. In the history of mining, however, the greatest portion of the world's supply has been taken from placer-deposits. California has produced two billion dollars of gold, the larger part of which was from the sand and gravel beds of the Sacramento and other streams. In the palmiest days of mining the state produced fifty-five to sixty millions annually. The Australian yield has been nearly, although not quite, as great.

Siberia, Africa, Mexico, South America, British Columbia and a number of American states have been large producers of placer gold, but to-day there are no known deposits of such richness and extent as those which have been worked in the past, with the possible exception of the banks of the Upper Yukon, in Alaska, concerning which our information is meager and not very reliable.

In California the working of placer-deposits by the great hydraulic plants had become of so grave economic importance, through the altering of courses of streams, changing the entire topography of great tracts of country, and destruction of immense areas of grazing and arable land, that their operations have been restricted, and in many instances entirely suppressed, by legislative enactment. Similar, therefore, to the question of treating low-grade sulphurets in rock-mining, the great problem of importance in placer-mining which men's minds are now wrestling with is that of the rapid and economic handling of river sands, and the saving of the small percentage of fine gold which they contain.

The bars of the streams in the Rocky Mountain region, especially those of the Pacific Slope, are impregnated, some with finely powdered, others with light, flaky gold, so sparsely scattered as to be unprofitable to work by the older, cruder methods, but so extensively and uniformly distributed as to promise large returns for rapid and cheap handling.

Great sums of money have been expended upon devices and experiments of many sorts, but nearly all have been failures, while but moderate success has been attained by any. The requisite is a machine that will lift or dredge the sand from the river bottom (containing, perhaps, an average of 25 cents to 50 cents in gold to the cubic yard), pass it through amalgamators which will save all the light, fine gold, and do the work rapidly enough to render it profitable. There are now under construction great floating machines, combinations of dredge and elaborate amalgamating apparatus, which, it is claimed, are shortly to solve the problem. Whether or not the solution is so near at hand, it may be predicted with reasonable certainty that man's ingenuity and industry will accomplish the desired result in the end, and the production of gold increased in proportion to the world's growing demands.

Mines. Among some of the great gold properties of the present time are the Homestake, in the Black Hills; the Treadwell, in Alaska; Little Johnny, at Leadville, Bobtail and the Dunderberg, in Gilpin, Colorado; the Idaho, in Cali-

fornia; the Anna Lee, Delmonico, Portland, Buena Vista, Anaconda, at Cripple Creek; Mount Morgan, and Bailey and Ford, in Australia, and the Rand mines, in Africa. J. F. CARGILL.

Cape Nome. Gold-seekers, who have actively been at work at Dawson City and the Klondike region of the Canadian Yukon territory, are now greatly attracted by the rich auriferous deposits around Nome City, Alaska. The mushroom town is situated close to Cape Nome, which abuts into Bering Sea between Norton Sound and Bering Strait. It is reached directly by sea from Seattle, Wash., *via* the Aleutian Islands; or, by steamer up the coast to Dyea City, thence *via* Dawson City, B. C., Circle City, and down the Yukon river to St. Michaels, then across Norton Sound. In these regions of the far north the rigors of winter, when the thermometer falls to 45° below zero, are greatly dreaded; though to the lucky ones among the gold-seekers and those who are lured by the rich deposits of the precious metal, the compensations appear to be ample. There are indications that Nome City will be the metropolis of the Bering Sea, though as yet there is great scarcity of lumber for building purposes, the vegetation of the region being very limited and stunted. Everything edible has to be brought to the place, usually in steam whaling vessels, which begin to arrive at the port about the middle of June each year, at the close of the hibernating season. Latterly the price of lumber has fallen from \$500 a thousand feet to \$150, and even at that figure there is brisk competition. Already half a dozen rich mining districts have been discovered along the coast; while up the rivers there are many pay streaks of marvellous richness. Ophir creek, 100 miles up the Fish river, is one of the great strikes; the Koog Rok district, near Port Clarence, is another rich region. While much excitement exists over the finds on the beach at Top Kok, about sixty miles down the coast. G. M. A.

The following table shows the gold production in ounces of the United States and foreign countries for the year 1898:

United States (production in 1898).....	3,118,398 oz., value, \$64,463,000
Transvaal, oz. (1898).....	4,555,009
Rhodesia	24,581
India	415,147
New Zealand	280,176
British Guiana.....	113,070
West Australia.....	1,050,179
Queensland	918,100
Victoria	837,257
New South Wales	341,372
Tasmania	48,913

GOLDAU, formerly a small town of Switzerland, in the canton of Schwyz, memorable for its destruction by a stupendous landslide, Sept. 2, 1806. In a few minutes not only Goldau but the neighboring villages of Busingen, Röthen and Lowerz were overwhelmed, and a part of the Lake of Lowerz was filled up by the fall of the upper slope of the Rossberg. The valley is now a wild, rocky waste, overgrown with grass and moss. The village of New Goldau, on the line of the Rigi railway, consists of but a few houses.

GOLD COAST, a British crown colony on the

Gulf of Guinea, West Africa, with a coast line of 350 miles, bordered on either side by the Ivory Coast and the Slave Coast. It is enclosed on the east by Togoland (German), and on the west and north by the Ivory Coast and Senegal Territories (French). Its area, exclusive of Adansi and Ashantiland, is about 40,000 square miles, with an estimated population of one and a half millions, of whom only about 500 are Europeans. Its governor and commander-in-chief is Sir Frederic M. Hodgson, whose headquarters are at Accra, on the coast (pop. 16,267). The other chief towns are Elmina (pop. 10,530), and Cape Coast Castle (11,614). Its exports, besides valuable native woods, are palm oil, palm kernels, dye-stuffs, ivory, and India rubber. Gold is said to be now found and partly mined in the colony, and government railways and telegraph lines are under construction. A railway from Accra to the Volta river is contemplated, and surveys have been made for lines to Kumasi from Tarkwa (Tarquah) and Appam, while harbor works are being undertaken at Accra, the administrative centre. The affairs of the colony are managed by an Executive and a Legislative Council, both nominated. There are government elementary schools, but education is mainly in the hands of the various religious bodies. By the Colonial Loans Act of 1899, the sum of 578,000 pounds Stg. was advanced by the Imperial Government for the construction of railways from Secondee to the gold mines of Tarquah, from the latter to Kumasi, and from Accra to the Volta.

Protracted correspondence between the English and French governments anent boundary questions have somewhat retarded settlement in the colony. The convention of 1898, however, practically settled the matter, the upper courses of the river Volta having been taken as the natural boundary line for the prolongation of the frontier between the Gold Coast and the French colony of the Ivory Coast. By the terms of the convention the French evacuated Wa and all points to the east of the river Volta, and south of the 11th parallel, but obtained the territory of Mossi, to the northward, thus closing the hinterland to the Gold Coast. France also obtained a slice of territory to the west of the river Volta, including the towns of Bona and Dawkita. More serious trouble has, however, recently arisen in the colony from the disaffection of the natives, due, it is said, in part, to French jealousies, and to the ambition of the dusky monarch of Ashanti, who having made submission to the English has since been exiled to Sierra Leone. Settlement in the colony has also been retarded by the want of roads and by an unhealthy climate. In the spring of 1900, a rising occurred of Ashantis around Kumasi, provoked, it is stated, by a fear of losing the symbol of their former ascendancy in the region. The small native and European garrison in Kumasi, in which the governor, Sir F. M. Hodgson, Lady Hodgson, and some European attendants, were at the time stationed, was attacked and had to undergo a lengthy siege. A relieving force of Hausas and Europeans from the coast, and a column of black regulars

from Nigeria, were dispatched to the aid of the garrison. Before either column reached Kumasi, Governor Hodgson and the bulk of the garrison were enabled (June 23) to break the siege and to set out for Cape Coast Castle, which they succeeded in reaching July 11, 1900. He brought Lady Hodgson away with him, together with most of the Europeans, including the missionaries; though a hundred native soldiers with two or three officers were left to defend the fort and await relief by Colonel Willcock's command. Almost all the food was left with the besieged. As we write, the country is still in a disturbed and unsettled condition, the menace by the Ashantis continuing, and the need being great for an adequate protecting force of European soldiery. G. M. A.

GOLD CREST OR **GOLDEN-CRESTED WREN**, a European bird of the genus *Regulus*, closely related to the warblers (a bright yellow mark on the head suggested the name). There are closely related species in the United States.

GOLDEN, a city and the capital of Jefferson County, northern central Colorado, on Clear Creek, and on the Union Pacific and the Denver and Rio Grande railroads, 15 miles west of Denver. It contains a college, state school of mines, flour and paper mills, smelting-works, foundry and coal-mines. It has good water-power from the creek, which runs several mills. Population 1900, 2,152.

GOLDEN AGE, a supposed state of pristine human excellence. (See **ANTHROPOLOGY**, Vol. II, p. 121.) The golden or patriarchal age of Hesiod was under the care of Saturn, and was the first or most remote of his five ages of human progress. The term is now used to refer to a culminating point in the history, but especially in the literature, of a nation, and is synonymous with the phrase *Augustan age*, referring to the period of about two hundred years ending with the reign of Augustus, Emperor of Rome, who died A. D. 14, during which time Rome was noted for its intellectual and literary attainments. The golden age of England was the reign of Elizabeth (1558-1603); that of France, during the reigns of Louis XIV and Louis XV (1640-1740); of Germany, the reign of Charles V (1519-58); of Prussia, the reign of Frederick the Great (1740-86); of Spain, the reign of Ferdinand and Isabella (1474-1516); of Sweden, from Gustavus Vasa to Gustavus Adolphus (1523-1632); of Russia, the reign of Peter the Great (1672-1725).

GOLDEN BEETLE, the name popularly given to many members of a genus of coleopterous insects, *Chrysomela* and of a subfamily, *Chrysomelidæ*, belonging to the tetramerous section of the order. The body is generally short and convex, the antennæ simple and wide apart at the base. None of the species are of large size, but many are distinguished by their metallic splendor of color. The finest species are tropical. See **COLEOPTERA**, Vol. VI, p. 134; and **INSECTS**, Vol. XIII, pp. 149, 150.

GOLDEN EAGLE. See **EAGLE**, Vol. VII, p. 590.

GOLDEN-EYED FLY, a name usually given to neuropterous insects of the genus *Chrysopa*, related to the ant-lions. This insect is of a green color, with prominent gold-colored eyes. The odor is very disagreeable. These flies, especially in larval state, destroy great numbers of plant-lice, or aphides.

GOLDEN FLEECE. See ARGONAUTS, Vol. II, pp. 496, 497; MEDEA, Vol. XV, pp. 776, 777; and JASON, Vol. XIII, p. 596.

GOLDEN FLEECE, THE ORDER OF THE, an ancient and illustrious order of knighthood of Austria and Spain; was founded by Philip III, Duke of Burgundy, Jan. 10, 1429, at Bruges, on his marriage with Isabella, Infanta of Portugal. The order is consecrated to the Virgin Mary and the apostle St. Andrew. The badge is a golden ram pendant by a ring which passes round its middle. The badge hangs from an elaborately designed jewel, showing rich enameling of various colors, and with suggestive devices. The motto is, *Pretium laborum non vile*. In 1477 the office of grand master passed to the House of Hapsburg, with the acquisition of the Burgundian dominions, through the marriage of Mary, daughter of Charles the Bold (son of Philip III, founder of the order), to Maximilian I of Austria. After the time of Charles V (obit 1558), grandson of Maximilian I (who had become king of Spain as Charles I in 1516), the office of grand master was exercised by the Spanish monarchs. After the cession of the Spanish Netherlands to Austria, the latter power claimed the office. In consequence of the dispute, the order has existed independently in Austria and Spain. It is still the highest order bestowed in these countries.

GOLDEN HORDE. See MONGOLS, Vol. XVI, pp. 746-748.

GOLDEN NUMBER. See CALENDAR, Vol. IV, p. 670.

GOLDENROD, the common name of the numerous species of *Solidago*, one of the largest genera of the family *Compositae*, especially represented in North America, where the goldenrods are among the most admired of late summer and autumn plants. They occur throughout the whole of North America, in all situations, but are chiefly represented in Europe by a single variable and perplexing species, *S. Virgaurea*.

GOLD-EYE OR MOON-EYE, fishes of the family *Hyodontidae*, common in the fresh waters of central North America. They resemble shad, are covered with bright shiny scales, and strong curved teeth are on the jaws, tongue and palate. Sometimes they are called toothed-herrings. They are of little value as food.

GOLDFINNY, GOLDSINNY OR CORK-WING. See WRASSE, Vol. XXIV, p. 686.

GOLDMARK, KARL, a Hungarian composer; born at Keszthely, on the Platten See, of Hebrew parents, May 18, 1830; was a pupil of Jansa, at Vienna; entered the Conservatorium in 1847. After the revolution of 1848, which interfered with his studies, he had good opportunities for improvement, and published some orchestral and

choral works. He next produced his overture, *Sacuntala*; in 1875, his grand opera, *Königin von Saba*; and later, *Die Ländliche Hochzeit*, a symphony. These gave him an international reputation. His three-act opera, *Merlin*, was produced at Vienna, Nov. 19, 1886. His recent works include *Das Heimchen am Herde* ("The Cricket on the Hearth"); and *The Prisoner of War*, an opera (1898).

GOLD-OF-PLEASURE OR FALSE-FLAX, the *Camelina sativa*, an annual plant of the family *Cruciferae*, growing in Europe, and sparingly in the United States. Its fibers can be used for the manufacture of coarse fabrics, and it is sometimes cultivated for the oil of its seeds.

GOLDSBORO, a city, the capital of Wayne Co., N. C., on the Little River (navigable), 53 miles S. E. of Raleigh; is a railroad center on the great Southern thoroughfare of travel, has a college for women, and ships much cotton, to the cultivation of which the neighborhood is devoted. Pop. 1900, 5,877.

GOLDSBOROUGH, LOUIS MALESHERBES, an American naval officer; born in Washington, District of Columbia, Feb.

18, 1805; entered the navy as midshipman at seven years of age, and at twenty was appointed lieutenant. In 1827 he received the thanks of the English government for the rescue of the brig *Comet*, which had been captured by Greek pirates. During the Seminole war he commanded a company of volunteer cavalry, and in 1847 was executive officer of the frigate *Ohio*, which bombarded Vera Cruz. In 1849 he was senior member of the commission to explore California and Oregon, and in 1853-57 was superintendent of the United States Naval Academy. In 1861 he became flag-officer, and was placed in command of the *Minnesota*. He was made rear-admiral in 1862, and in 1865 commanded the European squadron. In 1873 he was placed on the retired list, after a longer service and more active duty than any other naval officer then living. He died at Washington, District of Columbia, Feb. 20, 1878.

ADMIRAL GOLDSBOROUGH.

GOLDSCHMIDT, JENNY MARIA LIND, MADAME, "The Swedish Nightingale"; born in Stockholm, Oct. 6, 1820. Her father was a teacher of languages. When only three years old, she could sing any piece she had ever heard. At nine she was admitted to the singing-school attached to the court theater. Soon afterward she played juvenile parts on the stage, showing considerable dramatic ability. At eighteen she appeared in the rôle of Agatha in *Der Freischütz*, Alice in *Robert le Diable*, etc., and soon became the prima donna of the Royal Theater, Stockholm. In 1841 she went to Paris to receive lessons from Garcia, who did not encourage her at first. But Meyerbeer, who heard her once, prophesied a brilliant future for the young singer. Her voice was thought to

be wanting in volume, and when she appeared at the Grand Opera two years later, her failure was so discouraging that she resolved never again to sing in France.

In 1844 she went to Berlin, where she studied German. Returning to her native city, she was

JENNY LIND.

heard with enthusiasm in *Robert le Diable*. Upon Meyerbeer's recommendation she was engaged at Berlin in October, appearing in *Norma* and in Meyerbeer's operas. In 1846 she visited Vienna; in 1847, London. Prices at Her Majesty's Theatre rose to a fabulous height, and "the town," says Chorley, "sacred and profane, went mad about the Swedish nightingale." She selected the part of Alice, which had first shown the sweetness of her voice. Her soprano voice was at that time very thrilling and sympathetic. On May 18, 1849, she sang on the London stage for the last time, in *Roberto*. After that her appearances were confined to the concert halls.

In September, 1850, she came to America under the auspices of P. T. Barnum. Her share of the profits of a brilliant tour in this country, amounting to \$100,000, she afterward spent in founding and endowing musical scholarships and charities in Sweden and England. Her first concert in New York was accompanied by scenes of the wildest enthusiasm. The seats were sold at auction, and hundreds of dollars bid for the best choice. After giving about one hundred concerts in the principal American cities, she married, at Boston, Massachusetts, Feb. 5, 1852, OTTO GOLDSCHMIDT (a pianist, conductor and composer of several oratorios; born at Hamburg, Aug. 21, 1829; died in 1890), who had accompanied her as pianist, and succeeded Mr. Benedict as conductor. Returning to Europe, she continued to sing at concerts and oratorios, as in London (1856), and for the last time at Düsseldorf in 1870. Her English charities included the gift of a hospital to Liverpool, and of a wing of another to London. Her voice retained its sweetness to the last, but she sang only occasionally, either in London drawing-rooms or at the Royal College of Music, where she was professor of singing from 1883 to 1886. Jenny Lind's mind was pure and elevated, and her feelings deeply religious. She died near Malvern, England, Nov. 2, 1887. Of her Moscheles writes: "What shall I say of Jenny Lind? I can find no words adequate to give you any real idea of the impression she has made. . . . So much modesty and so much greatness united are seldom, if ever, to be met with; and although her intimate friend Mendelssohn had given me an insight into the noble qualities of her character, I was surprised to find them so apparent."

GOLDSCHMIDT, MEYER AARON, a Danish

novelist; born at Vordingborg, Zealand, Oct. 26, 1819; studied at the University of Copenhagen; in 1840, started *The Corsair*, a weekly journal, which was brilliantly edited; and in 1848 founded *The North and South*, a critical journal. He became more appreciated for his novels, in which he blended a sparkling wit with a sympathetic pathos, the delicacy of his style being equaled only by the sensitive idealism of his nature. Among the best known of his works are *A Jew* (1852); *The Homeless Man* (1853); *The Heir* (1865); and *The Raven* (1867). He died Aug. 16, 1887. See also DENMARK, Vol. VII, p. 93.

GOLD STICK, a title given in England to the captain of the Gentlemen-at-Arms, and to the colonel of the Second Regiment of Life Guards, who bear gilded rods on occasions of state.

GOLDTHREAD, the popular name in America for *Coptis trifolia*, a ranunculaceous plant, found from Denmark to Siberia, and over the North American continent, through Canada, into the United States. It is a small, creeping plant, the leaves somewhat like those of the strawberry, but smaller, and evergreen under the snow. The flowers are small and white. The name *goldthread* is given on account of its long, bright-yellow and bitter fibrous roots. It was a popular remedy with the Indians of the northern United States and Canada for sore mouths and ulcerated throats. The French Canadians use it often for these maladies, little bundles of the roots being often sold in the French markets of Montreal, under the name of *Tissa voyanne jaune*. The Indians made a dye from the stems and leaves, by which they colored skins of animals a saffron yellow.

GOLDTHWAITE, a village and the capital of Mills County, central Texas, on the Gulf, Colorado and Santa Fé railroad, 100 miles N.W. of Austin. It is the shipping-point for cotton, live-stock and grain raised in the vicinity. Population 1890, 1,066; 1900, 1,282.

GOLFO DULCE, a town and a lake; also called IZABEL. See GUATEMALA, Vol. XI, pp. 239, 241.

GOLIAD, a village and the capital of Goliad County, southern Texas, situated on the north bank of the San Antonio River, about 90 miles S.E. of the city of San Antonio. It is the seat of Aranama College. It has a salubrious climate, and is surrounded by rich lands. In March, 1836, the village was garrisoned by Texans, 500 of whom were massacred on its capture by Santa Anna's Mexican soldiery. Population, 1,300.

GOLIARDIC POETRY. See RENAISSANCE, Vol. XX, p. 383.

GOLIATH-BEETLE, a popular name given to the immense coleopters of the genus *Goliathus*, of the family *Scarabæida*, living in western Africa. Many of these beetles are brilliantly colored. *G. giganteus*, one of the largest known beetles, is four inches long and two inches broad. Their food consists of the sap of trees. The name is often applied to related genera, which attain a large size.

GOLOMYNKA (*Comephorus baikalensis*), a re-

markable fish, found only in Lake Baikal. It is about a foot long, is destitute of scales, and is very soft, its whole substance abounding in oil, which is obtained by pressure. It is never eaten.

GOMARA, FRANCISCO LOPEZ DE, a Spanish historian; born at Seville in 1510; educated at the University of Alcalá, and abandoned the career of arms, intended for him, for a literary one; became a priest; and in 1540 became secretary and chaplain to Hernando Cortes, who was then in Spain. Cortes did not again visit America, but, with Gomara, joined in the campaign of Charles V in Algeria. Gomara wrote a *Historia General de las Indias* (1552-53), a model of concise elegance, which was translated into several languages. The second part, devoted to Mexico, was subsequently published separately, with a new title, *Corónica de la Nueva España con la Conquista de Méjico*. Died about 1560.

GOMARISTS OR CONTRA-REMONSTRANTS. See GOMARUS, Vol. X, p. 769.

GOMBROON. See BENDER-ABBASI, Vol. III.

GOMERA. See CANARY ISLANDS, Vol. IV, 800.

GOMEZ Y BAEZ, MÁXIMO, the leader of the Cuban revolt; born at Bani, Santo Domingo, Aug. 25, 1826. Here was his home,

where his wife and children lived, and where he owned a small farm, the wife and daughters earning their living as music-teachers and seamstresses. Gomez has a son holding a clerkship, whom the father has managed to keep out of the war. Of himself he says: "I was born, educated, and have spent the greater

part of my existence on the field of battle." He served in the Spanish army as a major, in the reserves, but renounced that rank when the standard of revolt was raised, and became the organizer and commander of the Cuban insurgents, being induced by José Martí early in 1895 to join the revolt.

Previously, Gomez had served in the Ten Years' War (1868-78) on the insurgent side, and commanded one of the departments into which Cuba was divided on the death of General Agramonte. He fought also at Las Guasimas, where many Spanish soldiers were cut down by machetes. In 1895-96 he, with Antonio Maceo, marched into the western provinces, where the Spanish had 50,000 troops, and there, on crossing the trocha or dead line, they pillaged and burned right and left, devastating the whole country, and destroying sugar-mills, plantations, and towns. On Feb. 18 (1896) Jaruco was given to the flames, and its fort was captured, with 80 guns. The destruction, which seemed wanton, was inspired by a conviction in the mind of Gomez that it was Cuba's wealth that caused the bondage of Cubans, and hence he determined to make the island a desolation, especially to the Spanish. In many respects Gomez was hardly less cruel than Weyler when the latter gave effect to his concentration policy, which was

MÁXIMO GOMEZ.

practically a policy of extermination. Nor did Gomez look with favor on intervention by the United States, since the success of Cuban arms, as he himself said, depended on the unity and coöperation of the rebel forces. Perhaps for this reason little aid was forthcoming from the insurgents when the United States took the field against Spain, destroyed her fleets, took Santiago, and compelled her to cede and evacuate Cuba.

GOMPERS, SAMUEL, an American labor leader; born in London in 1854. His education was received at night-school, while he worked by day, first as a shoemaker and then as a cigar-maker. At the age of 13 he arrived in the United States, and became a member of the International Cigar-Makers' Union. He was sent as a delegate to the early conventions of the American Federation of Labor, where he developed abilities as a leader, and was elected to various offices, and lastly to the presidency. He held the office for several years, was defeated for reelection in 1894, but was reelected the following year. He edited *The American Federationist*, a monthly periodical started in March, 1894, to which the leading writers on labor subjects contributed. Mr. Gompers believed in "high dues, thorough organization, perfect discipline, sick-benefits, out-of-work benefits, traveling-benefits, and in maintaining an aggressive position at all times for higher wages and shorter hours." In 1894 he was committed to free silver, a position from which he receded in 1896. He also believed in the principle of the income tax, on a graduated scale, for all self-supporting men.

SAMUEL GOMPERS.

GOMPERZ, THEODOR, an Austrian philologist; born at Brünn, March 29, 1832; educated at Vienna, and studied at Venice, Naples, Paris, London, and Oxford; became extraordinary-professor of philology at Vienna in 1869; and ordinary-professor in 1873. He was noted for his work in connection with the papyri found at Herculaneum, and published *Philodemi Epicurei de Irá* (1864); *Philodemus de Musica* (1885); and *Herculanische Studien* (1886). Besides other contributions to the elucidation of classic texts, he assisted in the translation of the complete works of John Stuart Mill (1869-80).

GOMUTI PALM, the *Arenga saccharifera*, a very useful palm of the East Indies, yielding an abundant palm wine, from which sugar is obtained, and also *arrack* (by distillation).

GONAIVES, a seaport of Haiti, in lat. 19° 26' N., long. 72° 43' W., on a beautiful bay on the west coast, with an excellent harbor, 65 miles N.N.W. of Port-au-Prince. It exports coffee, cotton, logwood, and hides. Population 1887, 18,000.

GONÇALVES DIAS, ANTONIO, a Brazilian poet; born at Caxias, Maranhão, Aug. 10, 1823; was educated in law at Coimbra, Portugal; began to be attracted to literature, however, and wrote poems for

the Portuguese journals. On his return to Brazil, he accepted a position as professor of history at the Pedro II College, Rio de Janeiro; and in 1846 published *Primeiros Cantos*, which was followed by a second volume of poems in 1848, and *Ultimos Cantos* in 1851. From 1850 to 1858 he studied the scientific schools in Germany and France, and returned to Brazil to become ethnographer and historian of a government expedition to the province of Ceará, in connection with which he published ethnographical and historical papers, and a dictionary of the Tupy language. His latter years were spent in Europe. He met his death by shipwreck, Nov. 3, 1864, while returning to Brazil. The first four cantos of his epic, *Os Tymbiras*, appeared at Leipsic in 1857, and an edition of his works was published in 1860.

GONCOURT BROTHERS, DE, two French literary and artistic collaborators. The elder, EDMOND LOUIS ANTOINE HUOT DE, was born at Nancy, May 26, 1822, and died in Champrosay, in Seine-et-Oise, July 16, 1896; the younger, JULES ALFRED HUOT DE, was born in Paris, Dec. 17, 1830, and died at Autenil, June 20, 1870. They started their career with a novel, *En 18 . . .* (1851), published conjointly. This was followed by *Salon de 1852*. They then commenced a series of studies on the society and art of the eighteenth century in France. A list of their works from this time includes: *Histoire de la Société Française pendant la Révolution et sous le Directoire* (1854); *Portraits Intimes du XVIII^e Siècle* (1856); *Histoire de Marie Antoinette* (1858); *Les Maîtresses de Louis XV and Les Hommes des Lettres* (1860); *La Femme au XVIII^e Siècle* (1862); *Germaine Lacerteux* (1865); *Idées et Sensations* (1866); *Manette Salomon* (1867); *Madame Gervaisais* (1869). After the death of the younger brother, Edmond de Goncourt published, under his own name: *L'Œuvre de Prud'hon* (1877); *Les Frères Zenganno* (1879); *Chérie* (1884); *Madame Saint-Huberti* (1885); *Mlle. Clairon* (1890). The *Journal des Goncourt*, *Mémoires de la Vie Littéraire*, 1851-70 (1887-88); *Second Series* (1890), is one of the most remarkable of contemporary records. It is an interesting repository of criticism. The brothers' novels were intensely and uncompromisingly realistic, the Goncourts being regarded as the founders of the French realistic school. The bulk of Edmond de Goncourt's fortune, by the terms of his will, was to be applied to founding an Académie des Goncourt, the membership to consist of ten men named in the testament.

GONDOLA. See VENICE, Vol. XXIV, p. 157.

GONDS. See GONDWANA, Vol. X, p. 770.

GONIATITES, a genus of fossil cephalopodous mollusks of the family of ammonites. They are distinguished by the septa, which are lobed, but not serrated, hence the suture is a continuous, undulating line. Numerous species have been recognized, all from Palæozoic strata.

GONIDIUM, a name applied to asexually formed spores produced by the gametophyte of lower plants, serving the purpose of rapid multiplication. The name was formerly applied to the algæ living in symbiotic relations with the lichen-fungus.

GONOCOCCUS. See SURGERY, AMERICAN, in these Supplements.

GONORRHEA. See SURGERY, AMERICAN, in these Supplements.

GONZALES, a city and the capital of Gonzales County, southeastern central Texas, on the Guadalupe River and on the San Antonio and Aransas Pass and the Southern Pacific railroads. It is one of the oldest towns of the state. The inhabitants are mainly engaged in shipping agricultural products, especially cotton and stock raised in the vicinity. It is the seat of Guadalupe College. Population 1890, 1,641; 1900, 4,297.

GONZALEZ, MANUEL, a Mexican soldier; born near Matamoras, Mexico, in Oct., 1820; became a guerrilla leader in 1853, and was prominent in the reactionary party. In 1861-65 he assisted Juarez against the French and imperialists and in 1876, joined with Diaz to overthrow Lerdo de Tejada. In 1878 he became Secretary of War under Diaz, whom, in November, 1880, he succeeded as President, resigning in 1884. He was afterward governor of the state of Guanajuato. He died in Mexico, May 8, 1893.

GONZÁLEZ Y DÍAS-TUÑÓN, ZEFERINO, a Spanish cardinal; born at Vitoria, the capital of the province of Alava, Jan. 28, 1831; entered the Dominican order; went to the Philippines and taught theology and philosophy; returned to Spain in 1867, and was named bishop of Malaga in 1874; was promoted to the archbishopric of Cordova in 1875; and transferred to the see of Seville in 1883. He was elevated to the dignity of cardinal priest, Nov. 10, 1884; and next year was appointed archbishop of Toledo and primate of Spain, but retired from the see the year following, on account of ill health. The Cardinal published several works, including a study of the philosophy of St. Thomas (1864); a work on elementary philosophy, adopted in the higher seminaries and schools of Spain and a history of philosophy, a second edition of which appeared in 1883. He died at Seville, Nov. 29, 1894.

GOOBER. See GROUND-NUT, Vol. XI, p. 221.

GOOCH, FRANK AUSTIN, an American chemist; born in Watertown, Massachusetts, May 2, 1852; graduated at Harvard in 1872, and became attached to the chemical laboratory there. He served with the United States Geological Survey, and in 1886 was appointed professor of chemistry at Yale. He was a member of many scientific societies, wrote on improved methods of analysis, and devised the "Gooch filter," much used in chemical laboratories.

GOODALE, DORA READ, an American writer; born at Mount Washington, Berkshire County, Massachusetts, Oct. 29, 1866. She exhibited great precocity, and at an early age, with her sister Elaine, began to write verses, a selection of which appeared in *St. Nicholas*, December, 1877; and both sisters afterward published several volumes conjointly (see EASTMAN, ELAINE, in these Supplements). Dora afterward devoted herself to the study of art.

GOODALE, GEORGE LINCOLN, an American

botanist; born in Saco, Maine, Aug. 3, 1839; graduated at Amherst, and in medicine at Harvard and Bowdoin in 1863. He became professor of botany at Harvard and director of the botanical garden, and was elected a member of the council of Harvard College library and of the faculty of the museum of comparative anatomy. Dr. Goodale published *Wild Flowers of North America* (1882); *Vegetable Physiology* (1885); *Vegetable Histology* (1885); the last two expanded into *Physiological Botany* (1885); and *Useful Plants of the Future* (1891).

GOODALL, FREDERICK, a British artist; born in London, England, in 1820; became A.R.A. in 1852, and R.A. in 1863. He is best known by his historical paintings and works of genre. He won the Isis medal of the Society of Arts for a drawing of *Lambeth Palace*, and also a silver medal from the same society for *The Finding of the Dead Body of a Miner by Torchlight*, his first attempt in oil. Among his more noted works are *The Village Festival*; *The Summer Song*; *The Song of the Nubian Slave*; *A Bedouin Mother and Child*; *Rachel and Her Flock*; *An Intruder in the Bedouin's Camp*; *Palm Sunday*; *Glencoe*; and *The Time of Roses*.

GOODE, GEORGE BROWN, an American ichthyologist; born in New Albany, Indiana, Feb. 13, 1851. He graduated at Wesleyan University in 1870, and in 1871 became an assistant in the natural history museum at that institution. His work there resulted in a call to the Smithsonian Institution in 1873, where, from 1874 to 1887, he was chief of the division of fisheries. In 1887 he was appointed United States Fish Commissioner, but resigned the following year to become assistant secretary of the Smithsonian Institution and director of the National Museum. His knowledge of museum administration, together with his rank as an ichthyologist and general scientist, placed him among the foremost of American scholars. He was director of the Natural History Division at the Centennial Exhibition of 1876; United States commissioner to the international fisheries, exhibitions at Berlin (1880) and at London (1883); represented the Smithsonian Institution at the expositions in New Orleans, Cincinnati and Louisville in 1884, Chicago in 1893, and Atlanta in 1895. He wrote numerous papers on ichthyology and allied subjects. Among his publications are *Game-Fishes of the United States* (1879); *American Fisheries* (1880); *Natural History of the Bermudas* (1882); *American Fishes* (1887); and *Oceanic Ichthyology* (1894). He died in Washington, District of Columbia, Sept. 6, 1896.

GOODELL, WILLIAM, an American missionary; born at Templeton, Massachusetts, Feb. 14, 1792; graduated at Andover Theological Seminary in 1820; and two years later sailed for the island of Malta. In 1823 he went to Beirut, and in 1831 to Constantinople. He endured many hardships, and during his 29 years of missionary life was compelled to change his residence 33 times. He returned to the United States in 1865. In 1843 he completed a translation of the Scriptures from

the original Greek and Hebrew into Armeno-Turkish, and later contributed papers to the *New York Observer*, entitled *Reminiscences of the Missionary's Early Life*. He died in Philadelphia, Feb. 18, 1867.—His son, WILLIAM GOODELL, an American physician, was born on the island of Malta, Oct. 17, 1829; graduated in medicine at Williams College in 1851, and at Jefferson Medical College in 1854. He first practiced at Constantinople, afterward at West Chester, Pa., and in 1865 was appointed physician of the Preston Retreat, in Philadelphia. In 1874 he was elected professor of gynæcology in the University of Pennsylvania, and president of the Obstetrical Society of Philadelphia. He published *Lessons in Gynæcology* (1886). Died in Philadelphia, Oct. 27, 1894.

GOOD HOPE, CAPE OF, a high rocky promontory, extending from the southwestern coast of Africa. Its height is about one thousand feet above sea-level, and it extends out for thirty miles south of Cape Town. On the point is situated a lighthouse, at lat. 34° 22' S., long. 18° 30' E. To the east is False Bay. The cape was first discovered in 1486 by Bartholomew Diaz.

GOODRICH, CHARLES AUGUSTUS, an American clergyman and author; born at Ridgefield, Connecticut, in 1790; graduated at Yale in 1812; studied theology, and was pastor in the First Congregational Church, in Worcester, Massachusetts (1816–20); in Berlin (1820–48); and afterward in Hartford, Connecticut. He published, among other works, *Lives of the Signers* (1829); *History of the United States of America* (revised edition, 1867); *Geography of the Chief Places Mentioned in the Bible* (1855); *Child's History of the United States* (1855); *Great Events of American History*; etc. He died at Hartford, Connecticut, Jan. 4, 1862.

GOODRICH, CHAUNCEY ALLEN, an American lexicographer; born in New Haven, Connecticut, Oct. 23, 1790; died there, Feb. 25, 1860. He was graduated at Yale in 1810; was a tutor there from 1812 to 1814; pastor of the Middletown (Connecticut) Congregational Church in 1816–17; professor of rhetoric and oratory in Yale from 1817 to 1839; and professor of pastoral theology until his death. He contributed extensively to various periodicals, and in 1829 established the *Christian Quarterly Spectator*, being its sole editor from 1836 to 1839. Besides some educational works, he edited *Webster's Unabridged Dictionary* and *Select British Eloquence*.

GOOD ROADS MOVEMENT. See LEAGUE OF AMERICAN WHEELMEN, in these Supplements.

GOODS AND CHATTELS, a term used in legal documents to designate all personal property, whether in possession or merely existing through right of action. Choses in action, leaseholds and implements are included within the general term *goods and chattels*. If used without limitation in a will, these words will pass all personal property, of every kind or nature. In criminal law, however, the term has not this broad application, and such articles as mortgages, notes, money and other choses in action do not

usually come within the meaning of this general term. If such property is described in an indictment as goods and chattels, it will not be sufficient.

GOOD TEMPLARS, INDEPENDENT ORDER OF, a total abstinence society founded in New York City in 1851, and extended to Great Britain in 1868, where the grand lodge was organized by Joseph Nalin in 1870. Since then the order has spread over the whole of the United States, Canada, England, Scotland, Ireland, Wales, Germany, Denmark, Sweden and Norway, the West Indies, East, West and South Africa, Australia, New Zealand, British India, Iceland, etc. All persons who become members have to subscribe to the pledge that they will never make, buy, sell, use, furnish, nor cause to be furnished, to others, as a beverage, any spirituous or malt liquors, wine or cider, and will discountenance the manufacture and sale thereof in all proper ways. The order seeks to protect the abstinent and to reclaim the inebriate. Both sexes are admitted to equal privileges and office. The order consists of local or subordinate lodges, which meet weekly; county or district lodges, which meet quarterly; grand or national lodges, which meet annually; and an international supreme lodge, which meets biennially, in different countries. In 1876, when the international lodge met in Kentucky, a disruption occurred over the negro question, there then arising two branches, one mainly British, the other mainly American. The two branches were reunited at the double meeting held at Saratoga, May, 1887, no one being excluded on account of color or race. The order publishes about forty newspapers and magazines, in different languages. The international lodge has met in the United States, Canada, in the four divisions of the United Kingdom, in Sweden, and in 1897 in Zurich, Switzerland. The united international supreme lodge had, in 1896, a membership of 403,849, distributed throughout its one hundred local lodges. There is a juvenile order, enjoining abstinence from strong drink, tobacco, profanity and gambling.

GOOD WILL, in the legal application of the term, the benefit or advantage which attaches to a particular trade, profession or occupation, in addition to the mere value of the property used to carry on such business, by reason of the public patronage which is given to such business from regular customers or patrons who have been accustomed to deal there because of the convenience of the location or skill and reputation of the proprietor. Many other elements may exist, through accident, necessity or ancient partiality, to increase the value of the good will of a business, especially if it be a business of long standing. It may be described as the probability that the old customers will trade at their accustomed place. The good will of a business may be sold, the same as other personal property, and if a trade or business be sold together with the good will, the old proprietor may generally start a similar business in the same locality, but not an identical business,

and he must not solicit the old customers to leave the business thus sold. He may, however, stipulate that he will not engage in a similar business in the same locality for a certain period of time, and such agreement will be enforceable.

GOODWIN, DANIEL RAYNES, an American educator; born at North Berwick, Maine, April 12, 1811; graduated at Bowdoin in 1832; studied at Andover Theological Seminary one year, leaving to accept a tutorship at Bowdoin, where, after two years' travel in Europe, he was professor of languages from 1835 to 1853. In 1853 he became president of Trinity College, Hartford, where he was also professor of Christian ethics; in 1860 he became provost of the University of Pennsylvania, where he also taught intellectual and moral philosophy. In 1862 he filled the chair of apologetics, exchanging this in 1865 for that of systematic divinity. In 1868 he resigned his office with the university to become dean of the divinity school; and in 1884 again became professor. He was regularly a delegate to the general conventions of the church and one of its directing spirits. He was the author of *The New Realistic Divinity, neither the Religion of the Bible and Prayer-book, nor of the Holy Catholic Church* (1879); *Notes on the Revision of the New Testament Version* (1883); and *Christian Eschatology* (1885). He died at Philadelphia, March 15, 1890.

GOODWIN, NAT. C., an American comedy actor; born in Boston, Massachusetts, in 1857; studied under Wyzeman Marshall, a Boston actor and manager. Edward E. Rice, to get rid of his importunities, gave him a chance, in 1874, to make his first appearance on any stage, as the fore legs of the heifer in his burlesque of *Evangeline*, in which he made a hit—such as it was. In 1876 he appeared in *Law in New York*, wherein he succeeded, probably more by his imitations of well-known actors than by a higher histrionic talent. At Haverly's Theater he subsequently appeared for 150 nights as Captain Crosstree, in the burlesque of *Black-eyed Susan*. By this time he had become pretty well known, and he had a play named *Hobbies* written for him by a Boston playwright, Benjamin E. Woolf, in which he made quite a success, in conjunction with Eliza and Jennie Weathersby. After playing in that for two seasons, he appeared in *The Member for Slocum*, *The Black Flag*, and other plays. His success in recent years in *Lend Me Five Shillings* and some modern light comedies has been pronounced. One of the most artistic triumphs of his later career was in Augustus Thomas's play of *In Miz-zoura*, wherein his rôle was that of a typical Missouri sheriff, making a study and presentation of character, which shows that he possesses much of the creative art necessary to make a permanent comedy success. He acquired even greater prestige in *David Garrick*, in which impersonation he demonstrated his ability to accomplish the highest achievements of his art.

GOODWIN, WILLIAM WATSON, an American scholar; born at Concord, Massachusetts, May 9, 1831; graduated at Harvard in 1851; and studied

in German universities, taking his doctor's degree at Göttingen in 1855. He was a tutor at Harvard from 1856 to 1860, when he became professor of Greek literature. He was a member of several scientific and historical societies, and has contributed to various literary and philological journals. He published *A Greek Grammar*, and *Syntax of the Moods and Tenses of the Greek Verb*, which has gone through many editions, etc.

GOODYEAR, CHARLES, an American inventor; born at New Haven, Connecticut, Dec. 29, 1800; died in New York City, July 1, 1860. At the age of 21 he became a member of the firm of A. Goodyear and Sons, manufacturers of steel hay-forks, but in 1830, through the failure of Southern houses, the firm was compelled to suspend. From that time until his death Mr. Goodyear was engaged in experimenting with India rubber. In 1836 he discovered that the action of nitric acid on rubber produced a curing effect; but this was superseded by the use of sulphur, and in 1844 he obtained his patent for vulcanized rubber, and lived to see his material applied to nearly 500 uses, and to give employment to more than 60,000 persons. He received medals from the exhibition at London in 1851, and from the Paris exposition of 1855, and the cross of the Legion of Honor from Napoleon III.

GOOKIN, DANIEL, an American colonial soldier; born in Kent, England, about 1612. He removed to Virginia in 1621, and in 1644 went to Cambridge, Massachusetts. He was appointed a captain of the militia and a member of the house of deputies, was speaker of the house in 1651, was chosen magistrate in 1652, and in 1656 was appointed superintendent of all the Indians acknowledging the government of Massachusetts, retaining the office until his death. In 1681 he became major-general of the colony. He wrote *Historical Collections of the Indians of Massachusetts* (published posthumously), and a *History of New England*, which was lost and never published. He died at Cambridge, Massachusetts, March 19, 1687.

GOORKHAS, GORKHAS OR GURKHAS, the principal race of NEPAL; q.v., Vol. XVII, pp. 341 et seq.

GOOSANDER. See MERGANSER, Vol. XVI, pp. 35, 36.

GOOSE LAKE lies partly in Jackson County, Oregon, and partly in Siskiyou County, California. It is thirty miles long and ten miles wide, and at the southern end has an outlet called Pitt River.

GOPHER. See *Geomyinae*, under MAMMALIA, Vol. XV, p. 419. The name is also applied to *Spermophilus*. See also MARMOT, Vol. XV, p. 560.

GOPHER-WOOD. The probable identity of the gopher-wood of Scripture with the cypress is maintained partly on account of the qualities of the wood and partly on account of the agreement of the radical consonants of the names.

GORAL, a kind of goat antelope (*Nemorhedus goral*), inhabiting the rocky heights and lofty table-lands of India. It is of a grayish-brown color, dotted with black, the cheeks and throat

white; the horns are short, inclined, recurved and pointed. It is a wild and fleet animal, hunted for its excellent flesh. An allied species is found in Japan.

GORDIAN KNOT. See ALEXANDER THE GREAT, Vol. I, p. 481.

GORDIUS. See NEMATOIDEA, Vol. XVII, p. 325.

GORDIUS, KING. See GORDIAN, Vol. X, p. 781.

GORDON, SIR ARTHUR HAMILTON, a British colonial governor; born at Aberdeen in 1829. After graduating at Cambridge University, he served as private secretary to his father, the fourth Earl of Aberdeen, who was Prime Minister from 1852 to 1855. In 1854 Sir Arthur became a member of Parliament for Beverley. In 1858 he was attached to Mr. Gladstone's mission to the Ionian Islands. In 1861 Sir Arthur was appointed governor of New Brunswick, Trinidad, Mauritius and of the Fiji Islands in 1875, then just made a British colony. In 1880 he was made governor of New Zealand, and governor of Ceylon in 1883. He was raised to the peerage as Baron Stanmore in 1893.

GORDON, CHARLES GEORGE, a British military hero; "strange compound of Oliver Cromwell and Thomas à Kempis," as he has well been termed, and best known as "Chinese Gordon" or "Gordon Pasha," was born at Woolwich, England, Jan. 28, 1833. He came of a race of soldiers. His great-grandfather, an officer in Lascelles' Regiment, was taken prisoner by a Highland kinsman at Prestonpans. His grandfather, a British officer, fought under Pepperell and beside the American colonists at the capture of Louisburg, and saw the gallant Wolfe die on the Heights of Abraham. His father was an artillery officer, his mother, a daughter of that Samuel Enderby whose two tea-ships furnished the Boston Tea Party, and another of whose ships discovered Enderby Land. With two brothers, Charles Gordon entered the army of his native land, winning a commission in the Royal Engineers in July, 1852, when for two years this paladin, who was to set the East and the West aflame, helped in the prosaic duties of planning fortifications for Milford Haven. In December, 1854, he sailed for the Crimea, and soon commenced to exhibit in the advanced trenches that fearless fatalism which marked his entire life. His intense religious convictions controlled every action. Milton's lines,

"Necessity or chance
Approach me not, and what I will is fate,"

were indeed applicable to Gordon's belief in himself. His will he held to be identical with that

GORDON STATUE,
LONDON.

of his Maker, whose instrument he felt and knew he was.

He took part, unscathed, in the costly attack on the Redan, was stunned in the trenches by a ricochet round shot, but recovered to help carry "The Quarries" and watch the French storm the Mamelon. One of his fellow-officers here was Lord Wolseley, the future commander-in-chief of the British army, and Gordon's life-long admirer and friend. His magnetic influence was early noticed. The officers were all his friends, the men followed him in the face of murderous fusillades, and his superiors marked him as a man to whom great deeds could be intrusted to be done well. His corps commander reported him for promotion, and he was permitted to accept the French decoration of the Legion of Honor. The terms of the Treaty of Paris kept him for nearly a year delimiting the new boundary line amid Muscovite squalor and Danubian mosquitos. He did similar work in Armenia, and was promoted captain April 1, 1859, after seven years' service. In July, 1860, he was ordered to China, arriving too late for the attack on the Taku forts, but in time to see the Summer Palace at Peking destroyed, and to get over \$250 prize-money. The Taiping rebellion, which had worried China for 12 years, then reached its flood-tide. Hung, its leader, a mission-taught Chinaman, had brought his hordes to the gates of Shanghai itself. The Chinese army, trained to a high state of excellence by the American General Ward, fell, after his death, under the command of an American adventurer named Burgevine. He came to loggerheads with Li Hung Chang, the governor-General of the Kiang provinces, and was dismissed in January, 1863. Then Gordon was placed in command of the European-clad Chinese army. He was but 30, and a brevet major. His officers were of every nationality and character. In two years he fought 33 actions in two campaigns, took numerous walled towns, and crushed the formidable rebellion which had so long wasted the fairest provinces of China. (See also CHINA, Vol. V, p. 652.)

Returning from China in 1865, "as poor as when he had entered it," he performed engineer duties at Gravesend till 1872, establishing ragged schools and spending his scanty pay for his wards, when he went to Bulgaria as commissioner. In 1873, Khedive Ismail of Egypt employed him to open up the regions of the equatorial Nile and the lakes which recent explorations had discovered, a work formerly begun by Sir Samuel Baker. Gordon was appointed governor of the equatorial provinces, and in February, 1874, he marched, with two thousand Egyptian and negro troops, to Gondokoro, on the White Nile. Here he established a chain of fortified posts as far as the great equatorial lakes. He aimed at the suppression of the slave trade, which had formerly been the one great object of Soudanese commerce. The Khedive supported his efforts, raised him to the rank of pasha, and made him governor of all Soudan in 1877.

In 1879, when the new khedive, Tewfik, failed to support him, Gordon resigned his position and returned to England, where he was greeted with enthusiasm. After a brief holiday in Switzerland, he was sent to Mauritius as commanding royal engineer. He became interested in the Seychelles Islands, made curious researches as to the site of the Garden of Eden, and drew up a plan of defense for the Indian Ocean. Afterward he was appointed major-general, and had command of the British troops in Cape Colony till 1882. Then the British government asked him to proceed once more to the Soudan, where the Moslem populations had risen in revolt, defeated the Egyptian armies, and isolated the Egyptian garrisons. On Jan. 18, 1884, he left London for Khartoum to conduct the evacuation of the country. It was a cut-and-run policy at the best. The scene at the depot was curious. The commander-in-chief held open the car door, the Secretary of State for Foreign Affairs purchased his ticket, while Lord Wolseley carried his portmanteau. They had looked their last on a soldier friend. Cairo was reached January 27th, and on February 18th he entered Khartoum. The inhabitants hailed him as "Sultan" and "Father." He made a bonfire of the tax-books and instruments of torture, and sat down to judge in righteousness and equity. The timorous Egyptian soldiery were sent to safety, and with his trusty Soudanese, whom he refused to desert, the lion-hearted, simple soldier waited for the end. The Mahdi and his fanatics soon closely invested the city, in which Gordon did miracles in the way of defense. His companion in arms, Colonel Stewart, was killed on the Nile, and on Jan. 28, 1885, two days before a relieving advance guard of English soldiery reached the city, Gordon perished, a victim to treachery, and Khartoum was in the hands of the Mahdi.

Neglected and deserted by his country, thus fell one of the noblest soldiers of the Anglo-Saxon race. A serpent in military wisdom, in the ways of the world he was as simple as a little child. Religious enthusiast and fatalist to the core, he believed his end foreordained from all time. The ragged waifs of Woolwich were his kings, and their well-doing his great reward. Curious mixture of mediæval Crusader and modern Christian, Quixotic in impulse at times, the idol of the soldiery and the beau-ideal of his superiors, he won with his simple faith the reverence of the English-speaking world.

If posthumous homage can atone for those long, weary days in the heart of torrid Egypt, when straining eyes watched the mirage of the desert, and at times wondered if its fanciful forms were the dust raised by a tardy column of rescuers, the shame of England's desertion of her soldier-martyr may be yet obliterated. But three statues in the metropolis are decorated on the anniversaries of England's three great losses—Nelson, who would have looked with his sightless eye on an order to retreat, and Beaconsfield, who would have rescued Gordon if it bankrupted an empire share in the honors paid to one of "the bravest

of the brave. ' But the paladin, who, while he lived as "one of Plutarch's men, talked with us face to face," outranks the peers. The last and most fitting homage came in August, 1896, when Li Hung Chang, Viceroy of China, visiting Trafalgar Square, London, bent in ceremonious reverence before the bronze presentment of him whose herculean efforts had done so much for the Flowery Land.

Among his published writings were *Reflections in Palestine* (1884); *Letters from the Crimea, the Danube and Armenia* (1884); *Letters to his Sister* (1888); *The Journals of Major-General C. G. Gordon, C.B., at Khartoum*, printed from the original MSS. (1885); *General Gordon's Last Journal*, a lithographed fac-simile (1885); *Private Diary of Exploits in China* (1885); *Diary of the Taiping Rebellion* (1890). Many biographies of Gordon have also appeared; among them, Archibald Forbes's *Chinese Gordon*, and Egmont Hake's *Life of General Gordon*, from each of which many facts have been drawn for this article.

GORDON, GEORGE HENRY, an American soldier; born in Charlestown, Massachusetts, July 19, 1825; graduated at West Point in 1846, and was wounded at Cerro Gordo, in the Mexican War. He resigned to practice law, but in 1861 re-entered the service, fought at the second battle of Bull Run, commanded a brigade at Antietam, took part in the operations against Mobile, and was brevetted major-general of volunteers. He wrote a *History of the Second Massachusetts Regiment of Infantry* (1875); *History of the Campaign of the Army of Virginia under John Pope from Cedar Mountain to Alexandria* (1879); *A War Diary of Events in the War of the Great Rebellion* (1882); and *Brook Farm to Cedar Mountain* (1883). He died in 1886.

GORDON, JOHN BROWN, an American soldier and public man; born in Upson County, Georgia, Feb. 6, 1832. He was educated at the University of Georgia, and served in the Confederate army, being rapidly promoted from captain to major-general, and was eight times wounded in battle. In politics a Democrat, he was a Presidential elector in 1868 and 1872, and a delegate to the national Democratic conventions of those years.

GEN. J. B. GORDON.

In 1872 he was sent by the state legislature to the United States Senate to succeed Joshua Hill. He resigned in 1880, took an active part in state politics, and was governor of Georgia from 1886 to 1890. In 1890 he was elected to the United States Senate to succeed Joseph E. Brown, and was re-elected in 1891.

GORDON-CUMMING, CONSTANCE FREDERICA. See CUMMING, GORDON C. F., in these Supplements.

GORDONIA, a genus of plants of the family *Ternstroemiaceæ*. *G. Lasianthus*, the loblolly-bay, which covers considerable tracts of swampy coast along the Atlantic from Virginia southward, and

along the Gulf of Mexico, is a handsome shrub or small tree, with evergreen leaves, and large, white, fragrant flowers. The bark is used in tanning. *G. pubescens*, also called *Franklinia*, grows in Georgia and Florida. The genus is closely related to the camellias and teas.

GORDONSVILLE, a village of Orange County, northern central Virginia, on the North Anna River, and on the Chesapeake and Ohio railroad, at its junction with the Southern railroad, 87 miles S.W. of Washington, District of Columbia. It has several factories and a trade in grain and agricultural produce. Population, 1900, 603.

GORE, CHRISTOPHER, an American lawyer and public man; born in Boston, Massachusetts, Sept. 21, 1758; graduated at Harvard in 1776; studied law and practiced in Boston, and was United States district attorney for Massachusetts from 1789 to 1796, being the first to hold that office. He was appointed in 1796, with William Pinckney, commissioner to England to settle the French spoliation claims (q.v.), and succeeded in securing the restitution of much property. He remained in England for seven years and was then appointed *chargé d'affaires* in London; after holding this position one year, he returned to the United States in 1804, and was elected governor of Massachusetts in 1809, and United States Senator in 1814. In 1817 he was a Presidential elector, and then retired from active political life. Among his chief bequests was one to Harvard College of \$100,000, and Gore Hall, the library building, was named in his honor. He died at Waltham, Massachusetts, March 1, 1827.

GORE, GEORGE, a British physicist; born in Bristol, in January, 1826; attended private schools, but was otherwise entirely self-taught. He studied so successfully that he made an international reputation in electrical research and discovery. He was elected a fellow of the Royal Society in 1865; the degree of LL.D. was conferred upon him by the University of Edinburgh in 1877. Among his many important achievements may be mentioned that of the discovery of "explosive antimony"; his invention of the "voltaic balance," by means of which he was able to prove the existence of new chemical substances known as "solution compounds," etc. He was the first to apply commercially the process of electroplating. Among his publications are *Theory and Practice of Electrodeposition* (1856); *The Art of Electrometallurgy* (1877); *The Art of Scientific Discovery* (1878); *The Scientific Basis of National Progress and Morality* (1882); *Electrochemistry* (1885); and *The Art of Electrolytic Separation and Refining of Metals* (1890). In 1891 he received a civil-list pension of \$750 a year in recognition of his valuable services to British science.

GÖRGEI, ARTHUR, the commander-in-chief of the Hungarian forces during the revolt of 1848-49. He was born at Toporcz, Hungary, Feb. 5, 1818; received a military education and entered the Hungarian Body Guard, resigned in 1845 to study chemistry at Prague, and rejoined

the army at the time of the uprising against Austria. In 1848 he distinguished himself by compelling Jellachich's Croatian reserve of 10,000 men to capitulate to him. In March, 1849, he was made commander-in-chief. For an account of his military operations, see HUNGARY, Vol. XII, pp. 372, 373. After his surrender in August, 1849, Görgei was imprisoned for some time at Klagenfurt, in Carinthia, but eventually set at liberty. In *My Life and Acts in Hungary* (2 vols.; London, 1852) he wrote a comprehensive account of the revolutionary period. In 1868 he returned to Hungary.

GORGES, SIR FERDINANDO, a British "lord-proprietary" of Maine; born at Ashton, England, about 1565. During the war with Spain he served in the English army, and in 1604 became governor of Plymouth. He then became interested in the colonization of the New World, and formed a company for that purpose. After several unsuccessful attempts at settlement, the council resigned its charter, and in 1639 Gorges obtained a new charter, which constituted him lord-proprietary of the province of Maine. He divided it into two counties, and these were further divided into hundreds and parishes. In 1640 he sent his nephew, Thomas Gorges, to Maine as deputy governor. In 1642 he chartered the city of Gorgiana, Maine, afterward renamed York. Sir Ferdinando died in England in 1647. A grandson, Ferdinando, disposed of his rights in Maine to Massachusetts in 1677 for £1,250.

GORGONIDÆ. See CORALS, Vol. VI, p. 385.

GORHAM, a village of southern Coos County, northern New Hampshire, situated on the Andros-coggin River, and on the Grand Trunk and the Boston and Maine railroads, 91 miles N.W. of Portland, and about ten miles N.E. of Mount Washington, in the White Mountains. It has fine scenery, and is a favorite place of summer resort. Population 1890, 1,710; 1900, 1,797.

GORHAM CONTROVERSY, a controversy that raged in the Church of England in regard to baptismal regeneration. It arose out of the refusal of Dr. Henry Phillpotts, bishop of Exeter, to institute the Rev. George Cornelius Gorham (1787-1857), then holding a curacy in the diocese, to the vicarage of Bramford Speke, in the same diocese, which had been presented to the latter by the Lord Chancellor on behalf of the Queen. The grounds of refusal were, that Mr. Gorham held unsound doctrine as to the efficacy of the baptismal sacrament, in so far that infants are not made therein members of Christ and the children of God, as the catechism and formularies of the church declare them to be. Mr. Gorham brought the case before the Court of Arches of Canterbury, which decided, in 1849, that baptismal regeneration is the doctrine of the church, thus upholding the bishop; the case was therefore dismissed, with costs. Mr. Gorham then appealed to the judicial committee of the Privy Council, which found that opinions in no important particular to be distinguished from those held by Mr. Gorham had been maintained

without censure by many eminent prelates and divines of the church, and that therefore such points of difference had been left open, and were not thought to be inconsistent with subscription to the Articles of Faith. The judgment of the Court of Arches was thus reversed. After some further litigation, Mr. Gorham was reinstated in his vicarage. The question was a burning one among the controversialists of the church during the two years it was in the courts. See PUSEY, Vol. XX, p. 117; and STANLEY, Vol. XXII, p. 451.

GORILLA. See APE, Vol. II, p. 149.

GORITZ, an Austrian town. See GÖRZ, Vol. X, p. 788.

GORMAN, ARTHUR P., an American public man, conspicuous in connection with the tariff legislation of 1894; born in Howard County, Maryland, March 11, 1839; and educated in the public schools of his native county. In 1852 he was appointed page in the Senate of the United States, and continued in the service of the Senate until 1866, when he was postmaster. He was subsequently

ARTHUR P. GORMAN.

collector of internal revenue for the fifth district of Maryland (1866-69), member of the house of delegates of the Maryland legislature, as a Democrat (1869), speaker of that house (1871), and Maryland state senator (1879). He was elected to the United States Senate in January, 1880, as a Democrat, to succeed William Pinkney Whyte. He took his seat in this last capacity, March 4, 1881, and was re-elected in 1886, and 1892 for the term expiring March 3, 1899. He became president of the Chesapeake and Ohio Canal Company in 1872, of which corporation he had been a director since the year 1869.

GORRINGE, HENRY HONEVCHURCH, an American naval officer; born in Barbadoes, West Indies, Aug. 11, 1811; died in New York City, July 7, 1885. He went to the United States as a lad, and entered the United States navy as a sailor; in July, 1862, rose to the rank of commander, and when, in 1879, the Khedive of Egypt offered to the United States one of the noted Alexandrian obelisks, he was commissioned to bring it to this country. He arrived at Alexandria, Oct. 16, 1879, and with the assistance of one hundred natives entered on his labors. On Dec. 6, 1879, the stone was moved from its pedestal and placed in a horizontal position, an iron steamer was purchased at a cost of twenty-five thousand dollars, and the obelisk introduced through an opening made in the side of the vessel. It was safely transported to New York City, arriving July 20, 1880, and was conveyed from the Hudson River to Central Park. The shaft is 69 feet high, was erected at Heliopolis about 1600 B.C., and removed to Alexandria in the year 22 B.C. The

total expense of its removal and erection in the park amounted to over one hundred thousand dollars. Gorringe published a *History of Egyptian Obelisks* (1885).

GORTON, SAMUEL, the founder of the sect of Gortonians or Nothingarians; born at Gorton, England, about 1600; died in Rhode Island, 1677. He was for a time employed by a linen-draper of London, but in 1636 sought religious freedom in Boston, Massachusetts. Becoming involved in disputes, he removed to Plymouth; was accused of heresy and expelled from the colony; went with a few followers to Aquidneck (now Newport), Rhode Island, and was there publicly whipped for treating magistrates with contempt. He then settled at Pawtuxet, Rhode Island, but again became involved in disputes with the colonists, and in 1642 removed to Shawomet (now Warwick), Rhode Island, where he purchased land of the Indians. His claim to the property was contested; he and his ten followers were taken to Boston, tried as heretics, and sentenced to imprisonment and hard labor; but the sentence was afterward commuted to banishment. Gorton then went to England, procured an order giving him possession of the lands at Shawomet, returned there, and subsequently became a preacher and magistrate of much consideration. His sect survived him for nearly one hundred years. They were known as "Gortonians," and termed "Nothingarians" because they refused all set forms in religious worship and had no ministry.

GORTSCHAKOFF, PRINCE ALEXANDER MICHAELOVITCH, a Russian statesman; born July 16, 1798. He entered the diplomatic service in 1824, and in 1841 was ambassador extraordinary to Stuttgart to arrange a marriage between the Crown Prince of Würtemberg and the Princess Olga, sister of the Emperor Nicholas. During the Crimean War (1854-56) he was ambassador at Vienna, and then became Minister of Foreign Affairs. In 1863 he was appointed Chancellor of the Empire, and from this time until the ascendancy of Bismarck, he was the most powerful minister in Europe. In 1870, on the occasion of the Franco-Prussian war, he announced that Russia would no longer be restricted in her rights in the Black Sea as defined by the treaty of 1856, his demands being conceded at the London conference of 1871. He participated in the famous Berlin conference of 1878, yet it was evident that his prestige as a diplomat was then waning; in 1882 he retired from public life and went to Baden-Baden, where he died, March 11, 1883.

GOschen, GEORGE JOACHIM, an English statesman; born in London, Aug. 10, 1831, of German parents; educated at Oxford; engaged in mercantile pursuits from 1853. In 1863 he was elected to Parliament for London as a Liberal; in November, 1865, became vice-president of the Board of Trade, and in 1866 was made chancellor of the Duchy of Lancaster. In the Gladstone ministry of 1868 he was president of the Poor Law Board, and from March, 1871, until February, 1874, was First Lord of the Admiralty. Becoming dissatis-

fied with the course of the Liberal party on the question of extension of the franchise, he withdrew from Parliament in 1878. He was many years connected with a leading banking firm in London, and in 1876 he concluded an arrangement with the Khedive for a reorganization of the bonded debt of Egypt. In 1883 he was sent to Constantinople as a special representative to arrange disputed questions with the Sultan. He succeeded Lord Randolph Churchill as Chancellor of the Exchequer in the Salisbury ministry in 1887, as a Liberal-Unionist, resigning with his colleagues in 1892. At the general elections in 1892 and 1895, he was again returned for St. George's, Hanover Square, Middlesex, and in the latter year became a member of Lord Salisbury's Cabinet, as First Lord of the Admiralty. He was lord rector of Aberdeen University (1888), and published *The Theory of Foreign Exchanges* (1863-90).

GOSHEN, a city and the capital of Elkhart County, central northern Indiana, midway between Chicago and Toledo, on the Cleveland, Cincinnati, Chicago and St. Louis and the Lake Shore and Michigan Southern railroads. Elkhart River furnishes abundant water-power, and great quantities of lumber are manufactured here. There are flour-mills, a woolen-mill, oil-mill and plow factories. Its lumber trade averages 20,000,000 feet annually. Population 1890, 6,033; 1900, 7,810.

GOSHEN, a railroad junction and one of the capitals of Orange County, southeastern New York, on the New York, Lake Erie and Western and the Lehigh and New England railroads, 52 miles N.W. of New York. Dairying is the chief business; tiles and bricks are also made. It has very good water-works. Population 1900, 2,826.

GOSNOLD, BARTHOLOMEW, an English navigator; born in England about the middle of the sixteenth century; died in Virginia, Aug. 22, 1607. He was associated with Sir Walter Raleigh in his attempt to found a colony in Virginia, and later headed an expedition fitted out by the Earl of Southampton to found a colony in New England. On March 26, 1602, he left Falmouth for this purpose, with a ship and twenty colonists, attempting to cross the ocean in a direct line. Contrary winds took his vessel to the Azores, whence, after a tedious voyage of seven weeks, he reached the coast of Maine. Following the coast south, he anchored near York Harbor on May 14th, and discovered and named Cape Cod, May 15th. The navigators landed on an island near the mouth of Buzzard's Bay, which they named Elizabeth, in honor of the Queen, and left after a hard winter. Gosnold then united with the company of which Captain John Smith was a leader, to locate in Virginia. They received their charter April 10, 1606, the first granted for a British settlement in North America. On December 19th Gosnold left England with three small ships and about one hundred colonists, and in 1607 they reached James River and settled Jamestown. The place was unhealthful and within a year Gosnold and half the colonists died.

GOSSAMER. See ARACHNIDÆ, Vol. II, p. 296.

GOSSE, EDMUND WILLIAM, an English poet and litterateur, only son of Philip Henry Gosse,

EDMUND W. GOSSE.

the naturalist; born in London, Sept. 21, 1849, and educated in Devonshire. In 1867 he was appointed assistant librarian in the British Museum, and in 1875 became translator to the English Board of Trade. In the seventies he paid repeated visits to the countries of Northern Europe, for the purpose of studying Scandinavian literature, the fruit of which appeared in his *Studies in Northern Literature* (1879), and in his translations and editings of the novels of such writers as Björnson, Jonas Lie and other Norwegian authors, and in reviews of works by Scandinavian and Dutch writers in the London critical journals. His poetical work is represented by *Madrigals, Songs and Sonnets* (1870); *On Viol and Flute*, a collection of lyrics of much beauty (1873); *King Erik*, a tragedy (1876); *The Unknown Lover*, a drama (1878); *New Poems* (1879); *Firdausi in Exile, and Other Poems* (1886); and *Russet and Silver* (1894). In English poetical biography and criticism he wrote a *Life of Gray* (1882); a *Life of Congreve* (1888); *From Shakespeare to Pope* (1885); *Seventeenth-Century Studies* (1883); *History of Eighteenth-Century Literature* (1889); *Gossip in a Library* (1891); and *The Jacobean Poets* (1894). In 1880-81 he contributed numerous critical essays for Humphry Ward's *English Poets*, and in 1886 for the English Worthies Series, a monograph on *Sir Walter Raleigh*. In 1892 appeared a mediæval romance, *The Secret of Narcisse*, in 1893 a collection of essays entitled *Questions at Issue* and in 1896 *Critical Kit-Kats*.

GOSSE, PHILIP HENRY, a British zoölogist; born at Worcester, April 10, 1810; died in Torquay, Devonshire, Aug. 23, 1888. In 1827 he went to Newfoundland as a clerk, and was afterward, in turn, a farmer in Canada, schoolmaster in Alabama, and professional naturalist in Jamaica. Returning to England, he published, in 1840, the *Canadian Naturalist*, and, after another stay in the West Indies, settled in England, devoting himself to literary work. He was elected a fellow of the Royal Society in 1856. Among his works, besides the one named, are *Birds of Jamaica* (1847); *Natural History of Birds, Reptiles and Fishes* (1848-51); *British Ornithology* (1853); *History of the Jews* (1851); *Assyria* (1852); *The Aquarium* (1854); *History of British Sea-Anemones* (1858); *The Romance of Natural History* (1860); *Land and Sea* (1865); *The Great Atlas Moth of Asia* (1879). Many of the illustrations of these were original, and his works are still valued in the market on account of their colored plates.

GOSSELIN, PASCAL FRANÇOIS JOSEPH, a French geographer; born at Lille, Dec. 6, 1751. From

1772 to 1780 he traveled in the East for the purpose of working out its ancient geography. In 1789 he was elected a deputy to the National Assembly; became a member of the Central Administration of Commerce in 1791, and a member of the Ministry of War (1794). In 1790 he was elected to the Institute, and in 1799 succeeded Barthélemy as keeper of the medals in the National Library. Among his important geographical works are *Géographie des Grecs Analycée* (1790); *Recherches sur la Géographie des Anciens* (4 vols., 1798). He died in Paris, Feb. 7, 1830.

GOSSYPIUM, the genus whose species yield cotton, belonging to the family *Malvaceæ*, or mallows. They are herbs or shrubs, with lobed leaves, purple, yellow or white flowers, subtended at base by an involucre of three large, heart-shaped, leaf-like bracts, and numerous seeds, upon whose surface is developed the abundant cotton fibers. *G. herbaceum*, whose leaves have five short and roundish lobes, is the common cotton-plant of the South; *G. Barbadosense*, whose leaves have five taper-pointed lobes, yields the Barbados or Sea Island cotton, while *G. arboreum*, the tree-cotton of the South, is cultivated only for ornament.

GOT, FRANÇOIS JULES EDMOND, a French comedian; born at Lignerolles (Orme), Oct. 1, 1822; received his education at the Collège Charlemagne; entered M. Provost's class at the Conservatoire, where, in 1842, he carried off the second, and in 1843, the first, prize for comedy. After a year's compulsory service in the army, he made his first bow to a Parisian audience in 1844, at the Comédie Française, of which society he became a member in 1850. M. Got's reputation steadily increased, until he became recognized as one of the greatest actors on the French stage. He excelled in the representation of the leading comic parts in the old classical dramas, and created scores of characters in modern pieces. On Aug. 4, 1881, M. Turquet, the Under-Secretary of State for Fine Arts, publicly conferred the cross of the Legion of Honor on M. Got, he being the first French actor to receive this distinction.

GÖTA ELF, a river of southern Sweden, about 55 miles in length, discharging the waters of Lake Wener into the Cattegat; noted for the romantic grandeur of its scenery and its cataracts, of which Trollhätta is the most beautiful. It is made navigable and is connected with the Baltic by means of canals and Lakes Wener and Wetter.

GOTHA. See SAXE-COBURG AND GOTHA, *post*, p. 2641.

GOTHA ALMANAC (*Almanach de Gotha*), a universal political register, published annually at Gotha, in Germany. It was issued in the German language from 1764 to 1804, and from the latter date till the present has been published both in French and German.

GOTHAM, a parish of Nottinghamshire, England, whose people were long famed for their stupidity, being termed, in derision, "the wise men of Gotham." The name was, by Irving, humorously applied to the city of New York, and the appellation is still a familiar one in the United States.

GOTHENBURG PLAN OR SYSTEM. See LIQUOR LAWS, in these Supplements.

GOTHIC ARCHITECTURE. See ARCHITECTURE, Vol. II, p. 425.

GOTHIC LANGUAGE. See GOTHS, Vol. X, pp. 852-854.

GOTHLAND, the southernmost province of Sweden, bounded by the Skager-Rak, Cattogat, Baltic Sea and the province of Svealand. It is well watered, rich in lakes, and fertile. Its scenery is beautiful. The southern part is devoted to agriculture. The northern part produces iron, copper, alum, nickel and other ores. Area, 35,803 square miles; population 1891, 2,595,236.

GOTLAND, an island in the Baltic Sea, belonging to Sweden, 60 miles W. of the province of Gothland. Communication with the mainland is had by means of a submarine telegraph. It is about 65 miles long by 30 wide. Area, 1,219 square miles. Population 1894, 51,495, mostly engaged in agriculture, shipping and fishing.

GOTTSCHALK, LOUIS MOREAU, an American pianist and composer; born in New Orleans, Louisiana, May 8, 1829; died at Tijuca, Brazil, Dec. 18, 1869. He early showed marked musical ability, and at the age of 12 was sent to Paris, where he studied the piano with Hallé and Camille Stamatz, and harmony with Maleden. He appeared in 1845, in Paris, at a concert, and gave promise of coming distinction as a performer on the pianoforte. Later he gave concerts in Spain and Switzerland, and in 1853 returned to the United States. His first concert was given in Boston; thereafter he made the rounds of other cities, and visited Mexico and the West Indies. He was engaged to perform in Rio Janiero during a musical festival in November, 1869, and on the second evening's performance was taken seriously ill, and died December 18th. He composed many piano solos which became popular, a cantata, and a symphony entitled *La Nuit des Tropiques*.

GÖTZ VON BERLICHINGEN. See BERLICHINGEN, GÖTZ VON, in these Supplements.

GOUGH, JOHN BARTHOLOMEW, an American temperance lecturer; born at Sandgate, Kent, England, Aug. 22, 1817; died in Philadelphia, Pennsylvania, Feb. 18, 1886. At the death of his father in 1829, he went to the United States, and was for a time employed on a farm in Oneida County, New York; in 1831 he went to New York City, where he became a bookbinder. After some years of poverty, caused by dissipated habits, which finally reduced him to the utmost

misery, he reformed and devoted himself to the temperance cause, laboring with great zeal and success. He visited England in 1853 by invita-

tion of the London Temperance League, and lectured for two years in the United Kingdom. His publications include *Autobiography* (1870); *Temperance Lectures* (1879); *Sunlight and Shadow; or, Gleanings from My Life-Work* (1880).

GOULBURN, EDWARD MEYRICK, English clergyman, and author; born in London, Feb. 11, 1818; educated at Eton and Oxford, from which he graduated with first-class honors; elected fellow of Merton College (1841); head master of Rugby (1850-58); prebendary of St. Paul and chaplain to the Queen (1859); dean of Norwich (1866). He published a number of devout books worked out of his sermons, which were much read, and owed their popularity as much to their charm of style as to their high intellectuality and practical piety. Other works, such as his *Devotional Studies of the Holy Scriptures; Thoughts on Personal Religion; The Idle Word; and Pursuit of Holiness*, reached a number of editions. He wrote, also, several controversial works; held to a strict allegiance to the Athanasian creed; discussed liturgical and ecclesiastical themes; and wrote on the antiquities of Norwich Cathedral. Died in Tunbridge Wells, May 3, 1897.

GOULD, BENJAMIN APTHORP, an American educator; born at Lancaster, Mass., June 15, 1787; graduated at Harvard (1814); principal of Boston Latin School up to 1828, contributing greatly to the fame of that institution. His *Adams's Latin Grammar* (1825), and his annotated editions of *Ovid, Horace, and Virgil*, were among the earliest efforts of the kind in America. On account of ill health he abandoned teaching and engaged in the China and East India importing business. Died in Boston, Oct. 24, 1859.

GOULD, BENJAMIN APTHORP, an American astronomer and statistician, son of the preceding; born in Boston, Massachusetts, Sept. 27, 1824; Harvard graduate (1844); master of the Roxbury Latin School; studied for several years in the Paris, Berlin, Greenwich, Göttingen and Altona observatories; was a pupil of François Arago. He returned to the United States in 1848, and in 1851 took charge of the longitude determinations of the United States Coast Survey, using the telegraphic method adopted later in Europe. After the first transatlantic cable was laid in 1866, he joined the meridian systems of the two continents by precise observations. By his efforts a connected series of longitude measurements was established from New Orleans to the Ural Mountains. He successively organized and managed the Dudley Observatory, in Albany, New York, from 1856 to 1859, and the Argentine Republic's observatory at Cordoba, from 1868 to 1885, where he made a number of photographs of precision for all important southern clusters of stars, from 1872 to 1884. Returning to Cambridge in 1885, he resumed publication of his *Astronomical Journal*, previously published, at his own expense, from 1849 to 1861, and open only to original observations. In 1862 the United States Sanitary Commission placed him in charge of their statistics, when he elaborated an entirely new system of anthropological measurements, deducing formulæ which have been verified by subsequent research, and exhibiting the typical proportions of the human body. These

JOHN B. GOUGH.

observations were published in tabulated form, under the title of *Military and Anthropological Statistics of American Soldiers* (1869). Among his astronomical writings, the most noted are *On the Transatlantic Longitude* (1869), and *Zone Catalogue*, containing more than 105,000 observations of 73,160 stars. He died at Cambridge, Massachusetts, as the result of an accidental fall, Nov. 27, 1896.

GOULD, HANNAH FLAGG, an American poetess, a sister of Benjamin Apthorp, the elder; born in Lancaster, Massachusetts, Sept. 3, 1789. She was the constant companion of her father (a soldier and patriot, wounded at the battle of Lexington), and her first verses were imbued with true Revolutionary fire. Her poems, published from 1832 to 1854, in magazines and book-form, were much admired, both in England and America. She died in Newburyport, Massachusetts, Sept. 5, 1865.

GOULD, JAY, an American financier; born at Roxbury, New York, May 27, 1836. His only education, outside of a village

JAY GOULD.

school near his father's farm, consisted in a few months' stay at the academy at Hobart, New York, where he paid his expenses by keeping a blacksmith's accounts. He early developed a taste for mathematics and surveying, and on leaving school was employed in making surveys for county maps, in which he displayed great skill and accuracy. His work covered Ulster and Delaware counties, a history of the latter being published by Mr. Gould in 1856. Accumulating five thousand dollars out of his earnings, he invested it, in 1856, in a tanning and lumber business. Meanwhile, in the school of hard experience, he gradually acquired the shrewdness of insight, talent for direction, and rare capacity for labor, which were destined to culminate in the acquirement of a colossal fortune. The lumber venture prospered; but just previous to the panic of 1857 he sold his plant and put his small capital into stock of the bank of Stroudsburg, Pennsylvania. After the financial crisis, he bought the bonds of the Rutland and Washington railroad at ten cents on the dollar, and managed this railroad practically alone, and in 1859 he established himself as a broker in New York City. He and his business associate, James Fisk, Jr., were connected with the panic in the New York gold-room known as "Black Friday" (1873). He succeeded Fisk as president of the Erie Railway Company till 1872, and afterward invested largely in the stocks of other railways (Union Pacific, Wabash, Missouri Pacific, etc.) and telegraph companies (Atlantic Pacific and Western Union), and in 1881 became interested in the elevated-railroad system of New York City. In 1882, a question of his financial stability having arisen, Mr. Gould produced for examination stock-certificates in his own name having a face value of \$53,000,000, and offered to produce \$20,000,000

more if desired. In 1887 it was estimated that he controlled over 13,000 miles of railway, or nearly a tenth of the entire mileage of the country. He died Dec. 2, 1892, leaving an estate generally valued at \$70,000,000.

GOULD, JOHN, an English ornithologist; born at Lyme, Dorsetshire, in 1804. From an early age he interested himself in the study of natural history, and in 1824 became employed in preparing specimens for the museum of the London Zoölogical Society, of which he became curator in 1827. He gave much attention to humming-birds, and collected more than two thousand specimens, illustrating three hundred and twenty species. He died Feb. 3, 1881. For an account of his works, see ORNITHOLOGY, Vol. XVIII, p. 12.

GOULD, THOMAS R., an American sculptor; born in Boston, Massachusetts, in 1818. He early engaged in mercantile business, and did not devote himself to art until later in life, his first work being done in 1851, when in the studio of Seth Cheney, the crayon artist and engraver, his sole instructor. His colossal heads of *Christ* and *Satan* (1863) were among the most important of his earlier efforts. He followed his profession in Boston until 1868, when he went to Italy and settled in Florence. In 1878 Mr. Gould visited Boston. Among his most celebrated works are *The West Wind* (Centennial Exhibition, 1876); *Cleopatra*; *Timon of Athens*; the *Ghost*, in *Hamlet*; and *Ariel*. He also executed several portrait statues; among them, one of *John Hancock*, now in Lexington Town Hall, and a number of busts. Died in Florence, Italy, Nov. 26, 1881.

GOUNOD, CHARLES FRANÇOIS, a French composer; born in Paris, June 17, 1818. He received his musical education at the Paris Conservatory, where he enjoyed the instruction of the celebrated composers, Halévy and Lesueur. In 1839 he won the annual *grand prix*, offered by the National School of Fine Arts, by his cantata *Fernand*, and was thereby enabled to go to Rome for further study. At Rome

CHARLES F. GOUNOD.

he entered a priests' seminary for the purpose of devoting himself to old Italian church music. In 1843 he returned to Paris, and became musical director of the Catholic Church of Foreign Missions, which position he held for six years. In 1851 he produced a *Messe Solennelle*, his first great success. After that, inspired by the famous cantatrice Pauline Viardot-Garcia, he gave his attention more to secular music, producing first the lyric drama *Sappho* and several pastorals, which were not much appreciated. But his *Faust*, which appeared in 1859, captivated the French and even the most difficult to please among the Germans, and placed him in the front rank of modern composers. Afterward he composed other less popular operas, including *Phlémon et Baucis*; *La Reine de Saba*; *Mireille*; *La Colombe* ("The Pet Dove"); and *Romeo and Juliet*—all from 1860 to 1867. The war of 1870

drove him to London, but he returned to Paris in 1875, and there produced the opera *Polycucte* (1878); a cantata, *Gallia*; the opera *Le Tribut de Zamora* (1881); the oratorios *Redemption* (1882) and *Mors et Vita* (1885); also *Messe à Jeanne d'Arc* (1887); *The Funeral March of a Marionette*; and an *Ave Maria* for soprano, violin, and organ. He was a member of the French Institute from 1866, and grand officer of the Legion of Honor from 1880. Died at St. Cloud, near Paris, Oct. 18, 1893. His style was eclectic, with high ideals. He chose his librettos with great care, obtaining much of his inspiration from the merit of the poems.

GOUPIL, JULES BAPTISTE MICHEL ADOLPHE, a French publisher of line-engravings and etchings; born in Paris, March 7, 1806, a grandson of the famous painter, G. Drouais, and the founder of the art-publishing house that bears his name and has branches in Berlin and New York. As early as 1848 he attempted to introduce high-class works of art into America, but found the tariff regulations unfavorable. Later he triumphed over all obstacles, and met with growing success. He devoted much time and money to the preservation and improvement of line-engraving, which threatened to be deserted for lithography. When photographic processes of reproduction were in their infancy he foresaw the immense future before them, and made constant experiments in that direction, in his extensive works at Asnières. He finally succeeded in obtaining color-effects by blending etching and water-colors by methods which are still secret. He obtained the highest distinctions in all leading world's fairs, from that at London (1851) to that at Chicago (1893). Died May 9, 1893.

GOUR. See GAUR, Vol. X, pp. 112-116.

GOURA, the largest and finest genus of the pigeon family. The *G. coronatus*, found in New Guinea, and domesticated in Java on account of its excellent flesh, reaches the size of a turkey. It is characterized by a large fan-like crest on the head and the slaty blue of its wings marked lengthwise with whitish and chestnut stripes. See PIGEON, Vol. XIX, p. 85.

GOURAND, GEORGE EDWARD, an American soldier and promoter; born at Niagara Falls, New York, in 1841; enlisted before his twentieth year, and distinguished himself by unusual bravery; at Honey Hill he rallied, single-handed, a stampeded regiment; at Pocotaligo, with two comrades, he stormed a heavily manned redoubt and captured two cannons. Having left the army as a brevet colonel in 1865, he busied himself with securing capital for meritorious inventions. He managed the European rights of Edison's telephone, electric light and phonograph, and made them financial successes abroad. In 1889 he presented the perfected phonograph to the French Academy of Sciences.

GOURKO, JOSEPH VLADIMIROVITCH, COUNT, a Russian general; born Nov. 15, 1828, of a Polish family. He served as captain in the infantry during the Crimean War. In 1861 he became colonel, when he helped in the suppression of the Polish insurrection; major-general in 1867; and lieutenant-general in 1876. At the outbreak of the war with Turkey in 1877, he commanded the Russian van-

guard. At the Shipka Pass he attacked Suleyman Pasha, and suffered great losses during the heroic struggle of August 16th, 21st and 25th; later, at the head of a corps of cavalry, he invested Plevna, where Osman Pasha resisted him gallantly. Gourko compelled him to surrender, Dec. 10, 1877. After this, Gourko crossed the Balkans in midwinter with 75,000 men—a feat of extraordinary difficulty—and captured Sophia, Philippopolis, etc. At the end of the Turkish war he was made a general of cavalry and a count, and in 1883 military governor of Warsaw, but was superseded by one of the Russian grand dukes, as he treated the Poles with unnecessary severity.

GOVERNEUR, a town of St. Lawrence County, northern New York, situated on the Oswegatchie River, and on the Rome, Watertown and Ogdensburg railroad, 36 miles N.E. of Watertown; settled in 1806; named after Gouverneur Morris, the first proprietor. It contains a seminary and several large mills; better known for its marble-quarries and talc-mines, the latter unique of their kind in the United States. Population 1900, 3,689.

GOVAN, a police burgh of Lanark and Renfrew shires, on the south bank of the Clyde, outside the municipal boundaries of Glasgow, but connected with the city by continuous rows of buildings. Was considered, until the middle of the seventeenth century, one of the largest boroughs in Scotland. Now its leading industries are ship-building and silk-spinning. Population 1891, 61,364.

GOVE, a city and the capital of Gove County, Kansas, 11 miles from Grainfield, the nearest railroad station, on the Union Pacific railroad. It is in a fertile, stock-raising region, several salt-mines and quarries. Population of town and township, 1900, 421.

GOVE, AARON, an American educator; born at Hampton Falls, New Hampshire, Sept. 26, 1839; a graduate of Illinois State Normal University; served during the Civil War as major in the Thirty-third Illinois Infantry (1861-65); appointed city superintendent of schools of Denver, Colorado, in 1874; an organizer of uncommon ability; in 1888 was elected president of the National Educational Association.

GOVERNMENT BY INJUNCTION. See INJUNCTION and DEBS, EUGENE V., in these Supplements.

GOVERNMENT'S ISLAND See ROCK ISLAND, in these Supplements.

GOVERNORS. The pendulum or ball-governor for motors is being displaced in high-class motors by the inertia governor, which gives a much more regular rate of speed than is possible with the older type. In order that the ball-governor may act to reduce the speed of a steam-engine, it is first necessary that the speed of the engine shall increase, and it is also necessary that this increase shall continue a sufficient length of time to overcome the inertia of the balls or weights, and cause them to act on the valves so as to shut off the steam and reduce the speed. In the case of the inertia governor, which is now commonly set in the fly-wheel of an engine or motor, the weights, assisted by springs, are made to operate by their inertia, so that when there is a tendency to increased speed the inertia of the weights,

acting in opposition to this tendency, shall operate the eccentrics, and through them the valves. As a result, a tendency to increased speed can be checked within less than one revolution of a fly-wheel. Inertia is made use of where centrifugal force fails, and both principles exist in the one governor. The centrifugal action sets the pace, and the inertia maintains the rate.

Other forms of governor are known as the fan or fly-wheel governor, because making use of a rotating fan that beats against the air; the gyroscope, or screw-propeller governor, in which a small form of propeller rotates in a liquid; and the hydraulic governor, for any one of various forms in which the resistance of water is utilized to control the speed. See also STEAM-ENGINE, Vol. XXII, pp. 505-508; and MECHANICS, Vol. XV, pp. 768, 769.

GOVERNOR'S ISLAND, a small island about three quarters of a mile in length, in Boston harbor, just two miles E. of the city. At its northern end stands Fort Winthrop, a part of the defense system of the harbor.

GOVERNOR'S ISLAND, an island in New York Bay, a half-mile S. of the Battery, with which it is connected by a regular ferry line. It has an area of about 65 acres, and is, and has been since before the War of 1812, owned and occupied by the War Department. It is now the headquarters of the Department of the East, and has a number of interesting buildings and forts. The last are Fort Columbus and Castle William. There is also a military museum, containing many interesting relics, among them the war-horse, admirably mounted, which Sheridan rode from Winchester to the battle of Cedar Creek.

GOWAN, JOHN E., an American engineer; born in Lynn, Massachusetts, March 6, 1825. Spent most of his life abroad, in the employ of foreign governments; was prominently connected with the successful raising of the Russian fleet sunk by order of the Czar in the harbor of Sebastopol at the beginning of the Crimean War. He died in Paris, France, May 7, 1895.

GOWAN, OGLE ROBERT, a Canadian author and public man; born in County Wexford, Ireland, in 1796. He received a good education, and early became editor of the *Antidote*, a newspaper of Dublin. Removing to Canada in 1829, he resided for a time in Escott, and afterward in Toronto. He served with distinction against the insurrectionists of 1837-39; was a member of the Canadian Parliament from 1834 to 1841, and was for a time post-office inspector and subsequently a license-officer in Toronto. He was the founder of the Orange lodges of North America, and was for twenty years their grand master. He died in Toronto, Canada, Aug. 21, 1876. He wrote *Annals of Orangeism*; and *Orangeism: Its Origin and History*.

GOWANDA, a village of western New York, on Cattaraugus Creek, the boundary line dividing Cattaraugus and Erie counties, on the Buffalo and Jamestown railroad, 32 miles S. of Buffalo. It has manufactories of flour, agricultural implements, carriages and cheese-boxes. Population 1890, 1,657; 1900, 2,143.

GOWER, MRS. LILLIAN NORDICA. See DOME, MRS. ZOLTAIN F., in these Supplements.

GOWERS, WILLIAM RICHARD, an English physician and specialist in nervous diseases; born in London in 1845; educated at Oxford; graduated as M.D. from London University in 1870; became successively physician to the National Hospital for Paralytics and Epileptics, and professor of clinical medicine at University College; chiefly known on account of his work on the structure and diseases of the nervous system. In his *Manual and Atlas of Ophthalmoscopy* (1890) he indicated the changes occurring within the eye in diseases of the brain, kidneys, etc. The following of his works are considered authoritative, abroad and in America: *Epilepsy and Convulsive Diseases* (1880) and his excellent *Manual of Diseases of the Nervous System* (2 vols., 2d ed. 1890). He was a distinguished amateur etcher, and was elected F.R.S. in 1887.

GOWRIE CONSPIRACY, a plot against the person of King James VI of Scotland by John Ruthven, Earl of Gowrie, and others, in the attempted execution of which Gowrie and his brother were slain. See SCOTLAND, Vol. XXI, p. 509.

GOYAZ, a large province in the central part of Brazil, occupying 288,546 square miles of generally mountainous territory. The climate, in general, is healthy, but in the northern part fever and goitre are common. At one time it was famous for gold and diamonds; but these products are about exhausted. Now the industries are stock and tobacco raising and quartz-crystal mining, of which quantities are exported, known as Brazilian pebbles, and used for the manufacture of lenses. The population, 227,572 in 1890, are mostly half-breeds, though there are a great many wild Indians. The capital, Goyaz, on the river Vermelho, has a population of 8,000.

GRAAFIAN VESICLES OR EGG-SACS, named after Regner de Graaf, who first discovered and described them. See REPRODUCTION, Vol. XX, pp. 407-413.

GRACE, WILLIAM GILBERT, a British cricketer; born near Bristol, England, July 18, 1848. He early evinced a great aptitude for cricket, and in 1864 played with the South Wales team, at Brighton, against the Gentlemen of Sussex. The next year he was eagerly sought for, and his reputation established. Between 1864 and 1879 Mr. Grace completed 415 innings in first-class matches, and obtained, in all, 20,842 runs, the most wonderful record of batting performances, till then, chronicled. He was recognized as the best bat in England, a good bowler, an excellent fielder and a first-rate captain. In 1884 he played three innings of over one hundred against the Australians, and in 1886 his record was equally high. Mr. Grace's skill seems to lose nothing with his advancing years, his score of over two hundred runs occurring twice in the season of 1895. He is a member of the medical profession. He published a valuable book on cricket (1891), and in 1895 received a large sum of money as a testimonial from his thousands of admirers throughout the British Empire.

GRACE NOTES OR GRACES, the English

name for those ornaments (appoggiaturas, etc.) in vocal and instrumental music more correctly known as *agrémens*; said to be the invention of Chambonnières, the celebrated organist of Louis XIV (1670). Their use was regulated for the first time in a work by Emmanuel Bach (1752), who warns musicians against their too frequent use, while admitting that they are of great value in "connecting the notes, enlivening them, and giving them especial emphasis."

GRACIAS, a department and city of Honduras. Gracias, founded in 1536 under the name of Gracias á Dios, is the capital, and a thriving place of some 7,000 inhabitants. See HONDURAS, Vol. XII, p. 130.

GRADIENTIA, same as URODELA. See AMPHIBIA, Vol. I, pp. 751, 770.

GRADUAL. See MISSAL, Vol. XVI, pp. 508, 510.

GRADY, HENRY WOODON, an American journalist; born at Athens, Georgia, in 1851. He was

HENRY W. GRADY.

educated at the State University at Athens, and took a post-graduate course at the University of Virginia. For some time he acted as Southern correspondent of the *New York Herald*. Later, became editor of the *Rome (Georgia) Daily Commercial*, and afterward of the *Atlanta Herald*, and finally, in 1882, he became part owner and managing editor of the *Atlanta Constitution*, which he conducted until his

death. In December, 1886, he accepted an invitation to address the New England Society at their annual dinner. His address was received with the greatest enthusiasm, and the whole country was stirred by his eloquent and impassioned plea for "the New South." He became the idol of his native state, and contributed, in a marked way, to the healing of the feuds between North and South. Just prior to his death he delivered an address on *The Future of the Negro* before the Merchants' Association in Boston. He succumbed to an attack of pneumonia, contracted in New York, and died on his way home, Dec. 23, 1889. A handsome monument and a public hospital were erected in Atlanta, Georgia, to his memory. A biography of Henry Grady has been written by Joel Chandler Harris.

GRÆÆ, in Greek mythology, sisters of the Gorgons, and guardians of the only weapons with which the Gorgons could be overcome. See PERSEUS, Vol. XVIII, p. 560.

GRAF, ARTURO, an Italian litterateur; born in Athens in 1848; studied law in Naples; settled in Roumania for several years; went to Rome as private tutor at the university, 1874; was called to the Turin University in 1876, as professor of the Romance languages, and was appointed, in 1882, to the chair of Italian literature. Best known as a poet and student of middle-age lore, he published several valuable volumes; among them, *Verse* (1874); *Poesie*

e Novelle (1876); and, in prose, *Miti, Legende e Superstizioni del Medio Evo* (2 vols., 1891-93). He contributed to the *Nuova Antologia* and other high-class Italian magazines.

GRAFFITI. See PALEOGRAPHY, Vol. XVIII, p. 143.

GRAFTING. See HORTICULTURE, Vol. XII, pp. 213, 214, 236, 237.

GRAFTON, a city and the capital of Walsh County, northeastern North Dakota, on the Park River, 11 miles W. of the Red River of the North, and on the Great Northern and the Northern Pacific railroads. It is the trading-center for a large wheat-growing district, and ships much grain. Population 1890, 1,594; 1900, 2,378.

GRAFTON, a town and the capital of Taylor County, northern West Virginia, on Valley River, and on the Baltimore and Ohio and the Monongahela River railroads. The chief industries are lumber, coal-mining and manufacturing. It has the car-shops of the Baltimore and Ohio railroad, a pump factory, a foundry, and saw and flour mills. Population 1890, 3,159.

GRAFTON, AUGUSTUS FITZROY, DUKE OF, an English statesman; born Oct. 1, 1735. He entered political life by opposing Bute in 1763, and later was Secretary of State in the ministry of the Marquis of Rockingham. In 1766 he became First Lord of the Treasury in Pitt's administration, and on account of the sickness of Pitt was leader after September, 1767. His rule was marked by violence and bribery, and against it were directed many of the letters of Junius. In 1768 he was chosen chancellor of the University of Cambridge, which appointment he held until his death, which occurred March 14, 1811.

GRAHAM, a village and the capital of Alamance County, northwestern central North Carolina, on the Haw River and on the Southern railroad, 50 miles W.N.W. of Raleigh. It has several cotton and tobacco factories, and ships the produce of the vicinity. Population 1890, 991; 1900, 2,052.

GRAHAM, CHARLES KINNAIRD, an American civil engineer; born in New York City, June 3, 1824. He entered the United States navy as midshipman, and after serving in the Mexican War, returned to New York and studied civil-engineering. When the Civil War broke out, he became major of a volunteer corps, and served throughout the war, attaining the rank of brigadier-general, after which he returned to his profession in New York. In 1873 he was appointed chief engineer in the department of docks, and in 1878 surveyor of the port of New York. He died at Lakewood, New Jersey, April 15, 1889.

GRAHAM, SIR GERALD, a British soldier; born in Cumberland in 1831. He entered the Military Academy at Woolwich in 1847, and received his commission as second lieutenant in the Royal Engineers in 1850. He served through the Crimean War, and fought at Alma and Inkermann, and was wounded twice. He received numerous medals, and for conspicuous gallantry was made a knight of the Legion of Honor. He took part in the China war of 1860, and was wounded severely at the assault of the Taku forts.

He was present at the capture of Pekin. In 1882 he commanded a brigade of the division in the Egyptian campaign, receiving the thanks of both Houses of Parliament. He defeated a large force of Arabs at Tamai with great slaughter. In 1885, after the fall of Khartoum, he commanded an expedition to Berber, and commenced the Suakin and Berber railroad. On the 20th of March, 1885, he fought the battle of Hasheen. He was decorated with the grand cross of St. Michael and St. George by Queen Victoria. He contributed to current literature some valuable articles upon military matters, and translated Von Goetze's *Account of the German Engineers' Operations During the Campaign 1870-71*. His *Last Words with General Gordon*, contributed to the *Fortnightly*, was a paper of much public interest.

GRAHAM, JAMES DUNCAN, an American engineer and topographer; born in Virginia, April 4, 1799, and educated at the United States Military Academy. He entered the army as third lieutenant of artillery in 1817, and became adjutant at West Point two years later. During the years 1819-21 he accompanied Major Long on his explorations of the West, and from that time until 1838 he was employed as assistant on military and railway surveys. In 1838 he was made major of topographical engineers, and employed in determining the boundary line between the United States and Texas, and later upon the survey of the northeastern boundary line of the United States, the "Mason and Dixon" line, and the boundary between the United States and the British provinces. He was promoted colonel of engineers in 1863, and engaged on the Coast Survey until his death, Dec. 28, 1865.

GRAHAM, SYLVESTER, an American vegetarian; born in Suffield, Connecticut, in 1794. In 1823 he entered Amherst College, intending to prepare for the ministry, but did not complete the course. He began to preach in 1826, and in 1830 engaged in temperance work. Becoming convinced that intemperance could be cured by the adoption of a purely vegetable diet, he afterward applied the theory to other forms of disease. He published *Essay on Cholera* in 1832, and in 1839 delivered a course of lectures entitled *Graham Lectures on the Science of Human Life*. He also published *Bread and Bread-making; A Lecture to Young Men*; and one volume of *The Philosophy of Sacred History*. His dietetic system occasioned the terms *Grahamism* and *Grahamite*. He died in Northampton, Massachusetts, Sept. 11, 1851.

GRAHAM, WILLIAM ALEXANDER, an American statesman; born in Lincoln County, North Carolina, Sept. 5, 1804. He became a lawyer, and in 1833 was elected to the legislature of North Carolina. Several times he was chosen speaker of the assembly of that state, and in 1841 he was elected United States Senator. From 1845 to 1849 he was governor of North Carolina. When Fillmore became President, he appointed Graham Secretary of the Navy. In June, 1852, the Whig party nominated him for Vice-President, but he was defeated. After this he remained in private life until 1864, when he became a Senator in the Confederate Con-

gress. He died in Saratoga, New York, Aug. 11, 1875.

GRAHAME, JAMES, a Scotch historian; born in Glasgow, Dec. 21, 1790. He graduated at St. John's College, Cambridge, and in 1812 was admitted to the Scottish bar. He subsequently removed to the south of England. In 1827 he published the first two volumes of a history of the United States, and in 1836 a new edition in four volumes, bringing the history down to the year 1776. The work was highly praised by Prescott and other historians, but was not popular in England, because of its thoroughly American spirit. A Philadelphia edition was published in 1845. He died in London, England, July 3, 1842.

GRAHAM OF CLAVERHOUSE, JOHN, VISCOUNT DUNDEE. See DUNDEE, Vol. VII, pp. 536-559.

GRAIN COAST OR MALAGHETTA. See AFRICA, Vol. I, p. 269.

GRAIN-ELEVATOR, a building specially constructed for elevating, storing and loading grain into cars or vessels. The grain-elevator is a building of comparatively recent times, having been constructed to meet the requirements of the immense amount of grain which accumulates in the principal shipping ports of the country. In 1838 but 78 bushels of wheat were received in Chicago; in 1895 more than 200,000,000 bushels of wheat, corn, oats and rye were handled, mainly through the elevators of the city.

There is a similarity in the form of construction of all grain warehouses or elevators, and to describe a typical one is to virtually disclose the plan of all. The foundation, must of necessity, be such as will sustain an immense weight, and where the ground is not firm, solid piles are driven, on which the stone foundations are laid. The structure is built up to a height of from fifty to seventy-five feet without framing; spruce planks being laid flatwise upon each other and spiked together to form the outer walls and bin-divisions. Surmounting this structure is a narrower building, called the cupola, in which the stories are defined by windows. The outside measurement of one such building in Chicago is 550 feet long, 115 feet wide, and the extreme height 156 feet. The building is divided by a fire-wall, in order to decrease the cost of insurance. This is of brick, twenty inches wide at the base, and with openings protected by fire-doors and rolling iron screens. The first floor is twenty feet high, giving head-room for cars, which enter through five tunnels built into the structure. Above this first story extend the bins for 65 feet. These bins run from the covering of the ground floor to the top of the main building, and are from sixteen to twenty feet wide. They open above into the cupola and terminate in hoppers. They are simply rectangular wells formed of plank sides, and having no interior equipment except an iron ladder in one corner. The elevator under description had 8,000,000 feet of lumber used in its construction, and the annex, standing close by, and connected by pipes, required 11,000,000 feet. The cupola of five floors is divided as follows: The one immediately over the bins is known as the "bin" floor; the next, the "spout" floor; the third, the

"scale" floor, and the two top ones are called the "machinery" floors.

The margin in the sale of grain is so small that the most serious problem that the grain merchant now has to meet is to handle a maximum amount of grain with a minimum amount of labor. Cars of grain are received and switched directly into the elevator, standing in one of the tunnels, and the grain removed by machines resembling road-scrapers, which are operated by winch, cable and two men, who drag the grain from the cars into immense iron hoppers, set below the level of the elevator floor. From these hoppers, or tanks, the grain is taken to the top floor through legs, which are large pipes running up through the building, in which run belts, with cups twenty inches long and six inches wide attached. In the elevator under description there are 28 of these legs, any one of which can handle 7,000 bushels of grain per hour. The marine legs are larger, and are able to take 12,000 bushels of grain out of the hold of a canal-boat or lake-barge in an hour. The grain which is taken up through the legs goes directly to the top floor of the cupola. On the second machinery floor is a "garner," a bin which accommodates grain to the extent of 1,000 or more bushels, resting on a scale-hopper on the next floor below. The weighing is all done on the same floor, and is managed the same, whether the grain is for store or for immediate shipment, 16 shipping-bins, garners, shipping-scales and as many spouts leading out to the river front. Four hundred cars can be unloaded in a day, and the equivalent of grain reloaded into vessels. On the spout floor is an ingenious arrangement that receives the grain from the scale-hoppers, and from which the grain can be diverted into any one of 35 bins. When grain out of store is to be loaded, the process is the same as when it has been received by rail. The grain is let from the bins into iron receiving-tanks, then conveyed to the top of the building, discharged into the shipping-bin, and spouted out into the vessel. All grain is weighed as it comes in, and again as it goes out. In loading cars the same method as in loading vessels is used, except that the outlet is a bifurcated spout, which directs the grain to the ends of the cars, thus doing away with shoveling. A 700-bushel car is thus loaded in one and one half minutes. When it is desired to move grain horizontally from one building to another, two methods are used. One consists of an endless screw inclosed in a box; the other is simply an endless belt, along which the grain is made to travel. The belt runs over pulleys at either end of the route to be traveled, and the grain is deposited on it by a contrivance called a concentrator. This concentrator turns up the edge of the belt slightly when depositing the grain, and, as it flattens out again and travels along at a rapid rate of speed, the grain is held to the center by centripetal force. On a 40-inch belt the grain may stand a foot high in the center, while the edges of the belt for four or five inches will be bare of grain. It is possible, by this last-named method, to move 30,000 bushels of grain per hour to a contiguous house.

While grain remains in the elevator it is constantly handled, the principal reason for so doing being to prevent weevil from developing. On the advent of cold weather, all grain in store is at once handled, to allow the heat to escape, and that it may assume the temperature of the outside air.

The first small elevators were operated by hand-power. Then horse-power was introduced. The first to be operated by steam was built in 1848.

The capacity of the elevators of the principal cities from which grain is shipped is: Chicago, 50,000,000 bushels; Duluth, 27,000,000 bushels; Minneapolis, 26,000,000 bushels; New York, 29,000,000 bushels; Buffalo, 15,000,000 bushels; St. Louis, 13,000,000 bushels; Toledo, 7,000,000 bushels.

Many frauds arose in connection with the storage of grain in elevators soon after they came into use, and it became necessary to place them under the control of inspectors, whose duty it is to inspect elevators and certify as to warehouse-receipts and shipments of grain.

So disastrous are fires in elevators that it became a necessity to take extraordinary precautions to guard against them. Insurance companies refuse risks unless the building is divided into small areas by means of fire-walls, and generally require that they shall be covered with corrugated sheet-iron. In addition, they require patent sprinklers, which flood the building in the event of fire reaching the soft metal with which their valves are soldered. Fire-buckets hang at all convenient points, with which incipient blazes may be extinguished, and nearly all of the better class of buildings are provided with Niagara pumps, with which a four-inch stream of water may be thrown entirely over the top of the structure. See also ELEVATORS or LIFTS, in these Supplements.

GRALLATORES, a group of wading-birds. The term is almost equivalent to *Grallæ*, which generally is used. The group has rather indefinite boundaries, and the members usually are distributed in a number of orders. See ORNITHOLOGY, Vol. XVIII, p. 31.

GRAMINEÆ. See GRASSES, Vol. XI, p. 53.

GRAMME. See WEIGHTS AND MEASURES, Vol. XXIV, p. 490.

GRAMMONT, ORDER OF. See GRANDMON-TANES, Vol. XI, p. 47.

GRAMOPHONE, a device invented by Émile Berliner, for recording and reproducing sound. It consists of two essential parts, a recording and a reproducing mechanism. The former comprises a circular disk of zinc that is made to rotate horizontally under a needle-point, or stylus, by any electrical or mechanical motor. The stylus is connected with a diaphragm sensitive to sound-vibrations, and so adjusted as to trace, when in operation, a spiral line on the disk from circumference to center. On the zinc disk a very thin film of fatty substance having suitable viscosity is spread, and when placed in position, this coating receives from the stylus impressions corresponding to the vibrations communicated by the diaphragm. The record thus made is subsequently etched in with chromic acid upon the zinc disk. From this etching a duplicate in relief is made by an electrotyping process, which

is used to press the record into hard rubber plates, and will serve for one thousand reproductions.

The reproducing mechanism consists of a stylus that falls into the grooved lines on the rubber plate, and is governed by a sensitive spring that enables it to receive the vibrations recorded thereon, and transmit them in turn to a diaphragm placed in a sounding-box with a trumpet-shaped opening that augments the sound. The revolution of the plate under the stylus, which may be effected by a hand or pedal crank, or other suitable contrivance, causes the sounds first recorded on the zinc disk to be reproduced audibly.

Thus far the invention is but little more than a source of entertainment. Its manufacturers sell the reproducing mechanism and copies of various recorded songs, words or other sounds as sufficient for the purpose of those who ask only to be amused. The process of record-making is too technical and protracted for popular execution. The device is a sort of mechanical phonograph, and the above statements describe its usual commercial form, which is capable of variation.

D. O. KELLOGG.

GRAMPIANS, a mountain range. See SCOTLAND, Vol. XXI, pp. 523-526. Also the name of a short range of mountains in Australia. See VICTORIA, Vol. XXIV, p. 215, and map.

GRANBERY, JOHN COWPER, an American clergyman; born at Norfolk, Virginia, Dec. 5, 1829. He was educated at Randolph-Macon College, and began his career as a Methodist Episcopal preacher in 1848. During the Civil War he was chaplain in the Confederate army; from 1875 to 1882, professor of moral philosophy and practical theology in Vanderbilt University, Nashville, Tennessee; and in 1882 was made bishop in the Methodist Church. He published a *Bible Dictionary* (1882).

GRANBURY, a town and the capital of Hood County, central Texas, on the Brazos River, and on the Fort Worth and Rio Grande railroad, 30 miles S.W. of Fort Worth. It is the shipping and trading point of the agricultural and stock-raising district surrounding. Population 1900, 1,410.

GRAND, SARAH. See MCFALL, MRS. FRANCIS ELIZABETH, in these Supplements.

GRAND ARMY OF THE REPUBLIC, a patriotic and fraternal association of the survivors of the Union army who served in the Civil War of 1861 to 1865 and were honorably discharged. The national organization is known as the National Encampment of the Grand Army of the Republic, and in it is vested the supreme power, with the right of making rules and regulations to govern the order. Below this are the state organizations, called departments; and in the third place, local organizations known as posts, which are numbered and named after some locality, battle or deceased loyal person, such as a Union soldier or sailor. In 1895 the Grand Army numbered 357,640 members and 7,500 posts. B. F. Stephenson, a surgeon of the Fourteenth Illinois Infantry, was the founder of the organization. The first post was chartered April 6, 1866, at Decatur, Illinois, and the first national convention of veterans was held at Indianapolis, Nov. 20,

1866, and the national encampment of supreme body formed in Philadelphia on Jan. 15, 1868. The rules of the order forbid the discussion of partisan questions at its meetings, or any attempt to make the association a force in partisan politics. Each post is required to establish a relief fund for the assistance of needy comrades, and the wives and families of those deceased who may need aid. The motto of the order is "Fraternity, charity and loyalty," and it is a custom for the members of the different posts to visit the neighboring cemeteries yearly, on Memorial day, and decorate the graves of their fallen comrades. The original purpose of the organization was to emphasize by mutual assent the principles of union and national honor to which its members had given devoted adherence in the field. It followed, as a matter of course, that no person who had at any time borne arms against the United States could be eligible to membership. At the same time, a spirit of national fraternity is inculcated by the motives and practice of the order. In the occasional gatherings where Union and Confederate veterans have associated, there has been always manifest the soldierly magnanimity due to a worthy foe.

Appended is a list of encampments, together with the commanders-in-chief of the order: 1866, Indianapolis, Stephen A. Hurlbut, Illinois; 1868, Philadelphia, John A. Logan, Illinois; 1869, Cincinnati, John A. Logan, Illinois; 1870, Washington, John A. Logan, Illinois; 1871, Boston, A. E. Burnside, Rhode Island; 1872, Cleveland, A. E. Burnside, Rhode Island; 1873, New Haven, Charles Devens, Jr., Massachusetts; 1874, Harrisburg, Charles Devens, Jr., Massachusetts; 1875, Chicago, John F. Hartranft, Pennsylvania; 1876, Philadelphia, John F. Hartranft, Pennsylvania; 1877, Providence, J. C. Robinson, New York; 1878, Springfield, J. C. Robinson, New York; 1879, Albany, William Earnshaw, Ohio; 1880, Dayton, Louis Wagner, Pennsylvania; 1881, Indianapolis, George S. Merrill, Massachusetts; 1882, Baltimore, Paul van der Voort, Nebraska; 1883, Denver, Robert B. Beath, Pennsylvania; 1884, Minneapolis, John S. Kuntz, Ohio; 1885, Portland, Maine, S. S. Burdette, Washington; 1886, San Francisco, Lucius Fairchild, Wisconsin; 1887, St. Louis, John P. Rea, Minnesota; 1888, Columbus, Ohio, William Warner, Missouri; 1889, Milwaukee, Russell A. Alger, Michigan; 1890, Boston, Wheelock G. Veazey, Vermont; 1891, Detroit, John Palmer, New York; 1892, Washington, A. G. Weissert, Wisconsin; 1893, Indianapolis, John G. B. Adams, Massachusetts; 1894, Pittsburg, Thomas G. Lawler, Illinois; 1895, Louisville, Ivan N. Walker, Indiana; 1896, St. Paul, Thaddeus S. Clarkson, Nebraska; 1897, Buffalo, John P. S. Gobin, Pennsylvania; 1898, Cincinnati, James A. Sexton, Illinois; 1899, Philadelphia, W. C. Johnson, Ohio.

GRAND BANKS. See NEWFOUNDLAND, Vol. XVII, p. 382, note 384.

GRAND BAY OR HA-HA BAY, an inlet from the Saguenay river, Quebec, Canada, which receives the waters of the Ha-Ha river; a beautiful sheet of water, about a mile wide and 100 fath-

oms in depth, and is a source of attraction to summer tourists. See QUEBEC, Vol. XX, p. 165.

GRAND CANAL OF CHINA. See CHINA, Vol. V, pp. 631, 632.

GRANDEES (Span., *Grandes*), since the thirteenth century, the most highly privileged class of nobility in Castile, the members of the royal family being included. Their honors were hereditary. They held lands from the crown on the tenure of military service, were exempted from taxation, could not be summoned before any civil or criminal judge without a special warrant from the king, and could leave the kingdom and even enter the service of a foreign prince at war with Castile without incurring the penalties of treason. They had also the right of being covered in the presence of the king. In the national assemblies they sat immediately behind the prelates and before the titled nobility (*titulados*). Cardinal Ximenes did much toward lessening the power of the grandees, and later Charles V succeeded in reducing them, with the rest of the feudal nobility of Spain, to a dependent court nobility. Under Joseph Bonaparte, their privileges were entirely abolished, but they were partially regranted at the subsequent restoration. Grandees are still members of the Senate in their own right.

GRAND FALLS, a village and port of entry in Victoria County, New Brunswick, on the St. John River, and on the Canadian Pacific railroad, 93 miles N.N.W. of Fredericton. It is near the great falls of the river, which are 180 feet high, and very imposing. Steamers ply between here and St. John during high water. There is a fine suspension bridge over the river. Population 1891, 1,597.

GRAND FORKS, a city and the capital of Grand Forks County, northeastern North Dakota, on the Red River of the North (navigable from Fargo), and on the Great Northern and the Northern Pacific railroads. It contains the University of North Dakota, St. Bernard's Ursuline Academy and a Lutheran college. The region is an agricultural one, except where timbered. Lumbering and the manufacture of wooden articles form its chief industries. It is also the shipping and trading point for a large section. Population 1890, 4,979; 1900, 7,652.

GRAND HAVEN, a city, port and the capital of Ottawa County, western south Michigan, on Lake Michigan, and on the south bank of Grand River, and on the Chicago and West Michigan railroad, 31 miles W. by N. of Grand Rapids. It has a good harbor, with two lighthouses, and ships large quantities of lumber and grain. It contains several lumber-mills and manufactories of woodenwares, etc., and a magnetic spring renders the place a summer resort. Population 1900, 4,743.

GRAND ISLAND, a city, railroad junction and capital of Hall County, southeastern central Nebraska. It is on the north bank of the Platte River, opposite Grand Island, whence its name, and on the Burlington and Missouri River, the St. Joseph and Grand Island and the Union Pacific railroads. Shipping grain is the chief industry. Population 1890, 7,536; 1900, 7,554.

GRAND JUNCTION, a city and the capital of Mesa County, central western Colorado, on the

Denver and Rio Grande, the Colorado Midland, the Colorado, Wyoming and Great Northern and the Rio Grande Western railroads, at the confluence of the Grand and Gunnison rivers. The industries of the neighborhood are agriculture, horticulture, stock-raising and mining. Coal, limestone, sandstone, silver, gold, copper and asphalt are found. Population 1880, 859; 1890, 2,030; 1900 (12th census), 3,503.

GRAND JUNCTION, a town of Greene County, west-central Iowa, on the Chicago and Northwestern railroad, where it crosses the Des Moines and Fort Dodge railroad, 38 miles S. of Fort Dodge. The principal business in the vicinity is farming and stock-raising. Population 1900, 1,113.

GRAND JURY, a number of citizens of a judicial district summoned by the sheriff or other proper officer, to whom indictments are submitted against those charged with violations of the laws within their jurisdiction. The number of jurymen who are to be summoned on county grand juries is regulated by state statutes. Under the United States statutes, the grand juries which are called to attend the United States circuit and district courts consist of not fewer than sixteen nor more than twenty-three. The judge of the court selects a foreman from among their number. Grand juries selected under the state laws, and to attend the various state courts, are usually required to select their own foreman. The jurymen are sworn to perform their duties faithfully. Their proceedings are kept secret in every particular, so that those against whom indictments are found may not have opportunity to escape before arrest. They may call and examine witnesses, and are the sole judges of the testimony. Generally, twelve must concur before an indictment can be found, and upon indictment against any one, such person must be arrested and held for trial for the offense charged. See also JURY, Vol. XIII, pp. 785, 786.

GRAND OR CHETIMACHES LAKE, in Iberia, St. Martin's and St. Mary's parishes, Louisiana. It is about 35 miles long and 10 wide, and is too shallow for navigation. It is surrounded on all sides but the west by marshes and swamps, receives the waters of a number of rivers, and connects with the Gulf of Mexico by the Atchafalaya Bayou, 15 miles long. Two other lakes of this name in the same state are found in Pointe Coupee and Cameron counties.

GRAND LEDGE, a village of Eaton County, southern Michigan, on the Grand River, and on the Detroit, Lansing and Northern railroad, 12 miles W. of Lansing. It has a mineral spring, is a health-resort, and has good water-power, which is used for saw, cider, flour and other mills. Chairs, tables, terracotta and tiles are manufactured. In the vicinity are coal and fire-clay beds, and sandstone. Population 1890, 1,606; 1900, 2,161.

GRAND MAL, a form of epilepsy. See EPILEPSY, Vol. VIII, p. 479.

GRAND MANAN, an island in the Bay of Fundy, 22 miles long and from 3 to 6 wide, belonging to Charlotte County, New Brunswick. It is fertile, and has many good harbors. The chief settlement is Grand Harbor. The cod, herring and haddock

fisheries are important. The island is a summer resort. Population, 2,397.

GRAND PRÉ, a village lying in the basin of Minas, Kings County, western central Nova Scotia, 15 miles N.W. of Windsor. It is the opening scene of Longfellow's *Evangeline*. The village contains a seminary. The nearest post-office is Lower Horton. Population 1891, 700.

GRAND RAPIDS, a flourishing city, the capital of Kent County, west central Michigan. It is situated very favorably for commerce, being on ten railroad branches, and on the Grand River, at the head of navigation, and has an especially large distributing trade. Its streets are paved with asphalt and lighted with electricity, it has an electric street-railway system, reservoir water-works, 3 parks, 85 churches, 55 schools, a public library with 27,000 volumes, the City Home for the Treatment of Contagious Diseases, the Michigan Soldiers' Home, the State Masonic Home, St. John's Orphan Asylum and numerous hospitals. It is active in manufactures, the 1890 census reporting 869 industries, having a capital of \$16,000,000, employing 13,300 hands on an average, and paying \$6,500,000 in wages annually. The value of their products amounted to \$20,000,000. Of these industries, the most important are the chamber-furnishing, embracing 60 factories employing 16,000 men, and the carpet-sweeper and flour industries. The river, which falls 17 feet here in two miles, affords abundant water-power, which is much used. The gypsum-quarries near the city yield annually 100,000 barrels of stucco, and 100,000 tons of land-plaster. In 1891 the city limits were extended. Population 1880, 32,016; 1890, 60,278; 1900, 87,565. See also GRAND RAPIDS, Vol. XI, p. 47.

GRAND RAPIDS, a city and the capital of Wood County, central Wisconsin, on the Wisconsin River, and on the Green Bay, Winona and St. Paul railroad. Lumbering and agriculture are the chief occupations. There are lumber-mills, machine-shops and foundries in the city, and pure kaolin is found in the vicinity. Population 1900, 4,493.

GRAND RIVER, a river of Colorado and Utah, which rises, in several branches, in Grand County, central northern Colorado, on the west slope of the Front Range. Its direction is generally southwest, and it has two cañons of great beauty, one in Middle Park, in Colorado, where it has cut its way for three miles through granite rocks one thousand to fifteen hundred feet high; the other in Wayne and San Juan counties, where it is joined by the Green River to form the Colorado. Length, over 350 miles.

GRAND RIVER, a river of southwestern Michigan, rising in Jackson County. It flows north past Lansing, then takes a west-northwesterly course, and flows past Grand Rapids, after which it is navigable, from Grand Haven into Lake Michigan. Length, 250 miles.

GRAND RIVER, a river of northwestern Missouri, rising, in two branches, in Union County, southern Iowa, and flowing generally south-southwest, till it joins the Missouri, 20 miles above Glasgow. Length, about 220 miles.

GRANGE. See FARMERS' ORGANIZATIONS, in these Supplements.

GRANGER, GIDEON, an American lawyer; born in Suffield, Connecticut, July 19, 1767. He graduated at Yale in 1787, was admitted to the bar, and soon became prominent in his profession. He was a member of the legislature of Connecticut, and was instrumental in the establishment of the school fund; became Postmaster-General of the United States in 1801, and in 1819 was elected to the state senate. He died in Canandaigua, New York, Dec. 31, 1822.

GRANGER, GORDON, an American soldier; born in New York in 1821; graduated at the United States Military Academy in 1845; engaged in the Mexican War, and served at the beginning of the Civil War on the staffs of Generals McClellan and Sturgis; in September, 1861, appointed colonel of the Second Michigan Cavalry; in March, 1862, brigadier-general of volunteers, and put in command of the cavalry in the operations that led to the fall of Corinth; in command of the Fourth Army Corps at the battle of Missionary Ridge; of a division at Fort Gaines, Alabama, in 1864; and of the Thirteenth Army Corps in the Southwest, engaging in the siege of Fort Morgan, and in the operations that resulted in the fall of Mobile. He was brevetted first lieutenant and captain for services in the Mexican War, and for gallant conduct in the Civil War the brevets from major to that of major-general were conferred upon him. In January, 1866, he was mustered out of the volunteer service; in the following July was promoted to colonel, and was in command of the district of New Mexico at the time of his death, which occurred at Santa Fé, New Mexico, Jan. 10, 1876.

GRANGERS. See FARMERS' ORGANIZATIONS, in these Supplements.

GRANICUS, an historic river. See ASIA MINOR, Vol. II, p. 707.

GRANIER DE CASSAGNAC, BERNARD ADOLPHE DE, a French publicist and journalist; born at Bergelle, department of Gers, Aug. 12, 1808; educated at Toulouse; became a Parisian journalist under Berten and Girardin; defended romanticism in literature, and slavery in the West Indies, where he married; founded in Paris, in the interests of the Orleans dynasty, *Le Globe* newspaper, which assumed a turbulent character; supported the *coup d'état* of Louis Napoleon and his imperial system; began editing *Le Pays* in 1858, his son Paul joining him in 1866 in its direction; fled to Belgium after the capitulation at Sedan, but returned in 1871 to resume direction of *Le Pays*. He was a truculent adversary and duelist, wrote many books colored with bellicose prejudices, among them an account of a *Voyage to the Antilles*; histories of industrial and social agitations, of the Girondists, of the Directory, of the downfall of Louis Philippe, of phases of the second empire and of French democracy. He died in Paris, Jan. 31, 1886.

GRANIER DE CASSAGNAC, PAUL ADOLPHE DE, a French journalist and Deputy, son of Bernard; born in Paris, Dec. 2, 1843. He began journalism before he was of age, and adopted the

manners of a bravado, in insulting political opponents and then meeting them in duellistic combats, some of them notable for their ferocity and others for sensationalism. In 1866 he joined the staff of *Le Pays*, and later became editor-in-chief of the paper. He was an uncompromising Bonapartist, and in 1868 was decorated with the cross of the Legion of Honor by Napoleon III. When the Franco-Prussian war broke out, he enlisted as a volunteer and was taken prisoner at Sedan. Returning from a military prison in Silesia to Paris in 1872, he continued editing *Le Pays* until 1884, when he founded *L'Autorité*, and several times was prosecuted for fierce or seditious attacks upon the republican government. At the election of 1876 he was returned to the Chamber of Deputies from an arrondissement in the department of Gers, and in each subsequent election was rechosen to the same body. He was a supporter of the short-lived but fiery Boulangist movement, and the author of a few polemic books.

GRANITE FALLS, a village and the capital of Yellow Medicine County, southwestern Minnesota, on the Minnesota River, and on the Great Northern and the Chicago, Milwaukee and St. Paul railroads, 110 miles W. of Minneapolis. It is a shipping-point for agricultural produce, has flouring-mills and a foundry. Population 1900, 1,214.

GRANT, a city and the capital of Worth County, northwestern Missouri, 58 miles N.N.E. of St. Joseph, the terminus of a branch of the Chicago, Burlington and Quincy railroad. It ships the grain, live-stock and lumber produced in the vicinity. Population 1890, 1,186; 1900, 1,406.

GRANT, FORT, a United States army post in the Department of Colorado, situated in the town of Fort Grant, Graham County, southeastern Arizona. It has no railroad, but is connected by stage with Willcox, about 25 miles to the north, on the Southern Pacific railroad. Owing to its situation in a region which has long been exposed to attacks by hostile Apaches, Fort Grant is an important military post.

GRANT, SIR ALEXANDER, a Scotch educator; born in New York, Sept. 13, 1826; educated at Harrow, and Balliol College, Oxford; succeeded as baronet in 1856; appointed inspector of schools at Madras, India, in 1859; and became professor of history in Elphinstone College there, later its principal, and afterward vice-chancellor of Elgin College, Bombay; in 1868 principal of the University of Edinburgh, Scotland, continuing in that office till his death, Nov. 30, 1884. He published *The Story of the University of Edinburgh* (1883); *Xenophon*, in the Ancient Classics for English Readers; *Aristotle* (in the same series); and others.

GRANT, FREDERICK DENT, eldest son of General Grant, was born in St. Louis, Missouri, May 30, 1850. He graduated at West Point at the age of 21, and was assigned to the Fourth Cavalry. In 1871 he accompanied General Sherman to Europe. A year later he was detailed to command the military escort of the parties making the survey for the Southern Pacific railway. In 1873 he was assigned, with the rank of lieutenant-colonel, to the staff of General

Sherman, holding the position for eight years, when he resigned. In 1889 he was appointed by President Harrison United States minister to Austria, remaining till 1893. In 1895 he was selected as one of the police commissioners of New York City by the reform administration of Mayor Strong. Resigned July 30, 1897.

GRANT, GEORGE MUNRO, a Nova Scotian clergyman and author; born of Scotch parents at Stellarton, Dec. 22, 1835; educated at Pictou Academy and the West River Seminary of the Presbyterian Church; in 1853 won a scholarship, giving him a university course at Glasgow, Scotland, where he graduated with the highest honors in philosophy, and returned to Canada; in 1863 became pastor of St. Matthew's Church, Halifax; in 1877 principal of Queen's University, Kingston. He published works descriptive of Canada; among them *Ocean to Ocean through Canada* (1872); and *Picturesque Canada* (1881).

GRANT, JAMES, a British novelist; born in Edinburgh, Aug. 1, 1822. From the time he was 10 years old he lived with his father, an army officer, in various barracks in British America; in 1839 returned to England, and in the following year, retiring from the army, turned his attention to literature. His first work was *The Romance of War*, published in 1846, after which he brought out many novels of a similar character. His death occurred in London, May 5, 1887.

GRANT, JAMES AUGUSTUS, a Scotch soldier and explorer; born at Nairn in 1827; educated at Marischal College, Aberdeen; entered the Indian army in 1846 and served in several campaigns, participating in the relief of Lucknow. In 1863 he accompanied Captain Speke on his exploration of the source of the Nile, in the following year publishing, jointly with Captain Speke, an account of the trip, and in 1868 followed Lord Napier in his expedition into Abyssinia. He contributed to the journals of the Royal Geographical and Linnæan societies, and published *A Walk Across Africa* (1864) and *Khartoum as I Saw It* (1863). Died in Nairn, Feb. 11, 1892.

GRANT, SIR PATRICK, a Scotch soldier; born at Auchterblair, Strathspey, in Inverness, in 1804; at 16 entered the military service of the East India Company; fought in the Gwalior, Sutlej, and Punjab campaigns; in 1856 was made major-general and commander-in-chief of the army of Madras, and in the first days of the Mutiny, in 1857, acting commander-in-chief of Bengal; was made governor of Malta in 1867, and in 1874 governor of Chelsea hospital. In 1883 he was made field-marshal, and in 1885 colonel-in-chief of the Royal Horse Guards (the Blues). Died at Chelsea, March 28, 1895.

GRANT, ROBERT, an American lawyer and author; born in Boston, Jan. 24, 1852; graduated from Harvard University in 1873, and, six years later, finished a course at the Harvard Law School, and began the practice of law in Boston, and became judge of the probate court of Suffolk County, Massachusetts, in 1893. He contributed frequently to the magazines. His chief published works are *An Average Man* (1883); *Unleavened Bread* (1900); *The Little Tin God on Wheels* (1879); *The Knave of Hearts*

(1885); *The Reflections of a Married Man* (1892); and *The Opinions of a Philosopher* (1893).

GRANT, ULYSSES SIMPSON, an American soldier, and eighteenth President of the United States, was

GENERAL GRANT.

born at Point Pleasant, Clermont County, Ohio, April 27, 1822, being the eldest of the six children of Jesse R. Grant, an American of Scotch descent, and Hannah Simpson Grant, who were married in Clermont County, Ohio, in June, 1821. During his boyhood he worked on the farm and in the tannery of his father, attending regularly the schools of the neighborhood, and when 17 years old received an appointment to the United States Military Academy at West Point. In 1843 he graduated twenty-first in a class of 39, not being accounted especially proficient in any study except mathematics, and was given a brevet lieutenantship in the Fourth Infantry, stationed at Jefferson Barracks, Missouri. In 1845 he was commissioned second lieutenant, and joined the army of occupation in Mexico, under General Taylor. Later, his regiment was transferred to General Scott's army, where Grant served throughout the campaign, which terminated in the capture of the City of Mexico, winning two brevets by his gallantry. Returning to the United States with the army in 1848, he obtained a furlough and married Miss Julia Dent, the daughter of a St. Louis merchant. For the six years following he served at various posts, being raised in 1853 to the rank of captain. In the following year he retired from the army and followed farming near St. Louis, Missouri. Not finding this occupation very profitable, in 1860 he took a clerkship, at a small salary, in his father's leather business, at Galena, Illinois, where he remained till the outbreak of the Civil War. It is noteworthy that up to this time Grant had done nothing to merit or win particular distinction.

On April 15, 1861, President Lincoln called for volunteers, and four days later Grant began drilling a body of volunteers at Galena. He offered his services to the adjutant-general at Washington, and receiving no reply, accompanied his troops to Springfield, where he was employed by Governor Yates in the organization of volunteers. Five weeks later he was appointed colonel of the Twenty-first Illinois Infantry, and in August was commissioned brigadier-general of volunteers. On September 1st he was given command of the southeastern part of Missouri, with headquarters at Cairo, Illinois. Grant's policy was strategic, aggressive, and evidently clearly conceived from the first. It was to obtain possession of important points on the various confluent of the Mississippi and Ohio, traversing the central border states. On Sept. 5, 1861, he learned that a Confederate force was planning to take possession of Paducah, a little town at the junction of the Ohio and the Tennessee. On the

following day, without waiting for orders, Grant occupied the place. The move secured Kentucky to the Union. The legislature of the state, heretofore undecided, after this voted to remain loyal. November 1st, Grant was ordered to attack Belmont, which lay 18 miles down the Mississippi from Cairo, with the idea of frightening away General Price, who was advancing toward Missouri with a Confederate force. Grant's troops were raw, but he routed the garrison of the place, and, although almost surrounded at one time by a Confederate reinforcement, succeeded in cutting his way to his transports, and reached Cairo in safety. The engagement was not a victory, but it had its desired effect on General Price.

Grant's next move was up the Tennessee. For a long time he had importuned his superior, General Halleck, to allow him to capture Forts Henry and Donelson, and at last, on the 1st of February, 1862, permission to attempt the former capture was given. On the following day the expedition started. On the 4th, after a short bombardment by gunboats, the fort surrendered. Immediately, and without orders, Grant moved upon Fort Donelson, which was 12 miles to the northeast, on the Cumberland River. On the 12th he began the investment of the fortress with 15,000 men, a force later increased to 21,000, and eight batteries of artillery. The Confederate garrison numbered 21,000 and their position was strongly fortified. The fighting continued for three days, and on the 15th, after Grant had gained by assault a commanding position, the place was unconditionally surrendered. It was the first important military position won from the Confederates, and its possession gave the Unionists control of western Kentucky and Tennessee, besides opening navigation for hundreds of miles on the Mississippi, Tennessee and Cumberland. Moreover, it brought General Grant into notice and won for him a reputation as a strategist, although some of his superiors were slow in admitting his ability. He was soon made major-general of volunteers and given command of western Tennessee. Thinking to follow up his serious blow to the Confederate cause, General Grant started for Nashville on the 28th of February, again without orders. This time he was recalled by a dispatch from General Halleck, who had never been in sympathy with Grant's undertakings, relieving him of his command and ordering him to remain at Fort Henry. The matter, however, was reconsidered, and Grant replaced in his former position.

He now concentrated his forces, which numbered 38,000 men, near Shiloh, at Pittsburg Landing, on the west bank of the Tennessee River, and awaited, as he was ordered, a reinforcement of 40,000 men under General Buell. But on the 6th of April, Gen. A. S. Johnston, with a Confederate force of 50,000 men, attacked Grant in front, and with superior numbers succeeded in pushing the Union troops steadily backward toward the river. At night Grant was joined by Buell. On the following day a vigorous attack was made on the Confederate army, which was forced to retreat to Corinth, 19 miles away. Halleck now took command of the army and advanced on Corinth, which he found evacuated

when he was ready to deliver an assault. By the appointment of Halleck as general-in-chief, and his consequent removal to Washington, Grant was again in command of the army of Tennessee. He fought an indecisive battle at Iuka, fortified Corinth, and, when the Confederates attacked the place on the 3d and 4th of October, 1862, repulsed them with great loss. Immediately after this, Grant determined upon the capture of Vicksburg, and on November 2d began moving into Mississippi from the north, Sherman being sent down the Mississippi River with 40,000 men to attack the city from the Yazoo River. The campaign, however, failed, on account of the cowardice of one of Grant's subordinate officers, who surrendered the general's contemplated base of supplies, and on account of Sherman's repulse. In January, 1863, Grant brought his troops together on the west bank of the Mississippi, opposite the mouth of the Yazoo, taking command of them in person. The only favorable point of attack upon Vicksburg seemed to be the high land east of the city, and, after wasting several months in fruitless attempts to collect his forces there, Grant put into execution a bold and brilliant plan, contemplated for some time. The army was marched through the swamps on the western side of the river, while the transports and Commodore Porter's auxiliary fleet of gunboats ran past the Confederate batteries. With the fleet he ferried his army across the Mississippi, thirty miles below Vicksburg, uncovering Grand Gulf. He was now threatened by two Confederate armies, one under Pemberton and the other under Joseph E. Johnston, and these he met and defeated separately. On the 23d of May, 1863, the siege of Vicksburg began, which lasted until July 4th, when the place surrendered and the garrison of 32,000 men was paroled.

Grant was now made major-general in the regular army and placed in command of the military division of the Mississippi. His next great campaign was for the relief of Chattanooga, where the beaten and baffled army of the Cumberland was beleaguered and reduced to deplorable destitution and impotence, being cut off from supplies and almost surrounded by the enemy. On Oct. 23, 1863, Grant reached the place, and at Wauhatchie, on the 29th, was victorious in an engagement which opened Chattanooga to reinforcements and supplies. On November 23d to 25th the battle of Chattanooga was fought, and the Confederates were swept from Look-out Mountain, out of the valley, and from the crest of Missionary Ridge, in full retreat, into Georgia. On the 9th of March, 1864, the rank of lieutenant-general was conferred upon Grant, and three days later was put in command of all the Union forces.

His operations were now on a larger scale. There remained General Lee, with the Confederate army of northern Virginia, to be disposed of. Against him, General Grant took command of the main division of the Union forces in person; Sigel, who was sent into the valley of Virginia, was defeated, and succeeded by Hunter, and he in turn was succeeded by Sheridan, whose campaign thereafter was a series of victories; Sherman was directed to pene-

trate Georgia, and after reaching Atlanta was sent on his famous march to the sea; a third army was sent against Richmond, under Butler. In the mean time, Grant was pushing Lee back toward the James River, and slowly but surely reducing his military strength. The battles of the Wilderness, Spottsylvania, North Anna and Cold Harbor each resulted in an advance of the army of the Potomac. Grant's losses were enormous, but he claimed that the field of battle was more merciful than the typhus of camps, and that the losses of Lee's army were irreparable. To destroy his power of resistance brought the end of slaughter nearer. Owing to the outgeneraling of Butler, who was "bottled up" at Bermuda Hundred, Grant had to cross the James below Richmond to relieve and join him, and this made it necessary to include Petersburg in the sieges that ended the war. This campaign from the Rapidan to Appomattox lasted from the 4th of May, 1864, to the 9th of April, 1865. On the night of the 2d of April, Richmond was evacuated, and Lee began a retreat toward Lynchburg, but finally, on April 9th, at Appomattox Courthouse, surrendered to Grant. This event was decisive, and resistance to the authority of the Union rapidly ceased, and all Confederate forces capitulated. The strictly military but magnanimous terms offered by Grant to Lee went far to reconcile the South to her defeat. For further details of Grant's military history, see UNITED STATES, Vol. XXIII, pp. 778-783.

On April 10, 1865, Grant returned to Washington, and on the 14th Lincoln was assassinated, making Andrew Johnson President. At first, Johnson professed to be implacable toward the leaders of secession; later, he became quite as ardent in a scheme to reinvest them with their *ante-bellum* rights in the government. In both cases he came into conflict with Grant. An indictment of General Lee for treason was procured in the Virginia circuit court of the United States. The President was resolute to proceed with the prosecution. Lee appealed to Grant, who thereupon insisted that the men whose paroles had been given at Appomattox, and after that time under the same terms, could not be tried for treason while they kept them, and he threatened to resign if full faith with the paroled was not observed. The prosecutions were given up, but when Johnson, in the matter of reconstruction, completely changed his policy, it was due to Grant that the peace of the country was preserved. Contemplating the exercise of powers which Grant believed to be a usurpation of the rights of Congress, and in which he might need the control of the army, the President ordered Grant on an errand to Mexico. The General claimed that the order was beyond the authority of the President, nor would he leave Washington on any pretext the President invented, a position in which Congress sustained him by appropriate legislation. It even went so far as make all orders issued by district commanders, although done by direction of the President, subject to the approval of the general of the army, thus practically wresting from the executive the control of the military forces. In August, 1867, Johnson suspended Stanton as Secretary of War, and placed

Grant in charge, pending the determination of the President's right to remove from office without the consent of the Senate. The Senate did not approve of Stanton's removal, and Grant retired from the War Department and sided with Congress. When directly asked if he would obey orders in case the President should recognize the Senators and Representatives chosen in the Southern states, and should need the army to seat them in Congress, Grant told him that such a use of force would not be lawful, and he would maintain his honor and duty. The position was one of delicacy and great peril to the country, for in the contest between Congress and the executive, Grant had to judge how far the orders of his superior were lawful. Owing to his sagacity, love of order and patriotism, the crisis was passed safely, notwithstanding the bitterness of the contention, and it was Grant's conduct that designated him for the candidacy of the Republican party for the Presidential chair, although he had never voted the ticket of that party.

The national Republican convention of 1868, held in Chicago, nominated him for the Presidency on the first ballot, and he was elected by a large majority. Grant's career as President cannot be said to have been brilliant. He was a soldier, and had a soldier's directness and honesty, while to political arts and chicanery he was a stranger. He strove to put the civil service on a meritorious basis, but the politicians would not sustain him, and he abandoned the effort. During his first administration the *Alabama* claims were settled with Great Britain. He also sent commissioners to Santo Domingo in 1871-72, who reported that annexation to the United States was desired there, and he urged the acquisition of that state, but his policy was resisted in the Senate. His popularity secured him a re-election in 1872, against Horace Greeley, who was nominated by the Democrats and the Liberal Republicans, the issues being the stringency of the Reconstruction Acts, the military occupation of the Southern states, and corruption in administration. During his second term there were many frauds perpetrated on the government, such as the whisky and star-route rings. His Secretary of War resigned to escape impeachment for peculation. But no one believed the President in any way implicated in these dishonest schemes. It was felt that his own trustfulness and loyalty to men in whom he confided made him an easier victim of artful and unscrupulous schemers. Meanwhile, reconstruction had been steadily carried on in the South, amicable relations established with England, and several reforms started which bore fruit in later years. For his administrative career, see UNITED STATES, Vol. XXIII, pp. 785, 786.

After retiring from the Presidency, General Grant made a tour around the world, and was received at foreign courts with honors reserved for sovereigns. In 1880 his name was presented at the national Republican convention for the Presidency, but his nomination was defeated, partly on account of the feeling against a third term and partly because of dislike for the arrogance of the men who urged it in order to defeat the aspirations of Blaine.

In 1881 Grant removed to New York, and later

became a partner in a banking establishment in that city. The firm failed soon after, on account of the frauds of the junior partner, leaving Grant a bankrupt. He surrendered to his principal creditor his medals, swords, trophies and presents from foreign governments, who gave them to the United States; they are preserved at Washington. In 1885 he was restored to the rank and pay of general, and placed on the retired list. He commenced, in the *Century*, a series of articles on the battles of the war, which, later, he amplified into his *Personal Memoirs*. These memoirs were completed during the months of pain while Grant was dying of cancer in the mouth, and the royalties from the sale greatly enriched his family. He died at Mount McGregor, near Saratoga, New York, whither he had gone as to a sanatorium, July 23, 1885, and was buried in Riverside Park, in New York City, with a pageantry and honors unexampled in America. By special act of Congress, after his death, a yearly pension of \$5,000 was granted to his widow.*

On April 27, 1897, amid impressive ceremonies which included a military parade and naval demonstration, General Horace Porter, President of the Grant Monument Association, transferred to Mayor Strong, acting in behalf of New York City, the custody of the mausoleum in Riverside Park.

The beautiful memorial pile of white granite, 150 ft. in height, stands 100 ft. above mean high water of the Hudson (see cut p. 2203). The first 72 ft. of the structure is a cube of the Doric order surmounted by a parapet bearing the sculptured figures of Peace and War. Above this is a cupola 70 ft. in diameter encircled by relieving Ionic columns. Side stairways lead to the crypt where rests the sarcophagus of brilliant red porphyry.

GRANT'S PASS, a town and the capital of Josephine County, southwestern Oregon, on the Rogue River, and on the Southern Pacific railroad. It is the trading and shipping point of a large agricultural, mining and lumber region. Population 1890, 1,432.

GRANULAR LIDS OR GRANULAR CONJUNCTIVITIS. See OPHTHALMOLOGY, Vol. XVII, p. 780.

GRANVILLE, a village of Washington County, central eastern New York, on the Delaware and Hudson railroad, 22 miles E. of the head of Lake George. Gun-sights, axes and farming implements are manufactured. It is in a township of the same name, which includes five other villages. Slate is quarried in abundance, and roofing-slate and marbled slate articles are made. Population of village, 2,149; 1900, 2,700.

GRANVILLE, a village of Licking County, central Ohio, on the Toledo and Ohio Central railroad, seven miles W. of Newark. It is the seat of Denison (Baptist) University, the Shepardson College for Women and the Granville Female College, and has several manufacturing establishments. Population 1890, 1,366; 1900, 1,425.

Grant*, by Adam Badeau (3 vols., New York, 1867-81); *Life and Public Services of General U. S. Grant*, by James Grant Wilson (1868); *The Ancestry of General Grant, and Their Contemporaries*, by Edward C. Marshall (1869); and *Around the World with General Grant*, by John Russell Young (1880).

GRANVILLE, GRANVILLE GEORGE LEVESON-GOWER, EARL OF, an English Liberal; born May 11, 1815, in London; educated at Eton and Christ Church, Oxford, and in 1835 went as attaché to his father's embassy to Paris; in 1836, entered Parliament for Morpeth; four years later sat for Lichfield; in 1846, succeeded his father in the title; in 1851 became Secretary of Foreign Affairs, and after that time held office in every Liberal government until his death, leading his party in the House of Lords; president of the

EARL GRANVILLE

Privy Council (1855-58, 1859-66); Colonial Secretary (1868-70); Secretary of Foreign Affairs in (1870-74, 1880-85); in Gladstone's Cabinet of 1886 was Secretary of State for the Colonies. He died in London, March 31, 1891.

GRAPE. See HORTICULTURE, Vol. XII, pp. 277, 278; VINE, Vol. XXIV, 237, 238; WINE, Vol. XXIV, pp. 601, 611; and VITICULTURE, in these Supplements.

GRAPE SUGAR. See GLUCOSE, Vol. X, p. 605, SUGAR, Vol. XXII, p. 623, and GLUCOSE in these Supplements.

GRAPHIC STATICS. See MECHANICS, Vol. XV, pp. 725, 726.

GRAPPLE-PLANT (*Uncaria procumbens*), a procumbent plant of the same genus with the Gambir, a native of South Africa. The seed-vessel has many hooked thorns, and clings most tenaciously to any animal—a provision for the distribution of the seed. When it lays hold of the mouth of an ox, Livingstone says the animal stands and roars with pain and a sense of helplessness.

GRAPTOLITES, a genus of cœlenterates of the hydroid class, found as fossils in the slates of the Lower Silurian. The name, signifying written-stone, refers to the appearance of the slates with the fossils. They are allied to the existing sertularians, but, unlike them, were not attached to foreign objects.

GRASS-CLOTH, a popular and erroneous name for several textiles made from fibers of various plants, none of which are grasses. See RHEA FIBRE, Vol. XX, pp. 506, 507.

GRASSE, JOHANN GEORG THEODOR, a German bibliographer; born at Grimma, Jan. 31, 1814; studied philology and the history of literature at Leipsic and Halle; taught in the Kreuz schule in Dresden; in 1843 made librarian of King Friedrich-August II of Saxony; later inspector of the Cabinet of Coins and Medals and director of the "Green Vaults," with their celebrated collections of jewels, gold, silver and curios; from 1837 to 1860, published a work entitled *Lehrbuch einer Allgemeinen Literaturgeschichte aller Bekannten Völker der Welt*, a great mass of bibliographical material, of which his work, *Handbuch*, is a compendium. He also studied the myths and legends of the middle ages, and wrote several books on these subjects, besides treatises on

hunting, beer, porcelain, ancient coins, surnames and Christian names, Latin names, etc., and in 1876 a popular history of Saxony. He died in Dresden, Aug. 27, 1885.

GRASSE, FRANÇOIS JOSEPH PAUL, COMTE DE, a French admiral; born at Valette, Provence, in 1723; first served in the navy of the Knights of Malta in 1734, against the Turks; in 1749 passed into the service of France; while in charge of a convoy to the East Indies, was captured by a British admiral and imprisoned in England for two years; in 1762 became a captain; in 1778 was made a rear-admiral; in March, 1781, De Grasse set out from Brest with a large fleet conveying a land force to the United States; in June he assisted at the taking of Tobago, and then sailed to the mouth of the Chesapeake, in order to assist in the operations against Lord Cornwallis, who, shut up in Yorktown, was obliged to surrender, Oct. 19, 1781. De Grasse received the thanks of Congress for his share in this decisive victory. In January, 1782, he captured from the British the island of St. Christopher, in the West Indies, but on April 12th of the same year, after a gallant fight with Rodney, De Grasse was taken prisoner and conveyed to London, where he assisted in the negotiations relating to the peace of 1783, by which the independence of the United States was acknowledged. He was suspected of treachery by the French, but upon his return to France an official investigation of his conduct resulted in an honorable acquittal. Before his death the title of lieutenant-general of naval forces was conferred upon him. He died in Paris, Jan. 11, 1788.

GRASSES. See FORAGE PLANTS IN THE UNITED STATES, in these Supplements.

GRASSHOPPER CREEK OR DELAWARE RIVER. See DELAWARE RIVER, in these Supplements.

GRASSMANN, HERMANN GÜNTHER, a German mathematician and philologist; born at Stettin, Prussia, April 15, 1809; instructor in Stettin from 1834 to 1852, then professor of mathematics in the gymnasium at Stettin. He published a translation and dictionary of the Rigveda and other philological works, also treatises on mathematics, the chief of which, on the *Science of Extension*, comprised a system of geometry similar to Sir W. R. Hamilton's system of quaternions. In 1862 he published, in *Kuhn's Zeitschrift*, a phonetic law, since called Grassmann's law, by which, in Sanskrit and Greek, an aspirate loses, by dissimilation, its after-breath when an aspirate stands at the beginning of the next syllable. He died in Stettin, Sept. 26, 1877. See QUATERNIONS, Vol. XX, p. 163.

GRASSMANN, ROBERT, a German writer, brother of Hermann G.; born at Stettin, Prussia, March 8, 1815; took a university course and began teaching; in 1848 commenced writing for the press and produced many works in the field of science and philology. Among them are *Die Wissenschaft oder Physik; Die Formenlehre oder Mathematik*; and others on biology, metaphysics and philosophy.

GRASS-MOTH, a name usually given to moths of the genus *Crambus*, but sometimes to its allies.

This genus is common in all countries. Certain species are abundant in meadows and pastures in the United States. The caterpillars feed on the grasses, and when numerous sometimes do much damage.

GRASS OF PARNASSUS, the common name of *Parnassia*, a genus of plants belonging to the family *Saxifragaceæ*. It is a native of bogs and moist heaths in the northern parts of both hemispheres, becoming a mountain plant farther south. It is characterized by its scape-like stem, bearing a solitary white flower, and its cluster of gland-tipped sterile filaments standing before each veiny petal. *P. Caroliniana* is the common North American species.

GRASS-OIL, a fragrant volatile oil obtained largely from different grasses of the genus *Andropogon*, indigenous in India. It is used in medicine, the perfuming of soap and as an adulterant for more expensive perfumeries. The precious spikenard-oil of the Scriptures is supposed to have been obtained from one species. The kind known as the grass-oil of Nainaur is produced at the foot of the Vindhya Hills and exported from Bombay. The term is used rather loosely to cover a number of distillations from this genus, called, according to the species of the grass or the locality where the oil is produced or used, oil of lemon-grass, oil of ginger-grass, oil of geranium, and similar names, frequently erroneous. Ceylon exports ten tons of this oil annually.

GRASS TREE, the common name of *Xanthorrhæa*, a genus of plants of the family *Liliaceæ*, natives of Australia. They have shrubby stems, with tufts of long, wiry foliage at the summit, and a long cylindrical spike of densely aggregated flowers shooting up from the center of the tuft of leaves. The base of the inner leaves of some species is edible. All the species abound in a resinous juice, which, on exposure to the air, hardens into a reddish-yellow inodorous substance, soluble in alcohol, and useful as a tonic in dysentery, diarrhœa, etc. The common grass tree (*X. hastilis*), which yields gum for varnish, has a stem about four feet high, but sometimes a foot in diameter. It is of extremely slow growth. Several species are found in Eastern Australia and also in New Zealand. The genus also is called "black-boy."

GRASS VALLEY, a post town of Nevada County, northwestern California, on the Nevada County Narrow Gauge railroad, which connects with the Southern Pacific. It contains two orphan asylums, several schools, foundries and quartz-mills. This place is the center of the chief gold quartz-mining district of California. Pop. 1890, 4,032; 1900, 4,719.

GRASS-WRACK, the common name of *Zostera*, a genus of plants of the family *Naiadaceæ*. The leaves are narrow and grass-like, and the flowers are hidden in their upper sheaths. The common grass-wrack (*Z. marina*), or eel-grass, is a perennial plant which forms green meadows on the bottom of shallow bays. It becomes white by exposure to air. The rush-like coverings of Italian liquor-flasks are made of it, and it is used for packing glass bottles. The plant is now an article of commerce under the name of *Alga marina*.

GRATIOLA, a genus of plants of the family *Scrophulariaceæ*. *G. officinalis*, sometimes called hedge-hyssop, is found in pastures in most parts of Europe. It is extremely bitter, acts violently as a purgative, diuretic and emetic, and in overdoses is an acrid poison. Formerly it was esteemed so highly as a medicine that the name of *gratia Dei* ("grace of God") was given to it, and for the same reason it is known as *herbe au pauvre homme* ("poor man's herb"). *G. Peruviana*, a South American species, has somewhat similar properties. These properties are supposed to depend upon a resinous principle called *Gratiolin*. Several species are natives of the United States, all of them being inconspicuous plants in low or wet places.

GRATIOT, CHARLES, an American soldier; born in Missouri in 1788. In 1806 he graduated from West Point, and entered the army as second lieutenant of engineers; made captain in 1808, and served in the War of 1812 as chief engineer of Harrison's army; in 1815 promoted to major; in 1819 to lieutenant-colonel, and in 1828 to colonel, and put in charge of the engineering bureau at Washington, with the brevet of brigadier-general; later in the same year, appointed inspector of West Point, which position he held until dismissed by the President, Dec. 6, 1838, on the charge of misappropriation of public funds. He appealed to the United States Senate to investigate his case, but the matter was never settled. From 1840 to 1855 he held a clerkship in the land-office at Washington, then went to St. Louis, where he died in poverty, May 18, 1855.

GRATRY, AUGUSTE JOSEPH ALPHONSE, a French theologian and author; born at Lille, March 30, 1805. After being educated at the École Polytechnique he became an ecclesiastic, and in 1841 was appointed director of the Collège Sainte-Barbe, Paris; in 1846 chaplain of the Normal School, Paris; in 1852 joined the Abbé Petetot in reorganizing the order of the Oratorians of the Immaculate Conception, having previously resigned his position in the Normal School. In 1861 Bishop Dupanloup appointed him vicar-general of Orleans, and in 1863 he was made professor of moral theology at the Sorbonne, Paris; in 1867 chosen to the Academy; in 1869 left the Oratorians on account of being censured for his connection with Père Hyacinthe and the League of Peace. He published, among other works, *La Connaissance de Dieu* (1855); *Logique* (1856); *La morale et la Loi de l'Histoire* (1868). Several of his writings were directed against Renan and his school. He died in Montreux, Switzerland, Feb. 6, 1872.

GRATTAN, THOMAS COLLEY, a British author; born in Dublin, Ireland, in 1796; studied law in Dublin, but afterward devoted himself to literature. In 1828 he went to Belgium and settled in Brussels, where he actively supported the pretensions of King Leopold to the throne of Belgium; British consul at Boston in 1839-53; and subsequently held an office in the Queen's household. He published a pamphlet on the boundary question between Great Britain and the United States, and an attack on American society and institutions, entitled *Civilized America* (2 vols., 1859). He also published *England*

and the *Disrupted States of America* (1861). He died in London, England, July 4, 1864.

GRAVEL, a disease of the kidneys. See *Calculi*, under VESICAL DISEASES, Vol. XXIV, p. 189.

GRAVEL, sedimentary material. See GEOLOGY, Vol. X, p. 236.

GRAVELOTTE, BATTLE OF, called also REZONVILLE, and by the French ST. PRIVAT, the bloodiest and the greatest conflict of the Franco-Prussian war. The Emperor had yielded the position of commander-in-chief of the French forces to Marshal Bazaine. On August 16th, Bazaine, who had concentrated the army around Metz, in Lorraine, gave orders for a retreat toward Verdun; but, in the mean time, the German armies, by a circuitous march, had crossed the Moselle south of Metz, and were marching northwest to cut off the French retreat. The First Corps of German met the French at Vionville on the 16th, the result of the action being indecisive except that it prevented Bazaine's purposed retreat. On the following day he returned to the heights which extended west of Metz from St. Privat to Rozerieulles and faced his army to the west. The King of Prussia arrived on the same day at Gorze, and prepared for battle on the following day. The Germans were now east of the French. For a time King William was in doubt whether the French would try to march to the north or hold their position. On the 18th it was learned that they had not moved. Thereupon the order was given for the Germans to make a circuitous march to the right. The right wing of the German army attacked the French first in front, next the center, while the left wing closed in from the north. It was here that the severest fight took place, resulting in the capture of St. Privat by the Germans at seven p.m. The battle was decided some time later by the failure of the French left to break through the German line at Gravelotte. The German army numbered 211,000 men, and lost 28,000; the French numbered 140,000, and sustained a loss of 12,000. The result of the battle was that Bazaine was forced to retreat into the fortress of Metz, which he finally surrendered, with his whole army, to Prince Frederick Charles.

GRAVESANDE OR 'S GRAVESANDE, WILLEM JAKOB VAN, a Dutch philosopher and mathematician; born at 'S Hertogenbosch, Netherlands, Sept. 27, 1688; he studied law and philosophy at Leyden and Leipsic, and was professor of mathematics and astronomy at Leyden, and between the years 1717 and 1734, and after that time until his death, professor of philosophy at the same university. In association with MUSSCHENBROEK (see Vol. XVII, p. 109), he introduced the Newtonian philosophy into Holland, and contributed powerfully to shake the hold of Descartes upon the schools. Among other works he wrote a treatise on physics and an *Introduction to Philosophy*. He died at Leyden, Feb. 28, 1742.

GRAVES'S DISEASE OR EXOPHTHALMIC GOITER. See GOITRE, Vol. X, p. 740.

GRAVING—DOCKS. See HARBOURS, Vol. XI, p. 469.

GRAVITIES, SPECIFIC, the relative densities of bodies. See HYDROMETER, Vol. XII, pp. 536-542.

GRAY, ALBERT ZABRISKIE, an American clergyman; born in New York City, March 2, 1840; graduated at the University of New York in 1860, and at the General Theological Seminary of the Protestant Episcopal Church, in New York, in 1864. He served as chaplain of the Fourth Massachusetts Cavalry during the Civil War, and in 1882 was elected warden of Racine College, Wisconsin. He was engaged in the work of church reform in Europe, and was a delegate to the general convention in 1886. Among his writings are *The Law and the Life* (1876); *Mexico As It Is* (1878); *Words of the Cross* (1880); and *Jesus Only, and Other Sacred Songs* (1882). He died Feb. 16, 1889.

GRAY, ASA, an American botanist; born in Paris, Oneida County, New York, Nov. 18, 1810. In 1831 he graduated at Fairfield College of Physicians and Surgeons, in Herkimer County, New York, and engaged in teaching chemistry and natural history in a school at Utica, New York, until 1833, when Dr. John Torrey gave him an appointment as his assistant at the College of Physicians and Surgeons, in New York City. He began at once to assist Dr.

ASA GRAY.

John Torrey on a serial work, the *Flora of North America*, the first installment of which appeared in 1838. The first volume was issued in 1840, the work remaining uncompleted. This early work turned Gray's attention to the subject of botany as a permanent study. In 1834 he was appointed to the Wilkes expedition to South America and the islands of the South Pacific, but finally declined the appointment, although he prepared the *Botany of the Wilkes Expedition* from the notes and specimens brought to him. In 1837 he accepted a chair in the University of Michigan, but first went to Europe for a year's study. The Fisher professorship of natural history being founded at Harvard in 1842, Gray became its first incumbent. Here he remained in active service until 1873, during which time he superintended the formation of the most important herbarium in the country. In 1874 he succeeded Agassiz as regent of the Smithsonian Institution; in 1878 was elected a member of the Academy of Sciences in the Institute of France. The last fifteen years of his life were passed in study and investigation at Cambridge. Gray claimed to be a theistic evolutionist. While accepting the modern theory of evolution as enunciated in Darwin's *Origin of Species*, he did not reject the essential tenets of the Christian faith. He was an active supporter, correspondent and friend of Darwin, furnished him some data from his own researches, and wrote critical essays upon his works, later collected under the name of *Darwiniana*. Among others of his works are *Genera of Plants of the United States* (1848-49); *Manual of the Botany of the Northern United States*, which has become the standard textbook; *How Plants Grow*; *Relations of the Japanese*

Flora to Those of North America, which made his reputation abroad; and his most important work, the unfinished *Synoptical Flora*, the completion of which was undertaken by Harvard College. He was on the editorial staff of the *American Journal of Science and Arts* for 35 years. His *Life and Letters* have been recently published by his wife, the correspondence with Darwin, covering the period of the Civil War, being of rare interest. Dr. Gray made a specialty of the vast and difficult order *Compositæ*, his analysis and classification of which display a knowledge unrivaled among botanists. He died in Cambridge, Massachusetts, Jan. 30, 1888. In memory of him, Gray's Peak, in the Rocky Mountains, received its name.

GRAY, ELISHA, an American inventor; born at Barnesville, Ohio, Aug. 2, 1835. He served apprenticeships at blacksmithing, carpentry and boat-building; then studied physical science at Oberlin College, supporting himself by working as a carpenter. His patents number about fifty, a large number of which relate to the telephone, and the remainder to telegraphic apparatus, among them a speaking-telephone, and a multiplex telegraph by which eight messages can be sent at one time over one wire. In 1893 he announced his invention of the telautograph, by which autograph messages may be transmitted by electricity. See TELEGRAPH, Vol. XXIII, p. 124.

GRAY, HENRY PETERS, an American artist; born in New York City, June 23, 1819; studied art with Daniel Huntington; in 1839 went to Europe for four years; from 1869 to 1871 president of the National Academy, and then spent three years in Florence. His subjects were largely historical and classical, but he painted over three hundred portraits. He died in New York City, Nov. 12, 1877.

GRAY, HORACE, an American jurist; born in Boston, Massachusetts, in 1829; graduated at Harvard in 1845, and later at the Harvard Law School; became a lawyer in 1851; and, in succession, reporter, in 1864 associate justice, and in 1873 chief justice of the supreme court of the state. In 1881 he was made associate justice of the United States supreme court.

GRAY, ISAAC PUSEY, an American politician; born in Chester County, Pennsylvania, Oct. 18, 1828; studied law; and entered mercantile business; in 1855 moved to Union City, Indiana; during the Civil War was colonel of the Fourth Indiana Cavalry. In politics he was first a Whig, then a Republican, and from 1871 a Democrat. In 1868 he was elected state senator; in 1876 made lieutenant-governor; in 1884 governor; and in 1892 appointed minister to Mexico. He died in Mexico, Feb. 14, 1895.

GRAY, ROBERT, an American navigator; born at Tiverton, Rhode Island, in 1755. In September, 1787, he sailed from Boston in command of the sloop *Washington*, for the purpose of trading with the natives of the northwest coast of America, and returned in 1790 by way of Canton, China, thus being the first to carry the American flag around the globe. Upon a second voyage, in 1792, to the same region, he discovered the Columbia River,

naming it after his vessel. He died in Charleston, South Carolina, in 1806.

GRAYBACK OR KNOT. See SANDPIPER, Vol. XXI, p. 260; and KNOT, Vol. XIV, p. 129.

GRAYDON, ALEXANDER, an American soldier and author; born in Bristol, Pennsylvania, April 10, 1752; was educated in Philadelphia and studied law; in 1775 received the appointment of captain, and engaged in raising recruits; was in the battle of Long Island, and was taken prisoner in a subsequent action; exchanged in 1778, but did not rejoin the army; was prothonotary of Dauphin County, Pennsylvania, from 1785 to 1799. He resided for some years near Harrisburg, and removed to Philadelphia in 1816. He was a contributor to literary and political journals, and published *Memoirs of a Life Chiefly Passed in Pennsylvania Within the Last Sixty Years* (1811), reprinted in London and Edinburgh. He died in Philadelphia, May 2, 1818.

GRAY DUCK. See GADWALL, in these Supplements.

GRAY FRIARS. See FRANCISCANS; Vol. IX, pp. 698-700.

GRAYLING, a town and the capital of Crawford County, central northern South Michigan, 45 miles E. of Traverse City, situated on the Au Sable River, and on the Mackinaw division of the Michigan Central railroad. It is surrounded by pine forests, and its principal business is lumbering and sawing, for which it has several mills and good water-power. Grayling fish is found in abundance near here. Population township 1900, 1,716.

GRAY'S PEAK, in Summit and Clear Creek counties, northern central Colorado, 12 miles W. of Georgetown. It is the twin of Torrey's Peak and of the same height, 14,466 feet. It was named in honor of Dr. Asa Gray.

GRAYVILLE, a town of White County, southeastern Illinois, situated on the Wabash River, at the mouth of the Bonpas River, and on the Cleveland, Cincinnati, Chicago and St. Louis and the Peoria, Decatur and Evansville railroads. The surrounding country is fertile, and considerable grain is shipped. It has stave and heading factories, and flour, saw and planing mills. Population 1890, 1,999; 1900, 1,948.

GRAYWACKE OR GREYWACKE, in geology, a sort of conglomerate rock, found chiefly in the Palæozoic series. See GEOLOGY, Vol. X, p. 237.

GREASE. See VACCINATION, Vol. XXIV, pp. 23, 24.

GREASE-WOOD, a name applied to various chenopodiaceous shrubs growing abundantly in saline localities in the western United States. The one most commonly referred to as grease-wood is *Sarcobatus vermiculatus*, a rigid, wide-branching, leafy shrub, with smooth white bark, and terminal staminate spikes with persistent spirally arranged scales.

GREAT BARRINGTON, a village of Berkshire County, western Massachusetts, beautifully situated on the Housatonic River, and on the New York, New Haven and Hartford railroad, 15 miles S. of Lenox, and noted as a summer resort. It was the county seat until 1787, and the scene of great excitement during the suppression of Shay's Rebel-

lion. It has manufactories of woollens, cotton goods, paper and brick, and in the vicinity are noted quarries of variegated marble. It is the seat of the Sedgwick Institute (a Princeton preparatory school) and Housatonic Hall, a school for girls. Population 1890, 4,612; 1900, 5,854.

GREAT BASIN. See UNITED STATES, Vol. XXIII, pp. 794, 795.

GREAT BEAR LAKE. See BEAR LAKE, GREAT, Vol. III, p. 462.

GREAT BEND, a city and the capital of Barton County, central Kansas, on the Arkansas River, at its most northern point in the state, on the Santa Fé and the Missouri Pacific railroads; seat of Central Normal College. It has salt-mines, and stone-quarries and large agricultural interests. Population 1900, 2,470.

GREAT BRITAIN AND IRELAND, UNITED KINGDOM OF. For elaborate articles on the geography, history, government, literature and earlier statistics of Great Britain and the British Empire, see in this ENCYCLOPÆDIA and its Supplements, the titles of the countries, severally, which together constitute the present British Empire.

The article on ENGLAND, Vol. VIII, p. 368, ends with the accession to power of Disraeli in 1874. Many, varied and important have been the events of English history since that date. It is equally noticeable that very important matters in relation to the government and constitution of England have been sacrificed in that article for lack of space. Especially is this remarkable in regard to one of the most debated of English political questions—that of grants to members of the royal family. There is hardly an incident of English affairs as to which less accurate information is possessed by the people at large. The Civil List is the *bête noire* of the demagogue or socialist orator. Reigning in her own right, holding the crown by inheritance and election, the Queen's civil list consists of a fixed Parliamentary grant, annually voted, of £385,000, of which £60,000 is paid into her privy purse, £231,260 is set aside for the salaries of the royal household, £44,240 is paid for retiring allowances and pensions to servants, and £13,200 for royal bounty, alms and special services. This leaves an unappropriated surplus of £36,300, which may be applied in aid of the general expenditure of the court. In addition to this, the Queen has paid to her the annual revenues of the Duchy of Lancaster. The sums allowed to members of the royal family are charged on the consolidated fund, and are annually voted by Parliament. These sums are: £10,000 a year to the Duke of Edinburgh (reduced from £25,000 on the Duke's accession to the dukedom of Saxe-Coburg-Gotha in 1893); £25,000 to the Duke of Connaught; £8,000 to the Empress Victoria of Germany; £6,000 to Princess Christian of Schleswig-Holstein; £6,000 to Princess Louise, Marchioness of Lorne; £6,000 to Princess Henry (Beatrice) of Battenberg; £3,000 to the Grand Duchess of Mecklenburg-Strelitz; £5,000 to the Princess of Teck, formerly Princess Mary of Cambridge; £12,000 to George, Duke of Cambridge; and £6,000 to Princess Helena of Waldeck, Duchess of Albany.

The Prince of Wales, as heir apparent to the crown, is the recipient of £40,000 annually, and in addition receives £37,000 per year for the support and maintenance of his children. He also receives the revenues of the Duchy of Cornwall. The Princess of Wales receives £10,000 annually, to be increased to £30,000 in case of widowhood.

ELECTORS AND ELECTIONS. The Representation Act of 1884 extended to householders in counties the suffrages which previously had been conferred upon householders and lodgers in boroughs, while the Redistribution of Seats Act of 1885 made a new division of the United Kingdom into county and borough constituencies. All elections to Parliament must be by secret ballot. The new Reform Bill has added nearly three million electors to the roll, and there is now one elector to about every six of the population. The present total number of members is 670, against 652 who sat before the passing of the Redistribution Act. The classified lists showing the relative representation of England, Scotland and Ireland in the Lower House of Parliament from the counties, boroughs and universities in 1895 are as follows:

TERRITORIAL	Co.	BOR.	UNIV.	TOTAL.
England and Wales.....	253	237	5	495
Scotland	39	31	2	72
Ireland.....	85	16	2	103
Total	377	284	9	670

Under the Corrupt Practices Prevention Act of 1883 (amended 1895), election offenses are classified under Corrupt Practices and Illegal Practices. The first include: (1) Treating; (2) undue influence; (3) bribery; (4) personation; (5) knowingly making a false declaration respecting election expenses. The penalties are very heavy. Illegal practices include payment for the conveyance of voters; expenses in excess of amount allowed by statute; voting when disqualified, or inducing disqualified person to vote; publishing a false statement of a candidate's withdrawal, etc. Penalties in these cases are comparatively light.

PREMIERS. The following is a list of the Premiers of the British government from 1880 to 1895. For previous Cabinets, see ENGLAND, Vol. VIII, p. 369.

PRIME MINISTERS.	DATES OF APPOINTMENT.
William Ewart Gladstone.....	April 28, 1880
Marquis of Salisbury.....	June 24, 1885
William Ewart Gladstone.....	Feb. 2, 1886
Marquis of Salisbury.....	July 26, 1886
William Ewart Gladstone.....	Aug. 18, 1892
Earl of Rosebery.....	March 3, 1894
Marquis of Salisbury.....	June 25, 1895

POPULATION OF THE PRINCIPAL CITIES. The census of 1891 shows the population of the principal cities of Great Britain to be as follows:

London, 4,231,431; Glasgow, 618,052; Liverpool, 517,980; Manchester, 505,368; Birmingham, 478,113; Leeds, 367,505; Sheffield, 324,243; Edinburgh, 264,796; Dublin, 245,001; Bristol, 221,578; Bradford, 216,361; Nottingham, 213,877; Hull, 200,044; Salford, 198,139; Newcastle, 186,300; Portsmouth, 159,251; Dundee, 155,675; Leicester, 174,624; Old-

ham, 131,463; Sunderland, 131,015; Cardiff, 128,915; Aberdeen, 123,327; Blackburn, 120,064; Brighton, 115,873; Bolton, 115,002; Preston, 107,573.

AREA AND POPULATION OF THE BRITISH EMPIRE BY COUNTRIES. The following figures are from the returns of 1898:

NAME OF COUNTRY.	AREA IN SQUARE MILES.	POPULATION.
Great Britain and Ireland....	121,115	40,188,927
Indian possessions, etc.....	1,560,160	287,223,431
Asian possessions.....	96,429	5,801,553
Australasia, etc.....	3,173,442	4,954,039
British America.....	3,786,346	7,150,000
Africa.....	2,878,869	33,786,241
European possessions.....	119	202,261
South Atlantic.....	7,600	6,529
Totals.....	11,624,080	379,312,978

There is a considerable extent of very recently acquired territory, the exact boundaries of which are as yet undetermined, and of whose population no accurate census has so far been taken.

Of the total population of the United Kingdom in 1891, 18,437,027 were males, and 19,421,126 were females.

In England the density of population per square mile was 484; in Wales, 184; in Scotland, 122; in Ireland, 159.

The approximate annual emigration from the United Kingdom to British North America is 23,760; to the United States, 153,030; to Australasia, 11,200; total, 231,980.

EDUCATION AND RELIGION. Elementary education is now compulsory in the United Kingdom, and in 1889 it was made free in Scotland. On Jan. 1, 1898, there were, in England and Wales, 2,502 school boards, representing a population of 19,918,110. England and Wales have a total of 5 universities (58 colleges); Scotland, 4; Ireland, 2; total, 11; with 1,596 teachers and 24,534 students. The total grants to primary schools in Great Britain (for examination and attendance of scholars) in 1898 was £10,514,504.

In England and Wales the Episcopal continues to be the established church, but all other churches are fully tolerated, and civil disabilities do not attach to any class of British subjects on account of religion. There are 2 archbishops and 33 bishops. At the last census the population claiming membership in the state church was estimated at about 13,500,000, leaving about 12,500,000 to other creeds.

There are many Protestant dissenting religious bodies, the most numerous being the Methodists, reporting about 15,200 chapels, with 801,000 members; the Independents, 360,000 members; the Baptists, 3,842 chapels, with 365,000 members. There are recorded in Great Britain 180 different religious denominations.

The number of Roman Catholics in England and Wales is estimated to be about 1,500,000, with 1 archbishop and 15 bishops.

The number of Jews in Great Britain and Ireland is estimated to be nearly 100,000, of whom 70,000 reside in London.

The number of parishes of the established (Presbyterian) church in Scotland in 1898 was 1,371

with 1,767 churches, chapels, and stations, and 641,803 members. The Free Church (Scotch Presbyterian) has 402,135 members and adherents. The Episcopal Church in Scotland reported 7 bishops, 331 churches, 337 clergy, with a membership of 111,958.

The Roman Catholic Church in Ireland in 1894 was under the supervision of 4 archbishops and 23 bishops, with a total membership of 3,549,856.

The Irish Protestant Episcopal Church had, in 1898, 1,450 churches, with 600,000 members.

There were also, in Ireland, at the census of 1891, 444,974 Presbyterians, 55,235 Methodists, 17,017 Independents, 5,111 Baptists, 3,032 Quakers or Friends, and 1,798 Jews.

REVENUES AND EXPENDITURES. The accounts for the year ending March 31, 1898, reported the government income at £106,614,004, and the expenditure at £102,935,994; surplus £3,678,010.

The income tax is regarded as the most important of the direct taxes. This tax since 1881 has varied from 5d to 8d per pound. In 1883 and 1884 the rate was 5d; in 1885, 8d; in 1886 and 1887, 7d; in 1888 till 1892, 6d; in 1893, 7d; and in 1894-98, 8d. Only incomes over £160 are levied upon, while there is an abatement of £160 on those under £400, and of £100 on those below £500.

THE NATIONAL DEBT. The national debt was greatest at the peace of Paris, 1815. The increase during the war with France, 1792-1815, had been £621,375,628. At the commencement of the Crimean War in 1854, it was £804,226,354; during that war, about three years, it grew to £837,144,597, an increase of £32,918,243. On March 31, 1898, the debt was £634,435,704, or about \$3,090,000,000.

THE BRITISH ARMY. For the year ending March 31, 1899, the army of the United Kingdom consisted of 8,109 commissioned officers, 1,087 warrant officers, 17,100 sergeants, 3,941 drummers, trumpeters, etc., and 150,276 rank and file; a total of 180,513 men of all ranks—an increase of 16,944 over the previous year.

The above figures include only those of the standing army. In addition, there were four classes of reserves and auxiliary forces, viz., reserves, 83,050; militia, 138,961; yeomanry, 11,891; volunteers, 263,963. These, with the standing army at home, and a force of 73,162 in India, make a grand total of over 750,000 officers and men.

THE BRITISH NAVY. The number of seamen and marines provided for the naval service in the estimates for 1898-99, and also for those in the previous year, was as follows:

BRANCHES OF SERVICE.	1897-98	1898-99
For the fleet (including Indian troopships):		
Officers and seamen.....	67,072	72,009
Boys (including 1,950 under training).....	3,400	3,700
Marines afloat and on shore.....	16,841	17,807
For the coast guard.....	4,200	4,200
Training and various services.....	8,537	8,674
Total, all ranks.....	100,050	106,390

Provision was also made for 24,010 men of the royal navy reserves, 3,010 seamen and marine pensioner reserves, including 94 officers on salary.

The condition of the English navy at the beginning of 1899 is shown by the following table:

	LAUNCHED JAN., 1899.	BUILDING.
Battleships, first class.....	35	10
Battleships, second class.....	7
Battleships, third class.....	18
Coast-defense ships.....	14
Cruisers, Armored.....	9	12
Cruisers, first class.....	30
Cruisers, second class.....	53
Cruisers, third class.....	42	2
Torpedo gunboats.....	34
Torpedo-craft, first class, including 108 "destroyers".....	153	23
Torpedo-craft, second and third class.....	24
Total.....	419	47

According to estimates, the approximate aggregate cost of the effective and non-effective ships now in commission amounted to £60,000,000, while the incidental expenses amounted to £8,000,000.

In January, 1899, there were 164 ships in commission, exclusive of gunboats, small craft, the coast-guard ships, and training, harbor, and depot ships. The vessels were thus distributed: Mediterranean and Red Sea, 38; Channel squadron, 14; North America and West Indies, 12; East Indies, 9; China, 28; Cape of Good Hope and West Africa, 16; Pacific, 7; Australia, 12; southeast coast of America, 4; particular service, 11; surveying service, 9; training squadron, 4—making a total of 164.

COMMERCE AND INTERNAL COMMUNICATION. The United Kingdom is classed as a free-trade country, the only duties levied being on chicory, cocoa, coffee, dried fruits, plate, spirits, tea, tobacco, and wine, the bulk of all the levies being on spirits, tobacco, tea, and wine. The total imports in 1898 amounted to £470,604,198; and the exports to £294,009,991. The duties are levied on goods valued at £30,000,000, or about 7 per cent of the total imports.

The standard of value is gold. Silver is legal tender up to forty shillings, bronze up to twelve pence. Bank of England notes are legal tender for sums over five pounds sterling.

On Jan. 1, 1898, the railway mileage aggregated 21,433 miles, distributed as follows: In England and Wales, 14,818 miles; in Scotland, 3,447 miles; and in Ireland, 3,168 miles.

On March 31, 1898, the telegraph mileage aggregated 41,516 miles of government lines, with 280,578 miles of wire.

HISTORY SINCE 1874. Taking up the political history of England at the date of the formation of Disraeli's second Cabinet in February, 1874, and at the period at which the article on England, Vol. VIII, p. 368, concludes, the political complexion of the new Parliament is the first matter of interest to note. The Prime Minister was supported by 350 Conservatives in the House of Commons. His political opponents, the Liberals, numbered 244, and a compact and cohesive force of 58 Irish members,

all pledged to Home Rule, was a power, of itself, to help or hinder legislation.

Disraeli's Cabinet was a strong one. He himself was First Lord of the Treasury; Lord Cairns held the great seal as Lord Chancellor; the Duke of Richmond and Gordon was Lord President of the Council; Lord Malmesbury, Lord Privy Seal; Lord Derby, Foreign Secretary; Lord Salisbury, Secretary for India; Lord Carnarvon, Colonial Secretary; Gathorne Hardy (created Viscount Cranbrook in 1878) was Secretary of War; Sir Richard Assheton Cross, Home Secretary; Ward Hunt, First Lord of the Admiralty; Sir Stafford Northcote, Chancellor of the Exchequer; Lord John Manners, Postmaster-General; Lord Sandon, Vice-President of the Council; the Duke of Abercorn, Lord-Lieutenant of Ireland; and Sir Michael Hicks-Beach, Chief Secretary for Ireland. It was almost a second Ministry of All the Talents. Its members, both individually and collectively, left a deep impression on the pages of their country's history. The old Low Church element secured the passage of the Public Worship Regulation Act, and used its defective provisions vigorously against all High Church clergymen whose ritual savored of Romanism. The statute seems a strange one to be passed by a Parliament in which Conservatives were in a considerable majority.

Butt's Home Rule motion was negated in July, 1874, by a vote of 458 to 61, and the year saw the conclusion of a war with Ashanti. It had been commenced to protect the Gold Coast settlements, had cost the lives of many a brave fellow in the swamps of the pestilential Prah river, and concluded with the downfall of Koffee Kalcalli, the Nero of Ashanti. In October Fiji was definitively annexed to the empire.

In January, 1875, Gladstone took a premature farewell of politics, and resigned the leadership of the Liberal party. His successor was the Marquis of Hartington, a Whig of the old school. An Artisans' Dwelling Act for England, and coercion for Ireland in the shape of a Peace Preservation Act, were early items of the year's legislation.

An Agricultural Holdings Act, passed on August 13, 1875, gave tenant farmers compensation for unexhausted improvements; while a similarly permissive Land Transfer Act enabled the owner of land with a perfect title to obtain expensive registration of the same, but provided no method for clearing a defective title or registering it. Tentative as was the Act, it was also, from the first, a dead letter. The Prince of Wales made an extensive tour of the East Indian empire, 1875-76, cementing the ties which bound many a native ruler.

The year was marked by the extinction of special pleading and pettifogging in the courts of law. The new High Court of Justice, constituted by the Judicature Acts of 1873 and 1875, held its first sitting on Nov. 1st, and by the code of rules then promulgated showed that the old school of lawyers, satirized by Warren and Dickens, and indeed by every author since Chaucer, had passed away. The year was also memorable for Disraeli's purchase in Nov., 1875, of

the Khedive's Suez canal shares. Thenceforth England had a pecuniary interest in the nearest road to India. It was a step toward knitting together the empire, criticised severely at the time, but since fully justified as a sound commercial undertaking.

The year 1876 saw the shameless Bulgarian atrocities of the unspeakable Turk, evoked a ringing protest from Gladstone, and caused two changes in the tottering empire of Islam. The Queen assumed the title of Empress of India, and the nation watched with anxiety the Russian advance toward the Sweet Waters of the Golden Horn. It was the birthday of jingoism, and a powerful fleet was sent to Besika Bay.

Disraeli, created Earl of Beaconsfield in Aug., 1876, sent Lord Salisbury to the conference at Constantinople; and Russia, with the little armies of Roumania, Servia, and Montenegro, began, in April, 1877, the advance into the domains of "The Sick Man of the East." Home Rule (q. v., in these Supplements) began obstruction in this year, and produced closure rules in the House of Commons.

In January, 1878, the Russians had arrived in sight of the minarets along the Bosphorus. The Bear was within striking distance of the city he long had coveted, and in February Europe watched with bated breath the dispatch of the English fleet to Constantinople. The step cost the ministry the support of Lords Carnarvon and Derby, but a vote of credit for \$30,000,000 preceded the calling out of the army reserves and the moving of Indian troops to Malta. Beaconsfield and Salisbury attended the Berlin Congress, and brought home the high-sounding, if dissatisfying, "Peace with Honor." Cyprus fell to England on a division of the spoil, and an Afghan war nerved England to prepare for Russia's advance on her Indian empire.

Wars abroad and agricultural distress at home characterized the commencement of 1879. The soldier savages of Zululand overwhelmed the ill-guarded camp of the Twenty-Fourth Regiment at Isandula, and but for the heroism of Bromhead and Chard at Rorke's Drift, would have raided and ravaged the colony of Natal. The victory of Ulundi (July 4, 1879) followed peace in Afghanistan (June 8, 1879), but the massacre of Cavagnari and his escort in Cabul, Sept. 2-3, led to a renewal of the war. Cabul was occupied (Oct. 12, 1879), while the Irish Land League was formed at home. The office of Public Prosecutor was created, and Gladstone, chafing in retirement, commenced a campaign of vehement denunciation against the policy of Beaconsfield.

The year 1880 brought forth more closure rules in Parliament to meet the increase of obstructive tactics among the Home Rulers. Feb. 23 witnessed a dissolution of Parliament, and Gladstone was, after some delay, called upon to form a ministry. In April the new Parliament met. The campaign had given Gladstone 349 Liberal supporters. His opponents, the Conservatives, were 243 all told, and 60 Home Rulers rendered party divisions problematical on many occasions.

Gladstone's Cabinet included many of the Birmingham school of advanced Liberal ideas. John

Bright was Chancellor of the Duchy of Lancaster; the Marquis of Hartington was at the head of the India office; Joseph Chamberlain was President of the Board of Trade; Sir William Harcourt was Home Secretary; and, outside the Cabinet, W. E. Forster was Chief Secretary for Ireland.

The undignified Bradlaugh episode first attracted the attention of the Lower House. Avowing his atheistic views, the junior member for Northampton first desired to affirm, and then swore himself in. Much litigation followed, but, in the end, the sturdy "Iconoclast" obtained his seat.

Concession to Ireland was the order of the day, and the Peace Preservation Act was allowed to expire, while a Relief of Distress Act, with a Compensation for Disturbance clause, was offered to appease the sixty Irish malcontents, who were so potent to obstruct legislation. Then Gladstone tried to please the farmers with the hand that taxed the brewers in abolishing the malt tax and placing a tax on beer. Local option triumphed by a vote of 229 to 203 in the House of Commons, pleased Sir Wilfred Lawson and the apostles of cold water, but produced no actual legislation. The Burials Bill opened the graveyards of the English state church to Nonconformist funerals, and antagonized the warring creeds and sects. A Ground-Game Act was passed to protect farmers' crops from the depredations of hares and rabbits. An Employers' Liability Act, very fruitful in litigation when not contracted against, preceded a widespread anti-rent agitation in Ireland, an abortive state trial of Parnell and his supporters, and a Boer revolt in the Transvaal.

January, 1881, witnessed the defeat of the impetuous General Sir George Colley at Laing's Nek, in the Transvaal, and Feb. 27 his death at the greater disaster of Majuba Hill. Concession to rebellion was the policy of the Gladstonian Cabinet, and the foundation of future troubles was laid in a hasty peace, while the defeat of Majuba and the treachery of Potchefstroom were unatoned for and unavenged. Significant of a coming storm, the loyal and indignant Cape Colonists held a mock funeral of the British flag.

The policy of withdrawal was also shown in the retreat from Cabul and Candahar. In the eyes of the peace-at-any-price party Roberts's heroic march and Cavagnari's death counted as little to the Indian empire as a scientific frontier. But, goaded to desperation by the Irish agitation and obstruction, the government nerved itself to pass another coercion act for that "Niobe of Nations." More closure became necessary, and thirty-six Irish members, insisting on free speech, were forcibly removed from the House of Commons. An Irish Land Bill caused the sturdy Duke of Argyll to sever his connection with the Gladstonian Cabinet; and April, 1881, saw the nation mourning at the grave of the Earl of Beaconsfield.

In October, Parnell and his fellow Land Leaguers were incarcerated under the obnoxious "suspect" clause of the Coercion Act. The No-Rent Manifesto was issued in retaliation, and the Land League was proclaimed as illegal by a government at its wit's end for a policy that would pacify Ireland and satisfy

the landlord party. Crime held high carnival from Antrim to Kerry, and the suspects in Kilmainham jail ruled the land more potently than did the tenant of Dublin Castle.

The year 1882 opened with another Bradlaugh incident in Parliament, but his expulsion only increased his majority at the hands of the Northampton shoemakers. He was their choice, and in the interest of free thought they returned him again. Gladstone next boldly censured the House of Lords for their committee's emasculation of the Irish Land Act, and inaugurated a futile crusade for the mending or ending of hereditary legislators. The noise was greater than the result, which was nil, but it served to please and employ the new advanced Radical element.

Despairing over its Irish policy, the government made its "Kilmainham Treaty" with the imprisoned Land League suspects. The Lord-Lieutenant of Ireland, Lord Cowper, and Mr. Forster, the Chief Secretary, resigned their offices in disgust, and the ink on this "pact with treason" was barely dry before Lord Frederick Cavendish, who had gone to Ireland as Gladstone's bearer of the olive branch, and Chief Secretary, was murdered, with Mr. Burke, in Phoenix Park. G. O. Trevelyan became Chief Secretary, and another Coercion Act was passed, in spite of strenuous and sustained obstruction.

The revolt of Arabi Pasha in Egypt took the fleet to Alexandria Bay, and in July produced the bombardment of the fortifications. It was not war, said Mr. Gladstone, but John Bright fled from the ministerial fold before the army landed in Egypt and the navy seized the Suez canal. Kassassin and Tel-el-Kebir soon disposed of the insurgent Egyptians, who saw American sailors and marines assisting the British troops in policing Alexandria and protecting Europeans. Blood was once more thicker than water, and the bonds of friendship between the two great English-speaking nations were cemented afresh. Death claimed Charles Darwin one of the brightest stars in the scientific firmament.

More stringent closure rules were adopted in the autumn session of Parliament, and 1883 opened with a series of dynamite outrages, perpetrated by Irish-American irreconcilables, in the fatuous hope of emancipating Ireland. The only result was a drastic Explosives Act, and long sentences of penal servitude for the dupes who did the damage.

The punishment of the Phoenix Park assassins, following that of the Maamtrasna, Lough Mask and Castleisland murderers, served to break up the centers of terrorism in Ireland. The National League took the place of the Irish Land League, and propagated the same inflammatory doctrines as before. Parnell was the recipient of "a national tribute" of one hundred and ninety thousand dollars, designed primarily as a protest against ex-Chief Secretary Forster's exposure of the Land League and its methods, but promoted also as a counter-blast to the Pope's condemnatory letter to the Irish bishops.

Egypt, that bone of contention among the powers, again attracted attention before the reiterated demands for the withdrawal of the English army of

occupation could be complied with. The Egyptian army, under Hicks Pasha, was annihilated by the fanatics under the banner of the Mahdi, and the heroic Chinese Gordon (q.v., in these Supplements) was hurried to the Soudan to arrange for the withdrawal of the garrisons, and to meet his death in beleaguered Khartoum.

A stringent Corrupt Practices Act insured the future purity of Parliamentary elections, and lessened the cost to candidates. A compulsory Agricultural Holdings Act replaced an older and merely permissive statute, while the loose practices and fraudulent trustees of the Bankruptcy Act of 1869 were swept away by a return to official receiverships and the thorough supervision of the Board of Trade. In India, the ill-advised Ilbert Bill, conferring on the native judges jurisdiction over Europeans, aroused a storm of protest, and stimulated the native press to virulent attacks, before the agitation produced the withdrawal of the measure.

The obituary of the year 1883 included Sir George Jessel, the Master of the Rolls, and a leading jurist; Bishop Colenso, famous for his criticisms of the Pentateuch, and his Championship of the Zulu race; General Williams, once famous for his heroic defense of Kars; J. R. Green, the historian; Dr. Moffat, the Nestor of African missionaries and Livingstone's father-in-law; Captain Mayne Reid, the novelist; John Brown, the Queen's body-servant; and Captain Webb, the daring swimmer, who perished in a mad attempt to descend the rapids of Niagara.

The year 1884 witnessed military operations in the eastern Soudan, and an expedition to Bechuanaland under Sir Charles Warren, and, most important of all, Lord Wolseley's campaign for the relief of Gordon in Khartoum. A Franchise Bill was opposed by the Conservative party, and keenly contested until the provisions of the Redistribution of Seats Act was outlined. Votes of censure on the ministry were carried in the House of Lords, and narrowly averted in the Commons. The country was in a turmoil from end to end; Ireland, the agitation against the House of Lords and the operations in Egypt, with a series of dynamite explosions at home, taxed the energies of the Cabinets, and tried the patience of the nation. The year was also marked by the beginning of that "scramble for Africa" which resulted, before a decade had passed, in the colonization or annexation of the major portion of the Dark Continent by European powers. South African colonists bore with thinly veiled hostility the establishment of the robber republics in Bechuanaland. Forced by the action of the Queensland government, Mr. Gladstone at last resolved to establish a protectorate over New Guinea. The impending certainty of Germany seizing the island was the main reason for raising the British flag. Imperial federation, as a political gospel, was born in London, and on the Afghan frontier Sir Peter Lumsden found tracks of the Russian Bear, the Cossack soldiery masquerading as surveying parties.

The year was memorable for the Mignonette cannibalism case (see COLERIDGE, JOHN DUKE, BARON, in these Supplements), and the Lord Chief Justice's own troubles. The poet Tennyson was given

a well-deserved peerage, while the son of Lord Cairns, Viscount Garmoyle, figured as defendant in the Fortescue breach-of-promise suit, and became famous only for the fact that he paid the highest damages on record for blighted affections. In royal circles the death of the Duke of Albany, the Queen's youngest son, and the betrothal of the Princess Beatrice to Prince Henry of Battenberg, were events of note. The deaths of Fawcett, the blind Postmaster-General; Judah P. Benjamin, "The Brains of the Confederacy"; Charles Reade, the novelist; Sir Michael Costa, the composer; and H. J. Byron, the dramatist-author of *Our Boys*, marked the year.

January, 1885, brought the news of the heroic Gordon's death at Khartoum, and produced another partially successful vote of censure. But all interest was transferred to Afghanistan by the Penjdeh incident, and a vote of credit of \$55,000,000 showed the world that England was prepared to battle over broken treaties, even if her ministers deserted one of her noblest sons. The Redistribution of Seats Act passed, Gladstone essayed to re-enact some provisions of the Crimes Act, but the Home Rulers helped the Conservatives, and on the minor question of revenue a hostile majority forced his resignation.

Lord Salisbury took the reigns of office with a Cabinet remarkable for the presence of Lord Randolph Churchill as Secretary for India. A half-breed rebellion in the northwest territories of Canada, under Louis Riel, was speedily and summarily ended, by colonial forces. The death of the Mahdi in Egypt destroyed the cohesive power of harm his forces had, and British troops invaded Burmah and deposed the blood-stained ruler, Theebaw.

At home, Lord Ashbourne's Land Purchase Act was passed for Ireland. Coercion was for a while dropped, and a beneficial Criminal Law Amendment Act passed, for the protection of women and young children from masculine assault.

November and December saw a general election, wherein the Liberals seated 335 members, against 249 Conservatives and 86 Home Rulers.

Ireland held the balance of power at last in 1886, and, significantly, rumors of Gladstone's conversion to the principle of Home Rule began to be current.

The government gave the needed opportunity by promising the suppression of the Irish National League, and at once the Home Rulers voted with the Liberals on Jesse Collings's "three acres and a cow" amendment to the Address. Lord Salisbury resigned, but not before Burmah was formally annexed to the empire, and Gladstone came to power while the socialists and unemployed were rioting in Trafalgar Square.

Home Rule was to be the watchword of the ministry, and defections depleted its ranks of the brightest and best of its men. Chamberlain, Trevelyan, Collings, Bright and all the leading Whigs resolved to take no part in disrupting the Union. The Liberal-Unionist party was formed and became a power in the land. The "classes" were arrayed against the "masses," and all waited for the promised Home Rule Bill. The second reading was lost, and with the echoes of faction riots in Belfast in the air, an appeal to the voters was taken.

The Conservatives came to power with 316 members, supported by 78 Liberal-Unionists. As against these, there were 191 Home Rule Liberals and 85 Irish Home Rulers. Limited local government was announced as Lord Salisbury's panacea for Ireland's ills, and Parnell's Tenant's Relief Bill was voted down. The Plan of Campaign (q.v., under HOME RULE, in these Supplements) was inaugurated, while the Round Table Conference in 1887 failed to win the Liberal-Unionists back to the deserted Gladstonian fold. More closure rules in the House of Commons were passed, and coercion was drastically applied to Irish agitation and lawlessness.

But all politics paled in June before the celebration of the Queen's jubilee. The nation vented itself in bunting and beacon-fires, while a procession of Europe's rulers, or their representatives, marched in all stateliness around Victoria on her road to Westminster Abbey to return thanks for her long and beneficent fifty years' reign.

The Mitchelstown riot and Mr. O'Brien's undergarments kept Ireland indignant and amused by turns, and November saw more rioting in Trafalgar Square.

The year 1888 was one pervaded by the Irish question. A Local Government Bill for England did much to abate the rule of Dogberry, the justice of the peace, and his corrupt or fossil henchman, Bumble, the beadle. The special commission on "Parnellism and Crime" met, and fifty million dollars was voted in Parliament for the purposes of the Irish Land Purchase Bill. The tercentenary of the Armada lit the beacons again throughout the land as it did when the Spaniards menaced the realm of the Virgin Queen. From the Wrekin to Skiddaw the land glowed in memory of a great deliverance.

The beginning of 1889 was marked by Pigott's confession of the "Parnell letter" forgery and by the increased expenditure for naval defenses. The subject of royal grants enabled the Radical element to grow sarcastic at the expense of the Prince of Wales, but in spite of opposition £36,000 annually was voted him, wherewith to provide for his children. The dock-laborers' strike paralyzed London's shipping interest for a time, and gave John Burns the opportunity to pose as "a docker" and to win some fame for the men's victory. A charter was granted to the British South African Company, fated to become a powerful factor in the affairs of Africa in the hands of CECIL J. RHODES; q.v., in these Supplements.

With the advent of 1890, Parliament was mainly concerned with Irish and domestic affairs. In August the island of Heligoland was ceded to Germany in return for African concessions, and the close of the year marked Parnell's fall from power, owing to the disclosures of the O'Shea divorce case.

The year 1891 was remarkable for the cessation of Irish crime and for the acute dissensions in the ranks of the Home Rule party. The renewal of the Triple Alliance for a further term of six years assured the peace of Europe, and England concentrated her energies on Rhodes's African projects. The Bering Sea controversy (q.v., in these Supplements) engaged attention, and Australian federation received a fresh

impetus at the Sydney convention. In the later words of "the laureate of the barrack-room," the "Wards of the Outer March, Lords of the Lower Seas," nerved by the motherland's acceptance of their soldier-citizens in the Egyptian campaign, were commencing to

"talk together, brother to brother's face—
Thus for the good of your peoples—thus for the Pride of
the Race."

On January, 1892, occurred the death of the Duke of Clarence and Avondale, direct heir to the throne, and on the eve of his marriage to his cousin, Princess Victoria Mary of Teck. Peace pervaded Ireland, and the government essayed a mild Irish local government measure. Its appointive officers were objectionable to the Nationalists, and though carried by a majority of 92, it died with its second reading. Dissolution of Parliament drew near, and the Ulstermen held monster mass-meetings to protest against the tender mercies of Home Rule in the hands of their opponents. The elections passed, and Gladstone came to power with 355 supporters (270 Gladstonians, 4 Labor members, 72 anti-Parnellites and 9 Parnellites), as against 268 Conservatives and 47 Liberal-Unionists. Not until an actual division did the Conservative ministry formally resign. The numbers showed a majority of 40 for the venerable statesman. In Africa the marvelous development of the Transvaal gold-fields and the Kimberley diamond-mines were as marked as the energy of Cecil Rhodes. Literature this year had to mourn the deaths of Lord Tennyson and Professor Freeman.

The session of the Bering Sea Arbitration Commission occupied the early months of 1893. The question had been a constant source of irritation for seven years, and arbitration was as opportune as was the raising of the rank of the American minister to that of ambassador at the Court of St. James's. In Egypt the arrogance of the young Khedive received a salutary check in an ultimatum dispatched by Lord Rosebery, warning him of deposition if he resisted British policy and dismissed his Cabinet without consulting his English financial adviser. The Afghan boundary witnessed the Chitral campaign, which resulted in a further strengthening of India's scientific frontier.

February was memorable for Gladstone's introduction of his second Home Rule Bill. Welsh disestablishment and local option movements were placated by measures embodying the theories held by advanced Radicals. Abroad, the Bering Sea arbitration concluded its sessions, after eloquent addresses from the counsel employed, and a powerful British fleet participated in the Columbian naval review in New York harbor. The Earl of Aberdeen succeeded the Earl of Derby as Governor-General of Canada, and the Venezuelan boundary question arose on a protest by Ecuador against further British encroachments.

At home, Parliament wrestled with the Home Rule measure, which antagonized the Unionists and failed to satisfy the Irish party. The loss of the battleship *Victoria*, with 22 officers and 336 men, was one of the most appalling disasters of recent times in the history of the British navy.

In August the Bering Sea award was made public. While a technical victory for England on each of the five points submitted, the award established liberal regulations for the future preservation of the seal-herd. Debate on the Home Rule Bill occupied 82 days in the House of Commons. It ended with a disorderly *mêlée* and the measure passed its second reading by a majority of 34 in a house of 572. The bill went to the Upper House and met its fate in a rejection by a vote of 419 to 41.

Rejoicings in England marked the marriage of Prince George of Wales and his cousin. A strike of 500,000 colliers resulted in frequent collisions with the authorities. Negotiations were begun for a settlement of the Canadian damages in the Bering Sea arbitration. A successful mission to Cabul still further strengthened India's scientific frontier. The opening of the Manchester ship-canal served as the occasion for great local rejoicings on the completion of a colossal engineering feat. Noteworthy additions to the navy were made in the *Powerful*, *Terrible*, and *Revenge*. The coal strike was settled by Lord Rosebery's judicious arbitration, and in Matabeleland, the South African Company's troopers overran Mashonaland and Matabeleland, and captured Buluwayo, Lobenguela's chief kraal. The death of Tyndall by misadventure was a severe loss to the world of science.

The year 1894 was rendered memorable by the final retirement of Gladstone from the leadership of his party. Vexed by the rejection of his Home Rule measure by the Lords, disgusted with the quarrels and dissensions among his Irish allies, the veteran statesman laid the mantle of leadership on Lord Rosebery, and turned to his books with an ardor which belied his years. The Bluefields incident caused the landing of British sailors and marines to protect English residents. The headstrong Khedive of Egypt querulously belittled his frontier force, and again received an English ultimatum. An intercolonial conference was productive of good results. Home Rule for Scotland was essayed in April, and a vigorous campaign against the Lords inaugurated. The banquet to the American naval officers in London was memorable, and productive of much international good feeling. The formal opening of the Manchester ship-canal by the Queen, and the opening of the vast Tower Bridge by the Prince of Wales were events of national and local significance. A comprehensive Royal Commission on Labor concluded their labors of three years and issued a voluminous but instructive report. Troubles in the Transvaal between the Boers and the English began to grow serious, while the Venezuelan boundary question took an acute phase owing to Venezuela's invasion of the disputed strip. The death, at Windsor Castle, of Sir John Thompson, the Canadian Premier, cast a gloom over Canada.

Rumors of impending dissolution of Parliament, mixed with angry outbursts against the House of Lords, kept England on the watch for the opening of legislation. Mr. Schnadhorst, the active Liberal "boss" in politics, who had done much to Americanize Liberal politics, retired from the secretaryship of the National Liberal Federation, assigning

overwork as the reason. The launching of the *Magnificent* at Chatham was noteworthy as the first step toward adding seven monster war-ships, each of 15,000 tons displacement, to the British navy. A brief campaign in Waziristan ended in favor of the Indian troops, and the discovery of the new chemical element argon made the year noteworthy among scientists. Literature sustained the loss of James A. Froude and R. L. Stevenson (q.v., in these Supplements).

The year 1895 produced a serious Manitoba schools question, an agitation for a reform in the Canadian copyright laws, and a crisis in Newfoundland. Welsh disestablishment was again essayed, an Irish Land Bill introduced, and Home Secretary Asquith introduced a stringent Factories and Workshop Bill into Parliament. Speaker Peel, son of the great Sir Robert Peel, resigned his office, and it was for a while uncertain whether Lord Rosebery's indisposition would permit him to remain in political life.

The escape of Slatin Bey from a twelve years' captivity in Khartoum was a matter for congratulation. The remarkable productiveness of the Witwatersrand gold-field raised South Africa to the position of second among the gold-producing countries of the world. Death was busy this year, and laid low Professors Blackie and Cayley, Sir George Chesney (of *Battle of Dorking* fame), Lord Randolph Churchill, Sir Patrick Grant, Admiral Hornby, Sir Henry Rawlinson, and Professor Seeley.

The fall of the Rosebery ministry was precipitated by a catch-vote on the army estimates. Lord Salisbury came to power June 25, 1895, at the head of a Unionist ministry, with a general election impending, and a well defined sentiment against Home Rule prevalent. The visit of the Ameer of Afghanistan's second son, a great temperance convention, and the Wilde-Queensberry scandal were events of note. Wilde's conviction was the much-needed excision of a putrid cancer which had developed in a certain small section of London society.

The launch of the *Terrible*, the retirement of the Duke of Cambridge from the command of the Army, the visit of Ashanti envoys, and the conviction of the pious swindler, Jabez Spencer Balfour, for the Liberator frauds, were events of note.

The confession of Arthur Orton (see TICHBORNE, in these Supplements) undeceived the last of his dupes. A knighthood bestowed on Henry Irving met the approval of the entire Anglo-Saxon race. A powerful squadron participated in the opening of the Kaiser Wilhelm canal in Germany. A campaign in Chitral was remarkable for severe fighting. Death claimed Emily Faithfull. Huxley, the noted scientist, and the aged jurist, Sir James Bacon.

The British attempt on Jan. 5, 1895, to annex the island of Trinidad, off the coast of Brazil, evoked a protest from Brazil, and the question of its ownership was submitted to the arbitrament of the King of Portugal, who decided in favor of Brazil, Aug., 1896. The conclusion of delimitation work upon the frontier of the Pamirs was announced.

Parliament convened Feb. 11, 1896, after the general election, with 411 Conservatives and Liberal-Unionists, against 259 Gladstonian Liberals, Labor

members, and Home Rulers. The leaders in Lord Salisbury's cabinet were Joseph Chamberlain, the Duke of Devonshire, and A. J. Balfour. The ministry had hardly settled to work when President Cleveland's fulminating Venezuelan message was in its hands. Jurists by the score were satisfied that the frequently invoked Monroe Doctrine was in no way involved. Much diplomatic correspondence ensued, but the whole matter resolved itself into a case for arbitration, and preparations of evidence at once began. Alfred Austin was appointed poet laureate, and Lord Sackville, the victim of the "Murchison letter," covered himself with ridicule by publishing an attempt at self-exculpation in pamphlet-form. The year's death-roll includes Sir Henry Ponsonby, for many years the Queen's private secretary, George A. Sala, and Sergius Stepniak.

Coming to the year 1896, memorable as marking the Queen's reign as the longest of any ruler of the British Isles, and remarkable for the disturbances in South Africa which ended with the Jameson raid, the early months were occupied with the Venezuelan question, Armenian affairs, and naval defenses. John Dillon was chosen as leader of the anti-Parnellite faction of Home Rulers, and a military expedition to Ashantee cost the nation the life of Prince Henry of Battenberg and plunged the royal household into grief. The death-roll of the year included, also, Sir Joseph Barnby, the composer; Du Maurier, the author of matchless *Trilby*; Archbishop Benson; Thomas Hughes, the author of *Tom Brown's School-days*; Sir Frederick Leighton, and Sir John Everett Millais.

The German Emperor's telegram to President Kruger aroused a storm of protest and jingoism, and sent a splendid particular-service squadron to sea as a sample of what the country was prepared to do. In October Lord Rosebery astonished many by his resignation of the Liberal leadership. At home and abroad all was peace, with the exception of the Anglo-Egyptian successful operations in Egypt, and the nation rejoiced with the Queen on the attainment of the sixtieth year of her reign.

RECENT HISTORY. Since the withdrawal of Lord Rosebery from the Liberal leadership and the weakening of the party on the subject of Irish Home Rule, the British Liberals began to fall into a state of disintegration. This was further helped by the withdrawal from the party leadership in the House of Commons of Sir W. Vernon Harcourt, though his post was taken by Sir Henry Campbell-Bannerman, so far as that rather mild politician could be expected to fill Sir William V. Harcourt's rôle. For a time, however, there was little in the party contests to call for either ability or vigor in a leader of the Opposition, if we except such events as the British acquisition in China of the port of Wei-Hai-Wei, as an offset to Russia's acquisition of Port Arthur and Talienwan and Germany's seizure of Kia-Chau; and the national grant of £30,000 to Lord Kitchener, as a reward for his services in planning and conducting the expedition into the Egyptian Sudan, which culminated in the battle of Omdur-

man, the capture of Khartum, and the overthrow of the power of the Khalifa. The subject of legislative independence for Ireland increased national expenditure, especially on the navy, and the invitation of the Emperor of Russia to the nation to take part in a Peace Conference at The Hague, were topics that called for little discussion at the hands of the Opposition, though the party was soon to find, in the events happening in South Africa, material for active antagonism and biting criticism. This arose in consequence of the failure of England's diplomatic efforts to secure civil rights for her subjects in the Transvaal, and to satisfy its President, Mr. Krüger, that in insisting on England's right of paramountcy in the South African Republic, she had at the same time no desire to aggress on the territorial possessions of the Dutch State or unduly to interfere in its internal affairs. Negotiations with the Transvaal were conducted by the English Foreign Office (Rt. Hon. Joseph Chamberlain, Secretary), through Governor Sir Alfred Milner, High Commissioner at the Cape. Both of these officials, being high imperialists, were distrusted by the Liberal party (at least, by what is known as the "Little Englander" element of it), and so the policy of the Government and the Foreign Office in its relations with the South African Republic was sharply arraigned.

THE BOER WAR. Party opposition became more pronounced with the failure of the Bloemfontein Convention in June, 1899, and the subsequent provision that had to be made for increasing the military strength in South African garrisons. Then came (Oct. 9) the ultimatum of the Pretoria government, which fell like a bombshell in England, and threw a sinister light on Mr. Krüger's alleged designs of getting rid for ever of British suzerainty and of driving the English from South Africa. The view taken by the Liberals was that the Boers were being unreasonably coerced; though the Government claimed that its overtures had been fair as well as conciliatory, but that Mr. Krüger was obdurate, and, having craftily prepared his Republic for the eventualities of war, he insolently launched his ultimatum, which England was of course bound to treat as a *casus belli*. The army reserves were at once called out, Parliament was summoned, and the imperial troops were hurried forward to the Cape, together with contingents from India, and, later on, from all the chief colonies of the Crown.

Whether the conflict could have been avoided, it was now too late to discuss. Many of the enemies of the English nation saw in her attitude towards the Boers only her traditional policy of aggression, urged on by her lust of dominion and greed of gold. The Opposition in Parliament deemed the war unjust, since Mr. Krüger's oppression of the Uitlanders in the Transvaal was held to be exaggerated, and that England under the Convention of 1884 had practically abandoned her rights of suzerainty. On the other hand, the Government affirmed that the Uitlanders had undoubted grievances, in being denied the rights of

freemen, in spite of the specific promises of Mr. Krüger that they would be treated with the same equity as the Dutch burghers, and that it had sought throughout the negotiations to bring Mr. Krüger to reason, and thus avert an undesirable and calamitous collision. Mr. Krüger, however, remained obdurate, shuffled in the matter of the franchise, and practically refused all redress. In this attitude, he was no doubt confirmed by the alliance, for offensive purposes, with him of the neighboring Orange Free State, by promises of active support in a rising among his race and kin in Cape Colony, and in the event of war, by hope of intervention on the part of foreign nations. His expectations, with regard to the two latter, were, we know, disappointed, though the Orange State joined him and his people in arms, and in the middle of Oct. (1899) the armed forces of both republics invaded Natal and Cape Colony, and laid siege to the British garrisons in Mafeking and Kimberley.

As we narrate the story of the Boer war elsewhere in these Supplements, the incidents of the year's campaign need not here detain us. Active and serious fighting began, it will be remembered, on the banks of Tugela, when Sir Redvers Buller and the first English army corps arrived in Natal about the third week of November. As the year grew to its close, the seriousness of affairs in the field, with its high list of casualties, necessitated increased British mobilization and the despatch to the Cape of Lord Roberts, with Lord Kitchener as his chief of staff. The new year (1900) saw a total of close upon 200,000 English and Colonial troops in South Africa, opposed to an estimated force of 70,000 Boers (including foreign mercenaries), who had especial advantages in knowing the country, and in a training which, as a body, had given them great mobility as well as made them expert marksmen. With the advent of Lord Roberts and his increased army, a turn came in the tide of battle, and British fortunes improved with the invasion of the Orange Free State and the subsequent crossing of the Vaal and the capture of Johannesburg and Pretoria. After a time, the sieges of Ladysmith, Kimberley, and Mafeking were raised, Cronje's army was surrounded and compelled to surrender, and the Boers were driven eastward to the borders of the Transvaal, the Presidents of both republics taking to flight. Practically, the end of the war came with the British re-annexation of the Boer republics and the decamping of Mr. Krüger and his government-on-wheels to Lorenzo Marques, the Portuguese port on Delagoa Bay. From the latter ex-President Krüger set out (Oct. 20, 1900), for Europe on the *Gelderland*, a warship of the Netherlands.

To the British the cost of the war was exceedingly heavy, the financial expenditure being estimated at \$400,000,000, and the casualties, including killed, wounded, and died from disease, being in the neighborhood of 40,000. The struggle, owing to the sternness of resistance and the bravery of the burghers, cost the Boers heavily, besides the loss of the two Dutch republics, now converted

once more into colonies of the British Crown. Nor can the cost to Britain for a time be small until the country emerges from military into civil rule, and time is allowed for the necessarily slow processes of pacification. As we write, however (Nov. 1900), the Colonial contingents, which admittedly were of invaluable service to the Empire, are being sent to their homes; while the commander-in-chief, Lord Roberts, and his predecessor in the chief command, Sir Redvers Buller, are about to leave the Cape. Already many of the volunteer levies have returned in triumph, including the City of London Imperial Volunteers and the first Canadian contingent. For the services of the Indian troops of the Empire, as well as those of Cape Colony and Natal, of Australia and New Zealand, and of Canada and the Canadian Northwest, Britain has warmly and gratefully made her acknowledgments.

AUSTRALIAN FEDERATION. Early in 1899, a gratifying end came to the conferences held in the Australian colonies to bring about Federation. The voting for the amended Commonwealth Bill was passed by large majorities in Victoria, New South Wales, South Australia, Queensland, and Tasmania, the legislatures of which then adopted an address to the Queen praying for the passing of an imperial act constituting the Commonwealth. In the new Federation, the capital of which is to be in New South Wales, at least 100 miles from Sydney, there will be a Senate, consisting of six representatives from each colony, chosen for six years. The House of Representatives will contain about double the number of members returned to the Senate, allotted to the colonies on a population basis, but so that no colony shall have less than five members. The qualification for electors, for both houses, will be the present Parliamentary franchise of their respective colonies. The imperial Parliament duly passed the enabling act, and the Government nominated the Earl of Hopetoun, formerly (1889-95) Governor of Victoria, as first Governor-General of the Australian Commonwealth.

SAMOA, ASHANTI, AND THE INDIAN FAMINE. In Nov. 1899, Great Britain made an agreement with Germany, subject to the approval of the United States, whereby she (Great Britain) withdrew all claim to possession of any of the islands, situate in the Pacific, of the Samoan group. The islands, it will be remembered, owing to the rivalry of native monarchs, had been under the control of a commission composed of representatives of England, Germany, and the United States. The administration by these three Powers had however not worked amicably, and the Anglo-German agreement was formulated, whereby Germany became the possessor of Upolu and Savaii, and Tutuila and the other Samoan islands fell to the United States. In England's withdrawal, she received some compensating advantages from Germany, among which were the possession of the Tonga Islands, including the Vavau group and Savage Island, and a readjustment, favorable to Britain, of her claims to the hinterland of the

Gold Coast. During the year 1900, England's colony on the Gold Coast gave her trouble, the native King of Kumassi, the capital of Ashanti, having become restive after his submission to the Crown. Accra, on the coast, is the administrative centre of the colony, but a garrison is maintained inland at Kumassi, which in the summer of 1900, when the Governor of the Gold Coast was visiting the British Resident at the post, was attacked by large bodies of armed natives and for a time was in a critical situation. Relief at length came to the garrison through the gallantry of Colonel Willcocks and a body of native soldiery under English officers; but the entire region is, as we write, in a still unsettled and far from passive condition. The conflicting matter of the hinterland of the colony, which was long a disturbing factor in Anglo-German diplomacy, has been happily settled by the respective governments dividing between them the neutral zone that abuts on the French sphere of influence in West Africa. During the year 1900, large drains were made on the purses of the charitable in England on behalf of the stricken millions in India who suffered, first from the visitation of the Bubonic plague, and then from an appalling famine, caused from the want of rains and the consequent failure of the harvests.

THE "BOXER" RISING IN CHINA. From mid-summer 1900 Great Britain was greatly exercised over the anti-foreign rising in China and the attack upon the Pekin Legations. Elsewhere, in these Supplements, the matter is treated of, and hence all that may be noted here is the attention the imbroglia demanded at the hands of Lord Salisbury as Foreign Minister. The anarchic condition of Pekin, and the difficulty for a time in obtaining assurance from the Chinese capital of the safety of the Legations, greatly harrowed the public mind in England, which was further exercised by reports of the massacre of missionaries and their converts in the interior, and, later on, by news of extensive rebel risings in the southern portions of the Chinese Empire. The fact that these lawless outbreaks were condoned, if not actually inspired, by the Palace officials, acting under the authority of Prince Tuan and the Empress-Regent, brought into play the activities of the English Foreign Office and concerted action by the Administration of the United States and the Governments of the chief European Powers. The tragedy at Pekin was not as appalling as was first reported, though the Embassies were for weeks shelled by the "Boxers" and the soldier hordes of the vile Manchu Court, while the German minister was murdered, and the ambassadors were saved from extermination by the gallantry of their own defence. The relief of the Legations was due to the efforts of a combined force composed of American, British, German, Russian, French, British Indian, and Japanese soldiers and sailors, who marched from Tien-tsin to the capital, pushed their way into the city, and brought timely succor to the beleaguered diplomats and their families and those who had fled for refuge to the Legations. The approach of the allies was the signal to the

Court to take flight, leaving the city to chaos and to looting by the Legation deliverers. Then followed a lengthened period of diplomatic chaffering, during which Russia made hostile demonstrations in the region of the Amur river and threatened to annex Manchuria. Germany was also loud in her denunciations of the international outrage that had been committed and urgent in her demand for indemnity. Britain and the United States were chiefly concerned as to the guarantees for future good conduct on the part of China, while anxious to preserve the "open door" policy and if possible prevent partition of the Empire. So far as military matters were concerned, all the Powers agreed to act under the German field marshal, Count von Waldersee; but there was no inclination to come to a common understanding as to the course to be pursued in bringing to punishment those who were responsible for the outbreak and the mode of extorting from China, with an adequate indemnity, guarantees for her future good behavior. In October 1900, Lord Salisbury announced that Great Britain and Germany had made a compact providing for uniform and concerted action in China, under both present conditions and future contingencies. The agreement was designed to secure the "open door," for the benefit of all nations, and to oppose partition of the Empire, each Power pledging itself not to violate or permit the violation in others of the integrity of Chinese territory. The compact is a good omen for the early and satisfactory settlement of affairs in the Middle Kingdom, and is also in line with the expressed policy of the United States. As we write, an offer has been made by the Chinese plenipotentiaries proposing that China shall pay to the aggrieved foreign Powers an indemnity of forty million pounds sterling, in sixty instalments, agreeing that the Likin and the customs service shall be under foreign control until the obligation is discharged. Whether this proposal will be acceptable to the Powers, and how far China will go in punishing the instigators and perpetrators of the crime in Peking, and what guarantees she will give that similar outrage shall not again be done to foreigners in the Empire, are matters that at present writing (Nov. 1900), are still in doubt.

GENERAL ELECTIONS (Oct. 1900). The attitude of the country towards the Government in view of the South African war, its management, the annexation of the Boer republics, and the policy to be pursued for their pacification and future settlement, was determined in the autumn of 1900 by a general election. The verdict at the polls emphatically endorsed the Administration's war policy, the Salisbury Government being returned to power with even a larger majority than it had previously enjoyed, and this despite Radical opposition to the war, Liberal denunciation of the diplomatic negotiations that had preceded it, and pro-Boer protest against the wiping out of the two Dutch republics in South Africa. The significance of the elections is notable in indicating that the Government had the unabated confidence of the constituencies. We append a summary of the returns,

classifying the votes under Unionists (or Conservatives), Radicals (or Liberals), and Irish Nationalists:

	Un.	Rad.	Nat.	Total.
England and Wales.....	345	150		495
Scotland.....	36	36		72
Ireland.....	21		82	103
Government majority, 134	402	186	82	670

When the results of the elections were known, there was a persistent demand throughout the country for cabinet reconstruction. Lord Salisbury, every one admitted, had too heavy a burden on his shoulders in performing the onerous duties of Foreign Minister, in addition to the cares and responsibilities of the Premiership. The war office demanded also a new chief, one best fitted, and having a free hand, to undertake the urgent task of giving the nation a reformed modern army. A new presiding functionary was also needed at the head of the admiralty, to take the post vacated by the Rt. Hon Mr. Goschen. Extra efficiency in other administrative departments was also the demand of the hour, with an infusion of more youthful and vigorous blood in the cabinet. With the large government lead in the House of Commons, Lord Salisbury may be trusted to give heed to the earnest wishes of the people. As we go to press the announcement is made that Lord Salisbury retains the Premiership, but resigns the Foreign Secretaryship, which is assumed by Lord Lansdowne.

DEATH OF QUEEN VICTORIA. The opening of the twentieth century spread a pall over the United Kingdom and its dependencies such as the British people had not felt since the demise, in 1861, of the lamented Prince Consort. The sad cause of this was the death of England's beloved and august Queen. The lamented event occurred at Osborne on the Isle of Wight, on the 22nd of January, 1901, the immediate cause of death being a stroke of apoplexy. Her majesty's advancing years had, however, begun to tell upon her, added to the mental strain which in the previous fifteen months she had borne on account of the serious loss of life suffered by her armies in the War in South Africa. At the last, the break down in her health, nevertheless, came unexpectedly, and occasioned widespread sorrow throughout Great Britain and the Empire, and indeed throughout the world. At the bedside of the revered and beloved monarch were the members of the royal family, including Her Majesty's dutiful grandson, Emperor William of Germany. The new occupant of the throne is, of course, her late Majesty's eldest son, Albert Edward, Prince of Wales, who succeeded to the crown as Edward the Seventh. The passing away of Her Majesty, after a long and matchless reign, evoked poignant sorrow throughout the Kingdom, where she was universally honored for her beautiful life and illustrious reign, and was paid the affectionate reverence due to her exalted rank, besides winning the spontaneous loyalty of all who admired a noble woman, mother, and queen.

G. M. A.

GREAT-CIRCLE SAILING, the course of navigation along the line of shortest distance between two given points on the spherical surface of the globe. See NAVIGATION, Vol. XVII, pp. 266-268.

GREATER WEEVER. See WEEVER, Vol. XXIV, p. 477.

GREAT FALLS, a city and the capital of Cascade County, western central Montana, on the Missouri River, near its falls, at the mouth of the Sun River, and on the Great Northern and the Great Falls and Canada railroads. It is 75 miles N.N.E. of Helena. Near by are rich mines of gold, copper, silver, lead, iron and coal and building-stone. It has three reducing-works, which together cost five million dollars. Motive power for factories is furnished by an immense dam at Black Eagle Falls. It has a public library, street-railways, electric lights, city water and a sewer system. Pop. 1900, 14,930.

GREAT FISH OR BLACK RIVER, a river of the Northwest Territory of British America, rising in Sussex Lake, about lat. $64^{\circ} 30' N.$, long. $108^{\circ} 45' W.$, and after an east-northeasterly course of five hundred miles, enters Elliot Bay.

GREAT FISH RIVER, a river of western Cape Colony, which rises on the east slope of the Roode Berg, in Middleburg district, flows southeast through a very tortuous course for 230 miles, and empties into the Indian Ocean, 10 miles E. of Port Alfred, in Bathurst.

GREAT KAI, a river of southeastern Cape Colony. It is formed by the union of the Black and White Kai, and flows southeast, emptying into the Indian Ocean at lat. $32^{\circ} 40' S.$ It was for a long time the eastern boundary of Cape Colony. Length, 150 miles; its bed is very irregular and rocky, rendering the river unfit for navigation.

GREAT KANAWHA RIVER. See KANAWHA RIVER, in these Supplements.

GREAT NORTHERN DIVER. Same as LOOM or LOON; q.v., Vol. XV, p. 2.

GREAT PEDEE RIVER. See PEDEE RIVER, in these Supplements.

GREAT SALT LAKE. See UTAH, Vol. XXIV, pp. 19, 20; and UNITED STATES, Vol. XXIII, pp. 794, 795.

GREAT SLAVE LAKE, a large irregular body of water in the Northwest Territories of British America, extending from long. 108° to $118^{\circ} W.$ Its greatest width is about eighty miles. It is full of islands, and has a few government posts on its shores. It is frozen over for half the year. It is fed by numerous large tributaries, chiefly the Peace River, and is drained by the Mackenzie.

GREAT WALL OF CHINA, THE, a renowned national work of China, extending over twenty degrees of longitude, along the northern boundary of the country, traversing mountains and valleys and crossing streams, its total length being fourteen hundred miles. It was designed to protect China against the incursions of Tartar tribes, its construction dating two centuries before the Christian era. The material is chiefly earth and rubbish, flanked by walls of brick and fortified by strong battlemented towers. The height of the structure is from 15 to 30 feet, while the towers are 40 feet square at the

base and about 40 feet high. Having long since become practically useless as a means of defense, it is now only a shapeless ruin. See also CHINA, Vol. V, p. 644.

GRECIAN ARCHITECTURE. See ARCHITECTURE, Vol. II, pp. 401-413.

GRECIAN GAMES. See GAMES, Vol. X, pp. 63-65.

GRECIAN MYTHOLOGY. See MYTHOLOGY, Vol. XVII, pp. 153-155.

GREECE, the kingdom of the Hellenes. Area, 25,041 square miles. Population 1890, 2,187,208. Capital, Athens, with a population of 114,335. For the geography, history and productions of Greece, see Vol. XI, pp. 80-153. The territory detached from Turkey, consisting of most of Thessaly and a strip of Epirus, was added to Greece by a treaty with Turkey, executed—under pressure of the Great Powers—June 14, 1881. The kingdom, excluding these, is divided into 17 nomarchies. According to the census of 1896 the area and population were as follows:

NOMARCHIES.	AREA, ENGLISH SQUARE MILES.	POPULATION, 1896.	POP. PER SQ. M. 1896.
NORTHERN GREECE—			
Attica and Bœotia.....	2,472	313,069	125.1
Phocis and Phthiotis.....	2,044	147,297	71.9
Acarmania and Ætolia.....	3,013	170,565	56.6
PELOPONNESUS—			
Argolis and Corinth.....	1,442	157,578	104.4
Achaia and Elis.....	1,901	236,251	124.3
Arcadia.....	2,020	167,092	82.7
Messenia.....	1,221	205,798	168.5
Laconia.....	1,679	135,462	86.7
ISLANDS—			
Eubœa and Sporades.....	2,216	115,515	52.1
Cyclades.....	923	134,747	145.9
Corfu.....	431	124,578	289.0
Zante (Zakynthos).....	277	45,032	162.6
Cephalonia (Kephallonia).....	302	83,363	276.0
THESSALY—			
Arta.....	395	39,144	99.1
Trikala.....	2,200	176,773	80.3
Larissa.....	2,478	181,542	73.1
Totals.....	25,014	2,433,806	97.3

MOVEMENT OF POPULATION. The chief occupations of the people are the following, in percentages of the population, in Greece and Ionian Islands (census 1889): Agriculture, 40 per cent; shepherds, 9; industries, 6.37; servants, 7.75; laborers, 8.11; commerce, 6.37; landed proprietors, 6.10; seafaring, 3.05; army and navy, 4.86; priests, 1.50. In the ceded provinces (1889): Agriculture, 41.95; laborers, 12.32; industries, 10.21; shepherds, 8.18; servants, 7.24; commerce, 6.47; priests, 1.61.

The nationality of Greece is Hellenic. Most of the Albanians who at various dates during the last 400 years have migrated into Greece have become Hellenized. At present there are not more than 90,000 or 100,000 of distinct Albanian nationality in the whole of Greece. These are scattered in small communities, chiefly over Attica, northward as far as Thebes, then across the Isthmus of Corinth, throughout the ancient Argolis, in the southern districts of Eubœa, and a few of the neighboring isles.

On the other hand, there are large numbers of Greeks in the Ottoman Empire, raising the whole Greek nationality to over 8,000,000, as follows: Greece, about 2,200,000; Asia Minor, 2,000,000; Crete, Cyprus, and other Ottoman islands, 400,000; European Turkey, 3,500,000; total, 8,100,000.

About one-half of the population is agricultural, living dispersed in villages. The principal towns, with their populations in 1896, are the following:

Athens	111,846	Calamata	14,298
Piræus	42,169	Pyrgos	12,705
Patras	37,958	Tripolitza	10,465
Trikala	21,149	Chalcis (Euripos) (1889) ..	9,919
Corfu	17,918	Argos	9,814
Hermopolis	17,894	Missolonghi	9,476
Volo	16,232	Argostoli	9,085
Larissa	15,373	Hydra	6,413
Zante	14,650	Spelœa	5,172

EDUCATION. All children between the ages of 5 and 12 years must attend school, but the law is not well enforced in country districts. According to the census of 1889, 86.06 per cent of males and 23.08 of females could read and write. The following are the recent educational statistics of Greece: Universities, 1; gymnasia, 33; Hellenic schools, 297; communal schools, 1,741; elementary, 540; private, 81; ecclesiastical, 5; polytechnic, 1; pupils, 144,098.

The budget under date of Jan. 1, 1894, shows the interest in instruction by the liberal appropriation of \$600,000 by the government for higher and middle education.

REVENUE AND EXPENDITURE. The budget for 1897 estimated the total revenue at \$19,068,787, and the expenditure at \$18,750,518. The total amount of Greek indebtedness in 1898 was about \$144,846,762. Of this sum, rather less than \$1,800,000 is for small outstanding internal indebtedness. In all accounts since 1882, the drachma, the national monetary unit, is reckoned as equal to one franc, in accordance with the agreement of the Latin Monetary Union, of which Greece is a member.

ARMY AND NAVY. All able-bodied males 21 years old are liable to military service, the total period of service being 19 years, of which 2 years must be passed with the colors, 8 and 7 years in the reserve, and the remainder in the militia, or landwehr.

The nominal strength of the army in 1896 was 1,880 officers, and 23,453 non-commissioned officers and men; total, 25,333,—not far short of that of the army of the United States of America at that date.

The navy, at the opening of 1896, consisted of 5 small armor-clads (1,710 tons), carrying two 10-ton Krupp guns in a battery on the upper deck, and four 20-pounders, with a speed of 12 knots; and a wood-built vessel, the *Basalissa Olga* (2,060 tons), carrying four 6-ton and two 5-ton guns, with a speed of 10 knots. One steel armor-clad, the *Hydra*, was launched in 1889; it is 6,000 tons, and is now in commission; another similar vessel has been constructed in France. There are 49 small torpedo boats and launches, and two Nordenfeldt submarine torpedo boats. Of unprotected vessels there are two corvettes (1,300 and 1,800 tons), two cruisers (1,000 tons each, launched 1884-85); 12 gun-vessels (six built 1881-84, the rest old); four gunboats (1880); three revenue vessels (1884); an old steel yacht, an

iron transport, and 17 miscellaneous craft. Including officers and cadets, engineers, paymasters, medical officers, sailors, the navy is equipped with about 3,165 men, all told. The navy is manned partly by conscription from the people of the sea-coast, and partly by enlistment. In 1887 the period of service was made two years instead of one.

INTERNAL COMMUNICATION. Recently the internal communication by roads has improved greatly. There are now more than two thousand miles of roads. In 1893 the canal across the Isthmus of Corinth (about four miles long) was opened for traffic; its total cost was over \$5,000,000, and the time taken to build it 11 years. Railways were open for traffic in 1898 for a length of 591 miles, of which 92 miles belonged to the state.

The telegraphic lines, land and submarine, were of a total length of 5,087 English miles at the end of 1898; length of wire, 6,023 miles. The number of officers was 209. They sent over 980,000 inland telegrams and 413,000 international in the year 1896. Receipts over \$502,900.

Of post offices there existed 356 at the end of 1896, and there passed through the post office 9,444,000 letters and postal cards, and 8,533,000 samples, journals, and printed matter. The receipts average \$422,000 per annum, and the expenses about \$396,770. The total number of letters, postal cards, samples, newspapers, etc., which annually pass through the post office exceeds 17,700,000, of which nearly two-thirds is internal, and the remainder is described as international matter.

COMMERCE. *Imports*, 1897, \$22,952,305, principally cereals, stones, drugs, yarns and textiles, fish, skins, wood, hardware, sugar, and coffee. The largest importers are Great Britain, Russia, Turkey, and Austria-Hungary, the United States figuring on the list for about \$900,000. *Exports*, 1897, \$16,146,815, principally currants and other fruits, fresh and dried, ores, olive-oil, wine, tobacco, sponges, raw silk. These goods are mostly exported to Great Britain (almost half the total), France, and Austria-Hungary, the United States figuring on the list for a little over \$538,000.

GREEK LANGUAGE AND LITERATURE. See GREECE, Vol. XI, pp. 126-53.

GREELEY, a city and the capital of Weld County, northern Colorado. It is a considerable trade center, and is situated advantageously at the junction of the Platte and Cache la Poudre rivers, about midway between Cheyenne and Denver, on the Union Pacific railroad. Its educational institutions are of a high order of merit, and have gained for it some reputation. The state normal school, built in 1889 at a cost of three hundred thousand dollars, is located here. Abundance of coal is found near the town, and it has manufactories of vacuum-pumps, elevators, brick, and tiles. It has electric lights and city water. Population 1890, 2,395; 1900, 3,023.

GREELY, ADOLPHUS WASHINGTON, an American government officer and Arctic explorer; born in Newburyport, Massachusetts, March 27, 1844; graduated at Brown High School in 1860; served as a

volunteer through the Civil War, reaching a captaincy in a colored regiment; after its conclusion entered

GENERAL GREELY.

1881. He and the six survivors of his party were rescued at Cape Sabine, June 22, 1884, by a relief party under Commander Schley, when eighteen of his men had perished from starvation. Two of his party, Lieutenant Lockwood and Sergeant Brainerd, traveled to within 396 miles of the geographical pole, the most northern point then reached. In 1887 Greely was appointed chief of the Signal Service, with the rank of brigadier-general. In 1892 his work as head of the meteorological work in the United States was much reduced by the transfer of most of his duties to the civilian Weather Bureau, a branch of the Department of Agriculture. In 1886 he published *Three Years of Arctic Service*, in which he gave a full account of the expedition to the Arctic regions, and which has been translated into French and German. He received the formal thanks of his native state and of the British government, and gold medals from the geographical societies of London and Paris. He published *American Weather* (1888); *American Explorers and Travelers* (1893); *Handbook of Arctic Discoveries* (1896); and wrote the article on Polar Explorations, in these Supplements.

GREELY EXPEDITION. See POLAR REGIONS, Vol. XIX, pp. 326, 327; and POLAR EXPLORATIONS, in these Supplements.

GREEN, ALEXANDER HENRY, an English geologist; born at Maidstone, Kent, England, in 1832; received his early education at Ashby-de-la-Zouche Grammar School, where, as a boy, he acquired a strong taste for geology. He proceeded thence to Cambridge, and obtained the position of sixth wrangler in the mathematical tripos of 1855. Six years later he joined the staff of the Geological Survey, and soon acquired reputation as a sound field-geologist. His most important contribution to the publications of the survey was his masterly volume on *The Geology of the Yorkshire Coal-field*. Being well known in Yorkshire, he obtained the professorship of geology at the College of Science, at Leeds, when first instituted in 1875. In 1888 he was appointed professor of geology in the University of Oxford, in succession to Sir Joseph Prestwich. Professor Green was not only an accomplished geologist, but a vigorous writer, an acute critic and an admirable lecturer. His treatise on *Physical Geology*—intended to form part of a comprehensive work, never completed—remains unsurpassed. He died in Oxford, Aug. 19, 1896.

GREEN, ANNA KATHARINE. See ROHLFS, MRS. ANNA K., in these Supplements.

GREEN, ASHBEL, an American clergyman and educator; born in Hanover, New Jersey, July 6, 1762; the son of Jacob Green, a patriot, a divine and an educator of merit, president of Princeton College in 1757. Ashbel Green served in the Revolutionary War in 1778–82; graduated at Princeton in 1784, where he rose to be professor of mathematics and natural philosophy; pastor of the Second Presbyterian Church of Philadelphia, 1786; chaplain to Congress, 1792; president of Princeton College, 1812–22; editor of the *Christian Advocate*, 1822–34; published a number of sermons and a *History of Presbyterian Missions*, edited the *Autobiography of Jacob Green*, and attempted to bring about a renewal of communication between the Presbyterian and Congregational churches. He died in Philadelphia, May 19, 1848.

GREEN, GEORGE FLEMING, an American inventor; born in Montreal, Canada, March 26, 1832. His parents took him, when seven weeks old, to the present site of Chicago. In his twelfth year he was apprenticed to his father as a cabinet-maker; he took a strong liking to the study of electricity, and managed, by floating minor inventions of his, to secure a better education; he invented the first wire and cord harvester-binder; also a dentist's outfit operated by electricity, and a cash-conveyancer for stores. He soon gave his whole attention to perfecting an electric motor for running street-cars; his resources were supplied him by a factory for making photographic shutters, which he owned and worked in Kalamazoo. His motor was refused a patent by the Patent-Office, but, a few months before his death, his claims were allowed by the circuit court of the District of Columbia. But, before reaping the reward of his life-long struggles, he died in Kalamazoo, Michigan, June 7, 1892.

GREEN, HENRIETTA (ROBINSON,) an American capitalist; born, in 1823, in Massachusetts. Her father was Edward Mott Robinson, who traces his descent to John Howland, one of the signers of the compact drawn up on board the *Mayflower*. A nearer ancestor was Isaac Howland, who acquired a fortune in the whaling industry, his heirs being his granddaughters, one of whom, Abbie, was Hetty Robinson's mother, and the other her aunt. The family residence has been for three centuries at Round Hill, Massachusetts. Miss Robinson was known in New York society as the "New Bedford belle," and on the visit of the Prince of Wales to the United States in 1860 she was one of the few girls specially presented to the heir apparent to the British throne, who took quite a fancy to the ingenuous New York girl. In 1864 she married Edward H. Green, of Bellows Falls, Vermont. He made his fortune in the East Indies as agent of the Russells of London. His income at that time was \$50,000, and he was subsequently president of the Louisville and Nashville line, but retired from business afterward, residing at his native place. To this union two children were born, Edward H. R. (in 1868) and Sylvia (in 1870). The former is president of the Texas Midland railway, a road of 130 miles, pur-

chased and equipped by Mrs. Green; he has taken a prominent part in Texas politics. Mrs. Green is best known in connection with her judicious investment of the \$10,000,000 inherited from her father, which she personally supervises. She is one of the shrewdest financiers of her time, and her money is well invested in the largest cities in the East and West. She is accounted the richest woman in America, and it is not impossible that her fortune may exceed \$100,000,000 in the aggregate.

GREEN, HORACE, an American physician and author; born at Crittenden, Vermont, Dec. 24, 1802. He graduated at the University of Pennsylvania, and at Middlebury College; began practice in Rutland, and afterward spent several years abroad, studying in the hospitals of Edinburgh, London and Paris. On his return he became professor in the Medical College of Castleton, Vermont, and remained there until his removal to New York City in 1850. He was soon afterward chosen professor of the theory and practice of medicine in the New York Medical College, which position he held until obliged by failing health to resign in 1860. Author of *A Treatise on Diseases of the Air-Passages* (1846); *Pathology and Treatment of Croup* (1849); *Report of A Hundred Cases of Pulmonary Diseases* (1858); and other works. He was one of the founders and early editors, in 1854, of the *American Medical Monthly*. He died in Sing Sing, New York, Nov. 29, 1866.

GREEN, JACOB, an American professor and author, son of Ashbel Green; born in Philadelphia, July 26, 1790. Before graduating at the University of Pennsylvania in 1806, he distinguished himself by writing a *Treatise on Electricity*, which attracted wide attention. In 1818 he became professor of chemistry, experimental philosophy and natural history at Princeton, and in 1822 professor of chemistry at Jefferson Medical College, which position he held until his death, which occurred Feb. 1, 1841, in Philadelphia. Author of *Chemical Diagrams*; *Chemical Philosophy* (1829); *Astronomical Recreations* (1829); *A Syllabus of a Course of Chemistry* (1835); *Trilobites* (2 vols., 1832); *The Botany of the United States* (1833); *Notes of a Traveler* (1831); and *Diseases of the Skin* (1841).

GREEN, JOHN RICHARD, an English historian; born at Oxford, in December, 1837. After being educated at Magdalen College School and Jesus College, Oxford, in 1860, he became curate of St. Barnabas Church, a poor parish in the east of London. In 1862 he had charge of Hoxton, and in 1865 was made vicar of St. Philip's, Stepney, adding to his parochial duties constant historical researches in the British

JOHN R. GREEN.

Museum Library. Overwork during the cholera epidemic in 1868 obliged him to retire, and Archbishop Tait made him librarian at Lambeth Palace. His health remained delicate, and his winters were

spent usually on the Continent. He had been a frequent contributor to the *Saturday Review* before, and now he began to work on his *Short History of the English People*, which book he had ready for publication in 1874. As many as 150,000 copies were sold in England alone. This was followed by his larger work, *History of the English People*, in four volumes, to the end of the Napoleonic wars (1877-80). In 1877 Mr. Green gathered a number of his essays into a book under the title *Stray Studies*, and in 1882 published a masterly work on *The Making of England*, wherein he fearlessly and efficiently demonstrated that the foundation of England's greatness lay in its rank and file. In continuation of this he was preparing another work, which was called *The Conquest of England*, when his labors were cut short by death, at Mentone, France, March 9, 1883. In all his writings he showed a lively, but ever trustworthy, imaginative faculty. His characters breathe, move and act on each other as in real life. Distant places and times are made to appear distinct and perfectly natural. He was undoubtedly the first among English historians to give full attention to the study of the "common people" and their social institutions, in contradistinction to writers who follow the destinies of nations solely through the doings of their leaders and the members of the upper classes. In this respect, Green followed such men as Michelet and Louis Blanc in France, and did much to shape the studies of the younger generation of historians, both in Great Britain and in America. His wife assisted him in the completion of his last two books. She also published a remarkable memoir of his life as a preface to the 1888 edition of the *Short History*. Herself a historian of merit, she published a monograph on Henry II (1888), and *Town Life in the Fifteenth Century* (1894).

GREEN, MARY ANNE EVERETT WOOD, a British authoress; born in 1818, at Sheffield, England. Her literary talents were manifest at an early age; in 1841 she removed to London and began her *Lives of the Princesses of England* (6 vols., 1849-55), from documents in the British Museum and private libraries. She edited *Letters of Royal and Illustrious Ladies* (1846); *The Diary of John Rous* (1856); *Letters of Queen Henrietta Maria* (1857). By appointment of the Master of the Rolls, she calendared the papers of the reigns of James I and Charles II (11 vols., 1857-68). She completed the same task for the state papers of Queen Elizabeth (6 vols., 1869-74), and did a great deal more work of a similar nature, thus furnishing invaluable sources of information for the historian and student. G. P. Green, her husband, was a noted painter.

GREEN, ROBERT STOCKTON, an American statesman and jurist; born at Princeton, New Jersey, March 25, 1831; the grandson of Ashbel Green; graduated from Princeton in 1850; studied for the bar and began practice in Elizabeth in 1856; was successively prosecutor of the borough and city attorney; surrogate of Union County (1862); presiding judge of the county courts (1868); he resigned in 1873 to enter the famous New York firm of Vanderpoel, Green and Cuming. Elected, in

1890, vice-chancellor of New Jersey; was called, in 1893, to the court of errors and appeals, the highest judicial resort in New Jersey. In his political career he was successively elected by the Democrats member of Congress (1884), and governor of the state (1886). He was a man of great force of character, learning and integrity. He died in Elizabeth, New Jersey, May 7, 1894.

GREEN, SAMUEL ABBOTT, an American physician; born at Groton, Massachusetts, March 16, 1830; graduated from Harvard College in 1851; took his medical degree in 1854. After spending several years in Europe, he returned and settled in Boston. At the commencement of the Civil War he was commissioned assistant surgeon of the First Massachusetts Regiment of volunteers; was surgeon of the Twenty-fourth Massachusetts Regiment from 1861 to 1864; had charge of several hospital-ships; organized the Roanoke Cemetery, the first national burial-ground for Union soldiers; for his services in the field he was brevetted lieutenant-colonel of volunteers. He was city physician of Boston from 1871 to 1880, and was elected mayor in 1882; gave much of his attention to American historical researches, and was made librarian of the Massachusetts Historical Society. Author of *A History of Medicine in Massachusetts*; *Groton During the Indian Wars* (1883); *Epitaphs from the Old Burying-Ground in Groton, Massachusetts* (1879); *Groton Historical Series* (20 numbers, 1883-87); and other works, pamphlets and articles.

GREEN, SETH, an American pisciculturist; born in Rochester, New York, March 19, 1817. He received a common-school education, and for some years was proprietor of the only fish and game market near his home. Having a passion for hunting and fishing, he became interested in the habits of fish, and conceived the idea of artificial propagation. Observing that the male salmon consumed the greater part of the spawn discharged by the female, he suggested the plan of securing the spawn in shallow pans with the least possible depth of water that would allow hatching, and thus succeeded in hatching 95 per cent of salmon-eggs. Invited to New England to superintend the stocking of the Connecticut River with shad, he invented an apparatus that was successful. As a result of his transporting the first shad ever seen in California, in 1871, over one million marketable shad were fished and sold in 1885 on the Pacific Coast. He wrote *Trout-Culture* (1870) and *Fish Hatching and Catching* (1879). Much of the advancement made in pisciculture was due to his efforts, and he received recognition from foreign societies as well as from his native country. In 1868 he was appointed one of the fish commissioners of New York, and was soon afterward made superintendent of fisheries in that state. He died in Rochester, New York, Aug. 20, 1888.

GREEN, THOMAS HILL, an English philosopher and educator; born at Birkin, Yorkshire, England, April 7, 1836; was educated at Rugby and Balliol College, Oxford, and in 1860 was elected fellow of Balliol; in 1862 he won the chancellor's prize for the best essay on morals; became successively tutor (1866) and master (1870) of Balliol. He was re-

lected fellow in 1872; was elected in 1878 Whyte professor of moral philosophy. His example and influence both in and out of the university were potent for good, and his Neo-Hegelian tendencies still dominate the philosophical teachings of his successors. Among his leading works are his joint translation of Lotze's *Metaphysics* (1884); his *Prolegomena to Ethics* (1883); and his *Introduction to Hume's Treatise on Human Nature* (2d ed., 1886). Most of his works were published after his death, which occurred at Oxford, March 15, 1882.

GREEN, WILLIAM HENRY, an American scholar and clergyman; born at Groveville, Burlington County, New Jersey, Jan. 27, 1825; graduated at Lafayette College in 1840, and studied theology at Princeton. Ordained to the Presbyterian ministry in 1848, he became pastor of the Central Presbyterian Church of Philadelphia in 1849; in 1851 was appointed to the professorship of Hebrew and Old Testament literature in Princeton Seminary. He was chairman of the Old Testament Company of the American Committee of Revision. He declined the presidency of Princeton in 1868. Author of *Hebrew Grammar* (1861); *Hebrew Chrestomathy* (1863); *The Pentateuch Vindicated from the Aspersions of Bishop Colenso* (1863); *The Argument of the Book of Job Unfolded* (1874); and numerous other books and papers on the ancient Scriptures and on theological subjects.

GREENAWAY, KATE, an English artist, widely known as a book illustrator; born in London in 1855; the daughter of a wood-engraver of merit; she studied at Heatherley's Art School and at South Kensington, and in 1872 exhibited a series of black and white designs at the Dudley Gallery. These displayed marked and original talent, and procured her many commissions for illustrating juvenile works. Her *Under the Window* was the child's book of the year 1879. *Mother Goose* (1881) was, if possible, more popular. Ruskin turned a pretty phrase in her honor and described her work as "essentially and perfectly that of true picture color. . . . The children are there, but no railway trains or charitable institutions, for, like a graceful Gallio, she cares for none of these things." Miss Greenaway's range of work is narrow, but it is copious and charming.

GREENBACK-LABOR PARTY. See LABOR PARTY, in these Supplements.

GREENBACK PARTY, called by its members the Independent National, was organized in 1876, and was the outgrowth of the Granger and Labor Reform movements. Its convention at Indianapolis in May, 1876, "demanded the unconditional repeal of the Specie Resumption Act of Jan. 14, 1875"; urged the issue of United States notes as a circulating medium, and the suppression of bank paper; and protested against the further issuing of gold bonds, and the purchase of silver to replace the fractional currency. Peter Cooper was nominated for President, and received 81,740 votes. In 1880 its candidate was James B. Weaver, who received 307,306. After this year it ceased to exist as a political party, its members joining the different popular organizations.

GREEN BAY, a city and the capital of Brown

County, central eastern Wisconsin. (See GREEN BAY, Vol. XI, pp. 162, 163.) It is situated on Fox River, and on the Chicago, Milwaukee and St. Paul, the Chicago and North-Western, and the Green Bay, Winona and St. Paul railroads. The lumber shipped annually averages 80,000,000 feet, and 200,000,000 shingles and 6,000,000 staves, on the average, are shipped yearly, and it has a large trade in white-fish and trout. Calcic magnesian springs are found in the vicinity, and have made Green Bay a summer and health resort. Population 1890, 9,069; 1895, 18,290,—part of this great increase being due to its consolidation with Fort Howard, with 4,754 inhabitants.

GREENBRIER, a river of eastern West Virginia, which rises in the Rich Mountains, northern Pocahontas County, flows southwest for 150 miles, when it meets the New River, at Hinton, Summers County. This river constitutes part of a proposed water route, with the Great Kanawha and the James rivers, between the Atlantic and the Mississippi valley.

GREENBRIER MOUNTAINS, a ridge extending through Pocahontas County, West Virginia, parallel with the Greenbrier River, and about five miles to the west. They are about 2,000 feet in height, and the scenery of the region is remarkably fine.

GREENBUSH, a village of Rensselaer County, central eastern New York, on the Hudson River, opposite Albany, on the Boston and Albany and the New York Central and Hudson River railroads. It has car and machine shops, large freight-yards, a tannery, saw-mills, cigar factory and pork-packing establishment. It also has an R. C. convent. Pop. East and North Greenbush (1900), 4,551.

GREENCASTLE, a city and the capital of Putnam County, central western Indiana, on the Cleveland, Cincinnati, Chicago and St. Louis and the Louisville, New Albany and Chicago railroads. Block coal, timber, sandstone, limestone and some iron ore are found in the vicinity. There are excellent schools, and De Pauw University is located here (q.v., in these Supplements). Among the manufactures are iron and nails. Population 1890, 4,390; 1900, 3,661.

GREENCASTLE, a post borough of Franklin County, central southern Pennsylvania, 63 miles S. of Harrisburg, on Cumberland Valley railroad, and four miles from the Maryland line. It has agricultural machine and church-organ works, a woolen-mill and a high school. Population 1900, 1,463.

GREEN COVE SPRINGS, a town and the capital of Clay County, northeastern Florida, on St. John River, 30 miles S. of Jacksonville, on the South-western and the Jacksonville, Tampa and Key West railroads. It contains a large sulphur spring highly efficient in the treatment of rheumatic troubles. The city has a large business in shipping early fruit and vegetables and lumber; it manufactures woodwork and bricks, and builds and repairs cars. Population 1890, 1,106; 1900, 929.

GREENE, a village of Butler County, northeastern central Iowa, on the Shell Rock River and the Burlington, Cedar Rapids and Northern railroad, 35 miles N.W. of Cedar Falls. It has a good graded school, several churches and grain-warehouses, butter

and egg packing establishments, and is surrounded by a great cattle-raising region. Population 1890, 845; 1900, 1,102.

GREENE, CHARLES EZRA, an American engineer; born in Cambridge, Massachusetts, Feb. 12, 1842; graduated at Harvard in 1862; served as volunteer in the Civil War; graduated as C.E. from Boston School of Technology in 1868; appointed professor of civil-engineering at the University of Michigan in 1872; as a practical engineer, directed several public works; among others, the construction of the Huron trestle-bridge at Ann Arbor; author of *Graphics for Engineers, Architects and Builders* (3 vols., 1876-80); and other works.

GREENE, FRANCIS VINTON, an American soldier and writer; son of Gen. G. S. Greene; born in Providence, R. I., June 27, 1850; graduated from West Point in the engineer corps, January, 1874; joined the American legation in St. Petersburg as attaché in 1877, and followed the Russian army in the field for one year. For a time he was instructor in practical engineering at West Point. He has written an account of the *Russian Army and Its Campaigns in Turkey in 1877-78* (2 Vols., 1879). In the Spanish-American War he served under Major-General Merritt in the Philippines, and took part in the assault and capture of Manila, Aug. 13, 1898.

GREENE, GEORGE SEARS, an American soldier; born in Apponaug, Warwick, Rhode Island, May 6, 1801; lineal descendant of the John Greene who came from England and settled in Warwick, Rhode Island, in 1645; graduated second in his class at West Point, and entered the artillery in 1823. After occupying various positions, among them that of professor of mathematics at West Point, he resigned from the army in 1836 to follow civil-engineering. He took charge of various public works until he was appointed engineer of the Croton water-works, supplying New York city, in 1857. On the outbreak of the Civil War he was appointed colonel of the Sixtieth New York Volunteers, and in 1862 brigadier-general; participated in the battles of Cedar Mountain, Antietam, Chancellorsville, and Gettysburg; severely wounded and disabled at Wauhatchie (1863), later joined General Sherman's army, and was mustered out in 1866, being brevetted major-general of volunteers. After leaving the service he resumed work on the Croton aqueduct and other public works. Died in Norristown, N. J., Jan. 28, 1899.

GREENE, GEORGE WASHINGTON, an American author, grandson of General Nathaniel Greene; born in East Greenwich, Rhode Island, April 8, 1811; United States consul at Rome from 1837 to 1845; professor of modern languages at Brown University (1848); removed to New York City (1852), where he edited *Addison's Works, with Notes* (6 vols., 1853); appointed professor of American history at Cornell University (1872); wrote a number of works, from a *French Grammar to a Life of Nathaniel Greene*, his grandfather; also a number of *Historical Studies* (3 vols., 1867-71). He died at East Greenwich, Feb. 2, 1883.

GREENE, NATHANIEL, an American journalist and author; born at Boscawen, New Hampshire,

May 20, 1797; died in Boston, Nov. 20, 1877; started life as an apprentice in the New Hampshire

NATHANIEL GREENE.

office (1809); editor of the Concord *Gazette* (1812); had charge of various New Hampshire papers, until he founded the *Essex Patriot* (1817); in 1821 he established the *Boston Statesman*, which soon became the leading Democratic daily of Massachusetts; postmaster of Boston in 1829-40, and again in 1845-49. From 1849 to 1871 he resided in Paris, and from that time gave all his attention to high-class literature. His many poems, under the *nom de plume* of "Boscawen" were quite successful; he published, also, a number of *Tales from the German, Italian and French* (1843) and *Improvisations and Translations* (1852). He died in Boston, Nov. 20, 1877.

GREENE, SAMUEL D., an American naval officer; born in Cumberland, Maryland, in 1839; graduated at Annapolis, and in 1861 volunteered on the ironclad *Monitor*. He had charge of the guns during her fight with the *Merrimac*, and commanded her after Lieutenant Worden had been disabled. In 1862 he served on blockade duty, in 1872 became commander, and held various appointments in the naval academy. He died Dec. 11, 1884.

GREEN EARTH, a mineral of a green color and earthy character, often found in the vesicular cavities of crystalline igneous rocks, sometimes also disseminated through highly decomposed basic eruptive rocks. It consists principally of silica, alumina magnesia, and protoxide of iron. *Glaucosite* is the name given to the green earth which is not infrequently met with in sedimentary rocks. In such rocks, glauconite occurs in the form of grains, which in many cases are the casts of minute shells. There is also a green earth used as a pigment by painters in water-colors, who know it by the name of *mountain-green*. For their use it is mostly brought from Monte Bolso, and from Cyprus. See also HOLLAND, Vol. XII, p. 62.

GREEN EBONY (*Jacaranda mimosifolia*), a member of the family *Bignoniaceae*, a tall and graceful tree of Brazil, which furnishes a beautifully tinted and fragrant timber of great value. It is one of the sources of the "rosewood" of commerce. This plant produces a substance used by dyers in giving yellow, brown and green tints to fabrics.

GREENEVILLE, a village and the capital of Greene County, eastern Tennessee, 75 miles N.E. of Knoxville, on the Southern railroad, and near the Tennessee River. It was the home of President Andrew Johnson. Greenville and Tusculum College (founded 1794) is near the village. Manufacturing products, axles, tobacco and wool; agricultural products, stock and poultry; mining products, coal and iron. Population 1890, 1779; 1900, 1,817.

GREENEVILLE, a town and railroad center, and the capital of Hunt County, northeastern Texas, on

the Sabine River, and on five railroad branches, which connect directly with all the large cities of the state. It is 45 miles N.E. of Dallas. It is surrounded by farming-lands, and ships large quantities of produce; has flour and planing mills and furniture factories. Population 1890, 4,330; 1900, 6,860.

GREENFIELD, a city of Green County, western Illinois, 50 miles N. of St. Louis, on the Chicago, Burlington and Quincy and the Litchfield, Carrollton and Western railroads. It has flour and furniture factories, and exports cattle, swine, horses, grain and agricultural produce. Population 1900, 1,085.

GREENFIELD, a city and the capital of Hancock County, central Indiana, situated on the Columbus, Chicago and Indiana Central railroad, 21 miles E. of Indianapolis. It has large flouring-mills, planing and rolling mills, a furniture factory, a machine-shop and factories of stoves, nails, ice, glass, butter and cheese. It has good schools and is lighted with electricity and natural gas. Population 1890, 3,100; 1900, 4,489.

GREENFIELD, a town and the capital of Adair County, southwestern Iowa, situated on the Chicago, Burlington and Quincy railroad, 50 miles S.W. of Des Moines. Population 1900, 1,300.

GREENFIELD, a town and the capital of Franklin County, northwestern Massachusetts, located in the valley of the Connecticut and the Green rivers. It is on the Boston and Maine, the Fitchburg and the New York, New Haven and Hartford railroads. It is an important market for cattle, sheep and butter, and has manufactories of children's carriages, bolt-cutting machines, planes, boots and shoes, cutlery and silverware. A soldiers' monument is erected here, and the town contains a young ladies' seminary and a public library. Population 1890, 5,252; 1900, 7,927.

GREENFIELD, a village and the capital of Dade County, southwestern Missouri, 35 miles W.N.W. of Springfield, on the Kansas City, Fort Scott and Memphis railroad. Agricultural products and livestock, and coal, lead and zinc are shipped. Population 1890, 998; 1900, 1,406.

GREENFIELD, a village of Highland County, southwestern Ohio, on Paint Creek, on the Baltimore and Ohio Southern and the Ohio Southern railroads. It is an agricultural district, and is a shipping and trading center. Population 1900, 3,979.

GREENHALGE, FREDERIC THOMAS, American statesman; born in Clitheroe, Lancashire, Eng., July 19, 1842; arrived with his parents in the United States in 1855 and settled in Lowell, Massachusetts; entered Harvard College in 1859, but was compelled to leave at the end of two years. He was admitted to the Middlesex bar in 1865; appointed special justice of police court in Lowell, Massachusetts, in 1874; mayor of Lowell in 1880-81; in Massachusetts legislature in 1885; Representative in Congress, 1889-90; governor of Massachusetts, 1894, 1895, 1896; and died in Lowell, March 5, 1896.

GREENHOUSE. See HORTICULTURE, Vol. XII, pp. 221-225.

GREEN ISLAND, a village of Albany County, central eastern New York, on an island lying in the Hudson River, between Troy and West Troy, with

which places it is connected by bridges. It is on the Delaware and Hudson and the New York Central and Hudson River railroads. Machinery, castings, iron and many railroad cars are manufactured here. Population 1890, 4,463; 1900, 4,770.

GREENLAND, EXPLORATIONS IN. See POLAR EXPLORATIONS, in these Supplements.

GREEN MOUNTAINS, a range of the Appalachian system of mountains. See VERMONT, Vol. XXIV, p. 166.

GREENOUGH, RICHARD SALTONSTALL, an American sculptor, brother of Horatio (see Vol. XI, p. 173); born in Jamaica Plain, Massachusetts, April 27, 1819, and educated at the Boston Latin School. He began his career as a sculptor in Paris; returned to the United States and resided for several years in Newport, Rhode Island; but after 1874 spent most of his time in Europe. He was particularly successful as a sculptor of portrait busts. Among his works are a bronze statue of *Franklin*, executed in 1853, and placed in the City Hall Square of Boston; a marble statue of *Governor Winthrop*, finished in Florence, 1855-56, for the Mt. Auburn Cemetery; and another colossal statue of the same subject, ordered for the national capitol; the *Boy and the Eagle*, owned by the Boston Athenæum; a *Carthaginian Woman*; *Elaine*; *Circe*; and a bust of *Shakespeare*, from the Chandos portrait.

GREEN PIGMENTS. See PIGMENTS, Vol. XIX, p. 88.

GREENPORT, a village of Suffolk County, Long Island, southeastern New York, the eastern terminus of the Long Island railroad, 95 miles from Brooklyn. It has shipyards, and the people are chiefly employed in fishing, shipbuilding and the coasting trade. On account of its bathing and fishing facilities, it is a popular resort. Population 1900, 2,366.

GREEN RIVER, a river of Kentucky, which rises in Lincoln County, near the center of the state, flows west as far as Ohio County, where it turns northwest, and enters the Ohio River about six miles above Evansville, Indiana. It passes near the mouth of the Mammoth Cave, and traverses the western coal-field of Kentucky. Its length is estimated at 350 miles, and it is navigable, at high water, 200 miles, by means of locks and dams.

GREEN RIVER, the name of three small rivers of western Massachusetts. One rises in the Berlin Mountains, northwestern Berkshire, and flows 15 miles northeast into Hoosac River. A second rises in Lockbridge township, central western Berkshire County, and flows south into the Housatonic, after a course of about 18 miles. A third rises in Windham County, Vermont, flows southeast, entering the Deerfield at Greenfield, Franklin County, Massachusetts. Its length is about 30 miles. The famous Green River Works (cutlery) are located on this stream.

GREEN RIVER, a branch of the Colorado. It rises in the Wind River range, Fremont County, western Wyoming, and pursues a generally southward course into Utah, uniting with Grand River near lat. 38° 5' N., long. 109° 54' W. Its entire length is estimated at 750 miles, but it is not of much importance for navigation. In northern Utah

it is bordered by cliffs two or three hundred feet in height, and as it approaches its confluence with Grand River the depth of its cañons gradually increases, and for scores of miles it runs more than 3,500 feet below the surface of the surrounding mesas.

GREENSAND. See GEOLOGY, Vol. X, pp. 357-359.

GREENSBORO, a town and the capital of Hale County, central western Alabama, on the Southern railroad, 73 miles S.W. of Birmingham; located near the cane-brake region, which before the Civil War was noted for its productiveness. Southern University, under Southern Methodist Episcopal Church control, is located here, also Tullibody Academy and a non-sectarian college for women. It has a carriage factory, and is the trade center for a cotton-raising district. Pop. 1890, 1,759; 1900, 2,416.

GREENSBORO, a city and the capital of Greene County, north central Georgia, situated on the Georgia railroad, 87 miles from Augusta. It contains a court-house, several churches, the Thomas Stocks Institute and the Fuller Academy. It is in a corn, cotton and hay raising region. Population 1890, 1,313; 1900, 1,511.

GREENSBORO, a city and the capital of Guilford County, northeastern central North Carolina, located 82 miles N.W. of Raleigh, on the Cape Fear and Yadkin Valley and the Southern railroads. It contains spoke and handle manufactures, saw and planing mills and agricultural-machine works, and also hosiery, cotton, brick, tiles, terra-cotta and casting manufactures. Much tobacco, wheat, corn, oats and fruit are raised in the vicinity, and considerable fruit is dried and shipped farther south; gold, copper and iron are found in the vicinity. It contains Bessemer steel-works. It is the seat of the Greensboro College for girls, Bennett College for colored youth, the latter being co-educational, and the State Agricultural and Mechanical College for colored students. Population 1900, 10,035.

GREENSBURG, a city and the capital of Decatur County, southeastern Indiana, situated 47 miles S.E. of Indianapolis on the Cleveland, Cincinnati, Chicago and St. Louis railroad. There are quarries here, where fine Bedford stone, an oolitic limestone, is obtained and shipped. Among the manufactures are flour, woolen goods, furniture and carriages. The city has a pork-packing establishment and a foundry. Population 1890, 3,596; 1900, 5,034.

GREENSBURG, a borough and the capital of Westmoreland County, southwestern Pennsylvania, 31 miles E. of Pittsburgh on the Pennsylvania railroad. Coal and natural gas are abundant; grain, wool, coke and farming products are shipped from this point. Manufacturing products include flour, glass, engines, lumber, bolts and nuts. Population 1890, 4,202; 1900, 6,508.

GREEN SICKNESS OR ANÆMIA. See DIETETICS, Vol. VII, p. 206.

GREEN SNAKE, a common name generally applied to two different kinds of harmless grass snakes of the United States, *Cyclophis vernalis*, common in the Middle and Northern states, and *Cyclophis æstivus*, a climbing species, which inhabits the Mid-

dle and Southern states. They are slender in form and of a bright green color.

GREENSTONE OR DIORITE. See GEOLOGY, Vol. X, p. 235.

GREEN TURTLE. See TORTOISE, Vol. XXIII, p. 459.

GREENUP, a village and the capital of Greenup County, northeastern Kentucky, situated on the Eastern Kentucky railroad and on the Ohio River, about 20 miles from Portsmouth, Ohio. There are several iron furnaces near the village, and coal is mined in the vicinity. Population 1900, 711.

GREENVILLE, a city and the capital of Butler County, southern central Alabama, 45 miles S. of Montgomery on the Louisville and Nashville railroad. It has a college and the South Alabama Female Institute, a shingle factory, a boot and shoe factory and saw-mills. Cotton and timber furnish the chief industries. It has a street-railway and water-works. Population 1890, 2,806; 1900, 3,162.

GREENVILLE, a city and the capital of Bond County, southern central Illinois, 50 miles E.N.E. of St. Louis, Missouri, on the Jacksonville, Louisville and St. Louis and the Terre Haute and Indianapolis railroads. Almira Female College is located here. It is in a corn and wheat-growing and milk-producing region, and has coal-mines. It manufactures wagons, plows, flour and lumber. Population 1890, 1,868; 1900, 2,504.

GREENVILLE, a village and the capital of Muhlenburg County, central western Kentucky, situated on the Ohio and Southwestern railroad, 37 miles S. of Owensburg. It has a college for women and several tobacco factories, and there are coal-fields in the vicinity. Population 1900, 1,051.

GREENVILLE, a city of Montcalm County, southeastern central Michigan, on Flat River, which has two dams at this point, and thus furnishes the abundant water-power utilized in the flour, saw, planing and shingle mills, and the machine-shops and woolen-mill. It is on the Detroit, Lansing and Northern and the Toledo, Saginaw and Muskegon railroads, 25 miles E.N.E. of Grand Rapids. It is surrounded by good farm land, and is a trading center for Flat River lumbering district. Population 1900, 3,381.

GREENVILLE, a town and the capital of Washington County, eastern Mississippi, situated on the Mississippi River, 100 miles N.N.W. of Jackson. It is the western terminus of the Greenville, Columbus and Birmingham railroad. It has cotton-compresses and oil-mills, saw and planing-mills, and good public schools. Considerable cotton is shipped here. Population in 1890, 6,658; 1900, 7,642.

GREENVILLE, a town and the capital of Pitt County, eastern central North Carolina, on Tar River (navigable), 15 miles above Washington, and on the Atlantic Coast Line railroad; the surrounding region is rich, producing cotton, tobacco, peanuts, grains, vegetables and fruits. It contains numerous schools, and manufactures carriages, lumber, and paints. Population 1900, 2,565.

GREENVILLE, a city and the capital of Darke County, central western Ohio, on Greenville Creek and on the Dayton and Union and the Pittsburg,

Cincinnati, Chicago and St. Louis railroads, 35 miles N.W. of Dayton. It has planing-mills and a furniture factory. In 1793 a fort was built here by General Wayne, and two years later he signed a treaty here with the Indians. It is supplied with natural gas. Population 1890, 5,473; 1900, 5,051.

GREENVILLE, a post-borough of Mercer County, northwestern Pennsylvania, on the Shenango River, at the head of the Shenango Valley, and on the Erie and Pittsburg and the Pittsburg, Shenango and Lake Erie railroads. It has abundant water-power, a rolling-mill and coal-works, iron foundries and woolen-mills. Thiel College, under Evangelical Lutheran control, is located here. Population 1890, 3,674; 1900, 4,814.

GREENVILLE, a city and the capital of Greenville County, northwestern South Carolina, on the Reedy River and on the Carolina, Knoxville and Western, the Port Royal and Western Carolina and the Southern railroads. Its high elevation and the beautiful scenery of the Blue Ridge, near by, make it a pleasant summer resort. It is also a great manufacturing city; carriages, wagons and cotton are among its chief productions. The city is the seat of Furman University and Greenville Female College, and a theological school, all under Baptist control. Population 1890, 8,607; 1900, 11,860.

GREENWEED, a name given to certain half-shrubby species of *Genista*. Hairy greenweed (*G. pilosa*) is sometimes grown in France on light soils as fodder for sheep.

GREENWICH, a borough of Fairfield County, southwestern Connecticut, 6 miles E. of White Plains, New York, on Long Island Sound and the New York, New Haven and Hartford railroad. It has popularity as a summer resort. The famous escape of General Putnam from General Tryon's troops by riding down the stone steps at Horseneck in 1779 took place in this township. Population, 1900, borough, 2,420; town and borough, 12,172.

GREENWICH, a village of Washington County, central eastern New York, situated on the Greenwich and Johnsonville railroad and on the Battenkill River, about 16 miles E. of Saratoga Springs and 30 miles N.E. of Troy. It contains five paper-mills, thread and twine-mills, scale-works, knitting-mill, pulp-mills, foundry, machine-shop and shirt factories. Population 1890, 1,663; 1900, 1,869.

GREENWOOD, a village of Jackson County, central eastern Missouri, on the Missouri Pacific railroad, 25 miles S.W. of Kansas City. Lincoln College (United Presbyterian) is located here. Population, 1900, 230.

GREENWOOD, a village and the capital of Le Flore County, northeastern Mississippi, on the Yazoo River and on the Illinois Central and the Southern railroads, 85 miles N. of Jackson. It is the trade and shipping center for a cotton region, and ships by the river large quantities of this product. Population 1890, 1,055; 1900, 3,026.

GREENWOOD, FRANCIS WILLIAM PITT, an American Unitarian minister; born in Boston, Massachusetts, Feb. 5, 1797; in religious matters, he was a pupil of Dr. James Freeman; graduated at Harvard in 1814; studied theology at Cambridge; began

his ministry in 1818, at the New South Church, Boston; had to leave and travel on account of ill-health; in 1824 he accepted the pastorate of King's Chapel, Boston, first with Dr. Freeman; in 1827, alone. In 1837 his health broke down altogether. He had a strong love for natural science, and devoted much of his time to study and research in that line, contributing frequently to the *Journal of Natural History*. His sermons were extensively read. He published *Sermons of Consolation* (1842); *Sermons to Children* (1841); and other less-known volumes. He died in Dorchester, Massachusetts, Aug. 2, 1843.

GREER, JAMES AUGUSTIN, an American naval officer; born in Cincinnati, Ohio, Feb. 28, 1833; entered the United States navy Jan. 10, 1848; commanded the *Benton* at the passage of the Vicksburg batteries, April 16, 1863, and until the fall of Vicksburg, July 4, 1863, and later, was with the Red River expedition. In 1873 he participated in the *Polaris* search expedition, having command of the *Tigress*. He became captain in 1876; commodore, 1886; rear-admiral, 1893; retired Feb. 28, 1895.

GREG, WILLIAM RATHBONE, an English author; born at Manchester, Eng., 1809; educated at Edinburgh University; entered the public service, became Commissioner of Customs in 1856, and was Comptroller of the Stationery Office in 1864-77; devoted much time to literary criticism and articles on economic and social questions, reviewing severely Mrs. Gaskell's famous labor novel, *Mary Barton*. He wrote *The Creed of Christendom* (1851); *Literary and Social Judgments* (1869); *Enigmas of Life* (1872); *Roeks Ahead* (1874); *Mistaken Aims* (1876); and *Miscellaneous Essays* (1884). Died Nov. 15, 1881.

GREGARINIDEA. See PROTOZOA, Vol. XX, pp. 853-54.

GREGG, ALEXANDER P., an American Episcopal clergyman; born in Society Hills, South Carolina, Oct. 8, 1819; entered the Protestant Episcopal ministry in 1846, and became rector of St. David's Church, Cheraw, South Carolina, in 1847; a trustee and, later, proctor of the University of the South in 1857-59. In 1859 he was elected first bishop of Texas. Died in Galveston, Texas, July 11, 1893.

GREGG, ANDREW, an American statesman; born in Carlisle, Pennsylvania, June 10, 1755, of Irish parents; served in the militia during the Revolution; was tutor in the College of Philadelphia in 1779-83; then, successively, merchant and farmer; became a member of Congress in 1791, and served as such until 1807, from which year until 1813 he was United States Senator from Pennsylvania. In 1816 he was appointed secretary of state of his native state. Died in Bellefonte, Pa., May 20, 1835.

GREGG, DAVID McMURTRIE, an American general, and a grandson of Andrew Gregg; born at Huntingdon, Pennsylvania, April 10, 1833; graduated at West Point in 1855; served against the Indians in Oregon from 1858 to 1860 as lieutenant; at the outbreak of the Civil War was made captain in the Sixth Cavalry and in January, 1862, was appointed colonel of the Eighth Pennsylvania Cavalry; served with distinction in the Virginia peninsular campaign, and was made brigadier-general of volunteers in 1862. Then he commanded a division

of cavalry, and was engaged at Gettysburg and in the pursuit of Lee's army. After the Richmond campaign, in which he was engaged in command of the Second Cavalry Division, he resigned, Feb. 3, 1865, and was brevetted major-general of volunteers in recognition of his gallant conduct. In 1874 he was appointed United States consul at Prague, Bohemia.

GREGG, JOHN IRVIN, an American soldier; born in Bellefonte, Pennsylvania, July 19, 1826; served through the Mexican War, becoming first lieutenant of the Eleventh Infantry in February, 1847, and captain in the following September. At the commencement of the Civil War he was chosen colonel of the Fifth Pennsylvania Volunteers; in May, 1861, was made captain of the Sixth United States Cavalry; appointed colonel of the Sixteenth Pennsylvania Cavalry in October, 1862, he commanded a cavalry brigade in the army of the Potomac from 1863 till 1865. He was brevetted major-general of volunteers, and brigadier-general of the United States army for distinguished services during the war, and retired in 1879. He died in Washington, D. C., Jan. 6, 1892.

GREGG, MAXCY, a Confederate soldier; born in Columbia, South Carolina, in 1814; graduated at the College of South Carolina in 1836; admitted to the bar in 1839; served as major in the Mexican War in 1847 and 1848; elected to the South Carolina Convention of 1860; member of the committee that recommended secession; colonel of the First South Carolina Volunteers; later, brigadier-general; killed at the battle of Fredericksburg, Virginia, Dec. 13, 1862.

GREGORAS, NICEPHORUS. See BYZANTINE HISTORIANS, Vol. IV, p. 613.

GREGORI, LUIGI, an Italian painter; born in Bologna, Italy, July 8, 1819; studied in Rome and at the academy of his native city, and for several years was engaged in the restoration of old paintings in the Vatican galleries. In 1874 he removed to the United States and was engaged on the capitol at Washington, D. C., and in the decoration of a church at St. Louis, after which he became director of the Art Museum of the University of Notre Dame, Indiana. He remained there for 15 years, during which he produced many fine works, including the series of Columbian paintings that adorn the main hall of the university. In 1891 he returned to Italy.

GREGORIAN CALENDAR. See CALENDAR, Vol. IV, p. 667.

GREGORIAN MUSIC. See MUSIC, Vol. XVII, p. 80.

GREGOROVIVS, FERDINAND ADOLF, a German historian; born at Neidenburg, East Prussia, Jan. 19, 1821; studied theology at Königsberg University in 1838, but soon devoted himself to literature. In 1852 he went to Rome, where he subsequently spent most of his life. His great work is the *History of the City of Rome in the Middle Ages* (8 vols.; 4th ed., 1898). He has written also an Italian geography and a *History of Corsica, Capri and Corfu* (1854), *The Graves of the Popes* (1857; 2d ed., 1881), *Lucrezia Borgia* (1874); *Urban VIII* (1879); *History of Athens During the Middle Ages* (1881); *The Byzantine Empress Athenias* (1882);

The Death of Tiberius, a tragedy (1851); and an epic, *Euphorion* (4th ed., 1880). He died in Munich, May 1, 1891.

GREGORY, CAPE, a former name of ARAGO, CAPE, q.v. in these Supplements.

GREGORY, CASPAR RENÉ, an American divine and biblical critic; born in Philadelphia, Nov. 6, 1846; graduated at the University of Pennsylvania in 1864, and at Princeton Theological Seminary in 1870; completed his Ph.D. studies in Leipsic, where he was pastor of the American Chapel from 1878 to 1879, and finally was appointed honorary professor in 1890, after being private tutor there from 1884; assisted in the preparation of Hodge's *Systematic Theology* (1870-73); translated Luthardt's *St. John the Author of the Fourth Gospel* (1875), and *Commentary on St. John's Gospel* (1876-78); and also wrote important pamphlets on Tischendorf's manuscripts. In one of these entitled *Prolegomena*, he gives a description, from his own examination, of all the crucial manuscripts of the New Testament.

GREGORY, DANIEL SEELEY, an American educator; born in Carmel, Putnam County, New York, Aug. 21, 1832; graduated at Princeton in 1857; studied theology, and after holding various pastorates became, in 1871, professor of metaphysics and logic in Wooster University, Ohio, being transferred four years later to the chair of mental science and English literature. In 1879 he became president of Lake Forest University, Illinois. Author of *Christian Ethics* (1875); *Why Four Gospels* (1876); and *Practical Logic* (1881). He was one of the editors of the *Standard Dictionary* (1895).

GREGORY, ROBERT, an English clergyman; born in 1819; graduated at Oxford, 1843; was awarded the Denyer theological prize, Oxford, 1850; curate of Panton, 1847; of Lambeth, 1851; perpetual curate of St. Mary-the-Less, Lambeth, 1853-73; canon of St. Paul's, London, 1868, and treasurer of the cathedral, 1882. He took an active part in philanthropic and educational movements, being elected, in 1873, a member of the London School Board. In 1878 he was appointed a Royal Commissioner to inquire into the Parochial Charities of the city of London, and, in 1886, a Commissioner to inquire into the working of the Education Acts. In 1890 he succeeded Dean Church as dean of St. Paul, and did a great deal toward rendering the cathedral service popular; wrote *Plea for Small Parishes* (1849); *Difficulties and Organization of a Small Metropolitan Parish* (1866); *The Cost of Voluntary Schools and Board Schools* (1875); *Is the Canadian System of Education Rates Possible in England?* (1875); and a number of volumes of sermons, lectures, etc.

GRELL, AUGUST EDUARD, a German composer and organist; born in Berlin, Nov. 6, 1800; a pupil of Zelter; connected with the Berlin Sing-Akademie for over sixty years. His oratorio, *The Israelites in the Desert*, proved a durable success, and was given in New York in 1889. Died Aug. 10, 1886.

GRELLET, STEPHEN, a French divine, known in France as *Étienne de Grellet de Mabillier*; born of noble and wealthy parents, in Limoges, France, Nov. 2, 1773. He was educated at the Military Col-

lege of Lyons, and at the age of 17 entered the body-guard of Louis XVI. During the Revolution he was taken prisoner and sentenced to be shot, but made his escape to Demerara, and in 1795 went to New York. Formerly a Roman Catholic, he now joined the Society of Friends, and, removing to Philadelphia, ministered to the sick during the prevalence of yellow fever in 1798. He returned to New York in the following year, and was for a short time engaged in mercantile pursuits, but soon after devoted himself entirely to missionary work. He made a preaching tour through the Southern and New England states and Canada, and in 1807 went to Europe, where he traveled extensively. Pope Pius VII and Czar Alexander I of Russia listened courteously to his exhortations. Later, he visited Haiti. His biography has been written by Benjamin Seebohm (1868). He died in Burlington, New Jersey, Nov. 16, 1855.

GRENADA, a city and the capital of Grenada County, northern central Mississippi, on the Yallahusha River and on the Illinois Central railroad, 95 miles S. of Memphis, Tennessee. It is the business center of a cotton district, and has flour, lumber, planing and rolling mills. It is the seat of the Grenada Collegiate Institute (Methodist Episcopal South). Population 1890, 2,416; 1900, 2,568.

GRENADE, HAND, a small hollow ball or shell of metal or glass, filled with some explosive material, having a fuse attached, to be thrown by hand into trenches, or upon besiegers scaling a breach. Also, a glass bottle or bulb, filled with a fire-quenching liquid, to be thrown upon incipient fires for the purpose of extinguishing them.

GRENADINES, ISLANDS. See GRENADA, Vol. XI, p. 184.

GRENET'S CELL. See ELECTRICITY, § 103, in these Supplements.

GRESHAM, WALTER QUINTON, American soldier, jurist, and statesman; born near Lanesville, Harrison Co., Ind., March 17, 1832; received a common-school education and but one year at the Indiana State University before he was admitted to the bar in 1853, having studied law, as clerk in a small office, in Corydon, Indiana; was elected to the state legislature in 1860, as a Fremont Republican; resigned to accept a commission in the Thirty-eighth Indiana Volunteers; promoted colonel of the Fifty-third Indiana Regiment, he was severely wounded at Atlanta, and received the brevet of brigadier-general of volunteers for his gallantry before Corinth and Vicksburg in 1863; severely wounded and disabled at Leggett's Hill, he was brevetted major-general of volunteers in 1865; from 1867 to 1868 he was financial agent of the state of Indiana in New York; in 1869 he was appointed United States judge for the district of Indiana by President Grant; in April, 1882, he resigned from the bench to become Postmaster-

WALTER Q. GRESHAM.

General under President Arthur, when he so successfully fought the Louisiana Lottery corporation. On the death of Secretary Folger, in July, 1884, he became Secretary of the Treasury, resigning the office in October, 1884, to become United States judge for the seventh circuit, which office he filled with dignity until 1893; in 1892 he declined the nomination as Presidential candidate for the People's party, and gave his full indorsement to the Democratic doctrines as represented by President Cleveland; on the accession of President Cleveland, March, 1893, Judge Gresham became Secretary of State. He proved himself a strong, patriotic head of his high office, notably in the dispute between Nicaragua and Great Britain, in the case of the *Allianza*, and in other grave matters. He died in Washington, District of Columbia, May 28, 1895.

GRESHAM COLLEGE, a London institution, of a unique character, wherein lectures are given on the subjects of divinity, law, physics, geometry, astronomy, music and law, but which confers no degrees and has no regular roll of students. It was founded by the generosity of Sir Thomas Gresham, the "Royal Merchant" of Queen Elizabeth, as he is styled in his will. The lectures began in 1597 under the auspices of the Mercers' Company as trustees, and are continued to this day. Parliament removed the clause in the testator's will that the lecturers were not to be married men when appointed and were to lose their position if they married while in office; the lectures are now delivered in English instead of Latin, as formerly. The committee in charge of the Gresham College fund has declared its willingness to co-operate with the management of the University of London, to the best advantage of students.

GRESHAM'S LAW. See MONEY, Vol. XVI, p. 731.

GRETNA, a town and the capital of Jefferson Parish, southeastern Louisiana, on the Mississippi, opposite New Orleans. It has several railroads, and is connected by ferry with New Orleans. It has a good public-school system. Its principal industry is the making of cotton-seed oil, for which it has three of the largest mills in the United States. In 1868, 1880, 1884 and 1891 the town suffered considerably from crevasses. A wall has been raised in the rear to insure it against the results of breaks above it. Population 1890, 3,332.

GRETNA GREEN, a village of Dumfriesshire, Scotland, near the head of the Solway Firth, at one time noted for its clandestine marriages. The Scotch law of marriage simply requiring a mutual declaration of present intention of marriage, it happened that young couples in England, where licenses or bans were required, used to run away to Gretna Green and declare their marriage in the presence of any convenient witness, as a blacksmith, ferryman, toll-keeper or landlord. In 1771 Gretna Green had become "the resort of all amorous couples whose union the prudence of parents or guardians prohibits," and 200 couples were sometimes united in a twelvemonth. Statute 19 and 20, Vict. c. 96, destroyed the business by requiring one of the parties to an irregular marriage in Scotland to be a res-

ident of that kingdom for 21 days previous to the ceremony.

GRÉVILLE, HENRY, the pen-name of DURAND, ALICE MARY CÉLESTE, q.v., in these Supplements.

GRÉVY, FRANÇOIS PAUL JULES, a French statesman and ex-President of the French Republic; born at Mont-sous-Vaudrey, Jura, Aug. 15, 1807. He studied at the Collège Poligny, and afterward took a law course in Paris, being admitted as a lawyer in 1837. In 1830, while a student, he took part in the "Revolution of the three days of July." In 1848 he was appointed commissary to the Department of Jura, and shortly after returned as its deputy to the National Assembly, where, although not an

FRANÇOIS P. J. GRÉVY.

ultra-radical, he took his seat on the Left. After Louis Napoleon's *coup d'état*, Grévy retired from public life and devoted himself to his law practice until 1868, when he was again elected to the Chamber from Jura. Here he proved a strong enemy to the empire. In 1871 he was again returned and was elected president of the Assembly, which office he held until 1873. In 1876 he was again elected president of the Assembly, and upon the resignation of MacMahon in 1879, was chosen President of the Republic for seven years, and when his term expired in 1886 was re-elected. Up to this time he had enjoyed great personal popularity, his firmness, impartiality and honesty having kept him in office amid many changes of parties and fluctuations of public opinion; but finally he allowed his son-in-law, Wilson, to gain too great an influence over him; the latter abused his confidence, and in 1887 was adjudged guilty of the sale of public offices. Although Grévy was in no way implicated in these frauds, public indignation forced his retirement. He resigned Dec. 3, 1887, and died Sept. 9, 1891, at Mont-sous-Vaudrey.

GREWIA, a genus of East Indian tiliaceous trees, yielding good bast for rope-making, etc. Some yield timber, and the leaves of others are used as fodder.

GREY, ALBERT HENRY GEORGE, FOURTH EARL, a British nobleman; born in 1851; succeeded his uncle in 1894. He was Member of Parliament from Northumberland from 1880 to 1885. He traveled much in Africa, became connected with Cecil Rhodes's British South Africa Chartered Company, and on Feb. 21, 1896, after the recall of Dr. Jameson on account of his raid into the territory of the South African Republic, was appointed co-administrator of the company with Cecil Rhodes, and representative of the Colonial Office in South Africa.

GREY, SIR GEORGE, a British colonial governor; born at Lisburn, Ireland, in 1812. He was educated at the Royal Military College at Sandhurst, entered the army and became captain in 1835; four years

later retired and accompanied an exploring expedition to the interior of Australia. In 1841-45 he was governor of South Australia, and in 1845-54 of New Zealand, his conciliatory rule doing much toward reconciling the natives to British control. In 1854-61 he was governor of the Cape of Good Hope, and allayed the irritation left by the Kaffir war; and in 1861 he was reappointed governor of New Zealand to quell the insurrection then in progress. In 1872 he retired; in 1875, became superintendent of the province of West Auckland; in 1877-84 Premier of New Zealand. He published *Journals of Discovery in Australia* (1841) and *Polynesian Mythology and Traditions of New Zealand* (1855). Died in London, Sept. 19, 1898.

GREYHOUND. See DOG, Vol. VII, pp. 327-28.

GREYLOCK, MOUNT, 3,600 feet high, is the chief eminence of the Greylock Range, in Berkshire Co., Mass., and the highest point of land in the state. Its sides are covered with forests.

GRIDLEY, CHARLES VERNON, American naval officer, was born at Logansport, Ind., in 1845. He was made commander March 10, 1882; and captain March 14, 1897. When the war with Spain broke out in April, 1898, he was captain of the *Olympia*, Commodore Dewey's flagship, and though he was in bad health, he bravely took part in the battle in Manila Bay, May 1, 1898, and shared in the honors of that brilliant victory over the Spanish fleet. He died on board the steamship *Coptic*, near Kobe, Japan, June 4, 1898, of injury received through over-exertion in the battle.

GRIEG, EDVARD HAGERUP, a Norwegian composer; born at Bergen, Norway, June 15, 1843. In 1858 he went to the Conservatorium, at Leipsic, and studied under Hauptmann, Richter, and other masters; then went to Copenhagen and afterward to Christiania, where he taught music for eight years. The Norwegian Parliament gave him a pension to enable him to devote himself to composition. His works, with a few exceptions, are for the pianoforte, and possess marked originality and the characteristics peculiar to Norwegian music. Among them are *Humoresken*, *Sigurd Jorsalafar*, and *Peer Gynt*.

GRIER, WILLIAM MOFFATT, an American educator; born in York Co., S. C., Feb. 11, 1843; graduated at Erskine College in 1860, and in 1871, after four years in the ministry, became president of his *alma mater* and professor of Greek exegesis and homiletics at Erskine Theological Seminary. He edited *The Associate Reformed Presbyterian*.

GRIERSON, BENJAMIN HENRY, an American soldier and explorer; born in Pittsburg, Pa., July 8, 1826; at an early age removed to Ohio, and was afterward engaged in business at Jacksonville, Ill. At the beginning of the Civil War he served on the staff of General Prentiss; in August, 1861, was made major of the Sixth Illinois Cavalry; became colonel in the following spring; brigadier-general of volunteers in June, 1863; major-general in May, 1865; colonel of the Tenth United States Cavalry in July, 1866, and in March, 1867, was brevetted brigadier and major-general United States army. He commanded the district of the Indian Territory, 1868-73; was engaged in exploring parts of New

Mexico and Texas, 1875-84; and in 1886 was placed in command of the district of New Mexico.

GRIFFIN, a city and summer resort, the capital of Spalding Co., Ga., 40 miles S. of Atlanta. Cotton furnishes the chief industry, and there are furniture and carriage factories. The surrounding country is devoted to the raising of cotton and fruit, especially grapes and peaches, and wine-making. There is a mineral spring here. The State Agricultural Experiment Station and the State Military Encampment are located here. Pop. 1890, 4,503.

GRIFFIN, CHARLES, an American soldier; born in Licking County, Ohio, in 1826; graduated at the United States Military Academy in 1847; entered the army as brevet second lieutenant of artillery and served during the Mexican War; in June, 1849, made first lieutenant; was instructor of artillery at West Point in 1859-61; commanded the West Point Battery at Bull Run, and was brevetted major for gallant conduct; in June, 1862, was commissioned brigadier-general of volunteers; commanded a brigade in the Virginia peninsula campaign, winning distinction at Yorktown, Gaines's Mill and Malvern Hill, was promoted to the command of a division and engaged in the battles of Antietam and Fredericksburg; as commander of the Fifth Corps, under General Grant, was one of the commissioners to carry out the terms of the surrender of General Lee at Appomattox Courthouse. In May, 1865, General Griffin was brevetted brigadier and major-general in the regular army; was assigned to the command of the district of Maine in the August following; in July, 1866, was made colonel of the Thirty-fifth Infantry, and commanded military districts in Texas and Louisiana. He died in Galveston, Texas, Sept. 15, 1867.

GRIFFIN, EDWARD DORR, an American educator; born in East Haddam, Connecticut, Jan. 6, 1770. He graduated at Yale in 1790; studied theology; and in 1795 became pastor of the Congregational Church at New Hartford, afterward holding pastorates at Newark, New Jersey, and Boston, Massachusetts. He was professor of rhetoric in Andover Theological Seminary from 1809 to 1811, and president of Williams College from 1821 to 1836. He published *Course of Lectures in Park Street Church* (1813). He died in Newark, New Jersey, Nov. 8, 1837.

GRIFFIS, WILLIAM ELLIOT, an American author; born in Philadelphia, Pennsylvania, Sept. 17, 1843; served during a part of the Civil War in the Forty-fourth Pennsylvania Volunteers; entered Rutgers College, graduating in 1869; studied theology at the New Brunswick Theological Seminary for two years; in 1870 went to Japan, under an appointment from the Japanese government, to organize schools on the American plan; made superintendent of schools in the province of Echizen, Japan, in 1871; professor of physics and chemistry at the Imperial University of Tokio from 1872 to 1874. Upon his return to the United States he continued his theological studies at the Union Theological Seminary in New York City; graduated in 1877, and, until 1886, was pastor of the First Reformed Dutch Church at Schenectady, New York; afterward, until 1892, of the Shaw-

mut Church in Boston; in 1893, of a Congregational Church at Ithaca, New York. Dr. Griffis published *The Mikado's Empire* (1876); *Japanese Fairy World* (1880); *Corea: The Hermit Nation* (1882); *Corea Without and Within* (1885); *Matthew Calbraith Perry* (1887); *Japan in History, Folk-Lore and Art* (1892); *Life of Townsend Harris* (1895). He was an authority on Japan and Korea.

GRIFFITHS, JOHN WILLIS, an American naval architect; born in New York City, Oct. 6, 1809. Early apprenticed to a shipwright, at nineteen years of age he laid the lines of the frigate *Macedonia*. He suggested the clipper model of the fast ships built for the China trade; and in 1853, began the construction of a steamer which, when completed, made the fastest time on record between Havana and New Orleans. In 1858 he was appointed by the government special naval constructor to build the gunboat *Pawnee*, and in 1872 built the United States ship *Enterprise*. Mr. Griffiths was the originator of the idea of lifeboat steamers, the inventor of a timber-bending machine, iron keelsons for wooden ships, bilge-keels to prevent rolling, triple screws for great speed, and improved rivets. He died in Brooklyn, New York, April 29, 1892.

GRIFFITH'S VALUATION. See HOME RULE, in these Supplements.

GRIGGSVILLE, a city of Pike County, central western Illinois, 4 miles W. of the Illinois River, and 48 miles S.E. of Quincy, on the Wabash railroad. It has manufactories of farming implements, carriages and flour, and a public library. Population 1890, 1,400; 1900, 1,404.

GRIGORIOPOL, a town of Kherson, south Russia, on the left bank of the Dniester, 82 miles N.W. of Odessa. Its 7,918 inhabitants, mostly Armenians, cultivate tobacco, wine and fruit.

GRIGSBY, HUGH BLAIR, an American writer; born in Norfolk, Virginia, Nov. 22, 1806; represented his native county in the legislature and state convention of 1829-30, and devoted himself to literature. In 1871 he became chancellor of William and Mary College. He wrote a *Discourse on the Virginia Convention of 1776*. He died April 28, 1881.

GRIJALVA RIVER. See TABASCO RIVER, in these Supplements.

GRILLO, MARQUISE DEL (ADELAIDE RISTORI), an Italian actress; born at Cividale, Friuli, in 1821. Her parents were comedians and poor, and at four she was put upon the stage. She attained local distinction at Parma and Leghorn, and in 1847 married the Marquis del Grillo, retiring from the stage. During the siege of Rome she nursed in the hospitals. She returned to the stage in 1850, and in 1855 made her Parisian *début* with great success, although Rachel was at that time the idol of Paris. Later, she went to England, Spain, Russia, and in 1866 to the United States and South America. She made a second tour to America in 1874, and a third in 1884. Among her favorite rôles were those of Medea, Phædra, Deborah, Camilla, Francesca da Rimini and Lady Macbeth. She published *Études et Souvenirs* (1887).

GRILSE. See SALMONIDÆ, Vol. XXI, p. 224.

GRIMALDI, JOSEPH, an English pantomimist;

born in London, of a family of clowns, Dec. 18, 1779; began to act in pantomime when a child; won his reputation at Covent Garden, in 1806, in *Mother Goose*; made his last appearance June 27, 1828, as Harlequin. His health failed and he died in poverty in London, May 31, 1837. The pantomime is said to have died with him. In 1838 Charles Dickens edited his memoirs, the authority for the facts of Grimaldi's life.

GRIMES, JAMES WILSON, an American statesman; born in Deering, Hillsboro County, New Hampshire, Oct. 20, 1816; graduated at Dartmouth College in 1836; settled in the practice of law at Burlington, in the "Black Hawk Purchase," now Iowa; was a delegate to the territorial legislature of Iowa in 1838 and 1843; in 1852 a member of the state legislature; governor of the state in 1854; elected to the United States Senate, as a Republican, in 1859; was a delegate to the peace convention in 1861, and in 1865 was re-elected to the Senate; resigned in 1869, on account of failing health. As governor, Grimes promoted the extension of railroads in his state and espoused the Free-Soil movement, being one of the founders of the Republican party. In the Senate he was noted for his independence, and in 1861 came into conflict with his party in opposing Lincoln's increase of the regular army, and by voting to acquit President Johnson. As a member of the Committee on Naval Affairs, he was among the first to propose the use of ironclad vessels. He died in Burlington, Iowa, Feb. 7, 1872.

GRIMKÉ, SARAH MOORE, an American abolitionist; born in Charleston, South Carolina, Nov. 6, 1792. Becoming convinced of the evils of slavery, she freed her slaves in 1836, and went to Philadelphia and began writing and lecturing against that institution. Later she became a teacher in the schools of her sister, Angelina Weld. She published *An Epistle to the Clergy of the Southern States* (1827); *Letters on the Condition of Woman and the Equality of the Sexes* (1838); and a translation of Lamartine's *Joan of Arc* (1867). She died in Hyde Park, Massachusetts, Dec. 23, 1873.

GRIMKÉ, THOMAS SMITH, an American lawyer and politician; born at Charleston, South Carolina, Sept. 26, 1786; graduated at Yale College in 1807 and studied law in Charleston; member of the state senate from 1826 to 1830. In 1828 he made a speech in favor of the general government on the tariff question. He was one of the first advocates of the temperance cause and a member of the Peace Society. He published, in 1831, *Addresses on Science, Education and Literature*. He died near Columbus, Ohio, Oct. 11, 1834.

GRIMM, CONSTANTIN V., BARON DE, a German caricaturist; born Dec. 30, 1845, at St. Petersburg. He attended school in St. Petersburg until 1860 and completed his education in Dresden and Berlin. He entered the German army in 1867 as lieutenant in the Emperor's regiment, and retained his commission until 1873, when he resigned to accept the position of assistant editor of the Berlin *Kladderadatch*. In the following year he became editor of *Puck*, a humorous paper of Leipsic. In 1884 he went to America and did work on several of the

New York papers. He died in New York, April 16, 1896.

GRIMM'S LAW. See GRIMM, Vol. XI, p. 200.

GRIMSHAW, ROBERT, an American physicist and writer; born in Philadelphia, Pennsylvania, Jan. 25, 1850; educated in Andalusia, Pennsylvania, and abroad; professor in Andalusia College; lecturer on physics in the Franklin Institute of Philadelphia. Published *The Steam-Engine Catechism* (1885-87); *The Pump Catechism* (1887); *Steam-Boiler Catechism* (1888); and was one of the editors of the *Iconographic Encyclopedia* and of the *Standard Dictionary*.

GRIMSTON, MARGARET (ROBERTSON), better known as MADGE KENDAL, an English actress; born at Great Grimsby, England, March 15, 1849. When four years old she appeared at the Marylebone Theatre, London, and in July, 1865, made her *début* as Ophelia at the Haymarket, as "Madge Robertson." On Aug. 7, 1869, she married William Hunter Grimston, who was acting under the name of "Kendal," and became known as Mrs. Kendal. With Mr. Kendal she made profitable tours to America in 1889, 1891, 1893 and 1895. Among others, she played rôles in *Diplomacy*; *The Iron-Master*; and *A Scrap of Paper*. During the last few years she appeared mostly in *The Second Mrs. Tanqueray*, which was criticised severely from a moral standpoint.

GRIMSTON, WILLIAM HUNTER, an English actor; born in London, Dec. 16, 1843. As an actor he is known as W. H. Kendal. He was intended for a mercantile career, but turned to the dramatic profession. His first appearance in London was at the Haymarket, in *A Dangerous Friend* (1866), after which time he appeared at the same place in numerous old comedies. In 1869 he married Margaret Robertson (q.v., above), after which the couple played in the same companies. One of his best rôles is that of Captain Beauclerc in Sardou's *Diplomacy*; he is also well known in the parts of Captain Absolute and Charles Surface.

GRIMTHORPE, EDMUND BECKETT DENISON, BARON, an English author; born at Carlton Hall, Nottinghamshire, May 12, 1816; educated at Trinity College, Cambridge; called to the bar in 1841; in 1887, appointed chancellor and vicar-general of York; in 1886, created peer. Author of *Lectures on Gothic Architecture* (1855); *Lectures on Church-Building* (1856); *Life of John Lonsdale* (1868); and *A Review of Hume and Huxley on Miracles* (1883).

GRINDELWALD, a town of southwestern Bern Canton, Switzerland, on the Black Lütschine; beautifully situated in the valley of that name, 7 miles S.S.E. of the Lake of Thun. The valley is 15 miles long, 2 broad, and 3,852 feet above sea level. It is surrounded by the giants of the Bernese Alps, the Eiger (13,041 feet), the Schreckhorn, the Faulhorn and the Wengern Alp. Kirschwasser is manufactured here, and the place is a favorite tourist resort. Population, 3,089.

GRINDING AND CRUSHING MACHINERY. See GOLD, Vol. X, pp. 747, 748; and MINING, Vol. XVI, pp. 463, 464.

GRINDSTONE ISLAND, an island of Albert County, southeastern New Brunswick, at the head of the Bay of Fundy. Sandstone of very fine grain is

quarried, and is shipped, mostly to the United States, for the manufacture of grindstones. The island has a lighthouse.

GRINDSTONE ISLAND, one of the most important of the Magdalen Islands, situated in the Gulf of St. Lawrence, northeast of Prince Edward Island. Area, 13,700.

GRINNELL, a city of Poweshiek County, eastern central Iowa, 47 miles E. of Des Moines. It has a foundry, flour-mills, carriages and wagons, and wood-work factories, and a machine-shop and a glove factory. It is surrounded by an agricultural and wool-growing region. Grinnell University, founded here by Josiah Bushnell Grinnell in 1854, was consolidated later with Iowa College, the site of which is in this town. Population 1900, 3,860.

GRINNELL, HENRY, an American merchant; born in New Bedford, Massachusetts, Feb. 13, 1799; graduated at the academy in his native place in 1818, and became a clerk in a commission house in New York; in 1825, partner in the firm of Grinnell, Minturn and Company; retired from business in 1852. In 1850 he fitted out two vessels and dispatched them, under the command of Lieutenant De Haven, to search for Sir John Franklin. No trace of Franklin was found, but land in lat. 80° N. was discovered, and named Grinnell Land (q.v., in these Supplements). A second expedition for the same purpose, under Dr. Kane, was fitted out in 1853, by Grinnell and George Peabody. Mr. Grinnell contributed also to the expedition of Dr. Hayes and to Hall's *Polaris* expedition in 1871. He was the first president of the American Geographical Society (1852-53). He died in New York City, June 30, 1874.—His brother, MOSES HICKS GRINNELL, was born in New Bedford, Massachusetts, March 3, 1803; in 1818, entered a New York counting-house; became a member of the firm of Fish and Grinnell in 1825; member of Congress from 1839 to 1841; collector of the port of New York in 1869-70; president of the New York Chamber of Commerce in 1843. He contributed toward Dr. Kane's Arctic expedition of 1853. He died in New York City, Nov. 24, 1877.

GRINNELL LAND, a barren, mountainous tract, between lat. 80° and 83° N., on the west side of Kennedy Channel, the northern continuation of Smith's Sound. It was discovered by the expedition under Lieutenant De Haven in 1850, and named after Henry Grinnell of New York, who had fitted out the expedition. It was explored and mapped by Dr. Hayes in 1854, and more thoroughly explored by Greely in 1882. North and south it is covered with ice-caps; between them lie valleys, free of snow in summer, which support herds of musk-oxen and the usual Arctic fauna. In the interior is Lake Hazen, 65 miles long, and two ranges of mountains, one containing a peak, Mount Arthur, 5,000 feet high.

GRIPPE, LA. See INFLUENZA, Vol. XIII, p. 73.

GRIQUALAND, WEST. See GRIQUALAND, WEST, Vol. XI, pp. 204, 205; and AFRICA, in these Supplements.

GRIQUAS, a South African race of half-castes, the offspring of Hottentot and Bushwomen by colonists of Dutch descent. They form a distinct

community in the region known as Griqualand, annexed to Cape Colony in 1871. Many of the Griquas are civilized, have adopted the Christian religion, and are successful agriculturists and cattle-breeders. See also CAPE COLONY, Vol. V, p. 47.

GRISCOM, JOHN, an American educator; born at Hancock's Bridge, Salem County, New Jersey, Sept. 27, 1774; principal of the Friends' monthly meeting school in Philadelphia for 13 years; teacher in New York for 25 years; in 1812, appointed professor of chemistry and natural history at Rutgers College; founder of the New York High School, which was under his supervision from 1825 to 1831; principal of the Friends' school at Providence, Rhode Island, from 1832 to 1834. Griscom was one of the first to teach chemistry. He published *A Year in Europe* and *Monitorial Instruction*. A *Memoir of John Griscom* was published by his son (1859). He died in Burlington, New Jersey, Feb. 26, 1852.

GRISCOM, JOHN HASKINS, an American physician and author; born in New York City, Aug. 14, 1809. He graduated in the medical department of the University of Pennsylvania in 1832; was professor of chemistry in the New York College of Pharmacy from 1836 to 1840, and in 1843 became visiting physician of the New York Hospital. Author of *Animal Mechanism and Physiology* (1839); *Uses and Abuses of Air for the Ventilation of Buildings* (1850); *Prison Hygiene* (1868); and other works. He died in New York City, April 28, 1874.

GRISEBACH, AUGUST HEINRICH RUDOLPH, a German botanist; born in Hanover in 1814. He studied botany and medicine at Göttingen and Berlin; was employed by the government of Hanover, in 1839, to study the flora of Turkey; in 1841 was appointed professor of botany at Göttingen and director of the botanical garden. He published *Reise nach Rumelien und Brussa* (2 vols., 1841); *Spicilegium Floræ Rumellicæ* (2 vols., 1843-45); and *Die Vegetationslinien des Nordwestlichen Deutschlands* (1846); etc. He died May 9, 1879.

GRISI, GIULIA, an Italian prima donna; born in Milan, in May 22, 1812; studied at Milan and Bologna; made her first appearance at Bologna, as Emma, in Rossini's *Zelmira*, in 1828; made her Parisian *début* in 1832; two years later appeared in London; in 1836 married Gérard de Melcy, and afterward Signor Mario, the tenor. In 1854 she visited America with her husband, and afterward made her home in England. From the first, Grisi won distinction and admiration by the rare melody and sweetness of her voice, a pure, brilliant, powerful soprano, and by her personal grace and beauty, her admirers lavishing upon her extravagant praise, such as "The Singing Flower of Beauty," an expression of Heine, and the enthusiastic declaration that "She possessed the lost arms of the Venus of Milo." Though at first she had to struggle against defects of voice, she finally overcame them. Her favorite rôles were *Norma*, *I Puritani* (written for her), and *Don Pasquale*. She died in Berlin, Nov. 29, 1869.

GRIS-NEZ CAPE, a headland in the French department of Pas-de-Calais, opposite Dover, and the point of land nearest to the English shore, the

distance being barely twenty miles. About equally distant from Calais, on the northeast, and Boulogne, on the south, the cape marks the dividing line between the North Sea and the English Channel. It is surmounted by a lighthouse.

GRISWOLD, FORT, a Revolutionary fortification on the heights of Groton, across the Thames from New London, Connecticut, and the scene of a ruthless massacre of American troops by Benedict Arnold, during the attempt of Clinton to divert Washington from the siege of Yorktown. The place was garrisoned with 157 men. Arnold attacked it, Sept. 6, 1781, with a force of 600, and, after losing 192 of his men, forced it to surrender. He thereupon slaughtered the entire garrison, with the exception of 26, who escaped. The site of the old fort is occupied now by an earthwork with a small battery, and not far away stands a shaft, 127 feet high, commemorating the victims of the massacre.

GRISWOLD, ALEXANDER VIETS, an American clergyman and author; born in Simsbury, Connecticut, April 22, 1766. He studied law, but, disliking the profession, prepared for the ministry, and was ordained in 1795. He had charge successively of parishes in Plymouth, Harwinton and Litchfield, Connecticut, and in 1804 accepted a call to the rectorship of St. Michael's Church, Bristol, Rhode Island. In 1811 he was consecrated as the first bishop of the eastern diocese of the Protestant Episcopal Church. He published *Discourses on the Most Important Doctrines and Duties of the Christian Religion* (1830) and *The Reformation and the Apostolic Office* (1843). The *Life of Bishop Griswold* has been written by J. S. Stone (1844). He died in Boston, Feb. 15, 1843.

GRISWOLD, JOHN A., an American manufacturer; born in Rensselaer County, New York, Nov. 11, 1818; went to Troy and became interested in the Rensselaer Iron Company, of which he was later a partner; mayor of Troy in 1850; elected to Congress in 1862, and twice re-elected; trustee of the Rensselaer Polytechnic Institute from 1860 to 1872. During the Civil War he aided in raising three regiments of infantry and the "Griswold Light Cavalry" of the Twenty-first New York. He was one of the contractors to build Ericsson's *Monitor*. As a member of the House Committee on Naval Affairs, he urged building other monitors by the government. He died in Troy, New York, Oct. 31, 1872.

GRISWOLD, RUFUS WILMOT, an American author; born at Benson, Vermont, Feb. 15, 1815. In early life he traveled in the United States and central and southern Europe; was apprenticed to a publisher, but, tiring of the business, studied theology and became a Baptist minister. Leaving the ministry for journalism, he edited *Graham's Magazine*, in Philadelphia, from 1841 to 1843; in 1852 became editor of the *International Magazine*. His works include *Poets and Poetry of America* (1842); *Poets and Poetry of England in the Nineteenth Century* (1845); *Washington and the Generals of the Revolution*, in connection with other writers (1847); *Female Poets of America* (1848); *Sacred Poets of England and America* (1849); and a number of other works. He also compiled *Curiosities of American Literature*; ed-

ited the first American edition of Milton's prose works, and was one of the editors of the works of Edgar A. Poe, writing the introductory sketch which was criticised so severely. He died in New York City, Aug. 27, 1857.

GRÖBER, GUSTAV, a German philologist; born in Leipsic, May 4, 1844; private instructor at Zurich in 1869; professor of Romance philology at Breslau in 1874; in 1882 professor at Strasburg University. In 1876 he founded and edited the *Magazine of Romance Philology*, and was editor of the *Outline of Romance Philology* (1888).

GROLIER CLUB, a New York club for bibliophiles, organized in 1884, and consisting of 250 members. It possesses a handsome clubhouse at 29 East Twenty-second Street, and a fine library of rare books in valuable bindings.

GROLIER DE SERVIÈRES, JEAN, a French bibliophile; born at Lyons in 1479; died in Paris, 1565. He was attached to the court of Francis I; went to Italy as intendant-general of the army, and French ambassador to Rome. He returned to Paris, became the treasurer of Francis I and turned his attention to collecting books and medals. At the time of his death his collection of the former numbered three thousand, many of which were printed or bound especially for him. The library was broken up and sold in 1675, and only about three hundred and fifty are now extant; these sell for from one hundred and twenty dollars to two hundred and forty dollars apiece, and are much sought by book-collectors. His entire collection of medals was purchased by Louis XIV. See BOOKBINDING, Vol. IV, p. 41.

GROOTE EYLANDT (Dutch, "Great Island"), an uninhabited island on the west side of the Gulf of Carpentaria, in North Australia. It is surrounded by reefs, and its interior is hilly. In extreme length and breadth it measures about 40 miles each way.

GROSS, SAMUEL DAVID, an American professor of surgery; born near Easton, Pennsylvania, July 8, 1805. He graduated at Jefferson Medical College in 1828; in 1835 became professor of pathological anatomy in the Cincinnati Medical College, Ohio; in 1840 professor of surgery in the University of Louisville, Kentucky; and in 1850 was chosen Dr. Mott's successor in the University of New York. Six years later he became professor of surgery in Jefferson Medical College, Philadelphia, which position he held until within two years of his death. He was president of the American Medical Association in 1867, and of the International Medical Congress in Philadelphia in 1876. He published *A System of Surgery* and *Pathological Anatomy*. He died in Philadelphia, May 6, 1884.

SAMUEL D. GROSS.

GROSSE-ISLE. See QUEBEC, Vol. XX, p. 167.

GROSSULARITE. See GARNET, Vol. X, p. 82.
GROSVENTRE INDIANS. See INDIANS, AMERICAN, Vol. XII, p. 832.

GROTON, a village of New London County, southeastern Connecticut, on the Thames River, opposite New London, on Long Island Sound, and on the New York, New Haven and Hartford railroad. Fort Griswold is located here, on the same spot as old Fort Griswold. It is a fishing resort, and is the residence of numerous New London merchants. It has cotton-mills, manufactories of Britannia-ware and carriages, and two granite quarries. Population 1890, 5,539; 1900, 5,962.

GROTON, a village of Tompkins County, southwestern central New York, on the Lehigh Valley railroad, 25 miles S. of Auburn. It is in a farming and dairying district, has manufactories of iron bridges, carriages, farming implements and type-writing machines, and a large cooerage. Population 1890, 1,280. 1900, 1,344.

GROTTA DEL CANE. See AGNANO, LAGO D', Vol. I, p. 283.

GROUCHY, EMMANUEL, a French general; born in Paris, Oct. 23, 1766. He entered the army when fourteen; at the outbreak of the Revolution was colonel of cavalry; fought in the suppression of the revolt in La Vendée, and in 1798, under Moreau, in Italy; taken prisoner and exchanged in 1799; fought at Hohenlinden, Eylau, Friedland and Wagram, and commanded the body-guard of Napoleon in the retreat from Moscow. He was banished in 1814, but returned in 1815 and joined Napoleon upon his return from Elba. Grouchy has been severely criticised for his action at the time of the battle of Waterloo, and charged with deserting Napoleon. The usual explanation of his conduct is that he adhered too literally to Napoleon's orders. On June 16, 1815, Napoleon attacked the Prussians at Ligny, defeated them and forced them to retreat. Grouchy was now sent with 33,000 men to follow them, moving, according to his orders, toward Namur. Blücher advanced his main force toward Wavre, and finally was able to join Wellington, leaving Grouchy to fight a Prussian corps under Thielemann. When the cannon at Waterloo was heard, Grouchy's subordinates begged him to move in that direction, but he refused to disobey his orders. When other commands came, it was too late. After the battle he was banished, came to America, and lived in Philadelphia for six years, until, in 1821, he was allowed to return by royal ordinance. In 1832 he was created peer and allowed the title of marshal. He lived in France until his death, which occurred at St. Étienne, May 29, 1847.

GROUND-DOVE, a popular name for those pigeons or doves which seldom fly, but spend most of the time upon the ground. They are usually rapid runners. Several birds of the genus *Chamæpelia*, found in the United States, are given the name. The Australian bronze-wing is a ground-dove.

GROUND-FINCH. See CHEWINK, in these Supplements.

GROUND-HOG. See **WOODCHUCK**, in these Supplements.

GROUND-IVY (*Nepeta Glechoma*), a plant of the family *Labiata*, a native of Britain and other parts of Europe, and naturalized in America. It has a creeping stem, kidney-shaped crenate leaves and axillary blue flowers. A tea prepared from the leaves is in great repute among the poor in many places, and the plant is supposed to be stimulant, aromatic and of use in pectoral complaints. The leaves were used in England formerly for clarifying and flavoring ale. It is also known in the United States as gill-over-the-ground, and is one of the earliest bloomers in waste or cultivated shaded grounds. *N. Cataria*, of the same genus, is the well-known catnip.

GROUNDLING (*Cobitis taenia*), a small cyprinoid fish, allied to the loach, but differentiated by the presence of an erectile, divided spine situated under the eye, and by its more compressed form. It is rarely found, frequenting the muddy bottoms of rivers in Britain, and the genus is limited to a few species.

GROUND-PARRAKEET, a small Australian parrot of the genus *Pezoporus*, to which the popular name *parrakeet* is given because of the long, wedge-shape tail. The bird spends most of the time on the ground.

GROUND-PINE OR CLUB-MOSS. See **LYCOPodium**, Vol. XV, pp. 94, 95.

GROUND-RENT. See **RENT**, Vol. XX, p. 403.

GROUND-SQUIRREL, the popular name of a burrowing rodent of the genus *Tamias*. It is also known as "chipmunk." The American species are identical with those of the Old World. The fur is yellow, with dark, longitudinal stripes. In cultivated regions they are great pests. The North American species of *Spermophilus*, which resemble *Tamias* in appearance and habits, sometimes are called ground-squirrels.

GROUPEr, the common name of fishes belonging to the genus *Epinephelus*, found principally in the warmer American seas. The red-grouper (*E. morio*) of our Southern coasts is a valuable food-fish, and sometimes reaches a weight of forty pounds. The name *black-grouper* is sometimes applied to the related jew-fish (q.v., in these Supplements).

GROVE, SIR GEORGE, an English civil engineer and author; born in 1820. He was trained as an engineer, and erected, in the West Indies, the first two cast-iron lighthouses built; was employed on the Chester General Station and the Britannia Tubular Bridge; from 1850 to 1852 was secretary of the Society of Arts; secretary of the Crystal Palace Company from 1852 to 1873; knighted in 1883, on the opening of the Royal College of Music, Kensington Gore, of which he was made director by the Prince of Wales. He assisted Dean Stanley in some of his works on the Bible and the East; was one of the founders of the Palestine Exploration Fund, an editor of *Macmillan's Magazine*, a contributor to *Smith's Dictionary of the Bible*, and the editor of the *Dictionary of Music and Musicians*. He died May 28, 1900.

GROVE, SIR WILLIAM ROBERT, an eminent English jurist and man of science, was born at Swansea, South Wales, July 11, 1811, and died in London in his eighty-sixth year. He graduated from Brasenose College, Oxford, in 1830, and five years later was called to the bar at Lincoln's Inn. Ill health for a time prevented him from actively pursuing his profession; meanwhile, he turned his attention to electrical researches, and in 1839 contrived the powerful voltaic battery which bears his name. From 1840 to 1847 he was professor of experimental philosophy at the London institution, during which period he laid the foundation of the European reputation in the world of physical investigation which he subsequently acquired. Resuming his profession, he became a successful lawyer, and in 1871 was created a judge of the Common Pleas, and four years later became a judge of the High Court of Justice. He retired from the bench in 1887 after 16 years' service, was knighted and sworn a member of the Privy Council. Sir William made several important discoveries in electricity and optics, and in 1842 he delivered a remarkable lecture on *The Progress of Physical Science*. In this paper he first advanced the doctrine of the mutual convertibility of the various natural forces—heat, electricity, etc.—and of their being all modes of motion or forms of persistent force. This doctrine he developed in his now well-known work *On the Correlation of Physical Forces* (1846) and in *Voltaic Ignition* (1847). He died in London, Aug. 2, 1896.

GROVES, CHARLES EDWARD, an English chemist; born at Highgate, March 4, 1841. He studied at the College, Brixton Hill, and at the Royal College of Chemists; in 1862 appointed lecturer on practical chemistry at Guy's Hospital; in 1885 consulting chemist to the Conservators of the River Thames; in 1878 joined the staff of the *Journal of the Chemical Society*; in 1884 became editor of that paper. He has edited volumes 2 and 3 of *Miller's Chemistry* (the former with Dr. Armstrong); *Grove's and Thorp's Chemical Technology* (vol. I, 1889). He discovered the compounds tetra-bromide of carbon, Beta naphtha quinone, and the corresponding diquinone.

GROVE'S CELL. See **ELECTRICITY**, § 101, in these Supplements.

GROW, GALUSHA A., an American lawyer and statesman; born at Ashford, Windham County, Connecticut, Aug. 31, 1824; graduated at Amherst College in 1844; studied law, and was admitted to the bar in 1847; member of Congress from Pennsylvania in 1851, and represented his district for twelve successive years. First elected as a Democrat, he severed his connection with that

GALUSHA A. GROW.

party on the repeal of the Missouri Compromise in 1854. In 1861-63 he was Speaker of the House. He was delegate to the National Republican conventions of 1864 and 1868, and elected Congressman-at-Large from Pennsylvania, in February, 1894.

GROWLER OR GRUNT, a popular name applied to several fishes, which make a peculiar noise when drawn out of the water. The name is usually given to species of *Hæmulon*. These are excellent food-fishes, found in American waters. An allied genus, *Orthopristis*, found along the southern American coast, sometimes is called by above names.

GROWTH, ANIMAL. See NUTRITION, Vol. XVII, pp. 686, 687. For vegetable growth, see PHYSIOLOGY, Vol. XIX, pp. 57-60.

GRUB, the name properly applied to the worm-like larvæ of insects of the coleopterous or beetle order, loosely given to the larvæ of other insects. Thus the disease affecting sheep called "grubs in the head" is caused by the deposit of eggs of the gad-fly (a dipterous insect) in nostrils of sheep. The eggs are hatched, and the maggots or grubs attach themselves to the mucous membrane, remaining there till the following spring.

GRUB STREET, a street in the parish of St. Giles, Cripplegate, London, now called Milton Street, and during the seventeenth and eighteenth centuries inhabited by translators, copyists and hack-writers. From this fact, the term *Grub Street* came to be used as descriptive of any inferior literary production; it was particularly popular at the time of Pope and Swift, but seems to have first been used against the writings of Fox, the martyrologist. Henry Fielding produced a *Grub Street Opera* in 1731, and about the same time the *Grub Street Journal* was published, Dr. Richard Russell and Dr. John Martyn being the principal contributors. It was against the writers of this street that Pope directed his *Dunciad*. Johnson and Goldsmith lived there.

GRUNDY, FELIX, an American statesman; born in Berkeley County, Virginia, Sept. 11, 1777. He was educated by Dr. Joseph Priestly at Bardstow Academy, studied law, and achieved a great reputation as a criminal lawyer. He was chosen a member of the Kentucky constitutional convention in 1779; was a member of the legislature from 1799 to 1806; in the latter year was appointed a judge of the supreme court of errors and appeals, and in 1807 became chief justice. This position he soon after resigned, removing to Nashville, Tennessee. He was a member of Congress from 1811 to 1814, United States Senator from 1829 to 1838, and Attorney-General in Van Buren's Cabinet. In 1840 he resigned his position in the Cabinet and was re-elected to the Senate. He died in Nashville, Tennessee, Dec. 19, 1840.

GRUNDY CENTER, a town and the capital of Grundy County, northeastern central Iowa, situated on the Burlington, Cedar Rapids and Northern railroad, 42 miles W.N.W. of Cedar Falls. It is a farming center. Thoroughbred

horses, cattle and hogs are raised. Population 1890, 1,161; 1900, 1,322.

GRUNER, WILHELM HEINRICH LUDWIG, a German writer on decorative art; born in Dresden, Feb. 24, 1881; studied engraving under Krüger; traveled and studied in France and Italy, and finally settled in England. He published *Decorations of the Garden Pavilion at Buckingham Palace* (1846); *Specimens of Ornamental Art* (1850); and *Fresco Decorations and Stuccoes in Italy* (1854). He died Feb. 27, 1882.

GRUNT. See GROWLER in these Supplements.

GRYSBOK (*Calotragus melanotis*), a small, active antelope of South Africa. It is one of the African steinboks. The animal is reddish brown in color. It is hunted for its delicious flesh.

GUADALAVIAR, a river of Valencia, Spain. See VALENCIA, Vol. XXIV, p. 33.

GUADALQUIVIR, a river of Spain. See SPAIN, Vol. XXII, p. 295.

GUADALUPE, a river of southern Texas, rising in Edwards County, and flowing E.S.E. into the San Antonio River, about 10 miles above its mouth, in San Antonio Bay. Its length is about 200 miles.

GUADALUPE HIDALGO, a town of Mexico, 2½ miles N. of the capital, on the Mexican and the Hidalgo and Northeastern railroads. It is noted for its shrine of Our Lady of Guadalupe, the special patroness of the Indians. The spot is visited by thousands of pilgrims annually. Guadalupe is also noted for the treaty signed here on Feb. 2, 1848, between the United States and Mexico, by which were ceded to the former the present states of California, Arizona, Nevada and a part of Colorado, and the territories of Utah and New Mexico. Population, 4,000.

GUADALUPE MOUNTAINS, a spur of the Rocky Mountains, in western Texas and southern New Mexico, between the Rio Grande and the Pecos. Altitude, 9,800 feet.

GUADIANA, an important river of Spain and Portugal, rising in lat. 40° N., in the province of Cuenca, central Spain, and flowing westward to Portugal, where it turns south and becomes the boundary of the countries for 40 miles, then it flows into Portugal, keeping a generally southward course, and emptying into the Atlantic Ocean, after again separating the countries of Spain and Portugal for about 30 miles. It is not of much service for commerce, as only about 10 miles are navigable. Its mouth is divided into channels, one of which is but 15 feet deep at the ebb-tide. Its length is 515 miles. Chief affluents, the Giguella and Guadaranque, and the Javalon, Zuzar and Ardila.

GUAIRA OR GUAYRA FALLS, of the Parana; the greatest cataract of Brazil. The river, from a width of 2½ miles, is contracted to 65 yards, the water plunging down an incline of 50° with a roar heard for many miles. See BRAZIL, Vol. IV, p. 222.

GUAM, GUAHAN, OR GUAJAN, the largest and most southerly island of the southern group of the Ladrones or Mariana Islands, in the North Pacific

Ocean, situated in 13° N. lat. and 144° E. long. It was settled by the Spaniards in 1667 (the chain having been discovered by Magellan in 1521). Spanish rule well-nigh depopulated the islands of their native race, the total population of the chain in 1667 (50,000 to 60,000) being reduced in 75 years to 1,816. The population of the islands in 1899 is estimated at 26,000, composed of aboriginal Chamorros, Tagal settlers from the Philippines, and Spanish half-breeds, Guam having about 10,000 of this number. Guam is of volcanic origin, and its soil, aided by the climate, is very fertile, producing areca and coconut palms, rice, maize, sugar, cotton, tobacco, indigo, breadfruit, bananas, and castor-oil. Forest growths are abundant, and the island is well watered. Agriculture is neglected, owing to the laziness of the inhabitants. Cattle, swine, and deer run wild in the island, and turtles and fish are plentiful. The climate is humid, but salubrious, and the heat is tempered by the trade winds, the yearly mean being 81° F. August and September are the warmest months, but the variations of temperature are not great. The year is divided into the wet and the dry seasons. The aboriginal language is a Micronesian dialect akin to that of the Philippine Tagals, but the prevailing tongue is Spanish. The principal town is San Ignacio de Agaña, having a population of about 5,000. Other villages are Somayi, or Suma, and Piti. In 1898, during the war with Spain, the United States cruiser *Charleston* paused in her voyage to Manila, to take possession of Guam. The incident stands out as pure comedy from the tragic background of war's stern realities. On the morning of June 20, with the three transports of the first Philippine military expedition, the *Charleston* entered Umata harbor and reconnoitred the ancient stone forts that defend the town of San Luis de Apra. No signs of life being discernible, several shells were discharged at the stone walls without inflicting any damage save scars and wakening up some of the inhabitants of the town. A small boat appeared, whose occupants—the Spanish captain of the port, the surgeon of the garrison, and an English-speaking merchant who had formerly lived in the United States—boarded the cruiser and apologized most courteously for not returning the American salute. Their excuse—that there were no cannon or powder in the town, and that they were not in the habit of receiving salutes—was accepted by Captain Glass, who, however, undecieved them by stating that the morning's cannonade had been a bombardment, not a salute; that they were prisoners of war; and that he took possession of the island in the name of the United States. The Spaniards were ignorant of the fact that war existed between the nations, and of course were also ignorant of the destruction of the Spanish fleet at Manila. The governor of the island, General Marina, was notified of his enforced retirement, and he, his officers, and 54 Spanish soldiers were disarmed and taken as prisoners to Cavité.

Guam, being 900 miles from Manila, and 2,000 miles from Honolulu, is a direct link in the chain between the United States and its newly acquired territory in the Philippine Islands. On the conclu-

sion of the treaty of peace with Spain, the island was ceded to the United States. Captain Richard P. Leary, of the United States navy, was appointed the first governor.

GUANABACOA, a town of western Cuba, and a suburb of Havana, three miles to the east, with which it has railroad connections. It is a summer resort and residence town, being nicely located on a group of hills overlooking the harbor. It is well built, has fine gardens and groves, and is cooled by sea-breezes. Its hot springs and baths are well known, and are much visited by invalids. Population 1887: of town, 11,144; of commune, 28,043.

GUANAJUATO, an interior state of Mexico, on the Mexican central plateau and its southwestern slope. The Sierra de Gorda traverses the northern part of the state, and in the center the lofty Sierra de Guanajuato rises to the height of 11,030 feet above the level of the sea. It is drained by the river Lerma and its tributaries, and the land is fertile, notably the portion lying within the plain of Bajío. In the highlands, corn, wheat, and other grains are the principal products, and in the warmer valleys sugar-cane is raised. Chili peppers form an important item in the export trade of the state. Stock-raising is an industry of no little importance, though agriculture is somewhat neglected. Cotton and woolen goods are manufactured in various places, but mining is by far the most important industry. Silver is the first mineral product in point of quantity, but gold is abundant, and copper, lead, and quicksilver are found. The average yearly coinage of silver of the Guanajuato mint is \$4,500,000. The area of the state is 11,370 square miles, and its population in 1895 was 1,062,554.

GUANAJUATO, the principal city and the capital of Guanajuato, Mexico, located about the center of the state, is curiously situated on both sides of a deep ravine, traversed by the Guanajuato river, a small tributary of the Lerma. The streets are steep and tortuous, and the houses frequently rise to a height of five stories. It is at an altitude of 6,660 feet, and nearby is the celebrated Veta Madre (Mother Vein), long reputed to be the richest silver vein in the world. There are about fifty crushing-mills and amalgamation works, manufactures of various textile fabrics, a large mint, cathedral, barracks, colleges, convents, a government palace, and an art school. The Mexican Central line runs a branch to the city, and the electric light and the telephone have been introduced. Population 1895, 59,404.

GUANCHES, aborigines. See CANARY ISLANDS, Vol. IV, p. 796.

GUANINE, a basic substance related to uric acid, having the formula $C^5H^6N^2O$. It is secreted by the pancreas of some animals, and is found in considerable quantity in guano.

GUANTANAMO BAY, a bay on the southern coast of Cuba, situated about 40 miles east of Santiago, and one of the few harbors along the desolate coast that stretches westward from Cape Maisi to Cape Cruz. From this bay, during the Spanish-American War, a telegraph cable ran to Mole St. Nicholas, Haiti; and a similar connection existed with Santiago.

As this line established communication between Santiago and the outside world, it was necessary that the cables should be cut. Accordingly, on the 6th of June, 1898, after the close of the morning's bombardment of the Santiago fortifications, the *St. Louis* and the *Adria* (the latter a vessel especially equipped for the work) grappled for the line off Santiago harbor. This was unsuccessful, as, though they succeeded in cutting a cable, it was not the one to Guantanamo. Later the *St. Louis* moved down to Guantanamo Bay, grappled the Haitian cable, and cut it. The fort at Caimanera and a Spanish gunboat exchanged some shots with the protecting ships *Marblehead* and *Yankee*.

On the 10th of June the transport *Panther* and the *Yosemite* entered the bay with 600 marines under Lieut.-Col. Robert W. Huntington. Preceded by a party of 40 marines from the *Oregon*, and the Spanish fortifications having been silenced by the fire of the gunboats and cruisers, the marines effected a landing, occupying a hastily abandoned Spanish camp on the crest of the ridge. This was the first landing in force by American troops on the shores of Cuba, and the Stars and Stripes were hoisted over the camp amid great enthusiasm. The 10th and the best part of the 11th were occupied in completing the camp (which was named Camp McCalla, after the commander of the *Marblehead*) and landing stores; but on the latter date, while many of the men were bathing in the afternoon, the Spaniards concealed in the forest opened fire. The Americans hastily took up the defensive, and the skirmishing with the unseen foe continued through the night, the Spaniards following bush-fighting tactics, learned in their long struggle with the Cubans, with which their antagonists were unfamiliar. On the 12th the warships opened on the woods with shell, and did great service; but the fighting continued irregularly till the 14th, when a determined and concerted movement drove the Spaniards off, their water-supply being cut off and their heliograph apparatus captured. Cuban soldiers from General Garcia's command greatly assisted in the repulse of the Spaniards, following the same tactics of woodcraft which the enemy had so successfully adopted.

When repulsed on the 14th the Spaniards retreated to the town of Caimanera, on the west side and at the upper end of the bay. On the 15th and 17th the warships *Texas*, *Marblehead*, *Suwanee*, and *St. Paul* effectually shelled Caimanera and drove the enemy out.

GUAPAY OR GUAPEY, a river of Bolivia, a tributary or rather the head waters of the river Mamoré. Its waters unite with the Rio Grande, and, flowing north, become the Mamoré, which flows into the Madeira river, q. v., in these Supplements. See also BOLIVIA, Vol. IV, p. 11.

GUAPORE OR ITENEZ, a navigable river of South America, rising in Brazil, and for some distance forming the boundary between Bolivia and Brazil. It unites with the Mamoré to form the Madeira.

GUARANINE, a nervous stimulant similar to if not identical with Caffeine. See COFFEE, Vol. VI.

GUARANIS OR GUARAYOS, South American Indians. See AMERICA, Vol. I, p. 702; and INDIANS, Vol. XII, p. 829.

GUARANTY. See GUARANTEE, Vol. XI, p. 236.

GUARANTY COMPANIES. See CONVEYANCING, in these Supplements.

GUARDAFUI, CAPE, the most eastern point of the African continent, and the extremity of an immense promontory (the Somali country), stretching seaward in an east-northeast direction, and washed on the northwest by the Gulf of Aden, and on the southeast by the Indian Ocean. The cape is in lat. 11° 50' N., and long. 51° 14' E.

GUARDIAN, one empowered to exercise care over the person or property of a person unable to care for himself by reason of immature age or other disability. The natural guardian of a child is his father, and upon the father's death, the mother. In the case of young children, or any one under full legal age, who have property interests, it is frequently necessary to have a guardian appointed to care for them or their property. Under such circumstances, children of sufficiently mature age to exercise judgment may generally select their guardian; otherwise a guardian is usually selected by a court of competent jurisdiction, under provisions in the state statutes investing the court with such power. The rules under which guardians shall act in caring for their wards and their property are usually established by statute in the various states. The relation of a guardian to his ward is that of a trustee, and the greatest care must be used in the exercise of his duties. The guardian will not be permitted to reap any benefit at the ward's expense.

GUARDS, THE, a name applied to the three regiments of cavalry and three regiments of infantry, constituting the British Household Brigade. The force consists of the First and Second regiments of Life Guards, and the Royal Horse Guards (cavalry), and the Grenadier, Coldstream, and Scots Fusilier Guards (infantry). See also ARMY, Vol. II, pp. 578, 580.

GUARNIERI OR GUARNERI, one of the three celebrated families of violin-makers of Cremona, Italy, who flourished in the seventeenth and eighteenth centuries. Prominent members were: ANDREA (1650-1695), a pupil of Niccolò Amati; his sons, GIUSEPPE (1690-1730) and PIETRO (1690-1725), and his nephew GIUSEPPE, commonly called Giuseppe del Gesù (1725-1745). The violins of this gifted family hold equal rank with those of the Stradivari.

GUASIMAS, LAS, a locality in Cuba (so named from the *guasima* tree, which grows plentifully there) about three miles from Siboney, between that place and Sevilla. During the Ten Years' War Gomez fought a battle here with the Spanish troops, which resulted in the slaughter of 600 of the latter with the terrible machete of the insurgents. In the Spanish-American War, on June 24, 1898, it was the scene of a conflict between Gen. Young's brigade of dismounted cavalry and a large force of Spaniards. The former consisted of two squadrons each (500 men) of the Rough Riders, the First United States Cavalry (245),

and the Tenth United States (colored) Cavalry (220),—a total of 965 men; the latter was composed of regular troops and guerrillas estimated at 2,800 men. The landing-place at Daiquiri being very much congested by the number of troops on the beach and adjacent hills, Gen. Young was directed, on the morning of the 23d of June, to move out on the left of Gen. Lawton's division, to encamp, and to cover the landing-places. In the afternoon he marched out, and on reaching Siboney (at which point Gen. Wheeler had been consulting with Gen. Castillo, the Cuban leader, and had himself made a personal reconnaissance) he learned that a large body of Spaniards was posted at an advantageous spot near Sevilla.

From Siboney there were two ways to reach this place, the summit of the pass overlooking Santiago: the one the regular road from Siboney to Santiago; the other a mere trail through the brush, which joined the main road just beyond the Spanish position, which thus commanded both ways, while it also afforded an opportunity for attack by two columns at once. This method was decided on, the Rough Riders being sent over the by-path, while the regular cavalry took the main road, with a battery of Hotchkiss guns. This division of the forces in the face of the enemy was a violation of tactical rules, but the situation was considered justification for the manœuvre. (The tactics pursued and the responsibility for the whole movement have met with much criticism, and it has been claimed that the command fell into ambush. This would seem to be disproved by official reports.) At 950 yards the Hotchkiss guns opened fire on the Spanish position, which was immediately returned by volleys from Mauser rifles. The Americans had to advance through dense undergrowth, clipping barbed-wire fences as they progressed. One man in five was armed with wire-nippers for this purpose, but the ingenious irregularity with which the wire barriers were set proved a most formidable obstacle to the advance of the troops, particularly in the face of a galling fire from an unseen foe.

Colonel Wood's Rough Riders, advancing on the left by way of the trail, turned the Spaniards' right flank as the regulars in the road turned their left, and the Spaniards began to retreat. A troop of the First Cavalry, moving on the ridge between the two columns, kept pace with both, ultimately deploying and forming a thin line of connection between them.

The Rough Riders' path brought them out at the end of a spur or ridge which was flanked and confronted by the Spanish line extended in a semilunar form on high hills. From these hills the Spaniards, familiar by long experience with the region and with methods of tropical bush warfare, poured a constant and deadly fire upon the advancing Americans; their smokeless powder betraying no sign of the location of their marksmen, and their bullets mowing down the advancing ranks with precision. The clouds of smoke from the American Springfield rifles revealed plainly the positions of the troops and made them an easy target. Reaching

an open space before the blockhouse on the heights, the Rough Riders, with an Indian yell, charged up the hill in the face of a terrific fire, Lieut.-Col. Roosevelt leading the men in person. At a critical moment, when the possibility of further advance seemed in doubt, the First and Tenth Cavalry burst up the hill, and, joining forces, drove the Spaniards in full flight toward Santiago.

The loss on the American side was 16 killed and 49 wounded. While this number was small in proportion to the results achieved, the prominence of some of the victims brought the reality of war vividly home to the American people. The skirmish also developed the reliability of the American soldier in the face of danger, the methods of Spanish warfare, the superiority of smokeless powder, and the Spanish inability to withstand close-quarters fighting; it also gave to the victorious side a strong foothold in the district that, three weeks later, was to be surrendered to their arms. The Spanish loss was uncertain; Gen. Wheeler reported that 39 dead Spaniards were found on the field, and that six wagon-loads of wounded were carried into Santiago.

Although Cuban support had been promised in this movement, no assistance was received or offered until after the position had been captured.

GUATEMALA, a republic of Central America, about 63,400 square miles in extent, with a population in 1895 of 1,800,000, about 60 per cent of whom are pure Indians, the remainder being mostly half-breeds. For general description, see Vol. VIII, pp. 238-242. The executive is vested in a president, elected once in six years. The legislative body is called the National Assembly, and consists of representatives chosen by universal suffrage for four years. The standing army numbers 3,700, the militia 67,300. The revenue of the country comes mostly from customs and taxes on spirits, tobacco, etc. About one tenth of this goes to maintain the army. The finances of the country are in a precarious condition. In 1894 the expenditures were greater than the revenue by almost \$2,000,000. In the same year the government defaulted on its bonds. The holders, mostly English, protested, threatening armed interference by the British government; but a compromise was agreed upon finally. The national indebtedness in 1895 amounted to \$12,000,000. Education in Guatemala is free and compulsory. There were 1,304 primary schools in 1894, kept up at a cost of \$1,120,000. There were about 150 miles of railroads, and 200 miles more were being constructed.

The republic was established March 21, 1847, and after forming for 26 years a part of the Confederation of Central America, began to govern itself independently in 1879. In 1895, war with Mexico on account of a boundary dispute was imminent. Both sides sent armies into the disputed territory, but the United States intervened and brought about a settlement by arbitration. The territory in question was ceded to Guatemala.

GUATIMOZIN, the last Aztec emperor; born in the city of Mexico, about 1495. He was the nephew and son-in-law of Montezuma II, and

succeeded to the throne after the death of Montezuma's brother in September, 1520. The Spaniards under Cortes laid siege to the City of Mexico, April 28, 1521, and Guatimozin offered a heroic resistance until August, when a surrender was necessitated by famine and pestilence among the Mexicans. The emperor tried to escape in a boat, but was captured on Lake Tezcuco by the Spaniards. He was well treated at first, but was murdered judicially by Cortes in 1525, upon the false accusation of having plotted against the Spanish captain's life. See CORTES, Vol. VI, pp. 441, 442.

GUA VARI OR GUAYABERO, a river of southern Colombia, South America, rising in the Cordillera Oriental, near lat. 3° N., and flowing east for 750 miles to the Orinoco, which it joins near San Fernando de Otabapo. It is navigable for nearly five hundred miles, but as yet has very little travel. Its upper course is comparatively unknown, except that it runs through dense, unfrequented forests.

GUAYAQUIL, a city of southwestern Ecuador, the principal seaport and seat of trade in the country, and the most populous city. It lies 165 miles S.S.W. of Quito, in lat. 2° 12' S., long. 79° 52' W., on the Rio Guayas, at the head of navigation for large boats. The city is well laid out, but is generally built of wood, on low ground, with a poor water-supply, and is very unhealthy. Severe epidemics of yellow fever, and a bilious fever called Guayaquil fever, are common. It is also liable to earthquakes. Work on the drainage system and improvements on the water system have been carried on for several years, but their progress is slow. A railroad line has been started from Duran (on the river, directly opposite) to Quito, and a part of it is now completed. A national university and a theological seminary are located here. The exports of Guayaquil are essentially the same as those of the country; for which, see ECUADOR, Vol. VII, p. 648. Guayaquil is the capital of the province of Guayas. In October, 1896, the city was partially destroyed by a terrible incendiary fire. Fifteen blocks, including the most important buildings, were destroyed. The loss approximated \$30,000,000. Population 1890, 44,772.

GUAYAQUIL, GULF OF, an inlet of the Pacific into the coast of Ecuador, between lat. 2° and 4° S. and long. 80° and 81° W. At its mouth it is 140 miles wide, and it narrows down as it extends inland, toward the east and north. It is divided by the island of Puná, east of which is the best anchorage. The gulf contains many islands and sand-banks, especially along the northwestern coast, which is avoided by sailors. The islands are all low, and mangrove-covered, except Puná.

GUBERNATIS, ANGELO DE, an Italian author and Orientalist; born in Turin, April 7, 1840. He was educated at the universities of Turin and Berlin; became extraordinary professor of Sanskrit in Florence (1863), and ordinary professor (1869). He began his literary career by publishing the tragedy *Pere Delle Vigne*, and subsequently

wrote other dramas. He is the founder of five Italian reviews, and is the Italian correspondent of the *Contemporary Review* of London and the *International Review* of New York. He is the author of *Zoological Mythologie* (1872); *Mythology of Plants* (1878); *Alexander Manzoni: A Biographical Study* (1879); and has edited *An International Dictionary of the Writers of the Day* (1888-91).

GUDE, HANS FREDERIK, a Norwegian landscape-painter; born at Christiania, March 13, 1825. He studied at the Academy in Berlin; in 1854 became professor at the Academy of Fine Arts at Düsseldorf; ten years later went to Carlsruhe; in 1880 was made director of the School of Painting in the Berlin Academy. He belongs to the Norwegian school of art, both by his manner and by his choice of subjects. The wild scenery of his native land and the rude life of its people engage his brush continually. Among his pictures are *The Bay of Christiania*; *High Mountains of Bergen*; and *A Scotch Landscape*.

GUEBERS OR GHEBERS, Parsees or Persian fire-worshippers. See PARSIS, Vol. XVIII, p. 325.

GUEBWILLER. See GEBWEILER, Vol. X, p. 126.

GUELPH, a post town of Ontario, Canada, capital of the county of Wellington, on the Grand Trunk and the Canadian Pacific railroads. The town has also manufactories of iron castings, machinery, sewing-machines, musical instruments, leather, agricultural implements, soap and candles, boots and shoes, and woodenware. The Ontario Agricultural College is near here. Population 1891, 10,537. See also GUELPH, Vol. XI, p. 245.

GUERBEL, COUNTESS LUCIA GENOVEVA TERESA, better known by her stage-name of GENEVIEVE WARD, an American singer and actress; born in New York City, March 27, 1833. Her early years were passed in France and Italy, where Rossini superintended her musical education. She first appeared at La Scala, Milan, and at Bergamo, and sang in principal rôles of Italian opera at the Théâtre des Italiens, Paris. Having married Count Constantine

GENEVIEVE WARD.

Guerbel, a Russian officer, before going on the operatic stage, she sang under the name of Madame Guerrabella. She gave Italian operas in London, and in 1862 appeared in New York City and Philadelphia, and afterward in Havana. Losing her voice, she prepared herself for the dramatic stage. Being unfavorably received in New York, she went to England and played in Manchester, and later in Dublin, and at the Crystal Palace, London. She went to Paris in 1877 and played at the Comédie Française. In 1878 she appeared at Booth's Theater, New York, in *Jane Shore*, *Henry VIII*, and other plays. In

April, 1879, she leased the Lyceum Theater in London, and in the following year played at the Prince of Wales Theatre. In 1881-82 she toured the chief cities of the United States and Canada, and in 1882-83 in the Australian colonies. Returning to England in 1885, after a tour around the world, she managed the Lyceum Theatre in London till 1888, when she retired from the stage. Her earlier career was recounted in a *Memoir of Ginevra Guerrabella* and her later triumphs in *Genevieve Ward*.

GUEREZA, a monkey of the genus *Colobus*, found in tropical Africa. The fur, which is mostly black, is used for ornamenting clothing. Long white hairs hang down along the sides of the animal, and form a mantel-like covering. See APES, Vol. II, p. 151.

GUERICKE, HEINRICH ERNST FERDINAND, a German theologian belonging to the Old Lutheran school; born at Wettin, Prussia, Feb. 25, 1803. He became professor at Halle in 1829, and is the author of *Handbook of Church History* (1833), translated by Professor Shedd at Andover; *Universal Christian Symbolism* (1839); *Historical and Critical Introduction to the New Testament* (1843); *Manual of the Antiquities of the Church* (1847). He died in Halle, Feb. 4, 1878.

GUERIN, ALPHONSE, a French surgeon and medical writer; born at Vannes, in the department of Morbihan, Aug. 9, 1817. He studied medicine in Paris, and obtained his doctor's diploma in 1847; was in charge of the surgical department of hospital of Lourcine in 1855, Cochin in 1862, Saint Louis in 1863, and of L'Hôtel-Dieu in 1872. He was decorated with the star of the Legion of Honor, and in 1880 was made commander. He has published *Elements de Chirurgie Opératoire* (1858); *Maladies des Organes Genitaux Externes de la Femme* (1863); and *Du Pansement Ouaté* (1884). He died Feb. 21, 1895.

GUEROULT, ADOLPHE, French journalist and political economist; born at Radepont, Jan. 29, 1810. He was educated in Paris, and joined the St. Simonians in 1830. After the dispersion of the society by the government, he traveled in Spain and Italy as correspondent of the *Journal des Débats*. He was made consul at Mazatlan in 1842; later consul at Jassy; was removed by the provisional government, and became editor of the *République* and *Le Crédit Foncier*, later of the *Presse* and *Opinion Nationale*; was elected to the Corps Législatif in 1863. He published *The Colonial Question* (1842); *Studies in Politics and Religious Philosophy* (1862); *The Policy of Prussia* (1866). He died in Paris, July 22, 1872.

GUERRERO, VICENTE, a Mexican soldier; born in Tixtla, Mexico, Aug. 10, 1783; died at Chilapa, Feb. 14, 1831. He took part in an insurrection in 1809; subsequently gained several victories over the Spaniards, and in 1818 became a leader of the patriotic troops. In 1829 he was declared President of Mexico. He was deposed soon afterwards, and fled to the south, but was captured and shot at Chilapa, Feb. 14, 1831.

GUERRILLA, properly an irregular, petty

warfare on occasions of invasion or civil war, but now commonly applied to the individuals or bands carrying on such warfare. The word first came into popular use in Spain, where it was applied to the bands of peasants and shepherds who opposed Napoleon's armies in 1808-14, and they were active partisans of the Carlist cause in the civil wars of Spain. The name was brought to Spanish America, and thence introduced into the United States. In the late Civil War there were numerous guerrilla bands in the border states. When captured in war, they usually are allowed the privileges of war, unless found guilty of violating the laws of regular warfare. In the Franco-Prussian war, however, the German army executed many *francs-tireurs*, or guerrillas, as waging war without distinctive uniforms, and, at times, after the military occupation of a district by the invading army.

GUESS, GEORGE OR SEQUOYAH, a Cherokee half-breed, inventor of the Cherokee alphabet; born about 1770. He knew no language but his own, and was only known as an ingenious silversmith previous to his invention of the alphabet. This alphabet is considered to be the most perfect one ever devised, and consists of 85 characters, each representing a single sound. It has been employed in printing. Guess went with his tribe beyond the Mississippi, and emigrated with other Indians to Mexico in 1842. His Indian name is perpetuated in the *Sequoia*, or mammoth trees of California. He died in San Fernando, northern Mexico, in August, 1843.

GUEST, EDWIN, an English author and antiquary; born at Row Heath, Worcestershire, in 1800. He entered Caius College, Cambridge, in 1820; was graduated and made fellow in 1824; master in 1852; vice-chancellor of the university in 1854. The author of *History of English Rhythms* (1838, 2d ed., rev. by Prof. Skeat, 1882), and frequent papers on *Roman and Saxon England*, contributed to the *Archæological Journal* and the *Transactions* of the Archæological Institute, after his death collected in the second volume of *Origines Celtica* (1883). He died Nov. 26, 1880.

GUEST, JOHN, an American naval officer; born in Missouri in 1821. He entered the United States navy in 1837, as midshipman; served during the Mexican War, on the *Congress*, in the Pacific; made lieutenant in 1850; second in command on the *Plymouth*, stationed at Shanghai during the Chinese rebellion in 1854; made commander in 1862; commanded the *Owasco*, in Admiral Porter's mortar fleet, in the bombardment of Forts Jackson and St. Philip, and in the siege of Vicksburg; and the *Lchigh* and *Itasca* in the two engagements at Fort Fisher. In 1873 he was made commodore, and later commandant at the Portsmouth navy-yard, a position which he held until his death, at Portsmouth, New Hampshire, Jan. 12, 1879.

GUEUX OR "THE BEGGARS," the name assumed by the confederated nobles led by Count Brederode, who opposed the introduction of the Inquisition into the Low Countries by Philip

II of Spain. See HOLLAND, Vol. XII, pp. 74, 75.

GUIANA OR GUAYANA, a region of South America, lying between the Orinoco and Amazon rivers. The name is now usually confined to the European provinces, British Guiana, Cayenne or French Guiana, and Surinam or Dutch Guiana. Guiana was the "El Dorado" of Sir Walter Raleigh, and was formerly supposed to be rich in gold. Gold is found in the interior, in the Sierra Parime, but the true wealth of Guiana lies in its fertile soil and its boundless capabilities in tropical produce. Much of the interior is still unexplored. See GUIANA, Vol. XI, pp. 249-255.

GUIANA, BRITISH, has an area of 109,000 square miles, including about 48,000 claimed by Venezuela. The population numbers about 280,800, of whom 38 per cent are mainly East Indian coolies, 35 per cent African, 2 per cent Chinese, 1 per cent European, the remainder miscellaneous. The total exports amount to \$10,000,000 annually, of which sugar comprises 63 per cent; rum, 5 per cent; molasses, 1 per cent; gold, 25 per cent. The imports amounted to \$7,906,400 in 1895, of which 9 per cent was flour; rice, 8 per cent; pork, 3 per cent; butter, 1½ per cent; lumber, 2½ per cent; oils, 2 per cent; dried fish, 3½ per cent. There are 23 miles of railroad, 450 miles of river navigation, 360 miles of telegraph lines and a telephone line in George Town and New Amsterdam of 28 miles, with 450 subscribers. The currency is principally British gold and silver coins, with some local coins. There are 79,000 acres under cultivation in British Guiana. Gold-mining commenced in 1886; the output for 1886-94 was about \$9,000,000; for the year 1894-95, nearly \$2,000,000. As to the boundary dispute see VENEZUELA and MONROE DOCTRINE, in these Supplements.

GUIANA, DUTCH, OR SURINAM, a colony of the Netherlands; area, 46,060 square miles; population, 62,469. The capital and chief city is Paramaribo, with 30,000 inhabitants. The superior administration and executive authority is in the hands of a governor, assisted by a council composed of the governor as president, the attorney-general as vice-president, and three members, all nominated by the crown. The colonial states form the representative body of the colony. Four members are chosen every year by the governor; the others by electors, in proportion of one in two hundred electors. Entire liberty is granted to the members of all religious faiths. The local revenue is derived from import, export and excise duties, taxes on houses and estates, personal imposts, and some indirect taxes. A subvention from the mother-country is necessary. For 1895 the estimated revenue was 1,726,000 guilders, and the expenditures 2,089,000 guilders. The imports in 1893 amounted to 5,730,365 guilders; the exports, 5,467,631 guilders. In 1893, 8,739,000 kilogrammes of sugar was produced; cacao, 3,398,000 kilogrammes; bananas, 591,128 bundles; rum, 521,494 liters; molasses, 1,606,528 liters. The export in gold in the same year was 1,159,675 grammes, amounting to 1,588,755 guilders.

GUIANA, FRENCH, OR CAYENNE has an area of 46,697 square miles, and a population of 26,502. The capital and chief city is Cayenne, with a population of 10,000, of which 4,000 are ticket-of-leave or confined convicts. The exports amount annually to about \$850,000; the imports, \$1,800,000. The colony is used as a penal settlement; but the climate was found to be very unhealthful, and since 1864 no convicts have been sent there. It is under a governor appointed at Paris, and sends one deputy to France to represent it. Cayenne was used as a station by the Royal Astronomical Society, as a point of observation of the total solar eclipse, Dec. 21-22, 1889.

GUIANA BARK, FRENCH, the bark of *Portlandia hexanara*, also called *Conteria speciosa*, a tree of the Cinchona group of the family *Rubiaceæ*; with opposite ovate leaves and corymbs of very large purple flowers; a native of Guiana. The bark is esteemed a very powerful febrifuge.

GUIGNET'S GREEN, a pigment used in calico-printing. See BORAX, Vol. IV, p. 51.

GUIJA, LAKE. See GUATEMALA, Vol. XI, p. 239.

GUILD, REUBEN ALDRICH, an American author; born at West Dedham, Massachusetts, May 4, 1822. He was educated at Brown University, and graduated in 1847. Became librarian for the university in 1848, and held the position until 1893. He published *History of Brown University* (1867); *Chaplain Smith and the Baptists* (1885); *Footprints of Roger Williams* (1886). He has also edited several works by Roger Williams.

GUILDHALL, London. See LONDON, Vol. XIV, p. 820.

GUILFORD, a town of New Haven County, Connecticut, on Long Island Sound, and on the New York, New Haven and Hartford railroad, 14 miles E. of New Haven. Farming, iron-working and the manufacture of woolen goods are the chief industries. Guilford was settled in 1639 by English colonists, and it has some very old buildings. Population town and borough. 1900, 2,785.

GUILFORD COLLEGE, a co-educational school, founded in 1888, at Guilford College, North Carolina. The president of the institution is Lewis L. Hobbs; the number of students, 200; instructors, 10. It has a library of 2,500 books. The total income of the college amounts to \$13,000, and it is controlled by the Friends.

GUILFORD COURTHOUSE, BATTLE OF. See UNITED STATES, Vol. XXIII, p. 743.

GUILLAUME, JEAN BAPTISTE CLAUDE EUGÈNE, a French sculptor; born at Montbard, Burgundy, Feb. 3, 1822. Educated at the College of Dijon, and studied art at the School of Fine Arts in Paris; became professor at the school in 1863, and in 1864 director; was sent to Rome as head of the French Art School in 1891. Among his works are *The Tomb of the Gracchi*; a *Statue of Napoleon*; *Anacreon's Guests*, a bas-relief; the *Monument of Colbert* at Rheims.

GUILMANT, FÉLIX ALEXANDRE, a noted French organist and composer; born at Boulogne, March 12, 1837. He began to study music at an

early age, under his father, who was organist of St. Joseph's, at Boulogne, and when 16 years old took his father's place. In 1871 he became organist of the Church of the Trinity, in Paris. In 1893 Guilment made a professional tour through the United States. He has composed *The Practical Organist* (47 pieces, for the organ); *O Salutaris*, for bass, baritone and organ; *Quam Dilecta*, a psalm; *Balthazar*, a lyric cantata; the *Crusaders at Jerusalem*, a piece for four voices.

GUINEA, FRENCH. See AFRICA, in these Supplements.

GUINEA-PIG. See CAVY, Vol. V, p. 277.

GUINEA-WORM. See NEMATOIDEA, Vol. XVII, p. 325.

GUINES, a town of Cuba, 30 miles S.E. of Havana, with which it is connected by railroad. It is an important farming and grazing center, and it has a large trade. It was founded during the eighteenth century, but its population until after 1887 was less than 4,000. The building of the railroad gave its growth a great impetus, and in 1896 it had a population of over 13,000.

GUINICELLI, GUIDO, an Italian lyric poet; born in the thirteenth century, of a noble family of Bologna. Little is known of his life, the chief fact of interest being that he greatly modified the style of the Provençal troubadours, which up to this time was artificial and conventional. Becoming interested in the speculations of St. Thomas Aquinas and St. Bonaventura, he began to introduce them in his poetry, working out a new theory of love, and explaining it in philosophical terms. The new style powerfully attracted Dante, who adopted it, in part, in the *Vita Nuova* and the *Divina Commedia*. He died in 1276. See ITALY, Vol. XIII, p. 503.

GUINNESS, H. GRATTAN, an Irish home missionary; born near Dublin, Ireland, August, 1835; educated at New College, London; in 1856 ordained as evangelist; founded the East London Institute for Home and Foreign Missions, Harley House, London. He was the author of *The Approaching End of the Age* (1878); *Romanism and the Reformation* (1887); *Hymns of the Cross* (with Mrs. Guinness, 1864); *The Divine Programme of the World's History* (with Mrs. Guinness, 1888); and other works.—GUINNESS, MRS. FANNIE E., wife of H. Grattan Guinness, born April, 1831; married 1860; secretary of the first Christian Mission on the Congo and of the Livingstone Inland Mission. She has written, besides works in collaboration with her husband, *She Spoke of Him* (1872); *The Story of Our Sixth Year at the East London Institute* (1880); *Sitwani's Story* (1882); *The Wide World and Our Work* (1886). Mrs. Guinness was one of the first women preachers of the Gospel.

GUIRAUD, ERNEST, a French-American composer; born at New Orleans, Louisiana, June 23, 1830. Studied music under his father, and at 15 composed his first opera, *Le Roi David*; attended the Conservatoire in Paris, supporting himself by playing the kettle-drum in an orchestra; served in the Franco-Prussian war in 1870-71; in 1876 was chosen to a professorship in the Con-

servatoire. He composed *Sylvie*, a one-act opera brought out in Paris in 1864; *En Prison* (1869); *Le Kobold* (1870); *Gretna Green*, a ballet (1873); and two *Suites for Orchestra*. He died in Paris, May 7, 1892.

GUISCARD, ROBERT. See ROBERT GUISCARD, Vol. XX, pp. 596, 597.

GUITEAU, CHARLES JULES, assassin of President Garfield; born in Freeport, Illinois, Sept. 8, 1841; admitted to the bar, but achieved no success; published some pamphlets, setting forth his views on various moral questions, which were of the most erratic character; married, but his wife obtained a divorce from him, and he obtained a precarious living by lecturing and writing. He had been a member of the Oneida Community, but was expelled from that body. Guiteau became an office-seeker, and persistently solicited an appointment as consul from President Garfield. Enraged at being refused, he lay in wait for the President, and shot him, July 2, 1881. He was tried in Washington, District of Columbia, found guilty of murder, and executed, June 30, 1882.

GUITTONE, D'AREZZO, an Italian poet; born at Santa Firmina, Italy, in the first part of the thirteenth century. In early life he wrote chivalrous love-songs in imitation of the troubadours, but later joined the order called *Frati Gaudenti*, condemned all that he had hitherto praised, and began writing poems and letters, in the Latin style, on political and religious subjects. He left 35 sonnets, which were published in Florence in 1838, under the title of *Revire*. He died in 1294. See ITALY, Vol. XIII, pp. 501, 502.

GULF STREAM. See ATLANTIC OCEAN, Vol. III, pp. 18-20.

GULFWEEED, a common name for *Sargassum*, a genus of seaweeds of the family *Fucaceae*, of which immense quantities are found in all oceans, floating in huge, detached masses. The frond is long, sometimes hundreds of feet, and is furnished with distinct stalked, nerved leaves and simple axillary stalked air-bladders.

GULL, SIR WILLIAM WITHEY, an English physician; born Dec. 31, 1816, at Thorpe-le-Soken, Essex, England; graduated M.D. in 1846, at the London University; professor of physiology at the Royal Institution of Great Britain from 1847 to 1849; elected fellow of the Royal College of Physicians in 1848; for twenty years physician and lecturer at Guy's Hospital, retiring about 1867. In 1871 he was created a baronet for services rendered during the illness of the Prince of Wales, and appointed one of her Majesty's physicians extraordinary. He was the author of *Reports on Epidemic Cholera* (with Dr. W. Baly, 1854); *Gulstonian Lectures on Paralysis; Alcohol as a Medicine and as a Beverage* (1878). He died in London, Jan. 29, 1890, leaving the largest fortune ever amassed by a practicing physician.

GULLIVER, JOHN PUTNAM, an American divine and educator; born in Boston, Massachusetts, May 12, 1819. He graduated at Yale College (1840); at Andover (1845); pastor in Norwich, Connecticut (1846-65); in Chicago (1865-68)

president Knox College, Galesburg, Illinois (1868-72); pastor at Binghamton, New York (1872-78); professor at Andover Seminary (1878-94; emeritus after 1891). He was a member of the Yale College Corporation, and was influential in the establishment of the Free Academy at Norwich, Connecticut. He died at Andover, Massachusetts, Jan. 25, 1894.

GUM BENJAMIN. See BENZOIN GUM, Vol. III, p. 581.

GUM DRAGON OR DRAGON'S BLOOD. See INCENSE, Vol. XII, p. 718; and GUM, Vol. XI, p. 275.

GUM LAC. See LAC, Vol. XIV, p. 181.

GUMMING, a disease which attacks the plum, cherry, peach and other stone-fruit trees, whose presence is known by the amber-colored gum which exudes from wounds in various parts. It is claimed that the cause of the disease is a fungus named *Coryneum Beijerinckii*. The mycellum of the fungus develops a ferment which transforms the cell-walls, starch-granules and other contents of the cells into gum. The fungus cannot penetrate sound, healthy bark; there must be some wound or abrasion before it can enter the cellular tissues in which it can spread. Probably, insects are the chief agents in carrying the contagion from tree to tree. Wounds, as soon as they are observed, should be coated with a thick paste of quicklime or coal-tar. Gummed branches should be cut away without delay and burned, and the wounds dressed at once with coal-tar.

GUM-PLANT, a common name given to the species of *Grindelia*, a genus of the family *Compositae*, named in honor of Dr. Grindel, a German botanist. It inhabits the plains region of the American continent from the Mississippi River to the Pacific coast. The leaves are usually rigid, and often covered by a viscid exudation, or gum. In medicine it has gained popularity in the West as a remedy for poisoning by species of *Rhus*, and in asthma and bronchitis.

GUM RESINS. See GUM, Vol. XI, p. 276.

GUMTI, a river of the Northwest Provinces, British India, rising near long. 80° E. and flowing E. S. E., past Lucknow, into the Ganges. Length, 360 miles. It is navigable for small boats as far as Lucknow. Altitude of source, 520 feet.

GUM TREE, a name applied in the United States to various important trees. The sour-gum, black-gum, pepperidge, or tupelo (*Nyssa multiflora*), is a large tree, producing a firm timber, which is used for hat-blocks, windmill-shafts, hubs, etc. The *N. capitata* bears a sour, edible fruit. The *N. uniflora* and *aquatica* have soft, light wood, and their roots are used somewhat as substitutes for cork. The *Liquidambar Styraciflua*, the sweet-gum, is a large tree with star-like leaves. The firm and fine-grained wood is used in furniture-making. It yields a balsamic resin called American storax. *L. orientale* and *L. altingia* also yield storax, and the latter has a hard, heavy, fragrant red timber. The gum-trees of Australia are species of *Eucalyptus*, immense trees, and becoming extensively planted in swampy grounds

of the warmer parts of the United States and Europe. They grow very rapidly, and are prized for draining boggy places, in that capacity being known as fever-and-ague trees.

GUN-CONSTRUCTION. See GUNMAKING, in these Supplements.

*GUNMAKING. A full account of gunmaking in Europe from its earliest inception, including a description of the characteristic American guns that have been adopted by European nations, will be found under GUNMAKING and GUNNERY, Vol. XI, pp. 278 et seq.

IMPROVEMENTS IN MACHINE-GUNS. The principal modifications, of late years, have been in the direction of automatic working, the force of recoil or escaping gas being utilized to perform the operations of loading and firing. These systems involve either a forward motion of the barrel or a withdrawal of the supporting breech, thus introducing more or less weakness and complexity of system. The Gatling gun still remains the standard for machine-guns in our military service, and in this the only important modifications relate to the "feed," or method of supplying ammunition. The old prominent and clumsy drums have been replaced by a short and simple vertical plate with two grooves for guides, and into these the flanged heads of the cartridges are rapidly introduced directly from the pasteboard packing-boxes. A shield is proposed for the complete protection of the detachment in the field against the fire of small projectiles.

RAPID-FIRING GUNS. Modern conditions of offense and defense have rendered necessary this new class of guns, designed for the following uses: 1. In the land-service, against torpedo-launches, for the protection of mine-fields or systems of torpedoes, to impede and if possible prevent, the removal or disabling of the defensive mines. 2. In the naval service, against rapidly moving and lightly protected torpedo-boats maneuvering to attack. 3. In both services, against the secondary lightly protected batteries of modern battle-ships.

To facilitate rapid firing, these guns are mounted so as to secure the least practicable recoil, and, as a rule, are loaded by hand, with fixed metallic ammunition similar to that employed for small arms, and are provided with shoulder-rests to insure rapid and easy pointing. Triggers are provided for firing, either electrically or by percussion. If recoil is permitted to any degree, as in the larger calibers, provision is made for automatically running the guns into position after firing. Besides the saving of time and labor in loading, the metallic cases serve to protect the charge from climatic deterioration.

The requisites of the breech-mechanism are: 1. Simplicity and rapidity of action; 2. Security in locking, and safety from premature explosion of charge before the block is closed.

The limit in caliber is determined by the difficulty in keeping the recoil within the required bounds, the obstacles experienced in making metallic cases of the required size, and the fact

that the weight of each round must be such as to permit rapid and easy handling.

The caliber of six inches is at present about the maximum limit, and rapid-firing guns up to that size will doubtless soon constitute wholly the main batteries of unarmored vessels and the auxiliary batteries in battle-ships.

To obtain highest possible muzzle-velocities, the rapid-firing guns are distinguished by comparative great length of bore, extending, in extreme cases, to fifty calibers.

To insure continued and accurate fire with these guns, smokeless powder is deemed a necessity, and with this, remarkable velocities have been obtained, accompanied with permissible pressures.

IMPROVEMENTS IN REVOLVERS AND PISTOLS. One defect of the ordinary revolver has been the considerable and variable escape of gas between the cylinder and rear of barrel. This, in recent inventions abroad, has been overcome by allowing the cartridge to project beyond the front face of the cylinder. For firing, the cylinder is thrown forward so that the cartridge-case is entered in the barrel sufficiently to act as a gas-check.

Another recent invention in this class of small arms is the automatic or semi-automatic repeating magazine-pistol, the general principles of which are exemplified in the Mannlicher (model 1894). In this, the reaction due to recoil (together with the *drag* of the projectile) causes the barrel to slide relatively forward against the force of a spiral spring, the latter then returning the barrel to its place, the operations for reloading being carried out during the two movements. The cartridges are contained, one above the other, in the magazine in the upper part of the handle. These are raised by a spring, one by one, into the receiver, and held for loading in prolongation of the barrel when in its forward position. The barrel remains in the forward position during the short interval that the pressure is maintained on the trigger. As the latter is loosed, the barrel is released and returns to its firing-position, receiving into its chamber a fresh cartridge.

The lock-action differs in no way from that of the ordinary double-action revolver, the alternative being offered either of both cocking the hammer and releasing it by one long pull on the trigger, or of cocking by hand, when a light pull suffices for firing. The magazine can be replenished singly or from a "clip" containing five. A projection on the barrel serves to push the barrel forward by hand to introduce the first cartridge of a series.

It will be understood that these proposed changes introduce added complexity into weapons already sufficiently intricate, and it may well be remarked here that simplicity is the secret of success in all arms and material for the military service. A complicated mechanism may be made to work beautifully at times, but, more or less frequently, functions very poorly, or not at all, when the need for it is most pressing.

IMPROVEMENTS IN MILITARY RIFLES. During the last fifteen years radical changes have taken

place in the standard military rifle. These involve *increased rapidity of fire, marked reduction in caliber, and the use of a new propelling agent—smokeless powder.*

As to the first, the new models are classed either as *magazine* or *repeating* arms. With the former, the ordinary use of the rifle is as a *single loader*, with a reserve-supply of ammunition in the magazine for extremely rapid fire at the critical periods of a battle, or to take advantage of passing opportunities suddenly presented when the greatest possible volume of fire is desired. The number in reserve varies from five to twelve. A simple movement serves to throw on the magazine. The *repeaters* have a receptacle for a number of cartridges; but these are expended from shot to shot, and when emptied, the reservoir is quickly refilled by the use of packages contrived for convenient carrying and rapid loading. There is, in this system, therefore, no retention of a reserve for use in the crises of battle, but it permits a general increase in the rapidity of fire. By the addition of a "cut-off" the repeater becomes a magazine arm.

The comparative merits of the two systems involve questions of the weight of ammunition to be carried by the soldier, the possibility of replenishing the supply during the heat of an engagement, the condition of the troops as to fire-discipline, and the influence on the morale of always having in one system a reserve. Troops under rigid fire-discipline are expected to remain cool, husband their ammunition, and, up to a certain period at least, remain, as to firing, under the complete control of the officers. If such discipline does not exist, it is believed that less demoralization will result, with less consequent waste of ammunition, if the loading is more deliberate—shot by shot—and the morale is strengthened by the consciousness of reserve-power. Occasion having arisen for the use of the magazine, it is presumed that in the ebb and flow of battle there will not be wanting opportunities for recharging it, this being easily and quickly accomplished.

Fire-discipline is also required here, that the magazine may be reserved for those occasions when a decisive blow is to be struck or an imminent peril to be warded off.

As regards the character and position of the cartridge-reservoir, it may be,—1. A tubular magazine along the barrel, usually beneath; 2. A tubular magazine in the stock; 3. A box, with cartridges side by side, in the vicinity of the receiver, and usually beneath. This may be either detachable or fixed.

In the first and second classes the cartridges are loaded singly, and, as a rule, against the power of a spiral spring, the process being comparatively slow and difficult. The limit of military cartridges impelled satisfactorily by the spring is seven or eight, and being in close contact—end to end—there is some danger of the explosion of sensitive primers due to the intense heating and concussion of rapid firing. These accidents are

believed to be rare, but have sufficed to shake general confidence in the system. Then, again, the position of the center of gravity is changed at each shot, when the magazine is on, and this affects the *balance* of the gun and the accuracy in rapid shooting.

Weight of opinion is at present overwhelmingly in favor of the third system, the cartridges being, in general location, not far from the center of gravity. The receptacles are, as a rule, extremely simple and easily replenished.

As regards the breech-mechanism, the *bolt* system seems to be the only one to which the magazine can be successfully adapted in military arms. The sliding and hinged block systems, though superior in strength, have made way for the developed and modified bolt.

CALIBER. In the introduction of the small-caliber rifles, it is determined to sacrifice power at the longer ranges and stopping-effect for the advantage of flat trajectories, and greatly increased "dangerous space" at the shorter ranges, within which the greater portion of the ammunition is to

The reduction in caliber is limited by the following: 1. Mechanical difficulties in the manufacture of the barrel and in cleaning the grooves; 2. Increased difficulties to be overcome in the manufacture of suitable ammunition; 3. Decrease in stopping-power.

AMMUNITION. The great difficulties in the change to small caliber lie in the ammunition.

PROJECTILE. The diameter of the projectile being reduced and the length remaining practically unchanged, to insure stable and accurate flight increased velocity of rotation about the longer axis becomes necessary. Otherwise it is likely to "tumble" or rotate about the shorter axis at some point of its flight, and the accuracy be destroyed. With the increased twist to the rifling, it is found that the lead projectiles, even when hardened by admixture of tin or antimony, are liable to strip and *lead* the grooves. This is especially objectionable and troublesome in a small-caliber rifle. Hardened beyond a certain point, the bullet becomes brittle, and is liable to break up on striking. Then the cost is increased

MANNLICHER MAGAZINE RIFLE—MODEL 1888.

be expended. As the trajectory more nearly approaches the right line, the less the bullet rises above the line of sight, and the more extended are the shot-swept spaces, or "dangerous zones," within which men standing or kneeling are likely to be struck. The small-caliber projectile, being in weight less than one half the old standard, leaves the muzzle with a velocity per second greater by 700 feet or more. The trajectories, in consequence, are extremely flat, and the penetrations very great.

The admitted advantages of the smaller calibers are: 1. Ammunition of less weight, allowing an increase of one third or more in the number of rounds carried; 2. Increase in flatness of trajectory and extent of dangerous spaces; 3. Increased accuracy; 4. Greater penetration; 5. Diminished recoil.

There is a controversy as to whether or not the wounds are more humane. Experiments to determine this satisfactorily are accompanied with much difficulty, and diverse conclusions result from diverse conditions as to bullet, velocities, etc.

considerably, and it is desired, so far as possible, to retain the weight due to the great specific gravity of the lead. These difficulties have been overcome in a compound projectile, having a core of compressed and hardened lead, with a thin jacket of steel, copper, nickel, etc., or a combination of these metals. On firing, the jacket is pressed by the *lands* into the easily yielding core, and the projectile takes the shape of the bore without permitting escape of gas.

CARTRIDGE-CASE. It is necessary not to have the cartridge increased to any extent in length, as this would require an increased length and movement of the bolt, and introduce other troublesome complications; moreover, a long cartridge of small diameter is weak, and liable to injury. To avoid this, the case is bottle-shaped, with body considerably larger than that of the projectile, and tapering noticeably from shoulder to base. As the caliber is more and more reduced, the differences in diameter between case and projectile become more pronounced, and the circumstances of the explosion of charge tend to higher pressures, with greatly increased strain on

the breech. Brass is employed for case metal, being more elastic and easier of extraction than copper, and also cheaper.

To illustrate the general principles involved in the construction of modern rifles, the German Mauser-Mannlicher is represented on page 1483 in its most salient features. It is a typical repeater.

CARTRIDGE.

CARTRIDGE (SECTION).

CASE (REAR VIEW).

The cartridges are issued in packages of five, contained in a simple loading-case, *G*, of tin or thin sheet-iron stiffened by ribs; the rear interior projecting rib of the case taking in the annular groove of the cartridge-head. The case is placed in the magazine through an opening in the receiver, and pushed down until a projection in its rear face engages the catch, *C*. The elevating spring, *u*, is simple in construction, and has attached to it a *carrier-plate* to support the cartridges. This carrier-plate, when the magazine is empty, closes the well in the receiver, and enables the use of the arm as a single-loader. It cannot be used as such, however, while any cartridges remain in the magazine. The top cartridge is always in position to be pushed into the chamber by the forward motion of the bolt. If desired at any time to insert a fresh case, the one in use having been partially emptied, a slight pressure on the catch-knob, *a*, releases the case from the catch, *c*, when the elevating spring ejects both case and cartridges. So long as any cartridges remain, the case is retained in position by the pressure from the spring acting through the uppermost cartridge on the curved upper edges of the case. As the last cartridge is pushed out by the bolt, the case drops through by its own weight.

The recoil is supported by two locking-lugs on opposite sides, and near the forward end of the bolt. These engage in two recesses just in rear of the chamber. The rest of the bolt thus becomes merely a means for operating the locking-device and carrying-extractor, mainspring and firing-pin.

The shell of this bolt, in consequence, is made lighter, and this permits the advantage of a larger and more powerful mainspring. On the introduction of smokeless powder, it was found that the

bolt had been reduced too much to withstand the higher pressure then developed, and modifications were found necessary.

COCKING. The body of the bolt carries an inclined plane, or *cam*, which abuts against a piece attached to the rear end of the firing-pin. When the bolt is rotated to open the gun, this cam sets back the firing-pin and retains the spring in compression until the bolt is returned to its place, when the act of locking releases the firing-pin, now held in place, however, by the sear. This arrangement relieves the soldier's hand from the jarring action caused by having to force the bolt home against a powerful spring with the palm of the hand or muscles about the base of the thumb, an action which in rapid and prolonged fire has been found to cause serious damage to the soldier's hand, from the mass of nerves which are involved, and which become bruised and injured.

The raising of the bolt-handle, after firing, forces back the bolt slightly, and loosens the shell, usually overcoming with ease any tendency to stick in the chamber.

The barrel in the model represented is enveloped nearly to the muzzle in a casing of thin steel, strong enough to withstand the rough usage of service, and carry the sights and bayonet. The air-space between is supposed, in rapid firing, to keep the casing from becoming so overheated as to burn the hand or melt off the sights. The muzzle passes freely through the casing, so as to permit free expansion and contraction of the barrel. This arrangement has not been found to work well, and the use of a wooden guard to protect the left hand in firing is preferred.

The United States magazine-rifle, caliber 30, is a representation of the *magazine class*. Fig. 2 shows a cross-section through *receiver* and *magazine*, the latter fully charged, but *cut off*, and the bolt closed. With the magazine not in use, the

Fig. 2.

CROSS-SECTION KRAG-JØRGENSEN RIFLE.

cut-off spindle bears down upon the head of the upper cartridge, pressing it back into the magazine, and below the action of the bolt. The magazine mechanism, therefore, remains inert, and the arm operates as a single-loader. Turning down the cut-off thumb-piece rotates the spindle into its channel in the receiver, permitting the cartridges in the magazine to rise until the head of the upper one projects sufficiently into

the receiver to be struck by the head of the bolt in its forward movement.

The *carrier* is actuated by a spring, and through the *follower* pushes the cartridge to the left and up the slight incline into the magazine-channel. The magazine is refilled through the open gate, either by hand or from a charger.

The automatic rifles, working similarly to the revolver already described, are receiving some attention, but have not yet demonstrated that they possess the requisite qualities for military arms.

The following table contains data of interest regarding the arms of the principal civilized nations:

calibers is considered much in their favor, however, except for positions where guns of the highest possible power may be required. In the discussion of the principles of heavy gun-construction, and the methods as followed in the United States, the able review* of Captain Rogers Birnie, ordnance department, United States army, has been followed in so far as the limited space has permitted.

GUN-CONSTRUCTION IN THE UNITED STATES. In this country, as elsewhere, the muzzle-loading guns of iron and bronze, and the composite iron and steel guns of an intermediate period, have been supplanted by the built-up steel breech-loader.

HEAVY ORDNANCE. Within the last twenty years, *steel* as a metal for heavy ordnance has greatly improved and gained the confidence of experts to the extent that all other metals now, as a rule, are excluded from constructions in which high power is a requisite. The principles of construction are better understood, and the processes greatly improved. Some failures of heavy calibers abroad, the expense attending manufacture, and other conditions in regard to providing for them on modern battle-ships, have tended to the limit of caliber, not exceeding thirteen inches for naval use. This limit has not, however, been accepted for the land-service, where the conditions as to weight and space are not so rigidly fixed.

The greater rapidity of fire of the smaller

The excellence of the system is due to increased knowledge of the characteristics and manipulation of *steel*, maintenance of a high and uniform standard in the metal by a rigid system of inspection and test, and to the careful application, in the built-up construction, of the principles of initial tension. Steel is employed wherever strength is important, and the building-up process nearly doubles the resistance over that offered by a simple tube of the same thickness. A "built-up" gun is defined as consisting of a series of concentric simple cylinders or layers, in which the principle of initial tension is secured by the method of assembling.

A gun, considered with reference to its endurance under fire, and as an instrument of precision,

* Report of the Chief of Ordnance, United States Army, for 1893.

is required to support the strains to which it is subjected without deformation; that is, the strength should suffice to confine the strains within the *elastic limit* of the material. Otherwise weakness will be made evident by enlargement of the bore from the *tangential strain*, yielding in the direction of its length due to the *longitudinal strain*, or by bending due to strains which may result in "drooping of the muzzle." As regards the capacity of a gun to sustain a known force of discharge, therefore, the three important points to be considered separately are that within the elastic limit of the material it shall possess sufficient *tangential* and *longitudinal* resistances, and *stiffness* or resistance to bending.

The *tangential* resistance which opposes the bursting effort is relatively of greater importance, since it meets the greatest strain in the material, and incidentally determines the thickness of wall and the outline of the gun.

It is thus the principal element in economy of structure. The study of this resistance has received more attention than either of the others, and it fortunately admits of a completeness of solution in the built-up construction that fulfils every apparent requirement of a problem wherein a nice adjustment of factors is most desirable.

The *longitudinal* strain is chiefly due to the pressure on the bottom of the bore, and it is not difficult to provide for this in the usual methods of construction within dimensions required for and without sacrifice of the tangential resistance.

In respect to *stiffness*, the gun constitutes a beam supported by its trunnions at its center of gravity, approximately two fifths of the length from the breech. The forces operating to bend the chase are its own weight, but especially the bending-moment produced by the accelerated velocity of recoil, which moment increases with the angle between the axis of the gun in elevation and the direction of recoil as guided by the slides of the gun-carriage. The tendency is always to produce drooping of the muzzle, and has been observed notably in the 110-ton English guns of recent date. Although an insignificant factor in the old-style short guns, it has now, in view of the greatly increased length of guns and the present tendency to a still greater increase, become a very important matter, and deserves closer investigation than it apparently has received as yet, and possibly some exact rules to establish the requisite factor of safety in different modes of construction may be deduced or determined by experiment.

TANGENTIAL RESISTANCE. The gun being considered of homogeneous material, let θ and ρ represent the elastic limit of the metal under extension and compression, respectively; R_0 and R_1 , the interior and exterior radii of the gun; P , the resistance to bursting-effort, or the interior pressure per unit of surface that the gun will support without passing the elastic limit of the material. Understanding by a *simple* gun one composed of a single tube without initial

tension, and by a *compound* gun one composed either of a simple tube with initial tension or a built-up construction, the value of P for different cases is given by the formula:

$$\text{Simple gun. Tangential resistance. } \left. \begin{array}{l} \\ \end{array} \right\} P = \frac{3(R_1^2 - R_0^2)\theta}{4R_1^2 + 2R_0^2} \quad (1)$$

$$\text{Compound gun. } \left. \begin{array}{l} \text{Tangential resistance.} \\ \text{or when } \theta = \rho \end{array} \right\} P = \frac{3(R_1^2 - R_0^2)}{4R_1^2 + 2R_0^2} (\rho + \theta) \quad (2)$$

$$\text{Compound gun. } \left. \begin{array}{l} \\ \end{array} \right\} P = \frac{3(R_1^2 - R_0^2)\rho}{2R_0^2 + R_1^2} \quad (3)$$

$$\text{Compound gun. } \left. \begin{array}{l} \text{Radial resistance.} \\ \end{array} \right\} P = \frac{3(R_1^2 - R_0^2)\theta}{2R_1^2 + R_0^2} \quad (4)$$

These formulas embody the principle that the resistance is limited by the displacement of the metal at the surface of the bore where (within the limits of practice) the strain is greatest. The simple tube will fail by tangential extension only. The resistance of the compound tube will be proportionate to its initial compression, and failure under compression may occur either by tangential extension or radial compression, depending upon certain conditions.

If we assume the compound gun to be initially compressed to the limit, ρ , and assign a series of values to the radii, such as to represent guns with varying thicknesses of wall expressed in terms of the interior diameter or caliber ($2R_0$), the curves of resistance which may thus be plotted are as follows: The *abscissas* represent the thickness ($R - R_0$) of the wall in calibers, and the *ordinates* the multipliers of θ and ρ in the formulas.

The resistance increases with the thickness of wall, but with diminishing increments, which become relatively small after a thickness of from 1 to $1\frac{1}{4}$ calibers is reached.

The limiting values of P for an infinite thickness of wall, making $R_1 = \infty R_0$, become:

$$\text{Simple gun, } P = 0.75\theta.$$

$$\text{Compound gun. } \left\{ \begin{array}{l} \text{Tangential resistance, } P = 1.5\theta. \\ \text{Radial resistance, } P = \rho. \end{array} \right.$$

The elastic resistance of a simple gun cannot, then, exceed a pressure on the unit of surface equivalent to three fourths of the elastic limit of the metal; 84 per cent of the possible strength is attained with a thickness of 1 caliber and 91 per cent with $1\frac{1}{2}$ calibers.

The proportionately greater strength of the relatively thin tube is due to the distribution of the tangential strains throughout the thickness of the wall. In a thick, simple tube subjected to interior pressure, the circumferential tensions decrease rapidly from the bore outwards, and the outer portions render relatively little assistance.

With decrease of thickness the resistance of the outer fibers is more fully developed, and the same conditions of resistance are approached as by the application of initial tension in compound cylinders.

The two upper curves (Fig. 1,) represent the resistance of a compound gun under the conditions that the bore is initially compressed to the full elastic limit, and that $\rho = \theta$. These conditions are taken for purposes of illustration, and

because it is usual, in steel constructions, to consider $\theta = \rho$. It is not practicable to derive the benefit of full initial tension from a less thickness than 0.6473 caliber; hence these curves are broken (imaginary) within that thickness. To such failing cases the general formula (2) would be applicable in introducing determined values for ρ and θ considered as working-limits, the value of P being then equal to the product of the sum ($\rho + \theta$) into the multipliers for the curve of tangential resistance, simple gun.

Considering the full curves as shown, the tangential resistance of the compound gun is just double that of the simple gun, and the limit of elastic strength is equivalent to 1.5 times the elastic limit of the metal under extension. The curve of radial resistance lies below the other beyond the point which marks a thickness of about 0.29 caliber, and should therefore for a greater thickness of wall be taken as the true

of the bursting effort in a compound gun may, as in a simple gun, be confined to the tangential strains.

INITIAL TENSION. The principle of initial tension is embodied in the law of *tangential* strains, and the manner in which it acts to increase the resistance to interior pressure is the same in a single tube as in a built-up gun.

The difference is principally in the mode of application; being, in the one case, concerned with the cylindrical laminae of the single cylinder, and in the other, with the separate simple cylinders of the built-up construction. A maximum resistance corresponds to such an arrangement of the system that when the interior pressure, which determines this resistance, is applied, all the members will simultaneously be strained tangentially to their elastic limit, and it is the object of initial tension to secure this arrangement, as nearly as may be practicable, in the different plans of construction.

Fig. 1. Elastic resistance of guns.

curve of resistance; that is, the elastic resistance of a compound gun, theoretically, is limited to a pressure on the unit of surface equivalent to the elastic limit of the metal under compression.

In computing the shrinkages for a built-up gun, it is the general practice to consider the value obtained for the tangential rather than the radial resistance, as giving a more favorable arrangement of the system as a whole. The radial resistance can be computed finally when all other conditions are fixed, and if it is found to be less than the tangential, then it may be put down as the *elastic* resistance of the gun. In practice, however, this last operation is frequently omitted, and the tangential value alone is given. This may be defended upon the ground, already discussed, that the strength, as estimated by the formula for radial resistance, really is underrated, and hence the (greater) tangential value may be taken as more nearly the true one. In view of these considerations, general discussion

In a single tube the curve of initial tension is continuous, and the principle may be illustrated as follows:

In Fig. 2 is shown the case of a cylinder 0.6473 caliber in thickness; hence $R_1 = 2.2946R_0$, and formula (3), $P = 1.11\theta$.

Given a metal with equal elastic resistance under compression and extension ($\rho = \theta$), a cylinder of this dimension illustrates, in accordance with the law of tangential strains, the fullest extent to which the principle of initial tension can be utilized.

Its remarkable properties may be otherwise stated, that it fixes for a required resistance the minimum elastic limit of metal that can be fully utilized to procure that resistance. Again, having a metal of given strength, it fixes the maximum thickness that will fully utilize the elastic limit, or, otherwise stated, the thickness up to which the resistance of a cylinder may be made, substantially, directly proportional to its thickness, and beyond which the increase of resistance

will be disproportionate to the thickness in a rapidly diminishing ratio; hence it may be called the cylinder of maximum utility.

For example, let it be required to construct a cylinder having a bore of eight inches which will support an interior pressure of 40,950 pounds per square inch, then, from what precedes, $2R_0 = 8 \therefore R_0 = 4$, $R_1 = 2.2946 R_0 \therefore R_1 = 9.1784$; $2R_1 = 18,3568$ Also, the required elastic strength of metal will not be more than $\rho = \theta = P \div 1.11 = 45,000$

The case taken exemplifies the particular one wherein, the bore being initially compressed to the elastic limit, on the application of the interior pressure, the tangential strains increase until they are uniform throughout the thickness of the wall,

The curve of pressure descends from 49,950 at the surface of the bore to zero at the exterior surface. No other thickness of wall will fulfill these special conditions, which explains the reason for the resistance of a compound gun in Fig. 1. See p. 1487.

Observing that the curve of initial tension is convex upward, if the wall were thicker, the curve of extensions would pass the horizontal stage, and become convex downward, when, under the action of P, the limit θ was reached at the surface of the bore, whilst toward the exterior the extensions would be less than θ . The value of P would, of course, derive a certain increase from the increase of thickness. If ρ were greater than θ initially, the proportion would be restored, and for this

Axis of strains and pressures
pounds per sq. in.

Fig. 2. Initial tension in solid guns.

and at the same moment equal to the elastic limit of the metal. These conditions evidently give the maximum utilization of material, since every fiber of the metal is exerting its full elastic resistance. The curve of initial tension extends from 45,000 compression at the surface of the bore to 21,600 extension at the exterior surface, crossing the axis of radii at the neutral point, a , where $r = 1.487 \times R_0 = 5.95$ inches. The areas of compression, abc , and of extension, ade , represent the work of the two forces in equilibrium, system at rest. The horizontal line indicated by $\theta = 45,000$ represents the changed position of the curve of initial tension, or the state of extension of the wall during the application of the maximum interior pressure, and rectangle $bd fg$ is the strain-area of the system in action.

condition a cylinder of greater thickness than 0.6473 could be brought to the condition of uniform extension.

On the other hand, if the wall were thinner than 0.6473 caliber, with the full initial compression $\rho = \theta$ given, the initial extensions at the exterior would be proportionately greater than in the example taken; the curve of extensions would remain convex upward under the action of P, and the limit of resistance would be reached where the extensions at the exterior became equal to θ , whilst toward the interior they would be less than θ . But if ρ be taken less than θ initially, the proportions would be restored; and as this is an entirely supposable case, it follows that the condition of uniform extension under the action of an interior pressure can be secured in a cylinder

of less thickness than 0.6473 caliber, the values of ρ decreasing with the thickness. In any case, however, the value of P is directly proportional to the sum $\rho + \theta$, formula (2); and the series of values for P obtained in this way for varying thicknesses below 0.6473 caliber would also be substantially directly proportional to the thickness of cylinder for a constant value of θ .

The only example of solid tubes at present manufactured with initial tension for use in gun-constructon in this country are the cast-iron bodies for the steel-hooped 12-inch mortars. These bodies are cast hollow, on the Rodman plan, and initial tension is produced by cooling with water, through a core placed in the casting-mold. The actual initial tension is determined for each casting by cutting thin rings of metal from near the bore and outer surface. Diameters of the rings are measured before and after the separation, to determine the strains, whether positive or negative, by which the ring was held in restraint. Calling the original diameter D, and its measured expansion or contraction on removal d, we have

$$\frac{D}{+d} E = \rho \quad \frac{D}{-d} E = \theta$$

E being the modulus of elasticity, these express the tangential strains existing in the castings at the place from which the ring was taken. The value of ρ thus determined for the ring next the bore is used in connection with the general formula (2) in estimating the resistance of the mortar.

The observed tangential extension in the rings taken from near the exterior of these castings is less than it should be, owing to the cooling which cannot be prevented at the exterior surface, and the process produces an irregular, though beneficial state, of initial tension. To complete these rifled mortars, the cast-iron body is strengthened by shrinking on a double row of steel hoops, which extend from the breech to a distance forward of the trunnion-ring.

MODES OF CONSTRUCTION. In presence of the necessity for employing initial tension in modern high-powered steel guns, many good reasons are adduced for discarding the solid in favor of the built-up construction. The difficulties with the solid construction are almost wholly mechanical, but we are none the less far short of being in a position to overcome them; its adoption, although desirable, must wait until the larger masses of steel can be made and treated so as to insure uniformity and combined physical qualities of material equal to those secured in the smaller forgings, and further, until a measure is devised for producing a desirable state of initial tension with certainty and regularity, whilst avoiding the local and irregular strains of great intensity, which are apt to occur and make the result rather more detrimental than otherwise. On the other hand, the smaller parts used in the built-up construction do admit of excellence in the material, and the method affords the means of securing the greatest strength of structure com-

patible with the quality and weight of metal contained. Excepting for small arms and some special classes of light cannon to which the principle of the simple tube is applicable, this method is now universally employed.

Two schools are represented, which differ chiefly in the practical application of the principles involved. The *forged steel gun*, made throughout of cylinders of a determinate size, has for advocates those who will not depart from a fundamental principle, that none of the strains to which the structure is subjected shall exceed the elastic limit of the material, who also seek to reduce the numbers of parts and solidify the structure in measure as the art of steel-forging manufacture progresses, and depend likewise upon improvements made in the physical qualities of the forgings to increase the resistance and power of the gun within given limits of weight and dimensions.

It is noticeable, in the history of this type of gun, that the length of the cylinders surrounding the tube have been steadily increased from its first conception, and its legitimate finality is a gun, made, if not of one simple cylinder in each layer, at least so nearly so as to meet the requirements for longitudinal stiffness, and minimize the cost of production in pace with increased length of bore.

The *wire-wound gun* is advocated for the high elastic properties of metal attained by still further comminution of material in manufacture, and it is sought, by various combinations of such small parts, to utilize their intrinsic properties in resisting the strains in the gun, and thus enable the use of correspondingly high powder-pressures. When this principle is carried to its legitimate conclusion, it naturally brings about a multiplication of parts and complication of structure that enhance the difficulties, if not the cost, of manufacture.

On this ground it might not be objected to, provided there be a commensurate gain in power of gun. There is a limit, however, to the division of parts which may be made in a gun whilst preserving its integrity, and the difficulty arises in applying the small parts, with their high elastic properties, in every part of the structure. Hence we find that in most designs of wire guns this principle is sacrificed in part, and the core upon which the wire is wound, or an integral part of it, is composed of a tube forged substantially the same as is used in the forged gun. Based upon general principles, the elastic tangential strength of a wire gun so constructed cannot exceed that of the forged gun.

In effect, those designers of wire guns who adhere to the same form of tube as used in the forged gun, but aim for a higher tangential resistance, do avowedly ignore the rule which confined the initial compression of bore to the elastic limit of the material, and introduce a greater state of compression, which, according to the formulæ of construction, will cause the metal at the surface of the bore to be tangentially compressed beyond the elastic limit. What effect this may have upon

the life of the gun can be determined only by endurance-tests, which should be made with pressures corresponding to the high resistance claimed. It may be conceived, however, that such a condition would be unfavorable in metal subjected to repeated strains, and may facilitate erosion.

Another matter to be considered in connection with the question of *wire-wound* versus the *forged* cylinder construction is the erosion of bore, as limiting the useful powder-pressure. The endurance-tests of the built-up forged guns have shown that the wear and power of the gun are limited by erosion, and that the resistance of these guns is more than sufficient at present to withstand the pressures or other causes which determine this erosion. I conclude that, on the whole, there is little to be gained in attempting to make wire guns to be professedly stronger tangentially than the forged gun. And if equal strength only

nealed. The forgings are finished and assembled at the government gun factories, there being an extensive plant at Watervliet arsenal, under the army ordnance department, and a second, under the Navy Bureau at the Washington navy-yard.

The proportion of the available tangential resistance called into play varies from about seventy per cent in the sea-coast guns to ninety per cent in the field and siege guns.

The radial resistance is in all cases in excess of the actual pressures. Its value in the heavy sea-coast guns is nearly forty thousand pounds. This is considered a safe pressure for repeated firings, —one which will not cause the elastic limit of the material to be exceeded in any respect, and is from two thousand to three thousand pounds in excess of the powder-pressures. It will be remembered, of course, that these figures relate to the *elastic* strength of the guns, and not to actual rupture; they in no sense involve the work which

is aimed at, then the forged gun has the advantage of being inherently the more solid and stiffer construction.

SERVICE-GUNS OF THE UNITED STATES. The guns for both land and naval service are of the built-up, forged-steel constructions, with slotted screw breech closure. Exceptions as to mode of construction occur in the 3.6-inch and 7-inch rifled mortars of the land-service, which, by reason of the low powder-pressures employed, are composed of a single tube of forged steel, and in one pattern of the 12-inch rifled mortar (sea-coast), which comprises a cast-iron body, reinforced by two layers of forged steel hoops.

The gun-steel forgings are purchased from private manufacturers, being principally supplied from the great plants of Bethlehem and Midvale. The steel is made by the open-hearth process, and, after casting, the ingots are forged, rough-bored and turned, then oil-tempered and an-

would have to be done by the powder-pressure in stretching the very ductile metal through the range between its elastic limit and the limit of rupture.

The use of longer cylinders requires increased care and appliances for the shrinkage operations, to avoid undue longitudinal strains, arising from unequal "gripping" of the heated pieces on cooling. It is aimed, in assembling the guns, to produce progressive contact of the two surfaces by artificial means of cooling carried evenly along from end to end.

Experiment has shown the remarkable conformity of results obtained in the actual manufacture of these guns with those indicated by the formulas applied in their construction. Each gun is assembled with a determined set of shrinkage values, based upon the qualities of metal contained. The estimation of these values is facilitated in dealing with all steel guns in which a

uniform value may be taken for the modulus of elasticity of the steel throughout the structure. Taking this modulus in connection with the minimum elastic properties of the metal, it is the practice, in the United States army ordnance department, to deduce for each kind and caliber of gun a typical set of shrinkages to be used in the construction of other similar guns. The resistance computed for the type-gun will be the least of its kind, whilst the higher elastic qualities of the steel generally obtained will result in giving a greater resistance without necessitating any change of prescribed shrinkages.

The tests of the metal show that a uniform value of thirty million pounds may be taken, without sensible error, to represent the modulus of elasticity (E) of the steel throughout the series.

The average ultimate physical properties of the metal are annexed in the following table:

CANNON-FORGINGS.	SPECIMEN.		ELASTIC LIMITS.		TENSILE STRENGTH.	ELONGATION AFTER RUPTURE.	CONTRACTION OF AREA.

The formulas employed are based upon the principle that the displacement of metal fiber in the structure, due to the combined action of the stresses of tension and pressure, shall at no place exceed the elastic limit of displacement determined by free tests of the metal. The fundamental formulas are those of Lamé, modified, in their application, from the methods proposed by Major Clavarino of the Italian army.

A general statement regarding the application of the present formulas to determine the resistance and shrinkages for a forged steel built-up gun is as follows: The given quantities are the radial dimensions of the simple cylinders, the modulus of elasticity, and the elastic limits of the metals, the two former being fixed, and the latter independent constants to the extent that any values below the given limits may be substituted. The constants being given, the primary object will be to deduce such shrinkages for the assemblage of the simple cylinders as will put the structure, as a whole, in the best condition to resist the powder-pressure, or to afford a maximum resistance to pressure in the bore. To this end, and in order first to determine the pressures which it

will support, the system is supposed to be completely assembled, and the pressures determined, and thereupon the shrinkages commensurate with such pressures are deduced. It then remains only to apply these shrinkages in assembling the system, in order that the stated conditions of pressure in resistance may be realized.

Two extreme states of equilibrium, corresponding to the limits of strain in the system, must be considered, viz.: 1. The state of action, in which the resistance to pressure in the bore is determined by supposing each simple cylinder subjected to the maximum or at least the greatest useful interior pressure that it will support. This state corresponds to the moment of firing, and the reputed resistance must be fully equal to or greater than the anticipated surface-pressure. 2. The state of rest, which exists when there is no pressure in the bore. This is the normal

state of the system, and the strains are relatively small, except at the surface of the bore, where overcompression is liable to occur, and the limit of strength for the system in this regard will be determined by the consideration that the pressure acting at the first contact-surface upon the exterior of the tube shall not exceed the safe pressure for that cylinder when there is no interior pressure acting.

The sufficiency of the formulas used in these computations has been proved in a number of ways by experiment. It is difficult to state just what pressures are produced in firing, because the means of measuring them are not exact.

However, the many rounds fired from the guns do show that if the powder-pressures, as registered by the pressure-gauges, do not exceed the resistance estimated by the formulas, the guns will not be enlarged.

Much more exact verifications, by means of the measured displacements, are possible, and have been made in connection with numerous shrinkage-tests of hoops, and in building up short sections of different guns in full dimensions.

Particular reference may be made to the section

of an 8-inch gun tested in this way at the West Point foundry in 1885. The section was about eight inches in length and built up of four cylinders. The displacements of diameters and lengths caused by each shrinkage were carefully, measured and in every instance showed a close agreement with the indications of the formulas. For example, the anticipated total compression of the 8-inch bore was 0.0129 inch, and its measured compression 0.0131 inch; the anticipated extension of the exterior of the outer hoop (31.5 inches) was 0.0285 inch, and its measured extension 0.0276 inch. These culminating measurements of the series thus showed a difference of less than two per cent between the actual and anticipated results.

LONGITUDINAL RESISTANCE. The longitudinal strain in the breech of the gun on firing is assumed to be uniformly distributed over the cross-section of the jacket, or block-carrying cylinder. Two factors combine to produce this strain; one, the longitudinal pull or elongation,

Its greatest positive value corresponds to $P_1=0$; and, in general, an excess of exterior normal pressure tends to elongate the block-carrying cylinder and increase the direct thrust due to the powder-pressure.

BREECH-MECHANISM. Loading at the breech instead of the muzzle is a feature universally adopted for modern guns. The increased complexity of construction is much more than compensated for by greater facility of loading and increased rapidity of fire, together with a better utilization of the powder-charge and higher and more uniform ballistic results.

The essential features of every breech-mechanism, arranged in their order of importance, by which the various forms in use may be distinguished, comprise,—1. A removable block which shall be strong and safe in its connection with the gun when fired; 2. A means of preventing the escape of the powder-gases; and 3. A ready means of manipulating the block. It is highly

caused by the direct thrust of the pressure in the bore on head of block; and the other, the displacement in longitudinal direction, caused by the pressures which act normally upon the interior and exterior of the jacket. The latter may be either an elongation tending to increase the strain due to the direct thrust, or a contraction tending to diminish it, depending upon the relative intensities of the normal pressures. Employing the common notation to distinguish pressures and radii, the stresses per square inch on cross-section of jacket caused by the two sources of strain indicated are expressed as follows:

$$\text{Direct thrust, } \frac{P_0 R_0^2}{R_2^2 - R_1^2}$$

$$\text{Normal pressures, } \frac{-P_1 R_1^2 + P_2 R_2^2}{3(R_2^2 - R_1^2)}$$

The first expresses the aggregate pressure on head of block, divided by an area of cross-section of jacket. The second expresses a longitudinal stress, which will be positive or negative according as $P_1 R_1^2 < \text{or} > P_2 R_2^2$.

important, also, that it should be arranged to prevent premature discharge. The chief distinction, and that which fixes the generic name of the system, lies in the form of the block and the mode of its connection with the gun in resisting the shock of discharge. Thus all the breech-mechanism of the heavier guns in use are classified under two general systems—the screw and the sliding-wedge. Both of them have been previously described. The screw system is adopted in the United States for all cannon, except those in which metallic cases are to be employed.

The De Bange gas-check has been adopted as the standard, although the Freyre check has been experimented with, and used with most excellent satisfaction.

The latter is simple in construction, and takes up considerable less powder-space; on the other hand, the De Bange check is less likely to be damaged, and to that extent is preferable. The parts of both are replaced easily when injured. In the De Bange (Fig. 5) the head of the spindle

is shaped like a mushroom, and in the rear of it, slipped over the shank of the spindle, is a ring or pad of plastic material, composed of asbestos and tallow, formed in a die under great pressure. It is covered with canvas, and protected front and rear by the gas-check cups. These are made of special steel of high elasticity, are slightly smaller than the bore, to avoid contact, and are lined with cups of sheet-copper to prevent cutting of the pad on the outer surface. A small steel splitting ring is placed over the rear cup around the spindle, to prevent squeezing the pad into this joint. A change has recently been made in the gas-checks for all heavy guns,—siege and sea-coast,—consisting in the omission of the front steel cup and the lips of the rear cup, and substituting therefor split steel rings, to which the pad is made to conform. These split rings constitute a real and marked improvement over the old form of gas-check.

They act, under all pressures, with readiness and certainty, and without sticking or causing any obstruction to the free movement of the block in opening the breech after firing. During firing, owing to its plastic nature, the pad presses out against the gas-check seat and inward against the obturator spindle-stem so as to prevent the passage of the gas.

The spindle is perforated axially for the vent, through which the charge is ignited by an obturating electric primer placed in the rear end of the spindle. The front end of the vent is bushed with copper, to be removed when worn by erosion. The nut at the rear end of the spindle serves to adjust the initial pressure of the head on the gas-check. It rests on a steel spring, which forms a yielding bearing when the gun is fired, reduces the friction between the nut and its seat when the block is rotated around the spindle in opening, and serves to take up any excess of length of the spindle due to compression of the pad. For the heavier calibers the obturator-spring is replaced by antifricition washers, alternately steel and bronze. These allow the block to rotate around the spindle in making the sixth of a turn for opening, and utilize the power of the screw on the block to start the gas-check from its seat without rotation.

C. H. CLARK.

*GUNNERY. In so far as the instruments for measuring velocities and pressures are concerned, but few important improvements have been made. In the United States, the Le Boulengé chronograph is now almost exclusively used for obtaining the muzzle-velocities of projectiles, this instrument being simple, easily worked, and quite reliable. The *crusher-gauge* has replaced the *Rodman* for measuring chamber-pressures, its advantages being that it occupies less space, is easier to manipulate, cheaper and simpler in its elements, and is easier to duplicate, while its results are quite as accurate. This instrument is the same in principle as that previously described in the article on GUNMAKING AND GUNNERY, Vol.

* Copyright, 1897, by The Werner Company.

XI, pp. 278 et seq. In construction it has been varied to suit the differing conditions in small arms and heavy guns. The copper cylinders in all cases are initially compressed with a pressure a little below that expected in the chamber. This results in giving only slight motion to the piston, the records obtained being lower and more reliable. The following record illustrates this fact:

It has been found true, generally, that the pressures increase with the velocity. In practice, some difficulty arises from variations in the lots of copper rods as obtained from manufacturers. A careful inspection and gauging is required, and it is necessary to have a reference-table of compressions made for each lot of copper cylinders when finished.

This method gives, within close approximations, the maximum chamber-pressures due to various powders; but it fails to record the comparative rates with which the maxima are reached. A recent gauge, invented abroad, claims to record on a revolving cylinder curves which give not only the maximum pressures, but also indicate the greater or less rapidity of action of the various explosives. No opportunity has as yet been offered to verify these claims in this country.

Accuracy. With the breech-loading cannon, im-

proved powder, etc., the conditions of loading will be under much better control, and in consequence but slight variations will occur in muzzle-velocities. The sights have been perfected and entire matériel improved. In field-artillery, target-firing is now conducted to assimilate as nearly as possible the conditions of the battle-field. Practice is held at varying and unknown distances, and the target may be invisible, moving rapidly or alternately appearing and disappearing.

Distances are to be hurriedly estimated or measured with the range-finders, the ranges verified, and time-fuses prepared for the most effective bursts. The projectile mainly depended upon for use against troops will be the *shrapnel*, which has been greatly improved.

Frankford Arsenal Shrapnel for 3.2-inch Breech-loading Rifle.

Fig. 1.

Fig. 1 represents the standard shrapnel used in the United States service. It has a body of steel tubing, weakened for fracture by circular and longitudinal grooves cut upon the interior. The cast-iron head and base are screwed into the body, the system being given strength sufficient to withstand the shock of discharge without deformation or rupture. It contains 162 half-inch balls of hardened lead in 8 layers, separated by cast-iron plates fitted to receive the balls. The total number of individual pieces in the shrapnel before bursting is *two hundred*. It is intended to burst the shrapnel in air, a little in front and above the animate target. This is effected by a combination time and percussion fuse, the latter intended to function upon impact in case of failure, for any reason, of the time-device.

Due to the use of smokeless powders, it will be admissible to mass the artillery more in the most effective positions. Owing to the increase of power in all the arms, artillery will open the engagement at distances from 2,700 to 5,400 yards, depending upon the various conditions, and, in general, will probably be able to take a second and decisive position at about two thousand yards. Much greater rapidity of fire will be possible at times when its effectiveness can be assured; curved fire against troops under cover will also be provided for. There seems to be, on the whole, no room for doubt that the next great war will demonstrate in a most decisive and startling way the terribly increased effectiveness, in the field, of the artillery arm.

In the sea-coast service the effective projectile against the armored portions of battle-ships will be

the hollow-forged steel shot, or shell charged with some high explosive. The hostile vessel will be *tracked* in accordance with the general methods already described. Each battery will have its position finder or relocater, and from a central point the gunner will be signaled at short intervals by means of disks the distance and azimuth of the hostile object. If the elevations are not also posted, these will be obtained from range-tables. The gunner will also be supplied with data as to the wind-components. With all these, experience on the part of the gunners is alone necessary to insure a greatly increased percentage of effective shots. It may be observed, in closing, that the almost twenty years of comparative peace in Europe and America have resulted in vast improvements in all the terrible enginery of war. The machine age in the *constructive* arts has been well paralleled in those *destructive*.

*GUNPOWDERS, IMPROVEMENTS IN. Late improvements in gunpowder have tended toward greater uniformity of product, and this is effected more especially by careful analyses of the charcoal, and efforts to regulate its proportions of C, H, and O.

Special powders have increased in number, following the principle, that to obtain best possible results, each piece should have a powder adapted to its peculiar conditions.

COCOA POWDER. This was introduced in Germany in 1882, in the *prismatic* form, as being better adapted for the heavier rifles, giving higher velocities with lower pressures and less smoke than the black variety, although requiring about one fifth more in weight for the charge. These facts are well illustrated in Fig. 1, which represents the comparative pressure-curves obtained in the English 9.2-inch (22-ton) gun, the full curve being for the *black* prismatic and the broken curve for the *brown* powder, the initial velocities being 1708 and 1798 feet per second, respectively.

The constituents of the *dry* powder are 79 parts niter, 3 sulphur, and 18 charcoal lightly burned. For the latter, slightly carbonized straw is generally used—the method of carbonizing to the

required degree being one of the well-kept secrets of the manufacturers. The lower pressures are attributed to the slower rate of burning, the action being gradual but long-sustained. The brown powder has a larger percentage of moisture, which doubtless favors reduction of pressure in the earlier stages of combustion. If subjected to high heat in storage, however, the moisture is likely to be expelled, and abnormal results follow. Brown or cocoa powder has been found to vary quite regularly with the seasons, requiring, to attain certain results, about three per cent more powder in midwinter and three less in midsummer than necessary in either spring or autumn. It is found more erosive than the black

The brown prismatic is used in the United States for all breech-loading sea-coast cannon, and is manufactured at the Dupont and Peyton factories, for the Atlantic and Pacific coasts respectively.

SMOKELESS POWDERS. The recent introduction of successful smokeless powders marks a most important era in the history of ballistic explosives. It was made possible by the advance in knowledge of the manufacture of stable high explosives, and the necessity became evident upon the introduction of rapid-firing guns and repeating-rifles. Higher velocities were demanded than the black or brown powders could give within the limits as to pressure, and to retain advantage of increased rapidity of fire it became necessary to do away with the dense smoke-volumes of the old explosive. Fortunately, increased power and smokelessness are most intimately associated. Complete absence of smoke means complete resolution into gaseous products, and hence higher power.

Earlier but unsuccessful attempts to obtain a smokeless explosive for ballistic purposes are considered under the subject of GUN COTTON, Vol. XI, pp. 277-278. The late revival dates from about 1885. Two most important steps leading up to this were the improved processes of gun-cotton manufacture, by which is given greater assurance of a stable product, and then the later introduction, in 1875, of Nobel's *blasting-gelatine*, in which was accomplished both the gelatinization of the gun-cotton and the fixing of the nitroglycerine, with modification of the properties of both.

The new smokeless powders have, it is true, met with many reverses, but the tendency toward their adoption in one form or another has proved irresistible. The principal nations are now using it almost exclusively for small arms and rapid-fire guns, and are experimenting with it for field and heavy cannon. Its complete success seems at present beyond question.

Before classifying the powders generally accepted as *smokeless*, mention should be made of certain varieties sometimes so classed, though they may perhaps better be designated as *semi-smokeless*. These include certain nitrate mixtures other than ordinary gunpowder, and picrate mixtures with minor smoke-producing ingredients.

In the former, ammonium nitrate (NH_4NO_3), is prominent, yielding products which, with the

exception of water vapor, are entirely gaseous. To obtain with it the desired ballistic results, the introduction of a certain proportion of potassium nitrate is found necessary, and the latter insures smoke from the potassium carbonate formed on explosion. The ammonium nitrate powders absorb moisture readily, and precautions have to be taken to avoid exposure. Having naturally more water than even the brown powders, these compositions, when subjected, even in air-tight cases, to heat for considerable periods, are apt to give irregular results due to expulsion of moisture from portions of the powder-masses.

As an example, the composition of the Amide powder (1885) is given as follows:

	PER CENT.
Potassium nitrate-----	46
Ammonium nitrate -----	36
Charcoal-----	18

The volume of gases produced by this powder would be very large, and its rate of burning probably slow due to the absence of sulphur. It gives thin smoke and little residue, but readily absorbs moisture.

The picrates of potassium and ammonium have been much used in explosive preparations, giving more powerful mixtures than the ordinary gunpowder. The Brugère powder consists of 54 parts of ammonium picrate and 46 of potassium nitrate. It is reported as stable, safe to manufacture and transport, but is rather expensive. It gave good results in the Chassepot rifle, yielding but little smoke and slight residue. It is practically the same in composition as the "picric" powder of Abel.

Potassium nitrate being present in all these picric powders, there must be, as already stated, smoke resulting from the combustion, though not approaching in density that from ordinary powder.

The true *smokeless powders* as now accepted can be divided into three classes:

1. Powders in which nitrocellulose is used alone or in combination with substances other than nitroglycerine. Cotton is greatly preferred for obtaining the purer cellulose, and either the *trinitro* or *dinitro* compounds are used, these being commonly referred to as the *insoluble* and *soluble* varieties, although the former is soluble in acetic ether or acetone. The action of the solvent is to convert the cellulose into a tough, horny material.

2. Powders in which a mixture of *nitro-glycerine* and *nitro-cellulose* (dinitro or trinitro) is transformed into a similar horn-like substance, either with or without the aid of a solvent.

3. Powders which contain nitro-derivatives of the aromatic hydrocarbons either by themselves or in connection with nitrocellulose; as, for instance, the mixture of the latter with nitrobenzene as a solvent.

Classes 1 and 2 are complicated by the introduction of an endless variety of modifying agents, introduced for a number of purposes, such as to increase the power, retard combustion, insure stability, give easier granulation, etc. The preparation of powders having nitrocellulose for a

base is founded upon the property which this substance possesses of becoming, when treated with a proper solvent, a gelatinous mass easily convertible into sheets, strings, or grains, which can, by a simple process of drying, be freed from the liquid solvent. The nitrocellulose does not contain sufficient O to completely oxidize the C to CO². To remedy this, and as slowing agents, oxidizing-salts are sometimes added. The pure nitrocellulose powders give high pressure as a rule, and in many cases considerable irregularity. These are also difficult to ignite, and are considered more subject to decomposition in consequence of the varying degrees of nitration attained in the cellulose.

The pure tri-nitrocellulose is stable, but commercially it is always found with varying proportions of the less nitrated and less stable varieties. The pure nitro-cellulose powders are also more expensive.

In the second class, the nitroglycerine supplies to the nitrocellulose the deficient oxygen, the heat of combustion is extremely high, and the ballistic results remarkable. The permissible range of proportions is a wide one, but as the proportion of nitroglycerine becomes high, the grains becomes soft, there is a possibility of exudation when subject to heat or pressure, and the erosion of the bore becomes more pronounced. When the proportion of nitroglycerine is low, the product becomes tougher, more difficult to granulate, the pressures are higher, and the presence of a slowing agent more imperative. The following are prominent examples:

Ballistite.

40 parts dinitro or *collodion* cotton.

60 parts nitroglycerine.

With the addition of about 1 per cent of aniline.

Cordite.

37 parts gun cotton, }
58 parts nitroglycerine, } dissolved by 19.2 parts
5 parts vaseline, } of acetone.

The manufacture of a smokeless powder to meet the high requirements of modern times is accompanied with many difficulties. This will be seen by a consideration of the essential requisites, as follows:

1. *Approximate smokelessness of the products of combustion.* Perfect absence of smoke is hardly possible to be attained, but a sufficient measure of success has been met with in most varieties to satisfy this condition. The powder is mostly converted into permanent gases and steam. There results usually, on firing, a "very thin bluish smoke," "filmy vapor," or "dusty puff," all of which quickly dissipate.

2. *Give high and uniform velocities with safe and regular pressures.* Comparative tests show that the smokeless powders possess far better ballistic qualities than the ordinary powder, much smaller charges being required to produce equal velocities, while with equal chamber-pressures the velocities are much higher. The action is gradual, but sustained, giving lower chamber-pressures,

but higher pressures along the chase. The rapidity of combustion in many cases is checked by a slowing agent, such as mineral jelly or castor-oil. Camphor has been used; but, being volatile, it is not looked upon favorably for the purpose. Excessive pressures with certain brands have certainly been obtained, while others are known to be extremely uniform. It cannot be stated that *detonation* has occurred in any case during all the tests of its many varieties. This fact is strange when it is considered that in many varieties the principal ingredients are high explosives, each capable, when separate, of the most destructive detonation.

3. *Possess chemical and physical stability under varying conditions of moisture, temperature and age.* Many powders have failed to comply with these conditions, becoming unstable with varying temperatures and during prolonged storage. The ingredients in some cases are subject to chemical instability, and constant vigilance is necessary to guard against the introduction of any not above suspicion. The powders are subjected to severe stability-tests, as a rule, before acceptance, but this does not in all cases insure against spontaneous decomposition at some period after. The result of slow decomposition being usually nitrous fumes, it is a common precaution to introduce into the composition a small percentage of urea crystals. This combines directly at all temperatures with the smallest traces of nitrous acid the instant it is evolved, resulting in the formation of water and carbonic acid, and the decomposition thus is checked. The urea seems an ideal agent for this purpose. In powders with a very large percentage of nitroglycerine in composition, there is a tendency to exude when acted upon by heat or pressure. Such large percentages for this and other reasons are no longer considered as permissible.

Many varieties of smokeless powder have a hard, firm grain, with almost entire absence of dust. A soft and friable grain is likely to give at times abnormal pressures, and is a serious defect. Too great softness of grains also favors a tendency to agglomerate or "cake" in storage. As to effects of moisture, there is a great diversity. Some grains may be soaked in water for long periods and afterward dried, without the slightest change in explosive force. On the other hand, some varieties contain salts which are affected greatly by exposure to moisture.

4. *It must not cause excessive fouling, either from powder residue or metallic from the projectile or its envelope.* The small-caliber arms with rapid twist of rifling are especially difficult to keep clean, and any hard, dry residue gives annoyance. Most smokeless powders do not leave an appreciable residue, and the bore remains quite clean after firing; but traces of nitric compounds are apt to remain, which should in all cases be removed by careful cleaning. Otherwise the residue combined with the moisture of the air will attack the surface of the bore.

5. *It must not be sensitive to explosion from fric-*

tion or shock, nor yet very difficult to ignite when acted upon by the primer. A prominent characteristic of the smokeless powders is the remarkable insensitiveness to explosion. Ignited in the open air, combustion takes place often with much heat and brilliant flame, but without the characteristics of an explosion. This is found true for large as well as small quantities. Confinement is necessary to develop the explosive force.

It proves troublesome with many varieties, to provide a primer of sufficient strength to explode without hang or miss fires, especially with low density of loading. Strong primers generally are used, with special composition which insures the development of considerable heat. The poor combustibility has also the effect of preventing the entire charge from burning. After firing, it is often found that quite a number of grains not entirely consumed remain in the bore and cartridge case.

6. *The manufacture should not be attended with great difficulty or excessive danger.* While the difficulties met with have been numerous, the dangers have been those customary in the manufacture of the high explosives.

7. *The products of explosion must be comparatively free from noxious or irrespirable gases, and also from those which would rapidly corrode or erode the gun.* As to the former, this must be taken within limits. Cundill states that "there is no explosive within my knowledge, in practical use which, when exploded in a confined space, does not give off noxious or deleterious gases."

It has been found that in powders containing high percentages of nitroglycerine, there is, especially in rapid firing, a considerable erosion of the metal of the bore, more marked about the seat of the projectile, and this action increases very rapidly after a certain stage, soon rendering the arm unserviceable. With cordite, in the English small arms, a limit of life for the piece is reported as having been fixed at three thousand rounds. Tests in this country with similar powders confirm these results. On the other hand, it is claimed for a certain small-arm nitrocellulose powder (Rottweil), which contains no nitroglycerine, that satisfactory accuracy has been obtained after firing over twelve thousand rounds. In this country an instance is on record at the Frankford arsenal cartridge factory of favorable results from a small arm after more than thirteen thousand rounds fired with Peyton powder, which contains a considerable percentage of nitroglycerine. The result has been, in most cases, to limit the percentage of nitroglycerine. The latter favors low pressures and easy ignition, and a certain percentage, in consequence, is considered desirable, especially in the larger guns. Other things being equal, for small-arms, that powder is preferred which heats the barrel less in rapid firing.

8. *There must be entire freedom from chemical action in connection with the metallic cartridge-case, used with small arms and rapid-firing guns.*

GENERAL CONSIDERATIONS. In the manufacture of smokeless powders it has been found dif-

ficult to insure uniformity of product from lot to lot, the varying conditions of ingredients and manufacture being difficult to control.

A special smokeless powder is required for each variation in caliber, while a certain granulation of black powder is often used successfully in a variety of calibers. As an example, in tests made, using the same smokeless powder, for equal velocities in two rifles, varying in caliber from 0".314 to 0".299, the pressures were found to rise from 34,135 pounds per square inch to 45,513 pounds.

For small arms the powders are at present made either in the shape of grains, flakes, cubes or cords.

For cannon are used large square flakes, cubes, or perforated cylinders, the latter being for the larger calibers in some cases the full length of the chamber and of considerable diameter.

Space is too limited to consider the tactical results of the introduction of smokeless powders. To see is considered of the first importance in battle, and after that, *not to be seen*. It is assumed now that the army using smokeless powder will see better, aim better, carry out its fire-discipline more perfectly, and produce a far greater fire-effect.

It will also be less subject to observation by the enemy.

GUNTER, ARCHIBALD CLAVERING, an American novelist; born in Liverpool, England, Oct. 25, 1847; went to California with his parents when five years old; was educated in England, and graduated at the University College of San Francisco; mining-engineer from 1867 to 1874; stock-broker in San Francisco from 1874 to 1877. In the mean while he had produced several plays; among them, *Cuba* and *Our Reporter*, which were brought out in San Francisco. In 1877 he went to New York, and there wrote the play, *Two Nights in Rome*, produced in New York at the Union Square Theater, August, 1889. His first novel, *Mr. Barnes of New York*, was published in 1887, and had a great success, being translated into several languages. Since then he has written *Mr. Potter of Texas; That Frenchman; Miss No-*

body of Nowhere; Miss Dividends; and The Ladies' Juggernaut. He publishes his own works.

GÜNTHER, ALBERT CHARLES LEWIS GOTTHILF, a British zoölogist; born at Esslingen, Würtemberg, Oct. 3, 1830; educated at the universities of Tübingen, Berlin and Bonn; entered the service of the trustees of the British Museum in 1858, and was appointed keeper of the department of zoölogy in 1875. In 1864 he founded the *Record of Zoölogical Literature*, and edited the magazine from then until 1870; also co-editor of the *Annals and Magazine of Natural History*. He has published *The Fishes of the Neckar* (1853); *The Reptiles of British India* (1864); *The Fishes of the South Seas* (1873-78); *Reports on the Shore Fishes, Deep Sea Fishes and Pelagic Fishes in the Voyage of H. M. S. Challenger* (1887-88). He contributed to the ENCYCLOPÆDIA BRITANNICA a number of articles, among them ICHTHYOLOGY and REPTILES.

GURNEY, SIR GOLDSWORTHY, a British chemist and inventor; born at Treator, Cornwall, England, Feb. 14, 1793. He was educated for the medical profession, but became interested in the study of practical chemistry. He claimed the invention of the oxyhydrogen blowpipe, of the lime, magnesium, bude and oil-vapor lights, of the tubular boiler and of the high-pressure steam-jet. His claims of originality, or at least of priority, in all of these inventions, except the last-named, have been contested. He was the first, however, to make practical application of the high-pressure steam-jet. He applied the device to the locomotive in 1830, with the result of raising its speed from 12 to 30 miles per hour; later used it to ventilate mines (although to-day ventilation by use of fans is more common) and to extinguish fires in them. In 1849, a fire that had been burning for twenty years in the Clackmannan mine was extinguished by means of it. He also applied it to the exhaustion and consumption of poisonous gases in the London sewers. In 1852 he was given charge of the lighting and ventilation of the Houses of Parliament, and was knighted in 1863. He died at Reeds, Cornwall, Feb. 28, 1875.

GURNEY, JOSEPH JOHN, a British philanthropist; born Aug. 2, 1788, near Norwich, England, of a Quaker family. He was educated at Oxford, though not formally a student at the university; in 1818 was ordained preacher in the Society of Friends. He was wealthy, and used his money to promote philanthropic movements, and was particularly interested in the prison reforms carried on by his sister, Elizabeth Fry (q.v., Vol. IX, pp. 804, 805). He was prominent in a movement to give a more evangelical character to the doctrines of the Friends (see QUAKERS, Vol. XX, p. 149). He published *Notes on Prison Discipline* (1819); *Observations on the Religious Peculiarities of the Society of Friends* (1824); *Portable Evidence of Christianity* (1832); *Sabbatical Verses* (1837); *A Winter in the West Indies*, letters to Henry Clay (1840); *Thoughts on Habit and Discipline* (1844). Died at Earlham, Jan. 4, 1847.

GUROWSKI, ADAM, COUNT, a Polish historian;

born at Kalisz, Poland, Sept. 10, 1805. Expelled from the gymnasia of Warsaw and Kalisz for participating in revolutionary demonstrations, he continued his studies at German universities. In 1825 he returned to Warsaw, assisted to organize and took part in the unsuccessful revolution of 1830, and at its close escaped to France. In 1835 he published *La Vérité sur la Russie*, which was favorably received by the Russian government, and he was recalled, and employed in the civil service. In 1841 he went to Heidelberg, and devoted himself to study; afterward lectured in the University of Bern, Switzerland, spent some time in Italy, and in 1849 went to the United States; was translator in the State Department at Washington from 1861 to 1863. Among his works published in the United States are *Russia as It Is* (1854); *The Turkish Question* (1854); *A Year of the War* (1855); *America and Europe* (1857); *Slavery in History* (1860); and *My Diary*, notes on the Civil War (2 vols., 1862-66). He died at Washington, District of Columbia, May 4, 1866.

GURTEEN, STEPHEN HUMPHREYS VILLIERS, an American clergyman and author; born June 9, 1840, near Canterbury, England; educated at Jesus College, Cambridge; ordained deacon in 1875; priest, 1876; for a time was professor of Latin at Hobart College, Geneva, New York, and held rectorships in Buffalo, New York; Toledo, Ohio; and Springfield, Illinois. He published *A Handbook of Charity Organization* (1882); *What is Charity Organization?* (1879; reprinted 1880, 1881 and 1882); *The Arthurian Epic* (1895).

GUTHRIE, a town of Logan County, eastern Oklahoma, capital of the territory and of the county, situated on the Cimarron River, and on the Atchison, Topeka and Santa Fé railroad. It has cotton-gins, saw, flour and planing mills, carriage and furniture factories. It is situated in a fine grazing country, which also produces grains, potatoes, broom-corn, timber, etc. In 1890 the population was 5,333; and 10,006 in 1900.

GUTHRIE, JAMES, an American statesman; born in Nelson County, Kentucky, Dec. 5, 1792. He was educated at Bardstown, Kentucky; studied law, and in 1820 commenced practice in Louisville. He was a member of the state legislature from 1827 to 1840, and was president of the convention that framed the present constitution of the state; was secretary of the United States Treasury in 1853-57, and United States Senator in 1865-68; died in Louisville, March 13, 1869.

GUTHRIE, SAMUEL, an American chemist and inventor; born at Brimfield, Massachusetts, in 1782. He was an original discoverer of chloroform, independent of other experimenters working at the same time in the same field, and by priority of publication of his results seems entitled to the honor of the discovery. The elder Silliman of Yale College tested his method in 1831, while the discoveries of Soubeiran and Dr. Liebig were published in 1832. Guthrie called the substance a spirituous solution of chloric

ether, and it was not until 1834 that Dumas ascertained its composition and gave it its name, chloroform. He was also the inventor and first manufacturer of percussion-pills, and the punch-lock for exploding them, which superseded the old flint-lock. He was severely injured by an explosion while experimenting in this line. Died at Sackett's Harbor, N.Y., Oct. 19, 1848.

GUTHRIE, THOMAS ANSTEY, an English author, who writes under the name "F. Anstey"; born at Kensington, Aug. 8, 1856; educated at Trinity Hall, Cambridge, and called to the bar in 1880; wrote *Vice Versa* (1882); *The Giant's Robe* (1883); *The Tinted Venus* (1885); *A Fallen Idol* (1886); *Voices Populi* (reprinted from *Punch*, 1889); *Lyre and Lancet* (1896); *Puppets at Large* (1897); *Paleface and Redskin* (1898); *Love Among the Lions* (1898).

GUTHRIE CENTER, a village and the capital of Guthrie County, Iowa, on the South Racoon River, and the Chicago, Rock Island and Pacific railroad, 47 miles W. of Des Moines. It is the trading and shipping center of a large stock-raising and farming district, and has manufactories of plows, iron-work for bridge construction, novelties, bricks and flour. Population 1900, 1,193.

GUTTA ROSEA, a disease of the sebaceous glands of the nose and face. See *Aene Roseacea*, under SKIN DISEASES, Vol. XXII, p. 121.

GUTTIFERÆ OR CLUSIACEÆ, a family of dicotyledonous plants, consisting of trees and shrubs, natives of tropical countries, generally secreting an acrid, yellow, resinous juice. The leaves are opposite, destitute of stipules, leathery and entire. It contains numerous species, the greater part of them South American. The resinous secretions of some are valuable (as gamboge, from the East Indian *Garcinia morella*), and a few species afford valuable timber. The flowers of some are very fragrant; those of *Messua ferrea* are found, in a dried state, in every bazaar in India, and used as a perfume. The fruit of some is very highly esteemed, as those of *Garcinia mangostana* (*mangosteen*) of southeastern Asia, and *Mammea Americana* of the West Indies.

GUTTURALS, same as GLOTTIDS. See SPEECH-SOUNDS, Vol. XXII, p. 382.

GUYON, RICHARD DEBANFRE, a Hungarian general and patriot; born near Bath, England, March, 1813; entered the Austrian army in 1831; married the Countess Splényi, daughter of the Hungarian field-marshal, in 1838, and retired from the service. When the Hungarian revolution of 1848 broke out, Guyon offered his services to the national party; was made brigadier-general under Görgei, and took part in the battle of Velenzce; followed Görgei on his march to Buda, and upon the surrender of that general, Aug. 13, 1849, took refuge in Turkey with other revolutionists. He entered the service of the Sultan under the name Kourschid Pasha, and was given command at Damascus. During the Crimean War he was engaged in raising troops in Asia Minor. Died in Constantinople, Oct. 12, 1856.

GUYOT, ARNOLD HENRY, a Swiss-American geographer; born in Switzerland, Sept. 28, 1807.

He took the degree of Ph.D. at Berlin in 1835; was the colleague of Agassiz at Neuchâtel in 1839-48, and in the latter year accompanied him to America. He delivered a course of lectures at Lowell Institute, which were translated and published as *Earth and Man*, in 1849; in 1854 was appointed professor of physical geography and geology at Princeton, which position he occupied until his death, being for some time senior professor. He had the management of the meteorological department of the Smithsonian Institution, where he delivered several courses of lectures, and in connection with which he published *Meteorological and Physical Tables* (revised ed., 1884). His other works include *A Treatise on Physical Geography* (1873); *Creation; or, The Biblical Cosmogony in the Light of Modern Science* (1884). He died at Princeton, New Jersey, Feb. 8, 1884.

GUY'S HOSPITAL, London, England, was founded by Thomas Guy (see GUY, THOMAS, Vol. XI, p. 341), who leased from the governors of St. Thomas's Hospital, a large piece of ground in Southwark, London, for a term of 999 years, at a ground-rent of \$150 a year. The hospital admitted its first patient in 1725, a few days after the death of its founder. In 1829 a Mr. Hunt bequeathed to the hospital \$950,000, and additional bequests to the amount of \$50,000 have since been received. There was at first room for about 400 patients; now, 700 can be accommodated. The yearly average of patients is over 5,000; the out-patients relieved may number above 80,000. The annual income is about \$122,500. Students enter the hospital for study, attending clinical practice, lectures, etc., and paying annual fees. A library and valuable museums are attached to the hospital. New wards, with tall towers for ventilation, were built in 1852, and a chemical laboratory in 1872. A dental school for complete instruction in dental surgery and mechanics, and a residential college for the accommodation of 50 students and the junior medical staff, have recently been added. In the chapel is a fine marble statue of Guy, by Bacon, which cost \$5,000. Sir Astley Cooper, the eminent surgeon, is buried in the chapel.

GUZEL-HISSAR. See AIDIN, Vol. I, p. 425.

GUZMAN-BLANCO, ANTONIO, a Venezuelan statesman; born in Caracas, Venezuela, Feb. 29, 1829. He studied law, and in 1859 joined a revolt led by General Juan Falcon, which, in 1863, resulted in the election of the latter to the Presidency and of Guzman-Blanco to the Vice-Presidency. Falcon was deposed in 1868 and Guzman-Blanco headed a revolution to reinstate him, which was successful. Falcon having died, Guzman-Blanco became President in 1870, and for 12 years kept himself in office, during which time unwonted peace and prosperity were maintained. He retired from the Presidency in 1882, and at the elections of 1883, one of his friends, General Joaquin Crespo, was elected, and he became ambassador to France. In 1886 he was re-elected to the Presidency, but in 1888 he was succeeded

by a political rival, Dr. Rojas Paul, and since then has lived in retirement.

GWIN, WILLIAM MCKENDREE, an American public man; born in Sumner County, Tennessee, Oct. 9, 1805. He studied medicine at Transylvania University, and removed to Clinton, Mississippi. He was appointed United States marshal for the district of Mississippi in 1833; in 1840 was elected to Congress. In 1849 he removed to California, where he took an active part in the formation of a state government. He was elected United States Senator for the long term; was re-elected, and served till March 3, 1861, securing for his state the location of the mint and navy-yard at San Francisco, and a survey of the Pacific coast. When the Civil War broke out he tried to induce California to join the Southern Confederacy, and was imprisoned for disloyalty. In 1863 he went to Paris, and, becoming interested in a scheme to colonize Sonora, Mexico, with Southerners, under the auspices of Maximilian's government, spent the two following years in an unsuccessful attempt to carry out his plan. He afterward returned to his home in California, and continued to take an active part in politics. He died in New York City, Sept. 3, 1885.

GWINNETT, BUTTON, a signer of the Declaration of Independence; born in England about 1732. He was for a time a merchant in Bristol, England; emigrated to Charleston, South Carolina, in 1770, and two years later purchased a plantation on St. Catherine's Island, Georgia, and engaged in agriculture; was elected to the general Congress in 1776, and signed the Declaration of Independence. He was re-elected for the ensuing year, and chosen president of the provincial council of his state. His death, May 27, 1777, resulted from a duel fought May 15, 1777, with General McIntosh, whom he had refused to appoint commander on a planned invasion of Florida.

GWYNN, NELL, mistress of Charles II of England; born about 1650, and brought up in the slums of London. As a child she earned her living by selling fruit on the streets and singing and dancing in tavern bar-rooms. Later she went upon the stage and took boys' parts in the licentious plays of those times. She was first the mistress of Charles Sackville, who, in 1669, gave her to Charles II. Two years later he appointed her lady of the privy chamber to Queen Catherine, giving her the name Madam Ellen. She was pretty, generous and witty, and won completely the affections of the king, who, on his deathbed, begged those around him not to forget his "poor Nell." She assisted many of her old friends with money and influence, and is said to have first proposed the Chelsea Hospital for soldiers and sailors, and to have secretly supported the Protestant cause at court. She bore two sons to the king. One died early, but the other was made Duke of St. Albans. After the death of King Charles she retired from court. She died about 1690, and her funeral sermon was preached by Dr. Tenison, afterward Archbishop of Canterbury. In his *Story of Nell Gwynn*

(1852), Peter Cunningham has related the history of her life.

GYE, MADAME. See ALBANI, MADAME, in these Supplements.

GYLDEN, JOHN AUGUSTUS HUGO, a Finnish astronomer; born at Helsingfors, Finland, May 29, 1841; studied at the University of Helsingfors, and was appointed astronomer at the Pulkowa Observatory; in 1871 was given the direction of the observatory in Stockholm; in 1884, of that in Göttingen. He published *Researches on the Constitution of the Atmosphere* (1866-68); *Studies on the Theory of Perturbations* (1871); and *Principles of Astronomy Shown in Connection with their Historic Development* (1877). Died at Stockholm, Nov. 9, 1896.

GYLIPPUS, a Spartan general; son of Cleandridas, and a Helot mother. He was sent, in 414 B.C., to take command of the Syracusans against the Athenians, who were besieging Syracuse. In the following year he totally destroyed the Athenian force, and took Demosthenes and Nicias prisoners. At the end of the Peloponnesian War he was sent to Sparta by Lysander to carry treasure, but proved unfaithful, and stole a portion of the money. The theft was discovered, and Gylippus fled the country.

GYMNETRUS, a genus of fishes of the ribbon-fish family. They are delicate, fragile fishes, living deep in the sea, and are rarely captured.

GYMNOCLADUS, a genus of trees of the family *Leguminosæ*. *G. Canadensis* is a North American tree, found both in Canada and over a great part of the United States, attaining a height of fifty to sixty feet, with upright branches and a rough bark. The leaves of young trees are very large, three feet long, bipinnate, and the leaflets remarkable for hanging edgewise. The flowers are white, in short spikes, the pods five to ten inches long by two broad. It is sometimes called the *Kentucky coffee-tree*, because the seeds were formerly roasted and ground as coffee in Kentucky. It grows well in Britain. The wood is used both by cabinet-makers and by carpenters. The pods, preserved like those of the tamarind, are said to be wholesome and slightly aperient.

GYMNODONTS, a suborder of fishes remarkable for their grotesque shapes, which scarcely resemble those of ordinary fishes. The skin of the body is greatly distensible, especially in the ventral region. The scales are reduced to spines. The fish, variously known as swell-fish, globe-fish or puffer, is a good type of the group. The gigantic sunfish (*Mola*) of temperate seas is another well-known representative.

GYMNOSOMATA, an order of molluscs. See MOLLUSCA, Vol. XVI, p. 666.

GYMNOSPERMS. See VEGETABLE KINGDOM, Vol. XXIV, p. 131.

GYMNOTIDÆ. See ICHTHYOLOGY, Vol. XII, p. 694; and EEL, ELECTRIC, Vol. VII, p. 694.

GYMPIE, a town of eastern Queensland, Australia, on the Mary River; the terminus of a railroad; lat. 26° 25' S., long. 153° E.; 90 miles north of Brisbane. In the vicinity are important gold-fields. Population 1891, 8,449.

GYNOPHYTE, a name applied to a gametophyte which produces only female reproductive organs, as distinguished from the *androphyte*, which bears male reproductive organs.

GYP, the pen-name of Madame la Comtesse Sibylle Gabrielle Marie Antoinette Martel de Janville. See MARTEL DE JANVILLE, in these Supplements.

GYPSIES. See GIPSIES, Vol. X, p. 611.

GYPSY-WORT (*Lycopus Europæus*), some-

times also called water horehound, a perennial plant of the family *Labiata*. It is a tall, erect, branching plant, slightly hairy, with a creeping root-stock. It is found in Britain, on the Continent of Europe, in Russian and Central Asia and North America, and is regarded as a febrifuge and stringent. It dyes a permanent black. The bugle-weed of North America (*L. virginicus*) has more powerfully astringent properties.

GYRFALCON. See FALCON, Vol. IX, p. 3.

H

HABBERTON—HACKETT

HABBERTON, JOHN, an American journalist and author; born in Brooklyn, New York, Feb. 24, 1842, receiving an education in the public schools of Illinois, whither his family had moved. From 1859 until he entered the army in 1862 he was connected with the publishing house of Harper Brothers; literary editor of the *Christian Union* from 1873 to 1876; since, one of the literary critics on the staff of the *New York Herald*. His first work was a series of sketches of Western life, followed by a volume of *Selections from the Spectator* (1876); in the same year appeared *Helen's Babies*, a humorous sketch without much literary pretense, of which nearly a quarter of a million copies have been sold in the United States; he has since written *The Barton Experiment* (1876); *The Jericho Road* (1877); *Other People's Children* (1877); *The Scripture Club of Valley Rest* (1877); *Some Folks* (1877); *The Crew of the Sam Weller* (1878); *Little Guzzy* (1878); *The Worst Boy in Town* (1879); *Just One Day* (1880); *Who Was Paul Grayson?* (1880); *Bowsham Puzzle* (1884); *George Washington* (1884); and *Couldn't Say No* (1890). His only play, *Deacon Crankett*, had a long and successful run on the stage.

HABEAS CORPUS, a writ or command issued by a court or officer of competent jurisdiction, directed to a person who is detaining another, requiring him to produce the person detained, at a time and place named in the writ, and show his reasons for such detention. The object of this writ is to obtain release from illegal restraint, and the summary nature of the proceedings under it makes the writ an exceedingly useful remedy. The Constitution of the United States provides that the privilege of the writ of *habeas corpus* shall not be suspended unless when, in cases of rebellion or invasion, the public safety may require it. Similar provisions are found in many of the state constitutions. This exception provided in the Federal Constitution is founded upon the fact that during the existence of a rebellion or invasion, the safety of the republic may require the imprisonment of those who may be suspected of crime against the government, while, if the privilege of the writ of *habeas corpus* were extended, sufficient proof might not be at hand to hold such prisoners. The exception is based rather upon public policy than justice, and is justified by the right of the government to adopt extreme measures to suppress insurrection or repel invasions. The supreme court of the United States has decided that the power to suspend the privilege of the writ of *habeas corpus* exists only in the Federal Government. Congress in 1863 authorized the President to suspend the privileges of the writ in any portion of the United States where he might deem it necessary during the continuance of the

Rebellion. By act of Congress, the jurisdiction of the Federal courts under the writ of *habeas corpus* has been fully established, but the practice is governed by the rules of common law. The legislatures of the various states have determined what officers and courts of the state shall have jurisdiction of the writ, and to a considerable extent have prescribed the practice to be followed. See also **HABEAS CORPUS**, Vol. XI, p. 358.

HABITS. See **INSTINCT**, Vol. XIII, pp. 157-159.
HACKEL OR HITCHEL, a comb instrument for rippling flax; see **FLAX**, Vol. IX, p. 294.

HACKENSACK, a town and the capital of Bergen County, northeastern New Jersey; located on the Hackensack River, 13 miles north of the Battery, New York, and on the New Jersey and New York and the New York, Susquehanna and Western railroads. It is lighted with electricity and gas, and has a city water-supply; manufactures silk, jewelry, bricks; has a good trade, and is quite a residence town for business men of New York. Population 1890, 6,004; 1900, 9,443.

HACKER, ARTHUR, an English painter; born in London; educated at St. John's College, London, and Paris; entered the Royal Academy Schools, and later became a pupil of Bonnat, in Paris. His first picture was exhibited in 1878. He devoted himself to genre pictures; among them are *The Daughter's Legacy* (Paris Salon, 1881) and *The Relics of the Brave* (1882). He then traveled through Spain and Morocco in 1881 and devoted himself to classical and religious subjects. His recent works are *Pelagia and Philammon*; *Persephone*; *Vae Victis*; *Christ and the Magdalen*. He was elected an associate of the Royal Academy (1894).

HACKETT, HORATIO BALCH, an American classical scholar; born in Salisbury, Mass., Dec. 27, 1808; graduated at Amherst in 1830, and studied theology at Andover and in Germany. He became a tutor at Amherst, professor of ancient languages at Brown University, and in 1839 professor of Biblical literature in Newton Theological Institute, which last position he held until 1869. He visited Egypt and Palestine, spending 1858-59 in Athens, to become familiar with modern Greek. In 1870 he became professor of New Testament Greek in Rochester Theological Seminary. He was one of the American revisers of the Bible, and the author of several Hebrew text-books; a *Commentary on the Acts* (1851); *Illustrations of Scripture* (1855); and *Memorials of Christian Men in the War*. He assisted Dr. Ezra Abbott in editing the enlarged American edition of *Smith's Dictionary of the Bible*. He died in Rochester, New York, Nov. 2, 1875.

HACKETT, JAMES HENRY, an American actor; born in New York City, March 15, 1800; studied a short time at Columbia College; failed in business life; his wife, an English actress, urged him to adopt the theatrical profession; began with clever imitations in 1826; spent one year on the London stage; returned to America and succeeded well in low comedy; played a realistic Rip Van Winkle that lacked neither force nor verity; was not so happy in his Shakespearian characters, his Hamlet especially falling flat. He was a man of literary attainments, and the associate of Irving, Cooper and other prominent authors of his day; as a theater manager he made money, especially in his Italian opera venture with Mario and Madame Grisi. He died in Jamaica, Long Island, Dec. 28, 1871.

HACKETTSTOWN, a town of Warren County, northwestern New Jersey, situated 14 miles east of Belvidere, on the Musconetcong River, and the Delaware, Lackawanna and Western railroad. It contains the Newark Methodist Episcopal Conference Seminary, a car manufactory, foundries, several carriage manufactories, silk factories, and one of agricultural tools. Its surroundings are beautiful; it is inclosed on three sides by mountains, at the head of the beautiful Musconetcong Valley. It has a water supply taken from mountain springs. Population 1900, 2,474.

HACKLÄNDER, FRIEDRICH WILHELM VON, a German novelist and playwright; born at Burtscheid, near Aix-la-Chapelle, Nov. 1, 1816. He commenced his literary career with the publication of *Bilder aus dem Soldatenleben* (1841), and three years later followed up his success with *Das Soldatenleben im Frieden* (9th ed., 1883). He accompanied Baron von Taubenheim on his travels to the East, after which he published *Daguerreotypen aufgenommen auf einer Reise in den Orient*, and in 1843 was appointed private secretary to the Crown-Prince of Würtemberg, with whom he traveled in Italy, France and Russia. Later the King of Würtemberg gave him a pension on the civil list, and made him a baron; in March, 1849, he went to Italy, and was present with Radetzky's army during the campaign in Piedmont. From 1859 he lived chiefly in Stuttgart. The best of his longer novels are *Handel und Wandel* (1850); *Eugen Stillfried* (1852); and *Namenlose Geschichten* (1851). His best comedies are *Der Geheime Agent* (1850), which has been performed throughout Germany, and translated into several European languages, and *Magnetische Kuren* (1851). He was the founder (with Zoller) of the most successful German illustrated weekly, *Ueber Land und Meer*, and a number of his later stories appeared therein as serials, the last one *Verbotene Frucht*. A year after his death appeared a short autobiography, *Roman Meines Lebens*. He ranks among the best German fiction-writers of the century. He died in Munich, July 6, 1877.

HACKMATACK. See LARCH, Vol. XIV, p. 312.

HA-DANI, or the DANITE. See ELDAD BEN MALCHI, Vol. VII, p. 827.

HADDAM, a town and one of the capitals of Middlesex County, central Connecticut, on the west bank of the Connecticut River, 29 miles above its mouth, and on the New York, New Haven and Hartford railroad. It has large granite quarries. Population 1890, 2,095; 1900, 2,015.

HADDONFIELD, a borough of Camden County, southern New Jersey, on two branches of the Camden and Atlantic railroad, 5 miles S. E. of Camden. Industry, farming. Population 1890, 2,502; 1900, 2,776.

HADEN, SIR FRANCIS SEYMOUR, an English surgeon and etcher; born in London, Sept. 16, 1818; educated at University College, London, and at the Paris School of Medicine; successively member (1842) and fellow (1857) of the Royal College of Surgeons; gave much time and influence to the proper disposal of the dead; combated cremation, but secured the adoption of hygienic measures in burial-grounds. His famous paper, entitled *The Relative Claims of Etching and Engraving to rank as Fine Arts, and to be represented as such in the Royal Academy*, resulted in the organization of a society of etchers, of which he was naturally the first president. His own contributions to the art were considerable and of high merit, counting up into the hundreds; they are catalogued in Sir W. R. Drake's book, *The Etched Work of Francis Seymour Haden*. He was knighted in 1894.

HADING, JANE, the stage-name of JEANE TRÉFOURET HADING, a French actress; born at Marseilles, France, Nov. 25, 1859. At the age of three she played Blanche de Caylus in *Le Bossu*, her father at the same time playing the leading character. Educated at Marseilles Conservatoire, she played several light-comedy parts when but fourteen years old. She sang also in operetta, and in 1879 was the heroine in *Heloise and Abelard*; in 1883, returning to comedy, she played Paulette in *Autour de Mariage*; finally she began her great career as an emotional actress in Claire de Beaulieu of *Le Maître des Forges*. In 1889 she made a successful tour of the United States, accompanying M. Coquelin, of the Comédie Française.

HADJ OR HAJJ. See MECCA, Vol. XV, pp. 674, 675.

HADLEY, ARTHUR TWINING, an American economist, son of JAMES HADLEY (mentioned below); born April 23, 1856; graduated at Yale College (1876); studied political science in Berlin; tutor at Yale (1879-83); statistical commissioner of Connecticut (1885-87); professor of political science in Yale (1886); president of Yale (1899); made special studies in railway transportation; wrote on *Foreign and Continental Roads* in the article RAILWAY of this ENCYCLOPEDIA (Vol. XX, pp. 250-52); and also *Railroad Transportation: Its History and Its Laws* (1885); and a history of Yale in *Four American Universities* (1895).

HADLEY, JAMES, an American philologist; born at Fairfield, Herkimer County, New York, March 30, 1821; a cripple from boyhood, he graduated at Yale College (1842); tutor there (1845-48); full professor of Greek (1851-72). Besides Greek, he was thoroughly versed in Arabic, Ar-

menian, Hebrew, Sanskrit, Irish, Gaelic, Welsh and the principal modern languages; was founder and president of the American Oriental Society from 1870 to 1872; member American Academy of Sciences; lectured frequently on civil law; published a *Greek Grammar* for schools and colleges (1860); *Elements of the Greek Language* (1869); posthumously, twelve lectures on law and twenty philological essays. He wrote the *Brief History of the English Language* contained in the 1864 edition of Webster's Dictionary. He died Nov. 14, 1872.

HADLEY, JOHN, an English mathematician; an intimate friend of Newton, from whom, it is said, he borrowed the idea of his sextant; Godfrey was another claimant for this invention, and divided with Hadley the prize granted by the Royal Society. In 1717 Hadley was made a member of the Royal Society. He died Feb. 15, 1744. See SEXTANT, Vol. XXI, pp. 724, 725.

HAECKEL, ERNST HEINRICH, a German evolutionist; born at Potsdam, Feb. 16, 1834.

He studied natural science and medicine with Virchow in Würzburg, and with Johann Müller in Berlin; soon became distinguished for his originality in zoological studies. After working for a time at Naples and Messina, he became a private tutor in the University of Jena in 1861, a professor extraordinary in 1862, and an ordinary professor

ERNST H. HAECKEL.

of zoölogy in 1865, a chair especially created for him. He visited Darwin and then traveled extensively in Spain, northern Africa and Madeira; in 1875, on a steamer supplied to him by the Khedive he examined the coral reefs of the Red Sea. Haeckel devoted his life to applying the doctrine of evolution, and brought forward many interesting facts in support of the theory. The most important of his numerous systematic works are *Die Radiolarien* (1862); *Ueber die Entstehung und Stammbaum der Menschengattung* (*The Origin and Development of the Human Race*) (1870); *Das Leben in der Meerestiefen* (*Life in the Sea-Depths*) (1870); *Die Kalkschwämme* (*The Calcareous Sponges*) (1872); *Natürliche Schöpfungsgeschichte* (*Natural History of Creation*) (6th ed. 1875); *Anthropogenie* (*Origin of Man*) (3d ed. 1877); *System der Medusen* (1879); contributions to the *Challenger Report on Deep-Sea Medusæ* (1882); *Indische Reisebriefe* (*Letters from India*) (1882); *Darwin, Gæthe und Lamarck* (1882); *Ursprung und Entwicklung der Thierischen Gewebe* (*Origin and Development of Animal Tissues*) (1884); *Siphonophora* (1888); *Radiolaria* (1887). Haeckel's *Generelle Morphologie* (1866) attracted scientific attention for its proposals to draw lines between which distinction of animal and vegetable ceased, and to call the group *Protista*. In this work he also fortified with new researches the doctrine that each organism re-

peats its phylogenetic history as it develops into maturity. *Die Kalkschwämme* showed the arbitrary character of the specific classification of sponges, for he constructed from the *Ascetta primordialis* a typical ancestral sponge, from which he derived seven species, embracing the whole group. This work was a direct reinforcement of Darwin's doctrine of the variation of species. Haeckel did much for histology and phylogeny by his *Gastræa Theorie* (1874). He proposed to divide the animal kingdom into *Protozoa* or *Metazoa*, and *gastrozoa*. The latter class began with animals which, at some ancestral stage, developed from two cell-layers arranged in a sack-like way, suggesting a stomach. This stage is known as that of the *Gastrula*. All organisms that have passed through that stage in their development he held to have been derived from a *Gastræa*, a theoretical form. This suggestion was very fruitful in directing research, and Haeckel won the renown of being one of the most indefatigable champions of the unity of evolution by differentiation of species.

HÆHNEL, ERNST JULIUS, a German sculptor; born at Dresden March 9, 1811. He studied architecture, but in 1830 he went to Munich and devoted himself to sculpture under Rietschel and Schwanthaler. Being recalled to his native city in 1838, he executed some remarkable bas-reliefs for the new theater there, also statues of Sophocles, Aristophanes, Molière and Shakespeare. Among his other works are a statue of Beethoven (1845) now in Bonn; a statue of Charles V, for the University of Prague; a statue of Weber, the composer, for the city of Dresden, and for the new museum of Dresden, six statues: Alexander the Great, Lysippus, Michel Angelo, Dante, Raphael, and Peter von Cornelius. After 1858 he made statues of the four evangelists for the cathedral tower in Dresden; an equestrian statue of Prince Schwarzenberg for Vienna; a bronze statue of Leibnitz for Leipsic, and many other statues for his native city. Hæhnel became a member of the academy at Dresden in 1842, and a professor in 1848.

HÆMATITE OR HEMATITE, ores of iron. See MINERALOGY, Vol. XVI, p. 385.

HÆMATOXYLIN, the coloring principle of logwood. See LOGWOOD, Vol. XIV, p. 805.

HÆMATOZOA (Gr. *haima*, "blood," and *zoön*, an "animal"), parasites occurring in the blood. See PARASITISM, Vol. XVIII, pp. 258-271.

HÆMOCYTOMETER, an apparatus for assisting in the enumeration of the red and white corpuscles in the blood. It consists of microscopic slides, cross-ruled with exceeding fineness, so that the squares produced may contain so few corpuscles that it is possible to count them. The proportion of red to white corpuscles in the human blood is about five hundred to one, in a state of health. By the hæmocytometer the physician may determine whether the proportion in a patient's blood is normal. By diluting a few drops of blood with acetic acid the white and red corpuscles are separated. The white portion of

the blood may then be dropped from a tube on one of the finely-ruled microscopic slides. Being powerfully magnified, the number of corpuscles in sixteen squares may be counted, and the remainder computed. The blood containing the red corpuscles is treated in the same manner, the result being a close approximation of the proportions of the corpuscles in the blood of the patient. The blood used is best drawn from the lobe of the ear, great care being taken to procure it entirely clean. The slides are of ground glass, and are divided into 256 squares, each of which is subdivided again into 16 squares. Cases of internal tumor, previously unsuspected, have been diagnosed accurately by the aid of the hæmocytometer, and it is also valuable in noting the effect of certain remedies given to a patient.

C. H. COCHRANE.

HÆMODORACEÆ, an order of monocotyledons, consisting of herbaceous plants with fibrous roots and sword-shaped leaves, differing from *Iridaceæ* in habit and in having the stamens six in number, or, if only three, opposite to the petals. There are about 120 known species, and they occur in all parts of the world except Europe.

HÆMOGLOBIN, the coloring-matter of the red corpuscles of the blood. See ANATOMY, Vol. I, pp. 845-6; and RESPIRATION, Vol. XX, pp. 483, 484.

HAGBERG, JAKOB TEODOR, a Swedish littérateur and philologist; born in Stockholm, 1825; graduated in 1848 from the Upsala University; in 1868 was made professor of modern languages in his *alma mater*; published an *Italian Grammar* (1863); *Dramas by Calderon* (1870); and *Petrarch's Sonnets* (1874); wrote several original dramas; also exhaustive critical studies of Molière, Rabelais and *Provençal Literature in the XIXth Century*.

HAGDON OR HAGDEN, a fish, the *Puffinus anglorum*. See SHEARWATER, Vol. XXI, p. 781.

HAGEN, HERMANN AUGUST, a German-American entomologist; born in Königsberg, Prussia, May 30, 1817; in 1840 he received a medical degree from the University at Königsberg, and later studied in Paris, Berlin and Vienna. He devoted much attention to entomology, and in 1834 published a paper on *Prussian Odontata*. For some time from 1843 he practiced medicine at Königsberg as first assistant at the surgical hospital. From 1863 to 1867 he was vice-president of the city council. In 1870, thanks to the influence of Louis Agassiz, to whom his great learning was known, he was made professor of entomology at Harvard University. Wrote upwards of four hundred articles on scientific subjects, several of the most important being included in his *Bibliotheca Entomologica* (Leipsic, 1862). He died in Cambridge, Massachusetts, Nov. 9, 1893.

HAGERSTOWN, a city and the capital of Washington County, western Maryland. It lies in the fertile Cumberland valley, 86 miles W. of Baltimore. It is the terminus of the Shenandoah Valley railroad and of a branch of the Baltimore

and Ohio system. The Cumberland Valley railroad and the Western Maryland railroad run through the town. Hagerstown has a fine courthouse, a jail, and an academy of music; also a free library, public water-works, banks, hotels, churches, seminaries and public schools. Several newspapers are published here. This town is a local center of social refinement, the population being mostly of American birth, many of German descent. The chief manufactures are furniture, wheels, doors, sashes, castings, farm tools, brooms, cigars and fertilizers. It is an active trade center. Population 1890, 10,118; 1900, 13,591. See HAGERSTOWN, Vol. XI, p. 370.

HAGGADAH OR AGADAH. See MIDRASH, Vol. XVI, pp. 285, 286.

HAGGARD, HENRY RIDER, an English novelist; born at Bradenham Hall, Norfolk, June 22, 1856; educated at Ipswich Grammar School; accompanied Sir Henry Bulwer to Natal as his private secretary in 1875, and subsequently served in a similar capacity under Sir Theophilus Shepstone, commissioner to the Transvaal, until he was appointed Master of the High Court of the Transvaal. On his return to England, in 1879, he retired from official life and settled down to a literary career. He published *Cetewayo and His White Neighbors* (1882); his first novel, *Dawn* (1884); and *The Witch's Head* (1885). The publication of *King Solomon's Mines* (1886) won for him great popularity, which was increased by the appearance of *She* in 1887. *Jess*, *Allan Quatermain*, *Maiwa's Revenge*, *Mr. Meeson's Will*, *Cleopatra*, *Allan's Wife*, and *Eric Brighteyes*, are among Mr. Haggard's later writings. In 1895 he published a novel, *Joan Haste*, which was not equal to his African fancies, weird and extravagant though they were. In 1896 he returned to the scene of his former successes with *The Heart of the World*.

HENRY RIDER HAGGARD.

HAGIOGRAPHIA. See CANON, Vol. V, p. 2.

HAGUE, ARNOLD, an American geologist; born in Boston, Dec. 3, 1840; graduated at the scientific school of Yale in 1863; for three years studied at Göttingen, Heidelberg and Freiberg; in 1867 was appointed assistant on the United States geological exploration of the 40th parallel under Clarence King. From 1867 to 1868 he was in California and Nevada studying the various processes in use in the leading gold and silver mines; contributed a number of papers to the United States government reports. In 1877 he became government geologist of Guatemala. In 1878 the Chinese government employed him to examine its mines of precious metals in northern China. In 1879 he returned to the United States, and became one of the geologists of the government survey. In 1883 he was appointed geologist of the Yellowstone Park division. In 1885 he became

a member of the National Academy of Sciences. Wrote a number of works on volcanic formations, also *Nevada, with Notes on the Geology of the District* (1885).

HAGUE PEACE CONFERENCE. This conference was called in Aug. 1898, at the instance of Russia, to meet at The Hague, in the Netherlands, and consider proposals, originating with the Tsar, for national disarmament and the maintenance of peace. The conference, which assembled in May 1899, was represented by twenty-six states of the world, Baron de Stael, of Russia, being president. The American delegates were And. D. White, ambassador to Germany; Stanford Newel, U. S. minister to the Netherlands; Capt. Wm. Crozier, of the Ordnance Dept. of the U. S. army; Capt. A. T. Mahan, of the U. S. navy (retired); Pres. Seth Low, of Columbia University; and F. W. Halls, of N. Y., secretary of the delegation. As the sessions were held in secret, it has been difficult to learn just what the conference achieved as a whole; the results are understood to have been meagre and disappointing. Russia's proposals for arbitration, having a compulsory and binding rider attached, were not palatable to the conference. The chief gains at the meeting were those credited to England and the United States, the arbitration scheme offered by the two latter nations, being voluntary in its exactions, were more favorably considered. Reduction of armaments, favored by Russia, was brought up by delegates of the Tsar, but, as militarism was in the ascendant, the proposals did not meet with the approval of the representatives of the conferring Powers. The proposal to place a limit, for a period of years, on the annual budget appropriations for naval and military purposes, and to exact pledges that the military forces of the nations shall not be added to save for service in the colonies and outlying possessions of the subscribing Powers, was more favorably received. But the practical outcome of the conference was on the whole little, beyond attesting the amiable and peace-loving character of the Tsar; though the moral gains of the meeting made it notable and indirectly were not without result.

HA-HA BAY. See QUEBEC, Vol. XX, p. 165 and GRAND BAY, in these Supplements.

HAIDARABAD, district and city of Sind, India. See HYDERABAD, Vol. XII, pp. 429, 430.

HAIDUK. See HAJDUK, Vol. XI, p. 377.

HAIL COLUMBIA. See HOPKINSON, JOSEPH, *post*, pp. 1612-13.

HAILEY, a town, the capital of Blaine Co., Idaho, 96 miles E. of Boise City, on Wood River and the Union Pacific railroad; gold, silver, copper, and lead mines are near, stone is quarried, and bricks and lime are manufactured. The town exports ores, grains, hides, and wool; is supplied with city water, electricity, and a telephone system; the streets and gardens are watered by irrigation ditches. A mile and a half to the west are the Hailey Hot Springs, of water containing sulphate of soda, iron, and magnesia, at 150° F. These springs and their hot baths make Hailey an important health resort. Pop., 1797, 1073; 1900,

(12th census), Hailey precinct, 1,240.

HAILSTORM. See METEOROLOGY, Vol. XVI, p. 132.

HAIMURA, a large voracious fish of the genus *Erythrinus*, found in the fresh waters of northern South America. The inhabitants use great numbers as food. Men have been attacked and seriously lacerated by the sharp teeth of the fish.

HAIR-GRASS, the common name of species of *Deschampsia*, a genus of grasses having delicately paniced inflorescences, bearing 2-flowered spikelets, the flowering glumes with a fine dorsal awn below the middle. The species are natives of temperate and cold climates. The tufted hair-grass, or tufted grass (*D. caespitosa*), common in better pastures and meadows, is a beautiful grass when in flower. The other common species of the United States are *D. flexuosa*, *D. danthonioides*, and *D. latifolia*. The genus formerly was considered a subgenus of Aira, under which generic name the above-mentioned species all appeared.

HAITI (République d'Haïti), the western portion, near to Cuba, of the island of Santo Domingo. See under HAYTI.

HALACHA. See HERMENEUTICS, Vol. XI, p. 742.

HALCYONIDÆ. See KINGFISHER, Vol. XIV, p. 82.

HALDEMAN, SAMUEL STEHMAN, an American naturalist and philologist; born at Locust Grove, Pennsylvania, Aug. 12, 1812; partly educated at Dickinson College; assistant state geologist of New Jersey, 1836; assisted in the geological survey of Pennsylvania, 1842, and during that time prepared five annual reports. In 1842-43 he delivered lectures on zoölogy at the Franklin Institute in Philadelphia, and in 1851 was made professor of natural sciences in the University of Pennsylvania. In 1855 he accepted a similar professorship in Delaware College. From 1869 to his death he was professor of comparative philology in the University of Pennsylvania. He gave much time to the study of the human voice, discovering thus more than fifty varieties of human speech; was an earnest advocate of spelling-reform, and the founder and president of the American Philological Society. His contributions to scientific literature include over 200 titles, covering entomology, conchology, geology, chemistry, paleontology and philology; among them are found *Fresh-Water Univalve Mollusca of the United States* (1840); *Zoological Contributions* (1842). *Elements of Latin Pronunciation* (1851); *Tours of a Chess Knight* (1865); *Affixes in Their Origin and Application* (1865); *Rhymes of the Poets* (1868); *Pennsylvania Dutch* (1872); *Outlines of Etymology* (1877); and *Word-Building* (1881). He died at Chickies, Pennsylvania, Sept. 10, 1880.

HALE, BENJAMIN, an American educator; born in Newburyport, Massachusetts, Nov. 23, 1797; graduated with high honors from Bowdoin, 1818; studied theology at Andover, and in 1822 was licensed to preach as a Congregationalist; in 1823 became tutor in Bowdoin, and subsequently principal of the Gardiner Lyceum. From 1827

to 1835 he was professor of chemistry and mineralogy at Dartmouth. He joined the Protestant Episcopal Church, in which he took orders, and from 1836 to 1858 was president of Hobart College, Geneva, New York, resigning in the latter year on account of feeble health. He wrote *Introduction to the Mechanical Principles of Carpentry* (1827); *Scriptural Illustrations of the Liturgy* (1835); and *Education in Its Relations to a Free Government. His Life*, with selections from his works, published (1883) by Rev. Malcolm Douglass. He died at Newburyport, July 15, 1863.

HALE, EDWARD EVERETT, an American Unitarian clergyman and author; was born in Boston, Massachusetts, April 3, 1822. His mother was a sister of Edward Everett, and his father, Nathan, became proprietor of the Boston *Daily Advertiser*, on which the son served in many ways from office-boy to editorial management. Nathan bore the name of his uncle, the revolutionary patriot, and was also one of the founders of the *North*

EDWARD EVERETT HALE.

American Review and *The Christian Examiner*, periodicals that eventually passed to the editorial control of the son. Edward was graduated at Harvard in 1839, having prepared for college at the Boston Latin School, where he subsequently taught. At twenty years of age he began to preach, supplying pulpits as occasion offered. He had but two pastorates, the first of ten years from 1846 at Worcester, Massachusetts; the second from 1856 at the South Congregational Church, Roxbury, Boston. In 1879 he received a doctorate in theology from Harvard College.

Dr. Hale was indefatigable in literary work, and to him is due the establishment of a number of magazines. Besides editing the periodicals named, he revived the *New England Magazine*, and founded the *Old and New* in 1869, which was merged later in *Scribner's Monthly*, and *Lend a Hand* in 1885, a monthly devoted to charitable and sociological enterprises. Articles from his pen also found frequent introduction into periodical literature.

While engaged upon the *Daily Advertiser* Mr. Hale began extensive studies upon Spanish-American history, and in time became an accepted authority on such subjects. Some of his more important papers were published as contributions to antiquarian societies. He brought out an American edition of Dr. John Lingard's *History of England* (1853); and wrote *Stories of Discovery* (1882); a *Life of George Washington* (1888) from new sources; a *History of the United States* (1888) for Chautauqua circles; *Franklin in France* (1888) from original documents; and *The Story of Spain* (1886).

In philanthropic work Dr. Hale was full of suggestion. His *Ten Times One is Ten* (1870), show-

ing how a single life might accomplish beneficent ends, gave rise to organizations of young persons for doing good by individual influence, variously known as "Harry Wadsworth Clubs," "Lend-a-Hand Clubs" and the "Look Up Legion," precursors of the Christian Endeavor Societies. Many of his stories were designed to illustrate methods of social reform, as *In His Name* (1873), a tale of the Waldenses; *How they Lived in Hampton* (1888); *Mr. Tangier's Vacations* (1888); and *My Friend the Boss*.

But Dr. Hale is perhaps best known as the writer of short stories. *My Double and How He Undid Me* came out in the *Atlantic Monthly* in 1859, and attracted great attention; but its vogue was surpassed by *A Man Without a Country* (1861), a tale full of pathos, in which a young officer is punished for treason by never having his country named to him.

A complete enumeration of his more than two-score books is here out of the question. Among them the best known are *If, Yes and Perhaps* (1868); *The Ingham Papers* (1869); *Ups and Downs* (1873); *Philip Nolan's Friends* (1876); *A Family Flight over Egypt and Syria* (1882), in connection with his sister Susan; *About Home* (1884); *Through Mexico* (1886); *The Story of Massachusetts* (1891); *East and West* (1892), a novel; and many tales of travel or adventure.

HALE, EUGENE, a United States Senator; born in Turner, Maine, June 9, 1836; received a high-school education; was admitted to the bar in 1857; for nine successive years county attorney for Hancock County, Maine; a member of the state legislature in 1867, 1868 and 1880; and a member of Congress from 1869 to 1879. He was elected to the United States Senate as a Republican; took his seat March 4, 1881; was re-elected in 1887 and 1893. He repeatedly refused cabinet appointments, first from General Grant, later from President Hayes. His term of service will expire March 3, 1899.

HALE, HORATIO, American ethnologist (a son of SARAH J. HALE; q.v., *post*, p. 1508); born in Newport, N. H., May 3, 1817; graduated from Harvard, 1837; accompanied Captain Wilkes's expedition to the Antarctic regions; attracted to the study of anthropology, he traveled extensively for the purpose of making original observations and collecting documentary evidence; admitted to the Chicago bar, he practiced law at Clinton, Canada, without discontinuing his favorite studies; in 1886 he presided over the section of anthropology at the meeting of the American Society for the Advancement of Science, his address on *The Origin of Language and the Antiquity of Speaking Man* provoking much discussion. He gave much attention to the languages and customs of the American Indians. Among his other works are the seventh volume of the Wilkes Expedition Reports (1846); *The Iroquois Book of Rites* (1883); *Indian Migrations as Evidenced by Language* (1883); and *Report on the Blackfoot Tribes* (1885). Died at Clinton, Canada, Dec. 30, 1896.

HALE, NATHAN, an American soldier, spy, and hero; born in Coventry, Connecticut, June 6, 1755;

graduated at Yale in 1773; taught school in East Haddam, and later in New London, Connecticut. At the beginning of the Revolutionary War he enlisted as a volunteer, and became a lieutenant in Colonel Charles Webb's regiment. In January, 1776, he was made a captain and ordered to New York, where, with a few picked men, he captured at midnight a supply vessel lying under the guns of an English war vessel. He soon passed to the Connecticut Rangers of the Continental army, and on General Washington's call for a volunteer to enter the British lines and procure intelligence, Captain Hale responded, and, disguised as a loyalist schoolmaster, he visited all the British camps in New York and on Long Island. He obtained the needed information, but when about to return was arrested, tried by court-martial and condemned to be hanged before sunrise on the next morning. The execution took place in Colonel Henry Rutgers' orchard, near the junction of East Broadway and Market Street, New York City, Sept. 22, 1776. Captain Hale's last words were: "I only regret that I have but one life to lose for my country." Two monuments were erected to the memory of this patriot: one in the capitol at Hartford, Connecticut, and the other, by McMonnies, in City Hall Park, New York. His life and exploits are dealt with in *The Life of Captain Nathan Hale, the Martyr-Spy of the American Revolution*, by Isaac W. Stuart (1856); and Benson J. Lossing's *The Two Spies, Nathan Hale and John André* (1886).

HALE, NATHAN, an American journalist; the nephew of the patriot-martyr Nathan, and the father of Edward Everett; born in Westhampton, Massachusetts, Aug. 16, 1784; graduated at Williams College 1804; was admitted to the Boston bar in 1810, and in 1814 became an editor of the *Boston Weekly Messenger*. The same year he purchased the *Boston Daily Advertiser*, and continued as its chief editor until his death. He was a founder of the *North American Review* in 1815, and of the *Christian Examiner* in 1828, and in 1840 he edited and published the *Monthly Chronicle*. He was for nineteen years president of the Boston and Worcester railroad, the first company in New England to use steam-power, and in 1846 was chairman of the commission for building water-works for Boston. He was at various times a member of the legislature, and held important offices in various literary organizations. He published numerous plans and maps of his own design, also the *Journal of Debates and Proceedings in the Massachusetts Constitutional Convention* (1821). He died in Brookline, Massachusetts, Feb. 9, 1863.

HALE, SARAH JOSEPHA (BUELL), an American author; born in Newport, New Hampshire, Oct. 24, 1788. In 1822 she was left a widow with five small children, and found in her indefatigable literary work the means of living. From 1828 to 1837 she edited the *Boston Ladies' Magazine*, and when this periodical was united with *Godey's Lady's Book*, published in Philadelphia, she became editor of this magazine. In 1877 she retired from editorial work. Mrs. Hale was the author of *Woman's Record, or Sketches of all Dis-*

tinguished Women from the Creation to the Present Day (1853); *Northwood* (1827); *Sketches of American Character* (1830), and a number of other useful and entertaining works in prose and verse. Among her fugitive pieces *Mary's Lamb* is one of the most widely known. Her exertions in behalf of the Bunker Hill monument fund, her interest in seamen, in foreign missions, and in the higher education of women, were untiring and effective. For more than twenty years she advocated the keeping of Thanksgiving Day as a national festival, to be held on the same day throughout the country, as it has been observed since 1864, when President Lincoln adopted her suggestion. She died in Philadelphia, Pennsylvania, April 30, 1879.

HALES, JOHN, an English divine and critic; born at Bath, April 19, 1584. At the age of thirteen he entered Corpus Christi College Oxford, obtained a fellowship at Merton College in 1605, and in 1612 became professor of Greek in his university. In 1618 he went to The Hague as chaplain to the ambassador, Sir Dudley Carleton, for whom he made a report of the proceedings at the famous Synod of Dort. He was there converted to Arminianism, his amiable spirit being distressed by the disputations rancor of the Gomarist party. Subsequently he was appointed to a canonry at Windsor. The Puritan supremacy deprived him of this office and reduced him to poverty. Hales was one of the oldest of what is now called the Broad Church school—a rare example of a profound student without pedantry, a ripe theologian with an altogether untheological clearness of mind and directness of phrase. Soon after his death was published the *Golden Remains of the Ever-memorable Mr. John Hales, of Eton College* (1659); in 1765 his *Complete Works* (in 3 volumes) were published in Glasgow. He died at Eton, May 19, 1656.

HALÉVY, JOSEPH, a French orientalist; born at Adrianople, Turkey, Dec. 15, 1827. He studied the Semitic languages, and afterward taught Hebrew in Adrianople and Bucharest. He went to Paris to complete his studies, and obtained letters of naturalization; and became widely known through his Hebrew poems. The *Alliance Israelite Universelle* commissioned him in 1868 to examine the condition of the Fallasha branch of the Jewish religion, in Abyssinia. His report attracted much attention. In 1869 the French government sent him to the southwestern part of Arabia, called Yemen (Arabia Felix of the Romans), to explore it archæologically. Here he deciphered 683 inscriptions, and on his return received the gold medal of the French Geographical Society and the Volney Prize of the Institute of France. He published several volumes on oriental antiquities and epigraphy. Among his notable books are *Critical Researches concerning the Origins of Babylonian Civilization* (1876); *Religious Documents concerning Assyria and Babylonia*; Assyrian text, translation and commentary (1882); *Critical and Historical Miscellany about Semitic People* (1885).

HALÉVY, LÉON, a French poet and dramatist, of Jewish extraction, and a brother of the famous composer, JACQUES FROMENTAL HALÉVY (q. v., Vol. XI, p. 382), born in Paris, in 1802; was educated at the Charlemagne Lyceum, where he became a proficient Greek scholar. Afterward he was a follower of Saint-Simon; assisted the latter in founding *Le Producteur*; issued the *Poésies Européennes*; wrote a *Résumé de l'Histoire des Juifs*; and in 1838 the *Histoire Résumé de la Littérature Française*; from 1831 to 1834 he was professor of French Literature at the Ecole Royale Polytechnique; from 1838 to 1853 he was employed in the bureau of historic monuments in the department of Public Instruction. In 1855 he published the *Fables Nouvelles*, and in 1861 finished *La Grâce Tragique*. Besides, he wrote numerous poems, novels, tales, and translations from ancient and modern languages—Horace and Shakespeare being among his best efforts. His dramatic works cover a wide field. They include the tragedies *Le Czar Demetrius*, and *Electra*, the comedy *Le Duel*, and many dramas. He died at St. Germain-en-Laye, Sept. 3, 1883.

HALÉVY, LUDOVIC, a French dramatist; born at Paris Jan. 1, 1834, and a son of Léon Halévy (q. v.); completed his studies at the Lycée Louis-le-Grand, in Paris; was attached to the Ministry of State, and later for three years Bureau-chief in the Ministry of the Colonies; in 1861 became one of the short-hand writers to the Corps Législatif. He first became known as one of the writers of the librettos to Offenbach's burlesques: *Orphée aux Enfers* (1861); *La Belle Hélène* (1865); *La Vie*

LUDOVIC HALÉVY.

Parisienne (1866); *La Grande-duchesse de Gérolstein* (1867); *La Périchole* (1868); *Les Brigands* (1870). He wrote, besides, a large number of vaudevilles and dramas, some of great merit, among them *Frou-frou* (with Meilhac, 1869); *Tricoche et Cacolet* (1872); *La Petite Mère* (1880). His *Madame et Monsieur Cardinal* (1873) and *Les Petites Cardinal* (1880) are humorous sketches of Parisian theatrical life. In 1882 he published the charming idyllic story *L'Abbé Constantin* (150 editions; many translations; a very successful play was built on its incidents), which was followed by *Criquette* and *Deux Mariages* in 1883. Halévy was admitted to the French Academy in 1886. In many of his most successful plays he had the collaboration of Henri Meilhac.

HALF-BREEDS OF MANITOBA. Half-breed is the name given in America to the offspring of Europeans (chiefly French and Spanish) and the women of native races. In Northwestern Canada, from the early days of the Hudson's Bay and the

Northwest Fur companies, the English and French traders intermarried with Indian squaws, which left a legacy of trouble to Canada in the half-breeds, or, as they sometimes are called, *bois-brûlés*, *coureurs du bois*, or French *métis*. During the French régime in Canada these people were engaged largely in the fur trade as trappers or *voyageurs*, and during the French and Indian wars at times were utilized as *coureurs du bois*. In later times they have become useful as lumbermen, raftsmen, and as guides in the woods and waterways of the continent. For these duties, and especially as woodsmen, these people seem peculiarly fitted. The free life of the forest and plains has inured them to hardship, and developed in them the highest endurance and courage. Few of them take kindly to agriculture or to town life; in the Canadian plains they still continue to lead a partly nomadic life, attaching themselves to hunting, exploring or surveying parties, or engaging in teaming for settlers, or herding on the plains. When Europeans first intruded as colonizers in the Northwest, the half-breeds, in two notable instances, rose in revolt, and necessitated the Canadian government sending a military force to quell the disaffection. It was from the half-breeds in the Red River country and along the banks of the South Saskatchewan, who had been despoiled of their holdings and deprived of their hunting-grounds, that trouble came, and it was this people, of semi-French origin, whom the outlaw, Louis Riel, cajoled into rebellion in 1869 and again in 1885. On the whole, however, the French-Canadian half-breed has been peaceful, and done not a little to promote good feeling between the red man and the white.

HALIBUT. See *HOLBUT*, Vol. XII, p. 58.

HALICORE. See *DUGONG*, Vol. VII, p. 516.

HALIFAX RIVER, a tidal inlet, in Volusia County, central eastern Florida, beginning with Mosquito Inlet and running north thirty miles. It is a mile wide, and is separated from the sea by a narrow strip of land from one quarter to one half mile in width. It abounds in fish and oysters, and is navigable at high tide.

HALIOTIS. See *ABALONE*, in these Supplements.

HALITE. See *Rock-Salt*, under *GEOLOGY*, Vol. X, p. 228.

HALITHERIIDÆ OR HALITHERIUM. See *MAMMALIA*, Vol. XV, pp. 390, 391.

HALL, ASAPH, an American astronomer; born in Goshen, Connecticut, Oct. 15, 1829; received a common-school education, and then went to work as a farm-hand and later as a carpenter; in 1853 managed to pay his way through Norfolk Academy, where he learned algebra and geometry; for several years afterward taught school in Wisconsin; for one year only, he attended the University of Michigan; then, from 1857 to 1862, he was assistant in the Observatory of Harvard University, and then became aid in the United States Naval Observatory in Washington, when, in 1863, he was made professor of mathematics, ranking as captain in the army. He has been

connected with all the important astronomical expeditions sent out under the United States government since 1863, and won great distinction by his discovery (Aug. 11-18, 1877) of the moons of Mars, which he named Deimos and Phobos (Terror and Fear). Professor Hall was elected a member of numerous scientific societies, both in this country and in Europe and received the gold medal of the Royal Astronomical Society (1878).

HALL, CHARLES HENRY, an American clergyman; born in Augusta, Georgia, Nov. 7, 1820; graduated at Yale in 1842; graduated at Genival Theological Seminary, New York City, and ordained a priest of the Protestant Episcopal Church in 1845; held several pastoral charges, the two more recent being the rectorate of the Church of the Epiphany, Washington, D. C., and his present parish of Holy Trinity, Brooklyn, New York. Took an active part in favor of the Cleveland candidacy, 1884. His theological views are broad and his eloquence both practical and popular; was often a co-worker in Henry Ward Beecher's enterprises; wrote *Commentaries of the Gospel* (1867); *Protestant Ritualism* (1871); and *Spina Christi* (1883). He was elected chaplain of the Twenty-third Regiment, National Guard, New York.

HALL, DOMINICK AUGUSTINE, an American jurist; born in South Carolina in 1765. He began the practice of law in his native State, but removed to Louisiana after its purchase by the United States in 1804, and was appointed district judge of Orleans Territory in 1809, holding the office till 1812, when Louisiana was admitted into the Union, when he became one of the United States judges. He had a serious disagreement with General Andrew Jackson when the latter ordered the city of New Orleans to be placed in a state of siege previous to the battle of New Orleans. Judge Hall having granted a writ of *habeas corpus* for the release of a member of the legislature arrested by the commanding general, Jackson refused to recognize the judge's authority, and had him arrested for violating martial law. As soon as he was released, Judge Hall called General Jackson to account for contempt of court, and sentenced him to pay a fine of one thousand dollars. The money was paid at once, but afterward was refunded by Congress. Judge Hall remained in the United States court till his death, which occurred in New Orleans, Dec. 12, 1820.

HALL, FITZEDWARD, an American philologist; born in Troy, New York, March 21, 1825; graduated as C.E. from the (Troy) Rensselaer Polytechnic Institute; sailed at once for Calcutta, where he devoted himself to the study of Sanskrit, Persian, Hindustani and Bengalee. In 1853 he was appointed professor in Benares College, and later to the inspectorship of government schools. In 1862 he accepted the chair of Sanskrit and Indian jurisprudence at King's College, London; was the first American to translate a Sanskrit text; discovered many Sanskrit works supposed to have been lost. He assisted in the

editorship of James A. H. Murray's great Historical Dictionary. Besides the publication of his Sanskrit "finds," he also wrote *Lectures on the Nyāya Philosophy* (1852); *Hindi Grammar* (with Dr. J. R. Ballantyne, 1868); a *Rational Refutation of the Hindu Philosophical Systems* (1862); *Recent Exemplification of False Philology* (1872), etc.

HALL, GERTRUDE, an American author and vocalist; is a native of Boston, the daughter of Edna Hall, a teacher of vocal music. Miss Hall was taken abroad to be educated when only seven years of age; was placed in a school at Florence, Italy, where she remained nine years. *Far from To-Day* and *Foam of the Sea* are two stories which she has published.

HALL, GRANVILLE STANLEY, an American philosopher and educator; born at Ashfield, Massachusetts, May 6, 1846; graduated from Williams College (1867); studied at Berlin, Bonn, Heidelberg and Leipsic; lecturer in Harvard and Williams (1876, 1881, 1882), after having spent four years as professor at Antioch College, Ohio (1872-76); professor of psychology at Johns Hopkins University (1882); president of the (new) Clark University, Worcester, Massachusetts (1888); wrote *Aspects of German Culture* (1881); *How to Teach Reading and What to Read in Schools* (1887); and numerous sketches in magazines devoted to psychology and pedagogy.

HALL, ISAAC HOLLISTER, American Orientalist; born in Norwalk, Connecticut, Dec. 12, 1837; graduated at Hamilton College (1859); tutor there (1861-63); lawyer in New York City (1864-75); professor in the American College, Beirut, Syria (1875-76); associate editor of the Philadelphia *Sunday School Times* (1877). In 1885 became one of the curators in the Metropolitan Museum of Arts, New York; gave much attention to the study of Cypriote inscriptions; discovered in Beirut (1876) a Syriac MS. of the Gospels, Acts and several Epistles dating back to A.D. 700 to 900; published it with notes and a few papers in fac-simile; published in phototype the Williams MS. of the *Antilegomena Epistles* discovered by him; published *A Critical Bibliography of the Greek New Testament as published in America*. Died in Mt. Vernon, N. Y., July 2, 1896.

HALL, JAMES, an American geologist and palæontologist, born at Hingham, Massachusetts, Sept. 12, 1811; graduated from the Troy Polytechnic Institute, 1832, and remained there from 1832 to 1836 as assistant professor of chemistry and natural sciences, and then became professor of geology. In the same year he was appointed assistant geologist of the geological survey of New York, and in 1837 was made state geologist in charge of the fourth district. He made his full report on the survey in 1843, and then was placed in charge of the palæontological work. In 1855 he was state geologist of Iowa, and in 1857 of Wisconsin. He refused the office of chief palæontologist in the Canadian geological survey, although promised the position of director general. In 1866 he was appointed director of the New York State museum, still retaining the office

of state geologist. He wrote numerous important reports on geological and palæontological subjects; laid the foundation of a rational theory of mountains; in 1884 received the quinquennial prize of \$1,000 awarded by the Boston Society of Natural History; was the founder (1840), and later the president of the American Association for the Advancement of Science (1856); received many honors, both here and abroad; was elected a corresponding member of the Academy of Sciences of France; and wrote over 250 papers of importance on his favorite subjects of study. Died at Echo Hill, near Bethlehem, N. H., Aug. 7, 1898.

HALL, JOHN, Presbyterian clergyman; born at Market Hill, Armagh Co., Ireland, July 31, 1829;

REV. JOHN HALL.

was licensed to preach in 1849, and engaged in missionary labor in the west of Ireland. In 1852 he became pastor of the First Presbyterian Church at Armagh, and in 1858 of St. Mary's, Dublin. In 1867 he visited the United States as a delegate from the Presbyterian Church in Ireland to the Presbyterian churches in the United States; and in the

same year was summoned to take charge of the Fifth Avenue Presbyterian Church in New York. In 1881 he became chancellor of the University of the city of New York, resigning in 1891 because of the pressure of other duties. He was a man of broad ideas and an orator of great power; and he wrote *Family Prayers for Four Weeks* (1868); *Papers for Home Reading* (1871); *Familiar Talks to Boys* (1873); *Questions of the Day* (1873); *Foundation Stones for Young Builders* (1880); and *A Christian Home: How to Make and How to Maintain It* (1883). Died at Bangor, Down Co., Ireland, Sept. 17, 1898.

HALL, LYMAN, a signer of the Declaration of Independence; born in Connecticut in 1725; graduated at Yale (1747); studied medicine and removed to Sunbury, Georgia (1752); took an active part in the pre-revolutionary agitation; member of the Savannah conventions (1774-75), and instrumental in deciding Georgia to join the revolted colonies; served in Congress (1775-80); when the British occupied Georgia, all his property was confiscated, and he had to flee for his life; returned to Georgia (1782); governor for one term. He died in Burke County, Georgia, Oct. 19, 1790.

HALL, NEWMAN, an English clergyman; born in Maidstone, England, May 22, 1816; graduated from the London University (1835); began a law career, but soon changed for theology; from 1842 to 1854 was pastor of the Albion Congregational Church in Hull, and then went to London to take charge of Surrey Chapel, Blackfriars road. In 1867 and in 1873 he visited the United States, lecturing in the principal cities. Dr. Hall's publications include: *Come to Jesus* (circulation three million copies; translated into twenty languages); *The Christian Philosopher* (1849); *Italy, the Land of*

the Forum and the Vatican (1853); *Lectures in America* (1868); *Sermons and History of Surrey Chapel* (1868); *From Liverpool to St. Louis* (1869); *Prayer, its Reasonableness and Efficacy* (1875); *The Lord's Prayer* (1883); and *Songs of Earth and Heaven* (1885). His latest book is *Gethsemane; or, Leaves of Healing from the Garden of Grief*.

HALL, SAMUEL CARTER, an Irish author and editor; born at Geneva Barracks, County Waterford, Ireland, where his father commanded a regiment, May 9, 1800. In 1822 he went to London, studied law, and became a reporter for the *New Times*. In 1825 he established *The Amulet*, which he edited for several years; afterward succeeded the poet Campbell as editor of the *New Monthly Magazine*, and did other journalistic work before founding the *Art Journal*, which he edited from 1839 to 1880. He was an industrious worker and skillful compiler, the joint works written and edited by Mr. and Mrs. S. C. Hall (who was Anna Maria Fielding, and a writer of ability) exceeding 340 volumes. Among these were *Ireland* (1841-43); *The Book of Gems: British Ballads*, one of the fine art-books of the century; and *Baronial Halls*. He was an active worker in the temperance cause and a persistent philanthropist. His latest books, somewhat in the form of diaries and replete with interesting details, are *A Book of Memories of Great Men and Women of the Age* (1872); and *The Retrospect of a Long Life* (1883). In 1880 he received a civil-list pension of £150 a year. He died in London, March 16, 1889.

HALL, S. C., MRS. (ANNA MARIA FIELDING), an Irish authoress; born in Dublin, Jan. 6, 1805. At 15 years of age she went to London, where her education was completed and in 1824 married Samuel Carter Hall, whom she assisted in many of his works. She established a reputation of her own by her *Sketches of Irish Character* (1828); *Uncle Horace* (1837); *Lights and Shadows of Irish Character* (1838); *Marian; or, a Young Maid's Fortune* (1839, translated into German and Dutch); *Midsummer Eve* (1843); *The Whiteboy* (1845); and numerous shorter stories. Her dramas, *The French Refugee* (1837) and *The Groves of Blarney* (1838), met with fair success on the stage. She also contributed to the *Art Journal* and other periodicals, edited the *St. James's Magazine* for a year, and wrote various books for the young, some of them illustrated by her own pencil. She assisted in the formation of the Governesses' Benevolent Institution, and the Nightingale fund, the latter resulting in the endowment of a training-school for nurses. She died in East Moulsey, Surrey, Jan. 30, 1881.

HALLAM, ARTHUR HENRY. See HALLAM, HENRY, Vol. XI, p. 393.

HALLE, ADAM DE LA. See *Literature* under FRANCE, Vol. IX, p. 648.

HALLÉ, SIR CHARLES, Anglo-German pianist; born April 11, 1819, near Elberfeld, Germany. He studied chiefly in Paris, and acquired there a high reputation as an original interpreter of classical music. The revolution of 1848 drove him to London, where he soon came prominently into

notice. He subsequently settled in Manchester as director of the local conservatory. In 1857 he instituted a yearly series of classical concerts in London, and until his death they were given regularly with undiminished popularity, adding to his reputation as a virtuoso that of a conductor of great merit. His few compositions are erudite and dignified. Two of his children (by his first wife) are both distinguished in art circles; one (Charles E.) as a painter; the other, a daughter, as a sculptor. He edited *Classical Composers*, and did much for the culture of a high description of music. He was knighted in 1888. Died in Manchester, England, Oct. 25, 1895.

HALLÉ, LADY (WILHELMINE NERUDA), Austrian violinist virtuoso, wife of the preceding; born in Brünn, Moravia, March 20, 1840; pupil of Jansa; made her *début* in 1846 as an infant prodigy, and in 1849 played in London in De Beriot concerts at the Philharmonic; met with great success in Paris (1864); married, the same year, Ludwig Normann, a Swedish musician. In 1888, having been a widow for several years, she married Sir Charles Hallé. In 1899 she paid a professional visit to the United States and was well received.

HALLETT, HOLT SAMUEL, an English civil engineer; born July 16, 1841; educated at the Charter House and in the offices of William Baker, engineer-in-chief of the London and Northwestern railroad; in 1868 was appointed civil engineer under the government of India, and placed in charge of large tracts in British Burmah. With his friend, Archibald Colquhoun, he conceived the vast project of connecting India and China by railway. The survey for his plans entailed dangers of all sorts; but the two associates triumphed over all, and out of the 1,790 miles of road surveyed, the section up to Mandalay is completed, and the balance in a fair way. He wrote *A Thousand Miles on an Elephant in the Shan States* (1887).

HALLETTSVILLE, a town and the capital of Lavaca County, southeastern Texas, 100 miles W.S.W. of Houston, on the San Antonio and Aransas Pass railroad. It is the center of a cotton-raising region, and has cotton-gins and a cottonseed-oil mill. It is supplied with city water and electric lights. Population 1900, 1,457.

HALLEY'S COMET. See ASTRONOMY, Vol. II, p. 814.

HALLIWELL-PHILLIPPS, JAMES ORCHARD, an English antiquary and philologist; born in London, June 21, 1820. He studied for a time at Cambridge, and in 1839 began his long career as editor and publisher of old English authors and manuscript texts. His earlier work embraced plays, ballads, popular rhymes and folk-lore, chap-books and English dialects, but he gradually came to concentrate himself upon Shakespeare alone. At 36 he already had published 57 volumes on his favorite topics. In 1872 he succeeded to the property and name of Thomas Phillipps. This wealth he made use of in the accumulation of an unrivaled collection of Shakespearean books, manuscripts and rarities of every kind, in the entertainment of scholarly visitors, and in gifts of valuable books

to Edinburgh University, Stratford and Birmingham. His great work, however, was his *de luxe* folio edition of *Shakespeare's Works* (1853-65, in 16 volumes, with plates), with a *Life of Shakespeare* (1881). At the time of his death, which occurred in Brighton, Jan. 3, 1889, he was about publishing his *History of the English Stage*, the labor of thirty years of his life. See SHAKESPEARE, Vol. XXI, pp. 768-771.

HALL-MARKS. See PLATE, Vol. XIX, pp. 186, 187.

HALLOCK, GERARD, an American journalist; born at Plainfield, Massachusetts, March 18, 1800; graduated from Williams (1819); entered journalism by establishing the Boston (weekly) *Telegraph* (1824); became part owner of the New York *Observer* (1827); and in 1828 interested himself with David Hale in the publication of the *Journal of Commerce*, an old New York City daily; the partners fitted out a schooner to intercept European mail clippers off Sandy Hook, and organized a pony news-express between Washington and the office of their paper. Both moves made their reputation and their fortune. Mr. Hallock was a pro-slavery man, but very kind-hearted at the same time. Over one hundred fugitive slaves were freed with his own money. He was attached so strongly to his convictions, however, that upon the breaking out of the Civil War he was indicted as a rebel, and his paper was refused the privileges of the mail. He sold it at once, and retired from any interference in politics. He died in New Haven, Connecticut, Jan. 4, 1866.

HALLOWELL, a city of Kennebec County, southwestern Maine, on the west bank of Kennebec (navigable) River, 2 miles S. of Augusta. Cotton goods, oil-cloth, carriages, soap and candles are manufactured here, and in former times ship-building was carried on. Granite of a superior quality is quarried. It has an electric railway and a fine public library. Population 1900, 2,714.

HALLUCINATION. See INSANITY, Vol. XIII, p. 105.

HALM, FRIEDRICH, pseudonym of MÜNCH-BEL-LINGHAUSEN; q. v., in these Supplements.

HALMAHERA. See JILOLO, Vol. XIII, p. 692.

HALMSTAD, a seaport town in Halland province, Sweden, 70 miles N.W. of Christianstad; has a good harbor; exports oats and granite. Pop. 1896, 13,697.

HALOGENS. See CHEMISTRY, Vol. V, p. 490.

HALOID SALTS. See CHEMISTRY, Vol. V, 490.

HALPINE, CHARLES GRAHAM (Miles O'Reilly), an Irish-American soldier and author; born at Oldcastle, Ireland, Nov. 20, 1829; from a Protestant family; graduated at Trinity College, Dublin, 1846; married young, and engaged in journalism. In 1852 he moved to New York, joined the staff of the *Herald*, and his versatility opened for him the columns of a number of periodicals. He became associate editor of the New York *Times*, acted as war correspondent during Walker's filibustering expedition to Nicaragua, which terminated with the death of the adventurer. In 1856 he became part owner of the New York *Leader*, and made it a success. He also wrote for the

New York *Tribune*, and was the author of the famous abolitionist song:

“Tear down the flaunting lie,
Half-mast the starry flag.”

At the beginning of the Civil War he enlisted in a New York regiment; was immediately promoted lieutenant, and afterward served on Hunter's staff with the rank of major. While acting in this capacity he wrote for the New York *Herald* the series of articles purporting to be the production of one “Private O'Reilly.” He served on General Halleck's staff, and with Hunter in the Shenandoah Valley, and received the brevet of brigadier-general of volunteers. After the war he edited the *Citizen*, a New York reform paper, and in 1867 was elected register of New York County by a coalition of the best people in both parties. He died a few months later, Aug. 3, 1868, from an excessive dose of chloroform administered accidentally. His poems were published in volume form under the titles of *Lyrics by the Letter H* (1854); *Baked Meats of the Funeral* (1866); and *The Poetical Works of Charles G. Halpine* (1869).

HALSBURY, HARDINGE STANLEY GIFFARD BARON, an English lawyer and statesman; born in London, Sept. 3, 1825; graduated from Merton College, Oxford; called to the bar, 1850; became Queen's Counsel in 1865. He was engaged in most of the celebrated criminal trials of his time, including the Overend-Gurney and Tichborne cases. In 1875-80 he was Solicitor-General. On the accession to office of the Salisbury government, in 1885, he was made Lord Chancellor of England; was appointed to the same office when Lord Salisbury returned to power, 1886-92, and again in July, 1895. He was a remarkable exception to the rule of the English bar—that no Old Bailey practitioner ever reaches the woosack.

HALSEY, LEROY JONES, an American clergyman and author; born in Goochland County, Virginia, Jan. 28, 1812; graduated from Nashville (Tennessee) University (1834); tutor there (1834-36); studied theology at Princeton; licensed to preach (1840); pastor of the Presbyterian Church, Jackson, Mississippi (1843-48); pastor of the Chestnut Street Presbyterian Church, Louisville, Kentucky, (1848-58); in 1859 he was elected professor of pastoral theology, homiletics and church government in the Presbyterian Seminary of Chicago (now McCormick Theological Seminary); Emeritus professor, 1882; wrote *Literary Attractions of the Bible* (1859); *The Life and Pictures of the Bible* (1860); *The Life and Works of Philip Lindley* (3 vols., 1866); and *Living Christianity* (1881). Died in Chicago, June 18, 1896.

HALSTED, BYRON DAVID, an American agriculturist; born in Venice, New York, June 7, 1852; graduated at the Michigan Agricultural College (1871); doctor of sciences, Harvard (1878); instructor in botany, Harvard (1874-75); became editor of the *American Agriculturist* (1875-84); professor of botany, Iowa Agricultural College (1884); author of *The Vegetable Garden* (1882);

Farm Conveniences (1883); *Household Conveniences* (1883).

HALSTED, MURAT, an American journalist; born in Paddy's Run, Butlers County, Ohio, Sept. 2, 1829; bred to farm life, and graduated from the Farmer's College, College Hill, Ohio, 1851; taught district schools and wrote for country papers; reporter on the Cincinnati *Commercial* (1853); part owner of the paper (1854); editor-in-chief (1856); proprietor (1867). In 1882 he became chief editor of the consolidated *Commercial and Gazette*, a majority of the stock being his.

MURAT HALSTED.

A fearless, independent Republican writer; editor of the *Standard-Union*, Brooklyn, New York (1890). His letters from Cuba (1895-96), afterward published as *The Story of Cuba*, created much sympathy for the insurgents.

HALYS. See ASIA MINOR, Vol. II, p. 707.

HALYSITES, a genus of fossil corals, typical of the family of chain-corals (*Halysitidae*). They are characterized by the skeletons of the individual animals being united in a chain-like series. The name *Catenipora* is often applied to the chain-corals. They are all from Palæozoic strata.

HAMADRYADES. See DRYADES, Vol. VII.

HAMAMELIS OR WITCH HAZEL. See HAZEL, Vol. XI, 549; ARBORICULTURE, Vol. II, 320.

HAMBURG, a city and state of northwestern Germany. See HAMBURG, Vol. XI, pp. 404-09. The state reported, in the census of Dec. 1900, an area of 158 square miles and a population of 704,660. The state consists of two divisions, the population of each of which was as follows on December 21, 1895: City of Hamburg, 625,552; Landgebiet, 56,080, the population of the whole state increasing rapidly in the last few years; the number of foreigners is small in proportion. In 1897 the population of the city proper was 653,960. A large stream of emigration, chiefly to America, flows through Hamburg; but since 1891, when there were 144,000, the number of emigrants has rapidly decreased until 1897, when the number was 35,049. The jurisdiction of the Free Port was, on Jan. 1, 1882, restricted to the city and port by the inclusion of the lower Elbe in the Zollverein. On Oct. 15, 1888, the whole city, except a small portion, including the actual port and warehouses connected with it (population 1,585 in 1895), was incorporated in the Zollverein. The alterations in the port necessitated by this step involved an expenditure of about \$29,200,000, of which the imperial government contributed one-third. Hamburg is the principal port of Germany; in 1894 the number of ships which entered the port was 9,165, with a tonnage of 6,228,821, a considerable increase over any previous year; in 1897 the entries were 11,173, with a tonnage of 6,708,070. In 1897 the clearances were 11,293 ships, of 6,851,987 tons. In 1896 there were 23

miles of railroads. During 1892 Hamburg suffered very severely from an epidemic of Asiatic cholera, introduced by emigrants from infected districts in Russia.

HAMBURG, a city of Fremont County, southwestern Iowa, situated on the Nishnabotna River, near the Missouri, 12 miles S.E. of Nebraska City, on the Chicago, Burlington and Quincy and the Kansas City, St. Joseph and Council Bluffs railroads. It has flour mills and a foundry. It is the shipping and trading point for the fruit and stock-raising vicinity. Population 1890, 1,634; 1900, 2,079.

HAMBURG, a post borough of Berks County, southeastern Pennsylvania, at the foot of Blue Mountain, on the east bank of the Schuylkill River and on the Philadelphia and Reading railroad. It has a rolling-mill, foundries, tanneries and steam-mills, and several German weekly newspapers. Population 1900, 2,315.

HAMERLING, ROBERT, an Austrian poet; born in Kirchberg, Austria, March 24, 1830. He attended the gymnasium in Vienna, and while still a boy wrote several dramas; after the insurrection of 1848 he entered the university, where he studied philology and philosophy; from 1855 to 1866 he was professor in the gymnasium at Trieste, resigning on account of ill-health. He then returned to Graz, where he had been a teacher for a short period, and devoted the rest of his life to authorship. The following are among his most popular works, most of them having passed through several editions. A collection of lyrical poems, *Sinnen und Minnen; Schwanenlied der Romantik; Germanenzug; Ahasver in Rom*, which had a great success; *Der König von Sion; Danton and Robespierre; Die Sieben Todsünden* and *Die Atomistik des Willens*, published after his death. By some, *Ahasver in Rom* and *Der König von Sion* are classed among the finest German epics. Died in Graz, July 13, 1889.

HAMERTON, PHILIP GILBERT, an English etcher and writer on art; was born at Laneside, near Shaw, Lancashire, Eng., Sept. 10, 1834; died at Boulogne, Nov. 5, 1894. In early life his love for landscape painting drew him to the Highlands of Scotland, where he lived for awhile, but marrying a French lady he afterward for a time took up his abode in France, on the art of which country, together with its literary circles, he subsequently wrote much. In 1869, after

PHILIP G. HAMERTON.

studying art on the European continent, and having become a proficient etcher, he founded *The Portfolio*, a high-class art magazine, which he long edited, and in which many of his critical and art contributions appeared. In this and similar congenial work he labored for a quarter of a cen-

tury, accomplishing great things for art, and writing many instructive monographs on painting and the great painters. As a critic, he was well-informed and enthusiastic, and at the same time took a sympathetic interest in literature. His chief writings, besides a volume of poems, the fruit, in the main, of his sojourn in the Scottish Highlands, are *Thoughts about Art*, and *A Painter's Camp in the Highlands* (1862); *Etching and Etchers* (1868); *Contemporary French Painters* (1868); *Painting in France after the Decline of Classicism* (1869); *The Syrian Year*, and *The Unknown River* (1870); *The Etcher's Handbook* (1871); *Chapters on Animals*, and an inspiring work on *The Intellectual Life* (1873); *Round My House* (1875); *Modern Frenchmen*, five biographies of Gallic artists (1878); *Life of J. M. W. Turner* (1879); *The Graphic Arts*, drawings, etc., exemplifying the various branches of art (1882; new ed., 1892); *Human Intercourse* (1884); *French and English, a Comparison* (1889); *Man in Art*; studies in religious and historical art, portrait, and genre work (1892); *The Present State of the Fine Arts in France* (1892); *Drawing and Engraving* (1893); *Autobiography* (incomplete, but supplemented by his widow); and two novels, *Wenderholme* (1869); and *Marmoré* (1878). His principal writings, in 14 volumes, have appeared in a Boston reprint.

HAMILTON, a town and the capital of Marion County, northwestern Alabama, on the Buttahatchee River. Nearest station, Guin, 14 miles south, on the Kansas City, Memphis and Birmingham railroad. It is a farming center. Population 1900, town and precinct, 1,667.

HAMILTON, a town on Great Bermuda at the head of Great Sound, capital of the Bermuda Islands. It is irregularly built, and its chief occupation is raising early vegetables and flowers, mainly for New York markets, and shipping. Population, 8,000.

HAMILTON, a city, port of entry and capital of Wentworth County, Ontario, Canada, at the head of Lake Erie. (For full account of its industries, institutions, etc., see Vol. XI, p. 411.) Population 1881, 35,961; 1891, 48,980.

HAMILTON, a city of Hancock County, western Illinois, opposite Keokuk, Iowa, on the Mississippi River, and at the foot of Des Moines Rapids, on the Toledo, Peoria and Western railroad. It is an excellent fruit region, has abundant water-power, and several manufactories. Population 1890, 1,301; 1900, 1,344.

HAMILTON, a post village of Caldwell County, northwestern Missouri, 50 miles E. of St. Joseph, on the Hannibal and St. Joseph and the Hamilton and Kingston railroads. It has machine-shops, flouring-mills, and is a shipping-point for grain, cattle, horses and hogs. Population 1890, 1,641; 1900, 1,804.

HAMILTON, a village of Madison County, central New York, 27 miles S.W. of Utica, on the New York, Ontario and Western railroad. Colgate University and Hamilton Theological (Baptist) Seminary are situated here. Population 1890, 1,744; 1900, 1,627.

HAMILTON, a city and the capital of Butler County, southwestern Ohio, located on both sides of the Miami River, on the Miami canal and the Cincinnati, Hamilton and Dayton, the New York, Lake Erie and Western and the Pittsburg, Cincinnati, Chicago and St. Louis railroads. The city controls and operates its own gas and water-works, and there is a private gas and electric company. Electric street-railways traverse the principal streets. North of the city the river is turned from its channel into an immense reservoir, which feeds a system of hydraulics, and gives fine power to the factories. There are several national and other banks. The public schools are of a high order, and occupy fine buildings. There is a free library and charitable institutions, such as a children's home and the county infirmary. The county court-house, completed in 1890, is a fine building, and cost \$300,000. Greenwood Cemetery, with its beautiful lake, is well situated; and the city has three public parks. Safe and lock works, stove-foundry, buggy factory, carriage factory, Corliss engine-works, canning factory, a hosiery-mill, autographic register factory, shop for making laundry machinery, and many other enterprises have been recently established. The older industries of this city embrace the manufacture of paper, woolen cloth, tile and flour. With its plentiful opportunities for employment the city grows rapidly. Population 1890, 17,565; 1900, 23,914.

HAMILTON, FRANK HASTINGS, an American surgeon; born at Wilmington, Vermont, Sept. 10, 1813; graduate of Union College, and received his medical degree from University of Pennsylvania in 1835; was chosen professor of surgery in the Western College of Physicians and Surgeons, Fairfield, New York, in 1839; and the next year was called to the medical college in Geneva, New York. In 1846 he became professor in the Buffalo Medical College, and in 1859 was elected to fill the chair of principles and practice of surgery in the Long Island College Hospital, where he remained until the war broke out. For two years he served as surgeon in the army, and attained the rank of lieutenant-colonel. From 1868 to 1875 he was professor of surgery in the Bellevue Hospital Medical College, and was surgeon to the hospital from 1863 to his death, and, during President Garfield's last illness, was one of the consulting physicians. Besides numerous contributions to medical journals, Dr. Hamilton wrote *Treatise on Strabismus* (1844); *Treatise on Fractures and Dislocations* (1860); *Practical Treatise on Military Surgery* (1862); and *The Principles and Practice of Surgery* (1872). Died in New York City, Aug. 11, 1886.

HAMILTON, GAIL. See DODGE, MARY ABIGAIL, in these Supplements.

HAMILTON, GEORGE FRANCIS, LORD, an English statesman; born at Brighton in 1845; he was elected to the House of Commons in 1868 and has served constantly since, representing Middlesex, and, later, the Ealing division of the same county; became Under-Secretary for India in

1874, and four years later succeeded Lord Sandon as vice-president of the Committee of Council on Education, and on the latter occasion was sworn of the Privy Council. In 1885 Lord Salisbury nominated him First Lord of the Admiralty, which office he held also under Salisbury's administration. Lord George was made governor of Tasmania in January, 1887, and in 1894 was elected chairman of the London School Board.

HAMILTON, JAMES, an American statesman; born in Charleston, South Carolina, May 8, 1786; was admitted to the bar; practiced in Charleston; served in the War of 1812 as a major; and for several years was mayor of Charleston. He was several times a member of the legislature, and from 1822 to 1829 was a member of Congress, was elected governor in 1830. Subsequently he removed to Texas, which state he represented in Europe, trying to secure its recognition as a republic, and at the time of his death was a United States Senator-elect from that state. He was one of the founders of the Bank of Charleston and the *Southern Quarterly Review*. Drowned off the coast of Texas, Oct. 15, 1857.

HAMILTON, JAMES, an American artist; born in Ireland, in 1819; emigrated to Philadelphia, Pennsylvania, and in 1856 began furnishing illustrations for books. He illustrated Dr. Kane's *Arctic Explorations*, the *Arabian Nights*, the *Ancient Mariner*, and other popular works. Among his pictures are *Capture of the Serapis*, *Old Ironsides*, *Wrecked Hopes*, *Egyptian Sunset*, *Morning off Atlantic City*, and *Moonlight Scene Near Venice*. His oil paintings are chiefly marine views. He died in Philadelphia, in 1878.

HAMILTON, SIR ROBERT GEORGE CROOKSHANK, a British statesman; born in 1836, in Shetland. He was educated at the University of Aberdeen; entered the civil service; was afterward a War Department clerk, and later was in the Office of Works and the Education Department. After being accountant, later assistant-secretary of the Board of Trade, and two years later (1874) secretary to the Civil Service Inquiry Commission, he was appointed Under-Secretary to the Admiralty. In the same year, 1882, he was made Under-Secretary for Ireland, which position he filled until 1886, when he was appointed governor of Tasmania, which office he held until 1893, when he was named a commissioner to inquire into the affairs of Dominica.

HAMILTON COLLEGE, an institution of higher learning, at Clinton, Oneida County, New York; founded in 1793 as Hamilton Oneida Academy, and chartered as a college in 1812, its first trustee being Alexander Hamilton. It is non-sectarian, but under Presbyterian influence. The attendance averages about 160, all young men, and its faculty numbers 17. The property belonging to the institution is valued at about three quarters of a million dollars, including grounds and buildings. Some \$370,000 of this is productive, and together with all other sources furnishes an income of \$30,000. The campus is a fine park of forty acres, situated on the Oris-

kany. The buildings comprise three halls, a chapel, memorial hall, observatory, gymnasium, library, boarding-hall, hall of natural history and chemical laboratory. The library, which is rapidly increasing in size, has at present 34,000 volumes. The Litchfield Observatory has long been noted for the superior excellence of its service, and here Dr. Christian Peters did much valuable work, some of it of international fame.

The college has two courses, classical and Latin-scientific, while particular attention has always been given to rhetoric and oratory. The prize system is quite elaborate; the college societies are strong and active, and the students publish the *Literary Monthly*. The first class graduated in 1814, and since then 2,390 have received their degrees.

The presidents of the college have been Rev. Azel Backus, Rev. Henry Davis, Rev. Sereno Edwards Dwight, Rev. Joseph Pumey, Rev. Simon North, Rev. Samuel Ware Fisher, Rev. Samuel Gilman Brown, Rev. Henry Darling, Rev. Melancthon Woolsey Stryker, at present head of the institution.

HAMILTON GROUP. See GEOLOGY, Vol. X, p. 345.

HAMLEY, SIR EDWARD BRUCE, a British general; born at Bodwin, in Cornwall, England, April 27, 1824; graduated from Royal Military Academy, Woolwich; entered the service in 1843, and rose gradually until he was made lieutenant-general in 1882; served throughout the Crimean War and in the Egyptian campaign, 1882; was commandant of the Staff College, 1870-77. He received the Crimean medal, the Egyptian War medal, and eight other decorations. In 1854 he produced a charming tale called *Lady Lee's Widowhood*, on which the drama *Rosedale* was founded. His *Operations of War* (1866), of which several editions have appeared, is a standard text-book for military examinations. He also wrote *The War in the Crimea* (1855; 3d ed., 1891); *Voltaire* (1877); *Shakespeare's Funeral and Other Papers* (1889); *National Defence* (1889); and several other books and pamphlets on various subjects, especially against Irish Home Rule. He was Conservative member for Birkenhead, 1885-92. Died in London, Aug. 12, 1893.

HAMLIN, ALFRED DWIGHT FOSTER, an American architect; born at Constantinople, Turkey, Sept. 5, 1855. He was educated at Amherst College and Massachusetts Institute of Technology, and later studied at the École des Beaux-Arts, Paris. Was instructor, and later rose to be professor of architecture in the School of Mines, Columbia College. He was author of a series of papers on *Architectural Shades and Shadows* and *Handbook of the History of Ornament*.

HAMLIN, CYRUS, an American missionary and scholar; born at Waterford, Maine, Jan. 5, 1811; was a graduate of Bowdoin College, 1834; a missionary in Turkey from 1838 to 1876; during this time he founded Robert College, in spite of much opposition from the Turkish authorities, and, later, became head of the institution until 1876, when he returned to America

and became professor of dogmatic theology in Bangor Theological School (1877), and later was president of Middlebury College until 1885, when he removed to Lexington, Massachusetts. Wrote *Among the Turks*, and in 1893 published *My Life and Times*.

HAMLIN, HANNIBAL, an American statesman; born at Paris, Maine, Aug. 27, 1809. After being a printer he was admitted to the Maine bar in 1838, and from 1836 to 1840, and again in 1847, was a member of the legislature, serving a number of years as speaker. In 1842 he was elected to Congress, and re-elected in 1844. In 1848 he was elected United States Senator to fill a vacancy caused

HANNIBAL HAMLIN.

by the death of Senator Fairchild, and was re-elected in 1851; was still a member of that body when, in 1856, he joined in forming the Republican party; resigned in 1857 to serve as governor of his state, but resigned when he was again chosen United States Senator. He held this last position until 1861, when he again resigned, and became Vice-President with Mr. Lincoln. His term expired in 1865. Mr. Hamlin was collector of customs for the port of Boston under President Johnson, and later United States Senator from Maine, from 1875 to 1881, when he was sent as United States minister to Spain. He retired from public life on his return to this country, and held no other office until his death. While in Congress and Senate he was always strongly anti-slavery. Died at Bangor, Maine, July 4, 1891.

HAMLIN UNIVERSITY, an educational institution at Hamline, St. Paul, Minnesota. It was founded in 1854 at Red Wing, Minnesota, and named in honor of Bishop L. L. Hamline of the Methodist Episcopal Church, who furnished the nucleus for its endowment; in 1869 the school was closed on account of lack of funds; was removed to present site and opened again in 1880; was destroyed by fire in 1883, but continued running while being rebuilt. The property of the university is valued at \$310,000, of which \$180,000 is in grounds and buildings and some \$80,000 in productive property and securities, which, together with other sources, furnishes an income of \$16,000. The library has 6,000 volumes; the average attendance is 300 students, with 11 instructors. The school is co-educational, and under the control of the Methodist Episcopal Church. The collegiate department furnishes instruction in the classical and scientific courses. There are also musical and preparatory departments. President, Rev. G. H. Bridgman.

HAMMERHEAD. See SHARK, Vol. XXI, p. 776.

HAMMOND, a city and railroad center of Lake County, northwestern Indiana, 20 miles

from Chicago, on 11 railroad branches, and three miles from Lake Michigan. It has large steel works and an extensive slaughter-house, killing 2,500 cattle daily; nail-mills, axle and spring factories, a foundry, starch-works, and street-railways and electric lights. Population 1890, 5,428: 1900, 12,376.

HAMMOND, JAMES HENRY, an American statesman; born in Newberry County, South Carolina, Nov. 15, 1807. He was admitted to the bar in 1828 and, in 1830 became editor of the *Southern Times*, published at Columbia, South Carolina. In 1835-36 he was a member of Congress, and from 1842 to 1844 was governor of South Carolina. From 1857 to 1860 he was a United States Senator, retiring on the secession of South Carolina. He published letters on the slavery question and wrote several articles on agriculture, manufacture, banks, etc., and a review of the life of John C. Calhoun. Died at Beech Island, South Carolina, Nov. 13, 1864.

HAMMOND, JOHN HAYES, an American mining engineer, was born in California, in 1857, the

J. HAYES HAMMOND. son of Major Richard Hammond. He was educated at the Sheffield Scientific School at Yale, and completed his education as a mining engineer at the Mining College at Freiburg, in Germany, where he graduated with high honors. Returning to California, he was appointed assistant in the department of mining and mineral statistics in the California State Census of 1880. Then he became superintendent of the Sonora silver-mines in Mexico, and was interested in mining properties in the Cœur d'Alene district of Idaho. He worked up a large business, became well known in European investors' circles, and was president of the Bunker Hill Mining Company.

In June, 1893, he left San Francisco to act as expert mining adviser in South Africa to Abraham Barnato, the wealthy speculator. His abilities in the Witwatersrand gold-fields were so marked that his services were secured by the Chartered South African Company as their mining adviser. As such he inspected the Bechuanaland, Matabeleland and Mashonaland gold-fields, and drafted the mining laws and regulations for these districts on the model of the American mining laws. He was described by the *London Times* as "The greatest living authority on quartz-mining."

In January, 1896, he was one of the leaders of the Uitlander Reform agitation in Johannesburg, and signed the appeal to Dr. Leander Starr Jameson, to come to the Uitlanders' aid. He subsequently countermanded the request and expressly desired Dr. Jameson to postpone the attempt. Jameson started Dec. 29, 1895, and surrendered at Doornkop, 6 miles from Johannesburg, on Jan.

2, 1896. The leaders of the Reform Committee, including John Hayes Hammond, were arrested on charges of high treason, and were for some days confined in a veritable Black Hole, which served as a jail at Pretoria. Hammond was in precarious health, and after much discussion was released on bail. On April 27th he was arraigned before an Orange Free State judge in Pretoria, and, on a plea of guilty, was, the following day, sentenced to be hanged. This excessive penalty was immediately commuted, and on May 20th, was reduced to fifteen years' imprisonment. On June 11th the sentence was finally mitigated to a fine of \$125,000 each on the principal reformers, and banishment, in the case of refusal to abjure civil rights, for fifteen years. Hammond then left the Transvaal and came to England to give evidence in the Parliamentary inquiry into the Jameson Raid.

HAMMOND, SAMUEL, an American soldier; born in Richmond County, Virginia, Sept. 12, 1757. He served in the Indian wars of the American Colonies, and in the Revolution, during which he was twice wounded, and attained the rank of colonel of cavalry. After the war he was appointed surveyor-general of Georgia, and from 1803 to 1805 was in Congress. From 1805 to 1824 he was military and civil commandant of Upper Louisiana, the latter part of which time he was receiver of public moneys in Missouri. Was afterward a member of the legislature in South Carolina; was surveyor-general, and from 1831 to 1835, Secretary of State. Died at Augusta, Georgia, Sept. 11, 1842.

HAMMOND, WILLIAM ALEXANDER, an American physician, born at Annapolis, Maryland, Aug. 28, 1828. He graduated from the University of New York as a medical doctor in 1848, and entered the United States army in 1849 as assistant surgeon, leaving the service in 1860, after which he accepted a professorship of anatomy and physiology in the University of Maryland. At the beginning of the Civil War he again entered the army, and in 1862 was appointed surgeon-general, with the rank of brigadier-general; was dismissed on charge of irregularities in liquor contracts, but this sentence was afterward reversed by the President and Congress and he was restored to his full rank. In 1867 he became a professor in Bellevue Hospital Medical College, and then a member of the faculty of the University of the City of New York, medical department. In 1882 he lectured on diseases of the nervous system, in the New York Post-Graduate Medical School. Among his published works are *Physiological Memoirs* (1863); a *Treatise on Hygiene*, with special reference to the military service (1863); *Sleep and Its Derangements* (1869); *Diseases of the Nervous System* (1871); *Lal* (1884); *A Strong-Minded Woman* (1885); *On the Susquehanna* (1887). In 1889 he removed to Washington, District of Columbia, where he now resides.

HAMMONTON, a village of Atlantic County, southeastern New Jersey, on the Camden and Atlantic and the Philadelphia and Atlantic City

railroads, half way between Philadelphia, Pennsylvania, and Atlantic City, New Jersey. Much fruit is grown here, and the village has manufactories of boots and shoes. Population 1890, 3,833; 1900, 3,481.

HAMPDEN, mountain in Mashonaland, South Africa, 8 miles N.W. of Salisbury.

HAMPDEN SIDNEY COLLEGE, an educational institution, located at Hampden Sidney, Virginia; organized in 1783, although it had been founded in 1775 by the Presbyterians of Hanover. While under Presbyterian influence, it is yet non-sectarian. The college stands on a campus of 250 acres, part of which was given by Peter Johnson in 1773. Besides this the school owns \$140,000 worth of income-bearing property, and has a total annual income of \$12,500. In 1898 there were 9 instructors and 128 students. The library contains 16,000 volumes. The course is strictly that of a college, but allows considerable latitude in the choice of studies. Among its founders were James Madison and Patrick Henry. President, Richard McIlwaine, D. D.

HAMPTON, a village and capital of Franklin County, Iowa, situated on the Central railroad of Iowa, 29 miles S. of Mason City. It contains a court-house, several churches and a high school, and has water-works, electric lights, etc. Population 1890, 2,067; 1900, 2,727.

HAMPTON, a town and the capital of Elizabeth City County, southeastern Virginia, on the north side of Hampton Roads, two miles from Fortress Monroe. The principal trade is in oysters, fish and garden produce. The village contains a famous normal and agricultural school, organized in 1868, for Indians and colored youth. This school was organized in 1870 for the education of colored youth; but since 1878 Indians have been admitted. The school was founded by General Samuel Chapman Armstrong. The curriculum comprises courses in English, industrial, agricultural and military education. The attendance, both males and females, is about 650, with a corps of 80 teachers. Teachers are prepared who later work among their own people. A national cemetery is here, and an asylum for disabled soldiers. The small harbor opens into Hampton Roads. Population 1890, 2,513; 1900, 3,441.

HAMPTON, WADE, an American soldier; born in South Carolina, in 1754; he served with distinction in the Revolutionary War; was a member of Congress from 1795 to 1797 and from 1803 to 1805, and in the War of 1812 was a major-general, but resigned in 1814 and retired to his home, in South Carolina, where he applied himself to increasing his wealth. At the time of his death he was the wealthiest planter in the United States, and the owner of three thousand slaves. He died Feb. 4, 1835.—His son, WADE HAMPTON, a soldier; born in South Carolina in 1791; was a lieutenant of dragoons in 1813, and acting inspector-general and aide-de-camp to General Jackson at New Orleans in 1815. Died in Mississippi, in 1858.

HAMPTON, WADE, a United States Senator, and grandson of General Wade Hampton; born at

Charleston, South Carolina, March 28, 1818; was educated at South Carolina University; served in the legislature, where he opposed secession, but entered the army at the outbreak of the war; rose from private to lieutenant-general, and had command, first, of all Lee's cavalry, and later, Johnston's. He was governor of South Carolina in 1878, and United States Senator from 1879 to 1891, and served on Senate Committee of Coast Defense. In 1893 he became United States Commissioner of Railways.

WADE HAMPTON.

HAMPTON ROADS, the deep, broad channel opening from Chesapeake Bay into the James River, just south of lat. 37° n. It was the scene of important operations during the Civil War, especially the famous battle between the *Monitor* and *Virginia* or *Merrimac*. Since the war it has been a summer and winter resort, among its attractions being the famous Fortress Monroe.

HANAFORD, PHEBE ANN, an American authoress; born on the island of Nantucket, May 6, 1829; was educated in the public schools and under Rev. Ethan Allen, rector of St. Paul's Episcopal Church there; married Joseph H. Hanaford in 1849, and was ordained as a minister of the Universalist Church in Hingham, Massachusetts, in 1868, and afterward was called to New Haven, Connecticut, in 1870. Besides being several times chaplain of the Connecticut legislature, she has been grand worthy chaplain of the Good Templars, and represented the grand lodge at Detroit in 1867. She has conducted several lecture tours, has published many poems and made various contributions to literature. Among other works she has published *Lucretia, the Quakeress; The Best of Books and Its History; Abraham Lincoln; The Soldier's Daughter; The Captive Boy of Terra del Fuego; From Shore to Shore, and Other Poems; Charles Dickens; Women of the Century; etc.*

HANCHINOL (*Nesaea salicifolia*), a Mexican plant of the family *Lythraceæ*, with lanceolate leaves and flowers on one-flowered stalks. It is esteemed as a medicine.

HANCOCK, a village of Houghton County, northern North Michigan, situated on Portage Lake, opposite Houghton. It is connected with Lake Superior by a ship-canal, is a terminus of the Mineral Range railroad, and derives its prosperity from its location in the heart of the famous Lake Superior copper region. The village contains several copper-mines, smelting furnaces, stamping-mills, saw-mills and foundries. Population 1890, 1,772; 1900, 4,050.

HANCOCK, a village of Delaware County, southeastern New York, on the Delaware River, at the entrance of the East branch, and the New York, Lake Erie and Western railroad. It has bluestone quarries, tanneries, flour-mills and wood-alcohol factories. Population 1890, 1,279.

HANCOCK, CAPE. See **CAPE DISAPPOINTMENT**, in these Supplements.

HANCOCK, WINFIELD SCOTT, an American soldier; born in Montgomery County, Pennsylvania, Feb. 14, 1824.

GEN. W. S. HANCOCK.

He graduated at West Point in 1844, served with credit in Scott's campaign in Mexico, and on frontier duty until 1861, when he held the rank of captain. Having been appointed brigadier-general of volunteers in 1861, he served in the Army of the Potomac throughout its existence. For distinguished service on the peninsula and at South Mountain and Antietam, he was given a division and the rank of major-general, and in 1863 he was placed in command of the Second Corps, for his services at Fredericksburg and Chancellorsville. His crowning glory was won at Gettysburg. Reynolds fell on the first day, and Hancock was sent forward by Meade to arrange the line until the commander could arrive. On the second and third days Hancock commanded the left center, on Cemetery Ridge, where, just in the moment of victory, he was severely wounded. He received the thanks of Congress, and returned to the command of his corps early in 1864, in time to take part in Grant's campaigns of that year. He distinguished himself again and again at the Wilderness, at Spottsylvania and in the Cold Harbor and Petersburg operations. At the end of the war he commanded various departments, having been made a major-general in the regular army. While in command of the Department of Missouri, he led an expedition against the Indians of the plains. From September, 1867, to March, 1868, he commanded the Department of the Gulf, under the reconstruction acts; and certain orders issued by him, particularly those of Nov. 29 and Dec. 5, 1867, declaring that the military power was meant only to uphold, not to control, the civil power, and declining to exercise arbitrary powers, were so satisfactory to the Democratic party that in 1880 it nominated him for the Presidency. He was defeated by General James A. Garfield, but retained his position as senior major-general of the army and commander of the Department of the Atlantic, and the warm regard of the country. He was in chief command at Grant's military funeral in 1885. He died at Governor's Island, New York, Feb. 9, 1886.

HAND. See *Manus*, under **MAMMALIA**, Vol. XV, pp. 359, 360; and **SKELETON**, Vol. XXII, pp. 117, 118.

HANDBORO, a small village and summer resort of Harrison County, southern Mississippi, three miles N. of the Gulf of Mexico, on Bayou Bernard. It has saw-mills, machine-shop, carriage-shop and a shipyard. Population 1890, 1,021.

HAND-TREE, a common name applied to the Central American *Cheiroskemon platanoides*, a tree of the family *Malvaceæ*, or mallows. The name, both common and technical, refers to the five-curved anthers, taken to represent fingers. The tree is said to have been regarded as sacred in Mexico.

HANGING GARDENS OF BABYLON. See **BABYLON**, Vol. III, p. 183.

HAN KEANG RIVER. See **CHINA**, Vol. V, p. 632.

HANNIBAL, a city of Marion County, northeastern Missouri, on the west bank of the Mississippi River. (See Vol. XI, p. 445.) The population and business have had a steady and healthy growth during the last two decades. It has eight railroads, being the terminus of six trunk lines, which, with competitive river steamers, afford excellent facilities for shipping. The city has broad and handsome streets, well paved, and lighted by electricity. Gas is used chiefly for private lighting. A new electric-motor line of street-railway recently completed gives rapid transit to residence portions of the city. The water-supply is taken from the river two miles above the city, is passed by gravity through a system of filters, and then pumped into reservoirs. In 1890 the public sewer was completed, extending to all parts of the city. At that date there were 17 churches, Hannibal College (Methodist), 5 excellent modern school-buildings, and a free public library, with 10,000 volumes. There are also several good private schools. The banks are in good condition. Hannibal has a number of factories, such as foundries, machine-shops, lumber-mills, flour-mills, lime-kilns, and brick-yards. Pop. 1890, 12,857; 1900, 12,780. See also **HANNIBAL**, Vol. XI, p. 445.

HANOL. See **TONG-KING**, Vol. XXIII, p. 440.

HANOTEAU, HECTOR, a French landscape-painter; born at Decize, Nièvre, France, May 25, 1823. He early developed a disposition for drawing, and gave himself up to his favorite line, landscape-painting, which he studied under Gigoux. His works have been on exhibition in the salon since 1855, and have become favorites from frequent reproduction. Member of the Legion of Honor after 1870, and received a first-class medal at the Paris Exposition, 1889. Among his works are *Village Pond*; *Frogs*; *Paradise of Gusi*; *Sleeping Waters*; *Binage in Autumn*; and *Banks of the Loire*. He died at Briey, Nièvre, April 9, 1890.

HANOVER, a post-village of Jefferson County, southeastern Indiana, on the Ohio River, 5 miles below Madison. It contains Hanover College, which is under Presbyterian control.

HANOVER, a post-village of Grafton County, southwestern New Hampshire, on the Connecticut River, over which is a bridge connecting with Norwich, Vermont. It is the seat of Dartmouth College, and has considerable lumber trade. Population 1890, 1,817; 1900, 1,884.

HANOVER, a post-hamlet of York County, southern Pennsylvania, on the Pennsylvania and the Western Maryland railroads, 35 miles S. of

Harrisburg. The country surrounding abounds in iron ore. The articles manufactured are carriages, cigars, flavin and leather. Population 1890, 3,746; 1900, 5,302.

HANS BREITMANN. See LELAND, CHARLES GODFREY, in these Supplements.

HANSBROUGH, HENRY CLAY, an American journalist and statesman; born in Prairie du Rocher, Illinois, Jan. 30, 1848. He received a common-school education; removed to California with his parents in 1867, where he became a printer; was connected with newspapers in San José and San Francisco, California; Chicago, Illinois, and at Baraboo, Wisconsin. Removed to Dakota in 1882, and in 1883 established a newspaper at Devil's Lake. Served two terms as mayor of Devil's Lake; was a delegate to the National Republican Convention of 1888; was elected to the Fifty-first Congress as the first Representative at large from the state of North Dakota. In 1891 he was elected by the North Dakota legislature to the United States Senate to succeed Gilbert A. Pierce.

HANSI, a town of the district of Hissar, in the province of Punjab, northern India, about 80 miles W.N.W. of Delhi, on a railroad. It was a British cantonment from 1802 down to the mutiny of 1857. Population, 13,563.

HANTS, same as HAMPSHIRE (q. v., Vol. XI, p. 430).

HANUMAN. See APE, Vol. II, p. 151; and ENTELLUS MONKEY, in these Supplements.

HAPLOMI, a suborder of fishes with representatives in all parts of the world. There are three families, the pikes (*Esocidae*), the mud-minnows (*Umbridae*) and the minnows (*Cyprinodontidae*). The pikes are mostly valuable food-fishes, while none of the minnows are of economic importance.

HAPUR OR HAUPER, a town of India, in the Northwest Provinces, 23 miles S. by E. of Meerut. The western portion is substantially built, and the streets metaled and drained; the eastern half resembles a large agricultural village, full of cattle. A famous government stud was formerly maintained here. Population 1891, 14,294.

HARA-KIRI ("belly-cut"), sometimes called HAPPY DISPATCH, a system of official suicide formerly practiced in Japan, obsolete since 1868. Military men, and persons holding civil offices under the government, were bound, when they had committed an offense, to disembowel themselves. This was performed with elaborate formalities, in the presence of officials and other witnesses. Personal honor having been satisfied by the suicide's self-inflicted wound, his head was struck off by his second, often a kinsman or friend of gentleman's rank; but for the last two hundred years it has been the custom for the second to strike as soon as the principal reached for the knife. This mode of suicide was also resorted to by persons who had suffered unendurable affront which could not otherwise be satisfied, the harakiri being regarded not only as an honorable

expiation of crime, but as a blotting out of disgrace. It was necessary, however, to receive permission from the court, as otherwise the estate of the suicide was in danger of confiscation.

HARBAUGH, HENRY, an American theologian; born near Waynesboro, Pennsylvania, Oct. 24, 1817. After taking a partial course in academic and theological studies he was ordained in 1843, and sent to Lewisburg, Pennsylvania. From 1850 to 1860 he was pastor in Lancaster, Pennsylvania, and then went to Lebanon. In 1863 he became professor of theology at the Mercersburg Seminary, and occupied this chair until his death. He edited the *Mercersburg Review* during the last year of his life. His articles on religious topics were popular even among readers of other denominations. Among other things he published *The True Glory of Woman, and a Plea for the Lord's Portion of a Christian's Wealth* (1860); *The Golden Censer* (1860); *Hymns and Chants* (1861); and *Christological Theology* (1864). He died in Mercersburg, Pennsylvania, Dec. 28, 1867.

HARBOR GRACE, a port of Newfoundland, on the west side of Conception Bay, 84 miles by rail W. N. W. of St. John. Its harbor is spacious, though somewhat exposed, but the inner port is very secure. At the entrance of this stands a light-house with a revolving light. In commerce, this town is important, doing nearly a fourth of the business of the island. In population it is second only to St. John, having, in 1891, 6,466.

HARBORS AND DOCKS. This article is necessarily confined to the harbors of the United States, which are divided under the following heads: (1) The Atlantic Seaboard; (2) the Gulf Coast; (3) the Pacific Coast; and (4) the Lake Harbors:

(1) THE ATLANTIC SEABOARD. Calais, Maine, is the easternmost harbor of the United States; is the center of a considerable lumber trade; at Mark's Point, five miles from the town, there is a bar or ledge only eight feet deep at low water; but there is no anchorage in the harbor. Eastport, Maine, has a harbor free of ice in winter; there are two entrances to it, but they are not free from danger in stormy weather. Rockland, Maine, has an open harbor five fathoms deep within half a mile of the wharves and three fathoms to the wharves; but it is often closed by ice in winter. Winter Harbor, Maine, is in Frenchman's Bay, and one of the best on the east coast. Penobscot Bay can carry six to fourteen fathoms up to the town of Bucksport, where there is a good anchorage but a very strong current. Bangor, at the head of this bay, has an extensive lumber and ice trade; the bay is closed by ice during winter; and the harbor is defended by Fort Knox, at the narrows of the Penobscot. The harbor of Wiscasset, near Bath, Maine, can hardly be surpassed by any. Its depth is nine fathoms in the channel of the river. Bath has the largest ship-building and ship-owning interest in the state of Maine; is 12 miles up the Kennebec River, which has so strong a current that the ice can seldom close it up; and the entrance of the river is defended by Fort Popham. Portland, Maine, on a peninsula of the Casco Bay, has a harbor which can carry five fathoms to within half a mile of the wharves, and 16 feet up to the wharves. There are four entrances to the harbor, but only the most southern entrance can be used by large vessels. The harbor is defended by Forts Gorges, Preble, Scammel, and a battery on Portland Head. Portland has a large foreign and coasting trade, and is the principal shipping port for

Canada during the winter, as the harbor is always free of ice.

Portsmouth Harbor, New Hampshire, has a good anchorage, and six fathoms can be carried up to the city. A United States navy-yard is opposite Portsmouth, distant half a mile. For vessels not going up to the city or navy-yard the usual anchorage is at Pepperell's Cove, in from 6 to 11 fathoms. Portsmouth harbor is never closed by ice.

Newburyport Harbor, Massachusetts, has a bar with only six feet of water at low tide, but this obstruction is being removed. Rockport Harbor, Massachusetts, on the northern shore of Cape Ann, is eight fathoms deep to the wharf. It is the best harbor of refuge in that neighborhood. In Massachusetts Bay, between the headlands of Cape Ann and Cape Cod, there are several important harbors, those of Gloucester, Salem, Boston, Plymouth and Provincetown. Gloucester harbor has a good anchorage in five fathoms within 600 yards of the shore and in three and a half fathoms close to the shore; but it is frozen over in winter. Salem harbor can carry three and a half fathoms within half a mile of the town of Salem. The inner harbor is often closed by ice during January and February. Forts Lee, Pickering and Sewall defend this harbor. Boston harbor can carry 21 feet at any tide through the main channel. There are two other channels. It is defended by Forts Warren and Independence. The United States navy-yard is situated near Charlestown, opposite the city of Boston. Plymouth harbor is often frozen over, especially the inner harbor, and only 21 feet can be carried into the outer harbor. Provincetown has one of the finest harbors on the Atlantic coast. It has plenty of water, good holding ground, is easy of access, and, except during severe winters, is clear of ice. Sandwich harbor, in the southwestern part of Cape Cod Bay, is the proposed terminus to the ship-canal from Cape Cod Bay to the head of Buzzard's Bay; now it has a narrow and difficult entrance. New Bedford harbor can carry 16 feet into the inner harbor through a narrow, crooked channel. The outer harbor is an open roadstead with 4½ fathoms of water. There are forts at Clark's Point and Fort Point.

Newport, Rhode Island, has a fine harbor, with water enough for the largest ships; 19 feet can be carried into the inner harbor. Block Island Basin is an artificial harbor made by the United States government for the shelter of small vessels. It is 7 feet deep and protected by a solid stone breakwater. The United States Torpedo Station is located at Newport harbor. Fort Adams and some earthworks on Dutch Island defend it. The town of Bristol, Rhode Island, north of Newport, has a good anchorage in 5 fathoms of water, and off the lower end of the town the anchorage is 21 feet. Twenty-one feet can be carried through a dredged channel up to Providence.

New London Harbor, Connecticut, is on Long Island Sound. It is formed by the lower portion of the Thames River, and has a depth of 30 feet. Being 3 miles in length, it is one of the finest harbors in the United States. The entrance is defended by Forts Trumbull and Griswold. New Haven harbor is only 12 feet deep near the city, and even this depth is only found in a narrow channel. But 4 miles south of New Haven the water becomes 5 fathoms deep. The harbor is defended by Fort Hale. Long Island Sound is very free from dangers throughout its length, and affords many anchoring-places for light-draught coasters.

New York harbor is one of the finest and most capacious harbors of the world. It is entered from Long Island Sound through the East River; the Upper New York Bay is entered from the ocean through the Narrows, between Staten Island and Long Island. The East River forms a large part of the water-front of New York and Brooklyn, and for miles there are docks stretching along its shores. The East River channel was formerly obstructed by dangerous rocks and reefs at Hell Gate, both in mid-channel and projecting from the shores of small rocky islands; but these obstructions have been removed (see HELL GATE, in these Supplements), and a large foreign trade now takes this route. Eight miles below the Upper Bay is Lower New York Bay. It is in itself a harbor sufficiently large to accommodate all the

fleets of the world. The Hudson or North River forms also a large part of New York's water-front. The defenses of the harbor are Fort Schuyler on Throgg's Neck, at the western entrance of Long Island Sound, and a fort on Willet's Point on the opposite shore; Forts Wadsworth and Tompkins at the Narrows, and several detached batteries on the Staten Island shore; and Fort Hamilton and several batteries on the opposite Long Island shore. The forts in the bay are Fort Columbus, Castle William and some batteries, all on Governor's Island, and Fort Gibson on Ellis Island.

Perth Amboy, New Jersey, has a harbor with 11 feet of water up to the town; mean rise and fall of tide, 5½ feet. It seldom freezes over. Steamers can generally force their way through the ice when any is formed.

The harbor of Wilmington, Delaware, has only 12 feet of water, while the Delaware River has 20 feet up to near the city of Wilmington.

Hampton Roads, Virginia, is a channel between Chesapeake Bay and the estuary of the James River. It is defended by Fortress Monroe. This channel affords an excellent rendezvous for a fleet. There is plenty of water for vessels of any draught from the entrance of Chesapeake Bay, very near the fortress. Newport News is on the north, and Norfolk and Portsmouth are on the south side of this channel. The United States navy-yard is situated at Gosport, adjoining Portsmouth, and nearly opposite to Norfolk. Vessels drawing 21 feet of water can be carried to any of these cities. At Annapolis harbor, Maryland, vessels drawing 19½ feet of water can be carried over the bar. To the city of Baltimore, Maryland, 24 feet can be carried through a dredged channel, and 19 feet can be carried to the city of Washington, which is 200 miles from the ocean.

Newberne, North Carolina, is at the head of Pamlico Sound. Ten feet can be carried to the town, but only 8 feet over the bar from the sea into the sound. The same can be said about Plymouth, North Carolina, which is at the head of Albemarle Sound. Wilmington, North Carolina, is 30 miles above the mouth of the Cape Fear River. Eight feet can be carried over the outer bar at the mouth of the river, and 7 feet in the river channel to the city.

To Charleston harbor, South Carolina, 21 feet can be carried up the South Channel; but over the bar to the channel only 14 feet can be carried. Port Royal, South Carolina, at the head of Port Royal Sound, has a fine harbor with 21 feet of water over the bar. Brunswick, Georgia, has one of the best harbors on the coast. A deep arm of the sea, 20 miles long, leads to the town and approaches it by a channel 17 feet deep.

To Savannah, Georgia, 9 feet can be carried, while 17 feet can be carried over the bar at the mouth of the river. St. Mary's, Georgia, on St. Mary's River, has a good harbor. There are several anchorages inside the bar in from 4 to 7 fathoms of water. Seventeen feet can be carried to the town, 10 miles from the ocean.

To Jacksonville, Florida, on the St. John's River, 9 feet of water can be carried over the bar, through a narrow, crooked channel; it is 20 miles from the mouth of the river. St. Augustine has a shifting bar, with 10 feet of water, inside of which there is a good harbor north of the town, 18 to 20 feet deep.

(2) THE GULF COAST. Key West, southwest of the southern end of Florida, has a good anchorage for the largest vessels within a mile of the town. Three channels, the main ship channel, the southwest and the north-west channels, having from 12 to 30 feet of water, lead to this harbor. It is defended by Fort Taylor, some batteries and two Martello towers. The Dry Tortugas, a group of ten low islets west of Key West, form a large, deep and commodious harbor; it is of great strategic importance in the case of war with a foreign naval power, because it will afford its possessor an excellent base for naval operations. This splendid harbor is defended by Fort Jefferson, on Garden Key. Tampa Bay, Florida, is an estuary from 6 to 10 miles wide, and extending north-east for 20 miles, where it forms two arms. It affords anchorage in 5 fathoms of water. Cedar Keys, Florida, has three channels leading to the town. Sea-Horse Key is the deepest of these channels, with 9 feet of water on its bar. Cedar Keys is the terminus of the Florida railroad.

To Appalachicola, at the mouth of the river of the same name, 15 feet can be carried over the bar at the entrance of the bay; but only 4 feet can be carried to the town. St. Joseph's Bay is a large, deep and commodious harbor, just north of Cape San Blas; it can be entered in a gale or hurricane, and affords excellent anchorage. Pensacola Bay, Florida, is protected by Santa Rosa Island, and has an entrance 20 feet deep. It is defended by Forts Pickens, McRee and Barrancas, besides a redoubt on the north side. The city of Pensacola is 10 miles from the entrance, and the United States navy-yard is within three miles of the city.

Mobile Bay, Alabama, is an estuary 30 miles long. The Mobile River, a large navigable stream, flows into this bay. The bay's entrance, between Fort Morgan and Dauphin Island, is nearly three miles wide. Eighteen feet can be carried through a dredged channel 21 miles long to the city of Mobile.

New Orleans, Louisiana, is 120 miles from the sea. The Mississippi River surrounds the city on three sides. Where the river flows into the Gulf of Mexico it spreads out into four prongs, called the Southwest, Southeast, Northeast and South Passes; the famous jetties of Captain James B. Eads are at the entrance of the South Pass; it is 26 feet deep and 300 feet wide, while the other three passes are only from 7 to 15 feet deep. The Mississippi delta and the neighboring waters are defended by the following works: Forts Pike, Macomb, Livingston, Jackson and Philip, Tower Dupré, Battery Bienvenue and the Tower at Proctersville.

To Galveston harbor, Texas, 11 feet can be carried over the outer bar and $9\frac{1}{2}$ feet to the city wharves. Appropriations have been made for deepening the entrance. It is defended at Fort Point and Bolivar Point.

(3) THE PACIFIC COAST. Port Townsend, Washington, on the Strait of Juan de Fuca, has a fine harbor, and 5 to 9 fathoms can be carried within 400 yards of the town. Up to the wharves of Seattle, on Puget Sound, 5 fathoms can be carried, and there is plenty of water at the anchorage off the town.

Astoria, Oregon, at the mouth of the Columbia River, has usually over 28 feet of water from the bar to the town, but the depth of the bar varies.

Crescent City, California, has a very dangerous harbor, with many shoals and rocks. San Francisco has one of the finest harbors in the world. Twenty-three feet can be carried over the bar to the city and in almost any part of the bay, which is connected with the ocean by a strait called the Golden Gate. The entrance of the harbor is defended by Fort Point, on the south shore of the Golden Gate, and another fort has been constructed on Alcatraz Island, two miles north of the city. Vallejo is situated 27 miles north of San Francisco Bay, on the opposite side of Napa Creek from the United States navy-yard. To the anchorage between the town and the navy-yard 21 feet of water can be carried at low tide. Santa Cruz, California, has a well-protected harbor, with good anchorage in water from $3\frac{1}{2}$ to 15 fathoms deep. Santa Barbara, California, has a harbor open on the south side, but partially protected by an island. It is 19 feet deep at the wharves. The harbor of San Diego is formed by a projecting point of land on the west side, which terminates at the south end in Point Loma and on the east side by a flat peninsula. The entrance to this fine harbor is over a bar with 21 feet of water.

(4) LAKE HARBORS. Duluth, Minnesota, has a dredged basin 17 to 20 feet deep, covering a very extensive area. Grand Marais, Minnesota, has a similar basin, protected by a breakwater. Ontonagon harbor, Michigan, is shallow at the mouth of the river; but piers have been built from the shore into the lake, and the bottom between these piers has been dredged until a depth of 12 feet was secured. Oconto, Wisconsin, lies on Green Bay. Its harbor has also been deepened by dredging between two piers. Green Bay harbor has a dredged channel 14 feet deep to the deep water of Green Bay. Sturgeon Bay, Wisconsin, has a harbor of refuge between two piers one quarter mile in length. Its channel is 16 feet deep. Sheboygan Harbor, Wisconsin, is approached by a channel from 14 to 18 feet deep. Milwaukee Bay, Wisconsin, has an artificial harbor of refuge formed by inclosing a portion of Lake

Michigan within an outlet breakwater of crib-work. Milwaukee harbor has a channel 18 feet deep between two piers. Racine harbor, Wisconsin, has a dredged channel 13 feet deep between piers.

Chicago has an outer harbor, adjoining the Chicago River, of a depth of 16 feet, and a harbor of refuge, which affords good anchorage in deep water and safe access to the river and harbor. Calumet harbor has a dredged channel, 300 feet wide and 16 feet deep, from Lake Michigan to the Calumet River. Michigan City has an outer and an inner harbor. The inner harbor has been deepened at shoal points to 17 feet, and the heaviest vessels can now pass to any part of it. The harbor of Cheboygan, Michigan, has a depth of 15 feet in the basin opposite the steamboat-landing, and a 15-foot channel to the Strait of Mackinac. The width is only from 90 to 100 feet in some parts.

The harbor of refuge at Belle River, Michigan, has a channel 50 feet wide and 12 to 13 feet deep. It affords a safe refuge against running ice. Monroe Harbor, Michigan, has a channel 10 feet deep between the Raisin River and Lake Erie, the entrance into the lake being protected by piers. Toledo harbor is approached by a channel dredged through Maumee Bay. It is from 15 to 17 feet deep at low water. Sandusky City harbor has a channel 150 feet wide and 14 feet deep, by which it is approached through the outer bar. Huron harbor is approached between parallel lines of piers running out into Lake Erie. They give a wide entrance of at least 14 feet depth.

Cleveland harbor has now a good, wide channel, where the Cuyahoga River empties into Lake Erie, with a depth of from 17 to 20 feet between the railroad bridge and the lake. Fairport harbor, at the mouth of the Grand River, is approached between parallel piers 200 feet apart, leaving a channel 16 feet deep between them. Ashtabula is approached in a similar way. Erie harbor has a channel of 16 feet depth from the lake to the harbor. Dunkirk harbor has been formed by a breakwater nearly parallel to the shore. The channel is 13 feet deep between ragged rocks on either side. Buffalo harbor is made by a breakwater of crib-work $1\frac{1}{4}$ miles long, running parallel with the shore, and a line of pile and cribwork three fourths mile long running out toward the southern end of the main breakwater. They leave an open space of about 150 feet width between themselves.

Charlotte Harbor, New York, has a channel of 15 feet depth into Lake Ontario. It is the harbor for the city of Rochester, New York. Greatodus has a harbor formed of two breakwaters meeting at an angle. From the opening, parallel piers extend into the lake, the channel between them having now a depth of 10 feet. Oswego harbor, New York, is made by two breakwaters, one a mile in length and the other half a mile. The mouth of the Oswego River has been deepened to 15 feet. The harbor of Sackett's Harbor, New York, was formed by dredging an area of 15 acres to a depth of 12 feet. Ogdensburg harbor, New York, was made by deepening the channel along the St. Lawrence River front to 12 and 14 feet, and dredging a channel 15 feet deep, which leads to the deep water of the St. Lawrence.

Docks are divided into wet docks, dry docks and floating docks. For the description of the wet and dry docks, see Vol. XI, p. 465.

"Floating sectional dry-docks" consist of several sections joined together by sliding beams. Each section consists of a large rectangular tank, at the sides of which are frames formed of four uprights. In each of these frames a float moves up and down in suitable gearings. It rises when a section is being lowered, and goes down when a tank is being raised.

In the "tubular floating-docks," both the bottom and vertical sides consist of large wrought-iron tubes. The bottom consists of eight such tubes running longitudinally; and the sides consist of many similar tubes fixed vertically inside of the two outer longitudinal tubes. The tubes are divided into many water-tight compartments, and have water-valves at the bottom. When the dock is to be sunk, these valves are opened. When it is to be raised, compressed air is forced into the tubes, and the water is thus expelled through the valves. As soon as the dock and its vessel are fully raised, the bottom valves are closed again.

By the "hydraulic lift-dock" the vessel is lifted bodily out of the water upon a raft-like pontoon, which has sufficient buoyancy to sustain the weight of the vessel. For this purpose the pontoon is brought up between two rows of columns extending down to the dock below. These columns carry hydraulic lifts. From the heads of these lifts some rods extend and are made fast to lattice girders reaching across to the opposite column. Upon these girders the pontoon rests. When the pontoon is raised the water is let out by valves in the bottom of its tubes. As soon as the ship is lifted it may be floated away on its own pontoon, and the dock is left free to be used on another pontoon to raise a second ship.

A "balance floating-dock" consists of a large rectangular tank having hollow walls along its two long sides, but no walls at the ends. It is divided into a number of compartments. By pumping water into these side chambers any part of the dock may be lowered; and by forcing compressed air into them and the water out of them, they may be raised. Thus the dock can be balanced at any desired level.

1869 he was appointed Whewell professor of international law at Cambridge, from which he retired, in 1873, on becoming solicitor-general in the Gladstone administration. In the latter year he was knighted. In Mr. Gladstone's second ministry (1880-85) Sir William was appointed Home Secretary, and in that capacity introduced in Parliament the Prevention of Crimes Bill, of 1882, and the Explosives Bill, of the following year, which dealt summarily with the dynamite outrages of the period. He was also a vigorous defender of Mr. Gladstone's Irish Home Rule measure, which was defeated in 1893. During and since this period he has sat in the House of Commons as member for Derby. He went out of office with his party in June, 1885, but on the return of the Liberals to power, Feb. to July, 1886,

HARBOR SPRINGS, a village and the capital of Emmet County, northern South Michigan, on the north coast of Little Traverse Bay, the terminus of a branch of the Grand Rapids and Indiana railroad. It has a very good harbor, from which is shipped farm produce, lumber and fish. It is a summer resort. Population 1890, 1,052; 1900, 1,643.

HARCOURT, SIR WILLIAM GEORGE GRANVILLE VENABLES VERNON, an English Liberal leader, was born at Nuneham Park, Oxford, Oct. 14, 1827. He is the son of the late Rev. W. V. Harcourt, and grandson of a former archbishop of York. After his public school education he entered Trinity College, Cambridge, where he graduated with high honors in 1851. Called to the bar in 1854, he was made Queen's Counsel in 1866, and two years afterward entered Parliament for the city of Oxford in the Liberal interest. In

was Chancellor of the Exchequer; an office which he filled also in 1892-95. On Lord Rosebery's accession to the premiership in March, 1895, he became leader of the Liberal party in the House of Commons, but resigned that position on Dec. 8, 1898.

Next to his chief, Mr. Gladstone, he was one of the ablest and most vigorous speakers on the platform and in Parliament, was an able and effective debater, and had an intimate knowledge of public affairs. He was, moreover, versed in economical and financial subjects, and in 1894, as Chancellor of the Exchequer, introduced in Parliament a radical and almost revolutionary budget, which created a sensation in political circles by its plan of graduated death duties, and its imposts upon foreign and colonial investments.

Sir William Harcourt was one of the original contributors to the London *Saturday Review*, under the editorship of Mr. Douglas Cook. Early in

the sixties he was also a contributor to the *London Times*, and for that journal wrote a series of notable letters on international law, under the pen-name of "Historicus." These letters appeared in 1863 in a collected volume. Sir William, in 1876, married, as his second wife, Mrs. Ives, a daughter of the historian, John Lothrop Motley.

SIR WILLIAM HARCOURT.

HARDÉE, WILLIAM J., an American soldier; born at Savannah, Georgia, Oct. 10, 1815. He graduated at West Point, 1838, and, after serving in Florida for a time as first lieutenant of Second Dragoons, was sent by the Secretary of War to the Military School of St. Maur, France, where he was attached to the cavalry; after his return, was made captain of dragoons. In 1847 he was promoted major for gallantry at the siege of Monterey, and at the close of the war was brevetted lieutenant-colonel. From 1856 to 1861 he was at West Point as commandant of cadets, and then joined the Confederate army with the rank of colonel. He served with distinction during the war, and attained the rank of lieutenant-general. At the close of the war he retired to his plantation in Alabama. Before going to West Point he was called upon by Jefferson Davis, then Secretary of War, to compile what has since been commonly known as *Hardée's Tactics*, adopted for use in the United States army and militia. He died in Wytheville, Virginia, Nov. 6, 1873.

HARDING, CHESTER, an American portrait-painter and artist; born in Conway, Massachusetts, Sept. 1, 1792. He became a house-painter, and later devoted himself to portrait-painting. After studying in Philadelphia he established himself in St. Louis; he also studied three years in London, and in 1826 settled in Boston, where he became very popular. Among the distinguished personages who sat to him were James Monroe, James Madison, John Quincy Adams, John Marshall, William Wirt, Henry Clay, John C. Calhoun, Washington Allston, the dukes of Norfolk, Hamilton and Sussex, Daniel Webster and W. T. Sherman. He wrote *My Egotistography*. Died in Boston, April 1, 1866.

HARDING, SIR ROBERT PALMER, an English lawyer; born in 1821. He commenced his law practice in 1847, and has since taken part in many important liquidation cases, including the celebrated case of Overend, Gurney and Company, in which the liabilities amounted to nearly twenty million pounds sterling. In 1864 he was appointed a commissioner to inquire into the working of the Bankruptcy Act, and in 1883 he reorganized this department on the basis of the Bankruptcy Act of 1883. In January, 1890, he was knighted, and later was appointed a director in Imperial British East Africa Company.

HARDWICKE. THE FAMILY OF YORKE, EARLS OF. The founder of the family was PHILIP YORKE; born at Dover, England, Dec. 1, 1690, the son of a petty tradesman. Under the patronage of Chief Justice Macclesfield he was admitted to the bar (1715), and elected to the House of Commons (1719). Lord Macclesfield becoming Lord High Chancellor (1720), he was made Solicitor-General and Attorney-General (1724), when he had to prosecute his patron, Lord Macclesfield, for malfeasance in office. He was made Lord Chief Justice and a peer in 1733, and Lord High Chancellor in 1737. His legal learning and conservatism were considered of the highest order, and his decisions were never reversed on appeal. In Atkyns and Vesey's *Reports* are to be found many of his decisions. In the matter of common-law marriage his views are, in most respects, adopted by jurists of the present day in England and America. (See MARRIAGE, Vol. XV, p. 567.) Created Earl of Hardwicke in 1754, and died in London, March 6, 1764.—PHILIP, second earl; born Dec. 9, 1720; was distinguished as a man of letters; graduated from Cambridge; in 1762 was elected Chancellor of the University; was Member of Parliament from 1741 to 1764, but his feeble health prevented him from taking an active part in politics. He devoted most of his time to literature; wrote for *Athenian Letters*, author of *Walpoleana*, etc. Died May 16, 1790.—PHILIP, third earl; born about 1757; governor of Ireland as Lord-Lieutenant, 1801-05; fellow of Royal Society; died in 1834.—CHARLES PHILIP, fourth earl; born in 1799; educated at Harrow and the Royal Naval College; member of the House of Commons, 1831-34; inherited the title in 1834; captain of the *Vengeance* in 1848; by his energetic attitude quelled the republican revolution in Genoa against King Charles Albert of Sardinia; made rear-admiral in 1854; Lord of Privy Seal in Cabinet of Lord Derby, 1858-59. Died in 1873.—CHARLES PHILIP, fifth earl; born April 23, 1836; succeeded to the peerage in 1873.

HARDY, ARTHUR SHERBURNE, an American educator and author; born in Andover, Massachusetts, Aug. 13, 1847; graduated at West Point, 1869. Entered the United States Army as second lieutenant, but resigned the following year and became professor of civil engineering and applied mathematics in Iowa College, Grinnell, 1870; after studying one year in the *École des Ponts et Chaussées*, Paris, he became professor in Chandler Scientific School of Dartmouth, and in 1878 professor of mathematics in the college proper. He is the author of *Elements of Quaternions* (1881); *Imaginary Quantities* (1881); *New Methods in Topographical Surveying* (1884); a poem entitled *Francesca of Rimini*, and the following novels: *But Yet a Woman* (1883); *The Wind of Destiny* (1886); and *Passe Rose* (1889); published also the *Life and Letters of Joseph H. Nessima*. Appointed Minister to Persia in 1897.

HARDY, IZA DUFFUS, an English author; a daughter of Sir Thomas Duffus Hardy (1804-78),

keeper of the Royal Records; began writing stories for publication at a very early age. Among her more important novels are *A New Othello* (1890); *Glencairn*; *Only a Love Story*; *A Broken Faith*; and her three American tales *Hearts and Diamonds*; *The Love That He Passed By*; and *Love in Idleness*. She wrote two volumes of American Reminiscences. In 1893 she published *A Woman's Loyalty*.

HARDY, ROBERT SPENCE, an English author; born at Preston, England, July 1, 1803; was ordained a Wesleyan minister (1825); spent twenty-three years in Ceylon as a missionary, where he was one of the earliest students of Buddhism and considered the best scholar of his day in the Páli language. He returned to England in 1848. He wrote *The British Government and the Idolatry of Ceylon* (1841); *Eastern Monachism* (1850); *A Manual of Buddhism in its Modern Developments* (translated from Singhalese MSS., 1853); *Legends and Theories of the Buddhists Compared with History and Science* (1867). Died at Headingly, Yorkshire, April 16, 1868.

HARDY, THOMAS, English novelist; was born in Dorsetshire, England, June 2, 1840, and educated partly at King's

THOMAS HARDY.

College, London, and partly by private tutors. In 1858 he was articled to an architect, and, like Mr. Hall Caine, his fellow-novelist, he for a time equipped himself for the duties of that profession, gaining, in 1863, some notable prizes and medals for architectural design drawing. Some years later, however, he took to literature, and in 1871 published his first novel, *Desperate Remedies*, which was followed in 1872 by *Under the Greenwood Tree*, in 1873 by *A Pair of Blue Eyes*, and in 1874 by perhaps the best of his early works of fiction, *Far from the Madding Crowd*. This latter novel, which appeared in the *Cornhill Magazine*, and was afterward successfully dramatized, deals with Dorsetshire peasant-life, and shows much skill in its handling, with a fine eye for natural beauties, and great power in the portrayal of rustic character. Other novels from his pen are *The Hand of Ethelberta* (1876); *The Return of the Native* (1878); *The Trumpet-Major* (1880); *A Laodicean* (1881); *Two on a Tower* (1882); *The Mayor of Casterbridge* (1882); *The Woodlanders* (1886); and *Wessex Tales* (1888). With *A Group of Noble Dames* and *Tess of the d'Urbervilles* (1891), Mr. Hardy, who had been making good his claim to rank with the foremost novelists of the time, gave a shock to some of his readers by joining the realistic school of fiction and portraying in his tales objectionable types of character, introducing risqué situations and unsavory scenes in the social annals and tragedies of his favorite Wessex families. The natural result followed in an increase of popularity and an outcropping of discussion,

adverse and friendly, on the true function of the novelist, which have since been augmented by the publication of *Life's Little Ironies* (1894); *Jude the Obscure* and *The Pursuit of the Well-Beloved* (1895). In 1893 Mr. Hardy wrote a successful drama, *The Three Wayfarers*, based on his Wessex tales. As an evidence of Mr. Hardy's fame, it may be added, that more than one monograph on him and his novels have appeared, the best, however, being that of Mr. Lionel Johnson, entitled *The Art of Thomas Hardy* (1893), with an etched portrait and bibliography.

HARDY, SIR THOMAS DUFFUS, a British author; born in 1804, at Port Royal, Jamaica. At the age of 15 he became a junior clerk in the Tower of London, was made deputy-keeper of the public records in 1861, and knighted in 1870. He won great distinction by his compilation of the *Monumenta Historica Britannica*, intrusted to him by the government, and for which he wrote a valuable introduction. Among his important works are two folio volumes of the early *Close Rolls* (1833-44); one of the *Patent Rolls* (1835); and others of the *Norman Rolls* and *Charter Rolls*; *William of Malmesbury* (1840); a *Descriptive Catalogue of MSS.* relating to the history of Great Britain and Ireland (1862-71); and other works of much historical value. Died in London, June 15, 1878.

HARE, GEORGE EMLÉN, an American clergyman and a nephew of Robert Hare, the scientist; born at Philadelphia, Sept. 4, 1808; graduated from Union (1826); rector of the Protestant Episcopal Church of St. John, Carlisle, Pennsylvania (1830); then rector of Trinity Church, Princeton, New Jersey (1834); assistant professor of Latin and Greek at the University of Pennsylvania (1844, 1845); rector of St. Matthew's, Philadelphia, and of the Protestant Episcopal Academy; practically the founder of the Philadelphia Protestant Episcopal Seminary, where he was professor for twenty-five years. Died in Philadelphia, Feb. 15, 1892.—His son, WILLIAM HOBART, an American Protestant Episcopal bishop, born in Princeton, New Jersey, May 17, 1838; was ordained deacon in 1859, and priest in 1862. In 1864 he was elected rector of the Church of the Ascension in Philadelphia; next became general agent of the foreign committee of the Board of Missions, and in 1872 was elected Missionary Bishop of Niobrara. His jurisdiction in 1883 was extended over the southern part of Dakota, the incumbent being now called Missionary Bishop of South Dakota. Was sued for slander by a priest he had deposed for cause. After losing the case in the lower court the bishop was fully vindicated by the appellate judges.

HARE, JOHN INNES CLARK, an American jurist, and the son of the scientist, Robert Hare; born in Philadelphia, Pennsylvania, Oct. 17, 1817; graduated from the University of Pennsylvania, 1834; admitted to the bar, 1841; became associate judge of the district court, 1851; presiding judge, 1867; presiding judge of the

court of common pleas, 1875. A lawyer of wide learning and clear comprehension of facts. Published *American Leading Cases in Law* (2 vols.; with H. B. Wallace, 1847); *Smith's Leading Cases in Law* (2 vols.; 1852); *White and Tudor's Leading Cases in Equity* (3 vols.; 1852); *Hare on Contracts* (1887).

HARE, ROBERT, an American scientist; born in Philadelphia, Pennsylvania, Jan. 17, 1781; son of an English brewer. He early showed an interest in chemistry and physics, and before he was twenty was a member of the Chemical Society of Philadelphia. In 1801 he invented the oxy-hydrogen blowpipe; shortly afterward he contrived an apparatus which was the first to render lime, magnesium, iridium and platinum fusible in any considerable quantity; from this discovery proceed what are commonly known as the Drummond or calcium lights. In 1816 he invented the calorimotor, a heat-producing battery; it was the basis of his discovery of the application of voltaic electricity to blasting under water (1831). His chemical "finds" were also many and valuable. In 1818 he became professor of chemistry in William and Mary College, and also accepted a similar position in the medical department of the University of Pennsylvania. He resigned the latter position in 1847. Later he became a believer in spiritualism, and lectured in its advocacy. He made numerous contributions to scientific literature, over two hundred papers in the *American Journal of Science*, and published *Brief View of the Policy and Resources of the United States* (1810); *Chemical Apparatus and Manipulations* (1839); *Compendium of the Course of Chemical Instruction in the Medical Department of the University of Pennsylvania* (1840); *Memoir on the Explosiveness of Nitre* (1850); and *Spiritualism Scientifically Demonstrated* (1855). All his ingenious apparatus, many of them unique in conception and construction, he bestowed by will to the Smithsonian Institution. He died in Philadelphia, May 15, 1858.

HARELD, a duck of the genus *Harelda*, common on the sea-coasts of the northern hemisphere. The bird is often known as the long-tailed duck, also as "old-wife" or "old-squaw."

HARE-LIP. See ANATOMY, Vol. I, p. 831.

HARGRAVE, ROBERT KENNON, a Methodist Episcopal bishop; born in Pickens County, Alabama, September 17, 1829; graduated from the University of Alabama (1852); professor of pure mathematics there (1853-57); entered the Methodist Episcopal ministry (1858); president of the Centenary Institute of Alabama (1867); president of Tennessee Female College (1868-73); bishop of the Methodist Episcopal Church (1882); president of the board of trustees of the Vanderbilt University (1889); saved the publishing-house of the Methodist Episcopal Church South from bankruptcy by his wise management; was a member of the commission of 1868, organized to establish friendly relations between the North and South branches of the Methodist Episcopal Church.

HARGRAVES, EDMUND HAMMOND, an English prospector, the discoverer of the gold-fields of Australia, born at Gosport, England, about 1815; a sailor from boyhood, he saw much of the world, and at the age of 18 settled in Australia; in 1849 he was attracted to California, where he tried his luck as a gold-digger. While thus engaged he was greatly struck by the similarity in the geological formation of California and Australia, and on his return home he entered upon explorations which resulted in the discovery of valuable gold-fields in the Bathurst district, Australia, April 30, 1851. Within a year the export of Australian gold reached \$20,000,000. He was appointed commissioner of crown lands, and received from the government of New South Wales a reward of \$50,000. In 1855, one year after his return to England, he published *Australia and Its Gold-Fields*. He died Oct. 1, 1891.

HARICOT. See BEAN, Vol. III, p. 460.

HARKNESS, ALBERT, an American educator; born in Mendon, Massachusetts, Oct. 6, 1822; graduated from Brown University (1842); taught in the Providence High School (1843-53); spent two years in German universities; professor of the Greek language and literature in Brown (1855). The text-books prepared by him are very extensively used; the leading ones are *First and Second Latin Books* (1851-53); *First Greek Book* (1860; revised 1885); *Latin Grammar* (1864; revised 1874 and 1881); *Latin Reader* (1865); *Latin Composition* (1868); *Complete Latin Course for the First Year* (1883), and his school editions of *Cæsar*, *Cicero* and *Sallust*.

HARKNESS, WILLIAM, an American astronomer, and the son of James Harkness, the Scotch-American Presbyterian divine; born in Ecclefechan, Scotland, Dec. 17, 1837; graduated from the University of Rochester, New York (1858); M. D. (1862); aide to the United States Naval Observatory (1862); joined the army as surgeon just before the second battle of Bull Run; professor of mathematics in the United States Navy (1863); on board the *Monadnock*, during a cruise in South American waters and around Cape Horn, he made exhaustive observations on terrestrial magnetism; the Smithsonian Institution published his notes. From 1868 to 1874 he was attached to the United States Naval Observatory; discovered the 1474th line of the solar corona during the total eclipse of Aug. 7, 1869; as member of the United States Commission to observe the transit of Venus, he visited Hobart Town, Australia (1874); he planned similar expeditions organized since, and invented the machine used to measure astronomical photographs.

HARLAN, a town and the capital of Shelby County, southwestern Iowa; on the Nishnabtna River, and the terminus of a branch of the Chicago, Rock Island and Pacific railroad. It is the trading center of a rich agricultural region, and has manufactories of plows, flour and iron castings. Population 1890, 1,765; 1900, 2,422.

HARLAN, JAMES, an American statesman; born in Clarke County, Illinois, Aug. 25, 1820;

graduated at Indiana Asbury University (1845); superintendent of public instruction for Iowa (1847); president of Iowa Wesleyan University (1853). He sat in the United States Senate as a Whig from 1855 to 1857; was disqualified on a technicality, but reëlected the same year, and again in 1861, when he was a delegate to the Peace Convention. In 1865 he resigned to become Secretary of the Interior; was again elected to the Senate in 1866, and served from March, 1867, to March, 1873. In 1869 he was appointed president of the Iowa University. From 1882 to 1885 he was presiding judge of the court of commissioners of Alabama claims.

HARLAN, JOHN MARSHALL, an American jurist, and son of James Marshall, some time Secretary of State and Attorney-General of Kentucky; born in Boyle County, Kentucky, June 1, 1833; graduated at Centre College, 1850; called to the bar 1853; judge of Franklin County, Kentucky, 1858; he was in the volunteer Union service during the war; was attorney-general of his state 1863-67, and an unsuccessful candidate for governor in 1871 and 1875. On Nov. 29, 1877, he was appointed by President Hayes associate justice of the United States supreme court, and in 1892 one of the arbitrators on the part of the United States before the Bering Sea tribunal.

HARLAND, MARION, pseudonym of TERHUNE, Mrs. MARY V. H., q.v. in these Supplements.

HARLEIAN COLLECTION. Manuscripts preserved as a part of the treasures in the British Museum, London, and gathered by Robert Harley, first Earl of Oxford, 1661-1724, and his son. It consists of early civil and ecclesiastical records, manuscripts of ancient classics, illuminated missals and poems, essays, plays, etc., in almost every modern language. There are about 7,600 volumes and 14,000 original rolls, charters and deeds. It was purchased for £10,000 by the British Government just before the death of its collector. See OXFORD, EARL OF, Vol. XVIII, p. 100. The Harleian Society publishes, at stated intervals, reproductions of some of the most important manuscripts of this collection, in its *Harleian Miscellany*. See also BRITISH MUSEUM in these Supplements.

HARLEM RIVER. See NEW YORK, Vol. XVII, p. 457.

HARLEQUIN. See PANTOMINE, Vol. XVIII, pp. 215, 216.

HARLEQUIN DUCK. A duck of the genus *Histrionicus*, found near sea-coasts of northern Europe-Asia and North America. It migrates southward during the winter. The bird is lead-blue in color with irregular white marks; the male with a white collar.

HARLEY, GEORGE, a Scotch physician; born at Haddington, East Lothian, Scotland, 1829; graduated as M.D. from Edinburgh University, 1850; studied for five years in the leading medical schools of the continent; lecturer on practical physiology and histology at University College, London; professor of medical jurisprudence,

1860; physician to the University College Hospital, 1861; in 1863 he received the triennial prize of the Royal College of Surgeons, for his *Essay on the Superærcnal Bodies*; he wrote *Histology, healthy and morbid, on Diabetes; Albuminuria; Jaundice; Kidney Derangements; Liver Diseases* (1,200 pages.) He has advocated strongly a reform of spelling, and wrote *Simplification of the English Spelling* (1877), and *A Conservative Scheme for National Spelling Reform* (1878). He died in London, Oct. 23, 1896.

HARLEY, ROBERT, an English clergyman and mathematician; born in Liverpool, Jan. 28, 1828; when 16 years old he was appointed mathematical master at Seacombe School, and at 17 assistant head-master at Blackburn School, where he had been educated; in 1846 he started his famous correspondence on algebraic investigations with Sir James Cockle, Chief Justice of Queensland, Australia; educated for the ministry at Airedale College, Bradford; ordained pastor of the Congregational Church of Brighouse, Yorkshire, 1854-68, when he accepted a charge in Leicester; appointed vice-master of Mill Hill School (1872); principal of Huddesfield College (1882); finally devoted all his time to mathematical researches; although a nonconformist, was elected, at 35, a Fellow of the Royal Society; author of numerous papers on pure mathematics, *Inter Alia: On the Method of Symmetric Products; The Theory of Quintics; Differential Resolvents; The Theory of the Transcendental Solution of Algebraic Equations; The Explicit Form of the Complete Cubic Differential Resolvents; The Umbral Notation*.

HARMALINE, a vegetable alkaloid derived from the husks of the seeds of *Peganum Harmala*, or Syrian rue, a zygothylaceous shrubby plant that grows abundantly in the steppes of southern Russia. The seeds have been used in dyeing silk, to which they impart various shades of red.

HARMAN, HENRY MARTYN, an American instructor; born in Maryland, March 22, 1822; graduated from Dickinson College, Carlisle, Pennsylvania (1848); professor in Baltimore Female College (1853-55); principal of Baltimore Classical Institute (1858-68); professor of the ancient languages at Dickinson College (1870-79), when he was appointed there professor of Greek and Hebrew; wrote *A Journey to Egypt and the Holy Land* (1872); *Introduction to the Study of the Holy Scriptures* (1878); and was a contributor to the leading periodicals in his line of study.

HARMAR, JOSIAH, an American soldier; born in Philadelphia, Pennsylvania, in 1753; educated at Robert Prout's Quaker School; entered the Continental army in the First Pennsylvania Regiment (1776); lieutenant-colonel (1777); was in Washington's army (1778-80), and in General Greene's corps, in the South (1781-82); brevet-colonel (1783); brought to France the ratification of the final treaty (1784); was present as Indian agent at the treaty with the Indians at Fort McIntosh (1785); brevetted by Congress brigadier-general (1787); general-in-chief of the United States army (1789); commanded an expedition

against the Miami Indians (1790); resigned (1792); adjutant-general of Pennsylvania (1793-96). Died in Philadelphia, Aug. 20, 1813.

HARMONIC MOTION. See MECHANICS, Vol. XV, pp. 686-691.

HARMONIC RATIO. See HARMONIC ANALYSIS, Vol. XI, pp. 481, 482.

HARMONICS. See MUSIC, Vol. XVII, pp. 88, 89.

HARMONISTS, members of a religious community, of communistic character, organized by George Rapp (1770-1847), a German of Würtemberg. Disturbed by the authorities, they removed in 1803 to Butler County, Pennsylvania, and formed a settlement which they called Harmony. In 1815 they removed to New Harmony, Indiana, but returned to Pennsylvania ten years later, and formed the township of Economy, a few miles from Pittsburg, where they own thirty-five hundred acres of land and carry on important manufactures. They hold all property in common, do not marry, lead blameless lives, and believe in an early second coming of Christ. They make hardly any proselytes and the community is not more than 250 strong (1890). Their very valuable estate will finally become the property of the last survivor.

HARMONY, MUSICAL. See ACOUSTICS, Vol. I, pp. 107-110.

HARMONY OF THE GOSPELS. To write a life of Jesus is a task of more than ordinary difficulty. Research has found no material beyond what is supplied by the canonical books of the New Testament. Before the canon was formed there was opportunity to gather traditions and weave them into a free story, but the oldest extant book of that sort has no larger foundation than the four gospels. Tatian (see Vol. XXIII, pp. 80-82) was in many respects qualified for the task, and his *Diatessaron* was written scarcely more than 140 years from the crucifixion. Yet that work was known to scholars chiefly through the references made to it by Eusebius and Ephraem Syrus, who made a commentary upon it, until the labors of Zahn gave the world a restored text in 1881. The principal worth of Tatian's *Diatessaron* is in its support of the canonical gospels as the sources of authentic information concerning our Lord. He has no other authorities, and he particularly upholds the fourth gospel as to time and genuineness.

For many centuries the conception that the oldest documents received by the Christian church could be harmonized into a corroborative account of Jesus was a favorite theme. Yet, strangely enough, the literature on this subject is scant. Questions have arisen as to which of the evangelists was nearest to the original tradition, or, in other words, was most historical. The earliest writers were not conspicuous for a critical understanding, in the modern sense, and yet they were far from being heedless. Theophilus of Antioch, late in the second century, tried to fit together

the four gospels in one concurrent narrative. In the next century Ammonius of Alexandria made a *Diatessaron* or four-gospels harmony, in which St. Matthew served for a basis of chronology. From this work Eusebius of Cæsarea constructed his *Sections and Canons*, a work with the gospels arranged in parallel passages, and of which the last results of research may be found in Dr. Abbott's article on the GOSPELS, Vol. X, pp. 789-843. This work of Dr. Abbott's, while using the parallelisms of the evangelists, does not aim at harmony, but is a critical effort to exhibit the original tradition of Jesus as current among the first generation of Christians, in which the historic facts are of first importance. It represents the changed view of modern students, for whom historical or higher criticism overrides any mere textual correspondence of language.

In the middle ages there was a characteristic production of lives of Christ, but they were more the work of romancers than scholars. Thus we have the Saxon *Heliand* of 830 in alliterative verse, and a generation later the Alsatian *Life of Christ* by Oufriid, the monk of Weissenburg. These books have philological interest for the study of Teutonic dialects, but are of no value for scriptural students.

The Reformation brought fresh attention to this kind of work, but Osiander's views of plenary inspiration marred the worth of his *Harmonia Evangelica*. Discrepancies he resolved by assuming that events were distinct if their chronology varied. Thus he multiplied Peter's denials of Christ to suit the varied accounts of the evangelists. Calvin's *Harmonia de Tribus Evangelistis Composita* is a more scholarly and critical production. Since his time the number of harmonists has been very great. The best of them have been Griesbach (1776), Robinson, the American (1845), and Stroud (1853). No better work on the subject is to be found than Tischendorf's *Synopsis Evangelica* (1884), which embodies the best results of modern textual study. The tendency, however, of scholarship is away from forced parallelisms and hard conciliations. The scheme of Osiander leads to wild results, and cannot be tolerated, although it supplies an easy solution of chronologies otherwise hard to reconcile. It is seen more and more that each evangelist has his own point of view and is best understood by finding the aim of his narrative and not by processes of forced reconciliation. It is found that Mark and John best accord in narrative. Harmonists are divided upon the duration of our Lord's ministry, and the division turns upon the number of Passover feasts he is reported by the evangelists to have observed. The shortest reckoning of his ministry includes but two, the longest four paschal observances. All commentators of the New Testament must deal with these discrepancies, and harmonizing is now left almost wholly to them. Among these commentaries, mention should be made of Wescott's incomplete and Lange's voluminous work. Dr. Robinson's *Harmony* has been re-edited by M. R. Riddle

(1885-86), both in English and Greek, with a text collated from Tregelles, Wescott and Hort. See also Dr. Frederick Gardiner's *Harmony of the Four Gospels* (Andover, 1871), and Canon Venables's translation of Karl Wieseler's *Chronological Synopsis of the Four Gospels* (1878). Rushbrook's *Synopticon* (1880) is a valuable collection of textual facts bearing upon the harmony of the evangelists, and may well be studied with Dr. Edwin A. Abbott's *Common Tradition of the Synoptical Gospels*.

HARMS, GEORG LUDWIG DETLEV THEODOR, a German clergyman and missionary educator; born at Walsrode in Lüneburg, May 8, 1808. After studying theology at Göttingen he taught a private school till 1844, when he became the assistant of his father, the pastor of Hermannsburg, and a strong rationalist. There he preached pure evangelicism with such vigor and emotional power that the old orthodox tenets soon supplanted the rationalism which had previously prevailed. In 1849, after he had succeeded his father, Harms founded an institute for training young men as missionaries for Africa. It grew to large proportions and to an expenditure of over forty thousand dollars. A book plant was added to the training-school, and, thanks to Pastor Harms's enthusiastic fervor, it never lacked the funds necessary for its healthy growth. He died in 1865. A biography of this good man, and a collection of his most interesting letters to friends and fellow-workers, were published by his brother THEODORE, and had a large circulation.

HARNACK, ADOLF, a German-Russian clergyman and historian, and the son of Theodosius Harnack (1817-1889), a prominent Lutheran divine and professor of Dorpat (Russia) University; born at Dorpat, May 7, 1851; studied there (1869-1872); tutor in Leipsic 1874; professor of church history at Giessen (1879), at Marburg (1886), at Berlin (1889); said to be the leader among the German church historians. Among his very important works are *The Works of the Apostolic Fathers* (1876-78, with Gebhardt and Zahn); the serial publication entitled *Texts and Researches in the History of Early Christian Literature* (1882-96, 12 vols. issued so far); *Introduction to St. Augustine's Confessions* (1888); *Text-book on the History of Dogma* (1889); *The New Testament about A. D. 200*; *Apostolic Faith Knowledge* (1892); *History of Early Christian Literature up to the Time of Eusebius* (first vol., 1893).

HARNETT, CORNELIUS, an American statesman; born, it is supposed, in North Carolina, April 20, 1723. He early manifested his opposition to the encroachments of royal authority, and, as a member of the North Carolina provincial assembly (1770-71), took the lead in many energetic protests and remonstrances; in 1773 he was placed on the committee of continental correspondence for the Wilmington (North Carolina) district. He was president of the Provincial Council, and a signer of the "Articles of Confederation and Perpetual Union." The British excluded him from the offer of a general pardon,

and when, in 1781, they had temporary possession of the Cape Fear region, he fell into their hands, and died a prisoner, at Wilmington, North Carolina, April 20, 1781.

HARNEY, WILLIAM SELBY, an American soldier, born near Haysboro, Tennessee, Aug. 27, 1800. He entered the army in 1818 as second lieutenant of the Nineteenth Infantry, and remained in continuous service until 1863, when he was placed on the retired list, having attained the brevet rank of major-general "for long and faithful service," having refused, although a Southerner by birth, to enter the rebel ranks, in spite of General Robert E. Lee's earnest appeal. General Harney took part in the Black Hawk War (1833); the Florida and Mexican wars; he completely defeated the Sioux at Sand Hills (1855). After his retirement he lived in St. Louis. Died May 9, 1889.

HARO OR SAN JUAN ARCHIPELAGO. See SAN JUAN ISLANDS, Vol. XXI, p. 266.

HARPALUS. See DEMOSTHENES, Vol. VII, p. 71.

HARPER, a city of Harper County, central southern Kansas, situated 47 miles S.W. of Wichita, on the Hutchinson and Southern and the Atchison, Topeka and Santa Fé railroads. It is the shipping center of a fertile farming section, and has shipments of grain, live-stock, hides and wool. Population 1890, 1,579; 1900, 1,151.

HARPER, a family of American book-publishers of wide reputation. The business was established in New York City by the sons of Joseph Harper, a Newton (New York) farmer. The firm's name was, at first (1817), J. & J. Harper; the members were JAMES, born April 13, 1795; mayor of New York in 1844; died March 27, 1869, and JOHN, born Jan. 22, 1797; died April 22, 1875; in 1833 the firm assumed its present name of Harper Brothers, and took in JOSEPH WESLEY, born Dec. 25, 1801; died Feb. 14, 1870, and FLETCHER, born Jan. 31, 1806; died May 29, 1877. Their first book was *Seneca's Morals*. Their plant grew to occupy nine buildings on Pearl street, New York, when it was destroyed by fire in 1853, a net loss (above insurance money) of \$750,000; the stereotype plates were saved, however, and the stock of books quickly replenished. The new building, on Franklin Square, is entirely fire-proof, and forms the most completely equipped house of the kind in the world. Their four periodicals—two weeklies, *Harper's Weekly* and *Harper's Bazar*; two monthlies, *Harper's Magazine* and *Harper's Young People*—are widely read and very profitable. The school-book department is a very important feature, and contains such standards as *Anthon's Classics* and *Harper's Latin Dictionary*. In fiction a number of high-class, copyrighted works are constantly placed upon the market. The owners of this great business are now a number of sons and grandsons of the founders.

HARPER, WILLIAM RAINEY, an American educator, was born in New Concord, Muskingum County, Ohio, July 26, 1856; at fourteen he was

graduated at the Presbyterian College, in his native town; studied at Yale University; in charge of a Masonic institute for boys in Ma-

WILLIAM RAINEY HARPER.

con, Tennessee, 1875; removed to Granville, Ohio, in 1876, and rose from a tutorship to the charge of Denison University, a Baptist college there; in 1879 became professor of Semitic languages in the Baptist Union Theological Seminary, near Chicago; professor of the same branches at Yale University from 1886 to 1891; chosen president in 1891 of the revived University of Chicago, to which office he added the labors of instruction in Semitic literature; obtained endowments of several millions of dollars for that institution, and organized it on a comprehensive scale for continuous academic terms and post-graduate work. (See UNIVERSITY OF CHICAGO, in these Supplements). Dr. Harper gave much personal service to the expansion of the Chautauqua system of general education; adopted a method of teaching language by educating grammar from the text, applied his method to text-book editions of Cæsar's *Commentaries* and the *Aeneid*; was associated with the production of text-books concerned with Biblical Hebrew and Greek; and edited *Hebraica* and *The Old and New Testament Student*.

HARPIGNIES, HENRI, a French painter; born in Valenciennes, July 28, 1819; a pupil of J. Achard; had his first paintings (landscapes) accepted at the Salon of 1853; continued to exhibit remarkably luminous landscapes, generally with some personages or cattle to enliven the scenery; he takes most of his subjects from central France and the mountainous regions of Auvergne; received medals in 1856, 1867 and 1868; also at the Paris International Exposition of 1878; Knight of the Legion of Honor in 1875; officer in the same order in 1883. His *Moonrise* is at the Metropolitan Museum, New York, and a number of his best efforts have been purchased in this country. The Luxemburg (State) Museum in Paris owns his *Oaks of Château Renard* and his *Valley of Aumouce*. Had formed a number of pupils, prominent in their art.

HARP-SEAL OR GREENLAND SEAL (*Phoca groenlandicus*), the common seal hunted in the Newfoundland fisheries. It is commercially valuable for its oil and skin. The name refers to the two half-moon shape marks on the back of the male, together forming a lyre-shaped spot—the so-called "saddle." See SEAL, Vol. XXI, p. 581.

HARP-SHELL (*Harpa*), a genus of gastropodous mollusks of the whelk family (*Buccinidae*), found in the deep waters of tropical seas. The name refers to the regular parallel ribs on the shells, which suggest the strings of a harp. The beautifully colored shells are prized highly by

shell-collectors. The animal itself is used as food by the inhabitants of Mauritius.

HARPSICORD. See PIANO-FORTE, Vol. XIX, pp. 65, 69, 70.

HARRADEN, BEATRICE, an English novelist; born at Hampstead, Jan. 24, 1864; educated at Dresdenschule and in English colleges; graduated B. A. in classics and mathematics at the University of London. She belongs to a musical and artistic family, and early showed a disposition toward literature. After writing some short stories, chiefly for children, she was fortunate in appearing in *Blackwood's*. Her first book, *Things Will Take a Turn* (1891), was for children. Her next, *Ships that Pass in the Night* (1893), was partly autobiographical, and secured immediate attention. Her *In Varying Moods* (1894) is a collection of stories including *At the Green Dragon*; *The Painter and His Picture*; *The Umbrella-Mender*; *A Bird of Passage*; *The Clockmaker and His Wife*; *Sorrow and Joy*; and *An Idyll of London*. She lived in California for two years on account of her health, and wrote *The Remittance-Man*, dealing with an American subject, and other stories. Her recent works are *Hilda Strafford* (1897); *Untold Tales of the Past* (for children, 1897); and *The Fowler* (1899).

BEATRICE HARRADEN.

HARRINGTON, MARK W., an American astronomer and meteorologist; born in Sycamore, Illinois, Aug. 18, 1848; graduated from the University of Michigan (1868); lecturer on astronomy in Oberlin College and at the Louisiana State University (1868-70); in the United States Coast Survey Service in Alaska (1871); studied in Leipzig (1876-77); professor of astronomy in the Chinese Cadet School, Peking (1878); professor of astronomy at the University of Michigan and director of its observatory (1879-91); established the *American Meteorological Journal* (1884); and elected fellow of the Association for the Advancement of Science; chief of the United States Weather Bureau (1891-95), and writer of article on Meteorology in these Supplements.

HARRIS, SIR AUGUSTUS GLOSSOP, an English playwright and theatrical manager, was born in Paris in 1852. He became the manager of several of the London theaters, and raised the performances to a high standard of excellence. Among the most successful of his plays, usually written in collaboration with other dramatic writers, were *The World*; *Human Nature*; *A Run of Luck*; *A Million of Money*; *The Prodigal Daughter*; *A Life of Pleasure*; and *The Sporting Duchess*. He was a member of the London county council, sheriff of the city of London, and a deputy lieutenant of the city of London. The Queen knighted him in 1891, on the occasion of the German Emperor's visit to London. Died in Folkestone, June 22, 1896.

HARRIS, DAVID BULLOCK, an American soldier; born in Frederick's Hall, Louisa County, Virginia, Sept. 28, 1814; graduated from the United States Military Academy (1833), entering the artillery; assistant professor of engineering at West Point (1834); resigned (1835) to engage in civil-engineering and business; joined the Confederate army as captain of engineers (1861); the first to determine the military importance of the line of Bull Run; was conspicuous for his bravery during the first battle of that name; in the staff of General Beauregard during the latter's western expedition (1862); he planned and built the works at Island No. 10 and Fort Pillow, and later the Vicksburg defenses; had charge of the engineering operations around Charleston, South Carolina (1862), and of the same kind of work around Petersburg, Virginia (1864); had just been commissioned brigadier-general when he died of yellow-fever, near Charleston, South Carolina, Oct. 10, 1864.

HARRIS, HOWELL; born 1713. See METHUEN, Vol. XVI, p. 193.

HARRIS, ISHAM GREEN, an American soldier and public man; born near Tullahoma, Tennessee, Feb. 10, 1818; had only a meager common-school education, as a clerk in a store, and later as a merchant in a small way, he spent his evenings studying for the legal profession; admitted to the bar in 1841, he commenced practice at Paris, Tennessee; elected to the state legislature as a Democrat in 1847; elected Congressman in 1849, and re-elected in 1851. In 1853 he moved to Memphis, and from 1857 to 1863 was governor of the state. During the last three years of the war he was a volunteer aid on the staff of General Albert Sidney Johnston, and was with him when he fell at Shiloh; took part in all the important battles, except Perryville. After the war he lived 18 months in Mexico and a year in England; then resumed his profession at Memphis, Tennessee. In 1877, 1883, 1889, and 1895 he was elected to the United States Senate; and in 1893 was elected unanimously president *pro tem* of that body. His last term would have expired in 1901. Died in Washington, D. C., July 8, 1897.

HARRIS, JOEL CHANDLER, an American author; born in Eatonton, Georgia, Dec. 8, 1848; was, in turn, printer, lawyer and journalist, and by his sole, indefatigable efforts secured an education. In 1890 he succeeded his friend, Henry W. Grady (whose biography he wrote), as editor of the *Atlanta Constitution*. His delightfully original and unexpected book, *Uncle Remus, His Songs and His Sayings; The Folk-Lore of the Old Plantation* (New York, 1880), quickly carried his name even to the Old World, at once to children and scientific students of folk-lore. Later

works are *Nights with Uncle Remus* (Boston, 1883); *Mingo, and Other Sketches* (1884); *Free Joe* (1887); *Daddy Jake, the Runaway* (1889); *Balaam and His Master* (1890). His negro dialect and his way of relating incidents in every-day negro-life in Georgia are recognized as masterpieces of their kind.

HARRIS, ROBERT, a Canadian painter; born in Carnarvon, Wales, Sept. 17, 1849; educated at Charlottetown, Prince Edward Island; after trying surveying as a profession, he studied art, first from nature, later (1877) from prominent teachers in Paris and London; exhibited there, at the Salon and at the Royal Academy; settled in Canada; produced large historical paintings, such as *Fathers of Confederation* (in the library of the Parliament House, Ottawa). His *Meeting of School Trustees*, a realistic canvas of much power, figures in the Canadian National Gallery; devoted himself more especially to portrait-painting; refused to serve as president of the Royal Canadian Academy.

HARRIS, SAMUEL SMITH, an American Protestant Episcopal bishop; born in Autauga County, Alabama, Sept. 14, 1841; was graduated from the University of Alabama (1859); was admitted to the bar (1860), and engaged in the practice of his profession in Alabama until 1865, when he removed to New York. In 1869 he was ordained priest in the Protestant Episcopal Church, and held pastorates at Montgomery, Alabama; Columbus, Georgia; New Orleans, Louisiana; and Chicago, Illinois; declined the bishopric of Quincy, Illinois (1878). In 1879 he was consecrated bishop of Michigan. He published *Bohlen Lectures* (1882).

HARRIS, THADDEUS MASON, an American clergyman; born in Charlestown, Massachusetts, July 7, 1768. His father, a Revolutionary patriot, died during the war, leaving his family destitute; had to make his living on a farm; attracted the attention of Dr. Morse, the owner of a private school, and was prepared there for Harvard; was graduated in 1787; had he not been attacked with small-pox, would have been accepted as Washington's private secretary; librarian at Harvard (1781); studied theology at Worcester, and was chosen pastor of the First Unitarian Church, Dorchester, Massachusetts (1793), where he officiated for 46 years. He wrote *The Minor Encyclopædia* (4 vols., 1803); *Journal of a Tour in the Territory West of the Alleghany Mountains* (1805); *A Natural History of the Bible* (1821). He died in Dorchester, Massachusetts, April 3, 1842.—His son, THADDEUS WILLIAM, an American entomologist, was born in Dorchester, Massachusetts, Nov. 12, 1795; was graduated from Harvard (1815); practiced medicine at Milton Hill, Massachusetts; librarian of Harvard (1831); gave instruction in natural history and organized the Harvard Students' Natural History Society; was made commissioner for the zoölogical and botanical survey of Massachusetts (1837), and published a report of the insects in the state, enumerating 2,350 species; the legislature published his *Insects Injurious to Vegetation* (1841; enlarged ed., 1852); was also much interested and active in antiquarian researches.—His

JOEL CHANDLER HARRIS.

brothers, WILLIAM THADDEUS (1826-54) and EDWARD D., were also men of learning, much interested in genealogy and old state and town histories. The latter died in Cambridge, Massachusetts, Jan. 16, 1856.

HARRIS, WILLIAM TORREY, an American educator; born Sept. 10, 1835, in Killingly, Connecticut; educated at Phillips Andover Academy and Yale; superintendent of St. Louis public schools (1868-80); founded the Philosophical Society of St. Louis and the *Journal of Speculative Philosophy* (1866, the first of its character published in America); president of the National Educational Association (1875); removed to Cambridge, Massachusetts, (1880); represented the United States government at the Brussels International Congress of Educators (1880), and prepared, for the Vienna and Paris (1889) expositions, the official *Statement of the System of Education of the United States*; president of the Boston Schoolmasters' Club; commissioner of education under President Harrison; and editor of an *International Educational Series of School Books*.

HARRISBURG, a town and the capital of Saline County, southern Illinois, 60 miles N.E. of Cairo, on the Cleveland, Cincinnati, Chicago and St. Louis railroad; situated in a county abounding in salt, iron, coal and lead. Agricultural implements are manufactured here, and salt, coal and iron are found in the vicinity. Population 1890, 1,723; 1900, 2,202.

HARRISBURG, the capital of Dauphin County, Pennsylvania, and capital of the state; pleasantly situated on the left bank of the Susquehanna River, which here is crossed by four bridges, each over a mile in length. Besides the state capitol building, the city contains a courthouse, the state arsenal, the State Insane Asylum, a Roman Catholic cathedral, and some forty other churches. The state library contains about sixty thousand volumes. The prosperity of Harrisburg is due chiefly to its facilities for communication with the coal and iron districts of the state; the Cumberland Valley, Northern Central Pennsylvania, Philadelphia and Reading, and the Vanderbilt or Southern Pennsylvania railroads, all centering here, to which the facilities afforded by the Pennsylvania canal, with its outlets, may be added. As a result of the resources, it has large and important manufacturing establishments of iron, steel, boilers, galvanized iron cornices, brick, and tile. The manufactories of the city had, in 1890, a capital of \$6,700,000; and produced merchandise valued at \$10,500,000. They employ, on an average, 6,900 hands, and pay an average of \$3,370,000 annually in wages. Harrisburg is also an important depot for lumber via the Susquehanna River, and has extensive saw and planing establishments. Population 1880, 30,762; 1890, 39,385; 1900, 50,167. For history, description of capitol building, etc., see Vol. XI. p. 494.

HARRISON, a town and the capital of Boone County, northwestern Arkansas, on Crooked Creek, 39 miles E. of Eureka Springs, the nearest railroad station. It is the trade center of a farm-

ing section, and has a United States land-office, and cotton and flour mills. Population 1900, 1,551.

HARRISON, also called East Newark, a town of New Jersey, on the Passaic, opposite Newark, with which it is connected by a bridge. It has manufactures of oil and enameled cloth, wire, thread, cutlery, electrical supplies, a stone-yard, machine-shops, large steel-works, and shade-roller and trunk factories. Population 1900, 10,596.

HARRISON, a post village of Hamilton County, southwestern Ohio, situated on the state boundary, 25 miles N.W. of Cincinnati, on the White Water River, and on the Cleveland, Cincinnati, Chicago and St. Louis railroad. It contains tanneries, flour-mills, brush factories, corn-drill factory, railroad-shops, woolen and furniture factories, creameries and distilleries. It is surrounded by agricultural lands. Population 1900, 1,456.

HARRISON, FORT, a United States military post in the military department of Dakota, situate three miles from Helena, Montana, and reached by the Northern Pacific and Great Northern railroads. It is garrisoned by two companies of infantry.

HARRISON, BENJAMIN, an American statesman; a signer of the Declaration of Independence; born in Berkeley, Charles County, Virginia, about 1740. In 1773, although rather conservative in his views, he was a member of the committee of correspondence which united the colonies against Great Britain, and was five times elected to a seat in Congress. On July 4, 1776, he reported the Declaration of Independence. He opposed, at first, the ratification, by Virginia, of the Federal constitution of 1788, but finally gave it his full support. He was governor of Virginia in 1782-85, and at the time of his death was a member of the legislature. He was the father of President W. H. Harrison (his third and youngest son), and the great-grandfather of President Benjamin Harrison. He died in April 1791.

HARRISON, BENJAMIN, the twenty-third President of the United States, great-grandson of the preceding; born in North Bend, Ohio, Aug. 20, 1833; was graduated in 1852 from Miami University; studied law in Cincinnati. In 1854 he removed to Indianapolis, Indiana, where he has resided ever since when not on duty in Washington; gained a large legal practice; entered the Union army (1862) as lieutenant, and shortly afterward was appointed colonel of the Seventieth Indiana Volunteers, which he organized; served with gallantry in the Atlanta campaign, returning to civil life at the close of the war with the rank of brevet brigadier-general. In 1876 he was an unsuccessful Republican candidate for governor of Indiana, but in 1881 was sent to the United

BENJAMIN HARRISON.

States Senate for six years. In 1888 he was nominated on the Republican ticket for President of the United States, with Levi P. Morton for Vice-President. He received 233 electoral votes to 168 for Grover Cleveland, the Democratic nominee, the popular vote standing 5,439,853 against 5,540,329. Among the important measures adopted during his term were the McKinley Tariff Bill, the suppression of the Louisiana Lottery, the establishment of Mr. Blaine's reciprocity policy, the extension of the new navy, the settlement of the Chilean and Samoan difficulties, and the Bering Sea fisheries arbitration. In 1892 President Harrison was again the nominee of the Republicans, with Whitelaw Reid on the ticket for Vice-President, but this time he encountered defeat from the same rival, who succeeded him in the Presidency in 1893, Mr. Cleveland receiving 276 electoral and 5,553,142 popular votes, against Mr. Harrison's 145 electoral and 5,186,951 popular votes. He resumed his law practice and assumed the duties of lecturer of jurisprudence at the Leland Stanford Junior University, in California.

HARRISON, CONSTANCE (CARY), an American authoress, born April 25, 1845, near Alexandria,

MRS. BURTON HARRISON.

Virginia. She was descended from Archibald Cary of Amptill, Virginia, who presided over the senate of his native state from its organization and through the Revolutionary War, while on her mother's side she belonged to the Fairfax family. Educated in private schools in Virginia, she was noted in her girlhood for her piquant beauty. Her mother's home was devastated in the Civil War, and the family resided in Richmond, where, in 1867, she was married to Burton Harrison, who had been private secretary to Jefferson Davis. He became a member of the New York bar, and early established a summer residence at Bar Harbor, Maine. Mrs. Harrison's first book concerned this summer resort, and was entitled *Goldenrod: An Idyll of Mount Desert* (1879). Eight years later she published *Bar-Harbor Days*.

The literary work of Mrs. Harrison has been concerned with the scenes of her life and with society. In magazines and collections of tales she has depicted with sympathetic art life in Virginia. *Flower de Hundred* (1891) is concerned with the plantations of her native state, where kinship, hospitality and inherited culture gave rise to sunny manners. *Crow's Nest and Belhaven Stories* (1892) disclose life in quaint old Alexandria, one of the most historic cities of the South, and the pathos of the old families living through the war. In 1887 Mrs. Harrison appeared as a satirist of society manners, in *Anglomaniacs*. The commin-

gling of aspiring and newly opulent people with those of hereditary fortune and culture in the resorts of fashion furnished her with themes that she handled with a genial but unsparing pen, and with keen appreciation of incongruities. Of this character are *A Daughter of the South* (1892); *Sweet Bells Out of Tune* (1893); *A Bachelor Maid* (1894); *An Errant Wooing*, a romance of foreign travel (1895); *A Virginia Cousin* (1896); and *A Triple Entanglement* (1898). She also wrote *The Well-Bred Girl in Society* (1898).

HARRISON, FREDERIC, an English jurist and author, president of the London Positivist Committee, was born in London, Oct. 18, 1831; educated at King's College, London, and Wadham College, Oxford; scholar (1848); first class in classics (1853); fellow and tutor (1854); called to the bar, Lincoln's Inn (1858); examiner in jurisprudence for Inns of Court (1869-76), for London University (1875-79); professor of jurisprudence, Inns of Court (1878-80); member of Royal Commission on Trades Unions (1867-69); secretary to Royal Commission for the Digest of the Law (1869-70); member of the State Trials Committee (1888). As president of the London Positivist Committee, he published numerous essays and addresses on positivism, and was the author of very many articles in the *Fortnightly*, *Contemporary*, and *Nineteenth Century*, from their commencement, also of *The Meaning of History* (1862, expanded 1895, with a series of historical essays added); *Order and Progress* (1875); *Social Statics*, the second volume of Comte's *Positive Polity*, a translation (1875); the *Choice of Books* (1886); *Oliver Cromwell* (1888); and a great number of privately printed lectures on historical, social and religious questions. He was editor and part author of *The New Calendar of Great Men*, a dictionary of general biography, and a constant contributor to Professor Beasley's *Positivist Review*, published since 1893. He was defeated for Parliament by Sir John Lubbock in 1886; was elected an alderman by the London county council in February, 1889, but resigned in October, 1893.

HARRISON, JANE E., an English Hellenist; born in 1850; passed the Cambridge higher scholar examinations, winning the language scholarship; studied at Cheltenham, and later at Newnham, where her success was so great that she was declared by the examiners, informally, to have attained the honors standard; she made a specialty of Greek art and pottery, and traveled extensively in Europe, studying the leading collections of ancient sculpture. Returning in 1882, she began object-lessons at the British Museum, Greek Galleries and at South Kensington, where she lectured on Greek vase-painting; wrote *Introductory Studies in Greek Art; Greek Vase-Painting*. She was indorsed by such men as Professor Sedgwick and Sir E. Burne-Jones.

HARRISON, THOMAS ALEXANDER, an American painter; born in Philadelphia, Pennsylvania, Jan. 17, 1853; a pupil of Gerôme (at the École des Beaux-Arts, Paris); first-class medal, Paris Exposition (1889); knight of Legion of Honor; medal in Munich Exposition (1890). One of his pictures

is in the Luxembourg Palace state collection, and his *Crépuscule (Gloaming)* is in the Museum of Fine Arts, St. Louis. He devoted himself to marine and figure painting, with occasional landscapes. Though a resident of Paris, he was a member of the Society of American Artists, New York. His *Castles in Spain* is in the J. G. Johnson collection, Philadelphia.

HARRISON, WILLIAM POPE, an American Methodist Episcopal clergyman and author; born in Savannah, Georgia, Sept. 3, 1830; graduated from Emory College, Oxford, Georgia; entered the Methodist Episcopal ministry, and was appointed, by the General Conference South, editor of the *New Monthly Magazine* (1870); later book-editor and editor of the *Quarterly Review* (1884-86); four years chaplain of the House of Representatives, Washington; member of the Œcumenical Conference of his church, which met at Washington, District of Columbia (1891). He wrote *Theophilus Walton; or, The Magnets of Truth* (1858); *Lights and Shadows of Forty Years* (1883); *The Living Christ* (1884); *Methodist Union* (1892); *The Gospel Among the Slaves* (1893).

HARRISONBURG, a city and the capital of Rockingham County, northern Virginia, 22 miles N.N.E. of Staunton, on the Baltimore and Ohio railroad. It is in a beautiful region, between the Blue Ridge and the Shenandoah mountains. It is the trade and shipping center of a fertile agricultural tract. It manufactures carriages, farming implements and leather. Population 1900, 3,521.

HARRISONVILLE, a town and railroad center, and the capital of Cass County, central western Missouri, 38 miles S.S.E. of Kansas City. It has excellent transportation facilities, as railroads radiate from it in eight directions, among them the Kansas City, Fort Scott and Memphis and the Missouri Pacific. It ships quantities of coal and farm produce, and manufactures much flour and hardwood lumber, and has machine-shops and foundries. Pop. 1890, 1,645; 1900, 1,844.

HARRODSBURG, a town and the capital of Mercer County, central Kentucky; settled in 1773, and said to be the oldest town in the state; on the Southern railroad, 30 miles S. of Frankfort. It enjoys a reputation for its mineral waters, which makes it quite a resort; is the seat of an academy and of Daughters' College; has a variety of manufacturing establishments, including those of flour, tobacco, jean and whisky, and carries on an important trade in horses, cattle and other livestock. Population 1890, 3,230; 1900, 2,876.

HARROW SCHOOL, one of the famous English public schools, established in 1571, at Preston, near Harrow-on-the-Hill, 12 miles from London, by John Lyon, an enriched yeoman, as a free school for poor boys. It is now a strictly aristocratic institution, containing about six hundred boys, and preparing them for the universities. A number of scholarships have been founded from time to time, to secure free college education to boys of unusual ability. To meet the requirements of the age, the school is divided into

classical and modern sides, the latter being more especially devoted to scientific studies. The boys board in the various houses kept by the masters, but meet in the school buildings for common study. Among the hundreds of *alumni* of Harrow that attained prominence may be mentioned Sir Robert Peel, Cardinal Manning, Lords Byron, and Palmerston, Lord Shaftesbury, Earl Spencer, and Archbishop Trench.

HART, a village and the capital of Oceana County, western southern Michigan, 32 miles N. of Muskegon, on the Chicago and West Michigan railroad, and on the Pentwater River. It is in a grain and fruit growing region, and manufactures flour, sashes and broom-handles, and has saw-mills. Population 1890, 757; 1900, 1,134.

HART, ALBERT BUSHNELL, an American historian; born in Clarksville, Pennsylvania, July 1, 1854; was graduated from Harvard in 1880; received his Ph.D. degree from the University of Freiburg, Germany, in 1883; was successively fellow, instructor and assistant professor of history at Harvard; wrote *Coercive Powers of the United States Government* (1885); *Introduction to the Study of Federal Government* (1890). He prepared *Epoch Maps Illustrating American History*.

HART, ERNEST, an English physician and sanitary reformer; born in 1836; a brilliant pupil of the City of London School; first-prize man in every class during his stay at St. George's Hospital Medical School; ophthalmic surgeon and lecturer at St. Mary's Hospital School; wrote a book on the treatment of aneurism; chosen by the British Medical Association as the editor of their *Journal*; devoted himself to questions concerning social and sanitary progress, editing the *Sanitary Record* and *London Medical Record*; chairman of the National Health Society and the Smoke-Abatement Committee; exposed the defective arrangements for the sick poor in workhouses; urged the measures that culminated in the passage of the Metropolitan Asylums Act in 1867; established societies for the protection of infant life and for cheap concerts for the poor; helped in shaping the Public Health Acts, and in bettering the medical departments of the army and navy; worked strenuously in favor of such measures as would secure the purity of the milk supplied to cities; favored successfully the creation of an Irish peasant proprietary by the reclaiming of waste land—a measure embodied in a recent act of Parliament.

HART, JAMES McDUGAL, a Scotch-American painter; born at Kilmarnock, Scotland, December, 1828; coming to Albany, New York, by his parents, he began life in very humble circumstances, and was apprenticed to a carriage-painter; at the age of 23 he managed to go to Düsseldorf, Germany, and study in the Art School there. Landscape attracted him more particularly. In 1856 he took up his residence in New York City, and was elected a National Academician (1859). His pictures are exquisite in contours and colors without missing any of nature's touches. His best-known works are *Moonrise in*

the Adirondacks; A Summer's Memory of Berkshire; The Drove at the Ford. In 1889 he received a medal at the Paris Exposition for *The Rain is Over* and *In the Autumn Woods*.

HART, JOEL T., an American sculptor; born in Clark County, Kentucky, in 1810; as a boy he earned his living as a stone-cutter in Lexington, Kentucky, where he began to model busts in clay. In 1849, in Rome, where he had been sent at the expense of citizens who recognized his budding talent, he modeled the statue of Henry Clay, which is now in Richmond, Virginia. His next work was a colossal bronze statue of Mr. Clay, now in New Orleans, and the marble statue of that statesman now in the Louisville courthouse. He resided until 1879 in Florence, Italy, and finished busts and statues of many distinguished men. Among his portrait-busts are those of Jackson, Taylor and Governor Crittenden, all characteristic and truthful likenesses. His best ideal works are *Charity*, *Angelina*, the graceful *Woman Triumphant*, and *Pensive*. In all of them he showed a delicate, refined fancy. Hart invented an apparatus for obtaining mechanically the outline of a head from life, thus doing away with the great inconvenience of applying plaster direct on the skin. It consisted of a metallic shell which surrounded the head, with a space between, perforated for a large number of pins. Each pin was pushed inward till it touched the head, and then fastened there. The shell was afterward filled with plaster, which was cut away till the points of the pins were reached, thus forming a rough model. He died in Florence, Italy, March 1, 1877.

HART, JOHN, a signer of the Declaration of Independence; born in Hopewell township, New Jersey, in 1700; he was not a soldier, but a courageous public-spirited farmer. He served in the provincial legislature of New Jersey, and was a member of the Congresses of 1774, 1775, and 1776. He died in Hopewell township in 1780.

HART, SIR ROBERT, G. C. M. G., Director of Chinese Imperial Maritime Customs since 1885, was born in 1835 at Portadown, Co. Armagh, Ireland. Educated at Queen's College, Belfast; entered Consular service in China in 1854, and has since been Inspector-General and now Director of the Chinese Imp. Maritime Customs. Has many Chinese decorations. Was among the imprisoned Legationnaires at Peking during the Boxer rising of 1900.

HART, SAMUEL, an American clergyman and educator; born at Saybrook, Connecticut, June 4, 1845; graduated from Trinity College, Hartford, June, 1868, where he has been successively tutor, assistant professor and professor of Latin language and literature; entered the priesthood of the Protestant Episcopal Church; custodian of the *Standayd Prayer Book* (1886); president of the American Philological Association (1891-92); declined the appointment of bishop of Vermont (1893). He prepared editions of *Juvenal* (1873); *Persius* (1875); *Bishop Seabury's Communion Office* (1874); *Historical Sermons of Bishop Seabury* (1883-86).

HART, SOLOMON ALEXANDER, an English painter; born at Plymouth, in April, 1806, the son of a Jewish goldsmith who, in 1820, removed to London. Apprenticed first to a line-engraver, he became a student of the Royal Academy in 1823, and before he was 21 had paintings exhibited. Among his works are *The Elevation of the Law; Isaac of York; English Nobility Receiving the Communion; Henry I Receiving Intelligence of the Death of His Son; Milton Visiting Galileo in Prison; The Three Inventors of Printing.* The government bought his *Interior of a Synagogue* for the National Museum. He also painted miniatures and portraits. In 1840 Hart became R.A.; in 1857 professor of painting at the Royal Academy; in 1863 librarian of the same institution, in which office he improved materially the importance and quality of the collections in his charge. He died in London, June 11, 1881.

HARTE, FRANCIS BRET, an American novelist and poet, was born in Albany, New York, Aug. 25, 1839. His father was a schoolmaster and a man of fine education, and his son at one time designed to follow teaching as a profession. In 1854, however, he made his way to California in quest of fortune, and there, after working for a time at the mines, he became a compositor in a printing-office, and afterward undertook the editing of a local newspaper.

BRET HARTE.

In connection with the latter, he was insensibly drawn to literature, and in 1867 published, under the title of *Condensed Novels*, a collection of clever parodies of the novels of leading American and English writers of fiction. In the following year he became editor of *The Overland Monthly*, and in its pages appeared much of his earliest and most characteristic work, both in prose and verse. In 1870 he published a collection of poems, among which were the famous *Heathen Chinee* and *The Society Upon the Stanislaus*, which earned him a wide reputation as a humorist, followed by the inimitable prose sketches of realistic mining-life entitled *The Luck of Roaring-Camp*. These achievements won for him world-wide fame, and brought him an engagement to write, at a then unprecedented honorarium, a series of poems and sketches for the *Atlantic Monthly*. After this, he settled for a time in New York, when he received an appointment as United States consul at Crefeld, Germany, from which place he was transferred, in 1880, to the consulship at Glasgow, Scotland. At Glasgow, the novelist resided until 1885, when he settled in London, where he actively pursued his literary career, working chiefly, when at his best, in his old-time Californian vein. In him Western life has had no more dramatic or picturesque exponent, and no one has sketched with such vividness and animation the era of the Argonauts.

His style is at once vigorous, but easy and flexible, and in the character-drawing it is terse, vivid and racy. Rare are the skill and insight with which he seizes and portrays a situation, and with a few masterly strokes limns a figure on his canvas, bringing out, by his unerring genius, either the squalid and the base, or the noble and the heroic, elements in humanity. He has, moreover, a delicious humor, though it can at times be broad as well as subtle. His later writings are mainly in the field of fiction. The following are his chief writings: *East and West Poems* (1871); *Mrs. Skaggs's Husbands* (1872); *Echoes of the Foothills* (1874); *Tales of the Argonauts* (1875); *Gabriel Conroy* (1876); *Two Men of Sandy Bar* (1876); *Thankful Blossom* (1877); *Story of a Mine and Drift from Two Shores* (1878); *The Twins of Table Mountain, and Other Stories* (1879); *Flip, and Found at Blazing Star* (1882); *In the Carquinez Woods* (1883); *On the Frontier* (1884); *Maruja and By Shore and Sedge* (1885); *Snow-bound at Eagle's* (1886); *The Crusade of the Excelsior* (1887); *A Phyllis of the Sierras and Drift from Redwood Camp* (1888); *The Heritage of Dedlow Marsh* (1889); *A Waif of the Plains* (1890); *Colonel Starbottle's Client* (1892); *A Sappho of Green Springs* (1892); *Sally Dows, and Other Stories* (1893); *A First Family of Tasajara* (1893); *A Protégé of Jack Hanlin's* (1894); *A Ward of the Golden Gate* (1894); *The Bell-Ringer of Angel's, and Other Stories; Clarence; In a Hollow of the Hills; and Stories in Light and Shadow* (1898).

HARTFORD, a city, the capital of Hartford Co., Conn., and of the state since 1873. For an account of its site, history, and government, see HARTFORD, Vol. XI, pp. 496-97. The population in 1890 was 53,182; by the twelfth census (1900), it was 79,850. The postoffice building was completed in 1883, the county courthouse in 1884, the Board of Trade building in 1891. There are several important educational institutions: Trinity College (Episcopal, founded 1823, with a library of forty thousand volumes); the Congregational Theological Seminary, and various high schools and private academies. There are fifteen miles of street-railway, and seven railroads enter the city.

HARTFORD, a village of Van Buren County, southwestern south Michigan, on the Chicago and West Michigan and the South Haven and Eastern railroads, 58 miles S. of Grand Haven, and on the Paw Paw River. It ships much farm produce, especially wheat, apples and stock. It manufactures staves, hardwood lumber and wind-mills. Population 1900, 1,077.

HARTFORD CITY, a town and the capital of Blackford County, northwestern central Indiana, 40 miles S. of Fort Wayne, on the Lake Erie and Western and the Pittsburg, Cincinnati, Chicago and St. Louis railroads. It contains a hub and spoke factory, a heading factory, flour-mill, and window-glass, paper, wood-pulp and stave factories. Population, 2,287; 1900, 2,602.

HARTFORD CONVENTION, THE. See UNITED STATES, Vol. XXIII, p. 759.

HARTING, JAMES EDMUND, an English orni-

thologist; born in London, April 29, 1841; graduated from the University of London (1860); practiced law until 1878; from his youth devoted much attention to the study of ornithology; edited the natural history column of *The Field* (1871); appointed editor of the *Zoölogist* (1877); assisted earnestly in the drafting and passing of the Sea Bird Preservation Act (1869) and the Bill for the Protection of Wild Fowl (1872); appointed Librarian to the Linnæan Society (1888); wrote *The Birds of Middlesex* (1866); *The Ornithology of Shakespeare* (1871); *Handbook of British Birds* (1872); *Our Summer Migrants* (1875); *Rambles in Search of Shells* (1876); *Ostriches and Ostrich-Farming* (1879); *British Animals Extinct Within Historic Times* (1880); *Glimpses of Bird-Life* (1880); *Essays on Sports and Natural History* (1883); and various commented reprints of ancient works on hawks.

HARTINGTON, SPENCER COMPTON CAVENDISH, MARQUIS OF. See DEVONSHIRE, DUKE OF, in these Supplements.

HARTLEY, JONATHAN SCOTT, an American sculptor; born in Albany, New York, Sept. 23, 1845; received his artistic education at the London Royal Academy and in Germany; Royal Academy medallist (1869); one of the original members of the Salmagundi Sketch Club of New York; professor of anatomy at the Art Students' League (1878-84), and for two years its president. He produced *The Young Samaritan; King René's Daughter* (1872); *The Whirlwind* (1878); a statue of Miles Morgan, erected at Springfield, Massachusetts, in 1882; and bas-reliefs on the monument at Saratoga that commemorates the defeat of Burgoyne.

HARTLEY, SIR CHARLES AUGUSTUS, an English civil engineer; born at Heworth in 1825; finishing his course in civil-engineering at Bishop Auckland and Leeds (1845); he entered the service of the Scottish Central railway; resident engineer at Sutton Harbor, Plymouth (1848); captain in the Turkish contingent engineers (1855); engineer-in-chief of the European Commission of the Danube (1856); knighted (1862); awarded the 8,000-ruble prize in the imperial competition for plans to improve Odessa harbor; consulting-engineer to the Danubian Commission (1872). Made a specialty of improvement of docks, harbors, river-outlets, and was engaged by many governments to offer plans for bettering the commercial facilities of their harbors and waterways; received many orders and medals; recommended the improvement of the south pass of the Mississippi (1874), thus assisting the successful efforts of Capt. J. B. Eads; refused his official approval to the Panama canal scheme; wrote *Delta of the Danube; Public Works in the United States and Canada; Inland Navigations in Europe*.

HARTMAN, JACOB, BARON VON, a Franco-German soldier; born in the Bavarian palatinate, Feb. 5, 1795; educated at the military schools of Bonn and St. Cyr; entered French service (1811); at Waterloo saved the eagle of his regiment,

and was made knight of the Legion of Honor; entered the Bavarian service (1815); improved materially the topographical branch of the service; major-general (1849); published a book on the Franco-Austrian war (1859); as lieutenant-general he commanded the Bavarians against the Prussians (1866); as full general he commanded a Bavarian corps against the French, and served at Paris (1870-71). He died at Würzburg, Bavaria, Feb. 22, 1873.

HARTMANN, ALFRED, a Swiss author; born Jan. 1, 1814, near Langenthal, canton of Bern; educated at the public schools of Solothurn (1827-31); studied law in the universities of Munich, Heidelberg, and Berlin. During a prolonged visit to Paris he decided to devote himself to literary pursuits. Returning to his native country he fixed his residence at Solothurn, where he formed a close friendship with the well-known painter Disteli, and where (from 1845) he published a comic periodical called *Postheiri*. He became best known through his Helvetic romance, *Meister Putsch und Seine Gesellen* (1858), and by his sketch of his friend *Martin Disteli* (1861), *H. J. Von Staal* (1861), and *Hory, Kanzler-Denkwürdigkeiten* (1876). Among his other works may be mentioned *Gallerie Berühmter Schweizer* (2 vols., 1863-71); *Junker und Bürger* (1865); *Schweizer-Novellen* (1877); *Neue Schweizer-Novellen*; and *Fortunat* (1879).

HARTMANN, JULIUS, a German soldier; born at Hanover, March 2, 1817; entered the Prussian Hussars (1834); attached to the staff (1848); employed in confidential missions in Schleswig-Holstein and Austria to promote Prussian interests; major-general (1865); took part in the Bohemian campaign (1866); reorganized a Bavarian army on the Prussian model (1867); fought at the head of the first cavalry division at Metz (1870); captured Tours, the provisional French capital Jan. 1871; governor of Strasburg (1871); retired 1872. He died at Strasburg, April 30, 1878.

HARTMANN, KARL ROBERT EDUARD VON, a German philosopher; born in Berlin, Feb. 23, 1842; entered the Prussian army (1858); but lameness obliged him to leave the service (1865), and he took to literature as a profession. His first work, *Philosophie des Unbewussten* (*The Philosophy of the Unconscious*), created a deep impression (1869), and in thirteen years passed through nine editions. An English translation in three volumes was published in Trübner's English and Foreign Philosophical Library. It was followed by *Zur Geschichte und Begründung Pessimismus* (1880); *Philosophie des Schönen* (1887); *Die Geisterhypothese des Spiritismus* (1891).

HARTRANFT, JOHN FREDERICK, an American soldier; born in Montgomery County, Pennsylvania, Dec. 16, 1830; graduated from Union College, New York (1853); was admitted to the bar (1859); at the beginning of the Civil War he organized the Fourth Pennsylvania Regiment. He commanded it during the three months of its enlistment, and then organized the Fifty-first Pennsylvania Regiment, becoming its colonel;

with General Burnside he captured Roanoke Island, North Carolina; was present at the battles of Bull Run (second), Fredericksburg, Campbell's Station, Knoxville, Vicksburg, the Wilderness, and Spottsylvania; especially distinguished himself by storming the bridge at Antietam; brigadier-general of volunteers (1864); brevetted major-general (1865); the same year he was made auditor-general of Pennsylvania, and re-elected in 1868. From 1872 to 1878 he was governor of the state. His administration was one of reforms and suppression of corrupt politics, Philadelphia being given a new charter, supposed to be proof against further raids upon the city treasury. He became postmaster of Philadelphia in 1879, and in 1882 collector of the port of that city. He retired in 1885 to his home in Norristown, Pennsylvania. He died Oct. 17, 1889.

HART'S FALLS. See SCHAGHTICOKE, in these Supplements.

HARTSHORNE, EDWARD, an American physician, son of Dr. Joseph Hartshorne (q.v.); born in Philadelphia, Pennsylvania, May 14, 1818; graduated from Princeton (1837), and in medicine from the University of Pennsylvania (1840); resident surgeon to the Pennsylvania Hospital (1841); physician to the Eastern Pennsylvania Penitentiary (1843); surgeon in Will's (eye) Hospital (1848), and afterward in the Pennsylvania Hospital. During the war he served as consulting-surgeon in the United States army hospitals and as an active member and secretary of the United States Sanitary Commission; wrote a *Separate System*; notes to Taylor's *Medical Jurisprudence* (1854); and *Ophthalmic Medicine and Surgery* (1856). He died June 22, 1885.

HARTSHORNE, HENRY, an American physician, and the brother of Dr. Edward Hartshorne (q.v.); born March 16, 1823; graduated from Haverford College (1839), and from the medical department of the University of Pennsylvania (1845); professor of the Institute of Medicine in the Philadelphia College of Medicine (1853); professor of the practice of medicine (1859) and of hygiene (1865) in the University of Pennsylvania. In 1867 he was called to the chair of organic science and philosophy in Haverford College. He has also been a professor in the Pennsylvania College of Dental Surgery, in Girard College, and in the Woman's Medical College of Pennsylvania. Editor of the *Friends Review* (1872); wrote *Essentials of Practical Medicine* (1869), a number of medical articles and pamphlets, two volumes of poems, and a romance, *Woman's Witchcraft*. Died in Tokyo, Japan, Feb. 10, 1897.

HARTSHORNE, JOSEPH, an American physician, and the descendant of Richard Hartshorne, a Quaker, and a co-proprietor with William Penn of the colony of East Jersey; born in Alexandria, Virginia, Dec. 12, 1779; graduated in medicine at the University of Pennsylvania in 1805, and, after two years of travel through India, settled in Philadelphia. From 1815 to 1821 he was surgeon of the Pennsylvania Hospital; edited Boyer's *Treatise on Bones*, and invented a splint for a fractured thigh. He died of cholera, in Delaware, Aug. 20, 1850.

HART'S-TONGUE, the common name of species

of *Scolopendrium*, a genus of widely distributed ferns, of which one species, *S. vulgare*, is a native of Europe and North America, and is common in moist woods, on shady banks, in caves on the seashore, and other cold and damp situations. Its fronds are, in general, undivided, although sometimes forked, and from a few inches to two feet in length and from one to three inches in breadth. The sori are in transverse lines on the lateral veins. Fine plants of this fern are ornamental, and are most luxuriant in winter.

HARTT, CHARLES FREDERICK, an American geologist; born in New Brunswick, Aug. 23, 1840. By the invitation of Louis Agassiz he entered the Museum of Comparative Anatomy at Cambridge, Massachusetts; he took part in the Thayer expedition in Brazil (1865-66); professor of natural history at Vassar College (1866); professor of geology and physical geography in Cornell (1868). He made several exploring trips in the valley of the Amazon, on the last of which he died. He organized the Imperial Geological Brazilian Committee, with which he was connected up to the time of his death, and the collections gathered are incorporated in the National Museum, Rio de Janeiro. He died in Brazil, March, 1878.

HARVARD, a thriving village of McHenry County, northeastern Illinois, 63 miles N.W. of Chicago, on the Chicago and North-Western railroad. It has several elevators, railroad repair-shops, and manufactories of farm machinery, carriages and sewing-machines. It is supplied with electric lights, and with city water from an artesian well. Population 1890, 1,967; 1900, 2,602.

HARVARD, JOHN, an American philanthropist; born at Southwark, England, November, 1607; graduated from Emanuel College, Cambridge (1635); having become a dissenting minister, he sailed for America in 1637, and the same year was made a freeman of Massachusetts. In 1638 a tract of land in Charlestown was deeded to him, where he exercised his ministerial functions. At the time of his death his net property was worth £800, one half of which he left for the erection of the college which bears his name. He also gave a library of 320 volumes. He died at Charlestown, Massachusetts, September 24, 1638. See Vol. XI, p. 500; and HARVARD UNIVERSITY, in these Supplements.

HARVARD UNIVERSITY, an important American institution of learning, established in Cambridge, Massachusetts, and including a college of liberal arts, a library of 452,512 volumes and 366,540 pamphlets, divinity, law, medical, dental, veterinary and (Lawrence) scientific schools; also a museum of comparative zoölogy, an observatory, laboratories of all kinds, and a number of buildings for the accommodation of officials and students. It was founded Oct. 28, 1636, by vote of the General Court of the Colony of Massachusetts Bay, which appropriated £400 "toward a school or college in Newtown" (the old name of Cambridge). Nothing was done, however, toward organizing the college until after the death of a young nonconformist clergyman and graduate of Emanuel College, Cambridge, named John Harvard, who died at Charles-

town, a year after his arrival in America, leaving his library (300 volumes) and half his estate (valued at £800) toward the proposed college. It was organized at once, under the title of Harvard, the first class being formed the same year. Henry Dunster, who was the first president, succeeded in obtaining a charter, May 31, 1650, which gave the new institution an independent legal existence. It was signed by Governor Thomas Dudley, and the original parchment is in the custody of the present trustees. Since then the university prospered exceedingly, and its financial resources, as well as its influence, have grown apace. July 31, 1895, the books of the treasurer showed the value of the assets of the corporation to be \$8,381,581.83, and its income during the preceding year (1894-95) to have reached a total amount of \$1,201,908.78. Since its foundation Harvard University bestowed degrees upon 19,984 graduates. In 1896, its various departments included 337 instructors and 3,290 students. See also EDUCATION IN THE UNITED STATES, HIGHER, in these Supplements.

A woman's college of liberal arts has been organized in Boston, under the name of RADCLIFFE COLLEGE (q.v., in these Supplements), and its trustees have been empowered to confer degrees to its students. Harvard professors and instructors are in charge of the teaching, and it is admitted that, so far, its standard of merit is worthy of the great institution that has fathered it. The number of students (1894-95) was 284.

HARVEST-FLIES, a name often applied to the CICADAS; q. v., in these Supplements.

*HARVESTING MACHINERY. The earliest practice of mechanical harvesting antedates the Christian era, when the Gauls, using a box on wheels, with comb-like teeth in front, and an ox in hills to push at the rear, gathered the heads of the standing grain.

Grain-harvesting machines may be considered as falling under three types: 1. Thrust or push machines, which are known at the present time as "headers"; 2. Reapers, which throw the grain in gavels to the ground; and 3. Harvesters, which now include automatic binding attachments.

HEADER.

Headers deliver the cut grain upon the ground, or carry it continuously into a special wagon-box, from which it is stacked while still in the loose state.

In California, attachments have been mounted upon the machine to thrash and bag the grain. Binding attachments have also been placed upon them, but the practicability seems a little doubtful, because of the cumbersomeness of this type.

The idea of the push-machine seems to have first
• Copyright, 1897, by The Werner Company.

presented itself, and the foundation for it was so well laid by the Rev. Patrick Bell of Scotland in 1826, that its principles have been but little departed from thus far, as will be learned by comparison of the modern header with the previous illustration.

Bell's machine was provided with a thrust-tongue in rear and grain-platform in front, and a reel for laying the grain backward. These machines were introduced to a limited extent into America, and, having been copied and improved, reached a high state of development by 1860.

Among the many attempts to improve the Bell type, some of them successful, was that of Cyrus H. McCormick, who, in 1834, patented the machine next shown.

MCCORMICK THRUST-MACHINE, 1834.

It had the gearing-carriage, with the pushing-tongue in rear of the grain-platform, and a reel for laying the grain-stalks backward. Bell's self-delivering platform was removed, and the grain was received by a stationary one, from which a man with a rake, walking beside the machine, was depended upon to deliver the the grain to the ground. McCormick retained Bell's supporting-wheels, but one was placed well forward of the other, and the one next the standing grain was made small. On the machine was placed the enlarged grain-divider, employed on the then existing reaping-machines. Bell's unsupported thrust-tongue was also adhered to.

The actual development of the "header," was slow, and not until 1840 did the efforts of inventors bring it to a sufficient degree of perfection to make it acceptable, the most important improvement being the supporting of the thrust-tongue at rear upon a wheel, or wheels, by means of which the direction of travel could be controlled.

REAPERS. The second type is that in which the machine is drawn forward, and by a lateral-reaching cutting-apparatus and grain-platform is adapted to operate upon the standing grain, beside which the team travels.

In late machines of the class, the reel is made to serve as a rake as well, and automatically to deliver the grain to the ground at suitable intervals. The reel is supported by a vertical shaft, and as the machine is drawn forward the arms so move as to dip into the grain in front of the cutting-apparatus, lay it backward, and then rise and move forward for a new stroke. A number of arms being provided, the reeling effect becomes practically continuous. By means of a cam and the double-jointed securement of the arms, the latter are controlled at will, and made to sweep the platform and deliver the

gavel. A suitable timing-device is also provided for controlling them, which makes every arm operate as a rake, or any arm so operate, at will, or any pre-determined one operate automatically. As an alarm-clock may be set to awaken the sleeper at any hour, so this device may be set to perform its duties.

REAPER.

These machines, being light, simple, cheap, and easy to handle, still find homes on small farms.

The early forms of the reaper, up to about 1865, practically monopolized the grain-fields in America, and in other countries where cheap labor did not bar them out.

For the initiative moves in the practical development of this type of machine (from which the third type, soon to be considered, borrowed its reel, its divider, and its cutting apparatus), some credit must be given to Abraham Randall, but more to Obed Hussey than to all other early workers.

RANDALL, 1833.

The Randall machine was first practically used in 1833, but the Hussey had cut a harvest in 1832, though not patented in the United States until Dec. 31, 1833. The latter machine was so practical, that, with Bell's reel added and Randall's grain-divider, it was imitated at home and abroad. Having won a world-wide fame at a public trial in July, 1833, before the Hamilton County Agricultural Society, near Carthage, Ohio, it was soon widely manufactured, and the rights of the inventor under the patent were not questioned.

"In 1834 this machine was introduced into Illinois and New York, and in 1835 into Missouri, in 1837 into Pennsylvania, and in 1838 Mr. Hussey removed from Ohio to Baltimore, Maryland, and has continued to manufacture his reaper there up to the present time." (*Scientific American*, Dec. 23, 1854.)

The Hussey machine was practically alone, and sang the new harvest-song without accompaniment for ten years. After the value of the invention was thoroughly established, competition became general. Unfortunately, the clamor incident to business efforts has confused history. Let us brush away the cobwebs, of which the writer has watched the spinning, that obscure the successful efforts of Hussey.

HUSSEY, 1833.

On the twenty-first day of June, 1834, while the Hussey machine was crooning the new harvest-song in Illinois, the above-mentioned patent to Cyrus H. McCormick was granted; but by mistake, as is shown in a letter written by the Commissioner of Patents, Jan. 22, 1848, while considering the matter of the extension of the patent for which an application had been made, in which letter are these words: "The principal features embraced in the said patent, viz., the cutting-knife and mode of operating it, the fingers to guide the grain, and the revolving-rack for gathering the grain, were not new at the time of granting said letters patent. The knife-fingers and

general arrangement and operation of the cutting-apparatus are found in the reaping-machine of O. Hussey, patented 31st December, 1833."

In 1844, McCormick, having previously abandoned the Bell type of machine, and having conducted experiments with the Hussey type, put a machine similar to the latter into the field, but made no provision for carrying the raker (as had Randall and Hussey) until a year or two later. Improvements were patented in 1845 and 1847, and suits were later brought against competitors. The practical defeat of his patents in the courts, however, removed the fears that threats had caused, and new factories sprang up. Fully reduced to practice, Mr. McCormick's machine later became well known, and took its place beside that of Hussey, Seymour and Morgan of New York, Manny of Rockford, Illinois, and a half-dozen others, which for a number of years monopolized the grain-fields of the Mississippi valley.

Early American makers, seeking honors abroad, sent machines to the great London exhibition of 1851, where they were given practical tests. With no competent representative, the Hussey machine yielded to its competitor, and to McCormick was given the preference; but at a subsequent trial, after the arrival of Hussey, "an all but unanimous award was given in his [Hussey's] favor," and to his rival was left the empty honor of holding a medal. (See Vol. I, p. 322.)

From 1860 to 1870 it is probable that more than 100,000 reapers were put out in America annually by the various makers; but the third type of machine, now to be considered, arrived on the scene.

SELF-BINDING HARVESTER.

It at once made inroads into the ranks of the reaping-machines, and ultimately almost entirely supplanted them.

The third type of machine finds its full development in the modern self-binding harvester. It is drawn, not pushed, having the arrangement of cutting-apparatus, grain-divider, reel, and grain-receiving platform introduced by Hussey and Randall. To the platform is applied an endless conveyer,

placed horizontally. From this the grain is received and elevated to a sufficient height to render its swath easily controllable by the parts of the binding-attachment. The reel of the modern machine is wholly supported at one end, and is adapted to be moved forward or backward and there maintained, or to be moved into any desired position of vertical adjustment. Once cut and elevated, the grain is delivered to the automatic binding-attachment, which,

with its arms of steel and nimble fingers, takes a pre-determined quantity of straw, compresses the mass, throws a band of twine around it and deftly ties the ends. From the highest point of elevation the swath is permitted to flow down a sloping table in a path transverse to the line of advance of the machine (and transverse to the length of the straws as well), and, while still in a free state, is deflected, in order that it may so enter the binding-devices proper as to be centrally bound, and while being so deflected the tardily moving butts are hurried to their position in the receptacle. The flow of the grain is checked for a moment, and the needle, supported beneath the table and adapted to reciprocate and take the twine that is threaded into an eye at its point, and carry it to a position somewhat distant above the table, where it is delivered to a knotting-device. These last-mentioned parts are supported in proper positions by a suitable frame, and so connected by gearing as to be moved at such relative intervals of time as to make them work in harmony. From the knotting apparatus, where the end of the twine is held, to the needle's eye below the receptacle, the twine is drawn as the needle retreats, and against this twine, by means of reciprocating packing-fingers, the grain-straws, grasped wisp by wisp, are forced. The history of this last type of machine is largely written in that of the Marsh harvester, which made the unbounded success of the modern automatic binder possible.

MARSH HARVESTER.

Charles W. and William W. Marsh, trained by necessity, became experts in binding grain by hand, and believed that if they could ride upon the machine, and have the grain brought to them, they could handle it. Reasoning that grain-straws could be best formed for binding when allowed to fall into a receptacle, these inventors so provided that the swath carried from the platform-conveyer and elevated a little distance was delivered into a suitable receiver, and they constructed a stand for two men, and a table for each. As the machine moved through the field, a wisp, of the cut grain-straw was taken and a band made. The idle hand of the operator hastened the tardily moving butts of the straws and packed them into the form of a gavel. Thrusting the band through the swath of flowing straws, the operator brought the ends together, and, having united them, placed the completed bundle upon a

carrier. In heavy grain, where two men were required, the gavels, after being encircled by the band, were moved to the table and completed. It was found that one expert operator could bind as much upon the machine as four could upon the ground. Three men could do as much as six or eight could do with a reaper. In the Marsh harvester, provision was made for raising and lowering the machine in order to adapt it to operate in various heights of crop; for rocking it forward in order to tilt its cutting-apparatus and reel downward; and indeed for all the movements necessary to adjust it to its work and fit it to receive an automatic binder, should such ever be perfected.

In order to make a place for an automatic binder, succeeding inventors found it necessary merely to remove the tables, and the binder soon became an important attachment.

In retrospect, the efforts—failures and successes—in reaching this now so simple attachment seem like the struggles of a nightmare; for between 1850 and 1870 more than one hundred inventors clamored at the doors of the United States Patent-Office for recognition of their ill-considered ideas. Some of their machines were intended to bind with straw, some with wire, and some with twine. In the race, wire won at first. Its ends were more easily united by twisting than those of twine by being tied. Wire could be drawn tightly, so that neither compression nor packing was necessary. Previous to 1870, nearly all the underlying principles of the automatic binder had been made known.

When, in 1879 (mainly promoted by Gammon and Deering and Walter A. Wood), wire-binders had become well established, the twine-binding attachments had reached such perfection as to enable them to assert their superiority, and with an easy swing they took their place upon the Marsh harvester, where they are likely to remain.

In accordance with the fitness of things, the necessities of the great harvest-fields of Illinois prompted the most activity, and at Plano, in the northern part of that great state, at the very center of the then greatest grain region of America, the Marsh harvester, conceived on a farm, struggled into existence, was trained to its work, and there won its crown.

The modern twine-using binding-attachment is of the so-called John F. Appleby type, because this inventor conceived the special combination of parts which enabled its foster-parent, William Deering, to reduce the labor and expense of harvesting grain to the lowest point that it is probably destined to reach. The machine once a success, Mr. Deering, with the aid of the late Hon. E. H. Fittler of Philadelphia, turned his attention to the production of a suitable twine, and now the fibers of the Manila islands and of the sisal-fields of Yucatan are deftly made to tie the grain crop of the world.

In these machines, let us credit the broad idea of the knotting-device to Jacob Behel; the wisp-by-wisp gavel-forming mechanism to George H. Spaulding, who gave to the machine what seems to be more than human judgment, for it takes only as much at a time as is required, and so makes all bun-

dles of grain of uniform size. To Watson and Renwick, to Gordon and to Locke, must be accredited the central binding of the grain, whether long or short. To hundreds of diligent workers, the names of many of whom are enshrined in the records of the patent-offices of the United States and England, credit must be given for the fine touches which have produced this newer marvel, surpassing in its operation the skill of human hands.

GRASS-CUTTER.

GRASS-CUTTING MACHINERY. The above illustration represents a modern mowing-machine. It has a light metal "frame," or gearing-carriage, adapted by suitable conformation to receive the gearing, shafts, seat, draft-tongue and coupling-frame, to which the cutting-apparatus is attached, all cast in one piece. Through a bored sleeve-like portion of this "frame" the axle passes, supported therein by roller-bearings at each end of the frame. Secured to this axle at the immediate end of the frame is a spur-gear, and on a strong pin, supported in a rearward projection of the frame, and adapted to slide longitudinally, are mounted a bevel-gear and spur-pinion as one piece, having a long hub, with roller and ball-bearings within. From beneath the axle extends forward a strong arm, to which the coupling-frame is jointed. Through this arm passes a shaft having a crank-wheel in front and a bevel-pinion in rear, the latter in position to be engaged by the bevel-gear referred to. A pitman connects the crank to the cutting-apparatus. The pin that supports the bevel-gear and spur-pinion is adapted to move longitudinally in its support, and to carry the bevel-gear and pinion with it. In the projecting arm that supports the bevel-gear sustaining-pin is a groove forming part of a spiral revolution, and in the said bevel-gear support a smaller pin is inserted, that is adapted to move in the spiral groove. A lever serves to rock this gear support, and thus throw the bevel-gear into and out of mesh with the bevel-pinion. By this last-mentioned lever the operative mechanism is shifted into action or out, at will. The supporting-wheels are secured to the axle by pawls and ratchets within the hubs, so that the machine may be backed easily without imparting motion to the cutting-mechanism. At front and rear, beneath the metallic frame, is secured a strong iron bar formed like a V, its shorter portion hinged immediately forward of the crank-shaft, and its other part at rear immediately below the crank-shaft. To this, by a compound joint, the cutting-apparatus is

hinged, so that it may be folded directly upward for traveling over the road, and the coupling-frame at the same time may be so lifted by means of a lever as to carry all parts well above the ground. Doubly hinged as the cutting-apparatus is to the gearing-carriage through the instrumentality of the coupling-frame, it may rise and fall, to conform to uneven ground. The cutting-apparatus is also free to rock, and thus conform to the inclinations and undulations of the surface of the ground over which the machine passes. By a suitable lever the cutting-apparatus may be tilted to any desired degree, and there maintained.

A lifting-spring is so connected to the main gearing-carriage as partly to sustain the cutting apparatus throughout its length, and thus throw on the traction wheels such portion of the weight as is lifted, thereby reducing the friction upon the ground.

Constructed as this most modern mowing-machine is, possessing the fine mechanical touches, its weight of 550 pounds suffices to produce traction enough to move all its working-parts, and thus enable a very light team of horses to cut and spread to the sun more than twelve acres of grass as a day's work.

The discovery of the principles embodied in the cutting-apparatus must be credited to Obed Hussey. The adaptability of the cutting-apparatus to rocking must be credited to the genius of Cyrenus Wheeler, A. B. Graham and a few others. Broadly considered, the jointing of the cutting-apparatus to the gearing-carriage, and the modern form of the machine, must be credited mainly to Lewis Miller. For the practical application and introduction of ball and roller bearings to this class of machinery, credit must be given to William Deering. A host of diligent workers must have the credit of the finishing-touches by which the crude cutting-apparatus of Hussey and the cruder framework and heavy forgings of the early jointed-bar machine were converted into the light and lasting embodiment of the principles involved.

Limited space requires us to refer mainly to the records of the United States Patent-Office, where about seven thousand efforts of inventors, successful and otherwise, are made clear. Some were ephemeral, but most of the names we mention are of those who stand head and shoulders above their co-workers in the history of this great art.

CORN-HARVESTERS. It having become possible to put small grain into bundles, attention was at once directed to cutting and binding Indian corn. A machine was produced, capable of gathering in the stalks as it advanced, and of throwing them into the binding-receptacle, from which they emerged bound compactly into bundles suitable for being shocked, or loaded upon wagons. The accompanying cut represents one of the latest and most effective forms. With it a team and man may easily form into bundles more than eight acres of corn in a day, thus doing the work of from four to eight men by the old methods.

As an army is led to battle, so great enterprises are led by generals; and to Jonathan Haines, George Esterly, and a few others, must be credited the grand

strategies that ended in the capture of the harvest-fields of the drier sections of America by machines of the header type.

CORN HARVESTER.

To the foresight and energy of Seymour and Morgan, Walter A. Wood and D. M. Osborne, all of New York; to Leander J., Cyrus H. and William McCormick of Chicago; to Aultman, Miller and Company, of Ohio, and a few others, must be mainly credited the inroads that the reaper made; and for the successful self-binding harvester, the grandest achievement of the agricultural world (that so much influenced the opening up of the great Northwest prairie-lands of America to settlement), history must find a place on its pages, as promoters, for the names of Hussey, Charles W. and William W. Marsh, Lewis Steward, John D. Easter, Elijah H. Gammon and William Deering, all of Chicago and vicinity; Walter A. Wood and David M. Osborne of New York; George Esterly, and others, all of whose names are well known in the great industrial centers of the world.

For an account of these mechanisms from an English point of view, see AGRICULTURE, Vol. I, p. 322.

JOHN F. STEWARD.

HARVEST MOON. See ASTRONOMY, Vol. II, p. 798.

HARVEY, MOSES, a British divine and author; born at Armagh, Ireland, March 25, 1820; graduated from Belfast College (1840); ordained Presbyterian minister of Maryport, England (1843); minister of the Free Presbyterian Church, St. John's, Newfoundland, (1852-70), where he devoted much time to literary and scientific pursuits, especially to the geology and natural history of the island. Wrote *Thoughts on the Poetry and Literature of the Bible*; *The Harmony of Science and Revelation*; *Lectures, Literary and Biographical* (1864); *Newfoundland, the Oldest British Colony* (1883); *Textbook of Newfoundland History* (1885); *Where are We, and Whither Tending* (1886). He contributed to this ENCYCLOPEDIA the articles *Labrador*; *Newfoundland*; and *Seal-Fisheries of the World*.

HARVEYZED STEEL. See IRON AND STEEL, in these Supplements.

HARWICH, a village of eastern Barnstable County, Massachusetts, on the south side of Cape Cod, on the New York, New Haven and Hartford railroad. It carries on a good fishing and coast-

ing trade, and is in a region of numerous cranberry-bogs. It was settled in 1694. Population 1890, 2,734; 1900, 2,334.

HARWOOD, ANDREW ALLEN, an American sailor, and the great-grandson of Benjamin Franklin, by his granddaughter, Elizabeth Franklin Bache; born in Settle, Pennsylvania in 1802; appointed midshipman (1818), and served in the suppression of the slave-trade; lieutenant (1827); served in the Mediterranean squadron (1835-37); commander (1848); commanded the *Cumberland* (1853-55); captain (1855), and inspector of ordnance, (1858); chief of the Bureau of Ordnance and Hydrography (1861); commodore (1862); in command of the Washington navy-yard and Potomac flotilla (1862-63); retired (1869), as rear-admiral. Wrote *Summary Court-Martial* and *Law and Practice of United States Navy Court-Martial* (1867). He died in Marion, Massachusetts, Aug. 28, 1884.

HASDEU, BOGDAN PATRICEICU, a Roumanian philologist and author; born at Hatin, Bessarabia, Feb. 16, 1838; studied at the (Russian) University of Charkow; professor of history at Jassy (Moldavia) in 1856; professor of comparative philology at Bucharest (1864), where he has undertaken a *Roumanian Etymological Dictionary* on a gigantic scale, only the letter A having been completed so far. After publishing a few *Poems* (1873), and several dramas, he devoted himself to history and comparative philology. He wrote or edited *Historical Roumanian Archives* (3 vols., 1865-67); *Critical History of the Roumanian Language* (1875); *Texts and Studies of the Roumanian Language from 1550 to 1600* (1878-80). He is the editor of the periodicals, *Trajan's Column* and the *New Review*.

HASE, KARL AUGUST VON, a German theologian; born at Steinbach, Saxony, Aug. 25, 1800. Expelled from Erlangen University for his connection with the political students' union (*Burschenschaft*), he became, in 1823, a university tutor at Tübingen, but, as the result of another investigation, was afterward imprisoned for ten months. In 1828 he settled at Leipsic, and in 1830 was called to Jena as professor of theology. Here he remained until his retirement in 1883, when he was ennobled and appointed a privy councillor. He was a pronounced rationalist. In 1844 he assumed the editorship of the *Protestantische Kirchenzeitung*. He wrote *Lehrbuch der Evangelischen Dogmatik* (6th ed., Leipsic, 1870); *Hutterus Redivivus* (12th ed. 1883); *Das Leben Jesu* (5th ed. 1865; translated into English, 1859); *Kirchengeschichte* (11th ed. 1886; translated into English); *Ideale und Irrthümer* (4th ed. 1891); *Geschichte Jesu* (2d ed. 1891); and *Annalen Meines Lebens* (after his death, 1891). He died Jan. 3, 1890.

HASEBROEK, JOHANNES PETRUS, a Flemish poet; born in Leyden, Holland, Nov. 6, 1812; was graduated from the old Leyden University; completed his theological studies in 1836; was pastor successively in Heiloo, Breda, and Middleburgh in 1849, Amsterdam in 1851, and retired from the pastorate in 1883. His poetry is grace-

fully humoristic and touchingly sentimental; his favorite and most popular creation is one Jonathan, whose ways and sayings are ever droll and catching. He wrote *Waarheit en Droomen door Jonathan* (7th ed. 1887); *Windekelken* (1859); *Nieuwe Windekelken* (1864); *Theuwklokjes* (1878); *Winterbloemen* (1879); *Vesper* (1887).

HASHISH, an Arabian preparation of Indian hemp, known in India as *bang* (see BHANG Vol. III, pp. 627, 628) or *siddhi*. It consists chiefly of the leaves and stalks of *Cannabis indica*. The drug is used in the East in various ways. Sometimes it is smoked alone, or with tobacco. At other times beverages are prepared from it, or it is taken in the form of lozenges or electuaries. The *majoon* of Calcutta, the *mapouchari* of Cairo, and the *dawames* or *dawamesc* of the Arabs are preparations of this kind. The effects differ according to the dose and the idiosyncrasy of the individual. Some become pugnacious, while others fall into a state of reverie. After small doses there is a great tendency to causeless merriment. In most cases there is an extraordinary susceptibility to hallucinations of various kinds.

HASSAM, CHILDE, an American painter; born in Boston in 1859; pupil of Boulanger and Lefebvre, in Paris; third medal at the Paris exposition of 1889; devoted himself to landscape; settled in New York City, where he became a member of the Society of American Artists, and president of the New York Water-Color Club, as well as a member of the American Water-Color Society. His paintings are remarkable by their luminous atmosphere and their fidelity to nature.

HASSARD, JOHN ROSE GREENE, an American journalist; born in New York City, Sept. 4, 1836; graduated from St. John's College, Fordham, in 1855; assistant editor on *The New American Encyclopedia*; editor of *The Catholic World* in 1865; on the staff of *The Chicago Republican* in 1866; joined *The New York Tribune* as musical and literary editor in 1866; wrote *Life of Archbishop Hughes* (1866); *The Ring of the Niebelungs* (1877); *Life of Pius IX* (1878); also a school *History of the United States* (1878); and *A Pickwickian Pilgrimage* (1881). He died in New York City, April 18, 1888.

HASSLER, FERDINAND RUDOLPH, a Swiss-American scientist, was born Oct. 6, 1770, in Aarau; served on the trigonometrical survey of Switzerland; came to the United States when Mr. Gallatin was Secretary of the Treasury, and through him Hassler was appointed mathematical professor at West Point Academy, 1807-11; sent by the government on a scientific mission to Europe; first superintendent of the United States Coast Survey in 1816-18, organizing the new service; chief of the Bureau of Weights and Measures; resumed the superintendency in 1832, and completed a coast triangulation from Delaware Bay to Rhode Island; wrote *System of the Universe* and some mathematical text-books. He died in Philadelphia, Nov. 20, 1843.

HASSLER EXPEDITION, an American exploration of the South American coast, so called

from the name of the vessel used. Professor Agassiz was in charge of the scientific delegation, which started from Boston, Dec. 4, 1871, and reached San Francisco, California, in August, 1872, after making a number of geological coast-observations, deep-sea dredgings and important excursions inland on the less-known points of the coast, especially in Patagonia. Some of the zoölogical results were published by Messrs. Agassiz, Lyman and De Pourtalès. The death of Professor Agassiz prevented the publication of a more complete record of this most interesting expedition.

HASTINGS, a city and the capital of Barry County, southwestern south Michigan, on Thornapple River, 32 miles S.E. of Grand Rapids, on the Michigan Central, the Lowell and Hastings and the Chicago, Kalamazoo and Saginaw railroads. It has a foundry and flouring-mills, and manufacturing of felt boots, lawn hose-reels, steam-engines and furniture. It is in a wheat-growing region. Population 1890, 2,972; 1900, 3,172.

HASTINGS, a city and the capital of Dakota County, southeastern Minnesota, on the west bank of the Mississippi River, at the entrance of the Vermilion, 20 miles below St. Paul, on the Chicago, Milwaukee and St. Paul railroad. Carriages, furniture and flour are manufactured, and the city contains grain-elevators, saw-mills, a foundry, and is a wheat and lumber market. Population 1900, 3,811.

HASTINGS, a city and the capital of Adams County, central southern Nebraska. With the recent rapid growth in population, there has been a corresponding growth in all the important institutions of the city. A land company has been organized. Since 1886 railroad facilities have increased, five roads, with eleven outlets, connecting the city with all parts of the country. Street-railway lines have increased to 18 miles. The streets are well paved and lighted. The public buildings are the Courthouse, City Hall, Opera-House, Masonic Temple, State Asylum for the Incurable Insane, City Hospital, Hastings College (Presbyterian), and academy (Roman Catholic), and Young Men's Christian Association. There are six fine public-school buildings, public library, three daily and four weekly papers, four national banks, one private bank and a loaning company. The water-plant is owned by the city. There are a good police force, fire department and free mail-delivery. There are five extensive brick-yards, two flour-mills, six lumber-yards, two foundries, three sash and door factories, a cold-storage plant and a packing-house. There are 31 jobbing-houses, and the wholesale trade in 1890 amounted to \$1,250,000. Population 1880, 4,500; 1890, 13,584; 1900, 7,188.

HASTINGS, THOMAS, an American musician; born in Washington, Connecticut, Oct. 15, 1784; had only a common-school education, but manifested, at a very early age, a taste for musical composition; taught himself the rudiments of the art out of insignificant primers; later, having become master of the village choir, he mastered the

difficulties of musical composition, with the help of an elaborate treatise on the subject, given him by his brother; assumed charge of church choirs in various New York cities; accepted the editorship of the *Western Recorder*, a religious musical paper, and lectured much and well on the subject of church music; settled in New York City (1832), continuing in the same line of work as choir-director in Dr. Mason's Church, Bleeker Street; issued the *Musical Magazine* (1835-37); published nearly fifty volumes, including *The Musical Reader* (1818); *Dissertation on Musical Taste* (2d ed. 1853); *Spiritual Songs* (1831); *Elements of Vocal Music* (1839); *Sacred Songs* (1842); *The Presbyterian Psalmody* (1852); *Hastings's Church Music* (1860); and *Intraits* (1865). He died in New York City, May 15, 1872.

HASWELL, CHARLES HAYNES, an American mechanical engineer; born in New York City, May 22, 1809; had no college education; learned his profession in a steam-engine factory, and as early as 1836 was appointed chief engineer in the United States navy, then the only one of that grade; helped design the steam-frigates *Missouri* and *Mississippi*. From 1844 to 1850, when he retired on account of ill health, he ranked as senior United States navy engineer-in-chief. He traveled through Europe, and on his return resumed the practice of his profession in New York City; was the first to put zinc into a marine steam-boiler, or the hold of an iron-built steamer, so that the galvanic action of copper bottoms and salt-water might be minimized; engineer of the State Quarantine Commission; trustee of the Brooklyn bridge; author of the *Mechanic's and Engineer's Pocket-Book* (51st ed. 1887).

HATASU OR HATSHEPU, an ancient Egyptian princess. See EGYPT, Vol. VII, pp. 737, 777; and MUMMY, Vol. XVII, p. 22.

HATFIELD, a town of central Hampshire County, Massachusetts, on the Connecticut River, and on the New York, New Haven and Hartford and the Boston and Maine railroads, 4 miles above Northampton. Farming is the principal business of the region, especially tobacco-raising. An academy is situated here. In colonial times it was the scene of several Indian attacks. Population 1890, 1,246; 1900, 1,500.

HATFIELD, EDWIN FRANCIS, an American Presbyterian clergyman; born at Elizabethtown, New Jersey, Jan. 9, 1807; graduated from Middlebury College (1829); ordained minister after three years' study at Andover Theological Seminary (1832); pastor in St. Louis, Missouri (1832); in New York, Seventh Presbyterian Church (1835); in North Presbyterian Church, New York (1856); special agent of Union Theological Seminary (1864-66); and again (1870-73), raising large sums of money for its support; moderator of the General Assembly (1883); edited the *New York Observer Year-Book* (1871-73); wrote *Universalism as It Is* (1841); *History of Elizabeth, New Jersey* (1868); *The Church Hymn-Book* (1872); *Chapel Hymn-Book* (1873); *The Poets of the Church: Biographical Sketches of Hymn-Writers* (posthumous,

1884). He died at Summit, New Jersey, Sept. 22, 1883.

HATHOR. See ATHOR, Vol. III, p. 13.

HATTERAS, a point of land in Dare County, North Carolina, at lat. 35° 15' 12" N., long. 75° 30' 54" W. It is on a long, low, sandy island, separating Pamlico Sound from the Atlantic Ocean, and shaped like a right angle, Cape Hatteras being the vertex of the angle. The navigation is dangerous off the cape, on account of shoals extending far out to sea. Two miles north of the point stands a lighthouse, showing a flashing dioptric light of the first order, nearly two hundred feet above sea-level.

HATTERIA. See REPTILES, Vol. XX, pp. 437, 448, 450.

HATTON, JOHN LIPTROT, an English musician; born in Liverpool, England, in 1809; entirely self-educated; settled in London in 1832, and became known as a composer and conductor. As leader of the Drury Lane orchestra, he produced *The Queen of the Thames* (1844). The same year he gave, in Vienna, his opera, *Pascal Bruno*. He visited America in 1848; composed music for a number of Shakespearean revivals by Charles Kean at the latter's Princess Theatre, London, composed several cathedral services and anthems; also over 150 songs, several operas and *Hezekiah*, a sacred drama (1877). He died in Margate, Sept. 20, 1886.

HATTON, JOSEPH, an English author; born at Andover, England, Feb. 3, 1839; began to write at an early age. After editing several provincial newspapers, he was placed in charge of the *Gentleman's Magazine* (London); for many years the special correspondent of the *New York Times*; connected with various of high-class dailies, among them the *Standard* and *Telegraph*; wrote several books of note, and biographies on journalists and journalism, but his fame rests on his works of fiction. In 1865 his first novel, *Bitter Sweets*, a love-story, appeared, and in the following year, *Against the Stream*. This was followed in 1867 by *The Tallants of Barton*. His best-known novels are *Clytie* (translated into German and Swedish); *Cruel London*; *Three Recruits*; *The Queen of Bohemia*; *By Order of the Czar* (in defense of the Jews persecuted by the Russian autocrat); *Princess Mazaroff*; *Under the Great Seal*; *The Abbey Murder*; and *John Needham's Double* (dramatized and acted by E. S. Willard and his company). He also wrote a number of volumes of impressions, anecdotes on celebrities, etc. He dramatized Hawthorne's *Scarlet Letter* for Richard Mansfield.

HATZFELDT, COUNT VON, a German diplomat; born Oct. 8, 1831; son of Countess Sophie von Hatzfeldt, the friend of Ferdinand Lasalle, the Hebrew socialist. In 1862 Count Hatzfeldt was one of Count Bismarck's secretaries; during his Parisian embassy, and on the outbreak of the Franco-German war, belonged to the Chancellor's diplomatic suite. In 1874 he was appointed imperial minister at Madrid. Soon after the signing of the Treaty of Berlin he was sent as am-

bassador to Constantinople. After a three years' residence there he was recalled to Berlin to succeed Bülow as Foreign Secretary. In Nov., 1885, he became German ambassador to London.

HAUBERK. See ARMS AND ARMOR, Vol. II, p. 556.

HAUCK, MINNIE. See WARTEGG, *post*, p. 3089.

HAUKSBEE, FRANCIS. See HAWKS BEE FRANCIS, in these Supplements.

HAUPER. See HAPUR, in these Supplements.

HAUPT, HERMAN, an American engineer; born in Philadelphia, March 26, 1817; graduated from West Point in 1835; assistant engineer on the public works of Pennsylvania (1835-39); professor of civil-engineering and mathematics in Pennsylvania College (1844-47); principal engineer of the Philadelphia and Columbia railroad (1847), and superintendent in 1849; chief engineer of the Hoosac Tunnel, in Massachusetts (1856-61). He served in the Civil War as aid to General Irwin McDowell and chief of the Bureau of United States Military Railways; declined the brevet of brigadier-general of volunteers. Since 1875 he has been chief engineer of the Tide-Water Pipe Line Company, having been the first to demonstrate the feasibility of transporting oil in pipes over long distances. He wrote *Hints on Bridge-Building* (1840); *General Theory of Bridge-Construction* (1852); *Plan for Improvement of the Ohio River* (1855); and *Military Bridges* (1864).

HAUPT, LEWIS MUHLENBERG, American engineer, a son of the preceding; born in Gettysburg, Pa., March 21, 1844; graduated from West Point (1867); lieutenant of United States engineers in the lake surveys (1868); in charge of the fifth military district of Texas (1869); engineer of Fairmount Park, Philadelphia (1872); professor of civil-engineering at the University of Philadelphia (1873). He patented an automatic system for improving rivers and harbors and maintaining channels by an adjustable deflecting shield suspended by buoys, floats, or barges; edited the *American Engineering Register*; and wrote *Engineering Specifications and Contracts* (1878); *Working-Drawings, and How to Make and Use Them* (1881); and *The Topographer, His Methods and Instruments* (1884).

HAUPTMANN, GERHART JOHANN ROBERT, German poet and dramatist; born in Ober-Salzbrunn, Silesia, Nov. 15, 1862, the son of an hotel-keeper; educated at Breslau and at Jena University, and studied sculpture for two years; made a sea voyage to Italy, and opened a sculpture studio in Rome, but became ill, returned to Germany, and studied art in Dresden. In 1885 he married the daughter of a Hamburg merchant; and in 1888-92 lived in Ekner, a suburb of Berlin, preparing himself for his future career in literature. In 1894 he visited the United States. His first play, *Promethidenloös* (1885), was a weak imitation of Byron's *Childe Harold*; but he soon broke away from tradition, and his next plays, *Before Sunrise* (1889), and *The Peace Festival: A Family Catastrophe* (1890), are socialistic tragedies dealing with the proletariat. These and *Lonely People* (1891) show the influence of Ibsen and the ultra-realistic mod-

ern German school of writers. In 1892 he published *Railway Watchman Thiel* and *The Apostle*, two novelettes written some years earlier. Then came his first great drama, *The Weavers* (1892), a realistic and powerful picture of the miserable life of the poor weavers of Silesia. This was followed by *Friend Crampton* (1892) and *The Beaver Fur* (1893), two character plays marked by grim humor. Another epoch in his career came with *Hannele* (1893), wherein he deserted realism for symbolism. Next came *Florian Geyer* (1895), in which realism is combined with history, with doubtful results. *The Sunken Bell* (1896), a fairy drama, in which poetry, allegory, and symbolism are mingled, had an enormous success, mainly on account of its striking stage effects. This was followed by *Fuhrmann Henschel* (1898), another socialistic drama. Several of his plays, including *The Weavers*, *Hannele*, *The Sunken Bell*, and *Fuhrmann Henschel* have been played in the United States, either in German or in English.

HAUR, FRANZ VON, an Austrian geologist; born in Vienna, Jan. 30, 1822; educated at Vienna and Chemnitz; assistant curator of the Imperial Museum (1846); director of the Imperial Geological Institute (1867); intendant of the Imperial Court Museum of Natural History (1885); wrote a number of large works on geology, and prepared the map of Austro-Hungary (1867-73).

HAURAN, district and mountain chain in Syria. See SYRIA, Vol. XXII, 821-22; BASHAN, Vol. III, 410. HAUSSA OR HAUSA, states of the Sudan. See SOKOTO, Vol. XXII, p. 248.

HAUSSMANN, GEORGES EUGÈNE, BARON, a French administrator; born in Paris, March 27, 1809. He first studied music, then law, and was called to the Parisian bar; entering the public service under Louis Philippe, he distinguished himself as subprefect in various southern districts. The revolution of 1848 returned him to private life. Under Napoleon III he was made prefect of Toulon, Bordeaux, and finally of Paris in 1853. He then commenced his great work of improving and embellishing Paris, which, continued until 1870, imposed upon the city a financial burden, submitted to hardly any supervision, of \$120,000,000. He created the parks of the Bois de Boulogne, the Bois de Vincennes, the Buttes-Chaumont, Montsouris, etc.; opened the Rue de Rivoli through to the Bastille, and cut through densely populated quarters the magnificent boulevards Sébastopol, Magenta, Saint-Michel, Malesherbes, Haussmann, Pereiré, Prince Eugène, etc.; created several squares and planted them with trees and flowers; erected the Central Markets, the barracks Napoleon and Prince Eugène, the enormous La Villette slaughtering-houses, the new Prefecture of Police, twelve bridges in stone or iron, the superb churches of St. Augustin, Trinity, St. Ambroise, etc., and a number of monumental fountains; perfected the unique system of sewers Paris is justly so proud of; added to the supply of city water; built the largest theaters in Paris, the Théâtre Lyrique, the Chatelet, the Gaîté, the Vaudeville, finally the National Opera (finished under the republic); erected the

New Hospital, the Hôtel-Dieu; opened sanatoriums for the poor, in the vicinity of Paris and even on the seashore; added numerous municipal and school buildings; widened and straightened hundreds of streets; finally annexed a number of small towns within the fortification-line, and increased the population of the city by 400,000 inhabitants in 1860. He was made baron and Senator in recognition of his services. There was, however, much dissatisfaction with his enormous expenditures, and charges of mismanagement being freely made, he was dismissed from office in 1870. In 1871 he became a director of the Crédit Mobilier, and in 1877 was elected to the Chamber of Deputies. "Haussmannizing" has become a popular term for the destruction of ancient landmarks to make way for improvements. He contributed his share and his editorship to a *History of Paris* (16 vols.), and wrote his *Memoirs* (2 vols., 1891). He was a Protestant by birth. Died in Paris, Jan. 12, 1891.

HAUTBOY. See OBOE, Vol. XVII, p. 705.

HAÛY, VALENTIN, a French philanthropist and the inventor of a system of printing for the blind. See BLIND, Vol. III, p. 827; and TYPOGRAPHY, Vol. XXIII, p. 696.

HAVANA, a post village, the capital of Mason Co., Ill., on the Illinois river, opposite the mouth of the Spoon river; is the shipping-point of an agricultural region, exporting chiefly corn, and Osage-orange bushes for hedges. Pop. 1900, 3,268.

HAVANA, a village of Schuyler Co., N. Y., at the head of Seneca Lake, 18 miles N. of Elmira, on the Northern Central railroad; contains mineral springs, and has machine-shops, potteries, and mills where flour, plaster, and woolen goods are made. Pop. 1890, 1,751.

HAVANA, HABANA, or SAN CRISTOBAL DE LA HABANA, the capital of Cuba. See HAVANA, Vol. XI, pp. 524-25. Population 1000, 235,981. Havana was specially prominent in connection with the struggle for Cuban independence, the destruction of the United States battleship *Maine*, and the American-Spanish war of 1898. See CUBA, "MAINE, THE," and UNITED STATES, in these Supplements. The activity of the insurgents, their destruction of crops, and the Spanish government's war measures combined to destroy the commerce of Havana; but under the new conditions the city will doubtless far outgrow even its former commercial prominence. The strength of its fortifications and the natural defenses of its position and climate saved the city from attack by the American army and navy. The insurgents, however, approached the city closely several times. On June 3, 1896, Consul-General Fitzhugh Lee entered on his duties, which terminated with his withdrawal from the city on April 9, 1898. On July 21, 1896, a plot by a Cuban patriot to blow up the government buildings was frustrated. In the fall of that year, the city suffered severely from yellow fever and smallpox, the hospitals containing nearly 10,000 sick soldiers. The pro-Spanish feeling was always very strong in Havana, and just prior to the embarkation of General Weyler for Spain a great demonstration was held (Oct. 6, 1897) to express popular confidence in his administration.

On the night of Feb. 15, 1898, the United States battleship *Maine* was blown up in the harbor. (See "MAINE, THE," in these Supplements.) On April 22, 1898, Havana and other Cuban ports were declared to be in a state of blockade, and the harbor was closed until August 12, 1898, when the blockade was raised. In anticipation of the evacuation of the city, the Spanish authorities on Sept. 26 exhumed the alleged remains of Columbus from the cathedral and shipped them to Spain, but the identity of the bones is in doubt. On Jan. 1, 1899, the Spanish flag was hauled down, and with the hoisting of the Stars and Stripes in its place Spanish sovereignty over Cuba was transferred to the United States.

HAVEN, ALICE EMILY (BRADLEY), an American authoress; born in Hudson, N. Y., Sept. 13, 1828. Under the *nom de plume* of "Alice G. Lee" she wrote sketches for various papers until 1847; edited the Philadelphia *Saturday Gazette* on the death of her husband, Joseph C. Neal, its editor, her pen-name being then "Cousin Alice." In 1853 she married Samuel L. Haven. She wrote *The Gossips of River-town*, prose and verse (1850); *Helen Morton's Trial; No Such Word as Fail; All's not Gold that Glitters; Nothing Venture, Nothing Have; Where There's a Will There's a Way*, and other popular stories for young people, all of a religious color. Died at Mamaroneck, N. Y., Aug. 23, 1863.

HAVEN, ERASTUS OTIS, an American Methodist Episcopal bishop; born in Boston, Mass., Nov. 1, 1820; graduated from Wesleyan University (1842); president of Amenia Seminary, New York (1846); entered the Methodist ministry in the New York Conference (1848); professor of Latin in Michigan University (1853). In 1856-63 he was editor of *Zion's Herald*, of Boston, and also served two terms in the Massachusetts senate and was for a time one of the overseers of Harvard University. In 1863 he was president of Michigan University; in 1869 of Northwestern University, Evanston, Ill.; in 1872 secretary of the Methodist Episcopal Board of Education; and in 1874-80 chancellor of Syracuse University, N. Y. In 1880 he was ordained a bishop. He published *American Progress; The Young Man Advised* (1855); *Pillars of Truth* (1866); and a treatise on *Rhetoric*. While ardently attached to his own denomination he was remarkable for his broad, catholic behavior toward all other Christian bodies. Died in Salem, Oregon, Aug. 3, 1881.

HAVEN, GILBERT, an American Methodist Episcopal bishop; born in Malden, Mass., Sept. 19, 1821; graduated from Wesleyan University (1846); teacher in Amenia Seminary, New York (1846); ordained a member of the New England Conference (1854). In 1854-63 he preached in churches in Massachusetts, and then traveled in Europe, Palestine, Egypt, and Greece. In 1867 he became editor of *Zion's Herald*, of Boston, and in 1872 was ordained bishop, with official residence at Atlanta, Ga. He visited Mexico in 1873 and 1876, and Liberia in 1877, as missionary superintendent. A zealous reformer, an untiring worker, and a man of wide influence, he declined all collegiate honors. Devoted much of his time and efforts to the development of the Clark University for Freedmen. He was the

author of *The Pilgrim's Wallet; or, Sketches of Travel in England, France, and Germany; National Sermons; Life of Father Taylor, the Sailor Preacher* (1871); and *Our Next-Door Neighbor; or, a Winter in Mexico* (1875). He died in Malden, Massachusetts, Jan. 30, 1880.

HAVEN, JOSEPH, an American Congregational clergyman; born in Dennis, Massachusetts, Jan. 4, 1816; was graduated from Amherst (1835); while studying at the Union Theological Seminary, New York, he taught in the Deaf and Dumb Asylum in that city; ordained pastor of the Congregational Church at Ashland, Massachusetts (1839); had charge of the Harvard Church, Brookline, from 1846 to 1850; professor of mental and moral philosophy in Amherst College (1850), and of systematic theology in the Chicago Theological Seminary (1850-70). He then traveled in Germany, Palestine, and Egypt, and from 1873 until his death was professor of mental and moral philosophy in the old Chicago University. He published *Mental Philosophy* (1857); *Moral Philosophy* (1859); *Studies in Philosophy and Theology* (1869); and *Systematic Divinity* (published posthumously, 1875). The extent and thoroughness of his scholarship were remarkable. He died in Chicago, May 23, 1874.

HAVERFORD COLLEGE, an educational establishment, founded in 1833, at Haverford, near

HAVERFORD COLLEGE.

Philadelphia, by a few members of the Society of Friends. It opened, in its present location, in Montgomery County, Pennsylvania, in 1833, with \$40,000 subscribed by its founders. But it changed its name and purpose from a mere school to a full-fledged college only in 1856. It contains now a number of appropriate buildings, an observatory, mechanical, chemical, physical, and biological laboratories, library, and halls for all purposes. The faculty numbers 18 members, with 116 students, and a library of 34,800 volumes. Over 650 students have graduated since the foundation of the college, which continues to be entirely under the influence of the Society of Friends. Since 1849 the admission has not been restricted to Friends or their sons. See FRIENDS, SOCIETY OF, these Supplements.

HAVERGAL, FRANCES RIDLEY, an English devotional and religious writer, youngest daughter of the Rev. William Henry Havergal (q. v.). She was born at Astley Vicarage, Worcestershire, Dec. 14, 1836, and was educated at the Luisenschule, in Düs-

seldorf. At the age of seven years she wrote hymns and letters in verse, but published nothing until 1860, when she began to contribute to *Good Words*. Her principal work was a *Life of the Rev. William Henry Havergal*, her father. In addition she wrote upward of thirty devotional works. Of these the most noteworthy were *The Ministry of Song* (1871); *Four Happy Days* (1873); *Royal Bounty* (1877); *Loyal Responses* (1878); *Red Letter Days* (1879); *Poetical Works* (1881); and *Letters* (1885). She died in Swansea, Wales, June 3, 1879.

HAVERGAL, WILLIAM HENRY, an English clergyman and composer of sacred music, was born at Chipping Wycombe, Buckinghamshire, in 1793. He was educated at the Merchant Taylors School and at St. Edmund Hall, Oxford, where he graduated in 1815. In 1829 he was presented to the rectory of Astley, near Bewdley. A severe accident compelled him to relinquish his clerical ministrations for several years, during which period he devoted himself to the study of music. His initial venture as a composer was a successful setting of Heber's well-known hymn, *From Greenland's Icy Mountains*, as an anthem. The profits from this work, as of many of his other compositions, he devoted to charitable purposes. In 1836 he obtained the Gresham prize-medal for his *Evening Service in A*, and a similar distinction in the following year for his anthem, *Give Thanks*. Other anthems and services followed, and in 1844 he began his labors toward improving the psalmody by the publication of a reprint of *Ravenscroft's Psalter*. In 1845 he was presented to the rectory of St. Nicholas, Worcester, and to an honorary canonry in the Cathedral. In 1847 he published *The Old Church Psalmody*, and in 1854 an excellent *History of the Old Hundredth Tune*. In 1859 he brought out *A Hundred Psalm and Hymn Tunes*, of his own composition. In addition to these works he wrote a number of songs and rounds for the young, besides many hymns, sacred songs, and carols for the periodical press. "As the pioneer of a movement to improve the musical portions of the Anglican services," says Sir George Grove, in his *Dictionary of Music and Musicians* (1893), "Mr. Havergal's labors deserve more general recognition than they have hitherto met with. At the time when church music was at its lowest ebb, the publication of his *Old Church Psalmody* drew attention to the classical school of English ecclesiastical music, and paved the way for the numerous excellent collections of hymns and chants which the Anglican Church now possesses." He died at Leamington, England, April 19, 1870.

HAVERHILL, a city of Essex County, northeastern Massachusetts, pleasantly situated on the Merrimac river, 18 miles from its mouth, and connected with Boston by the Boston and Maine railroad. Its manufactures have a capital of \$8,000,000, and produce, on an average, \$25,000,000 worth of merchandise annually. The average number of employees is 15,000, with wages averaging \$7,000,000 annually. The principal industry is the manufacture of fine boots and shoes, in the production of which the city ranks third in the country. In February, 1882, a large part of the business portion of the city was

destroyed by fire, involving a loss of nearly \$2,000,000. Rebuilding was promptly begun. See also HAVERHILL, Vol. XI, pp. 526-27. Population 1880, 18,472; 1890, 27,412; 1900, 37,175.

HAVERHILL, a village and one of the capitals of Grafton County, central New Hampshire, on the Boston and Maine railroad, and on the east bank of the Connecticut river. Leather, lumber, whetstones, paper, starch, and boxes are made. Population 1890, 2,545; 1900, 3,414.

HAVERSIAN CANALS. See ANATOMY, Vol. I, pp. 314-315.

HAVERSTRAW, a post village of Rockland County, southeastern New York, situated on the Hudson River, 38 miles from New York city, and on the New Jersey and New York railroad. It has a paper-mill, large print-works, a rolling-mill for copper, and engages extensively in the manufacture of brick. Population 1900, 5,935.

HAVILAND, JOHN, an English architect; born at Gundenham, Somersetshire, December 15, 1793. He studied with James Elmes. In 1815 he entered the imperial corps of engineers of Russia; and the following year removed to the United States, where he made a special study of penitentiary buildings, among them that at Pittsburg, the first designed on the radiating principle advocated by Jeremy Bentham; the Eastern Penitentiary at Philadelphia; the Tombs, New York; and the state penitentiaries of New Jersey, Rhode Island, and Missouri. He also designed the United States Naval Asylum at Norfolk, the United States Mint at Philadelphia, and other public buildings. His prisons were considered standard at the time, and were visited by commissioners from England, France, Russia, and Prussia. He died in Philadelphia, March 28, 1852. See ARCHITECTURE, in these Supplements.

HAVRE DE GRACE, a village of Harford County, northeastern Maryland, on the south bank of the Susquehanna river, at its entrance into Chesapeake Bay, and on the Philadelphia, Wilmington, and Baltimore railroad. It has a fine harbor, shipyards, a trade in lumber and coal, fruit-canning factories, shoe factories, tin-can factories, saw, planing, and flour mills, fish-packing establishments, and extensive shad and herring fisheries. The famous canvas-back ducks are obtained in the vicinity. Population 1900, 3,423.

HAWAIIAN ISLANDS, a group of 12 islands (7 inhabited and 5 uninhabited) in the North Pacific Ocean. Census of 1900: Area, 6,449 square miles; population, 154,001; capital, Honolulu (on the southwest coast of Oahu), with a population of 39,306. For the history, government, productions, and early statistics, see Vol. XI, pp. 528-32.

In 1843 the independence of the Hawaiian government was formally guaranteed by the English and French governments in the family of Kamehameha III. When Kamehameha V died in 1872, it ended the line of the Kamehamehas, and a chief named Luñalilo was elected to the throne. He died in 1874, and another chief, Kalakaua, was elected. A new constitution was adopted in 1887. Under it the members of both Houses of Parliament were

elected by the vote of all the adult male subjects, under the provisions of an educational qualification on suffrage, and, in the case of the House of Nobles, a property qualification.

King Kalakaua died in San Francisco, Jan. 20, 1891, of Bright's disease. In 1876 he visited the United States and Europe. His habits were wild and extravagant. Princess Liliuokalani succeeded her brother. Her husband was an Englishman. She was constantly at variance with her legislature and advisers, and in January, 1893, attempted to promulgate a new constitution, depriving foreigners of the right of franchise and abrogating the existing House of Nobles, at the same time giving herself the power of appointing a new House. This was resisted by the foreign element of the community, who at once appointed a committee of safety, and called a mass-meeting of their class, at which about fifteen hundred were present. That meeting unanimously adopted resolutions condemning the action of the Queen and authorizing a committee to take into further consideration whatever was necessary to protect the public safety. The committee issued a proclamation to the Hawaiian people, formed itself into a provisional government, took possession of the national property, and sent commissioners to the United States inviting the annexation of the Hawaiian Islands. The United States did not respond, but, recognizing the Hawaiian republic as a fact, continued its old friendly relations. A constitutional convention held session from May 20 to July 3, 1894, and on July 4 the constitution was proclaimed, the new government calling itself the "Republic of Hawaii." For details of this revolution, see UNITED STATES, in these Supplements, p. 2995.

Soon after the establishment of the republic plots for the restoration of the monarchy were discovered, and in January, 1895, actual conflicts occurred between the royalist rebels and the government forces. The ringleaders were, however, arrested, brought to trial, and condemned to death, the extreme sentence being later commuted to heavy fines and long terms of imprisonment. On Jan. 1, 1896, the prisoners were released. Ex-Queen Liliuokalani was also arrested and tried, and her complicity in the plots having been shown, she was sentenced to a modified form of imprisonment for five years. While under arrest the Queen penned her renunciation of the throne, and admitted the validity of the acts of the republican government. In February, 1896, she received a conditional pardon, which was afterwards made absolute. Much discussion was provoked in Congress by a proposition that the American government should undertake the construction of a cable line to Hawaii, the interest being intensified by a real or pretended dread that Great Britain might seize the opportunity to lay the cable, and perhaps proceed to a seizure of the islands, the establishment of a protectorate, or the exercise of influences over the new republic that would prove hostile to United States' interests.

For some time the Japanese laborers, who had been imported into the islands, under contract, until they formed about one-third the male population, seemed

likely to prove a source of trouble. The Hawaiian government began to enforce existing immigration laws, and thus drew from Japan diplomatic protests against violations of treaty rights in this regard. Early in 1897 three immigrant steamers were compelled to carry back to Japan the passengers they had brought, and who were not allowed to land. Legal and diplomatic proceedings failed to settle the question, and the Japanese government ordered the cruiser *Naniwa* to Honolulu. At the same time the United States government despatched the *Philadelphia* to that port,—a mere hint of the interest that Americans were taking in the islands. The differences between Japan and Hawaii were finally left to arbitration.

Meanwhile the question of annexation to the United States was a live issue, the republican administration of Hawaii working toward that end, while certain sugar-growing and other interests formed a strong party in opposition. In the United States the question had similarly met with both support and opposition, the proposed annexation treaty which President Harrison sent to the Senate in February, 1893, being withdrawn by his successor, President Cleveland, a few weeks later. Throughout the latter's administration the Hawaiian question excited much discussion; and some activity displayed by ex-Queen Liliuokalani, and her visits to Washington, lent color to rumors that she would receive American countenance in the event of her attempting to reestablish her monarchy.

On the 16th of June, 1897, President McKinley sent to the United States Senate a treaty of annexation; but no action was taken thereon by that body until the following January, when the conflict of opinion became very marked in the discussions. The policy of expansion, especially beyond the geographical boundaries of the American continent, aroused fears of imperial aggrandizement, and this subject later became of much more importance by the events of 1898 and the war with Spain (concerning which see UNITED STATES, in these Supplements). The Hawaiian legislature, however, ratified the treaty on the 10th of September, 1897, and it only remained for the action of the United States Senate to complete the annexation. All attempts, however, to secure definite ratification by that body failed; but a solution of the difficulty was arrived at by the passage, after much discussion and vigorous opposition, of a joint resolution of both Houses, which was signed by President McKinley on the 7th of July, 1898. The text of the resolution is as follows:

“WHEREAS, The Government of the Republic of Hawaii having in due form signified its consent, in the manner provided by its constitution, to cede absolutely and without reserve to the United States of America all rights of sovereignty of whatsoever kind in and over the Hawaiian Islands and their dependencies, and to cede and transfer to the United States the absolute fee and ownership of all public, government, or crown lands, public buildings or edifices, ports, harbors, military equipment, and all other public property of every kind and description belonging to the Government of the Hawaiian Islands, together with every right and appurtenance thereunto appertaining; therefore,

“Resolved, By the Senate and House of Representatives of the United States of America, in Congress assembled, that said cession is accepted, ratified, and confirmed, and that the said Hawaiian Islands and their dependencies be, and they are hereby, annexed as a part of the territory of the United States, and are subject to the sovereign dominion thereof, and that all and singular the property and rights hereinbefore mentioned are vested in the United States of America.

“The existing laws of the United States relative to public lands shall not apply to such lands in the Hawaiian Islands; but the Congress of the United States shall enact special laws for their management and disposition; provided that all revenue from or proceeds from the same, except as regards such part thereof as may be used or occupied for the civil, military, or naval purposes of the United States, or may be assigned for the use of the local government, shall be used solely for the benefit of the inhabitants of the Hawaiian Islands for educational and other public purposes.

“Until Congress shall provide for the government of such islands, all the civil, judicial, and military powers exercised by the officers of the existing government in said islands shall be vested in such person or persons, and shall be exercised in such manner, as the President of the United States shall direct; and the President shall have power to remove said officers and fill the vacancies so occasioned.

“The existing treaties of the Hawaiian Islands with foreign nations shall forthwith cease and determine, being replaced by such treaties as may exist, or as may be hereafter concluded, between the United States and such foreign nations. The municipal legislation of the Hawaiian Islands not enacted for the fulfilment of the treaties so extinguished, and not inconsistent with the joint resolution nor contrary to the Constitution of the United States, nor to any existing treaty of the United States, shall remain in force until the Congress of the United States shall otherwise determine.

“Until legislation shall be enacted extending the United States customs laws and regulations to the Hawaiian Islands, the existing customs relations of the Hawaiian Islands with the United States and other countries shall remain unchanged.

“The public debt of the Republic of Hawaii lawfully existing at the date of the passage of this joint resolution, including the amounts due to depositors in the Hawaiian Postal Savings Bank, is hereby assumed by the Government of the United States; but the liability of the United States in this regard shall in no case exceed \$4,000,000. So long, however, as the existing government and the present commercial relations of the Hawaiian Islands are continued, as hereinbefore provided, said government shall continue to pay the interest on said debt.

“There shall be no further immigration of Chinese into the Hawaiian Islands, except upon such conditions as are now or may hereafter be allowed by the laws of the United States; and no Chinese, by reason of anything herein contained, shall be

allowed to enter the United States from the Hawaiian Islands.

"The President shall appoint five commissioners, at least two of whom shall be residents of the Hawaiian Islands, who shall, as soon as reasonably practicable, recommend to Congress such legislation concerning the Hawaiian Islands as they shall deem necessary or proper.

"Section 2. That the commissioners hereinbefore provided for shall be appointed by the President, by and with the advice and consent of the Senate.

"Section 3. That the sum of \$100,000, or so much as may be necessary, is hereby appropriated out of any money in the treasury not otherwise appropriated, and to be immediately available, to be expended at the discretion of the President of the United States of America for the purpose of carrying this joint resolution into effect."

In accordance with the terms of the resolution, President McKinley appointed the following commissioners: Sanford B. Dole, ex-President of the Hawaiian Republic; Walter F. Frear, Justice of the Supreme Court of Hawaii; Senator Shelby M. Cullom, of Illinois; Senator John T. Morgan, of Alabama; and Representative Robert R. Hitt, of Illinois.

The commission met at Honolulu in August, and thereafter prepared measures providing for the erection of the annexed islands into a Territory of the United States, to be called the Territory of Hawaii. These measures were submitted by the President to Congress on the 6th of December, and they await the action of that body.

The formal ceremonies of transferring possession to the American authorities took place on the 12th of August at Honolulu. The former president of the Hawaiian Republic, Sanford B. Dole, conducts the executive department of the government under the new *régime*.

The original importance of these islands to the United States was due to their commercial and agricultural value, their utility as coaling and cable stations, and the desirability of keeping other nations—possible foes—from establishing military and naval stations so near American shores or where so many American people and interests are located. Since the cession of the Philippines to the United States, however, the possession of the Hawaiian Islands has become a military, naval, telegraphic, and commercial necessity.

AREA OF THE ISLANDS AND MOVEMENT OF POPULATION. The areas of the island groups are as follows: Hawaii, 4,210 square miles; Maui, 760; Oahu, 600; Kauai, 590; Molokai, 270; Lanai, 150; Niihau, 97; Kahoolawe, 63; total, 6,449. The islands are to a great extent mountainous and volcanic, but the soil is highly fertile and productive.

According to the census of 1896 the population was composed of 31,019 natives; 8,485 half-castes; 21,616 Chinese; 24,407 Japanese; 15,191 Portuguese; 3,086 Americans; 2,250 British; 1,432 Germans; and 1,534 other foreigners; total, 109,020. The native population is closely allied, ethnologically, to the Maoris of New Zealand. At the time of Captain Cook's discovery of the islands, in 1778, the population

numbered probably 200,000. Since then the natives have rapidly decreased, and since the census of 1878 there has been a decrease in the native population of 13,069. The foreign element, however, is rapidly increasing. The total arrivals from 1886 to 1895, inclusive, were 55,661; the departures during the same period, 32,862; showing a surplus of immigrants over emigrants of 22,799. Most of the immigrants are Chinese and Japanese.

All forms of religion are permitted and protected. Nearly all the natives are Christians. There is a Church of England bishop at Honolulu, as well as a Roman Catholic bishop, and ministers of various denominations. Schools are established all over the islands; the sum allotted for public instruction in 1896 being \$227,695. In 1892 there were 168 schools, with 10,712 pupils; of the latter, 5,353 were Hawaiians, 1,866 half-castes, and 2,253 Portuguese.

The revenue of the republic for 1897 amounted to \$2,282,454; expenditure, \$1,924,358. The revenue was largely derived from customs and internal taxes. The debt on Dec. 31, 1897, was \$4,390,147. The interest varies from 5 to 12 per cent.

In 1897 the total exports, practically the whole of which went to the United States, amounted in value to \$15,934,000, of which sugar (\$15,390,000), rice (\$226,000), coffee (\$100,000), and bananas (\$75,000), formed the largest part. The imports, amounting in 1897 to \$8,838,000, of which 76 per cent were brought from the United States, consisted largely of groceries, provisions, clothing, grain, timber, machinery, hardware, and cotton goods.

Steamers connect the islands with the American continent, Australasia, and China. In the inter-island traffic 20 steamers and 28 sailing vessels are constantly engaged. In 1897 there were 62 vessels belonging to the islands, of 34,066 tons. There are about 88 miles of railway in the islands of Hawaii, Maui, and Oahu. There are telegraphs in the islands of Maui and Hawaii, between Hawaii and Oahu, and around the latter island; total length 250 miles. The various islands also are connected by telegraphic cables. Nearly every family in Honolulu has its telephone, and the system is in operation in the islands of Oahu, Kauai, Hawaii, and Maui. The postal service is very thoroughly organized, and the islands are included within the Postal Union. In 1897 the total number of letters, etc., transmitted and received by the post office was 6,377,761, and there were 81 post offices. The postal savings bank system has over 3,000 depositors.

The city of Honolulu is lighted by electricity, and there is a system of tram cars. Several evening, daily, and weekly papers and monthly magazines are published in English, Hawaiian, Portuguese, Japanese, and Chinese.

HAWARDEN, a small market town of Flintshire, North Wales, seven miles W. of Chester. The church, almost destroyed by fire in 1857, was restored from designs by Sir G. G. Scott. A free library was opened in 1889. Hawarden Castle, the seat of the late W. E. Gladstone, dates from 1752. The park contains the ruined circular keep of a

thirteenth-century castle, which commands a good view of the valley of the Dee.

HAWEIS, HUGH REGINALD, an English clergyman and author; born at Egham, Surrey, April 3, 1838; graduated from Trinity College, Cambridge (1859). He was in southern Italy with Garibaldi during the famous campaign of 1860, and wrote an account of the scenes he had witnessed. After being curate of two London parishes for six years he was appointed incumbent of St. James Church, Marylebone, in 1866. He took a great interest in the welfare of the lower classes, diffused knowledge among them by his penny readings, and advocated the opening of the museums on Sundays. In 1868 he was made editor of *Cassell's Family Magazine*, and in 1885 and 1893 lectured in the United States. He wrote *Music and Morals; Thoughts for the Times; Speech in Season; Arrows in the Air; American Humorists; Unsectarian Family Prayers; The Broad Church; or, What is Coming? His Life of Sir Morell Mackenzie*, the surgeon who attended Emperor Frederick III in his fatal illness, caused a great sensation, not altogether of a flattering nature.

HAWESVILLE, a city and the capital of Hancock Co., Ky., on the Ohio river. Tobacco-raising and coal-mining are the chief occupations. It is in the centre of the Kentucky coal-beds, and eight mines are in operation. Population 1900, 1,041.

HAWKBIT, the *Leontodon autumnale*, or fall dandelion, a plant of weedy aspect, belonging to the family *Compositæ*, closely related to the dandelion. The name is due to the deep, tooth-like lacerations of the leaves. It is a native of Europe, but is naturalized in parts of the United States.

HAWKE'S BAY, a provincial district of North Island, New Zealand; area 4,410 square miles; population 1896, 34,038. It presents rich alluvial plains and undulating hills, with enormous forests. The bay was first entered by Captain Cook, on Oct. 8, 1769, and was named after Sir Edward Hawke, then First Lord of the Admiralty. Napier (population 8,300) is the port and chief town.

HAWKESBURY, a river of New South Wales, which rises in the Cullarin Range, and, under the names of Wollondilly and Nepean, flows northeast; then turns, as the Hawkesbury, southeast, and enters Broken Bay, near lat. 34° 30' S., about 20 miles N. E. of Sydney. Its length is 330 miles, and it is navigable for vessels of one hundred tons as high as Windsor. The Hawkesbury is crossed by a steel girder bridge (1886-89), one of the largest structures of its kind in the world; it completes railway communication between Brisbane and Adelaide.

HAWKING. See **FALCONRY**, Vol. IX, p. 5.

HAWKINS, BENJAMIN WATERHOUSE, an English scientist and author; born in London, Feb. 8, 1807; graduated from St. Aloysius College; studied art under the sculptor William Behnes; from 1827 devoted himself to natural history; began the restoration of extinct animals in gigantic models in 1852; assistant superintendent of the London Crystal Palace Exposition (1851), where were placed 33 of his life-size models, one of them (the iguanodon) so colossal that he gave a dinner to 12 people within its

body; made a visit to the United States in 1868, lecturing and building models of antediluvian animals for the Central Park Museum, New York. Wrote *Popular Comparative Anatomy* (1840); *Comparative View of the Human and Animal Frame* (1860); *Atlas of Elementary Anatomy* (with T. H. Huxley, 1865); *Artistic Anatomy of Cattle, Sheep, etc.* (3d ed. 1873); *Artistic Anatomy of the Horse* (5th ed. 1874). He died in New York city in 1889.

HAWKINS, HAMILTON SMITH, American army officer, was born in South Carolina, Nov. 13, 1834. In July, 1852, he was appointed from New York state as cadet to the Military Academy, and remained there till January, 1855. On April 26, 1861, he entered the regular army as second lieutenant of the Sixth Infantry, and was promoted to be first lieutenant May 17, 1861, and captain Sept. 20, 1863. For gallant and meritorious services in the battle of Gettysburg, he had, in July previous, been brevetted captain, but he declined the honor; and he also declined the offer of brevet major which was made to him Oct. 11, 1865. From 1861 to 1865 he occupied the staff position of regimental quartermaster of the Sixth Infantry. He was appointed major of the 10th Infantry Oct. 31, 1883; lieutenant-colonel of the 23d Infantry Feb. 17, 1889; and colonel of the 20th Infantry Aug. 13, 1894, when he was placed in command of Fort Leavenworth, Kansas. After the war with Spain broke out, he was made brigadier-general of the volunteers; and as commander of the First Brigade of Kent's division he did excellent service at the battles of El Caney and San Juan, near Santiago de Cuba, July 1-3, 1898. Later he was made major-general of volunteers; and on Nov. 13, 1898, he was retired.

HAWKINS, SIR HENRY, an English criminal jurist, was born at Hitchin, Hertfordshire, Sept. 14, 1817, and educated at Bedford School. He was called to the bar in 1843, and rapidly acquired an extensive criminal practice. As a prosecutor he was dreaded by the criminal classes, while his success in pleading for the defense was as remarkable. He was appointed a queen's counsel in 1858, was for many years one of the leaders of the Home Circuit in England, and was engaged in nearly every *cause célèbre* in English courts. In the Roupell forgery case he exhibited that masterly skill in cross-examination which later did so much to discomfit the witnesses for the Tichborne claimant. In the prosecution of this impostor he led the case for the crown, and insured conviction by his remarkable abilities. (See **TICHBORNE**, in these Supplements.) He became judge of the Queen's Bench Division of the High Court of Justice on Nov. 3, 1876, and was knighted. As an able and impartial criminal judge, he had few equals. Invariably lenient to the oppressed, for the villain and the knave his severity was inflexible. To the criminal classes he became known as "the hanging judge." His knowledge of criminal law and practice was most thorough, and his decisions were masterly expositions of legal principles. A keen lover of field-sports, a brilliant wit, with a deep knowledge of human as well as legal affairs, his was an interesting personality in the life of the British metropolis.—ANTHONY HOPE

HAWKINS,—his cousin, sought fame and found it in the field of letters, under the name of Anthony

ANTHONY HOPE HAWKINS.

Here he took a good degree and was honorably mentioned as an English essayist. In 1886 he was chosen president of the Oxford Union, that debating society where many an English statesman first tries his oratorical wings. Then he entered the Middle Temple and read law, being admitted to the bar in 1887. He defended a few clients, with poor success, and acted as marshal to his relative, Sir Henry Hawkins. His first attempt in the literary field was *A Man of Mark* (1890), the story of some swindling financiers in a South American republic. *Father Stafford* (1891) fell flat at first. *Mr. Witt's Widow* (1892) and a series of short stories, reprinted from the *St. James's Gazette* under the title of *Sport Royal* (1893), had better success. Then a Parliamentary career attracted him, and he was handsomely defeated by the Hon. G. N. Curzon in one of the divisions of Buckinghamshire. *A Change of Air* (1893) and *Half a Hero* (1893), the latter a story of colonial politics, were more successful than his Parliamentary venture. His persistence and his pure English style were beginning to interest the critics and the reading world. Success came in solid form in 1893, when *The Prisoner of Zenda* came from the Arrowsmith press. It was a modern story of incident, the scene being laid in an imaginary kingdom. With a soldier for a hero, a beautiful woman for a heroine, sprightly dialogue, and a polished style, the book was a striking success. Emerson's aphorism as to all mankind loving a lover applied also to one who could so faithfully portray human affection. The famous *Dolly Dialogues* (1894), followed by *The God in the Car*, *Comedies of Courtship*, and *The Indiscretion of the Duchess*, failed to satisfy the demand for his writings. He turned to the field of his first success, and with *The Heart of Princess Osra* (1896); *Phroso* (1897); *Simon Dale* (1898); *Rupert of Hentzau* (1898); and *Lady Ursula* (1898), was welcomed as a writer of novels of adventure. His *Prisoner of Zenda* was equally successful on the stage, and, with a poetic sense of the fitness of things, in 1896 its author married the beautiful actress, Evelyn Millard, who had created the rôle of his Princess of Zenda.

HAWKINS, SIR RICHARD, an English sailor, and son of Sir John Hawkins (q. v.); born, probably at Plymouth, England, about 1562; accompanied his father in his freebooting expeditions

to the West Indies, also to the Portuguese coast; commanded the *Swallow* in its fight against the Armada (1588); started on a trip around the world, on board the *Dainty* (1593); rounded Cape Horn; sacked Valparaiso de Chili; finally was captured in San Mateo Bay (June 22, 1594) by the Spanish fleet sent in pursuit; sent to Spain and imprisoned (1597); escaped (1598); recaptured and finally ransomed (1602); knighted, elected to Parliament and made Vice-Admiral of Devon (1604); took part in Sir Robert Mansell's expedition against the Algerine pirates (1620); died in London, April 17, 1622.

HAWKINSVILLE, a city and county seat of Pulaski County, central Georgia, on the Ocmulgee (navigable) River, 40 miles S. of Macon, and on the Southern and the Oconee and Western railroads. It has cotton warehouses, cotton factory, steam grist-mill, manufactures carriages and wagons, and is an agricultural shipping-point. Population 1890, 1,755; 1900, 2,103.

HAWK-MOTH. See *Moths*, under **BUTTERFLIES**, Vol. IV, p. 596.

HAWKS, FRANCIS LISTER, an American Episcopal clergyman; born in New Berne, North Carolina, June 10, 1798; graduated with highest honors from the University of North Carolina, 1815; admitted to the North Carolina bar, 1819, but, after a few years of marked success in the practice of law, took up the study of theology, and was ordained deacon in 1827, and priest shortly afterward. Assistant rector of Trinity Church, New Haven, Connecticut, 1829, and the same year at St. James's, Philadelphia. Professor of divinity in Trinity College, Hartford, 1830; rector of St. Stephen's Church, New York, 1831. From December of 1831 to 1843 he was rector of St. Thomas's, New York, and from 1845 to 1849, of Christ Church, New Orleans; rector of Calvary Church, New York, 1849. In 1862 he resigned and went to Baltimore, where he became rector of Christ Church, but in 1865 returned to New York. As conservator of documents and historiographer of the Protestant Episcopal Church, he visited England, 1836, and brought back eighteen large folio volumes of manuscripts concerning the Church of England in America; published two volumes of extracts, etc., which were so severely criticised that he gave up the task; was unfortunate in his personal financial affairs and was unpractical in business; he declined several bishoprics. Besides the work above mentioned, he wrote *Commentary on the Constitution and Canons of the Protestant Episcopal Church in the United States* (1841); *Auricular Confession in the Protestant Episcopal Church* (1850); *History of North Carolina* (Vol. I, 1857); also a number of translations and compilations. He was a forceful orator and a man of sincere religious enthusiasm. Died in New York City, Sept. 26, 1866.

HAWKS-BEARD, a name applied to *Crepis*, a genus of annual and biennial plants belonging to the family *Compositæ*, so closely related to Hawkweed (*Hieracium*) that some of the species are referred to the one genus or the other, according

to the peculiar views of individual botanists. The species are widely distributed through Europe and Asia. Doubtful medicinal properties have been ascribed to several species, and *C. lacera*, a native of the Apennines, is said to be poisonous.

HAWKS BEE OR HAUKS BEE, FRANCIS, an English natural philosopher; born in the latter half of the seventeenth century, and died about 1730. Was elected a fellow of the Royal Society (1705), and appointed curator of experiments to the society, and elected assistant secretary (1722). He carried further the tentative observations by Drs. Gilbert and Boyle (see Vol. VIII, pp 3, 4) on the subject of electricity, and by his experiments laid the scientific foundations of that branch of knowledge between 1704 and 1713. He contributed forty-three memoirs to the *Philosophical Transactions*, chiefly on subjects connected with chemistry and electricity. His chief work, published in 1709, is entitled *Physico-Mechanical Experiments on Various Subjects*, most of which refer to the action of light and electricity. Well known as the improver of the earlier air-pumps of Boyle, Papin and Hooke, and as the first who used glass in the electrical machine.

HAWKS BILL TURTLE. See **TORTOISE**, Vol. XXIII, p. 459.

HAWKSHAW, SIR JOHN, an English civil engineer; born in Leeds, April 9, 1811; received only a common-school education; but studied engineering under the famous engineers, Fowler and Alexander Nimmo; he succeeded the latter in the management of the Bolivar copper-mines in Venezuela (1831); returning to England (1834), he was engaged on a number of railroads and other public works at home and abroad, among them, the Southwestern Railway and Charing Cross and Cannon Street railways in London, the Riga-Dunaburg and Dunaburg Witpepsk railways in Russia; the new Spithead forts; the tunnel under the Severn; the great canal from Amsterdam to the North Sea; the docks of Buenos Ayres, and a number of bridges. This is only a very small part of his work. He was consulting engineer for the Suez canal, the navigation of the Nile, the navigation of the Weaver, England, etc.; knighted (1875); president Institution of Civil Engineers (1862), and of the British Association (1875). A man of immense working capacity and of deep and original intellect. Died in London, June 2, 1891.

HAWLEY, a village of Wayne County, north-eastern Pennsylvania, situated on the Lackawaxen River, 8 miles S. E. of Honesdale, and on the New York, Lake Erie and Western and the Erie and Wyoming Valley railroads, and also on the Delaware and Hudson canal. It has a large business in the transfer and forwarding of coal. Its other more important industries are silk and lumber manufacturing, and glass-blowing and cutting. Population 1900, 1,925.

HAWLEY, JOSEPH ROSWELL, an American statesman, born in Stewartsville, North Carolina, Oct. 31, 1826; graduated from Hamilton College, New York (1847); admitted to the Connecticut bar (1850). In 1857 he became editor of the

Hartford *Evening Press*. Enlisted in the Union army as a lieutenant, in 1861; received special praise for gallantry at Bull Run; with A. H. Terry, raised the Seventh Connecticut Volunteers, a three-year regiment, and was its lieutenant-colonel; commanded the regiment in the battles of James Island and Pocotaligo; made a brigadier-general in Terry's division, Tenth Corps; became brevet major-general,

JOSEPH R. HAWLEY.

and in 1866 was mustered out. In April of the same year he was chosen governor of Connecticut; held the office one year, and returned to journalism as editor of the *Hartford Courant*, with which the *Press* had been consolidated; president of the Republican national convention (1868); elected a member of Congress (1872); was re-elected to the Forty-third and Forty-sixth Congresses. He was elected to the United States Senate in 1887 and again in 1893. Was president of the United States Centennial Commission from its organization to the close of the exposition.

HAWTHORNE, JULIAN, American author and son of the novelist, **NATHANIEL HAWTHORNE**, q. v. Vol. XI, pp. 536-538; was born in Boston, Massachusetts, June 22, 1846. He studied at Harvard College, but left it without graduating, to devote himself to engineering studies in Dresden, Germany. In 1870 he visited the United States, intending to return to Dresden, but the Franco-German War interfered with his plans, and he became connected with General McClellan's staff of hydrographic engineers, then at work on the New York docks, and remained attached to this service until mid-summer, 1872. Meanwhile, he contributed short stories to American magazines, which, being well received, he henceforth devoted himself to literature. Returning to Germany, he published, in England and in this country, two imaginative novels, *Bressant* (1873), and *Idolatry* (1874), and, settling in London, issued through the *Contemporary Review* and afterward in book form, his *Saxon Studies* (1876), a series of German sketches, the fruit of his residence in Dresden. Hawthorne now essayed longer flights in fiction, beginning with *Garth* (1877), and continuing in *Sebastian Strome* (1879); in *Fortune's Fool* (1883); and in *Noble Blood and Dust* (1883). Besides these, he produced a number of short stories and novelettes of varying merit, and one or two dealing with crime and its detection. Of the latter class was *A Fool of Nature*, which obtained the ten thousand dollar prize offered by the New York *Herald*,

JULIAN HAWTHORNE.

in 1896. Two other kindred stories, founded on facts furnished by a New York detective, are *A Tragic Mystery*, and *The Great Bank Robbery* (1887). His other detective stories include *Another's Crime*; *American Penman*; *Section 558* (1888); *The Trial of Gideon*; *David Poindexter's Disappointment* (1889); and *Confessions of a Convict* (1893). In 1887 Mr. Hawthorne issued a collection of critical papers, chiefly on literary subjects, entitled *Confessions and Criticisms*, and in 1893, in conjunction with Leonard Lemmon, he prepared a text-book on *American Literature*. He has also served journalism fitfully, on one occasion being on the staff of the *London Spectator*; at another, acting as literary editor of the *New York World*. His other writings embrace *Archibald Malmaison* (1878); *Laughing Mill* (1879); *Ellice Quentin*; *Prince Saroni's Wife* (1880); *Beatrice Randolph*; *Love; or, a Name* (1884); *Miss Cadogna*; *Mrs. Gainsborough's Diamonds* (1885); *Constance*; *John Parmalee's Curse* (1887); and *The Professor's Sister* (1888). He also edited and published (1884) *Dr. Grimshawe's Secret*, a posthumous romance by his father, and in 1885 a biography of the latter, entitled *Nathaniel Hawthorne and His Wife*. In 1889 Mr. Hawthorne visited Europe, with a large delegation of workingmen, to examine into the condition of European industries.

HAXO, FRANÇOIS BENOIT (1774-1838). Distinguished French engineer. See FORTIFICATIONS, Vol. IX, pp. 463, 464.

HAY, JOHN, an American author and diplomat; born in Salem, Indiana, Oct. 8, 1838; graduated from Brown University, 1858; admitted to the bar of the supreme court of Illinois, 1861, but immediately afterward made assistant secretary to President Lincoln. He acted also as his adjutant and aide-de-camp, and served for some time under General Hunter and General Gillmore, with the rank of major; he was also brevetted colonel. He was first secretary of legation at Paris, *chargé d'affaires* at Vienna in 1867-68, and then secretary of legation at Madrid. From 1870 to 1875 he was on the editorial staff of the *New York Tribune*, and from 1879 to 1881 was first assistant Secretary of State under President Hayes; was elected president of the International Sanitary Congress, held in Washington, 1881. He published *Pike County Ballads* (1871); *Castilian Days* (1871); and, with John G. Nicolay, *History of the Administration of Abraham Lincoln*. He translated Castelar's *The Republican Movement in Europe* (1874-75). Appointed minister to England in 1897, and Secretary of State on Aug. 16, 1898.

HAYCRAFT ELECTROLYTIC PROCESS. See GOLD AND GOLD MINING, *ante*, p. 1417.

HAYDEN, FERDINAND VANDEVEER, an American geologist; born in Westfield, Massachusetts, Sept. 7, 1829; graduated from Oberlin College, 1850; and, as M.D., from Albany Medical College, 1853; the same year he explored the "Bad Lands" of Dakota, and in 1854-56 was in the basin of the upper Missouri, bringing back fine collections of minerals and fossils. From 1859 to

1862 he was naturalist and surgeon on the expedition sent out to explore the Yellowstone and Missouri rivers under Capt. W. F. Reynolds, and in the latter year became assistant surgeon of volunteers in the United States army. In 1863 he was promoted full surgeon, and in 1865 resigned with the brevet of lieutenant-colonel. Professor of mineralogy and geology in the University of Pennsylvania, 1865-72; became connected again with the government geological surveys, and in 1879 was made United States geologist in charge of the Montana division. In 1886 his failing health compelled him to resign. He is the author of a very large number of scientific papers and government reports. He was elected a member of the National Academy of Sciences. Died in Philadelphia, Pennsylvania, Dec. 22, 1887.

HAYES, AUGUSTUS ALLEN, an American chemist; born at Windsor, Vermont, Feb. 28, 1806; graduated from the Norwich (Vermont) Military Academy; studied chemistry under Prof. J. F. Dana, and settled in Boston in 1828, where he became consulting chemist of some of the most important dyeing, bleaching, gas and smelting works in New England. He discovered the organic alkaloid color-compound sanguinaria, carried through experiments which led to the construction, in 1838, of improved furnaces and boilers, suggested the process of reducing pig to malleable iron without loss by the use of the oxides of iron, as well as new processes in copper-smelting, the decomposition of alcohol and the formation of chloroform, and made important investigations into the properties of guano. He also examined the constitution of sea water and fresh water at various depths, prepared a report for the Navy Department on the copper-sheathing of vessels and supplied a novel process for the manufacture of saltpeter. He used electricity to determine the purity of water at different depths; was for many years state assayer of Massachusetts, and wrote a number of papers on his many valuable observations and discoveries. Died in Brookline, Massachusetts, June 21, 1882.

HAYES, ISAAC ISRAEL, an American explorer of the Arctic regions; born in Chester County, Pennsylvania, March 5, 1832; graduated as M.D. from the University of Pennsylvania, 1853. The same year he sailed as surgeon of the second Grinnell expedition in search of Sir John Franklin, and was the first civilized man to place foot on Grinnell Land. In 1860 he sailed in command of the schooner *United States*, and claimed to have reached a point which he called Cape Lieber, in lat. 81° 35' N., long. 70° 30' W. Some explorers think that his calculations were incorrect, and that he reached Cape Joseph Good, about lat. 80° 15' N., long. 70° W. In 1869 Hayes again entered the Arctic Circle, in the *Panther*. During the Civil War he was surgeon of volunteers, and attained the brevet rank of lieutenant-colonel. He received gold medals from the London and Paris Geographical Societies. He published *An Arctic Boat Journey* (1860); *The Open Polar Sea* (1867); *Cast Away in the Cold*:

A Story of Arctic Adventure for Boys (1868); and *The Land of Desolation* (1871). Died in New York City, Dec. 17, 1881.

HAYES, RUTHERFORD BIRCHARD, an American statesman, the nineteenth President of the United States; born in Delaware, Ohio, Oct. 4, 1822; graduated at Kenyon College, Ohio, 1842, and at Harvard College Law School, 1845; began the practice of law at Lower Sandusky in 1845 and in 1850 removed to Cincinnati, where he was city solicitor in 1859-61; was appointed major of the Twenty-third Ohio Infantry and shortly afterward lieutenant-colonel, when he commanded the

RUTHERFORD B. HAYES.

regiment until December, 1862; distinguished himself in the campaigns of West Virginia and in the battles around Winchester. At South Mountain he was severely wounded. In 1863 he was promoted brigadier-general, and the following year was brevetted major-general. From 1864 to 1866 he was a member of Congress from Ohio, and from 1867 to 1871 governor of the state, being elected for a third term in 1875, an honor never bestowed before in Ohio. In 1876 he was the Republican candidate for President of the United States. At the following election, the results of which were hotly disputed and finally settled by a special Electoral Commission (q. v., in these Supplements), he was chosen over Mr. Samuel J. Tilden by a majority of one vote in the Electoral College, and was inaugurated March 5, 1877. He chose W. M. Evarts as his Secretary of State and John Sherman as his Secretary of the Treasury. Shortly after his inauguration he restored North Carolina and Louisiana to full state rights by withdrawing the United States troops therein stationed and recognizing their Democratic governors, Wade Hampton and Nichols. He gave its first serious impulse to civil-service reform; brought to a successful issue the resumption of specie payments Jan. 1, 1879, without impairing the credit or the commercial prosperity of the country; made strong efforts to check the destruction of the United States forests, and showed himself a determined adversary of the free coinage of silver, of any trans-oceanic canal that would not be under the direct control of the United States. His policy may be characterized as wise, conservative and truly American in the highest sense of the word. At the expiration of his term, March 3, 1881, he retired to his home in Fremont, Ohio, and withdrew altogether from public life. Died at Fremont, Ohio, Jan. 17, 1893.

HAYNAU, JULIUS JAKOB, BARON VON, Austrian general; born at Cassel, Germany, Oct. 14, 1786. Entering the Austrian service in 1801, he became noted, during the Italian campaigns of 1848-49, for

military skill and ruthless severity at the capture of Brescia, gaining the name of "Hyæna of Brescia." He was engaged in the siege of Venice, when he was summoned by the Emperor to Hungary, in May, 1849, to take the supreme command of the forces in that country. The storming of Raab, his victory at Komorn, his occupation of Szegedin, and his victories on the Theiss contributed materially to the final success of the Imperialists, but his atrocious severity toward the defeated Hungarians excited the detestation of Europe. Appointed governor of Hungary after its pacification, he was dismissed in 1850 for insubordination. He died in Vienna, March 14, 1853.

HAYNE, an illustrious family of South Carolina.—ISAAC; born in Beaufort district, South Carolina, Sept. 23, 1745; was cavalry officer in the Revolutionary War, and upon the surrender of Charleston was paroled upon the condition that he should not take up arms against the British. Later, Lord Rawdon ordered him to aid in the defense of the city, but, declaring that his parole was nullified by such a summons, he again joined the Colonial army, and, being captured by the British, was hanged without court-martial, Aug. 4, 1781.—PAUL HAMILTON, a poet; born Jan. 31, 1831, in Charleston, South Carolina; was educated to the law, but early turned to literature and became editor of *Russell's Magazine*; in 1865 removed to Augusta, Georgia, and became editor of the *Constitutionalist*; ended his life in retirement near Groveton, July 6, 1886. He published *Sonnets and Other Poems* (1857); *Avolio* (1860); *The Poems of Henry Timrod* (1873); *Lives of Robert Y. Hayne and Hugh S. Legaré* (1878). For ROBERT YOUNG, see Vol. XI, p. 543.

HAYS, ISAAC, an American physician; born in Philadelphia, July 5, 1796. He graduated at the University of Pennsylvania, and practiced medicine in Philadelphia, especially as an oculist. In 1820 he became editor of the *American Journal of the Medical Sciences*; in 1869, associated his son with him, who still edits the magazine; in 1843, established the *Medical News* and in 1874 the *Abstract of Medical Science*. He edited *Wilson's American Ophthalmology*; *Lawrence's Treatise on Diseases of the Eye*; *Arnott's Elements of Physics*. The code of ethics of the American Medical Association was framed by Dr. Hays. It has been adopted by every medical society in the United States. He died in Philadelphia, April 13, 1879.

HAYTER, HARRISON, a British civil engineer; born at Falmouth, England, April 10, 1825; studied applied science at King's College, London; began as civil engineer on the Stockton and Darlington railroad; worked afterward upon the construction of the Great Northern railroad; in 1857, became assistant to Sir John Hawkshaw; in 1870, his partner. In 1895 he was engaged in constructing a system of docks at Buenos Ayres, to cost twenty-five million dollars.

HAYTI, a republic, formerly a French colony, now governed by a constitution adopted June 14, 1867; area (embracing the western portion of the island of Hayti), 10,204 square miles; population 1895, 1,400,000, about nine-tenths of whom are

negroes; capital, Port-au-Prince, with a population of 50,000. For early history, productions, government and statistics, see HAYTI, Vol. XI, pp. 543-546.

The religion of the republic is chiefly Roman Catholic. Public elementary education is free. There are about four hundred national schools, besides several private schools, and five public lycées. The official language is French. As a result largely of long-continued civil war, there has been much disorder in financial affairs, and in 1893 there was a total indebtedness of \$16,993,347.

The army, under a "law of reorganization" passed in 1878, consists of 7,000 men, chiefly infantry. There is a special "guard of the government," numbering 650 men with 10 generals, who act as aides to the president. In 1895 Hayti had a navy of five gunboats.

In 1893 the imports amounted to \$10,143,757, two thirds of them from the United States, while the exports were valued at \$12,163,059. The chief articles exported were logwood, 160,000,000 pounds; coffee, 78,000,000 pounds; cacao, 3,000,000 pounds; mahogany, 35,000 feet. The total revenue for the year was \$7,465,249.

The following is a list of the presidents of Hayti, from the date of the republic:

Presidents.	Assumed Office.
General Fabre Geffrard-----	Jan. 23, 1859
Sylvestre Salnave -----	March 27, 1867
General Nissage Saget -----	May 15, 1870
Michel Domingue -----	May 15, 1874
Boisrond Canal -----	July, 1876
General Salomon -----	Oct. 22, 1879
General Légitime -----	Oct. 22, 1888
General L. M. L. Hippolyte-----	Oct. 17, 1889
General T. A. Simon Sam.....	March 26, 1896

The president's constitutional term is seven years; and his salary \$24,000.

The historic outline for the last decade has been largely interwoven with that of Santo Domingo, which embraces the eastern portion of the island of Hayti. On Jan. 1, 1880, the Republic of Hayti was reported as "tranquil"; and this state of things continued notwithstanding serious government trouble in Santo Domingo until 1883, when a negro insurrection broke out in Port-au-Prince; but this was suppressed Sept. 22, of the same year. In 1886 great troubles arose because of large thefts of funds from the National Bank of Hayti, resulting in convictions of doubtful desert and imprisonments against which the English and American governments protested. The prisoners were soon after released. In 1888 a revolution took place in Hayti, and Salomon was deposed. He fled to Cuba, August, and died in Paris, Oct. 19, 1888. A little later an insurrection took place under General Télémaque; and during the month of October, while engaged in an attack on the Palais National at Port-au-Prince, he was killed with about three hundred of his followers. General Légitime was elected President, Oct. 22, 1888, and General Hippolyte was installed as President at Haytien, Jan. 1, 1889. A conflict of authority and immediate war followed. Légitime was defeated Jan. 29, 1889, and General Hippolyte was defeated Feb. 20, 1889; subsequently the latter advanced on Port-au-Prince, and soon became re-established in office. President Hippolyte repressed another outbreak in 1891, granting amnesty to the lesser participants on Jan. 1, 1892. His official term was afterward marked with several incipient revolts. General Hippolyte died March 24, 1896.

Louis Mondestin Florvil Hippolyte, a Haytien general, was born at Cape Haytien in 1827. His

mother was a Frenchwoman, and his father one of the negro ministers of the Emperor Faustin I. He was educated in France, and entered upon a military career. His defense of the fortress of Belair in the revolution of 1865 was a notable achievement. After the ten-months' war in 1888, General Hippolyte proclaimed a general amnesty, and since that time affairs in the negro republic have been progressing very peaceably.

General Tiresias Augustin Simon Sam, Hayti's new President, succeeding General Hippolyte, issued another amnesty proclamation immediately upon taking his seat.

HAYTIEN, CAPE, OR CAPE FRANÇOIS, a seaport town of the Republic of Hayti, on the northern coast of the island of Hayti, at lat. 19° 46' N., long. 72° 14' W. In the middle of the eighteenth century this town was very prosperous, having a university and an academy of music. In 1791, however, it was burned by Toussaint l'Ouverture; and in 1842 it was destroyed by an earthquake. Its trade is now mostly with the United States. Population, about 12,000. Its original Indian name was Guarico.

HAYWARD, a village and the capital of Sawyer County, northwestern Wisconsin, on Namakagon River and the Chicago, St. Paul, Minneapolis and Omaha railroad, 65 miles S.W. of Duluth. Its principal business is lumbering, its largest saw-mill having a capacity of 40,000,000 feet of lumber per year. It also has planing and feed mills. It has a public library, electric lights and city water. Population 1900, 2,720.

HAZARA, the name of a mountainous district in Afghanistan, between Herat and Cabul. Also, of a peculiar Mongol tribe of herdsmen, inhabitants of the Hazara district. See also AFGHANISTAN, Vol. I, p. 235.

HAZEN, WILLIAM BABCOCK, an American general; born at West Hartford, Vermont, Sept. 27, 1830. He graduated at West Point in 1855, and served against the Indians in California, Oregon and Texas; in 1861 became assistant professor of infantry tactics at West Point, and was made a captain in the same year; soon after took command of the Forty-first Ohio Regiment, and joined General Buell's army. In 1862 he was appointed to command a brigade; fought at Shiloh and Corinth; at the battle of Stone River saved the left wing from being vanquished. He took part at Chattanooga, and in Sherman's march to the sea, commanded a division. With this he captured Fort McAllister, Dec. 13, 1864, and was promoted major-general of volunteers. After the war, Hazen was made colonel of the Sixth Infantry of the Regular Army. In December, 1880, he was appointed chief signal officer, with the rank of brigadier-general. While in this office he sent Lieutenant Greely to Lady Franklin Bay, to make meteorological observations, introduced the "cold-wave signals," promoted the use of local and railway weather signals; organized special observations for the cotton-producing states, established frost warnings, and initiated forecasts for vessels coming to this country from Europe. He published *The School of the Army in Germany and France, with a*

Diary of Siege-life at Versailles (1872); *Narrative of Military Service* (1885). He died in Washington, District of Columbia, Jan. 16, 1887.

HAZLEHURST, a village and the capital of Copiah County, southwestern Mississippi, 35 miles south of Jackson, on the Illinois Central Railroad. It is the shipping and trading point for a large cotton-raising section. It has some manufactures, principally of cotton and cotton-seed oil. Population 1900, 1,579.

HAZLETON, a city of Luzerne Co., Pa., in a great anthracite coal region, and on two great railroads, the Lehigh Valley and the Pennsylvania; manufactures undertakers' supplies, pianos and organs, spring-guns, iron, and flour; and a beef company, established in 1884, does an extensive business. The public schools are excellent. The miners' hospital is a commodious building. There are public halls and numerous churches, and two daily, one semi-weekly, and two weekly papers, and three banks. Pop. 1890, 11,818; 1900, 14,230. See Vol. XI, p. 549.

HAZLITT, WILLIAM CAREW, an English author, grandson of William Hazlitt; born Aug. 22, 1834; educated for the law, but early turned his attention to literature. He is the author of *History of the Venetian Republic* (4 vols., 1860); *Sophie Laurie*, a novel (1865); *Memoirs of William Hazlitt* (1867); *Popular Poetical and Dramatic Literature of Great Britain* (1867); *Bibliographical Collections* (1882). He has edited the *Poems of Constable, Lovelace, Herrick*, and other seventeenth and eighteenth century literature.

HEAD, THE VERTEBRATE. See SEGMENTATION OF THE VERTEBRATE HEAD AND BRAIN, in these Supplements.

HEAD-DRESS. See COSTUME, Vol. VI, pp. 453 et seq.

HEADER. See HARVESTING MACHINERY, in these Supplements.

HEADLEY, JOEL TYLER, an American author; born at Walton, Delaware County, New York, Dec. 30, 1813. After graduating at Union College in 1839, he studied theology at Auburn Theological Seminary, and became pastor of a church at Stockbridge, Massachusetts. Ill-health soon obliged him to give up pastoral work. In 1842 he went to Europe, and on his return published *Letters from Italy and the Alps and the Rhine*; after this, numerous works, mostly on historical subjects and popular in character: *Napoleon and His Marshals* (1846); *Washington and His Generals* (1847); *The Adirondacks* (1849), in which he made this region known to the world; *Second War between England and the United States* (1853); *Life of General Havelock* (1859); *Sacred Heroes and Martyrs* (1865); *Grant and Sherman* (1865); *Great Rebellion* (1866); *Farragut and our Naval Commanders* (1867); *Life of U. S. Grant* (1868); *The Achievements of Stanley and Other African Explorers* (1877). He was assistant editor of the *New York Tribune* in 1846, and in 1855 was elected Secretary of State of New York. Died at Newburg, N. Y., Jan. 16, 1897.

HEADLEY, PHINEAS CAMP, an American author; born in Walton, New York, June 24, 1819; educated to the law; later studied theology, and held pastorates in Adams, New York, and Greenfield, Mas-

sachusetts; wrote historical works similar to those of his brother JOEL TYLER; *Empress Josephine* (1851); *Lafayette* (1856); *Massachusetts in the Rebellion* (1866).

HEALDSBURG, a city of Sonoma County, central California, situated on the Russian River and the San Francisco and North Pacific railroad, 60 miles N. of San Francisco, and 20 miles from the ocean. It has an academy, the Healdsburg College, and a graded school. It is principally engaged in fruit and stock raising, grape-culture and quicksilver-mining. It has manufactories of chairs, baskets and wine. Population 1890, 1,485; 1900, 1,869.

HEALTH, BOARDS OF. A board of health is a commission charged with certain duties and powers for the purpose of protecting or improving the public health. Boards of health in the United States are either national, state or local in their jurisdiction. A national board of health, composed of seven members, is provided for by act of Congress. It has general charge of matters affecting the public health, especially in quarantine matters, and must report to Congress and consult with the various state and local boards when occasion may require. State boards of health are provided for in the various states, to be appointed by the governor, and whose duty extends throughout the state. The duties of these boards may vary in the different states, but they are usually required to supervise generally the matters pertaining to the public health, and collect statistics and report measures to the state legislature for the improvement and protection of public health.

Local boards of health are usually provided for by the general laws of the state, and in cities especially such boards have important duties to perform. When a business is carried on in a city in such a manner as to become a public nuisance and threatens to injure the public health, the board of health usually has the right to abate it. They may prohibit the sale of impure milk and other articles of food, and may be empowered to employ physicians, and may regulate the manner of caring for persons afflicted with contagious diseases. In many matters in which the public health is affected, the board may exercise summary powers for the public benefit, and if it is guilty of gross negligence in the performance of these duties, the members are personally liable for the act. See PUBLIC HEALTH, Vol. XX, p. 97.

HEALY, GEORGE PETER ALEXANDER, an American portrait-painter; born at Boston, Massachusetts, July 15, 1808. He studied for several years in Paris, and painted afterward the portraits of Louis Philippe, Marshal Soult, Lewis Cass, Clay, Calhoun, Daniel Webster, Seward, Pierce, General Sherman, William H. Prescott, H. W. Longfellow, Cardinal McCloskey and Stephen A. Douglas. In twenty years he executed nearly six hundred portraits. In 1851 he completed his large historical picture of *Webster's Reply to Hayne*, which contains 130 portraits, and hangs now in Faneuil Hall, Boston. In 1855 he exhibited at Paris a large picture representing Franklin urging the claims of the American colonies before Louis XVI, besides a series of thirteen por-

traits. To the Philadelphia Centennial Exhibition he sent portraits of Thiers, the Princess of Roumania, Elihu B. Washburn and Lord Lyons. He published his *Reminiscences of a Portrait Painter* shortly before his death, which occurred in Chicago, June 24, 1894.

HEALY, TIMOTHY M., an Irish statesman; member of Parliament; born at Bantry, Ireland, in 1855. He took an active part in the Land League agitation in 1880, and was arrested for a speech at Bantry, but was acquitted. Elected to Parliament without opposition, he took a lively interest in the discussions of the Land Bill of 1881, and obtained the insertion of the clause (since known as "the Healy clause") which excluded the improvements made by tenants from rent. In 1882 he was sentenced to imprisonment for six months for refusing to give bail for good behavior, but was released after four months; in 1884 Healy was called to the Irish bar; in 1888-90 he was one of the Irish leaders brought before the Special Commission; took a prominent part in the struggle against the leadership of Mr. Parnell in 1891; in 1892, and again in 1895, he was returned from North Louth. Healy, with other Irish Land Leaguers, visited America on a lecturing tour in 1881-82. He was one of the founders of the *National Press* of Dublin.

HEARD'S ISLAND, an island in the South Indian Ocean, extending between lat. $50^{\circ} 2'$ and $53^{\circ} 14'$ S., and between long. $73^{\circ} 30'$ and $72^{\circ} 30'$ E. It is 30 miles long and 10 miles wide, and its highest point, Kaiser Wilhelm Peak, is about 6,000 feet high. The island was discovered by Captain Heard of the American ship *Oriental* in 1853.

HEARING, DEVELOPMENT OF. See SENSE-ORGANS, in these Supplements.

HEARN, LAFADIO, an American author; born at Santa Maura, Ionian Islands, June 27, 1850, of a

LAFADIO HEARN.

Greek mother, his father being English; educated in England and France; engaged in journalism in Cincinnati and New Orleans; author of *One of Cleopatra's Nights* (1882); *Stray Leaves from Strange Literature* (1884); *Glimpses of Unfamiliar Japan* (1894), consisting of an account of the marvelous patience, industry, and courtesy of the common people; and *Kokoro* (1896). He now lives in Japan, and is married to a native of that land, where he has been fitly appointed to the chair of English literature in the Imperial University of Tokyo.

HEARNE, a post-village of Robertson County, southeastern central Texas, about three miles E. of the Brazos River, at the junction of the Houston and Texas Central and the International and Great Northern railroads. It ships cotton, grain, hides and stock. Population 1900, 2,129.

HEARSAY-EVIDENCE. See EVIDENCE, Vol. VIII, p. 740.

HEART. See ANATOMY, Vol. I, pp. 899-902; and HEART, DISEASES OF, Vol. XI, pp. 552-554.

HEART'S CONTENT, a port of Newfoundland, beautifully situated on the S.E. side of Trinity Bay, in lat. $47^{\circ} 50'$ N., long. $53^{\circ} 20'$ W. It is the landing-place of the Atlantic telegraph cables, extending to Valencia, Ireland, and there are overland wires connecting with St. John's and Cape Ray. It has a fine telegraph building. Most of the inhabitants are engaged in fishing. Population, 900.

HEARTWOOD OR DURAMEN. See BOTANY, Vol. IV, p. 101.

HEATH, FRANCIS GEORGE, an English writer; born at Totnes, Devonshire, Jan. 15, 1843; entered the civil service in 1862, and has taken an active interest in the preservation of forests and in the extension of parks and public squares in London, notably in the enlargement by twenty-four and one half acres of Victoria Park in 1872 and in the preservation of Epping Forest. He has published *The Romance of Peasant Life* (1872); *English Peasantry* (1874); *The Fern Paradise* (1878); *Our Woodland Trees* (1878); *My Garden Wild* (1881); *The Fern Portfolio*, containing colored plates and brief descriptions of all the British ferns (1885); *Sylvan Winter* (1885).

HEATH, WILLIAM, an American Revolutionary general; born in Roxbury, Massachusetts, March 7, 1737. He was active in organizing the militia before the Revolution; was a captain in the Suffolk regiment, of which he afterward became colonel; joined the artillery company of Boston, and was chosen its commander in 1770. In 1774-75 he was a member of the Provincial Congress, and as provincial brigadier-general he performed valuable services in the pursuit of the British troops from Concord, April 19, 1775. He organized and trained the undisciplined forces at Cambridge before the battle of Bunker Hill. Upon the organization of the Continental army he was commissioned a brigadier-general, and stationed at Roxbury with his command; on Aug. 9, 1776, he was made a major-general. In March, 1776, he opposed the evacuation of the city of New York; after the battle of White Plains he took command of the posts in the Highlands; in 1777 had charge of the prisoners of Burgoyne's army at Cambridge. In June, 1779, he commanded the posts on the Hudson with four regiments, and remained in that vicinity till the close of the war. After the war he returned to his farm; was a member of the convention that ratified the Federal Constitution; State Senator in 1791-92; and probate judge of Norfolk County in 1793. In 1798 he published *Memoirs of Major-General William Heath, containing Anecdotes and Details of Skirmishes, Battles, etc., during the American War*. He died in Roxbury, Jan. 24, 1814.

HEATH-FOWL, same as BLACK-COCK. See GROUSE, Vol. XI, p. 223.

HEATHS. See HORTICULTURE, Vol. XII, p. 263; and ERICACEÆ, in these Supplements.

HEATING OF BUILDINGS. See FURNACES, in these Supplements.

HEAVES OR BROKEN-WIND, a disease of horses most common in those of low breed. 12

symptoms are observed most easily when the animal has been severely exercised. At such times the breathing is labored, the expulsion of breath from the lungs being affected by spasmodic efforts; the nostrils are dilated, the eyes blood-shot, and the animal coughs frequently. Little is definitely known about the cause of the disease; some consider that it arises from impurity of the blood, others from a diseased condition of the heart. No method of cure has proved very successful, but the distemper may be relieved by insuring good digestion and not overworking.

HEAVY SPAR. See BARYTES, Vol. III, p. 406.

HEBEL, JOHANN PETER, called the "Geiman Burns"; born at Basel, May 11, 1760. He was educated at Carlsruhe and Erlangen; became professor of ancient languages in the gymnasium at Carlsruhe, later professor of theology and Hebrew, for some time was editor of the *Rheinländische Hausfreund*. He published *Bible Stories* (1824); *Allemanian Poems* (1803). J. G. Schultheiss has written his biography (1831). He died at Schwetzingen, Sept. 22, 1826.

HÉBERT, ANTOINE AUGUSTE ERNEST, a French painter; born at Grenoble, Nov. 3, 1817; studied under Delaroche and D'Angers, and at the school of Fine Arts, in Paris; made commander in the Legion of Honor in 1874; was director of the French Academy, in Rome, in 1866-73, and again in 1885; professor at the Fine Arts in 1882. Among his works are *La Mal' Aria* (1850), now in the Luxembourg; *Portrait du Prince Napoléon* (1853); *Le Baiser de Judas*; *Muse* (1884).

HEBRON, a town and the capital of Thayer County, southeastern Nebraska, on the Little Blue River, and the Burlington and Missouri River and Chicago, Rock Island and Pacific railroads, 55 miles S. E. of Hastings. It is the trade and shipping center of a fertile and well-watered farming and stock-raising region. Fine building-stone is found in the vicinity. Population 1890, 1,502; 1900, 1,511.

HECATOMB, in the worship of the Greeks and in other ancient religions, a sacrifice of a large number of victims; properly, although by no means necessarily, one hundred. As early as the time of Homer it was usual only to burn the legs wrapped up in the fat and certain parts of the intestines, the rest of the victim being eaten at the festive meal after the sacrifice. In Athens the hecatomb was a most popular form of sacrifice, while the Spartans limited the number of victims and sacrifices. In the hecatomb, strictly so called, the sacrifice was supposed to consist of one hundred bulls, but other animals were frequently substituted.

HECKER, FRIEDRICH KARL FRANZ, a German revolutionist; born at Eichtersheim, Baden, Sept. 28, 1811. He studied law at Heidelberg; began practice at Mannheim; in 1842 was elected to the Chamber of Deputies of Baden, and became a prominent member of the Opposition, later a leader of the extreme Republican and Socialist party. When the revolution of 1848 broke out he was active in its support, and endeavored to change the preliminary convention into a permanent republican assembly. Failing in this, he put himself at the head of an

army of artisans, with the idea of getting control of some of the smaller German governments. He was beaten by the Baden soldiery at Kaudern, May 20, 1848, and had to retreat into Switzerland, and from there emigrated to America, settled as a farmer near Belleville, Illinois, and became a citizen of the United States. When the Civil War broke out he served in General Frémont's division as colonel of a regiment raised by himself, and afterward as brigadier-general under General Howard. He died in St. Louis, Missouri, March 24, 1881.

HECKER, ISAAC THOMAS, an American clergyman, founder of the Paulists; born in New York City, Dec. 18, 1819. In 1843 he joined the Brook Farm Community, near Boston, where for nine months he baked the bread eaten by the members. In 1845 he became a Roman Catholic; went to Germany to study for the priesthood; joined the Redemptorist Fathers in Belgium in 1847, and was ordained priest in London in 1849 by Cardinal Wiseman.

ISAAC T. HECKER.

After being released from connection with the Redemptorists, he founded in 1858 the new congregation of the missionary priests of St. Paul (the Paulist Fathers) in New York City. The members take no vows, and any priest can leave the order when he chooses. Hecker established *The Catholic World*, a monthly periodical, in 1865; wrote the *Questions of the Soul*; *Aspirations of Nature*; and a pamphlet on *Martin Luther* (1883). Died in New York City, Dec. 22, 1888.

HECKEWELDER, JOHN GOTTLIEB ERNST, an American Moravian missionary to the Indians; born at Bedford, England, March 12, 1743. His father brought him to Pennsylvania in 1754, where he was afterward apprenticed to a cooper. In 1762 he visited the Indian tribes on the Ohio with Christian F. Post, a colonial Indian agent, and in 1771 he became a missionary to the Delaware Indians. In 1792 and 1793 he accompanied the United States commissioners sent to make treaties with Indian tribes near the Great Lakes. After staying in Ohio for some years as postmaster, justice of the peace, and also of the court of common pleas, he retired to Bethlehem, Pennsylvania, where he studied the languages and customs of the Indians, especially the Delawares, and wrote a *History of the Indians of Pennsylvania* (1818); *Narrative of the Mission of the United Brethren Among the Delaware and Mohegan Indians* (1820); and a collection of *Names which the Delaware Indians Gave to Rivers, Streams and Localities within the States of Pennsylvania, New Jersey, Maryland and Virginia, with Their Significations* (1822). A *Life of Heckewelder* was written by Edward Rondthaler (1847). Died at Bethlehem, Pennsylvania, Jan. 21, 1823.

HECKLING. See LINEN, Vol. XIV, p. 664.

HECLA, MOUNT. See ICELAND, Vol. XII, pp. 616, 617.

HECTIC FEVER, the name given to the fever which occurs in connection with certain wasting diseases of long duration. It is one of the most serious and constant symptoms of consumption, and seems to be directly related to the progressive emaciation which marks the course of that malady. In the morning the patient's temperature may be normal, but toward evening or after eating he grows hot and flushed, and there is a preternatural vividness of expression, which, with the heightened color, sometimes gives a very fallacious impression of health. The patient retires to bed, has uneasy sleep, and wakens in the middle of the night or toward early morning, bathed in cold perspiration, and in a state of extreme languor. The same exhausting cycle repeats itself day after day. The only radical way of treating the fever is to cure the disease on which it depends.

HECTOCOTYLUS OR HECTOCOTYLIZED ARM. See MOLLUSCA, Vol. XVI, p. 675.

HECTOR, MRS. ANNIE, a British novelist, writing under the pseudonym of MRS. ALEXANDER; born in Dublin in 1825. Among her novels are *The Heritage of Langdale* (1877); *The Admiral's Ward*; *Her Dearest Foe* (1883); *Ralph Wilton's Weird* (1884); and *The Cost of Her Pride* (1898).

HEDBERG, FRANS TEODOR, a dramatic author; born in Stockholm, March 2, 1828; was apprenticed to a wig-maker; in 1849 went on the stage; left the stage in 1854, and began writing plays; in 1862 was made professor of declamation at the Royal Theater of Stockholm; in 1871 intendant in the same theater; in 1881 director of a theater at Göteborg. Among his plays are *My Friend the Lieutenant* (1853); *When You Have No Money* (1854); *Glanskis*; *The Vikings*; and *The Wedding at Ulfasa* (1865). He also published *Poems* (2 vols., 1866), and in 1884 biographical works on the Swedish theater and opera.

HEDDING COLLEGE, at Abingdon, Knox Co., Ill., a co-educational establishment, controlled by the Methodist Episcopal Church, was organized in 1855, and in 1898 had 12 instructors, 200 students, and a library of 2,000 volumes. Its productive funds amount to \$30,000; and its total annual income, including tuition fees, is \$6,400.

HEDDLE OR HEALD, an implement used in weaving. See WEAVING, Vol. XXIV, pp. 464-467.

HEDGE. See ARBORICULTURE, Vol. II, p. 319.

HEDGE, FREDERIC HENRY, an American clergyman and author and scholar of note; born at Cambridge, Massachusetts, Dec. 12, 1805; in charge of George Bancroft, he was educated in Germany. On his return to America he studied theology at the Cambridge Divinity School; became pastor of the Unitarian church at West Cambridge in 1829; in 1835, of a church at Bangor, Maine; in 1850, after spending a year in Europe, pastor of the Westminster church at Providence, Rhode Island, from which he removed to Brookline, Massachusetts, in 1856. In 1858 he became lecturer on ecclesiastical history in Harvard College, and edited at the same time the *Christian Examiner*. In 1872 he assumed the professorship of the German language in the same college. Dr. Hedge published *The Prose-*

Writers of Germany (1848); *Reason in Religion* (1865); *The Primeval World of Hebrew Tradition* (1870); *A Christian Liturgy for the Use of the Church*, etc. He also wrote hymns for the Unitarian Church and published translations from the German poets. Died at Cambridge, Massachusetts, Aug. 21, 1890.

HEDGE—MUSTARD, a name given to species of *Sisymbrium*, a genus of plants of the family *Crucifera*, annual or rarely perennial herbs, with various foliage, small yellow or white flowers, and long roundish or four- or six-angled pods. The common hedge-mustard (*S. officinale*) was once employed in medicine. It is said to be a diaphoretic and expectorant, and has a mild pungency. It is an annual, hairy plant, sometimes two feet high, branched with runcinate leaves, very small yellow flowers, and pods closely pressed to the stalk.

HEDGE—SPARROW. See SPARROW, Vol. XXII, p. 369.

HEDJAZ EL HEJAZ OR HIJAZ, a nearly barren district in Arabia noted as the pathway of the pilgrimage to Mecca. See ARABIA, Vol. II, pp. 236-253.

HEDONISM, philosophy of the pursuit of pleasure. See ETHICS, Vol. VIII, pp. 585, 586.

HEGIRA OR HIJRA. See MOHAMMEDANISM, Vol. XVI, pp. 545-551; and CHRONOLOGY, Vol. V, p. 717.

HEIBERG, PETER ANDREAS, a Danish political and dramatic writer; born at Vordingborg, Denmark, Nov. 16, 1758; educated at the University of Copenhagen, and lived in the same city as translator and political writer until 1799, when he was banished for a seditious publication. Went to Paris, and was employed by Napoleon as translator in the department of foreign affairs. Among his writings are *Heckingborn* and *The Voyage to China*, dramas; *Historical and Critical Summary of the Danish Monarchy* (1820); *The Life of a Dollar Bill*. Died in Paris, April 30, 1841.

HEIDENHAIN, RUDOLPH PETER HEINRICH, a German physiologist; born at Marienwerder, Jan. 19, 1834; studied at Königsberg, Halle and Berlin; private instructor at Halle in 1857; professor of physiology and histology at Breslau in 1859. He has published *Studies in Physiology* (1856); *The So-called Animal Magnetism* (1880); *Vivisection applied to the Art of Medicine* (1884). See MAGNETISM, Vol. XV, p. 278. He died Oct. 14, 1897.

HEILBLUTH, FERDINAND, a German painter, born in Hamburg, but moved to Paris and became a citizen of France, and later chevalier of the Legion of Honor; in 1881, officer. Among his works are *Le Mont-de-Piété* (1861), now at the Luxembourg; *Spring*; *The Autumn of Love* (1871); *The Antechamber of the Cardinal*; *By the Thames* (1878).

HEIMDAL, in Scandinavian mythology, the god of watchfulness. See AESIR, Vol. I, p. 211.

HEINSIUS, ANTHONIUS, a Dutch statesman, born at Delft, Dec. 22, 1641. He studied law at Leyden, became the friend and supporter of Wil-

liam of Orange, and when that prince ascended the English throne, was elected Grand Pensionary of Holland, 1689, and re-elected every five years thereafter until his death. While in office he controlled the political policy of Holland, and was instrumental in the formation and maintenance of the grand alliance of England, Holland, Denmark and the German states against Louis XIV. He was the last of the allies to sign the treaty of peace at Utrecht. He died Aug. 13, 1720.

HEINTZELMAN, SAMUEL PETER, an American soldier, born at Manheim, Lancaster County, Pennsylvania, Sept. 30, 1805. He graduated at West Point in 1826, spent several years in border service as lieutenant, served during the Mexican War as captain, and on the 9th of October, 1847, was brevetted major. After serving in California against the Indians and on the Rio Grande against Mexican marauders, he was brevetted lieutenant-colonel in May, 1861, and was made inspector-general of the United States forces with headquarters at Washington. Afterward he commanded a division of McDowell's army at the battle of Bull Run, and was wounded; in March, 1862, was in command of the Third Army Corps; took part in the battles of Williamsburg and Fair Oaks; in the seven days' fighting around Richmond; in the second battle of Bull Run; and commanded the defenses of Washington. After the war he did duty in New York and Texas as colonel of the Seventeenth Infantry. In April, 1869, he was placed on the retired list with the rank of major-general. He died in Washington, District of Columbia, May 1, 1880.

HEISS, MICHAEL, a German evangelist; born in Bavaria, April 12, 1818; removed to the United States in 1842 and acted as a missionary priest in Wisconsin for several years; in 1846 founded the Church of St. Mary, in Milwaukee; in 1868, became bishop of La Crosse, Wisconsin; in 1880 he was made coadjutor to the archbishop of Milwaukee, with right of succession, and in 1881 succeeded to the see. Among his published works are *Über die vier Evangelien* and *Über die Ehe*. He died March 26, 1890.

HEL, in Norse mythology, the goddess of the dead, and daughter of the evil-hearted Loki. The All-father hurled her down into Niflheim, and gave her authority over the lower world. She was of fierce aspect, and to her were assigned the characteristics of insatiable greed and pitilessness. After the diffusion of Christianity the ideas personified in Hel gradually merged, among the races of Scandinavian and German descent, in the local conception of a hell, or dark abode of the dead.

HELENA, a city and the capital of Phillips County, central eastern Arkansas, situated on the Mississippi River, 67 miles below Memphis, Tennessee, and on the Arkansas Midland and the St. Louis, Iron Mountain and Southern railroads. It is the seat of Southland College, and has gas and electric lights, and a street-railway system. It has saw-mills, cottonseed-oil mills, and foundries. Pop. 1890, 5,189; 1900, 5,550.

HELENA, the capital of Montana and of Lewis and Clarke County, situated among foot-hills in the Prickly Pear Valley, 14 miles W. of the Missouri River, and with the Rocky Mountains rising behind the city to the south. The Great Northern and the Northern Pacific railroads pass through Helena, and the city is connected with the Canadian Pacific and Union Pacific roads, and by branch lines with several mining-camps. Many of the streets are wide and straight, shaded with rows of cottonwood trees, and faced with handsome residences and business premises, and well lighted with gas and electricity. There are six street-railways. A board of trade was organized in 1887. There are 34 graded schools, a high school and a number of private and parochial schools. Montana University, opened in 1890, is located outside the city. Charitable institutions are numerous, and nearly all religious denominations are represented by the churches of the city. It is active in manufacturing, having quartz, flour and lumber-mills, foundries, machine-shops, planing-mills, carriage and harness and other factories. Gold was found here in 1864, and the camp was known as Last Chance Gulch until December of that year, when it received its present name. There are also ruby and sapphire fields in the vicinity. Population 1890, 13,834; 1900, 10,770.

HELENUS, son of Priam and Hecuba, and gifted with prophetic powers. He fought against the Greeks in the Trojan War, but later deserted to them, some say beguiled by Ulysses, others because, at the death of Paris, Helen was given to Deiphobus and not to himself. The Greeks turned his gift of prophecy to good account, and he is said to have suggested the construction of the wooden horse and the theft of the Palladium. At the close of the war he became the slave of Pyrrhus, and it was due to his advice that Pyrrhus did not accompany the other Greek chieftains homeward by sea, but went by land instead to Epirus. Upon the death of Pyrrhus, Helenus became king of a portion of Epirus, and married Andromache, the wife of Hector. He was visited by Aeneas, whose future course he prophesied. Alexander the Great claimed descent from Helenus.

HELIANTHUS, a species of sunflower. See HORTICULTURE, Vol. XII, p. 251.

HELICIDÆ (Gr., *helix*, "a spiral"), a large family of terrestrial, air-breathing (pulmonate) gasteropods, of which snails are familiar examples, found in almost all parts of the globe save the Arctic regions. The genus was originally quite extensive, including nearly all land-shells, but has now become greatly restricted. See also MOLLUSCA, Vol. XVI, p. 660.

HELGOLAND ("Holy Land"), an island 36 miles N.W. of the Elbe mouth. It consists of a rock two hundred feet high, on which are a village and a light-house. It is the resort of bathers from Hamburg. During 1890 the announcement of its proposed transference, under the terms of the Anglo-German agreement respecting Africa, from British to German rule, came as a complete surprise

to the public of both countries, and various opinions were speedily elicited as to the propriety of the step contemplated. In England the value of the island as a naval station was strongly insisted upon. It was declared that the Heligolanders themselves were bitterly averse to the change, and Lord Salisbury was severely criticised in some quarters for not having ascertained more carefully their views upon the subject. The protests, however, proved unavailing, and on August 9th the island was formally handed over to Germany, the ceremony being followed by the visit of the German Emperor on the next day, when a proclamation was read in which his Majesty promised the utmost care for the rights and wishes of the islanders, and announced that all living males would be exempt from compulsory military and naval service, to which they have a remarkable abhorrence. The revenue of the island annually is slightly over \$40,000, and the expenditure over \$35,000. See also HELIGOLAND, Vol. XI, pp. 630-632.

HELIOCHROMOSCOPE, a photographic apparatus for reproducing objects in colors. That exhibited before the Franklin Institute in Philadelphia in 1893, by T. E. Ives, contains an arrangement of mirrors. Three pictures representing the effect upon the three fundamental color-sensations are made by a single exposure on a single sensitive plate, and from a single point of view. The mirrors serve to recombine the three photographs in such manner that the photographic color-record is translated into color again.

HELIOMETER. See MICROMETER, Vol. XVI, pp. 250-252.

HELIOS. See APOLLO, Vol. II, pp. 185, 186.

HELIOSTAT. See HELIOGRAPHY, Vol. XI, p. 633.

HELIOTROPE OR HELIOSCOPE. See GEODESY, Vol. X, p. 165.

HELIOTROPISM, a term in physiological botany applied to the irritability displayed by growing parts of plants and other motile members to the direction of incidence of the rays of light. If the apex of the member is directed toward the source of light, it is said to be *positively heliotropic*, as is the case with most primary stems; if the apex is directed in the opposite direction, the member is said to be *negatively heliotropic*, as in many roots.

HELIOTYPE. See PHOTOGRAPHY, Vol. XVIII, pp. 832, 833.

HELIOZOA, fresh-water animalculæ. See PROTOZOA, Vol. XIX, pp. 844, 845.

HELIUM. Nitrogen from the air having been shown to contain a considerable proportion of argon, it occurred to Professor Ramsay that the "nitrogen" found in certain minerals might also be mixed with a similar proportion of the new gas. This expectation was fulfilled, and at the same time the surprising discovery was made that several minerals gave off a gas which was neither nitrogen nor argon, but something entirely new. Thus cleveite had been thought to give nitrogen on boiling with dilute sulphuric acid. The gas,

however, was found to possess an entirely different spectrum, and showed a brilliant orange line corresponding to the line D³ of the solar spectrum. This line had long been observed in the spectrum of the sun, and the unknown substance which produced it had been called *helium*. This name, was, therefore, at once conferred on the new element. The same gas has also been extracted from other minerals, such as bröggerite, samarskite, and fergusonite, and from the mineral water of Wildbad. Helium is one of the lightest known gases, having the density of 0.139, air being unity, and is thus twice the density of hydrogen. The gas, like argon, does not seem to enter into chemical combination. Its molecules consist of single atoms; and its atomic weight is 4. Crookes has measured 79 lines in its spectrum, of which 27 seem to be identical with known solar lines. In 1898 Professor Dewar succeeded in liquefying helium, when its boiling-point was found to be about the same as that of hydrogen.

HELLBENDER (*Cryptobranchus alleghaniensis*), a large, voracious salamander, common in rivers of the Ohio system. It is slate-colored, about twenty inches long, and with no external gills. It is greatly feared by many people, but is perfectly harmless. The generic names *Menopoma* and *Protonopsis* are used in some systematic works. The popular names of mud-puppy, water-dog, mud-devil, etc., are given to the animal in common with similar forms.

HELL-DIVER. See GREBE, Vol. XI, p. 79.

HELLENES, ancient Greeks. See GREECE, Vol. XI, pp. 90-93.

HELLER, STEPHEN, a German pianist and musical composer; born at Pesth, May 15, 1814. He made his *début* as a pianist when only nine years of age, and before he was sixteen had played in many of the principal cities of Europe. In 1830 he settled in Augsburg, and began the study of composition. In 1838 he removed to Paris, where he occupied himself with composing and teaching until his death, which occurred Jan. 14, 1888. His works are distinguished by originality and refinement.

HELL GATE, named by the Dutch settlers of New York *Helle Gat*, is a pass in East River, between New York City and Long Island, formerly very dangerous to vessels from its numerous rocks and its rapid currents. These rocks and reefs were in mid-channel, and projected also from several small, rocky islands. The largest were known as the Gridiron, Flood Rock, Hen and Chickens, Negro Head, Bread and Cheese, Hallett's Point, Way's Reef, Pot Rock, Frying Pan, Middle Reef, etc. In 1851 attempts were made to blast away the obstructions, and in these operations Maillefert's process of surface-blasting was employed. This consisted in placing charges of gunpowder, usually 125 pounds, on the surface of a rock and exploding the powder by means of an electric current. The rocks thus operated upon were Pot Rock, Frying Pan, Way's Reef, Baldheaded Billy, Sheldrake Rock, and Diamond Reef. On all of them the depth of the water was increased, in some cases only two feet, and

in others as much as ten feet. These improvements consumed over seventy-four thousand pounds of gunpowder, and cost about fourteen thousand dollars. The money was furnished by New York City. In these operations the broken material was not dredged or otherwise cleared away.

The depths obtained were not sufficient for first-class vessels. Besides, a number of other obstructions remained in the channel. The United States government, therefore, appropriated twenty thousand dollars in 1852, and Major Frazer, United States engineer, continued the surface-blasting on Pot Rock in the same year, thereby increasing the depth of the water over this rock from eighteen to twenty feet. By this time it was deemed necessary to adopt other methods of working. Drilling under water through diving-bells was impossible, because the current runs too fast and the space was too small. The question arose, How can this work be done successfully? No satisfactory plan was devised until 1866, when General John Newton, United States Engineer, proposed drilling from a fixed platform through tubes reaching to the surface of the rocks. Congress made now sufficient appropriations for the work.

In 1869 Newton used a floatingscow having a central opening of 32 feet diameter, through which a large hemispherical iron bell, open both at top and bottom, was lowered to the rock below. This dome-like caisson, made of boiler-iron, afforded a framework for supporting 21 drill-tubes. Drills weighing from six hundred to nine hundred pounds worked through these tubes. The bell had legs which could be let out or drawn in to fit the rock. Cams were used to hold the legs in place. After the drilling was completed the drill-holes were filled by a diver, who inserted charges of nitroglycerine and made the electrical connections with the fuses. After this the scow was floated away and the blasts fired. The broken rock was removed by means of a steam-grapple.

In 1871 Newton used a steam-drilling scow on the Diamond Reef. He now drilled holes from 7 to 13 feet deep and 4 inches in diameter. He fired them with charges of from 30 to 55 pounds of nitroglycerine. In 1871 he operated in like manner on Coenties Reef; in 1872, on the Frying Pan and Pot Rock. In that year the scow was struck 16 times by colliding vessels, and four of the latter were sunk by it. One vessel was drawn under the scow, and carried off its dome; but the dome was afterward recovered in a damaged condition. In 1874 Newton reduced Way's Reef from 17 feet to a depth of 26 feet.

The most difficult problem was the removal of the reef at Hallett's Point. To accomplish this, in 1869 he sank a large shaft on shore. From this shaft 41 radial and 11 concentric galleries of various cross-sections were driven under the reef. The length of all these galleries together amounted to nearly one and one half miles. Diamond drills, Ingersoll drills, Burleigh drills and hammer-drills were all used in this work. The excavations were

completed in June, 1875. Then holes were drilled in piers and roofs for the charges. From Sept. 11, 1876, till the 20th of the same month was occupied by charging the holes. Twenty-three distinct galvanic batteries, aggregating 960 cells of zinc and carbon, were arranged to fire 160 fuses each; 3,680 mines were connected in continuous series with a lead and return wire, so that the circuits of all could be closed with one circuit-closer—i.e., by pressing down a button. After everything was ready the mines were tamped by water run in through a syphon, and on Sunday, Sept. 24, 1876, at 2.50 P.M., they were fired, without any hurtful shocks to surrounding objects. The water was thrown up to a height of 123 feet. The total expense of this blast was \$81,092.

Flood Rock, situated in mid-channel, was still projecting above water, and constituted a dangerous reef. Work tending to its removal began June, 1875, by sinking a shaft 10 feet by 20 feet down through the rock. During the following year the mine was filled with water. Want of appropriations caused several suspensions, which added considerably to the cost of the work, in consequence of the pumping required to free the mine from the water flowing into it by some large seams. In 1884 the undermined area covered 9 acres. The total length of the galleries, 10 feet square, was 21,670 feet. The drill-holes for breaking up the roof and columns amounted to a total length of 113,000 feet, or over twenty miles. For charging the drill-holes, cartridges 2 feet long were inserted and held in place by 4 small wire legs. These cartridges were filled with "rackarock," a mixture of 79 per cent of finely-ground chlorate of potash with 21 per cent of dinitrobenzole. After filling the drill-holes with several rackarock cartridges, a dynamite cartridge, 15 inches long, with a fulminate of mercury exploder, was inserted. The mine was fired by primary charges of dynamite placed at intervals of 25 feet along the galleries, lashed to some timbers. Their explosion produced a concussion strong enough to ignite the fulminate primers in the charges of rackarock. By this "sympathetic" method the entire mine, containing over 120 tons of rackarock and 42,000 pounds of dynamite, was exploded simultaneously, on Oct. 10, 1884. The battery contained 60 bichromate cells, connected together in series. When the electric contact was made, a dull report was heard, the earth shook for a considerable distance around and an immense mass of water was thrown some 200 hundred feet up into the air. But no damage was done except the breaking of a few dozen panes of glass, and shaking down some loose brick and plaster in Astoria. No severe shock was felt anywhere. Yet the entire roof of the mine was shattered, and about 500,000 tons of rock were loosened. The total expense of this blast was \$106,509.

Immediately after this explosion dredging was commenced with the government scow, but in October, 1885, a contract was let for the removal of 30,000 tons of loosened rock, and afterward other similar contracts were let. About 120 tons

were removed daily for a considerable time. But there are some of the rocky obstructions yet to be removed, inasmuch as the mean low-water depth is not quite 26 feet over the Diamond Reef, Coenties Reef, a reef near the North Brother's Island, and the Pilgrim Rock, which have been included in the projected improvements. Both the main and eastern channels, however, now afford passages wide and deep enough for the largest vessels.

HELLGRAMMITE-FLY, a neuropterous insect (*Corydalus cornuta*). The larvæ are much used as fish-bait, especially for bass, and have various local names, such as dobsons, crawlers, etc.

HELLMANN, JOHANN GEORG GUSTAV, a German meteorologist; born in Silesia, July 3, 1854; studied at Breslau, Berlin, and Göttingen, and afterward spent two years in Spain, making a study of the climate of the country; entered the Meteorological Department of the German government, and in 1880 was made assistant at the Royal Prussian Meteorological Institute. He is on the staff of the *Meteorologische Zeitschrift*, and has written a work on meteorology.

HELMET-SHELL, the shell of a mollusk belonging to the genus *Cassis*, a thick, heavy shell, with bold ridges, a short spire, and a long aperture, the outer lip toothed, the canal recurved. There are numerous species, most of them found in tropical seas, some in the Mediterranean. The shells are made up of differently colored layers, and are much used for the manufacture of cameos. (See also **MOLLUSCA**, Vol. XVI, p. 649.)

HELMHOLTZ, HERMANN LUDWIG FERDINAND VON, a German physiologist and physicist, born at Potsdam, Prussia, Aug. 31, 1821. After studying medicine in the Military Institute at Berlin, and being attached for a time to the staff of one of the public hospitals there, he returned to his native town as an army surgeon. In 1848 he was appointed professor of anatomy in the Academy of Fine Arts at Berlin; in 1850 professor of physiology and pathology at Königsberg; and in 1855 was appointed to

H. L. F. VON HELMHOLTZ.

the chair of anatomy and physiology at Bonn, whence he removed, in 1858, to Heidelberg, where he filled the chair of physiology. He was afterward appointed professor of physics at Berlin. The works of Professor Helmholtz have reference principally to the physiological conditions of the impressions on the senses. Among those most deserving of notice are *On the Conservation of Energy* (1847); *Manual of Physiological Optics* (1856); and *Theory of the Impressions of Sound* (1862). His *Popular Lectures on Scientific Subjects* were published in London in 1873, and

his work on *Sensations of Tone as a Physiological Basis for the Theory of Music* appeared in 1875. In 1883 a patent of hereditary nobility was conferred upon him by King William, and in 1887 he was put at the head of the Institute of Charlottenburg. He died in Berlin, Sept. 8, 1894.

HELMUND OR HALMARD, a river of Afghanistan, rising in the Unai Pass between the Hoh-i-Baba and the Pugman Mountains. It flows southwest and forms the boundary of Baluchistan for 50 miles, turns north and forms the Persian boundary for 30, then flows on, emptying into the salt lake Dek-i-Tir. Its length is estimated at 650 miles. The country through which it flows is generally arid, especially about the upper part of the course, though the immediate river valley is fertile and cultivated.

HELODERMA. See **LIZARD**, Vol. XIV, p. 735. See also **GILA MONSTER**, in these Supplements.

HELOS, a town in Laconia. It is said by some that the Helots, a slave class among the Spartans, got their name from this place, being originally the Achæan inhabitants of the town, reduced to slavery by their Doric conquerors. The derivation is doubtful.

HELVETIC REPUBLIC. See **SWITZERLAND**, Vol. XXII, pp. 793, 794.

HELVETII. See **CÆSAR**, Vol. IV, p. 636.

HEMATITE OR HÆMATITE, ores of iron. See **MINERALOGY**, Vol. XVI, p. 385.

HEMIBRANCHII, an order of fishes characterized by peculiar skeletal arrangements. In the shoulder-girdle a single bone unites the largest bone (proscapula) with the skull. The bones of the branchial apparatus are reduced. The sticklebacks are the best-known members of the order.

HEMICRANIA. See **NEURALGIA**, Vol. XVII, p. 364.

HEMIPLEGIA. See **PARALYSIS**, Vol. XVIII, p. 255.

HEMITRIPTERIDÆ, a family of fishes belonging to the mailed-cheeked group. Two representatives occur along the coasts of the United States, the deep-water sculpin and the sea-raven.

HEMLOCK OR HEMLOCK-SPRUCE. See **FIR**, Vol. IX, p. 224.

HEMP CROP IN THE UNITED STATES. See **AGRICULTURE**, in these Supplements.

HEMPSTEAD, a village of Queens County, southern New York, in Hempstead township, situated on the Long Island railroad, 21 miles E. of New York City. It has Hempstead Institute, public halls, a seminary and many fine residences. The township of Hempstead is bounded on the south by the Atlantic Ocean, and includes Rockaway, a popular bathing-place. It has a few factories, but it is chiefly a residence place, many New York business men having handsome residences here. Population 1900, 3,582.

HEMPSTEAD, a city and the capital of Waller County, southeastern Texas, on two branches of the Houston and Texas Central railroad. It has a cotton factory, and manufactures cotton-seed.

oil. The surrounding country is high and salubrious, and produces, chiefly, cotton and corn. Population 1890, 1,671.

HEMSLEY, WILLIAM BOTTING, a British botanist; born Dec. 29, 1843, in Sussex, England. His father was a gardener, and as a boy he got a taste for botany. In 1860 he entered the Kew Herbarium on probation, and in 1863 received a regular appointment; in 1883 was appointed assistant for India in the Kew Herbarium, and in 1890 promoted to principal assistant. He is author of a *Handbook of Hardy Trees* (1873); *Diagnoses Plantarum Mexicanarum et Centrali-Americandarum* (1878-79); one of the authors of the *Biologia Centrali-Americana* and of the botanical reports of the *Challenger* expedition to explore the deep seas in 1872-76.

HENDERSON, a city and the capital of Henderson County, western Kentucky, on the Ohio River, 212 miles S.W. of Louisville, on the Louisville and Nashville and the Ohio Valley railroads. It has car-works, wagon and carriage factories, tobacco factories, cotton-mills and distilleries. Population 1890, 8,835; 1900, 10,272.

HENDERSON, a borough and the capital of Sibley County, southern Minnesota, on the Minnesota River, 43 miles S.W. of Minneapolis, on the Chicago, St. Paul, Minneapolis and Omaha railroad. It has some steamboat traffic, flouring and grist mills, and is a shipping-point for farm produce. Population 1900, 904.

HENDERSON, a town and the capital of Vance County, central northern North Carolina, 36 miles N. of Raleigh, on the Seaboard Air Line and the Southern railroads. It is in the Golden Tobacco region, and cotton is also an important export. It has tobacco warehouses and factories, and a canning factory. Several academies are located here. Population 1890, 4,191; 1900, 3,746.

HENDERSON, a town and the capital of Chester County, southwestern Tennessee, 15 miles S.E. of Jackson, on the Mobile and Ohio railroad. It is a farming center, and ships corn, cotton, fruit, cattle and hogs. Population 1880, 493; 1890, 1,069.

HENDERSON, a town and the capital of Rusk County, central eastern Texas, on the International and Great Northern railroad. It is the seat of Henderson College. It is in an agricultural and fruit-growing section. Population 1890, 1,536.

HENDERSONVILLE, a town and the capital of Henderson County, western North Carolina, 20 miles S. of Asheville, on the Hendersonville and Brevard and the Southern railroads. It ships vegetables and hay, raised extensively in the vicinity. It is the seat of Judson (Baptist) College and of an academy. Population 1880, 554; 1890, 1,216; 1900, 1,917.

HENDRICKS, THOMAS ANDREWS, an American statesman; born near Zanesville, Ohio, Sept. 7, 1819. He graduated at South Hanover College, Indiana, in 1841; studied law at Chambersburg, Pennsylvania; was admitted to the bar there in 1843; practiced law at Shelbyville, In-

diana; in 1850 was elected to the state convention to revise the constitution of Indiana; from 1851 to 1855 was a member of Congress, after which President Pierce appointed him commissioner of the United States general land office. In 1863 Mr. Hendricks was elected to the United States Senate from Indiana, and was one of the leaders on the Democratic side. In 1872 he became governor of Indiana, and after the expiration of his term continued to practice law at Indianapolis until 1884, when he was unanimously nominated for Vice-President on the Democratic ticket. In November following he was elected, but lived to serve only a few months of his term, dying at Indianapolis, Nov. 25, 1885.

HENGEST OR HENGIST. See ENGLAND, Vol. VIII, p. 269.

HENLEY, WILLIAM ERNEST, a British poet, critic and dramatist; born at Gloucester, England, in 1849, and educated in the same city. After a period of illness, during which he wrote *In Hospital: Rhymes and Rhythms*, he began writing for the London magazines, and in 1877 was one of the founders as well as editor of *London*, to which he contributed much of his early verse. For a time he was editor of the *Magazine of Art*, and in 1889 became editor of the *Scots Observer*, of which, under its present title, the *National Observer*, he is still the chief. Subsequently he became a contributor to the *Athenæum* and the *Saturday Review*, from the pages of which have been made up a volume of literary and critical articles published under the title of *Views and Reviews*. He is also well known as a poet and dramatist, having collaborated with the late Robert Louis Stevenson, the novelist, in the publication of a volume of plays, and won the ear of many admirers by his spirited verse in the issue of his *Song of the Sword*. He is, moreover, the editor of two volumes of heroic English verse, entitled *Tudor Translations* and *Lyra Heroica*, as well as of an *Anthology of English Prose*, in conjunction with Mr. C. Whibley. His latest literary enterprise is the editing, in concert with Mr. T. F. Henderson, of the Centenary edition, in four volumes, of Robert Burns's poetry, with an essay by Dr. Henley on the life and genius of the poet. Dr. Henley was a man of much learning, an accomplished journalist and an acute critic. Few modern men of letters were so well equipped as he for the everyday work of an intellectual toiler, and he possessed a forceful and attractive literary style, which invests all he wrote with a peculiar charm. In 1893 Mr. Henley received the honorary degree of LL.D. from St. Andrew's University, and was editor of *The New Review* from 1894 till it ceased to exist in 1898.

HENLOPEN, CAPE, a cape in Sussex County

THOMAS A. HENDRICKS.

Delaware, at the entrance to Delaware Bay, 13 miles S.S.W. of Cape May. It has a lighthouse, showing a fixed white dioptric light of the first order, 128 feet above sea-level.

HENNEPIN, LOUIS, a French explorer of America; born at Ath, Belgium, in 1640. He entered the order of Recollets of St. Francis, and was employed by his brethren to solicit alms at different places—among others, at Dunkirk and Calais, where the stories related by the sailors stimulated his desire to visit foreign countries. Afterward he traveled in Germany and Italy, and was regimental chaplain at the battle of Seneffe, between the Prince of Condé and William of Orange. In 1673 he was ordered to Canada, where he preached for some time at Quebec, and founded a convent at Fort Frontenac. Father Hennepin went to Niagara with La Salle's expedition (see LA SALLE, Vol. XIV, pp. 318, 319). After building Fort Crève Cœur, at the headwaters of the Illinois, La Salle returned to Canada, while Hennepin set out with two men in a canoe in 1680, descended the Illinois to its mouth, and, after sailing up the Mississippi River for some weeks, fell into the hands of a party of Sioux Indians, who carried him and his men to their country. Here he discovered and named the Falls of St. Anthony. He spent eight months among the savages. Then Daniel Greysolon du Lhut, who had come by way of Lake Superior, rescued him, and enabled him to reach Green Bay by way of the Wisconsin River. Hennepin returned to Quebec in April, 1682, and soon afterward returned to France, where he published his *Description of Louisiana, Recently Discovered to the Southwest of New France* (1683). He was appointed guardian of the Convent of Renty, in Artois, but he soon withdrew to Holland. After laying aside his religious dress he lived in England, where he published his *New Discovery of a Vast Country in America* (1697). His last work was *New Journey in a Country Greater than Europe, between the Arctic Ocean and New Mexico* (1698). His works are invaluable to the historian, but full of exaggerations. He died in Utrecht, Holland, in 1706.

HENNEPIN CANAL. See CANAL, in these Supplements.

HENNER, JEAN JACQUES, a French painter; born in Bernwiller, Alsace, March 5, 1829; entered the School of Fine Arts in 1848; decorated with the Legion of Honor in 1873; made an officer in 1878; elected to the Academy of Fine Arts in 1889. Among his works are *La Chaste Suzanne*, which is in the Luxembourg; *Alsacienne* (1870), presented to M. Gambetta by a number of Alsatian ladies; *Madeleine dans le Désert* (1874); *Le Christ Mort* (1878); and *Pietà* (1891).

HENNESSY, HENRY, an Irish physicist; born in Cork, Ireland, March 19, 1826; became a civil engineer, and pursued the study of natural science and mathematics at the same time; in 1855, became professor of physics in the Roman Catholic University of Ireland; in 1874, professor of mathematics in the Royal College of Science. He wrote *The Study of Science in its Relations to Individuals*

and *Society* (1858); *Relations of Science to Modern Civilization* (1862); and more than eighty papers on miscellaneous scientific subjects, published in the reports of the Royal Society, the Royal Irish Academy and the Paris Academy.

HENNINGSEN, CHARLES FREDERICK, a British military adventurer and author; born in England, of Swedish parents, in 1815. He joined the Carlist army in Spain in 1834, and became colonel of cavalry after the battle of Vielos de los Navarros. He was afterward taken prisoner, and released on parole. Then he served in the Russian army in Circassia, and afterward joined Kossuth in the Hungarian Revolution, becoming commander of the Fortress Comorn. Going to America in Kossuth's interest, he joined, in 1856, William Walker in his expedition to Nicaragua, where he was given command of the artillery. He distinguished himself by his defense of Granada, and in the victory of Queresma. After Walker's surrender to Commodore Davis, United States navy, in 1857, Henningsen returned to the United States. At the outbreak of the Civil War he entered the Confederate army as colonel, but soon afterward was made brigadier-general. He was an able artilleryist. Henningsen published *Revelations of Russia* (1845); *The White Slave*, a novel; *Eastern Europe*; *Sixty Hours Hence*, a novel of Russian life; *Past and Future of Hungary*; *Personal Recollections of Nicaragua*. He died in Washington, District of Columbia, June 14, 1877, where he had settled after the Civil War.

HENOTHEISM. See THEISM, Vol. XXIII, pp. 235-237.

HENRIETTA, a town and the capital of Clay County, northeastern Texas, on the Fort Worth and Denver City and the Missouri, Kansas and Texas railroads. It is in an agricultural and stock-raising country, and some coal has been found near by. It has flour-mills, an ice and a cigar factory, and is supplied with electricity and city water. It has a Roman Catholic convent, a normal college and public and private schools. It was once destroyed by Indians, previous to the Civil War, and was re-established in 1874. Population 1890, 2,100; 1900, 1,614.

HENROTIN (MRS. CHARLES) ELLEN MARTIN, an American social reformer; born in Portland, Maine, in 1848, of an old New England family. She was educated partly in America and partly in England, France and Germany; was married, in 1869, to Charles Henrotin, a banker in Chicago. She became a leader in the principal women's clubs of Chicago; was made vice-president of the woman's branch of the World's Congress Auxiliary in Chicago, in 1893, in which she was an active worker, achieving considerable reputation thereby; in Philadelphia, in 1894, was elected president of the Federation of the Women's Clubs of the United States; was re-elected for two years in Louisville, Kentucky, in May, 1896. She contributed the articles on INDUSTRIAL CONDITION OF WOMEN, WOMEN'S CLUBS and WOMEN IN AMERICA to these Supplements.

HENRY, a village of Marshall County, north-

ern central Illinois, on the Illinois river, 120 miles S. of Chicago; has a paper-mill, a wagon factory, wind-mill factory, and grain elevators, and is the seat of Marshall College. Population 1900. 1,637.

HENRY, CAPE, in Princess Anne Co., Va., at the entrance of Chesapeake Bay. Has a lighthouse showing a fixed light 120 feet above the sea.

HENRY, FORT, in the northwestern part of Tennessee, on the Tennessee river. In the early part of the Civil War it was garrisoned with 2,700 men under the Confederate general, Tilghman. In Feb., 1862, General Grant advanced upon it with a land force of 17,000 men and a fleet of seven gunboats under Commodore Foote. The gunboats arrived first, and forced Tilghman to surrender, Feb. 6. Owing to floods which delayed the advance of the land force, most of the garrison escaped to Fort Donelson.

HENRY, CALEB SPRAGUE, an American clergyman and author; born in Rutland, Vt., Aug. 2, 1804. Graduated at Dartmouth in 1825; studied theology at Andover and New Haven, and was ordained minister of the Congregational Church in 1829; held pastorates in Greenfield, Mass., and in Hartford, Conn.; ordained priest in the Episcopal Church in 1836; professor at Bristol College, Pa., 1835-38; professor of philosophy in the University of New York, 1839-52; rector of St. Clements, New York, 1847-50. He was one of the founders of the *New York Review* and the *American Advocate of Peace*. He published *Cousin's Psychology* (1834), translated from the French; *Compendium of Christian Antiquities* (1837); *Moral and Philosophical Essays* (1839); *Guizot's History of Civilization*, with notes; *Ancient and Modern History* (1845); *Epitome of the History of Philosophy* (1845); *Dr. Oldham at Greystones, and His Talk There* (1860); *Social Welfare and Human Progress* (1860); and *Satan as a Moral Philosopher* (1877). Died March 9, 1884.

HENRY, GUY VERNOR, American army officer; born at Fort Smith, Indian Territory, March 9, 1839. He was the son of Major William Seaton Henry (1816-51), who served in the Florida war of 1841-42, and in the Mexican war, and wrote *Campaign Sketches of the War with Mexico* (1848). The son, Guy Vernor Henry, graduated at the Military Academy in 1861, and was assigned to the artillery. On May 14, 1861, he was made first lieutenant, and was on General McDowell's staff at the battle of Bull Run (July 21, 1861). He commanded a battalion in General David Hunter's unsuccessful expedition against Charleston, S. C. (May-June, 1862); and was brevetted captain for gallantry in an action near Pocotaligo, S. C. (Oct. 22, 1862). On Nov. 9, 1863, he was made colonel of the 40th Massachusetts volunteers. In 1864-65 he commanded a brigade in the army of the James, and for services before Petersburg he was made brevet brigadier-general of volunteers (June 30, 1864), and brevet lieutenant-colonel in the regular army (Sept. 30, 1864). On Dec. 1, 1865, he was made captain of the First Artillery. In 1874 he accompanied Custer in the expedition to the Black Hills, S. D., where he was severely frost-bitten. On June 17, 1876, he was wounded and lost an eye in the battle with Sitting Bull at Rosebud Creek, Mont. On June 26, 1881, he was pro-

moted to be major of the 9th cavalry, and stationed at Salt Lake City. In 1884 he was stationed at Fort Leavenworth, Kan., and in 1887 at Omaha, Neb. On Jan. 30, 1892, he was promoted lieutenant-colonel of the 7th cavalry, and on June 1, 1897, colonel of the 10th cavalry. During the war with Spain (April-August, 1898) he was made brigadier-general of volunteers, and was in command of the second brigade of General Wilson's division of the Puerto Rico expedition, and took part in the brief campaign in that island. On Sept. 28, 1898, he was made brigadier-general in the regular army; and from Dec., 1898, to May, 1899, was governor-general of Puerto Rico. He wrote *Military Records of Civilian Appointments in the United States Army* (2 vols., 1865-71); *Army Catechism for Non-Commissioned Officers and Soldiers* (1881); and *Manual of Target Practice* (1884). Died in New York, Oct. 27, 1899.

HENRY OF BATTENBERG. See BATTENBERG, HENRY MAURICE, OF, in these Supplements.

HENSCHEL, GEORG, a German singer and composer; born Feb. 18, 1850, at Breslau, Germany; studied music at Leipsic and Berlin, and began to sing in concerts; in 1881-84 was conductor of the Boston Symphony Orchestra, and in 1885 took up his residence in England. His voice was a baritone of great strength, richness, and compass.

HENSON, JOSIAH, an American clergyman; born at Port Tobacco, Md., in 1787. He was a negro, and was born and bred a slave. Mrs. Stowe took his life as the foundation for *Uncle Tom's Cabin*. His arms were crippled as the result of blows from a Maryland overseer. Although he paid \$500 toward purchasing his freedom, his master's son took him to New Orleans to be sold. The latter was attacked with yellow fever, and the slave accompanied him back to Kentucky and nursed him through his sickness. He finally escaped with his wife to Canada, carrying his two children through swamps and thick forests. "Uncle Si," as he was called, settled on Sydenham river, Ontario, near the present town of Dresden, and prospered as a farmer. He was also the pastor of a church. When 52 years old he learned to read and write. In 1858 he published an *Autobiography*. He went three times to England, lecturing and preaching in various cities, and was, in 1876, presented to Queen Victoria at Windsor Castle. Died in Dresden, Ont., in 1881.

HENTY, GEORGE ALFRED, an English writer, born at Trumpington, Eng., Dec. 8, 1832; educated at Westminster School and at Cambridge; went to the Crimea in the Purveyor's Department, and later served in Italy and England; engaged in mining in Wales and Italy, and later became correspondent for the London *Standard* in the Austro-Italian, Franco-German, and Turco-Servian wars; the Abyssinian and Ashanti expeditions; with Garibaldi in the Tryol; and in the Carlist insurrection in Spain. He wrote *With Clive in India*; *With Lee in Virginia*; *By England's Aid*; *In Freedom's Cause*; *Under Drake's Flag*; *By Pike and Dyke*, and a host of others, largely juvenile stories of adventure, based on history.

HENTZ, CAROLINE LEE, an American writer, daughter of General John Whiting; born at Lancaster, Mass., June 1, 1800. In 1824 she married

Nicholas M. Hentz, a French teacher, and in 1831 moved with him to Covington, Ky., where they conducted a young ladies' seminary. She wrote plays and novels of a sensational character, dealing mostly with society in the Southern states, including *De Lara*, a tragedy, which won a prize of \$500 offered by the directors of the Arch Street Theatre, Philadelphia; *Linda* (1850); *The Planter's Northern Bride* (1854); and *Ernest Linwood* (1856). Died Feb. 11, 1856.

HEPATICÆ. See LIVERWORTS, Vol. XIV, p. 718.

HEPATITIS. See PATHOLOGY, Vol. XVIII, 396.

HEPBURN, JAMES CURTIS, an American missionary; born in Milton, Pa., March 13, 1815; graduated at Princeton in 1833, and from the medical department of the University of Pennsylvania in 1836. In 1841-46 he was medical missionary in China; practiced in New York 1846-59; then went to Japan as missionary; worked there as physician and in the translation of the Bible and the compilation of a Japanese-English and English-Japanese dictionary. The latter was published in 1867. In 1892 he published a *Japanese Dictionary of the Bible*.

HEPPENHEIM, an old walled town and a health resort of Hesse, Germany, 16 miles S. of Darmstadt; noted for its excellent wine, and for the ruins of the castle of Starkenburg. Population 5,300.

HEPTAGON, a plane figure of seven sides and seven angles; when the sides and angles are equal, the figure is a *regular heptagon*. Geometers have hitherto failed to discover a method of inscribing the heptagon in or of circumscribing it about a circle, and the problem is believed by many modern mathematicians to be impossible of solution by geometry.

HEPTANOMIS, seven divisions of Egypt. See EGYPT, Vol. VII, p. 701.

HEPTARCHY, the seven kingdoms which were finally united to form early England. See ENGLAND, Vol. VIII, pp. 269-72.

HEPWORTH, GEORGE HUGHES, an American clergyman and writer; born in Boston, Mass., Feb. 4, 1833; graduated at the Theological School at Cambridge in 1855; held pastorates in Unitarian churches at Nantucket, 1855-57; and in Boston, 1858-70; in 1862-63 served as army chaplain in the Forty-seventh Massachusetts and on the staff of General Banks; in 1870-72 was pastor of the Church of the Messiah, New York; in 1872 he declared himself a Trinitarian, and organized the Church of the Disciples, of which he was a pastor until 1879; pastor of the Congregational Church at Newark, N. J., 1882-85; left the pulpit and went on the staff of the New York *Herald*. He wrote *The Whip, Hoe, and Sword* (1864); *The Criminal, The Crime, The Penalty* (1865); *Rocks and Shoals* (1870); *Starboard and Port* (1876).

HERACLEIDÆ, descendants of Hercules. See GREECE, Vol. XI, p. 92.

HERALDS' COLLEGE. See HERALDRY, Vol. XI, pp. 687-88.

HERBERT, HILARY A., an American statesman; born in Laurensville, S. C., March 12, 1834; educated at the Universities of Virginia and Alabama; admitted to the Alabama bar, and then served in the Confederate army until 1864. After the war he

resumed practice in Alabama, at Greenville and Montgomery. He was elected as a Democrat to consecutive Congresses from the Forty-fifth to the Fifty-second; in 1893 became Secretary of the Navy.

HERBERT, JOHN ROGERS, an English painter; born at Maldon, Essex, Jan. 23, 1810; studied art at the Royal Academy, London, and for a while was obliged to support himself by portrait-painting and illustrating; studied in Italy, and in 1839 exhibited his *Brides of Venice*; in 1840 became a Roman Catholic, and turned his attention to the painting of events in religious history. In 1846 he was elected to the Royal Academy, and was employed on mural decorations for the new Houses of Parliament. He painted *The Introduction of Christianity into Britain* (1842); *Christ and the Woman of Samaria* (1843); *St. John Reproving Herod* (1848); *Moses Descending from the Mount with the Tables of the Law* (in the Houses of Parliament); *Adoration of the Magi* (1874); *Ruth with the Reapers* (1883). Died March 17, 1890.

HERBERT, SYDNEY, LORD HERBERT OF LEA, an English statesman; born at Richmond, Sept. 16, 1810. Educated at Harrow and Oriel College, Oxford; from 1832 to 1861 was M. P. for South Wilts; secretary to the admiralty, 1841-45; secretary for war, 1845-46, 1852-55, and in 1859. He was an able and popular Conservative leader, his army administration being signalized by great improvements in the sanitary condition and education of the army, the amalgamation of the Indian with the royal army, and the organization of the volunteer force. In 1861 he was created Baron Herbert of Lea. He was heir-presumptive to the earldom of Pembroke, and his son became thirteenth earl in 1862. Died at Wilton, Aug. 2, 1861.

HERCULANO, ALEXANDRE (1810-1877), a Portuguese writer. See PORTUGAL, Vol. XIX, p. 558.

HERCULES, PILLARS OF, the name given by the ancients to Calpe (now Gibraltar) and Abyla (now Ceuta), two rocky promontories forming the entrance to the Mediterranean Sea. According to the fable, they were originally one rock, but were torn asunder by Hercules.

HERCULES BEETLE (*Dynastes hercules*), a gigantic lamellicorn beetle from tropical America. The male bears on the thorax an enormous horn, which is met by a shorter upturned horn from the head. The female is without horns, and smaller. Another species, *D. titigus*, about two inches in length, occurs in the United States. The genus *Megasoma* is regarded by entomologists as nearly allied to *Dynastes*. See COLEOPTERA, Vol. VI, p. 131.

HERCYNIAN MOUNTAIN SYSTEM. See AUSTRIA, Vol. III, p. 116.

HÉRÉDIA, province and town. See COSTA RICA, Vol. VI, p. 450.

HEREDIA, JOSÉ MARIA DE, a French poet; born near Santiago, Cuba, Nov. 22, 1842; studied in the École des Chartes, Paris, and began to write for the *Temps*, *Revue des Deux Mondes*, and other Parisian periodicals. His reputation rests on a volume of sonnets much admired by the literary class. He was elected to the Academy, Feb. 22, 1894.

HEREDITAMENTS are things which are legally

capable of being inherited. They are either corporeal or incorporeal. Corporeal hereditaments are things of a substantial, permanent nature which have a tangible existence, as land and other similar property. Incorporeal hereditaments are those classes of inheritable property which are not tangible or visible, but which are rights which grow out of something corporeal, as commons, ways, franchises, rents and other similar classes of property.

HEREDITY, PLANT. See REPRODUCTION, in these Supplements.

HEREDITY, THE NEW. Perhaps in no branch of science has greater progress been made both in original research and in the development of theories based thereon, than in the laws governing heredity. The advances in the former and the changes in the latter have been so enormous that the whole are fittingly embodied in the caption above given. A complete revolution has taken place in the methods of investigation, in the results attained, and in the theories derived therefrom. To such an extent is this true that the new heredity is likely to become the chief corner-stone of evolution itself.

Interest now centers not in what are or what are supposed to be the final results of heredity as seen in the individual, but in the nascent influences determining those results traceable from the earliest period of regeneration or recreation in the new being itself.

The assurance of the existence and the certainty of the location of a particular substance credited with hereditary continuity, is the great fact of the history of the histological research in this direction. The substance seems to be fully recognized in both egg and sperm-nuclei.

The central ideas, to which all others are subordinate, are embodied in what is comprehensively termed Weismannism—or the system laboriously elaborated by Professor August Weismann of Freiburg, in Brisgau (Baden).

The preliminary consideration of the subject thus involves the study of the elementary products of generation, viz., the ovum and spermatozoon. For this the reader is referred to the article REPRODUCTION, Vol. XX, p. 407; and EMBRYOLOGY, Vol. VIII, p. 163, and in these Supplements.

The special details of these articles, to be carefully studied, refer to the homologies of oögenesis and spermatogenesis; the significance of the extrusion of the polar bodies; the chromosomes and the centrosomes; karyokinesis (see PROTOZOA, Vol. XIX, p. 833); and parthenogenesis (see Vol. XII, p. 574; Vol. XIII, p. 146; Vol. XX, p. 427). Especially to be noted are the processes of *Reducing Division*, by means of which the egg and sperm-cell receive half the number of chromosomes, originally present in the egg and mother-sperm cell respectively; of *Fertilization*, or the union of the nuclei of the egg and sperm cells to form an oöspERM, true germ, or embryo, in which the normal number of chromosomes is restored; and which gives significance to what is called amphimixis (see REPRODUCTION, Vol. XX, p. 417, 418); and of *Cell Lineage*, which traces the germ-cells to the germ-layers of the embryo, i.e., the mesoderm which has no converse with the ex-

ternal layers; where the germ-cells are early differentiated, where their integrity and continuity are secured, and where their independence of other cells seems demonstrable. (See EMBRYOLOGY, Vol. VIII, pp. 163-167.)

The central fact of the new heredity is that each segmentation nucleus contains one half of the number of original male chromatin loops *plus* one half of the female. As all subsequent cell-division proceeds as described, by a continual interstitial growth, this intermixed male and female chromatin must be distributed in the mature individual during life in gradually diminishing force, until its longevity is interfered with by natural death.

Besides, as this process of regeneration which occurs as a result of fertilization is ever continuously the same at each generational period, it can be very readily conceived that there must be a continuity of some part of the germ-plasm which can give rise not only to the production of the cells of the body and thus of the individual, but also to the production of cells referable to the preservation of the potential germ-plasm itself, and thus of the race.

In the *fundamental plasms*, independently of the nutritive or secondary plasm (deutoplasm), as seen in the well-stored egg, we have to deal with two kinds of protoplasm alone in the simplest form of sexual cells: (1) the cytoplasm or cell-plasm outside of (2) the nucleo-plasm of the nucleus.

Here we have at once the simple distinction which Weismann maintains exists throughout multicellular organisms; that is, the individual or *body cells* (somatoplasm), and the reproductive, ancestral or *germ-plasm*. But in the complicated process of the rapid transformation of these cells into others descended therefrom, we have to imagine the existence of a reproductive plasm of a disposition to differentiate in certain well-defined directions. Hence Weismann, in so conceiving the germ-plasm, finds it convenient to give to germ-plasm acting in its several conceived rôles, names indicative thereof. To aid the student, Dr. G. J. Romanes (*An Examination of Weismannism*, 1893, p. 32), has tabulated these plasms in a useful manner. This tabulation we use here in an altered form, to enable us to represent as graphically as possible the whole scheme and purpose of cell-plasms in their relations to one another and the results produced therefrom. In this tabulation occurs the new and very useful name of "idio-plasm" (from the Greek *idios*, meaning "one's own self"). It may be regarded as the active force of germinal or intracellular life.

{ Cytoplasm = all the contents of the cell other than nucleo-plasm.

{ Nucleo-plasm = the whole contents of any cell nucleus.

||

Idio-plasm.

||

A = that portion of a nucleus which "controls" a single cell. B = that portion of nucleo-plasm which is destined to construct future cells.

||

Germ-plasm = undifferentiated idio-plasm B.

Somato-plasm = idio-plasm A + cytoplasm.

Broadly speaking, the cytoplasm and nucleo-plasm together represent the starting-point of the individual; the idio-plasm represents the substance that

transforms the first-named into the perfected somatoplasm or individual, while preserving by its isolation the germ-plasm, the integrity of which is kept intact for handing on the phylogeny to future generations. It is meanwhile, in a latent condition, but ever ready to differentiate whenever the fertilizing impulse again demands it.

The ideal mechanism of heredity, as conceived by Weismann, consists of the following parts:

(4.) *Idants*, the definite arrangements of the hereditary substance in the nucleus, already known to us as the loops or chromosomes and composed of granules or microsomes.

(3.) *Ids* (formerly designated the "ancestral germ-plasms"), consisting probably of the microsomes. They are clearly defined and localized vital units, possessing a fixed architecture, "indissolubly united in phylogeny, and, therefore, transmitted (each) as one complex whole" (Romanes). The ids are composed of the

(2.) *Determinants*, the primary constituents of a cell or of a group of cells, possessing special qualities "capable of directing the ontogeny of such; and such a group of cells as is independently variable from the germ onwards" (Romanes). The determinants consist of groups of

(1.) *Biophors*, the bearers of vitality and of cell qualities. They are of different kinds and are the ultimate (or initial) units of the germ-plasm, and themselves consist of a number of simple molecules (properly) chemically understood, and therefore capable of unlimited rearrangement.

Let us obtain a conception, if we can, of the minuteness of these biophors. The largest idants as yet observed are those of the thread-worm of the horse (*Ascaris megaloccephala*). Each of the idants of this animal is composed of six more or less distinct granular portions (microsomes). Supposing an id to be as large as one of the larger of these spherules or granules, it would measure about 0.0008 of a millimeter in diameter, and would contain two millions biophors of such a size that seven hundred and three millions of them could be contained in the cube of a blood corpuscle. Each of these biophors, determinants and ids, in regard to each other and their related constituents, has a certain autonomy of its own, and is, we may conceive, endowed with the regal capacity of variation and differentiation in initiatory and determinative results.

The possibility of variation thus depends upon the changes and interchanges of relationship in the component parts named, as well as upon the varied opportunities of growth that occur during the process of amphigony. To illustrate the infinite possibilities of the idants and their constituent units, the following illustration may be used: Tacquet, the mathematician, has calculated that one thousand million writers in one thousand million years could not write out all the combinations of the 26 letters of the alphabet if each of them were daily to write out forty pages of these combinations, each page containing different orders of the letters. It would indeed require an "immortality" to accomplish such a task, but the biophors are being continually augmented by growth to take the place of such as may

be worked out of the combination. Thus the biophors are constantly rearranged and reconstituted from their self-generating potentiality. The biophors are indeed not only the carriers of heredity, but the creators of careers.

The immortality of the germ-plasm is also an idea of Weismann, which we have endeavored to develop in the remarks preceding; and now no one is surprised at what is only metaphorically synonymous with the more sedate phrase, "continuity of the germ-plasm." Even this was considered a heresy in its apparent meaning; but when analyzed, we obtain a substantial thought which represents the descent of progeny from ancestors, sometimes referred to as the "lineage." The idea had been already anticipated in the declaration: "We are the same our fathers have been"; while another expressed the idea when he said:

"My flame expires, but let true hands pass on
An unextinguished flame from sire to son."

Thus we must imagine an ever-present surplus of creative substance, guarded, as it were, within sacred precincts, experiencing a separate existence amidst surrounding microcosms. Weismann believes that after segmentation a minute portion of the germ-plasm is preserved in its integrity, and "remains unaltered in one of the daughter-cells mingled with its nuclear idio-plasm, but in an inactive state; and that it traverses in this manner a longer or shorter series of cells, till, reaching those cells on which it stamps the character of germinal cells, it at last (again) assumes the active state."

This lineal as well as linear course traversed by the germ-plasm, leads directly to and from the germ-cells, originating in the mesoderm—"a layer which," according to Spencer, "as the mode of formation implies, never has any converse with the surrounding medium and its contents, or with the nutritive bodies taken into it"—which is of vital importance for any theory that might refer to germ-plasm.

If we can thus conceive of the germ-plasm overflowing, as it were, in certain directions for the purpose of carrying from a preceding generation to that following certain individual characters, while retaining in all its integrity the mainspring of racial or specific characters, we must at once accept the hypothesis of the absolute independence of the germ-plasm from the somato-plasm. This hypothesis involves the corollary that the characters that appear to arise newly in the individual, the existence of which commences at the period of segmentation, belong only to the individual, die with it, and cannot be transmitted.

Upon this rock, evolutionists have split. It is this difference that has aroused such an intensity of interest to the extent of dividing an apparent impregnable union of evolutionists into two antagonizing camps holding two opposing views, embodied in the names Neo-Darwinism and Neo-Lamarckism (q.v., in these Supplements).

Neo-Lamarckians deny Weismannism because it upsets their work, removes the foundations from the apparently sure structure they thought to have erected, and leaves them, in fact, no place among evolutionists. To this they refuse to submit. Neo-

Darwinians, on the other hand, hail Weismannism as enabling them to explore the very sources and fountain-head of evolution.

The difference between the two theories, arising from a difference in view as to the processes by which the same end, the origin and heredity of variations, is accomplished, must now be noted. Lamarckism evidently involves the process known as pangenesis (see *BIOLOGY*, Vol. III, p. 690), on which it is unnecessary here to dilate, it being well understood. In contradistinction to this, Neo-Darwinians maintain the distinctively Weismannian plasmogenesis (or origin of variations from the germ-plasm) by its own inherent activity, to use the words of Erasmus Darwin. (See Vol. VI, p. 830.)

If we could eliminate the conception of the pangenetic process, we might describe the material basis of heredity (as conceived of by Weismann) as the stirps of Galton constituted of Spencer's "physiological units, in all of which dwells the intrinsic aptitude to aggregate into the form of a certain species."

Natural selection has at the very beginning a free hand and the first word. The battle for the survival of the fittest nascent characters is at once inaugurated, being continued until it is eventually fought out between individual and individual, species and species. The potential disposition of the nascent constituents of the stirps is toward the selection or choice and initial encouragement of the determinants of these characters that will or can take the fullest advantages of the novel environmental conditions always presented to them. Thus natural selection at once adopts and adapts what, out of its infinitude of choice, will give individualism a continuous advantage in the struggle for the preservation of self and race. It is, then, according to the new heredity, the variation that fits the environment, not the environment that fits the variation.

Selection, therefore, has its most advantageous opportunity whenever the influence of fertilization sets the machinery of heredity in motion. The selection is germinal. The process has a constantly renewed opportunity of intensifying its effects by amphimixis (the mingling of the hereditary substances of two like individuals in an act of sexual selection); and its cumulative effects are always interrupted by the process of panmixia (the condition of free-intercrossing, or what Romanes described as the "cessation of selection").

This conception of "germinal selection" has been indeed the latest of Weismann's contributions to his theory. It was the subject of an address recently delivered by him and translated and published, January, 1896, in *The Monist* (vol. vi, p. 292), in which he says: "By a selection of the kind referred to, the germ is progressively modified in a manner corresponding with the production of a definitely directed progressive variation of the part." Going back to the self-originating point in this process, the selection may be described in the words of a Lamarckian, Prof. H. F. Osborn, as "the disposition to adaptive atrophy or hypertrophy at certain points"; but, according to the followers of Weismann, strictly within the germinal elements.

A few illustrations may be cited to illustrate, in part, the two opposing processes. Take the case of mimicry in insects. The Lamarckians explain this by saying that the insect, constantly striving to appear like a certain leaf, for protective purposes, by some means develops outwardly a distinct resemblance to the leaf it desires to imitate. This result it contributes in pangenes, to the material basis of heredity, and thus transmits its individual accomplishment to its progeny. That progeny follows the excellent example of the thoughtful parent, the effort is repeated and transmitted, and so on until the consummation has been reached in the fortunate descendants. But, in the mean time, it might be asked by the thinking originators of this mimicry: What has posterity done for us and our present condition that we should waste our efforts to accomplish a future result of no present benefit to ourselves, especially when it is the present advantage that determines in the struggle for existence? The Darwinian would explain the case thus: That as certain insects, by germinal variation and selection, exhibit a disposition to resemble certain leaves, not fortuitously but fortunately, those so characterized have at the very start a better chance of surviving, and therefore of reproduction. Segregation and amphimixis increase the tendency to the so-called mimicry. The often misrepresented case of the giraffe is the same. Lamarckians say that the animal, suddenly thoughtful of the browsing benefit of his descendants, while he himself must perhaps starve, comes to the conclusion that he must stretch his neck, throw the stretching effects off in gemules, and pangenetically transmit the result to the next generation of giraffes, when at length, if starvation has not obliterated the persevering intention, the long neck is attained and the nutritive salvation of the race is accomplished. But while this has been going on, the whole locomotor apparatus is thrown so thoroughly out of gear that the unfortunate animal would be an easy prey to its devouring enemies. (Spencer, *Factors of Organic Evolution*, p. 15.)

The explanation by Darwinians of the "stretching" is simply that certain giraffes come into existence with longer necks than others and can secure food at greater heights, and have thus an advantage over their less well-favored companions. Natural variation, as in the former case, determines at its earliest stages the extension of the neck, which is of advantage to the race. Natural selection accomplished what germinal selection began.

Goethe saw the difficulty when he "pointedly remarked" that the future question for naturalists will be, for instance, "why cattle get their horns, and not for what they are used." Lamarckists explain this case: "It is well known that in many cases shocks, repeated blows or frictions cause the repairs to exceed the waste, and excrescences of bone are the results, as in the hands and feet. The bony excrescences on the heads of horned animals have been explained as having arisen in this way, under the intensifying effects of inheritance and selection." (Dr. Henry B. Orr, *A Theory of Development and Heredity*, p. 163; see also Spencer, *Factors*, p. 7). But, replies the Darwinian, is it reasonable to sup-

pose that a pugnacious bull became so from the deliberate determination of ancestral peaceful bulls to injure themselves against each other while heroically enduring the "callosities consequent upon the habit of butting"? This case of indelible contusion reminds one of the prize-ring. If the horns were derived in the way supposed, why could we not have a race of pugilists with heads exhibiting protuberant points of defense, derived from the inability of their ancestors to avert the blows so well directed by the victors? But then, the survivor in the original contest, coming off with few marks of the battle, could not contribute to the benefit of his descendants, who would find themselves quite anomalously placed and at an absolute discount—the process in this case working in an entirely opposite manner.

The evolution of the trotting-horse has been similarly explained by Lamarckians: "The shock of the feet striking the ground furnishes the motive for the lengthening of the bones." (Orr, *sup. cit.*, p. 164). Such a process has been strongly insisted upon by the distinguished American palæontologist, Dr. Edward Drinker Cope, in his recent works. But it might be permitted to offer another explanation: that it is more logical to suppose that the natural tendency to produce longer legs, cannon-bones, etc., marked those so originally characterized as more adapted to the new environment found by or forced upon the progenitors of the horse, and was developed *de novo*; rather than that the several-toed animal, being placed upon an uncongenial terrain, should have to "think out" laboriously by continual severe poundings the salvation of his descendants, while he was reaping direct disadvantage in the mean time. The Darwinians think it more reasonable to suppose that the animals capable of taking instant advantage of the new environment would have the best chance of perpetuating a race with long shank-bones. Besides, a practical horseman would on this point speedily inform the investigator that it is of these very poundings that the horseman stands in most dread; for it is these shocks and strains and impacts that cause the "break-down" of colts—so carefully avoided by trainers. If the Lamarckian theory were true, we would soon have a race of horses incapable of "going" in any form.

The general understanding we have obtained of the germ-plasm tends to explain those phenomena apparent in individual growth which may be referred to the reproductive remains of the idio-plasm in the somatic tissue, such as repair, budding, graft hybridization, dichotomy, etc. But, furthermore, such a rational conception of the germ-plasm should be able to offer a substantial solution of such phenomena, arising as a result of fertilization, as twins, hybridity, and perhaps the relative prepotence of parents, as well as the overpowering and suppression of influence by one or other parent.

Again, though the essential hereditary matter is of different sexual origin, Weismann regards it, in the segmentation-nucleus, as sexless, be-

cause there is no apparent sex in the embryo visible during its early development. But sex is, evidently, determined or becomes apparent by the action of mysterious agencies on what we can regard only as the hermaphroditic elements derived from the mingling of the paternal and maternal chromosomes.

The facts as to the likeness or unlikeness of progeny to one or other parent and to each other, particularly in regard to full brothers and sisters, seems to be referable to the re-combinations occurring within the idants. These further resolve themselves into the more general phases of atavism and variation, of accumulation and elimination, and of progress and retrogression. Thus we approach the domain of the possibilities of evolutionary heredity as it affects in its widest scope the human race itself, the consideration of which is beyond the limits of this article.

But there are some forms of transmission which have been brought forward as arguments against the acceptance of the new heredity. These are: (1) *Initial heredity*, or results supposedly due to the condition of the parents at the time of coition; (2) *Sympathetic heredity*, or results supposedly due to the effects of imagination upon the dam at the time of impregnation and early conception; (3) *Artificial heredity*, or results supposedly due to the acquirement of artificial characters by the parents, such as mutilations, etc.

Lastly, we have the often-advanced argument of *Telegony*, or the results supposedly due to the influence of the primary impregnation on subsequent progeny by other sires. Admitting this, what is to be done with the form of heredity which we may call *Metagony*, described as referring to the results supposedly due to the later, or after-developed, influence of one sire's impregnations on a female of a different variety (whose first and some immediately subsequent progeny resemble herself entirely and not the sire), as shown, for example, in the fourth, fifth and sixth, etc., progeny, which resemble the sire and not the dam?

But whatever the results of the forms of heredity mentioned in the two preceding paragraphs may be, it must be pointed out that the struggling hereditary force remaining to carry the race, as so represented, onward, is directed, not to the preservation of such monstrous characters, but to their elimination.

Some have gone so far as to assert that, according to Lamarckism, "anything is transmissible"; while Weismannism claims that "nothing goes into the offspring but what comes out of the parents," and, in the mature individual, nothing can be got out of it that is not in it. Here comes forward the argument of training, schooling, etc., the results of which have usually been claimed as belonging to the class of characters called "acquired." Training, etc., in any direction, mental or physical, is very evidently worthless unless there is "that within" the individual which is capable of being developed, of "coming out." This kind of test is always helpful in discovering what

abilities are inherent, and in what direction they can be best utilized. The results of training may thus be regarded, from Weismann's standpoint, as the measure of the adaptability of the determining units of the germ-plasm or stirps. Thus, in the same view, nurture favors nascence.

Weismannism teaches that variation in its self-origination, takes place and is determined at the very threshold of the regeneration of the nascent material of heredity.

Lamarckism believes in a sort of precipitation of the accretions or products of vicissitudinous individualism, involving the accumulation of a burden of monstrosities, against the transmission of which nature would revolt. Lamarckism has to assume full-fledged perfect pangenetic parents: for how could the recreating gemmules be produced without the finished individual? Such a theory of original creation seems incompatible with that of evolution itself, which Lamarckism claims to uphold. Weismannism inspires a different conception and confidence in the destiny of races. It strives to furnish an opportunity of reaching a future state of perfection by its potential ability of holding fast to that which is good, and continually leaving behind that which must fail. Thus it designs to attract by its promise of approximating to that goal of evolutionary aim—a point at which it might be found true that "The higher the life the less the strife"; and stepping in the direction of "one far-off, divine event to which the whole creation moves."

Historically considered, it should be pointed out that most of the theories of the new heredity have occurred to former thinkers. One hundred years ago, as indicated, Erasmus Darwin had the idea of germinal activity in his mind; and, contemporaneously with him, Dr. James Anderson (q. v., Vol. II, p. 14) in one of his works had also expressed views opposing the inheritance of acquired characters. Later, Galton had shown the significance of stirps (germ-plasm) and "double parentage," and Romanes showed the results of the "cessation of selection" (panmixia), while the idea of continuity seems to have been a general conception. What has been gained to-day seems to be the demonstration of a physical basis upon which such theories can be more fully and securely elaborated.

In dealing with this subject here, space has admitted only of its treatment in regard to the higher animals. The object has not been to plead specially for the new heredity, but to attempt to present it as it appears to be conceived of by its sponsors, as compared with the old theory. Its presentation in this manner has been deemed only its due. But the older doctrine has always a zealot following.

The truly splendid labors of Dr. Cope, in the palæontological field, and the arguments and illustrations of processes he has deduced therefrom, will long be regarded as their ægis by the American school of Lamarckists.

Bibliography. The reader is referred, for further study of this subject, to the following works, etc.: Francis Gal-

ton, *On Blood-Relationship*, paper read before the Royal Society, London (1872); *A Theory of Heredity*, in *Journal of the Anthropological Society*, London (1875); the same, reprinted in the *Contemporary Review*, December, 1875; *Hereditary Genius* (1869); *Natural Inheritance* (1889); *Experiments in Pangenesis* (1871). August Weismann, *Studies in the Theory of Descent* (1882); *Essays on Heredity* (1889-91); *The Germ-Plasm* (1893); *Germinal Selection*, reprinted from *The Monist*, with a preface, appendix and index (Chicago, 1896). Herbert Spencer, *The Factors of Organic Evolution* (1886). G. T. H. Eimer, *Organic Evolution as the Result of the Inheritance of Acquired Characters*, etc. (London, 1890). W. K. Brooks, *The Law of Heredity* (Baltimore, 1883). H. F. Osborn, *Are Acquired Characters Inherited?* (New York, 1875). W. Platt Ball, *The Effects of Use and Disuse* (1890). Lester F. Ward, *Neo-Darwinism and Neo-Lamarckism* (Washington, District of Columbia, 1891). H. B. Orr, *A Theory of Development and Heredity* (New York, 1893). G. J. Romanes, *Darwin and After Darwin* (2 vols., Chicago, 1892, 1896); *An Examination of Weismann* (Chicago, 1893). E. D. Cope, *Origin of the Fittest* (1887); *The Primary Factors of Evolution* (Chicago, 1896). Also, *Nature*, *Contemporary Review*, *American Naturalist*, *Popular Science Monthly*, etc., for these years.

R. C. AULD.

HEREDITY, THEORY OF. See EMBRYOLOGY, in these Supplements.

HERGENRÖTHER, JOSEPH, a German theologian; born at Würzburg, Bavaria, Sept. 15, 1822; studied theology at Würzburg, at Rome, and at Munich; in 1852 was made professor of canon law and church history at Würzburg. He was a vigorous upholder of the doctrine of papal infallibility, which he defended in his *Antijanus*. Among his other works are: *Catholic Church and Christian State* (1876); *Church History* (1884); and *Leonis X Regesta*, left unfinished at the time of his death, which occurred Oct. 7, 1890.

HERING, CONSTANTINE, a German physician; born at Oschatz, Saxony, Jan. 1, 1800. He studied medicine at Leipsic and Würzburg; was converted to homœopathy while preparing a refutation of its theories, and after personal acquaintance with Hahnemann became his admiring friend. The king of Saxony sent him to Surinam to study the flora and fauna of that country. In 1833 he arrived in Philadelphia, where he founded the first homœopathic school in the United States. From 1845 to 1869 he filled the chairs of homœopathic *materia medica* and medicine in this school. He edited the *Homœopathic Quarterly*, the *Homœopathic News*, and the *American Journal of Homœopathic Materia Medica*. He published in English and German on his favorite doctrine, among them the *Rise and Progress of Homœopathy*; *Effects of Snake-Poison*; *Condensed Materia Medica*; *Hering's Domestic Physician*; and *American Drug Proving*s. He died in Philadelphia, July 23, 1880.

HERING, EWALD, a German physician; born in Saxony, Aug. 5, 1834; educated at Leipsic; tutor in medicine, Leipsic, 1862-65; professor in Vienna, 1865-70; in 1890 became professor of physiology at Prague. He was an investigator in the realm of psycho-physics, and is the discoverer of the accepted theory of color-vision. (See *PHYSIOLOGY*, Vol. XIX, p. 22.) Among his works are *Contributions to Physiology* (1861-64); *The Relationship of Body and Soul* (1875).

HERIOT, the right by which a feudal lord was

entitled to seize the tenant's beast or other chattel in the event of the tenant's death. See *COPYHOLD*, Vol. VI, p. 356.

HERKIMER, a village and the capital of Herkimer County, eastern central New York, on the Mohawk River and the West Canada Creek, with canal and railroad facilities. It is a thriving village; has good schools and street-railways. It is noted for its cheese and butter; it manufactures also flour, paper, knit-goods, air-guns and rifles, office desks, furniture and mattresses. Population 1890, 3,456; 1900, 5,555.

HERKIMER, NICHOLAS, an American soldier, born in Herkimer County, New York, about 1720. In 1758 he became lieutenant of militia, and commanded Fort Herkimer, on the Mohawk, during the attack of the French and Indians in that year. In 1775 he became colonel and chairman of the committee of safety of Tryon County, New York. A year later he was made brigadier-general in the New York militia, and fought during the Revolution until Aug. 5, 1777, when he was mortally wounded while leading an expedition to the relief of Fort Stanwix (now Rome, New York). He died at his home in Danube, New York, Aug. 17, 1777. Congress and New York united in erecting a monument to his memory in 1884.

HERKOMER, HUBERT, an English artist, born in Waal, Bavaria, May 26, 1849. He was taken to the United States by his father, Lorenzo Herkomer, a wood carver, in 1851, but in 1857 returned to Europe and studied at the Art School, Southampton, England, and under Frederick Walker at the South Kensington Art Schools in 1866. His pictures were first exhibited at the Dudley gallery in 1869, and his success was immediate. Is a member of the British Institute of Water Color Painters, Royal Academy and Berlin Academy. He personally directs the Art School at Bushey, near London of which he is the founder, and is a popular instructor. He was created an officer of the Legion of Honor in 1889, on account of services in connection with the Paris Exposition. Among his most famous works are *The Last Muster: At Death's Door; Missing; Natural Enemies; and Windswept*.

HUBERT HERKOMER.

member of the British Institute of Water Color Painters, Royal Academy and Berlin Academy. He personally directs the Art School at Bushey, near London of which he is the founder, and is a popular instructor. He was created an officer of the Legion of Honor in 1889, on account of services in connection with the Paris Exposition. Among his most famous works are *The Last Muster: At Death's Door; Missing; Natural Enemies; and Windswept*.

HERMANDAD, SANTA, or **HOLY BROTHERHOOD**. See *SPAIN*, Vol. XXII, p. 326.

HERMANN, a town and the capital of Gasconade County, central eastern Missouri, 81 miles W. of St. Louis, on the Missouri River and the Missouri Pacific railroad. It is a noted wine-producing town, and its inhabitants are mostly Germans. Its other more important products are beer, cigars, flour, carpenters' tools and castings. Population 1890, 1,410; 1900, 1,575.

HERMAPHRODITISM. See *MONSTER*, Vol. XVI, p. 764.

HERMAPHRODITUS, son of Hermes and Aphrodite. He inherited the beauty of both his parents, and was brought up by the nymphs of Mount Ida. At the age of 15 he removed to Caræ, and, being near the fountain of Salmacis, in the neighborhood of Halicarnassus, the nymph of the fountain fell in love with him. After trying in vain to win his affections she embraced him one day as he bathed in the fountain, praying, at the same time, that they might be united forever. Her prayer was answered and their bodies united, retaining the characteristics of both sexes. There are several statues of him, and on a large number of monuments he is grouped along with the Bacchic train.

HERMANN OR ARMINIUS. See *GERMANY*, Vol. X, p. 478.

HERMAS. See *APOSTOLIC FATHERS*, Vol. II, p. 197.

HERMESIANISM. See *HERMES, GEORG*, Vol. XI, p. 750.

HERMIAS, a slave in the household of Eubulus, tyrant of Atarneus and Assus, in Mysia, Asia Minor; being made free, he succeeded his master, Eubulus, 347 B.C.; was noted as the friend of Aristotle, who spent several years at his court. He was seized by Mentor, the Greek general of the Persian king, and sent captive to the Persian court, where he was crucified. Aristotle married his adopted daughter, Pythias, celebrated his praises in an ode to Virtue, and erected a monument to him at Delphi.

HERMIONE, a daughter of Menelaus and Helen; was very beautiful, and had been promised to Orestes before the Trojan War, but was married to Neoptolemus after Menelaus returned home. Orestes claimed her, and finally caused Neoptolemus to be slain at Delphi. He then married her. This story is varied at times so as to make Orestes the first husband of Hermione, from whom he was separated; and in the interval Neoptolemus seized her, and Orestes, returning, caused the Delphians to kill Neoptolemus.

HERMIT-CRAB. See *CRUSTACEA*, Vol. VI, p. 642.

HERMITE, CHARLES, a French mathematician, born at Dieuze, Lorraine, Dec. 25, 1822; studied first at Nancy and then at Paris; became professor of higher algebra at Sorbonne and honorary professor at the École Polytechnique. His articles on mathematics have appeared in scientific and mathematical journals in France and other countries. Among other honors conferred upon him were foreign member of the Royal Society, and of the Mathematical Society of London; of the Royal Society of Edinburgh; of the Academies in Berlin, Paris and Vienna; and commander of the Legion of Honor. He edited, in conjunction with Serret, *The Elementary Treatise of Lacroix on the Differential and Integral Calculus* (1867).

HERMITIC BOOKS. See *HERMES TRISMISTUS*, Vol. XI, p. 750.

HERMITS. See MONACHISM, Vol. XVI, pp. 699, 700.

HERMODACTYL ("Hermes's finger"), a bulbous root, formerly brought from Turkey and much esteemed as a cathartic, but entirely discarded in modern times. It is probably obtained from *Colchicum variegatum*.

HERMONTHIS, NOW ARMENT, a town of Egypt. See EGYPT, Vol. VII, p. 782.

HERMOPOLIS OR SYRA, the capital of Syra, an island of the Cyclades in the Ægean. It is on the eastern shore of the island, built about its harbor on a conical hill. It has since classical times been of great commercial importance. It is at present the residence of many European consuls, and is a station of the steamers going to and from Constantinople. It manufactures flour, ropes, glass, pottery, iron-wares, castings, handkerchiefs, sashes and yarn, and has tanneries, ship-yards, a gymnasium and a normal school. Population, 1896, 17,894.

HERMOPOLIS MAGNA, an ancient Egyptian city. See EGYPT, Vol. VII, p. 775.

HERNDON, WILLIAM LEWIS, an American naval officer; born at Fredericksburg, Virginia, Oct. 25, 1813. He served in the American navy and in the Mexican War. In 1851 he was sent to explore the Amazon River. He crossed the Andes from Lima to the headwaters of the Amazon, and then sailed down the river in a canoe. The United States government published two volumes of Herndon's *Exploration of the Valley of the Amazon*. In 1857 he was captain of the steamer *Central America*, which, with 580 persons on board, sailing from Havana for New York, sank in the Gulf stream, September 12th. The women and children were saved, but Herndon with 426 men sank with the vessel. His daughter was the wife of President Arthur.

HERODES. See ATTICUS HERODES, Vol. III, p. 61.

HERODIONES, order of Herons. See ORNITHOLOGY, Vol. XVIII, p. 47.

HEROÓPOLIS. See RAMESES, Vol. XX, p. 265.

HEROPHILUS, ancient Greek physician. See ANATOMY, Vol. I, p. 802; also, MEDICINE, Vol. XV, p. 801.

HERO'S APPARATUS. See STEAM ENGINE, Vol. XXII, p. 473.

HEROSTRATUS. See EPHEBUS, Vol. VIII, p. 466.

HERPES. See SKIN DISEASES, Vol. XXII, p. 123.

HERPETOLOGY. See REPTILES, Vol. XX, pp. 432, 433.

HERRON, FRANCIS JAY, an American soldier; born in Pittsburg, Pennsylvania, Feb. 17, 1837; graduated at Western University of Pennsylvania, 1853; and in 1861 entered the army as captain of volunteers from Iowa. He served in the operations west of the Mississippi; rose to the rank of major-general of volunteers, and in 1865 received the surrender of the trans-Mississippi army of the Confederates. He was Indian commissioner in 1865, but resigned during the same

year, at the same time resigning from the army. He was United States marshal in Louisiana, 1867-69; secretary of state of Louisiana, 1872-73; and afterward took up his residence in New York City.

HERRING-GULL (*Larus argentatus*), a bird of the gull family, common on the west coasts of Europe. There is an American variety.

HERRMANN, ALEXANDER, an American magician, known as "Herrmann the Great," of Hungarian and Jewish ancestry; born in Paris, Feb. 10, 1844. He passed for the brother of the prestidigitator, Carl Herrmann, from whom he learned his art as a boy, but there is reason to think that Alexander's name was Nieman, and that he was of Hungarian birth. His first wife was the Hungarian prima donna Rosa Csillag (1835-92), from whom he was speedily divorced. In 1859 he gave a court exhibition at Madrid; two years later he and his brother came to the United States and appeared at the Academy of Music, New York, and gave exhibitions in almost every town in the Union. He was naturalized at the earliest opportunity; made highly lucrative tours in America, Europe, Siberia, India, and Australasia; became renowned for his sleight of hand; was usually assisted by his second wife, an actress whom he married in 1881. Died in his car near Salamanca, N. Y., Dec. 17, 1896.

HERSCHELL, FARRER, LORD, an English statesman; born Nov. 2, 1837. After being educated at the Universities of London and Bonn he was called to the bar; became a Queen's counsel in 1872, and recorder of Carlisle in 1873. In 1880 he was solicitor-general in Gladstone's ministry, and in 1886 became Lord Chancellor and Baron Herschell. On the appointment of a royal commission to inquire into the working of the Metropolitan Board of Works, he was elected president of this commission. In 1892 he was again Lord Chancellor under Gladstone, and in 1894-95 under Rosebery. He was chosen chancellor of the University of London in 1893. In 1897 he was a member of the British Guiana and Venezuela Boundary Arbitration Tribunal; and in 1898-99 chairman of the Canadian-American Joint High Commission. Died in Washington, D. C., March 1, 1899.

HERTSLET, SIR EDWARD, a British diplomat and author; born in London, Feb. 3, 1824; educated at private schools; entered the Foreign Office, 1840. He was attached to the special embassy of the Earl of Beaconsfield and the Marquis of Salisbury to the Congress of Berlin in 1878; was one of the delegates appointed in June, 1889, to settle the boundary between Dutch and British Borneo; and was knighted in 1892. He published *Hertslet's Commercial Treaties* (1875-79); *British and Foreign State Papers; The Map of Europe by Treaty* (1891); and *The Foreign Office List*.

HERTZ, HEINRICH, a German electrician, discoverer of the so-called Hertzian waves or rays; born in Hamburg, Feb. 22, 1857; took his degree at Berlin in 1880, when he became assistant to Helmholtz; became professor of physics at Bonn in 1889. His investigations were directed principally to electrical phenomena. He attracted the attention of the whole scientific world in 1890, by a paper on the relations between light and elec-

tricity. His researches were collected and published under the title, *Die Ausbreitung der Elektrischen Kraft*. He died in Bonn, Jan. 1, 1894.

HERTZ, WILHELM, a German poet; born in Stuttgart, Sept. 24, 1835; studied philology at the University of Tübingen; served in the army of Württemberg, and then traveled in France and England. He became professor of German in the technical school at Munich in 1869. He published epics and poems of the middle ages, *Lancelot and Ginevra* (1860); *Marie de France* (1862); *Tristan et Isolde* (1877); *A Legend of the Convent Bruder Rausch* (1882); and *Lager in Alsace* (1872).

HERVÉ, AIMÉ MARIE EDOUARD, a French journalist; born in St. Denis, Réunion island, May 28, 1835. In 1854 he entered the normal school, but sent in his resignation shortly afterward, in order that he might devote his undivided attention to journalism. He was connected with several journals until 1867, when, after the publication of the imperial letter of Jan. 19, 1867, inaugurating a new system for the press, Hervé established, in conjunction with M. Jean Jacques Weiss, the *Journal de Paris*, which became noted for its persistent attacks on the imperial régime. At the general election of May, 1869, Hervé came forward in the circonscription of Arras, as the candidate of the Liberal opposition, under the patronage of Thiers, but he was defeated at the poll by the official candidate, Sens. Weiss having retired from the strife of political journalism on being nominated general secretary of the Ministry of Fine Arts, Hervé remained sole editor of the *Journal de Paris*, and on Feb. 5, 1873, started the *Soleil*. After the visit of the Comte de Paris to Frohsdorff, which preceded the attempt to re-establish the ancient monarchy, Hervé proclaimed loudly "the reconciliation of the House of France," and engaged, with reference to this subject, in an animated controversy with Edmond About, the editor of the *Dix-Neuvième Siècle*. This dispute ended in a duel, in which About was slightly wounded. After the proclamation of the Septennate, Hervé supported the policy of the Broglie, Cissy, and Buffet cabinets. The *Journal de Paris* was discontinued in 1876, and he remained editor of the *Soleil*. He wrote *A Page of Contemporary History* (1869), and a *History of the Irish Crisis* (1885). Died in Paris, Jan. 4, 1899.

HERVEY ARCHIPELAGO. See COOK'S ISLANDS, Vol. VI, p. 331.

HERWARTH VON BITTENFELD, KARL EBERHARD, a Prussian general; born at Grosswerther, Sept. 4, 1796. He entered the military service in 1811, and gained his first laurels in the war of liberation, especially in the battle of Leipzig. In 1863 he was promoted to the rank of general, and in 1864 commanded the Prussian troops against Denmark, distinguishing himself by his daring capture of the Isle of Alsén. In the campaign of 1866 he was intrusted with the occupation of Saxony, and then with the command of the army, which advanced from Saxony into Bohemia. He gained victories at Hühnerwasser and Münchengrätz, and took a prominent part in the

battle of Königgrätz. In 1870, on the outbreak of the Franco-German War, he was made governor of the Rhine provinces, and in 1871 a general field-marshal. He retired from active service April 8, 1871, and died at Bonn, Jan. 14, 1884.

HERZ, HENRI, a French pianist and composer; born of Jewish parentage at Vienna in 1806, and educated in Paris, where his talent was recognized early. His compositions became popular over Europe, and he was received with applause on visiting England in 1834 and America in 1846. In 1837 he received the decoration of the Legion of Honor, and from 1842 till 1874 he was professor of music at the Conservatory of Paris. He was also manager of a pianoforte factory, and in 1855 his pianofortes won the first prize at the Paris Exhibition. His compositions, more than two hundred in number, are mostly for the piano. He died Jan. 6, 1888.

HERZEN, ALEXANDER, an Italian physiologist; born at Vladimir, Russia, June 25, 1839; educated in England; studied medicine at Berne; became assistant to Schiff in Florence, and was called to Lausanne in 1881. He published many works on physiology and physiological psychology, among them, *Analisi Fisiologica del Libero Arbitrio Umano* (1870); and *Le Cerveau et l'Activité Cérébrale* (1886).

HERZOG, JOHANN JAKOB, a German theologian; born at Basel, Sept. 12, 1805. He studied theology in his native city and in Berlin, became professor at Lausanne in 1830, at Halle in 1847, and at Erlangen in 1854, retiring in 1877. Among his works are *Calvin* (1843); *Das Leben Æcolampadii* (1843); *Die Romanischen Waldenser* (1853); but his name is best known for the great theological encyclopædia edited by him, *Realencyklopädie für Protestantische Theologie und Kirche* (22 vols., 1854-68). He died at Erlangen, Sept. 30, 1882.

HESPERIS OR ROCKET. See HORTICULTURE, Vol. XII, p. 251.

HESPERORNIS, fossil swimming-bird. See ORNITHOLOGY, Vol. XVIII, pp. 36, 37.

HESSE, the name generally applied to Hesse-Darmstadt, a grand-duchy of the German Empire. Area, 2,966 square miles; population (1895), 1,039,020. Capital, Darmstadt. For history, productions, and early statistics, see Vol. XI, pp. 779-80.

The former landgraves of Hesse had the title of grand-duke given to them by Napoleon I in 1806, together with a considerable increase of territory. At the Congress of Vienna this grant was confirmed, after some negotiations. The reigning family is not possessed of much private property, but dependent almost entirely upon the grant of the civil list, amounting to 1,331,857 marks, the sum including allowances to the princes.

The executive is assisted by a ministry, divided at present into three departments, viz.: of the grand-ducal house and foreign affairs and of the interior; of justice; and of finance.

The largest towns of the grand-duchy are Mayence, or Mainz, with a population, in 1895, of 76,946; Darmstadt, 63,745 (including Bessungen); Offenbach, 39,408; Worms, 28,636; Giessen, 22,924.

Of the population on Dec. 2, 1895, there were,

Protestants, 68 per cent; Roman Catholics, 30 per cent; Jews, 2 per cent, and the remainder unclassified.

The public debt in 1898 was \$56,877,150. The revenue for each of the three years, 1897-1900, was estimated at \$8,903,851, and the expenditure at \$8,913,390.

HESSE-NASSAU. See HESSE, Vol. XI, p. 779.

HESSIAN-FLY (*Cecidomyxia destructor*), a popular name for one of the gall-midges, which has been very destructive to wheat in the United States and to some extent in Europe. The perfect insects emerge from the pupæ in autumn and deposit their eggs on young plants of winter wheat. The eggs develop, and winter is passed in the pupa stage. The popular name was given because the Hessian troops were supposed to have brought the insects in their baggage in 1776, but there is no foundation for this belief.

HETAERISTS, Greek revolutionists. See ROUMANIA, Vol. XXI, p. 20.

HETEROCERA. See INSECTS, Vol. XIII, p. 151.

HETEROCERCAL (Gr., *heteros*, "different," "unequal," and *kerkos*, "a tail"), a term introduced by Agassiz, to designate the unsymmetrical tail of fishes, in which the vertebral axis is bent upward in the tail, making the upper lobe much the larger, and the lower lobe is placed at a distance from the extremity. A heterocercal tail is found in sharks (*Elasmobranchii*), chimæras (*Holocephali*) and in certain ganoid fishes. This type of tail is a modification of a simple type in which the vertebral axis is straight, and the dorsal and ventral lobes are equal (diphycercal). The outwardly symmetrical tail (homocercal) of most bony fishes is a modification of the heterocercal.

HETERODONTIDÆ, a family of sharks, in geologic times numerous, now represented by a few living genera, among which is the Port Jackson shark (*Heterodontus philippi*). There is one representative on the western coast of the United States. The term *cestraciontida* is synonymous. See SHARK, Vol. XXI, p. 775.

HETEROGAMY, a botanical term indicating that the gametes concerned in the sexual act are unlike. All higher plants are heterogamous; while the transition from *isogamy* (similar gametes) to heterogamy is very evident among the algæ.

HETEROGONY, a botanical term signifying dissimilar reproductive organs, and applied to that condition of flowers in which stamens and pistils are of reciprocal lengths. In *Houstonia*, for example, some flowers have short stamens and long styles, while others have long stamens and short styles. The arrangement is such that pollen from the short stamens, through insect agency, reaches the short styles, and pollen from the long stamens reaches the long styles. The pollen is impotent, or nearly so, upon any style not the length of the stamen. In case there are two kinds of flowers thus reciprocally related, as in *Houstonia*, it is said to be a case of *dimorphism*; in *Lythrum Salicaria* the flowers are *trimorphous*, three kinds of flowers, different as to the lengths of stamens and styles, manifesting reciprocal relations.

HETEROPODA, a group of marine gasteropod mollusks, abundant in the warmer seas. Their most peculiar feature is the foot, which is expanded to form a leaf-like fin. They swim near the surface of the water, with the ventral side uppermost. The animals are quite transparent. The nervous system is more highly developed than in any other gasteropod. The peculiarities of the heteropods formerly caused them to be considered a separate order, but recent authors unite them with the prosobranchiate gasteropods. The term *Natantia* is equivalent; under which, see MOLLUSCA, Vol. XVI, p. 653.

HETEROPTERA. See HEMIPTERA, Vol. XI, p. 646; and INSECTS, Vol. XIII, p. 153.

HETEROPYGIA GROUP. See MAMMOTH CAVE, Vol. XV, p. 450; also ICHTHYOLOGY, Vol. XII, p. 693.

HETEROSOMATA, a suborder of fishes, which, unlike most other vertebrates, are asymmetrical with respect to their external form. The body is greatly compressed laterally, and one side is almost uncolored; the other is dark. The eyes of the adult are on the dark side. The fish lies on the bottom, and on the white side of the body. The young fish is as symmetrical as most other fishes, with an eye on either side. Later, it begins to lie on the bottom, and one eye gradually shifts to the side occupied by its fellow. The fishes of this group are popularly known as flat-fishes. There are two families, the *Pleuronectide* and the *Soleide*. The former includes the flounders, halibut, turbot, plaice, etc., while the latter includes the sole and related fishes.

HETEROSPORY, a botanical term signifying the production by the Sporophyte of two kinds of spores, one of the most fundamental facts of the plant kingdom. The larger spore is known as the *macrospore*, and produces the female gametophyte; the smaller spore is known as the *microspore*, and produces the male gametophyte. Heterospory appears first in the higher Pteridophytes, or fern-plants, and characterizes all of the Spermatophytes, or seed-plants. In the latter group it results in the formation of the structure known as the seed, the macrospore being retained instead of being shed, as in the lower groups. The microspores in the seed-plants have long been known as pollen-grains, and the macrospores as the embryo-sacs of the ovules.

HET-HOR OR HATHOR. See ATHOR, Vol. III, p. 13.

HETMAN OR ATAMAN, the title of the head of the Cossacks, now retained only among the Cossacks of the Don. From earliest times the office was elective, and might be held by any member of the tribe. His power was very great, extending over life and death. In 1654 the office was suppressed among the Ukraine. The office gradually came under royal control, and is now the hereditary title of the heir to the throne.

HEWES, JOSEPH, a signer of the Declaration of Independence; born in Kingston, New Jersey, 1730. In 1774 he was a delegate to the Continental Congress. He belonged to the Society of Friends, and when this society denounced the proceedings of Congress he severed his connection with it, and became even a promoter of war. In 1776 he was

one of the signers of the Declaration of Independence, and was at the head of the naval committee. Hewes declined a re-election in 1777, but resumed his seat in Congress in 1779. He died in Philadelphia, Nov. 10, 1779.

HEWIT, AUGUSTINE FRANCIS (baptized NATHANIEL AUGUSTUS), an American clergyman; born at Fairfield, Connecticut, Nov. 27, 1820. He studied theology at East Windsor, Connecticut, and in 1843 was ordained deacon in the Protestant Episcopal Church; became a Roman Catholic, and was ordained in that church in 1847 by Bishop Reynolds. Hewit thereupon was appointed vice-principal of the Charleston Collegiate Institute. He joined the order of the Redemptorists in 1850, and in 1858, on the foundation of the congregation of St. Paul by Father Hecker, Hewit became one of its chief members, taking the religious name of Augustine Francis. He was appointed professor of philosophy, theology and Holy Scriptures in the Paulist Seminary in New York City in 1865. From 1869 till 1874 he edited the *Catholic World*. He was active as an author, and published *Reasons for Submitting to the Catholic Church* (1846); *Life of Princess Borghese* (1856); *Problems of the Age* (1868); *Light in Darkness* (1871); *The King's Highway* (1874); and many other works. Died at New York, July 3, 1897.

HEWIT, NATHANIEL, an American clergyman; born in New London, Connecticut, Aug. 28, 1788; studied divinity at Andover, and was licensed in 1815; preached till 1827, when he took up temperance work. He was very successful, and was called the "Luther of the early temperance reforms." In 1830 he returned to preaching. He was in England from 1831 to 1834 on temperance work. He was a founder of the Hartford Theological Seminary. He died in Bridgeport, Connecticut, Feb. 3, 1867.

HEWITT, ABRAM STEVENS, an American statesman; born at Haverstraw, New York, July 31, 1822.

ABRAM S. HEWITT.

After graduating at Columbia College, he studied law, and was admitted to the bar in 1845. His impaired eyesight soon made him give up the practice of law, and he became associated with Peter Cooper in the manufacture of iron. The firm of Cooper and Hewitt became the owners of the Trenton, Ringwood, Pequest and Durham iron works. He was a commissioner to the French exhibition of 1867, and made a report on iron and steel. He married Peter Cooper's daughter, and was secretary of the Cooper Union for the Advancement of Science and Art after its incorporation in 1859; was elected to Congress in 1874 as a Democrat, and served continuously, with the exception of one term, until 1886; advocated moderate tariff reform. In 1886 he was elected mayor of New York City. In this office he enforced the laws strictly and held the heads of the departments strictly accountable. In 1887 Columbia College gave him the degree of LL.D.

on account of his expert knowledge in the manufacture of iron.

HEXACORALLA, coral insects. See ACTINOZOA, Vol. I, p. 130.

HEXAMETER, the name applied to the most important form of classical verse. It is the heroic or epic verse of the Greeks and Romans, the grandest examples of which are the *Iliad* and *Odyssey* in Greek and the *Aeneid* in Latin. It consists of six feet, or measures, the last of which must be a spondee (a measure composed of two long syllables), and the penultimate a dactyl (one long syllable and two short). If the penultimate is also a spondee, the verse is said to be spondaic. The verse consists of two cola or numbers, and hence has a verse-cæsure, which regularly falls in the third foot, after the first long, or between the two short syllables, but seldom after the first long of the fourth foot. Klopstock, Goethe and Voss have produced admirable specimens of hexameter verse in German, and it has become familiar in English through Longfellow's *Evangeline*. The following lines from the last show the only varieties of the hexameter which are endurable to the ear—that is, those in which the accent on each foot falls on its first syllable:

"Felt she in | myriad | springs her | sources | far in the |
mountains,
Stirring, col | lecting, | heaving up, | rising, | forth out |
flowing."

It will be observed that on whatever syllable here the metrical accent falls, that syllable is precisely the same which the voice naturally accentuates. Whether this was the case in ancient Greek and Latin hexameters we do not know; but, if the present system of Greek accentuation represents the natural accent of Homeric words, Homer disregarded the natural accents, or did not observe our rule of always placing the metrical accent on the first syllable of each foot. We still pronounce Latin hexameters by preserving what we take to be the natural accent of each word, whether that corresponds to the metrical accent or not. Thus, in the line—

"Itali | am fa | to profu | gus La | viniaque | venit,"

we disregard the metrical accent, which should fall on the first syllable of each foot (and actually does so on the fifth and sixth), and in reading the line give effect to the natural accents only, as we conceive them, in the words *Italiam, fato, profugus*.

When English hexameters were first written they were constructed in the same manner: the natural accent, except in the last two feet, overruled the metrical. In the following lines from Stanihurst's translation of the *Aeneid*, it will at once be seen that the effect is absurd if we read the lines as modern English hexameters are read:

"Either here | are crouch | ing some | troops of | Greekish
as | sembly,
Or to crush | our bul | warks this | work is | forgéd, all—
houses
For to pry, | surmount | ing the | town; some | practice
or other
Here lurks | of cun | ning; trust | not | this | treacherous
ensign."

If we read by the natural accent, the effect is rough and harsh to the ear; if by the modern metrical, ridiculous and absurd. Such are the limitations of the hexameter in English.

HEXAPLA. See BIBLE, Vol. III, p. 646.

HEXATEUCH. See PENTATEUCH, Vol. XVIII, p. 506.

HEYSE, PAUL JOHANN LUDWIG, a German author; born in Berlin, March 15, 1830; educated there and at Bonn. He was one of the band of authors whom King Max of Bavaria gathered around him in Munich in 1854. He published more than a score of collections of novelettes under various titles, good specimens of which are contained in *Das Buch der Freundschaft* (1883-84). His poetic works include narrative poems, such as *Urica* (1852); and epics, such as *Die Braut von Cypern* (1856); and *Thekla* (1858). His miscellaneous poems are collected in *Das Skizzenbuch* (1877); *Der Salamander, ein Tagebuch in Terzinen* (1879); and *Verse aus Italien* (1880). As a dramatist he proved quite a voluminous but scarcely a successful writer. Among his dramas are *Francesca da Rimini* (1850); *Ehre um Ehre* (1875); *Die Weiber von Schorndorf* (1881); and *Getrennte Welten* (1886). He wrote two more ambitious novels, *Die Kinder der Welt* (1873), and *Im Paradiese* (1875), which have been very popular; and translated the poetical works of Giusti, of Leopardi, and of Parini, Monti and Manzini.

HEYWARD, THOMAS, JR., an American statesman; born in St. Luke's Parish, South Carolina, 1746. He studied law in the Temple, in London. After returning home he was elected to the Continental Congress of 1775, and became one of the signers of the Declaration of Independence. In 1778 he was appointed judge of the criminal and circuit court of South Carolina. At the siege of Charleston, May 12, 1780, he was taken prisoner and sent to St. Augustine, Florida, where he was confined one year. After his release he resumed his office as state judge. In 1790 he was a member of the constitutional convention, and then retired to his plantation. Died in St. Luke's Parish, March 6, 1809.

HEYWOOD, JAMES, an English writer; born at Manchester, May 28, 1810; was educated at Trinity College, Cambridge, where he was a senior optime in 1833, but did not graduate until 1857. He studied but never practiced law; was a member for North Lancashire in 1847, and from that time till 1856 succeeded in passing several reform bills regarding educational institutions; and, after removal of religious tests from degrees in arts, law, medicine and music at Cambridge, took his degree. He resided for many years at Kensington, and presented his free library to that parish. He published, among other works, *The History of University Subscription Tests* (1853); *The Early Cambridge Statutes* (1855); and edited Professor Heer's *Primaval World of Switzerland* (1881).

HIAWATHA, a city and the capital of Brown County, northeastern Kansas, 40 miles W. of St. Joseph, Missouri, on the Missouri Pacific and the St. Joseph and Grand Island railroads. It is in an agricultural and stock-raising region, and has grain-elevators and flour-mills; it also has an academy and

a public library. Population 1890, 2,486; 1900, 2,829.

HIBBERT, SIR JOHN TOMLINSON, an English politician; born at Oldham, 1824; was educated at Cambridge, and studied law; entered politics as a Liberal in 1859 and was defeated in Oldham, but was successful in 1862. From that time till 1874 he represented the same borough, but was defeated in 1874; regained his seat in 1877 and held it till 1886, when he was again defeated; was returned in 1892, but not in 1894. In 1883 he was appointed Under-Secretary at the Home Office, and in 1885 Financial Secretary to the Treasury, which office he again held after the elections of 1892 and 1894. He was chairman of the Council of the County Palatinate of Lancaster and of the County Councils Association.

HIBERNIANS OF AMERICA, ANCIENT ORDER OF. See BENEFIT SOCIETIES, in these Supplements.

HIBISCUS, genus of showy plants. See HORTICULTURE, Vol. XII, p. 251; and GUMBO, Vol. XI, p. 276.

HICKMAN, a city and the capital of Fulton County, western Kentucky, on the Mississippi River, 40 miles below Cairo, Illinois, on the Nashville, Chattanooga and St. Louis railroad. It contains a college, town library and manufactories of flour, wagons, stoves, lumber and boxes. Population 1890, 1,652; 1900, 1,589.

HICKOK, LAURENS PERSEUS, an American clergyman and philosopher; born at Bethel, Connecticut, Dec. 29, 1798. After studying theology he became successively pastor at Newton, Kent and Litchfield, Connecticut, from 1822 to 1836. In the latter year he was appointed professor of theology in the Western Reserve College, and in 1844 professor of the same branch in the Auburn Theological Seminary. In 1852 he removed to Schenectady, New York, to become professor of mental and moral science and vice-president of Union College there. From 1860 to 1866 Dr. Hickok had full charge, and was then elected president of the same college. At the age of seventy Dr. Hickok retired to Amherst, Massachusetts, where he devoted himself to philosophical studies. He published *Rational Philosophy* (1848); *System of Moral Science* (1853); *Empirical Psychology* (1854); *Rational Cosmology* (1858); *Creator and Creation* (1872). He died at Amherst, May 6, 1888.

HICKORY, a town of Catawba County, western North Carolina, on the Chester and Lenoir and the Southern railroads, 48 miles N.W. of Charlotte, near the Catawba River. The district is very fertile, and abounds in iron ore; corn, wheat, tobacco and cotton are exported. The town contains the Claremont Female College, Lenoir College, St. Paul's Seminary and Meade School for Boys. Population 1890, 2,023; 1900, 2,535.

HICKS, HENRY, a British geologist; born in St. David's, Pembrokeshire, England, in 1837; was educated at the collegiate and chapter school in his native place, and at Guy's Hospital, London. Practiced medicine at St. David's from 1862 to 1871, during which period he commenced his geological researches. He carried on valuable investigations

in North Wales and England, confining his attention, in later years, to the oldest rocks, and proved their existence in many places where their presence was unsuspected; published evidence tending to show that men occupied the caverns during a part of the glacial period, and did much other glacial work. He published several articles, and prepared a geological map of North Wales. He was president of the London Geologist Association; elected a fellow of the Royal Society, and connected with many other geological societies.

HICKS, THOMAS, an American portrait-painter; born at Newton, Bucks County, Pennsylvania, Oct. 18, 1823; studied at the Pennsylvania Academy of Fine Arts in Philadelphia, at the National Academy in New York, and later in London, Rome, Florence and Paris. In 1850 he settled in New York, and a year later became prominent in the Academy. He painted many celebrated persons, among them being President Lincoln, W. H. Seward, O. W. Holmes, Mrs. Harriet Beecher Stowe and Edwin Booth. Died at Trenton Falls, New York, Oct. 8, 1890.

HICKS, WILLIAM MITCHINSON, a British physicist; born at Lancelton, England, Sept. 23, 1850; was educated at St. John's College, Cambridge, and was elected fellow of the same college in 1876, holding the fellowship six years. In 1883 he became principal and professor of mathematics and physics at Firth College, Sheffield; became a fellow of the Royal Society in 1885, and was author of several papers published in the *Transactions of the Royal Society*. Among them are *On the Motion of Two Spheres in a Fluid* (1879); *On Toroidal Functions* (1881); *Researches in the Theory of Vortex Rings* (1885); read before the British Association a *Report on Recent Progress in Hydronamics*; author of *Elementary Dynamics of Particles and Solids* (1889); and contributed to various journals.

HICKS-BEACH, SIR MICHAEL EDWARD, a British statesman; born in London in 1837; finished his education at Oxford in 1861; was elected to Parliament for East Gloucestershire in 1864, and retained his seat until 1885, when he was returned for West Bristol, which he still represents; served as Under-Secretary for the Home Office till 1868, and consecutively as Chief Secretary for Ireland (1874), and Secretary of State for the Colonies (1878); was Chancellor of the Exchequer and leader of the House of Commons in the first Salisbury administration; and when Salisbury returned to power, in 1886, Hicks-Beach became again Chief Secretary for Ireland, but resigned in a few months on account of failing eyesight. From 1887 to 1892 he was president of the Board of Trade; was made Church Estates Commissioner in 1893, and Chancellor of the Exchequer in 1895. He served on the Royal Commissions, on Friendly Societies, on Industrial Schools, on Labor and on Reformatory.

HICKSITES, followers of Elias Hicks. See QUAKERS, Vol. XX, p. 149; and FRIENDS, SOCIETY OF, in these Supplements.

HICKSVILLE, a village of Defiance County, northwestern Ohio, on the Baltimore and Ohio railroad, 20 miles W. of Defiance. It is surrounded by a farming and lumbering district. It has furniture-

works, planing and wagon works, and produces various kinds of wooden articles. Population 1890, 2,141; 1900, 2,520.

HIDALGO, a state of central Mexico; between lat. 19° 30' and 21° 30' N., and between long. 98° and 100° W. Its surface is mountainous in the northern and eastern parts, the highest point being Cerro Canjardo, 9,380 feet in height. It is drained by the Octapan, the San Juan and the Amajaque rivers. The most common agricultural products are maize, wheat, barley, rice, cotton, sugar-cane, beans, peas and sarsaparilla; and pulque, a Mexican beverage, is produced in large quantities here. In mining resources the state is rich, producing gold, silver, copper, iron and lead in abundance, the annual mineral product being valued at over \$5,000,000. Capital, Pacluca, of which the population is 40,500. Population of the state, by the official estimate of 1893, 506,028; area, 8,917 square miles.

HIDALGO, Y COSTILLA, DON MIGUEL, a Mexican patriot; born in Mexico, May 8, 1753. He studied at Valladolid, and in 1779 went to the City of Mexico, where he became a priest. In December, 1809, a conspiracy was formed at Valladolid against the Spanish government of Mexico; of this, Hidalgo was a member. After some preliminary disturbances, Hidalgo issued a declaration of independence to the people of Suevavato. He was quickly surrounded by a mob of almost unarmed men, which had swelled to 50,000 when he reached Guanajuato, which place he stormed, and, in accordance with the fashion of Indian warfare, massacred the inhabitants. After establishing a cannon foundry and mint, he marched against Valladolid and occupied it without much resistance. Having been excommunicated by the archbishop, many of his plundering followers deserted, and on December 2d Hidalgo began his retreat. On the 7th his body of troops and pillagers were attacked near Acula, by General Callega, and the greater part dispersed. Hidalgo then took refuge in Valladolid. Here he organized a government and prepared to resist the Spanish forces. On Jan. 17, 1811, 6,000 Spanish troops attacked the mob of 100,000 armed natives and won a complete victory. He, with several of his officers, tried to escape to the United States, but were betrayed by a companion-in-arms. On July 29th Hidalgo was degraded from his sacerdotal character, and executed on the following day at Chihuahua, 1811.

HIDES. See LEATHER, Vol. XIV, p. 380.

HIDEYOSHI, Japanese general and statesman. See JAPAN, Vol. XIII, p. 583.

HIEL, EMANUEL, a Belgian poet; born at Denendermonde, May 31, 1834. After holding various positions in business houses he finally secured a post in the Ministry of the Interior, and in a short time was appointed professor of declamation in the Conservatory of Music at Brussels; also, librarian of the Industrial Museum. Among his poetical publications of interest are the following: *Gedichten* (1863); *Bloemken een Liederkrans* (1877). His miscellaneous writings include dramatic poems, *Jacoba Van Beieren* (1879), and *Bloemardinne* (1877); children's poems, *Liederen voor Groote en Kleinkinderen*; *De Schelde*; and others, written for music. In 1880, at

the anniversary of Belgian independence, he wrote *Belgenland* and *Eer Belgenland*.

HIEROMAX. See PALESTINE, Vol. XVIII, p. 173.

HIERONYMUS. See JEROME, SAINT, Vol. XIII, p. 630.

HIERONYMUS, tyrant. See SYRACUSE, Vol. XXII, p. 817.

HIGGINSON, FRANCIS, a New England clergyman; born in England in 1588. He was a Puritan preacher of great influence in Leicester, England. In 1628 he was invited by the Massachusetts Bay Company to accompany its expedition to New England. He arrived at Salem on June 29, 1629, and was soon after chosen teacher of the congregation. He drew up a confession of faith, which was assented to by thirty persons. During the ensuing winter he was attacked by a fever, which disabled him and finally caused his death. He wrote *New England's Plantation: or, A Short Description of the Commodities of that Country* (1630). He died in Salem, Massachusetts, in 1630.

HIGGINSON, THOMAS WENTWORTH, an American author; born in Cambridge, Massachusetts, Dec.

22, 1823, being a lineal descendant of Francis Higginson, first minister at Salem (1629); graduated at Harvard in 1841, and at the Divinity School of that university in 1847; settled at Newburyport, and afterward took charge of a liberal Unitarian parish in Worcester, but resigned and left the ministry in 1858. He took an active part in the anti-

slavery agitation, and, together with Theodore Parker, Wendell Phillips and others, engaged in an attempt to rescue Anthony Burns, arrested in Boston under the fugitive slave law, in 1854. For this assault Higginson was indicted, escaping trial only through a legal technicality. In 1856 he joined the Free-State forces in Kansas, being made a brigadier-general and bearing a conspicuous part in the effort to exclude slavery from the new commonwealth. Upon the breaking out of the Civil War, his ardent support of the Union finally led him to take the field as captain in a Massachusetts regiment of volunteers. Subsequently he was appointed to the command of the first colored regiment of freed slaves raised in the United States service, its ranks including many former slaves from Pierce Butler's plantation on St. Simon's Island, Georgia. During a Florida campaign in 1863 he was disabled by a wound received in the capture of Jacksonville, and compelled to retire from the service. He now devoted himself largely to literature, although taking a warm interest in public affairs, being chosen to the Massachusetts legislature in 1880-81, and serving upon the staff of Governor John D. Long, as well as on the state board of education. He contributed many papers to the *Atlantic Monthly*, afterward collected under various titles, and has always been especially ardent

THOMAS W. HIGGINSON.

in his advocacy of woman's rights and health reform. He has published several poems of merit, together with felicitous translations from Petrarch. Among his earlier essays may be mentioned *A Charge with Prince Rupert*, as indicating a talent for historic narrative, afterward developed in histories of America, by which as a writer he is widely known. His works include *Woman and her Wishes* (1863); *Out-door Papers* (1863); *The Works of Epictetus* (1865), an admirable revision of Elizabeth Carter's translation; *Harvard Memorial Biographies* (1867, edited); *Malbone: An Oldport Romance* (1869); *Army Life in a Black Regiment* (1869); *Oldport Days* (1873); *Young Folks' History of the United States* (1875), translated into French and German; *A Book of American Explorers* (1877); a biography, *Margaret Fuller Ossoli* (1884); *Larger History of the United States* (1885); *Women and Men* (1888); *Tales of the Enchanted Isles of the Atlantic* (1898); besides many separate essays. He is state historian of Massachusetts, and a constant contributor to various periodicals, possessing a cultivated, graceful style, a scholarly grasp of letters, and the courage of his convictions.

HIGGINSVILLE, a village of Lafayette County, northwestern central Missouri; on the Chicago and Alton and the Missouri Pacific railroads, 48 miles east of Kansas City. It is a trading and shipping center for a wheat-growing section, sending off corn and other produce, and also some coal. A Confederate home is located here. Population 1890, 2,342; 1900, 2,791.

HIGHER CRITICISM. See CRITICISM, in these Supplements.

HIGHLAND, a city of Madison County, southwestern central Illinois, on the Terre Haute and Indianapolis railroad, 22 miles east of East St. Louis. It has a Roman Catholic University, woolen and flour mills, and a foundry, brewery and machine-shop; manufactures condensed milk and embroidery. Many Germans and Swiss reside here. Population 1890, 1,857; 1900, 1,970.

HIGHLAND, a town of Ulster County, southeastern New York, on the Hudson River and the West Shore and the Philadelphia, Reading and New England railroads. It contains flour-mills, felloe factories and fruit-package factories. It has daily steamboat connections with Albany, Newburg and New York. Fruit, especially grapes, is raised in the vicinity. Population 1890, 1,570.

HIGHLAND FALLS, a village of Orange County, southeastern New York, on the Hudson River and the West Shore railroads, 46 miles north of the Battery, New York City. It is a summer resort, and has many fine residences of New York business men. West Point and the United States Military Academy grounds are just to the north. Population 1900, 4,519.

HIGHLAND PARK, a city of Lake County, northeastern Illinois, a suburb of Chicago, 22 miles north of the City Hall. It has many summer residences of Chicago business men, and has several educational institutions, including the Northwestern Military Academy, Deerfield Township High School and Sylvan Dell's School for Boys. It is connected with Chicago by the Chicago and Northwestern railroad. Population 1890, 2,163; 1900, 2,806.

HIGHLAND REGIMENTS, regiments originally raised in the north of Scotland. There are nine in the British army, of whom five wear the national costume. The first Highland regiment was organized in 1739. See **ARMY**, Vol. II, p. 580, and **BLACK WATCH**, in these Supplements.

HIGHLANDS, a city of Arapahoe County, northeastern Colorado, on the South Platte River, opposite Denver. It is a suburb of Denver, on the Union Pacific railroad. Population 1890, 5,161. It has since been annexed by Denver.

HIGHLANDS OF THE HUDSON. See **HUDSON RIVER**, Vol. XII, p. 331.

HIGH-LEVEL BRIDGE, at Halifax, England, opened in 1890, was built to provide railway accommodation for the upper part of the town, which is 400 feet higher than the station of the Lancashire and Yorkshire railway. The line ascends in a ruling gradient of one foot in fifty, with sharp curves and several deep cuttings; there are also a tunnel of 820 yards, a viaduct of ten spans of 50 feet each, and a number of bridges. The total length is three and one-half miles, and there are two stations. The cost was \$1,500,000.

HIGH MISDEMEANOR, an offense closely bordering on treason. See *Cognate Offenses*, under **TREASON**, Vol. XXIII, pp. 528, 529.

HIGH POTENTIAL DISCHARGE. See **ELECTRICITY** §94, in these Supplements.

HIGH PRIEST. See **PENTATEUCH**, Vol. XVIII, p. 510.

HIGH SEAS, the open sea, including the whole extent of sea, not the exclusive property of any particular country. The rule of international law is that every country bordering on the sea has the exclusive sovereignty over such sea to the extent of three miles from its shores, all beyond being common to all countries. The part of the sea within three miles distance is generally called the territorial sea of the particular country, or *mare clausum*. The distinction has little effect on the right of navigation, but as regards fishing it is otherwise.

HIGHTSTOWN, a post borough of Mercer County, central New Jersey, 13 miles E.N.E. of Trenton, on the Pennsylvania railroad. It contains three educational institutions, including Peddie (Baptist) Institute, with 200 students, and manufactories of plows, chains and doors. Population 1895, 1,875; 1900, 1,749.

HIJAZ. See **ARABIA**, Vol. II, pp. 236-253, and **HEDJAZ EL HEJAZ** in these Supplements.

HIJRA OR HEGIRA. See **MOHAMMEDANISM**, Vol. XVI, pp. 545-551, and **CHRONOLOGY**, Vol. V, p. 717.

HILARY. See **HILARIUS**, Vol. XI, p. 812.

HILDEBRAND. See **GREGORY VII**, Vol. XI, pp. 176, 177.

HILDEBRAND, HANS OLOF, a Swedish archæologist; born in Stockholm, Sweden, April 5, 1842. He was educated at Upsala; was attached to the Museum of Archæology, and in 1879 succeeded his father in the post of royal antiquarian and guardian of the medals; founded the Society of Archæology, and did much to popularize archæ-

ological research concerning his own country. He has published, among other things, *The Swedish People During Pagan Times* (1866); *Life in Iceland During the Saga Times* (1867); *Prehistoric Nations in Europe* (1873-80); a collection of essays *From Ancient Times*; and with his father, Bror Emil Hildebrand, he prepared several volumes of plates of designs from the Historical Museum of the Swedish state.

HILES, HENRY, an English musician; born at Shrewsbury, England, Dec. 31, 1826; held various organ appointments in England, and in 1880 was appointed lecturer on harmony and musical composition at Owens College, Manchester, a position he still holds, together with a like position in Victoria University. Besides, he is director of several musical societies. He gained prizes for the best organ composition in 1864, 1865 and 1868 from the College of Organists. In 1878 he received the prize for the best serious glee, from the Manchester Gentlemen's Glee Club. Among his works are *The Grammar of Music; Part-Writing, or Modern Counterpart*; and has composed *The Crusaders; War in the Household*, and other works.

HILGARD, EUGENE WOLDEMAR, an American chemist; born at Zweibrücken, Bavaria, Jan. 5, 1833. He studied at the Royal Mining Academy in Freiburg, Saxony, at the Universities of Zürich and Heidelberg. In 1857 he became assistant state geologist of Mississippi, and in 1857 he was appointed chemist in charge of the laboratory of the Smithsonian Institution, and filled also the chair of chemistry in the National Medical College at Washington. From 1858 to 1866 he was state geologist of Mississippi, and till 1873 also professor of agricultural chemistry in the State University there. In 1873 he was called to the chair of geology and natural history in the University of Michigan, and in 1875 to the professorship of agricultural chemistry and botany in the University of California, where he has since remained. During 1881-83 he had charge of the agricultural division of the northern transcontinental survey; wrote various geological articles for the government, and in 1892 prepared for the weather bureau, a report on the relation of soils and climate, which became well known abroad, being translated into several languages.

HILGARD, JULIUS ERASMUS, an American engineer and scientist; born in Zweibrücken, Bavaria, Jan. 7, 1825. From 1843 to 1845 he studied civil engineering in Philadelphia. In the latter year he became one of Alexander D. Bache's assistants on the coast survey, and soon rose to the office of assistant in charge of the bureau at Washington. This place he held until the death of the superintendent in 1881, when he was appointed to fill the vacancy. Hilgard also had charge of the United States standard weights and measures, and in 1872 he was made a delegate to the International Metric Commission which met at Paris. In 1885, on the advent of Cleveland's administration, he was suspended, and then permitted to resign. Professor Hilgard's work in terrestrial physics, geodesy, the magnetic survey

of the United States, tidal action in harbors, etc., and his papers and lectures on these topics, are of considerable scientific importance. He died in Washington, May 8, 1891.

HILGARD, THEODORE ERASMUS, a German lawyer; born in Nassau, Germany, July 7, 1790; was educated at Heidelberg and Paris. His writings on the working of the Code Napoleon in the Germanic provinces of Switzerland were influential in jurisprudence; his dislike for the return of absolutism at home led to his emigration. He went to southern Illinois, where he spent his time educating his sons, one of them being Julius Erasmus Hilgard. He afterward returned to Germany, where he busied himself with sociological subjects, on which he wrote several treatises. He also translated Virgil and Ovid. He died in Heidelberg, Feb. 14, 1873.

HILL, AMBROSE POWELL, an American soldier; born in Culpeper County, Virginia, Nov. 9, 1825. He graduated at the United States Military Academy in 1847; served as lieutenant of artillery during the Mexican war, and was engaged in Florida against the Seminoles in 1849-50. When Virginia seceded, in 1861, Hill went with it, and was appointed colonel of the Thirteenth Regiment of Virginia volunteers. After the battle of Bull Run he was promoted brigadier-general, and fought as such in the battle of Williamsburg, in May, 1862, with such a spirit that he was made a major-general. After Jackson's death he became lieutenant-general, fought at Gettysburg, and in 1865 commanded the city of Petersburg during its siege. On April 2, of the same year, while reconnoitering, Hill was killed by a rifle-shot.

HILL, BENJAMIN HARVEY, an American statesman; born in Jasper County, Georgia, Sept. 14, 1823. He practiced law successfully in La Grange, Georgia, from 1845 to 1861. When his state seceded he was elected to the Confederate Senate at Richmond, where he remained till the close of the war. He was a Federal prisoner for several weeks, during 1865, and after his release earnestly opposed the reconstruction acts of Congress. In 1875 he was elected to Congress, but resigned on being chosen United States Senator in 1877. He died in Atlanta, Georgia, Aug. 19, 1882.

HILL, DANIEL HARVEY, an American general; born in York district, South Carolina, July 12, 1821. After graduating at West Point in 1842 he served through the Mexican War; resigned in 1849; was made professor of mathematics in Washington College, Virginia; and in 1859 president of the military institute at Charlotte. On the outbreak of the Civil War he became a Confederate colonel in the First North Carolina volunteers, and took part in the fight at Big Bethel, Virginia, in June, 1861. He then rose to the rank of major-general, and continued fighting till the surrender of Johnston's army. At the close of the war General Hill returned to Charlotte, North Carolina, where he published a monthly magazine, *Field and Farm*; and subsequently, *The Land We*

Love; also, *Elements of Algebra*; *The Crucifixion of Christ*; and *Consideration of the Sermon on the Mount*. He died at Charlotte, Sept. 24, 1889.

HILL, DAVID BENNETT, a United States Senator and lawyer; born in Havana, New York, Aug. 29, 1843. He received a

common-school and academic education; removed to Elmira, New York, and entered the profession of law. In politics he is a Democrat, and in 1865 was elected city attorney of Elmira; was elected a member of the state assembly in 1871 and 1872; afterward was elected mayor of Elmira. In 1882 was

DAVID B. HILL.

elected lieutenant-governor of the state of New York; became governor when Mr. Cleveland resigned to become President of the United States; was elected governor in 1885 and in 1887. In 1891 he was elected to the United States Senate to succeed William M. Evarts. He was nominated for governor in 1894, but was defeated at the polls; but still retained his seat in the Senate. He opposed the policy of President Cleveland, especially in relation to the tariff and income tax. At the Democratic convention of 1896 he refused to vote.

HILL, DAVID JAYNE, an American educator; born at Plainfield, New Jersey, June 10, 1850. He was educated at what is now Bucknell college, Pennsylvania, becoming professor of rhetoric there between 1877 and 1879, and from then till 1888 president of the same school. At that time he was called to the presidency of the University of Rochester. He published *The Science of Rhetoric* (1877); *Life of Washington Irving* (1879); *Principles and Fallacies of Socialism* (1885); *The Social Influence of Christianity* (1887); *Genetic Philosophy* (1893); besides many others; and writes for several magazines.

HILL, GEORGE WILLIAM, an American astronomer, born in New York City, March 3, 1838; after graduating from Rutgers College, 1859, he was appointed assistant in the office of *The Nautical Almanac*, which position he retained until 1892. He gave his attention almost entirely to mathematical theories of the celestial bodies; and in 1887 received the gold medal of the Royal Astronomical Society. In 1892 he published a work on the theory of Jupiter and Saturn.

HILL, JOHN HENRY, an American educator, born in New York City, Sept. 11, 1791; was educated at Columbia college; became a deacon in the Episcopal Church, and immediately, in 1830, started as a missionary to Greece. Through his efforts and those of his wife, a school for girls and later a school for boys was started, as well as a department for training teachers. Dr. Hill was chaplain of the British Legation for thirty years before his death; but continued his educational work, and the education and elevation of

women in Greece are due largely to his efforts and those of his wife. He died July 1, 1882, but his wife continued to manage the school for several years, and it is still in operation.

HILL, OCTAVIA, a British social reformer; born about 1838. She began work among the London poor under Frederick D. Maurice, but it was when acting as the almoner of John Ruskin that she performed her great work for those unfortunates. Going down into the slums, she purchased, in the east end of London, tenements which were filthy and dirty, which she put in sanitary condition and then rented to the inhabitants of these low quarters; looked after them herself and kept them on a paying basis, at the same time going among the occupants and striving to arouse in them habits of cleanliness, and feelings of self-respect. Her example had a good effect, and her strict sanitary regulations worked wonders. She never gave alms, but worked to make people help themselves, and was successful to a wonderful extent, reforming some of the most squalid families in London. Miss Hill wrote *Homes of the London Poor* (1875); *Our Common Land and Other Essays* (1878); together with other articles.

HILL, THOMAS, an American Unitarian clergyman and educator; born at New Brunswick, New Jersey, Jan. 7, 1818. He studied theology at Cambridge, and was ordained pastor at Waltham, Massachusetts, in 1845. From 1859 to 1868 he was successively president of Antioch College and of Harvard College. In 1868 he resigned on account of bad health. Then he became botanist of the Hassler expedition around the coast of South America under Professor Agassiz, in 1871. In 1872 he was pastor of a church at Portland, Maine, and remained till 1888. Hill published *Geometry and Faith* (1849); *Liberal Education* (1858); *Jesus the Interpreter of Nature* (1859); *Natural Sources of Theology* (1877); and some elementary mathematical books. He died in Waltham, Massachusetts, Nov. 21, 1891.

HILL, THOMAS, an American artist; born in Birmingham, England, Sept. 11, 1829; removed with his father to the United States when 11 years of age, settling first in Taunton, and afterward in Boston, in which latter city he was a carriage-painter, no one suspecting his talent until he began to paint little ornamental pictures in the omnibuses and stages which he was called upon to decorate. These called attention to him, and he was advised to study art. He went to Philadelphia in 1853, and entered the life class at the Academy; went to California in broken health in 1861, where he began work on portraits and figure pieces. One of the latter, the trial scene in *The Merchant of Venice*, won for him the first prize in the Art Union of San Francisco, in 1865. In 1866 he studied art in Paris for six months with Paul Meyerheim. Determined to follow landscape-painting, he returned to America, and opened a studio in Boston in 1867; but the climate was too severe for him and he returned to California, where he continued to

reside. It was his picture of *The Yosemite Valley* that introduced that scenic wonder to the world. Some of his noted works since that one are *The White Mountain Notch*; *Donner Lake*; *The Great Cañon of the Sierras*; *The Heart of the Sierras*; *The Driving of the Last Spike*; and *The Yellowstone Cañon*.

HILLARD, GEORGE STILLMAN, an American lawyer; born at Machias, Maine, Sept. 22, 1808; was graduated from Harvard College, 1828; admitted to the bar, 1833; was editor of the *Christian Register*, and assisted in editing the *Jurist*; state senator, 1850; and served in the Massachusetts constitutional convention, 1853, the labors of which, however, were rejected by the people. He was city solicitor, 1856, and then became part proprietor and editor of the *Boston Courier*, in which he opposed the efforts of the national government to restore its authority in the South. He published the lives of various men, among them General McClellan and John Smith; also wrote *Six Months in Italy*. He died Jan. 21, 1879.

HILL CITY, a village of Hamilton County, southeastern Tennessee, on the Tennessee River, opposite Chattanooga, of which it is a suburb. It is engaged in agriculture and mining. Population 1890, 1,763.

HILLER, FERDINAND, a German composer; born at Frankfort-on-the-Main, Oct. 24, 1811; was of Jewish parentage, and early developed his musical tastes. He studied under the best masters in Germany, Austria and France; returned to Frankfort in 1836, and took charge of the Cäcilienverein; for a few years was kapellmeister at Düsseldorf; and in 1850 accepted a like position at Cologne, where he resided during the rest of his life. He was director of concerts in all parts of Europe, and conducted the lower Rhine musical festivals from 1850. Besides publishing many compositions, he was a writer and teacher, having organized the conservatory at Cologne. Among his compositions are *Destruction of Jerusalem* (1839); *Traum der Christnacht* (1845); *Wala und Damayanti* (1871); and has written *Aus dem Tonleben unserer Zeit*; and *Briefe an eine Ungenannte*. He died at Cologne, May 12, 1885.

HILLERN, WILHELMINE BIRCH, a German novelist; born in Munich, March 11, 1836. She studied at Coburg, and later married the Kammerheer von Hillern, of Coburg, 1857. She wrote *Guten Abend* (1873); *Die Auge der Liebe* (1878); *Ein Arzt der Seele* (1869); *Die Geyer-Wally* (1873); *Die Friedhofsblume* (1883); and *Am Kreuz* (1890).

HILLIARD, HENRY WASHINGTON, American lawyer, statesman, and writer; born in Fayetteville, Cumberland Co., N.C., Aug. 4, 1808; was admitted to the bar at Athens, Ga., in 1829; and appointed professor in the State University of Alabama in 1831. In 1838 he was elected to the legislature as a Whig, and in 1842 President Tyler sent him as United States Minister to Belgium. From 1845 to 1851 he sat in Congress. At the outbreak of the civil war he went with the South, and held the nominal rank of brigadier-general in the

Confederate army. After the war he resumed the practice of law at Augusta, and afterward at Atlanta. From 1877 to 1880 he was United States Minister to Brazil. Hilliard published a volume of speeches in 1855. He died in Atlanta, Dec. 17, 1892.

HILLSBORO, a city and the capital of Montgomery County, southern central Illinois, 66 miles N.E. of St. Louis, Missouri, on the Cleveland, Cincinnati, Chicago and St. Louis railroad; on Shoal Creek. It exports agricultural produce, flour, furniture and woolen goods. Population 1900, 1,937.

HILLSBORO, a post village of northern Hillsboro, New Hampshire, situated in the Contoocook Valley. It contains woolen-mills, bedstead factory and shovel-handle shops. Population 1890, 2,120; 1900, 2,254.

HILLSBORO, a post village and the capital of Orange County, central northern North Carolina, 40 miles N.W. of Raleigh, on the Southern railroad, in a pretty, undulating region and a fertile, farming one. It has several tobacco factories and a military academy. Population 1900, 707.

HILLSBORO, a city and the capital of Highland County, southwestern Ohio 60 miles E. of Cincinnati, on the Baltimore and Ohio, and the Cincinnati, Portsmouth and Virginia railroad. It contains several educational institutions, banks, churches, scale and agricultural works, planing, flouring and woolen mills, foundries, bent-wood and furniture factories. It is the seat of Hillsboro College, a Methodist institution, founded in 1854. Population 1890, 3,620; 1900, 4,535.

HILLSBORO, a village and the capital of Washington County, northwestern Oregon, on the Tualitin River and the Southern Pacific railroad, 13 miles W. of Portland. It is situated in a farming and stock-raising section, with several blooded-stock farms near by. It has saw and flouring mills. Population 1900, 980.

HILLSBORO, a city and the capital of Hill County, eastern central Texas, on the Missouri, Kansas and Texas and the St. Louis Southwestern railroads, five miles S. of Fort Worth. The district produces grain, cotton and live-stock. It has a fine courthouse, costing one hundred thousand dollars; an academy, an artesian well water supply, and manufactures cotton-seed oil, ice, gin-feeders, and has a cotton compress. Population 1890, 2,541; 1900, 5,346.

HILLSBORO RIVER, the name of three streams in Florida. The first, sometimes called Mosquito River, is a salt-water lagoon in Volusia County, Florida, a continuation of Halifax River, extending 30 miles S. of Mosquito Inlet. It is separated from the ocean by a narrow strip of land, and was formerly called Mosquito South Lagoon. It is navigable for small boats, and is full of fish and oysters. The second rises in Polk County and flows southwest into Tampa Bay. Its length is about seventy miles. The third is a small stream, 15 miles long, in Dade County. Its course is nearly parallel with the coast, and it enters the ocean near lat. 26° N.

HILLSDALE, a city and the capital of Hillsdale County, central southern South Michigan, 25 miles S.W. of Jackson, on the Lake Shore and Michigan Southern railroad. It is the seat of Hillsdale College, a co-educational Free Baptist institution with 28 instructors and 521 students, founded in 1855, with a good library containing about 9,000 volumes. Its manufactories include screen-door, table and chair factories, machine-shops, foundries and flour-mills. It is provided with city water, gas and electricity and city mail service. Population 1900, 4,151.

HILL STATES, a number of small principalities of India on the east side of the Upper Sutlej, comprising about 10,000 square miles and about 550,000 inhabitants. With the exception of this aggregate name, they have but little in common with each other. There are about twenty distinct states.

HILO, an important seaport of Hawaii, situated on Byron Bay, an inlet on the east coast of the island, in lat. 19° 48' N., long. 155° 4' W. It is the second town in size in the Hawaiian Islands, and has a spacious and commodious harbor. Population, 4,231.

HIMILCO. See **CARTHAGE**, Vol. V, p. 160.

HIMYARITIC OR SABÆAN LANGUAGE. See **SEMITIC LANGUAGES**, Vol. XXI, p. 653.

HINAYANA, ancient school of Buddhism. See **LAMAISM**, Vol. XIV, p. 229.

HINCKLEY, a village of Pine County, central eastern Minnesota, on the Great Northern and the St. Paul and Duluth railroads, 72 miles N. of St. Paul. It was destroyed in September, 1894, by the devastating forest-fire of that region. Over 235 lives were lost in this one town. It was rebuilt, but is not growing. Population 1900, 459.

HINCKS, SIR FRANCIS, a Canadian statesman; born in Cork, Ireland, Dec. 14, 1807. He settled at Toronto in 1832, when he entered politics and edited the *Examiner*. After being elected to the Dominion Parliament, in 1841, he was appointed inspector-general. In 1851 he became Prime Minister of Canada, and held this post till 1854. The next year he was made governor of the Windward Islands, and in 1862 governor of British Guiana. After returning into Canada he assisted in uniting the British provinces to the Dominion of Canada. In 1869 Hincks was knighted. From that time till 1873 he was the finance minister of Canada. He founded the *Toronto Examiner* in 1838, and the *Montreal Pilot* in 1844, being editor of the first. For the last few years before his death he was editor-in-chief of the *Journal of Commerce* in Montreal. Died Aug. 18, 1885.

HIND, JOHN RUSSELL, an English astronomer; born at Nottingham, May 12, 1823. At an early period he became interested in the study of astronomy, and in 1840 obtained a situation in the Royal Observatory at Greenwich, where he remained till June, 1844. He was then sent as a member of the commission appointed to determine the exact longitude of Valentia, and on his return entered Bishop's Observatory, Regent's

Park, London. Here he calculated the orbits of more than seventy planets and comets, noted a number of new stars, and in 1847-54 discovered ten minor planets. In 1851 he obtained from the Academy of Sciences at Paris the Lalande medal, and was elected a corresponding member; in 1852 he received the gold medal of the Astronomical Society of London and a pension of £200 a year from the government. In 1853-92 he edited the *Nautical Almanac*; and in 1880 became president of the Royal Astronomical Society. His scientific papers were usually published in the *Transactions* of the Astronomical Society, in the *Comptes-Rendus* of Paris, and the *Astronomische Nachrichten* of Altona. He wrote *The Solar System* (1852); *Illustrated London Astronomy* (1853); *Treatise on Comets* (1857); etc. Died in Twickenham, Dec. 23, 1895.

HINDLIP, BARON. See ALLSOPP, SAMUEL, in these Supplements.

HINDMAN, THOMAS CARMICHAEL, a Confederate general, born in Tennessee in 1818. In the Mexican War he served as lieutenant of Mississippi volunteers. During 1859 and 1860 he was in Congress. On the outbreak of the Civil War he was made a brigadier-general in the Confederate army. He served first under Gen. S. B. Buckner in Kentucky, and commanded afterward at Memphis. He fought at the battle of Shiloh, was made a major-general and assigned to the chief command in Arkansas. At Chickamauga he commanded a division in General Polk's army. He was killed at Helena, Arkansas, by one of his former soldiers, Sept. 27, 1868.

HINDS, SAMUEL, a British clergyman; born in Barbadoes, 1793; graduated at Queen's College, Oxford, in 1815; became principal of Codrington College, Barbadoes, and in 1827, vice-principal of St. Alban's College, Oxford. He was successively chaplain to Archbishop Whately; vicar of Yardley; prebendary and rector of Castlenock, Dublin; chaplain to the Lord-Lieutenant of Ireland; dean of Carlisle, and bishop of Norwich, which office he resigned in 1857. He wrote a *History of Christianity* (1828); *The Three Temples of the One True God Contrasted* (1830); and *Scripture and the Authorized Version* (1845). He died in London, Feb. 7, 1872.

HINDUISM. See INDIA, Vol. XII, pp. 779-782; and BRAHMANISM, Vol. IV, pp. 201, et seq.

HINDU PHILOSOPHY. See SANSKRIT LITERATURE, Vol. XXI, p. 289.

HINGHAM, a manufacturing town of Plymouth County, eastern Massachusetts, on Hingham Harbor, 17 miles S.W. of Boston, on the New York, New Haven and Hartford railroad; has daily steamship connection with Boston. Fancy knit-goods, woodenware, cordage, bagging, furniture, boots and shoes, iron castings and worsted upholstery are made here. It is a popular summer resort. Population 1900, 5,059.

HINKSON, KATHARINE (TYNAN), an Irish authoress; born at Clondalkin, Ireland, in 1861; first known as a writer of verses and later as a novelist. Among her works are *Louise de la Val-*

lière and Other Poems (1885); *Shamrocks* (1887); *The Way of a Maid* (1895); *An Isle in the Water* (1896); *The Wind in the Trees* (poems, 1898); *The Hand-some Brandons* (1898); and other tales, in which the writer displays much humor and insight.

HINSDALE, a village of Du Page County, north-eastern Illinois, on the Chicago, Burlington and Quincy railroad, 15 miles W. of Chicago. It has a classical academy. Population 1900, 2,578.

HINSDALE, a post village of Cheshire Co., N. H., on the Connecticut river and the Boston and Maine railroad; has good water-power, and manufactures woolen goods, lumber, and mowing-machines. Population 1890, 2,258; 1900, 1,933.

HINSDALE, BURKE AARON, an American educator and author; born at Wadsworth, Ohio, March 31, 1837. In 1861 he became a minister of the Christian (or Campbellite) Church; was pastor of a church at Solon in 1864, and afterward at Cleveland till 1868. Then he was made professor of history and English literature in Hiram College, and was its president from 1870 to 1882, when he became superintendent of public schools in Cleveland till 1886. In 1886 he was elected to the chair of pedagogy in the University of Michigan. He published *Authenticity of the Gospels; Evolution of the Theological Systems of the Ancient Church; Life and Works of President Garfield; Schools and Studies; The Old North West; American Government* (1891); *Studies in Education* (1895); *History and Civil Government of Ohio* (1896); *Teaching the Language Arts* (1896); articles on EDUCATION and SCHOOLS in these Supplements.

HINTON, a town and the capital of Summers County, southern West Virginia, on the New River, where it receives the Greenbrier; on the Chesapeake and Ohio railroad, at the foot of the White Oak Mountains, amidst beautiful scenery. The railroad has repair-shops here, and there are here also large steam saw-mills, a valuable brownstone quarry and coal-mines. Population 1880, 879; 1890, 2,570.

HIODONTIDÆ (derived from the shape of the hyoid bone), an order of isospondylous, teleocephalous, herring-like fishes, with cycloid scales and naked head, a peculiar structure of supra and intermaxillaries, and dorsal fin situated in the posterior portion of the body. The eggs are first injected into the abdominal cavity. The "moon-eye" herring (*Hiodon tergesius*), proper to the family, finds its habitat in western lakes and rivers.

HIP, in botany, a name often applied to the fruiting condition of the peculiar concave receptacle found in many of the *Rosaceæ*, notably in the genus *Rosa* itself, where the hip, commonly known as the fruit, ripens into a more or less pulpy and bright-colored body. Certain rose-hips are used in pharmacy and in confections, and some are used as food by wild animals.

HIP-JOINT DISEASE, technically known as *Coxalgia*, *Coxitis*, *Tubercular Arthritis*, etc., an inflammation of the hip-joint and adjacent tissues. It is a disease of childhood, occurring rarely after the twelfth year, the majority of cases being

between one and six years of age; but adults are not infrequently the subjects of attack.

The predisposing causes are such as weaken the general tone of health; as, a disturbance of nutrition; and the scrofulous constitution. In persons thus predisposed a slight injury to the joint, a fall or a blow, a distortion, a wrench or over-exertion may be followed by inflammation of the joint. But the real cause is believed to be the presence in the body of exceedingly minute organisms called *tubercle bacilli*. These bacilli exist in the air, in food and water, and find their way into the blood through the lungs, stomach, a puncture or other form of wound.

The symptoms are at first pain, either in the hip or the knee of the affected side, greater at night or in the early morning; the person rests on the ball of his foot, and in walking limps, or drags the leg, stiffly extending it. In time the person lies with the thigh flexed on the abdomen, the body bends forward in walking, the leg is shortened.

The disease may originate either in the synovial membrane which lines the cavity of the joint or in the head of the thigh-bone. Bacilli finding their way to the synovial membrane induce in it an inflammation. Tubercular nodules, spongy fungous forms, granulations and fibrous growths cover the surface of the membrane. Its blood-vessels are congested and weakened, and blood may escape into the joint-cavity. The fluid of the joint (synovial) is increased in quantity, often so much as to distend the capsule or covering of the joint and force the fluid into surrounding tissues. If the inflammation continues the capsule becomes thickened and the joint-cavity is filled with diseased products. The tubercular growths push their way over the cartilages and ligament into the bone of the socket and into the head of the thigh-bone, which are softened and disorganized; in short, wherever tubercular tissue develops the original tissue is destroyed. The whole joint and adjacent parts, by this destructive process, may form an abscess which may work its way outward through the skin. If the bacilli first find lodgment in the thigh-bone they work their way upward into the joint, with results as above described. In the last stage of the disease the head of the thigh-bone separates from its shaft, adheres to the socket and the leg is shortened. The patient's strength is undermined, hectic fever sets in, emaciation becomes extreme, and death occurs from exhaustion or from general tubercular infection, often from tuberculosis of the lungs.

The prospects for complete recovery are not favorable. Partial or complete stiffness of the joint, with more or less shortening of the limb, will, in most cases, be the result, however well treated. At least 12 per cent of all cases beginning with inflammation of the thigh-bone terminate fatally in from one to six years. Good and timely treatment in the first stage cures 50 per cent; surgical treatment in the last stage cures one half the cases treated. The treatment of

this disease, until within a few years, was largely surgical, and often of the most heroic kind. But at present (1896) it is of a more conservative character. Instead of operative treatment there is now chemical treatment, chiefly by the injection of antiseptic fluids into the diseased parts to destroy the bacilli. Much attention is given to nourishing food and pure air, to baths, and to tonics in general which strengthen life. Dr. Koch, a German physician, who discovered the tubercle bacilli, has prepared a remedy which he calls "tuberculin," and which has been used in the treatment of the various forms of tuberculosis. Its curative principle is an excretion from the bodies of the bacilli themselves, which it destroys. It is injected into the blood, through which it reaches the diseased tissues. But the results from its use have not as yet been uniformly successful or satisfactory, and it is now rarely employed. It is believed, however, that a similar remedy, and one to be found along similar lines of investigation, will yet be discovered. See *Diseases of Joints*, under SURGERY, Vol. XXII, pp. 685, 686.

HIPPEAU, CELESTIN, a French author and educationist; born at Niort, Deux-Sèvres, May 11, 1803. His earlier studies were pursued in his native city, and he subsequently held positions as professor at Poitiers, Napoléon, Vendée, Strasbourg, Paris and Caen. He received the decoration of the Legion of Honor in 1861. Among the most prominent of his writings are *Histoire de l'Abbaye de Saint-Etienne de Caen, 1066-1790* (1855); *Histoire du Gouvernement de la Normandie* (1863-73); and *Avènement des Bourbons au Trône d'Espagne* (1875). He died in Paris, May 31, 1883.

HIPPIAS, tyrant. See GREECE, Vol. XI, pp. 97-99.

HIPPIAS OF ELIS. See SOPHISTS, Vol. XXII, p. 265.

HIPPOCRAS (*vinum Hippocraticum*, "wine of Hippocrates"), an aromatic medicated wine, formerly much used as a cordial. It was prepared from white wine, flavored with cinnamon and other spices, lemon peel, almonds, etc., and sweetened with honey or sugar.

HIPPOCRENE. See PEGASUS, Vol. XVIII, p. 468.

HIPPODAMIA. See PELOPS, Vol. XVIII, p. 480.

HIPPODROME. See OLYMPIA, Vol. XVII, p. 768.

HIPPOGRIFF OR HIPPOGRYPH (Gr. *hippos*, "a horse," and *gryph*, "griffin"), a fabulous animal, unknown to the ancients, which is represented by modern writers as a winged horse with the head of a griffin. The hippogriff figures as the horse of the Muses, and plays a conspicuous rôle in the *Orlando Furioso* of Ariosto.

HIPPOLYTUS LEGEND. See THESEUS, Vol. XXIII, p. 294.

HIPPOPHAGY, HIPPOPHAGI (Gr., "eaters of horse-flesh"), was a name given by the Greeks to a Scythian people living northeast of the Caspian Sea, and to a Sarmatian tribe north of the

Euxine, who ate horse-flesh. In some parts of Europe horse-flesh is a regular and wholesome article of diet. In 1866 the sale of horse-flesh in the Paris markets as an article of food was recognized and regulated officially; and during the siege of Paris, horse-flesh was gladly eaten by all who could get it. In Great Britain an act was passed in 1889, regulating the sale of horse-flesh, requiring that all horse-flesh exposed for sale should be expressly so described. In the United States no general law has been enacted, but the use of horse-flesh for food is prevented in the larger cities by a high-license system. From experiments, horse-flesh has been found to contain more nutriment than beef, and people who eat it claim it is better than beef of the same age.

HIPPURIC ACID, $C^9H^9NO^3$, a compound of great interest to chemist and physiologist. It derives its name from its having first been discovered in the urine of the horse, and that fluid, or the renal secretions of the cow, affords the best and readiest means of obtaining it. The crystals of hippuric acid are moderately large, colorless, but subsequently becoming milk-white, four-sided prisms, which are devoid of odor, but have a faintly bitter taste. They dissolve readily in boiling water and in spirit. It is an abundant normal constituent of the urine of the horse, cow, sheep, etc., and probably is to be found in the urine of all vegetable feeders. In the urine of healthy persons living on an ordinary mixed diet it occurs in very small quantity, but it is increased by an exclusively vegetable diet and in the well-known disease, diabetes. The hippuric acid occurring in the animal organism exists in combination with bases, and chiefly as hippurate of soda and hippurate of lime. The last-named salt can be obtained by the mere evaporation of the urine of the horse. Hippuric acid readily splits into benzoic acid and glycocoll. If benzoic acid is administered it is excreted as hippuric acid, combining with glycocoll in the body. In herbivorous animals the benzoic acid is largely derived from the food; in animal feeders, even in starvation, it occurs in small amount in the urine; and, therefore, it is concluded that its forerunners may be derived from the metabolism of the tissues. That certain bodies closely allied to benzoic acid may so be formed, has now been demonstrated experimentally, while glycocoll can also be proved to be produced in that manner. At one time the belief was entertained that these bodies were combined in the liver; but more recent search has shown that the synthesis chiefly takes place in the kidneys.

HIPPURITES, a genus of bivalve mollusks found in the cretaceous formations of Europe and America. The Hippurite limestone of Europe is composed largely of their shells. These mollusks are so unlike ordinary bivalves that they have been classed as barnacles, worms or corals by some authors. The valves of the shell are very unequal, and the animal is attached to foreign objects by one valve. One valve is greatly elongated into a tubular or cone-like

structure. *Hippurites* is the typical genus of a family of cretaceous mollusks which Lamarck named *Sudistes*, but recent authors adopt the term *Hippuritidæ*.

HIRAM, a town of Portage County, north-eastern Ohio, 11 miles northwest of Ravenna, on the New York, Lake Erie and Western Railroad. It is the seat of Hiram College, an institution founded by the Church of the Disciples of Christ in 1850. The college has 18 instructors, 400 students, and a library of 5,000 volumes. Population 1900, 659.

HIRAM, King of Tyre. See PHENICIA, Vol. XVIII, p. 807.

HIRE, LAURENT DE LA, a French classical painter; born in Paris in 1606. He was a student under Vouet, but endeavored to form a style of his own. His easel pictures and landscapes were prized highly, while some of his larger works are to be seen in the Carmelite and Capuchin churches in Paris. He was one of the first members of the Academy of Painting and Sculpture, founded in 1648, and now known as the Academy of Fine Arts. He died in Paris, 1656.

HIRN, GUSTAVE ADOLPHE, a French physicist and engineer; born at Logelbach, near Colmar, Alsace, Aug. 21, 1815. He entered the cotton-mill of his grandfather, and there made his first investigations. As a result of his systematic study of the steam-engine, he revealed to the engineering world the extent of the wastes of the modern engine. In 1845 he published his first essay, *On the Mathematical Theory of Fan-blowers*, and later followed this with others of a scientific nature, besides numerous contributions to the *Bulletin de la Société Industrielle de Mulhouse*. He was elected secretary of the Academy of Sciences in 1867. He died March 12, 1890, at Logelbach.

HIROSHIMA, a city of Japan, in the department of Aki; situated on the Inland Sea. Opposite Hiroshima lies the island of Miyajima or Itskushima, "island of light." This island is one of the San-Kei or three chief sights of Japan. The great temple of Bentin, being partly built over the sea on piles, has the appearance at high tide of floating on the surface of the water. The Royal Naval College, removed from Tokyo in 1890, is situated on an island of Hiroshima. Population 1896, 107,685.

HIRSCH, EMIL G., an American Jewish rabbi; born in the Grand Duchy of Luxemburg, May 22, 1852; emigrated to the United States in 1866; educated in America and Germany, being a graduate of the universities of Pennsylvania, Berlin and Leipsic. He has held the position of rabbi in the cities of Baltimore, Maryland; Louisville, Kentucky; and Chicago, Illinois; a professor of Semitic languages in the University of Chicago; director of the Chicago Public Library, having been twice president of the Board of Directors; president of the Board of Examiners of the Civil Service Commission. Dr. Hirsch has published a volume of sermons, and *Truths of Fiction from a Jewish Point of View*. He contributed the article

ON JUDAISM AND JEWS IN THE UNITED STATES, in these Supplements.

HIRSCH, JOSEPH, a French civil engineer; born at Lyons, France, May 22, 1836; graduated at the École des Ponts et Chaussées, 1857; constructed a portion of the Canal de l'Est; director of the metallurgical works of Ars-sur-Moselle; invented the Mittersheim siphon. He was appointed professor on steam-engines at the École des Ponts et Chaussées and at the Conservatoire des Arts et Métiers. He published a number of valuable scientific works, including a translation of Thurston's *On the Steam-engine*.

HIRSCH DE GEREUTH, BARON MAURICE DE, Austrian financier and philanthropist; born in

BARON MAURICE DE HIRSCH.

Munich, Bavaria, Dec. 9, 1833; died at O'Gyalla, near Komorn, Hungary, April 20, 1896, leaving an estate estimated at \$200,000,000; married the daughter of a wealthy Belgium senator, whose dowry, added to his own inheritance, enabled him early in life to undertake financial schemes resulting in a princely fortune. In 1888 the loss of a beloved son at the age of 20 moved the baron to devote \$20,000,000, accumulated by the youth's financial ability aided by his father's prevision, wholly to charities. By the advice of prominent Jews of all countries, the investment of this vast sum was made in behalf of indigent Jews in Hungary, Russia, Galicia, and Roumania, among which countries the amount was equally divided. Even in Russia and Roumania, where the experiment proved unsuccessful, owing to Russian opposition, the accrued interest from the son's imaginary bequest has been regularly distributed for charitable purposes, the baron having regarded himself merely as a faithful executor. Then came the heartless decrees of expulsion of Jews from the Russian Empire, which inspired Baron Hirsch with intense sympathy for the fate of his co-religionists. He devised a colossal scheme of emigration, guaranteeing an expenditure of \$10,000,000, with the object of assisting the expatriated Jews, embracing colonial settlements in other countries—chiefly in the Argentine Republic, where nearly half a million acres were acquired, at a cost of more than \$1,000,000. The Russian government tardily acquiesced in the project, which proved an eminent success, in 1895 the establishment of 1,222 families being reported, the earlier colonists rapidly becoming independent of provisional subsidies. The refusal of the Tsar to accept \$10,000,000 for popular education on condition that his Jewish subjects should share in the advantages is a significant commentary on the baron's munificence and the recalcitrant attitude of the Russian government.

The above benefactions but partially cover the enormous sums dispensed in Baron Hirsch's charitable work. In 1891 alone he expended \$15,000,-

000 in philanthropic service. He was an enthusiastic turfman, and won large sums from successful ventures in horse-racing; yet his entire winnings were devoted to the London hospitals, not even his personal expenses being withheld. To the Alliance Israélite, of Paris, he contributed nearly \$500,000. Not less interesting among his beneficent enterprises was the establishment of a Jewish settlement at Woodbine, N. J., in 1891, now a thriving community of 700 Russian exiles, each family being supplied with thirty acres of land and necessary farming implements. His total gifts amounted to \$50,000,000; and those of his widow were proportionately munificent. She died in Paris, April 1, 1899.

HIRSCH FUND, THE, was created by Baron Hirsch for the benefit of needy Hebrew immigrants from Russia and Roumania in the United States. The fund, amounting to \$2,400,000, was conveyed in February, 1891, to a board of trustees in New York City, to be invested in the United States, and the net income (estimated to be \$10,000 a month) to be loaned to Hebrew immigrants. The specific purpose of the fund is to furnish mechanics with tools, teach easy trades, aid in securing employment, and in exceptional cases to be loaned out to immigrants until they become self-supporting. At present a flourishing colony is in existence at Woodbine, New Jersey. Similar colonies are being projected in Minnesota, Pennsylvania, Texas and New Mexico. In addition, classes are conducted in manual training in connection with the Hebrew Technical Institute of New York, and a school for young and old immigrants is established, while transportation is furnished those leaving the seaboard cities for the interior.

HIRST, THOMAS ARCHER, an English mathematician and scientist; born at Heckmondwike, Yorkshire, April 22, 1830; studied under Bunsen and others at the University of Marburg, and obtained the degree of doctor of philosophy. He became a friend of Tyndall, and in company with him made a study of the glaciers of Switzerland. His experiences are described in *Glaciers of the Alps*. He was made a fellow of the Royal Society in 1861, and in 1873 director of studies of the Royal Naval College. He wrote a large number of original papers on mathematics and physics, published in the proceedings of various societies. Among these writings are *On the Correlation of Two Planes* (1875-77); *On Congruences of the Third Order and Class* (1885); and *Cremonian Congruences which are Contained in a Linear Complex* (1887).

HIS, WILHELM, a Swiss anatomist; born at Basel, July 9, 1831; educated at the Universities of Berlin, Würzburg, Prague, Vienna and Paris; professor of anatomy and physiology at Basel; and, since 1872, professor of anatomy at Leipsic. He published several valuable works on anatomy and embryology, among them *Crania Helvetica* (1864), and *Recherches sur la Formation Primitive du Corps des Vertébrés* (1868).

HISSARLIK. See TROAD, Vol. XXIII, p. 581.

HISTIÆUS. See PERSIA, Vol. XVIII, p. 570.

HISTORICAL AND GENEALOGICAL SOCIETIES IN AMERICA. Following the interest awakened in GENEALOGIES (q. v., in these Supplements) considerable activity has been shown in the United States in the formation of historical and genealogical societies. These, with naturally a wider scope than that of the man delving into the history of a single family, have as a rule issued at stated intervals valuable reports of their proceedings, which, in themselves, constitute the most valuable material for the local historian. At times the organization has been enlarged in its operations to a county or state, rather than confined to a single township or a distinct locality.

The pioneer society—The New England Historical and Genealogical Society—bravely covered the New England field, and from 1847 regularly issued its invaluable and well-indexed *Register*. A work such as this last has become a *sine qua non* to the historian of the future, whether he deals with state, county or town. Massachusetts holds high rank in the matter of such societies, no fewer than eighty-nine being described in Senator Roe's *Massachusetts Year Book*.

New York, Rhode Island, Pennsylvania and many other states have long boasted of excellent societies doing meritorious work. It is in the exhumation and publication of local and long-forgotten records dealing with important eras of national and local history that these societies have been in the past, and will be in the future, of inestimable value to the community. Often a society has rendered valuable assistance in the publication of local histories. A list of the more important of such works may be found in Durrie's *Index to American Genealogies*; Marshall's *Genealogist's Guide* (as to England, mainly); and in *The Bulletin of the Boston Public Library* (October, 1891).

HITCHCOCK, CHARLES HENRY, an American geologist; born at Amherst, Massachusetts, Aug. 23, 1836; was graduated from Amherst College. He studied divinity at New Haven and science at the Royal School of Mines, London. He was professor of geology at Lafayette College from 1866 to 1870, and, after the latter year, professor of the same science at Dartmouth College. He published many scientific papers, and several volumes of reports prepared in connection with various state geological surveys, most important among which is the *Final Report on the Geology of New Hampshire* (1874-78).

HITCHCOCK, EDWARD, an American specialist in physical culture; born at Amherst, Massachusetts, May 23, 1828; was graduated from Amherst College in 1849, and attended Harvard Medical School in 1852. In 1861 he was appointed professor of hygiene and physical education in Amherst College. The chair of physical culture at Amherst was the first of the kind established in this country. He was for many years a member of the state board of health of Massa-

chusetts, and a director of Mount Holyoke College and of Clark Institute for the Blind. Author of *Anatomy and Physiology* (1852).

HITCHCOCK, ETHAN ALLEN, an American general and author; born at Vergennes, Vermont, May 18, 1798. After graduating at West Point in 1817, he was assistant instructor in tactics there until 1829, and from that time till 1833 he was commandant of cadets. In the Mexican War he was inspector-general under Scott. Becoming colonel in 1851, he was placed in command on the Pacific coast. When the Civil War broke out he was appointed major-general of volunteers in the Union army in February, 1862, and soon afterward made commissary-general of prisoners. He retired from service in October, 1867, and died at Sparta, Georgia, Aug. 5, 1870.

HITCHCOCK, ROSWELL DWIGHT, an American theologian and educator; born at East Machias, Maine, Aug. 15, 1817. Graduated at Amherst College in 1836, and after some years spent in teaching and in attendance at Andover Theological Seminary, he was in 1845 ordained pastor of the First Congregational Church of Exeter.

He later spent a year in Germany at the Universities of Halle and Berlin; resigned his pastorate in 1852 to accept the Collins professorship of natural and revealed religion in Bowdoin College; and three years later was called to the Washburn professorship of church history in Union Theological Seminary, New York City. He spent some time in travels through Greece, Italy and Palestine, and in 1871 was elected president of the American Palestine Exploration Society. In 1880 he was appointed president of Union Theological Seminary.

He received the degree of D.D. from Bowdoin in 1855 and from the University of Edinburgh in 1885, and of LL.D. from Williams in 1873 and from Harvard in 1886. He was a trustee of Amherst from 1869 until his death. From 1863 to 1870 he was one of the editors of the *American Theological Review*.

Besides numerous articles, essays, orations and addresses on religious topics, he also wrote and published a number of church hymns. Among his writings are *Life of Edward Robinson* (1863); *Hymns and Songs for Social and Sabbath Worship* (1875); and *Socialism* (1879). Died at Somerset, Massachusetts, June 16, 1887.

HUEN-TSANG. See HWEN T'SANG, Vol. XII, p. 418.

HIVES. See NETTLE-RASH, Vol. XVII, p. 360; and SKIN DISEASES, Vol. XXII, p. 122.

HIWASSEE COLLEGE, an institution established by the Methodist Episcopal denomination in Monroe County, Tennessee, in 1849. The college had, in 1895, 4 instructors, 70 students, and a library of 2,200 volumes. The institution became co-educational in 1894.

HOADLEY, BENJAMIN, JR., an English physician and author; born in London, Feb. 10, 1706; studied at Cambridge, and received the degree of doctor of medicine in 1728; was appointed physician to the royal household in 1742. He

wrote a successful comedy, *The Suspicious Husband*, and assisted Hogarth in his *Analysis of Beauty*. In 1756 *Observations on a Series of Electrical Experiments* was published by him. He died at Chelsea, Aug. 10, 1757.

HOANG-HO OR HWANG-HO. See *Yellow River*, under CHINA, Vol. V, pp. 630, 631.

HOAR, EBENEZER ROCKWOOD, an American jurist, son of Samuel Hoar, mentioned below; born at Concord, Massachusetts, Feb. 21, 1816. His mother was a daughter of Roger Sherman. He was admitted to the bar in 1840. In 1849 he became judge of the court of common pleas, but resigned in 1855. Soon afterward he was appointed a justice of the supreme court of Massachusetts, and held this office until 1869, when President Grant appointed him Attorney-General of the United States. He was one of the joint high commission on the Washington treaty of 1871, and a member of Congress from 1873 to 1875. He died at Concord, Jan. 31, 1895.

HOAR, GEORGE FRISBIE, an American jurist and statesman, brother of the preceding; born at

Concord, Massachusetts, Aug. 29, 1826; studied at Harvard; and was admitted to the bar of Massachusetts in 1849. He was elected a member of the lower house of Congress from Massachusetts in 1869, and to each subsequent House of Representatives till 1877, when he took his seat as a Republican in the United States Senate, to which

GEORGE F. HOAR.

he was re-elected in 1883, 1889 and 1895. He presided over the Republican National Convention of 1880.

HOAR, SAMUEL, an American statesman, born at Lincoln, Massachusetts, in 1778. Being admitted to the bar in 1805, he soon became eminent in his profession. He was a member of Congress in 1835-37, and a state councilor in 1845-46. The state of Massachusetts sent him to South Carolina in 1844 to test the constitutionality of acts of the latter state by which free negro sailors were seized and imprisoned on entering its ports. But on December 5th of the same year he was driven from Charleston by a mob, and the South Carolina Legislature authorized the governor on the same day to expel him from the state. He died at Concord, Massachusetts, Nov. 2, 1856.

HOBART, Tasmania. See HOBART-TOWN, Vol. XII, p. 29.

HOBART, GARRET AUGUSTUS, an American statesman, born at Long Branch, New Jersey, in 1844. He graduated from Rutgers College and studied law in the office of one of New Jersey's most distinguished lawyers, Socrates Tuttle, whose daughter he afterward married. After completing his law studies he began the practice of his profession in Paterson, New Jersey, which he made his permanent residence, and in

addition to his legal occupation engaged in various enterprises, becoming president of several local corporations in the nature of water companies, gas companies, street and suburban railways. He also acquired interests in various manufactories and railroads. He early identified himself with the politics of his state, and served in both branches of the legislature, both as speaker of the house and president of the state senate.

GARRET A. HOBART.

In 1884 he became both state and national committeeman, holding these positions until Nov., 1896, when he was elected Vice-President of the United States, on the regular Republican ticket. Died at Paterson, N. J., Nov. 21, 1899.

HOBART, JOHN HENRY, an American Protestant Episcopal bishop and author; born in Philadelphia, Sept. 14, 1775; was graduated in 1793 from Princeton College, where he was afterward tutor until admitted to holy orders in 1798. He was successively pastor at New Brunswick, Hempstead, and Trinity Church, New York City, and in 1816 was chosen bishop of New York. He was active in founding the General Theological Seminary in New York City, in which he became professor of pastoral theology in 1821. He visited Europe in 1824, and in England published sermons on the *Redemption*. By his writings and his personal influence, Bishop Hobart must be considered one of the leaders of theological thought in the United States. Among his published works are *Companion for the Altar*; *Apology for Apostolic Order*; and two volumes of sermons. He died at Auburn, New York, Sept. 12, 1830.

HOBART COLLEGE, an institution at Geneva, New York, under the control of the Protestant Episcopal Church. The school, projected in 1812, founded for academic work in 1822, was chartered as Geneva College in 1825; the name was changed to Hobart Free College in 1852, and in 1860 it became Hobart College. There are three courses, leading respectively to the degrees A. B., B. S., and B. L. The college is not open to women. There were in the college in 1896, 17 instructors and 81 students, with alumni numbering over thirteen hundred. The equipment includes numerous scholarships, a chemical and physical laboratory, a cabinet and museum, a gymnasium and a library of 30,000 volumes.

HOBART PASHA, AUGUSTUS CHARLES HOBART-HAMPDEN, an Anglo-Turkish naval officer, third son of the Earl of Buckingham; born at Waltham-on-the-Wolds, Leicestershire, April 1, 1822; entered the British navy in 1836, retiring from active service in 1860. During the Civil War in the United States he became distinguished as a successful blockade-runner, under the name of Captain Roberts, skillfully eluding pursuit, and

rendering material assistance to the Confederate cause. He afterward entered the Turkish service, being appointed to the chief command of the Turkish fleet in the war against Russia. He was the first naval officer to maintain the possibility of perfect immunity from torpedoes by the adoption of suitable precautions, such as ample nettings, etc. His assumption of the chief command in the Turkish naval service brought him into conflict with the home authorities, and led to the erasure of his name from the British navy-list. In 1885, however, he was reinstated, with the rank of vice-admiral. He published several works full of stirring adventure, among them *Twelve Successful Trips in Blockade-Running* (1867); *The Torpedo Scare* (1885); and *Sketches from My Life* (1886). Died in Milan, Italy, June 19, 1886.

HOBBES, JOHN OLIVER. See CRAIGIE, MRS. MARY E., in these Supplements.

HOBBY. See FALCON, Vol. IX, p. 3.

HOBOKEN, a city and port of entry of Hudson County, New Jersey, on the west bank of the Hudson river, opposite New York city, and immediately above Jersey City. It has an extensive trade in coal, being one of the principal depots from which New York and its shipping are supplied; and four lines of European steamships (the Netherlands-American, the Hamburg-American, the North German Lloyd, and the Thingvalla) start from this port. The principal industries of the place are the manufacture of lead pencils, caskets, leather goods, foundry and machine-shop products. It is connected with Jersey City by electric railways; and is lighted with electricity. It has a public library, two convents, a monastery of the Passionate Fathers, St. Mary's Hospital and Stevens Institute of Technology. Population 1880, 30,999; 1890, 43,648; 1900, 59,364. See Vol. XII, p. 40.

HOBOKEN DOCKS FIRE. On June 30th, 1900, a terrible fire, resulting in a calamitous loss of life, broke out in the docks at Hoboken, N. J., of the North German Lloyd Steamship Co. The fire had its origin in some cotton bales, and everything being dry with the excessive heat then prevailing, it speedily destroyed three piers belonging to the company, together with three great liners, the "Saale," the "Main," and the "Bremen." The "Kaiser Wilhelm der Grosse" was saved with difficulty, her bow having caught fire before she was removed. About 1,000 persons, many of them women and children, were on board the ill-fated vessels, between two and three hundred of whom, including stokers and seamen, were burned or drowned.

HOCHHEIM, a town of southeastern Prussia, in Hesse-Nassau, on the right bank of the Main, 3 miles E. of Mainz. Here is produced the white wine known as *Hochheimer*.

HÖCHST, a town of Hessen-Nassau, southwestern Prussia, on the north bank of the Main, five miles W. of Frankfurt. Here, in June 20, 1622, Tilly defeated Duke Christian of Brunswick, and on Oct. 11, 1795, the Austrians defeated the French under Jourdan. It has manufactories of furniture and to-

bacco. Population 1890, 8,455. See AUSTRIA, Vol. III, p. 130.

HOCKING OR HOCKHOCKING RIVER, a river in Ohio, having its rise in Fairfield County, and flowing southeast for 80 miles until it joins the Ohio River. It is navigable for a distance of 70 miles.

HODGE, CHARLES, an American theologian; born in Philadelphia, Dec. 28, 1797; graduated at Princeton College in 1815; in 1822 appointed professor in the Princeton Theological Seminary, where he remained till the close of his life. He was founder and long the editor of the *Princeton Review*; and besides numerous essays, etc., he was the author of commentaries on Romans, Corinthians and Ephesians, of a history of the Presbyterian Church in America (1840), and of the well-known *Systematic Theology*, now a standard work of the Calvinistic churches. He died June 19, 1878, at Princeton, New Jersey.

HODGE, FREDERICK WEBB, an American ethnologist; born at Plymouth, England, Oct. 28, 1864; was taken to the United States when seven years of age; he was educated at Washington, District of Columbia, and in 1884 received appointment to the United States Geological Survey. In 1886 he resigned his position in the Geological Survey, and became secretary of the Southwestern archaeological expedition. Detailed surveys and maps on a large scale of the ruins of Los Muertos, with their accompanying irrigation *acequias* and reservoirs, descriptions of which have been embodied in papers on the *Architecture of the Prehistoric Pueblos of Southern Arizona* and *Methods of Irrigation of the Ancient Inhabitants of the Salado Valley*. In 1889 Mr. Hodge was appointed to the bureau of ethnology, Smithsonian Institution.

HODGE, HUGH LENOX, an American surgeon; born in Philadelphia, June 27, 1796; graduated from Princeton; took medical degree from the University of Pennsylvania, and was for many years professor of obstetrics in the latter institution. He wrote a standard treatise on *Diseases Peculiar to Women* (1868), and was the author of a *System of Obstetrics* (1864). He died in Philadelphia, Feb. 23, 1873.

HODGKINSON, EATON, an English engineer; born at Anderton, near Northwich, Cheshire, Feb. 26, 1789. He devoted his life to a study of the strength of iron rails, pillars, etc. He discovered that an iron rail in the shape of an inverted letter T will support a greater pressure than any other. His formulæ for solid and hollow iron pillars are generally accepted. Hodgkinson was associated with George Stephenson in the construction of the tubular Britannia bridge in 1845. He died near Manchester, June 18, 1861.

HODGSON, JOHN EVAN, an English painter; born in London, March 1, 1831. Spent his early years in Russia; returned to England in 1853; entered the Royal Academy in 1855, and exhibited his first picture the following year. He went to Tunis and Tangiers in 1868, and after his return exhibited many pictures of Eastern life. Among his noted works are *The First Sight of the Armada*

and *An Arab Story-Teller*. He died June 19, 1895.

HODSON, WILLIAM STEPHENS RAIKES, a noted English soldier; was born at Maisemore Court, near Gloucester, March 19, 1821. Choosing a military career, he joined the Indian army in 1845. From 1849 to 1852 he was employed in the work of civil government in the Punjab. Then being made commandant of the Guides Corps, he did excellent service on the turbulent frontier. But in 1856 he was deprived of his command on account of irregularities in the regimental accounts and of his unjust treatment of the troops and natives under his authority. In the crisis of the mutiny, however, he was appointed head of the intelligence department in the army engaged before Delhi, and was commissioned to raise a new regiment of irregular cavalry, which became known as "Hodson's Horse." With this body of men Hodson took part in the siege of Delhi and in the subsequent operations down to the siege of Lucknow. After the siege of Delhi, Hodson pursued the King, who had taken to flight, and captured two of the princes. An attempt was made on the road to Delhi to rescue the princes, whereupon Hodson shot them both with carbines, which he had seized from his soldiers. He himself was shot on March 11, 1858, during the assault on a royal palace in Lucknow, and died the following day.

HOE, RICHARD MARCH, an American inventor; born in New York City, Sept. 12, 1812; was the son of an English printer, who came to this country in 1803, and who invented the printing-press known by his name. The son improved upon the invention of the father, and to his efforts are due many notable improvements which the power-press has received. In 1846 he brought out "Hoe's Lightning Press," used very widely for newspaper-work. He died in Florence, Italy, June 7, 1886.

HOEFER, JOHANN CHRISTIAN FERDINAND, a German scientist and author; born at Doeshnitz, in the principality of Schwarzburg-Rudolstadt, April 21, 1811; became, in 1834, secretary to Victor Cousin, whom he assisted in the translation of the works of Plato; he took up the study of medicine, and in 1843 was sent by Cousin to Germany to study the methods of medical instruction and practice in that country. In 1842 he published the *History of Chemistry from the Earliest Times to the Present*. In 1851 he was selected by the Messieurs Didot to edit their great biographical dictionary, *Nouvelle Biographie Générale*, for which he wrote able articles on Aristotle, Cæsar, Columbus, Descartes, Erasmus and others. He died at Brunoy in May, 1878.

HOEY, FRANCES SARAH (JOHNSTON), an Irish authoress; born at Bushy Park, near Dublin, Feb. 15, 1830. She married A. M. Stewart in 1846, and in 1858 John Cashel Hoey. After 1860 she contributed largely to magazines, and published a large number of novels; also translations of French and Italian works. Among her novels are *A House of Cards* (1868); *The Blossoming of an Aloe* (1874); *Griffith's Double* (1876); *The Question of Cain* (1882); *The Lover's Creed* (1884); *A Stern Chase* (1886); *The Queen's Token*; *His Match and More*; and *Buried in*

the Decp. Her translations include *The Outbreak of the French Revolution*, by Erckmann-Chatrion (1871); *Thorwaldsen, His Life and Works*, by E. Plon (1873); and *The Memoirs of Madame Rémusat* (1881).

HÖFER, EDMUND, a German novelist; born at Greifswald, Oct. 19, 1819; studied philology and history at Greifswald, Berlin and Heidelberg. He devoted himself to writing, and produced many novels which had a wide popularity. His descriptions of Pomeranian peasant-life are excellent, but he wrote too much to always write well, and only a few of his works have permanent value. Among his stories are *Auf Deutscher Erde* (1860); and *Land und Seenovellen* (1871). He also wrote a *History of German Literature* (1876); and *Wie das Volk Spricht* (1876), a collection of rustic sayings. He died at Cannstatt, May 23, 1882.

HOFFMAN, CHARLES FENNO, an American author; born in New York City in 1806. When he was 11 years old his leg was crushed and had to be amputated above the knee. After studying law at Columbia College he was admitted to the bar in 1827. In 1833 he was the chief editor of the *Knickerbocker Magazine*. After a trip through the West, he wrote *A Winter in the West* (1835); and *Wild Scenes in the Forest and the Prairie* (1837); and a novel, *Greyslaer* (1840). He also wrote poetry. The first volume is called *The Vigil of Faith* (1842); and the second, *Borrowed Notes for Home Circulation* (1844). He was the author of *The Administration of Jacob Leisler*, in Sparks's American Biography Series (1848); and *The Pioneers of New York* (1848). A mental disorder which attacked him in 1849 closed his literary career. He died in Harrisburg, Pennsylvania, June 7, 1884.

HOFFMAN, DAVID, an American lawyer and author; born in Baltimore, Dec. 25, 1784; was professor of law in the University of Maryland from 1817 to 1836. He spent two years in travel in Europe, and on his return began the practice of law in Philadelphia. He published a *Course of Legal Study* (1817), which has been highly commended. He also wrote or compiled *Chronicles Selected from the Originals of Cartaphilus, the Wandering Jew* (1853); *Legal Outlines* (1836); *Miscellaneous Thoughts on Men, Manners and Things* (1837); and *Legal Hints* (1846). He died in New York City, Nov. 11, 1854.

HOFFMAN, EUGENE AUGUSTUS, an American clergyman; born in New York City, March 21, 1829. After graduating at Harvard College in 1848, he attended the General Theological Seminary, where he graduated in 1851; was rector, successively, of Grace Church, Elizabeth, New Jersey; of St. Mary's Church, Burlington, New Jersey; of Grace Church, Brooklyn Heights, New York; and of St. Martin's Church, Philadelphia, Pennsylvania. In 1879 he was appointed dean of the General Theological Seminary, and made large donations to this institution. He wrote a number of religious articles and historical papers.

HOFFMAN, MURRAY, an American jurist; born in New York City, Sept. 29, 1791; after graduating at Columbia College in 1809, he studied law and was admitted to the bar; was assistant vice-chancellor

from 1839 to 1843, and judge of the superior court of New York from 1853 to 1861. He wrote quite largely on law topics, both civil and ecclesiastical. Among his best-known writings are *Reports of Cases, Court of Vice-Chancery* (1839-40); *On the Law of the Protestant Episcopal Church in the United States* (1850); *Ecclesiastical Law in the State of New York* (1868); *Law and Practices as to References, and the Powers and Duties of Referees* (1875). He died in Flushing, Long Island, May 7, 1878.

HOFFMAN, WALTER JAMES, an American ethnologist; born at Weidasville, Pennsylvania, May 30, 1846; was graduated from Jefferson Medical College, Philadelphia, Pennsylvania, in 1866, and after practicing at Reading, Pennsylvania, until the outbreak of the Franco-Prussian war, was commissioned surgeon in the Prussian army. On his return from Prussia he was appointed acting assistant surgeon in the United States army, and attached as naturalist to the expedition for the exploration of Nevada and Arizona; detailed as surgeon to the expedition for the selection, along the Yellowstone River, of a route for the Northern Pacific railroad. At the organization of the ethnological bureau in 1879, he was appointed assistant ethnologist. Dr. Hoffman published numerous articles on ethnology, biology and folk-lore. He was ten times decorated by foreign powers for his services in medicine and science.

HOFFMANN, FRIEDRICH, a German physician; born at Halle, Feb. 19, 1660; studied at Jena, and afterward traveled in England and Holland. On the opening of the University at Halle, he was appointed to the professorship of medicine. In 1708 he was appointed body-physician to Frederick I of Prussia, but still retained his professorship. Hoffmann rendered important services to practical medicine by his experiments with various remedies. He was one of the first to bring mineral waters into general use. He wrote, in Latin, *Systema Medicinæ Rationalis* (1718-40), a work in nine volumes. His name is perpetuated by HOFFMANN'S ANODYNE. He died at Halle, Nov. 12, 1742.

HOFFMANN VON FALLERSLEBEN. See HOFFMANN, AUGUST HEINRICH, Vol. XII, p. 44.

HOFLEER, KARL ADOLPH KONSTANTIN RITTER, a German historian; born at Memmingen, in Bavaria, March 26, 1811; educated at Munich and Göttingen, and in Italy; professor of history in Munich, and after 1851 at Prague. The most prominent of his writings are *Die Deutschen Päpste* (1839); *Papst Adrian VI* (1880); *Abhandlungen aus dem Gebiet der Slawischen Geschichte* (1883).

HOFMANN, AUGUST WILHELM, a German chemist; born at Giessen, April 8, 1818. After obtaining the degree of doctor of philosophy he became assistant to Liebig in the laboratory at Giessen, and on the establishment of the Royal College of Chemistry in London in 1845, was made superintendent of the new institution. From 1856 to 1865 he was chemist to the Royal Mint, and in 1865 accepted an appointment as professor of chemistry in the University of Berlin. He made important discoveries in chemistry (see ANILINE, Vol. II, p. 48), and contributed numerous papers to the transactions of scien-

tific societies, for the most part on the highest departments of organic chemistry. At Liebig's death Hofmann became editor of the *Annalen der Chemie*. He was ennobled on his seventieth birthday. He died in Berlin, May 5, 1892.

HOFMEYER, HON. JAN H., South African journalist and politician, was born July 4, 1845, and educated at Cape Town. He is the leader of the Afrikaner Bond, and has often represented Cape Colony at Colonial and other conferences. For some years Mr. Cecil Rhodes found him a staunch ally; but after the Jameson Raid he broke with Mr. Rhodes, and in the elections of 1898, as wire-puller of the Bond caucus, was active in his opposition to him. At one time Mr. Hofmeyr advocated total separation of South Africa from England; but after the Transvaal war of 1882 he acted as mediator between the Boers and the Cape Government, especially over the Swaziland question, and it was through his influence that a solution of the difficulty was arrived at. He was prominent in the negotiations which followed on the Bloemfontein Conference (1899), and his influence induced President Kruger to offer a better franchise than that which he had put forward at the Conference, but failed to persuade him to grant the five years' franchise.

HOGG, JABEZ, an English surgeon and writer; born at Chatham, April 4, 1817; studied at Gill's school in company with Charles Dickens; at the age of 15 he was apprenticed to a medical practitioner, after which he went to London and took up literary work. He brought out *The History, Construction and Application of the Microscope* (1854), which has passed through many editions and still remains the textbook of the microscope. He died April 23, 1889.

HOGG, QUINTIN, an English philanthropist; born in February, 1845. He early took a special interest in the education of homeless boys, young mechanics and artisans in London. In 1873 he started an institute for this purpose, which in 1893 had twelve thousand members. The work of the institute, known as the Polytechnic, is of a threefold character,—social, educational and religious,—but attendance at religious meetings is optional. During the nine years preceding 1891, Mr. Hogg expended over five hundred thousand dollars in the institute work.

HOG-GUM, a name applied to various gums used in the arts and in medicine. It is a product of various tropical trees of both hemispheres, notably *Spondias mangifera* of India, whose yellowish fruit is called wild mango.

HOG-PLUM, a name ordinarily applied to the plum-like fruit of the various species of *Spondias*, a genus of *Anacardiaceæ*. The species are natives of the East and West Indies, and also of India and Brazil.

HOGUE, CAPE DE LA, the northernmost point of the department of Manche, northwestern France, in lat. 49° 44' N., long. 1° 56' W., in the English Channel.

HOHENLOHE, PRINCE CLODWIG KARL VICTOR, a German Chancellor, and Prime Minister of Prussia, was born March 31, 1819. In 1841 he entered the University of Göttingen, and in 1845 he became a member of Parliament in Bavaria. He af-

terward represented the kingdom as ambassador at the Papal, Italian and Greek courts. In 1870

PRINCE HOHENLOHE.

he took his seat in the House of Peers. After the close of the Franco-German war he became a member of the first Imperial Parliament; three years later he succeeded Count Arnim as German representative at Paris, and attended the congress of Berlin that was held in 1878. In the same year he entered the Reichstag. On the death of

General Manteuffel, governor of Alsace-Lorraine in 1885, he succeeded to the governorship, retaining that office up to his promotion, in October, 1894, to the position of Chancellor of the German Empire and Prussian Prime Minister. This office Prince Hohenlohe resigned Oct. 1900. See HOHENLOHE, Vol. XII, p. 51.

HOHENSTAUFFEN FAMILY. See GERMANY, Vol. X, pp. 488-490.

HOHENZOLLERN, LEOPOLD, PRINCE OF. See Vol. XII, p. 52; and FRANCE, Vol. IX, p. 626.

HOKUSAI, KATSUSHIKA, a Japanese artist; born in 1760; famous for his illustrations of Japanese scenery, costumes and life. His work is preserved in the *Hokusai Tchon* and the *Fuji Hiakké*, which contain one hundred views of the famous volcanic mountain, the scene of annual Buddhist pilgrimages. His drawings have furnished ideas and suggestions to all manner of artistic workmen on Japanese subjects. He died in 1849.

HOLBROOK, JOHN EDWARDS, an American naturalist; born at Beaufort, South Carolina, Dec. 31, 1795. After receiving his degree of M.D. from the University of Pennsylvania, he went to Europe to continue his medical studies there, especially at Paris. In 1824 he was made professor of anatomy in the Medical College of South Carolina, which position he held for more than thirty years. During the Civil War he served as surgeon in a South Carolina regiment. His chief work is *American Herpetology*, published in 1842. He died at Norfolk, Massachusetts, Sept. 8, 1871.

HOLCOMBE, JAMES PHILEMON, an American lawyer and author; born at Lynchburg, Virginia, in 1820; educated at Yale College and the University of Virginia; professor of law in University of Virginia (1852-60); a member of the Confederate Congress from 1861 to 1863; principal of a high school from 1868 to 1873. He was the author of numerous magazine articles and also wrote a number of papers on legal questions, chief among which are *Introduction to Equity Jurisprudence* (1846); *Law of Debtor and Creditor in the United States and Canada* (1848); *Literature and Letters* (1868). He died in Capon Springs, Virginia, Aug. 26, 1873.

HOLDEN, a city of Johnson County, central western Missouri, on the Missouri, Kansas and Texas and the Missouri Pacific railroads, 42 miles S.E. of Kansas City. Farming is carried on in the neigh-

borhood, and timber, building-stone and coal are obtained in abundance. It has grain-elevators, flour and grist mills, schools, water-works, hotels, St. Cecilia's Seminary, etc. Population 1890, 2,520.

HOLDEN, EDWARD SINGLETON, an American astronomer; born in St. Louis, Missouri, Nov. 5, 1846. He studied at West Point, and subsequently held several positions in the army, as instructor in mathematics and philosophy. He resigned from the army in 1873, and was appointed professor of mathematics in the navy, where he was assigned to duty in the naval observatory as assistant to Professor Newcomb. The telegraph time-ball in New York was planned by him. In 1881 he became professor of astronomy in the University of Wisconsin and director of the new Washburn Observatory, where he remained, with brief intermissions, until 1886, and published four volumes of observations. In 1883 he visited the Caroline Islands to observe a total eclipse of the sun; in 1896 was chosen president of the University of California and director of the Lick Observatory on Mount Hamilton, San José. He published *Astronomy for Students* (1880); *Sir William Herschel: His Life and Works* (1881); *Hand-book of Lick Observatory* (1888).

HOLDER, JOSEPH BASSETT, an American zoölogist; born at Lynn, Massachusetts, Oct. 26, 1824. In 1860 he entered the United States army, and was surgeon-in-charge at the United States military prison in Tortugas, Florida, until 1867, and then was assistant post-surgeon at Fortress Monroe, Virginia. In 1870 he was made curator of invertebrate zoölogy, ichthyology and herpetology in the American Museum of Natural History, New York, of which he was one of the founders. His principal works are a *History of North American Fauna* (1882); *History of the Atlantic Right Whales* (1883); *The Living World* (1884). He died Feb. 28, 1888.

HOLDREGE, a city and the capital of Phelps County, central southern Nebraska, on the Burlington and Missouri River railroad, 23 miles S.W. of Kearney. It has flour-mills, brick and marble yards and grain-elevators. It is a great-cattle and hog market. It is supplied with electric lights and water-works. Pop. 1890, 2,601; 1900, 3,007.

HOLD-THE-RENT MANIFESTO. See HOME RULE, in these Supplements.

HOLE, SAMUEL REYNOLDS, an English clergyman and author, Dean of Rochester; born Dec. 5, 1819; educated at the grammar school, Newark-on-Trent and at Brasenose College, Oxford; ordained deacon, 1844; priest, 1845; vicar, 1850; prebendary of Lincoln, 1875; dean of Rochester, 1887. He is the author of *A Little Tour in Ireland*, illustrated by John Leech (1858); *A Book about Roses* (1859); *Six of Spades* (1860); *Nice and Her Neighbors* (1881); *Book about the Garden* (1892); *Memories of Dean Hole* (1892); *More Memories* (1894); *A Little Tour in America* (1895).

HOLE, WILLIAM, an English artist; born at Salisbury, Nov. 7, 1846. After studying at the University of Edinburgh he was apprenticed to a firm of civil engineers; four years later he visited Rome, where his latent artistic instincts were developed, causing him, on his return to Edinburgh, to

give up engineering for art. He was trained at the Edinburgh School of Art, and under Cameron and Chalmers at the school of the Royal Scottish Academy. Mr. Hole's distinction was gained chiefly through his power as an etcher. Among his leading pictures are *The Evening of Culloden* (1880); *Prince Charlie's Parliament* (1881); *Gethsemane* (1887). His principal original etchings are *Quasi Cursors* (1884); portraits of the professors of Edinburgh University; and *The Canterbury Pilgrims* (1888).

HOLGUIN, a city of Santiago de Cuba, eastern Cuba, 115 miles E.S.E. of Puerto Principe. It is on the Rio Salado, near its source, in a fertile plain, which produces cattle, maize, tobacco and timber. The place was settled in 1720, and received its city charter in 1751. Population 1894, nearly 10,000.

HOLIDAY, in legal terms, imports Sunday, Christmasday and any other day appointed as a public festival or fast day. (See **FESTIVALS**, Vol. IX, pp. 113-119.) The old English holidays, which had their origin and obtained their name in mediæval England when the state religion was that of the Church of Rome, are still observed in some parts of England, Scotland and Ireland. These holidays are as follows:

January 6th, Twelfth day, sometimes called Old Christmas day, the same as Epiphany; February 2d, Candlemas, the Festival of the Purification of the Virgin; February 14th, Old Candlemas, St. Valentine's day; March 25th, Lady day, the Annunciation of the Virgin; April 6th, Old Lady day; June 24th, Midsummer day, Feast of the Nativity of John the Baptist; July 7th, Old Midsummer day; August 1st, Lammas day, originally the festival of the wheat-harvest, but in the church the festival of St. Peter's miraculous deliverance from prison; August 13th, Old Lammas day; September 29th, the Feast of St. Michael the Archangel; October 11th, Old Michaelmas day; November 1st, Allhallowmas; November 2d, All Souls' day; November 11th, Martinmas; and December 28th, Childermas, or Holy Innocents' day.

Lady day, Midsummer day, Michaelmas and Christmas are quarter (or rent) days in England, and Whitsunday, Martinmas, Candlemas, and Lammas day in Scotland. Shrove Tuesday, the day before Ash Wednesday, and Maundy Thursday, the day before Good Friday, are observed by the church. Mothering or Refreshment Sunday is Mid-Lent Sunday, on which the old rural custom obtains of visiting one's parents with presents.

Legal holidays in the United States are days appointed by law to be kept as holidays, especially as regards the closing of public offices and the suspension of judicial proceedings and general business. A list of the legal holidays observed by the various states is as follows:

JANUARY 1 (*New Year's day*). In all the states except Arkansas, Massachusetts, Mississippi, New Hampshire and Rhode Island.

JANUARY 8 (*anniversary of the battle of New Orleans*). In Louisiana.

JANUARY 19 (*Lee's birthday*). In Florida, Georgia, North Carolina and Virginia.

FEBRUARY 12 (*Lincoln's birthday*). In Illinois, Minnesota, New Jersey, New York and Washington (state).

MARDI GRAS. In Alabama and the parish of Orleans, Louisiana.

FEBRUARY 22 (*Washington's birthday*). In all the states, except Arkansas, Iowa and Mississippi.

MARCH 2 (*anniversary of Texan independence*). In Texas.

MARCH 4 (*Firemen's anniversary*). In New Orleans, Louisiana.

STATE ELECTION DAY. In Rhode Island.

GOOD FRIDAY. In Alabama, Louisiana, Maryland, Pennsylvania and Tennessee.

APRIL 19 (*Patriots' day*). In Massachusetts.

APRIL 21 (*anniversary of the battle of San Jacinto*). In Texas.

MEMORIAL DAY. In Alabama, Florida and Georgia.

MEMORIAL DAY. In North Carolina.

MAY 20 (*anniversary of the signing of the Mecklenburg declaration of independence*). In North Carolina.

DECORATION DAY. In Arizona, California, Colorado, Connecticut, Delaware, District of Columbia, Illinois, Indiana, Iowa, Kansas, Kentucky, Maine, Maryland, Massachusetts, Michigan, Minnesota, Missouri, Montana, Nebraska, Nevada, New Hampshire, New Jersey, New York, North Dakota, Ohio, Oklahoma, Oregon, Pennsylvania, Rhode Island, Tennessee, Utah, Vermont, Wisconsin, Washington and Wyoming.

JUNE 3 (*Jefferson Davis's birthday*). In Florida.

JULY 4 (*Independence day*). In all the states.

JULY 24 (*Pioneers' day*). In Utah.

AUGUST 16 (*Bennington battle day*). In Vermont.

LABOR DAY. In Alabama, California, Colorado, Connecticut, Delaware, Florida, Georgia, Illinois, Indiana, Iowa, Kansas, Louisiana, Maine, Maryland, Massachusetts, Michigan, Minnesota, Missouri, Montana, Nebraska, New Hampshire, New Jersey, New York, Ohio, Oregon, Pennsylvania, Rhode Island, South Carolina, South Dakota, Tennessee, Texas, Utah, Virginia, Washington and Wyoming.

SEPTEMBER 9 (*Admission day*). In California.

OCTOBER 15 (*Lincoln day*). In Connecticut.

OCTOBER 31 (*Admission day*). In Nevada.

NOVEMBER 1 (*All Saints' day*). In Louisiana.

GENERAL ELECTION DAY. In Arizona, California, Colorado, Idaho, Indiana, Iowa, Kansas, Maryland, Minnesota, Missouri, Montana, Nevada, New Hampshire, New Jersey, New York, North Dakota, Ohio, Pennsylvania, Rhode Island, South Carolina, South Dakota, Tennessee, Texas, West Virginia, Washington, Wisconsin and Wyoming.

THANKSGIVING DAY. Observed in all the states, though in some it is not a statutory holiday.

DECEMBER 25 (*Christmas day*). In all the states.

Sundays and fast days are legal holidays in all the states which designate them as such.

There are no statutory holidays in Arkansas and Mississippi, but by common consent the Fourth of July and Christmas are observed as holidays.

Arbor day is a quasi holiday in Colorado, Kansas, Minnesota, North Dakota, Wisconsin and Wyoming, the day being set by the governor; in Texas, February 22d; in Nebraska, April 22d; Montana, third Tuesday in April; Utah, first Saturday in April; Rhode Island, first Friday in May; and Idaho, on Friday after May 1st.

Every Saturday after twelve o'clock noon is a legal holiday in New York, New Jersey, Pennsylvania and Maryland, and the cities of New Orleans and Wilmington, Delaware, and June 1st to September 30th in Newcastle County, Delaware, and Denver, Colorado.

There is no national holiday, not even the Fourth of July. Congress has at various times appointed special holidays. In the second session of the Fifty-third Congress it passed an act making Labor Day a public holiday in the District of Columbia, and it has recognized the existence of certain days as holidays, for commercial purposes, in such legislation as the Bankruptcy Act, but with the exception named there is no general statute on the subject. The proclamation of the President designating a day of thanksgiving only makes it a holiday in those states which provide by law for it. The Federal Courts and officers of the United States government, however, observe the legal holidays of the states in which they are located.

HOLL, a family of English artists descended from **WILLIAM HOLL**, an engraver of note in the early part of the nineteenth century. He was the father of two eminent engravers, **WILLIAM**, born at Plaistow in 1807, and **FRANCIS**, born at Camder Town, March 23, 1815. **WILLIAM** studied under

his father, and after devoting himself for a considerable time to work in portraiture and illustration, began engraving after William Powell Frith and George Richmond. He was not a prolific artist. His best-known works are *An English Merry-making a Hundred Years Ago*; the *Village Pastor*, after Frith; and *Rebekah*, after Richmond. Died in London, Jan. 30, 1871.

FRANCIS, like his brother, got his training from his father, and like his brother, also, worked principally after Frith and Richmond in some of their best productions. Holl's success with Richmond's work, which was almost exclusively portraiture, led to court patronage. His best-known works are the *Railway Station* and *Coming of Age*, after Frith, and his illustrations in Martin's *Life of the Prince Consort*. He died at Godalming, Jan. 14, 1884.—FRANK HOLL, a son of Francis, was born July 4, 1845, in London, and educated at University College, in that city. He became a student at the Royal Academy, and at the age of 19 exhibited a portrait, and a picture called *Turned Out of Church*. In 1868 he produced a picture entitled *The Lord Giveth and the Lord Hath Taken Away*, which gained for him a two-years' traveling scholarship. During his later years he devoted himself to portrait-painting, and his work in this line includes many of the most prominent men in England. Some of his best-known productions are *A Village Funeral*; *Her Firstborn*; *No Tidings from the Sea*. Mr. Holl became a member of the Royal Academy in 1883. He died in London, July 31, 1888.

HOLLAND. See Vol. XII, pp. 59-98; and NETHERLANDS, in these Supplements.

HOLLAND, a city of Ottawa County, central western south Michigan, on the Black River, and on the Chicago and West Michigan railroad, 4 miles E. of Lake Michigan. It is the seat of Hope College, a co-educational institution of the Reformed Church, having 256 students and 13 instructors in 1898; has iron-smelting furnaces, mills, and tanneries. It is largely populated by Hollanders. Population 1890, 3,945; 1900, 7,790.

HOLLAND, JOSIAH GILBERT, an American journalist and novelist; born at Belchertown, Massachusetts, July 24, 1819. After graduating at Berkshire Medical College, Pittsfield, Massachusetts, he practiced medicine for three years and then became superintendent of public schools at Vicksburg, Mississippi. In 1849 he became associate editor of the *Springfield Republican*. In 1866 he sold his interest in the *Republican* and traveled for some time in Europe.

Scribner's Magazine was established by him in 1870, and of it and its successor, *The Century Magazine*, he remained editor until his death. Having removed to New York, Dr. Holland be-

DR. JOSIAH G. HOLLAND.

came president of the Board of Education of New York city, and also chairman of the board of trustees of the College of the City of New York. A large number of works were written and published by him, all of which were of the highest moral tone, and many of which obtained very great popularity. Some of the best known of these works are *History of Western Massachusetts* (1855); *Letters to Young People* (1858); *Married and Single* (1858); *Bitter Sweet: A Poem in Dramatic Form* (1858); *Gold Foil* (1859); *Miss Gilbert's Career* (1860); *Arthur Bonnicastle* (1873); *The Story of Seven Oaks* (1875); *Nicholas Minturn* (1876); and *Complete Poetical Works* (1879). Died in New York city, Oct. 12, 1881.

HOLLAND, ROBERT AFTON, an American clergyman and author; born in Nashville, Tennessee, June 1, 1844. At the age of 17 he became a Methodist preacher, and in the following year chaplain of a brigade in the Confederate army. At the close of the war he was called to the pastorate of Trinity Methodist Church, Baltimore, and became editor of the *Christian Advocate*, published in that city. In 1872 he joined the Protestant Episcopal Church, and after that time held charges in St. Louis, New Orleans, and Chicago. A number of his sermons and articles on religious topics have been published. Among his publications are *The Philosophy of the Real Presence*; *The Proof of Immortality*; and *Democracy in the Church*.

HOLLAND, THOMAS ERSKINE, an English writer on jurisprudence; born at Brighton, July 17, 1835; educated at Oxford, and called to the bar in 1863; was frequently lecturer and law examiner at Oxford, University of London, and at Cambridge; probably best known by his *Elements of Jurisprudence* (1880), which became a textbook in most English and American universities and law schools. In addition, he published *Essays on the Form of the Laws* (1870); *The Institutes of Justinian as a Recension of the Institutes of Gaius* (1873); *A Manual of Naval Prize Law* (1888); *Studies in International Law* (1898).

HOLLEY, a village of Orleans County, northwestern New York, 22 miles W. of Rochester, on the New York Central and Hudson River railroad, and on the Erie canal. It exports farm produce, Medina sandstone, cider, vinegar, and evaporated apples. Its evaporating establishment is the largest in the state. It has good schools, good water-supply, and electric lights. Population 1900, 1,385.

HOLLEY, ALEXANDER LYMAN, an American metallurgist and engineer; born at Lakeville, Connecticut, July 20, 1832; graduated from Brown University and took up practical work at the Corliss steam-engine works. From 1856 to 1863 he was a contributor to and editor of various engineering journals, and in connection with Colburn published his *Railway Economy: A Report on European Railways* (1858). The Bessemer process of steel-making was introduced by him into the United States in 1865, and steel-works and rolling-mills were built by him at Har-

risburg, Troy, Chicago, Joliet, and Pittsburg. In the same year he published *A Treatise on Ordnance and Armor*. Mr. Holley was consulting engineer to a large number of steel-works; was connected with various scientific societies; and achieved the rare distinction of being a leading authority in three separate lines—railways, ordnance, and steel-manufacture. He died in Brooklyn, N. Y., Jan. 29, 1882.

HOLLIDAYSBURG, a borough and the capital of Blair County, southwestern central Pennsylvania, on a branch of the Juniata River, and on the Pennsylvania railroad. It has furnaces, foundries, rolling-mills, and nail factories. Population 1890, 2,975; 1900, 2,998.

HOLLINGSHEAD, JOHN, an English author; and theatrical manager; born in London, Sept. 9, 1827. He joined the staff of *Household Words* in 1857; was a constant contributor to that periodical and to *All the Year Round*, *Cornhill Magazine*, *Good Words*, and *Once a Week*. From 1859 to 1864 he published several volumes of essays and stories, chiefly on life in London. He wrote several original dramatic pieces; among them, *Rubbing the Gilt Off* and *Rough Diamonds*. He was for ten years the dramatic critic of the *Daily News*, *London Review*, etc., and became a member of the Dramatic Authors' Society. Mr. Hollingshead opened the Gaiety Theatre, in the Strand, in Dec. 1868. He had three metropolitan theaters under his direction at one time, with the most powerful combination of actors in London. He was also the director of the principal theater in Manchester. In 1879 he induced the whole Comédie Française to visit London and play for six weeks at the Gaiety.

HOLLIS, a town of southern Hillsboro County, New Hampshire, on the Nashua River, 5 miles S.W. of Nashua, and on the Boston and Maine railroad. It is engaged in agriculture and the manufacture of lumber and caskets. Population 1890, 1,000, 1900, 910.

HOLLISTER, a town and capital of San Benito County, central California, 94 miles S. of San Francisco, by the Southern Pacific railroad. Tobacco and grain and fruits are raised in the vicinity, while coal and quicksilver are found in the surrounding mountains. Wool and wine are also exported. A complete system of irrigation has been introduced with success. Population 1890, 1,234; 1900, 1,315.

HOLLISTON, a manufacturing town of southern Middlesex County, Massachusetts, 26 miles S.W. of Boston, on the Boston and Albany railroad. It manufactures boots, shoes, harness, straw and woolen goods, nails, wrenches and pumps. Population 1890, 2,619; 1900, 2,598.

HOLLOWAY COLLEGE, THE ROYAL, an institution at Egham, England, for the higher education of women. It is connected with the universities of London, and provides the instruction necessary for the London degrees in science and arts, the preliminary M.B., and for the examinations of the University of Oxford. Instruction is also provided in music, drawing and painting.

There were, in 1896, 88 students, 8 resident women lecturers, and 10 non-resident lecturers and professors. No student may enter the college for less than one year, nor reside for more than four, without special leave.

HOLLY, a post village of Oakland county, southeastern South Michigan, 52 miles N.W. of Detroit; on the Detroit, Grand Haven and Milwaukee and the Flint and Pere Marquette railroads. Ice is shipped, and the manufactures are furniture, boxes, pickles and vinegar, lumber, flour and castings. Population 1890, 1,266; 1900, 1,419.

HOLLY OAK. See **HOLM OAK**, in these Supplements.

HOLLY SPRINGS, a city, railroad junction and the capital of Marshall County, central northern Mississippi, noted for its educational institutions. Rust University (Methodist), Franklin Female College (non-sectarian), Bethlehem Academy (Roman Catholic), Maury Institute (non-sectarian), and the State Normal School are located here. It is a cotton-shipping point, and manufactures hubs, spokes, wagons, and contains potteries and marble-works. Population 1900, 2,815.

HOLMAN, AGNES, the stage name of **GILFERT, AGNES**; q.v., in these Supplements.

HOLMAN, WILLIAM STEELE, an American statesman; born in Dearborn County, Indiana, Sept. 6, 1822. He was admitted to the Indiana bar, and from 1843 to 1846 was judge of the probate court. From 1847 to 1849 he was prosecuting attorney; was a member of the legislature in 1851, and was a judge of the court of common pleas from 1852 to 1856. He was a Democratic member of the successive Congresses from the 36th to the 53d, except the 45th and 46th. From his opposition to all doubtful measures and schemes of lobbyists, he gained the title of "The Great Objector." He was defeated for Congress in 1894. Died in Washington, D.C., April 22, 1897.

HOLMES, AUGUSTA MARY ANNE, a French composer; born in Paris, Dec. 16, 1847, of Irish parents. Her musical education was completed in Paris under Lambert and Franck. Her works consist mostly of operas and symphonies. She produced the *Ode Triumphale* at the Paris Exposition in 1889; an opera, *La Montagne Noire*, was produced by the Grand Opera at Paris in 1895. Among her other compositions are *Hero and Leander*, an opera; *In Exitu Israel*, a psalm; and a symphonic ode with choruses, *Ludus pro Patria*.

HOLMES, GEORGE FREDERICK, an American educator; born in Georgetown, British Guiana, Aug. 2, 1820. He was a teacher in Virginia, Georgia and South Carolina, and in 1842 was admitted to the South Carolina bar. In 1845 he became a professor in Richmond College, Virginia; in 1846 president of the University of Mississippi; in 1847 professor of political economy, history, and international law in William and Mary College; and in 1857 professor of history and literature in the University of Virginia. He published a series of text-books used in Southern schools. Died at Richmond, Va., Nov. 4, 1897.

HOLMES, MARY JANE HAWES, an American novelist; born at Brookfield, Massachusetts. Her father was a brother of Dr. Joel Hawes. She married Daniel Holmes, and resided in Versailles, Kentucky, and Brockport, New York. Her numerous novels are of a domestic character and of a high moral tone. Some of the best known are *Tempest and Sunshine* (1854); *Lena Rivers* (1856); and *Madeline* (1881).

HOLMES, NATHANIEL, an American jurist and Shakespearean scholar; born at Peterboro, New Hampshire, July 2, 1814. After graduating from Harvard he studied law and was admitted to the bar in 1839; was judge of the supreme court of Missouri from 1865 to 1868, and professor of law in Harvard University from 1868 to 1872. Mr. Holmes was well known as a believer in and advocate of the Baconian theory of the authorship of Shakespeare's plays, and in 1866 published *The Authorship of Shakespeare*.

HOLMES, OLIVER WENDELL, an American surgeon, poet and essayist; born at Cambridge,

Massachusetts, Aug. 29, 1809, and died at Boston, Oct. 7, 1894. He was the son of the Rev. Abiel Holmes, a Congregational minister, and of Sarah Wendell, of Dutch ancestry, and related to many well-known families in New England. He entered Harvard College at the age of 16, and graduated in 1829, in a class,

many of whose members afterward became famous. For a time he studied law, but later on abandoned it for a course in medicine at Harvard, whence he went to the hospitals of Paris, and, returning, took the M.D. degree at his *alma mater* in 1836. Two years afterward he was appointed professor of anatomy and physiology at Dartmouth College, and in 1847 was called to the same chair in the Massachusetts Medical School, Boston, a post which he held for 35 years. He became distinguished as an anatomist, and was the first to establish the infectiousness of puerperal fever. In 1882, at the age of 73 he retired from his professorship. His literary career dates from his student days, when he found amusement in dashing off quaint and humorous verse, the first collection of which appeared in 1836, supplemented by a further volume in 1848. Selections from both of these volumes were at an early period published in England, where they won a wide audience.

The poems are mainly short pieces, attuned to a delicate ear, and many of them exquisitely wrought. Others belong to the class known as *vers d'occasion*, delightful conceits, playful and witty, and turned out with great felicity of expression. A few, such as *The Voiceless*, *Nearing the Snow-Line*, and *The Last Leaf*, are half-serious effusions, with a pathos that touches all hearts:

while others, again, like *The Chambered Nautilus*, in which he used a meter of his own devising, belong to the highest type of verse. It is as a poet of humor that Holmes is likely to remain best known—the vein that he worked at his happiest at anniversary gatherings, banquets, and celebrations. He has a masterly command of metric form, with an uncommon freshness and originality. His later collections of verse are *Songs in Many Keys* (1862); *Songs of Many Seasons* (1875), *The Iron Gate, and Other Poems* (1880); and *Before the Curfew, and Other Poems* (1888.)

In Holmes's correspondence (*Life and Letters*, edited by John T. Morse, Jr., 2 vols., Boston, 1896), the grave and gay commingle, as they do, also, in the poet's most characteristic prose writings, the series of discursive philosophizings and personal talks, styled *The Autocrat of the Breakfast-Table* (1857-58). The work originally appeared as contributions to the *Atlantic Monthly*. In the same vehicle appeared, in 1860, *The Professor at the Breakfast Table*, and, after a lengthened interval, *The Poet at the Breakfast-Table* (1872). The first of the series is the best. Here the distinctive charm of the man comes freely out, and in reading the sparkling pages one hardly knows which most to admire—the wit or the wisdom of the writer, his half-bantering chidings and criticisms, or the delightfully familiar and amusingly unconventional character of his personal confidences.

In his two notable novels, *Elsie Venner* (1859) and *The Guardian Angel* (1867), Dr. Holmes writes purposively, and as a medical man and scientific observer. The former is a study of heredity as affected by prenatal influences; the latter, which is a less weird and more artistic story, is a fine historical and semibiographical study, with an admirable New England setting. To these he added a third novel in 1885, entitled *A Mortal Antipathy*, in which the hero, a weak and uninteresting character, has a repulsive feeling for a young and pretty cousin, owing to her having caused him to fall from a balcony in his childhood.

The further serious side of Holmes's personality we see in quasi-scientific essays, written with an eye to popular acceptance, in the intervals of an active and engrossing professional career. These include *Currents and Counter-Currents* (1861); *Border-Lines of Knowledge* (1862); *Soundings from the Atlantic* (1864); and *Mechanism in Thought and Morals* (1871). Even here there is much of the buoyancy of manner and sprightliness of thought habitual to him. Of these qualities he could never divest himself, even in his most intellectual prelections, and where his personal antipathies, as in the case of rigid theological creeds, would excite him to the point of vehement denunciation and sometimes to heretical irreverence.

Holmes's faculty for memoir-writing was not great. His *Life of John Lothrop Motley* (1878) and that of *Ralph Waldo Emerson* (1885) are respectable performances, but cannot be satisfactory to the admirers of either. Both works have many

OLIVER W. HOLMES.

brilliant and suggestive passages in the writer's characteristic vein; but neither quite achieves a success. In 1886 Dr. Holmes visited Europe, and in Britain came into pleasant contact with many admirers. A record of this tour was published under the title of *One Hundred Days in Europe* (1887). While in the United Kingdom the great universities conferred on him their academic honors. Cambridge made him a doctor of letters, Edinburgh gave him an LL. D.; and Oxford made him a doctor of laws. Holmes made a further annual appearance in letters in 1890, when he published *Over the Tea-cups*, full of the old-time wit, wisdom and humor, though the "Autocrat" himself speaks of it as "the wintry products of my freezing wits." He died four years later in his loved native city of Boston.

G. MERCER ADAM.

HOLMES, WILLIAM HENRY, an American archaeologist; born near Cadiz, Ohio, Dec. 1, 1846; became attached, as draftsman, to the Smithsonian Institution at Washington, in 1871, and in 1872 was appointed artist to the Hayden exploring expedition; from 1874 to 1882 he was connected with the Geological Survey; in 1882 he was made honorary curator of aboriginal pottery in the National Museum; and in 1889 was placed in charge of the archaeological explorations of the bureau of ethnology. He was elected professor of archaeological geology at the University of Chicago in 1892. Besides his writings, which include reports on the cliff ruins of the San Juan country and Hayden's *Atlas of Colorado*, he has done a large number of water-colors of western scenery, which have been largely used in the reports of the Geological Survey.

HOLM-OAK OR HOLLY-OAK, a beautiful evergreen oak (*Quercus ilex*), a native of southern Europe and northern Africa. It affords excellent timber.

HOLST, HERMANN EDUARD VON, a Russian-German historian; born at Fellin, Livonia, June 19, 1841; studied at Dorpat and Heidelberg; settled in St. Petersburg, but having, while traveling in Germany, written an article displeasing to the Russian government, he was forbidden to return, and soon after emigrated to the United States, where he engaged in literary and editorial work in New York. In 1872 he was appointed professor of history at Strasburg University, and two years later was called to the chair of modern history at Freiburg. He afterward revisited the United States and lectured at Johns Hopkins University. In 1892 he was called from Freiburg to the chair of history at the University of Chicago. His articles on the Monroe Doctrine in

1896 attracted wide attention. His principal work is *Verfassung und Demokratie der Vereinigten Staaten von Amerika*, translated by J. J. Lalor and A. B. Mason, under the title *The Constitutional and Political History of the United States* (1876-85). Among his other works are a *Life of John C. Calhoun* and *The Constitutional Law of the United States of America* (1887).

HOLSTEIN. See SCHLESWIG-HOLSTEIN, Vol. XXI, p. 415.

HOLSTON, a river of eastern Tennessee, rising in several branches in Smyth and Washington counties, western Virginia, on the eastern slope of the Clinch Mountains. It flows W.S.W. into Tennessee, receives the French Broad, the Little Tennessee and the Watega, joins the Clinch River at Kingston, Roane County, and forms the Tennessee. Its length is about 200 miles, and it is navigable for most of the distance for river-boats of light draft.

HOLT, JOSEPH, an American jurist; born in Breckinridge County, Kentucky, Jan. 6, 1807; studied at Center College, Danville, and St. Joseph's College, Bardstown. He was admitted to the Kentucky bar in 1828; in 1857 was appointed Commissioner of Patents; became Postmaster-General in 1859, and in 1860 assumed charge of the War Department; with the exception of General Cass, he was the only member of the old Buchanan Cabinet who did not sympathize with the South. In 1862 he was made judge-advocate-general of the army, and in 1864 was put at the head of the bureau of military justice. In 1865 he was brevetted major-general of the United States army, for faithful, meritorious and distinguished services in the bureau of military justice during the war, and in 1875, at his own request, was retired. He was conspicuous in various courts-martial and courts of justice, notably that before which President Lincoln's assassins were arraigned. He died in Washington, D. C., Aug. 1, 1894.

HOLTON, a city and the capital of Jackson County, northeastern Kansas, 56 miles W. of Leavenworth, on the Union Pacific, Missouri Pacific, the Kansas City North-Western, and the Chicago, Rock Island and Pacific railroads. It manufactures flour, and exports excellent fruit, good timber, live-stock and building-stone. It is the seat of Campbell University, a co-educational, non-sectarian institution with 550 students, opened in 1882. Population 1900, 3,082.

HOLTZENDORFF, FRANZ VON, a German jurist; born at Vietmannsdorf, in Brandenburg, Oct. 14, 1829. Educated for the law, he practiced in the courts at Berlin till 1857, when he became a lecturer on law at the university. Made professor there in 1861, he was called to Munich in 1873. He is known as an able writer on several branches of law, and especially as an advocate for the reform of prison and penal systems. Among the more important of his numerous works are *Französische Rechtszustände* (1859); *Prinzipien der Politik* (1869); and, with Jagemann, *Handbuch des Gefängniswesens* (1888). He died Feb. 4, 1888.

HOLTZ MACHINE. See ELECTRICITY, Vol. VIII, p. 102.

HOLTZMANN, ADOLF, a German archæologist, born at Carlsruhe, May 2, 1810. He first studied theology at Berlin, then Old German under Schmeller at Munich, and afterward Sanskrit under Burnouf, Paris. In 1852 he was appointed professor of German language and literature at Heidelberg. It was Holtzmann who first advanced the theory that manuscript C of the *Nibelungenlied* was the oldest form of the mediæval epic, and thus caused the war among students of German philology over the origin of the *Nibelungenlied*. Among his works are translations of the *Mahâbhârata* and the *Râmâyana*, and an *Old German Grammar*. He died at Heidelberg, July 3, 1870.

HOLTZMANN, HEINRICH JULIUS, a German theologian, son of Adolf Holtzmann; born at Carlsruhe, May 17, 1832. In 1861 he became extraordinary, in 1865 ordinary, professor of theology at Heidelberg, and in 1874 accepted a call to the theological faculty at Strasburg. He became one of the leaders of the advanced school. Among his writings are *Kanon und Tradition* (1859), and, with Zöpffel, *Lexikon für Theologie und Kirchenwesen* (1882).

HOLY ALLIANCE. See AUSTRIA, Vol. III, p. 135; FRANCE, Vol. IX, p. 619; and MONROE DOCTRINE, in these Supplements.

HOLY BROTHERHOOD. See SPAIN, Vol. XXII, p. 326.

HOLY COMMUNION. See EUCHARIST, Vol. VIII, p. 651.

HOLY GHOST. The word *ghost* has here its proper meaning of spirit; and many religious writers now prefer the name *Holy Spirit*, owing to the associations suggested to certain minds by the word *ghost*.

The Holy Spirit is the third person in the Trinity, of the same substance with the Father and the Son, and co-eternal and co-equal with them.

The Christians of the first three centuries had no well-defined doctrine of the Holy Spirit. The formula of baptism and the apostolic benediction taught them to think of three divine persons as engaged in the work of our salvation, but naturally Christ attracted their chief reverence and affection, and challenged their chief thought. Yet they regarded Christ as inferior to the Father in nature, and naturally, therefore, regarded the Spirit as inferior to Christ in nature; and this gradation of the persons of the Trinity was taught by all the Fathers who wrote on the subject, as Justin, Tertullian and Origen.

In the fourth century, however, the study of the Scriptures led the orthodox Christians to believe that God exists naturally as a Trinity, and produces his Son by nature, and not by an act of will. It followed logically that the Son possesses the same nature with the Father, and that, though he may be subordinate in functions, he is not subordinate in nature. When this view was reached it was but a step to the conclusion

that the Spirit also possesses the divine nature equally with the Father and the Son. Yet it is not probable that a majority of the bishops who attended the council of Nicæa in A.D. 325 accepted this view of the Holy Spirit, and it was not set forth in the Nicene creed. But the statements of the Nicene creed concerning the Father and the Son led necessarily to the full doctrine of the Holy Spirit, and this doctrine was formulated at the council of Constantinople in 381. Thus the Christians of the fourth century were brought to the doctrine of the Holy Spirit almost without design, and as a natural result of their studies of Christ in his relations to the Father.

Up to this point the East and the West, the Greek and Latin branches of the church, had moved as one body in these inquiries. The East now paused, while the West proceeded further. If, as some affirm, there were traces of subordinationism in the creeds of Nicæa and Constantinople they were removed, for the West, by Augustine, who taught strenuously the contrary view. Again, the Nicene creed, as completed at Constantinople, in 381, declared that the Holy Spirit proceeds from the Father. But there were many in the Latin Church who believed that he proceeds from both the Father and the Son. Perhaps they were led to this view by the Arian objection to orthodoxy, that, if he proceeds from the Father only, the Son must be inferior to the Father. The third council of Toledo, in 589, declared that he proceeds from both. This council was not ecumenical, however, and had no authority to amend the creeds; but the statement was accepted gradually throughout the Western Church, though to this day it has never been promulgated officially by any ecumenical council or any pope. The general adoption of this statement in the West was a chief cause of the separation of the Latin and the Greek churches, and is now a chief impediment to their reunion. Protestant theologians, in general, teach the procession of the Spirit from both the Father and the Son, but they do this solely on Biblical grounds, and with the admission that the doctrine of the double procession has not been revealed so clearly as some others, and should not be made an occasion of divisions among brethren.

The offices of the Holy Spirit have not caused much controversy. It has always been held by all, that he inspired the prophets and the other writers of the Scriptures, and that he regenerates and sanctifies those who are saved.

Literature: Schaff, *The Creeds of Christendom*; the histories of doctrine and of dogma, by Hagenbach, Shedd, Fisher, Sheldon and Harnack; the histories of the church, by Neander, Schaff and others.

FRANKLIN JOHNSON.

HOLY GHOST, ORDER OF THE, a name given to various orders of the Roman Catholic Church, which have existed at different times since the twelfth century. The first, consisting of hospital knights of St. Augustine, was founded by Guido of Montpellier in 1178, and in part removed to Rome in 1204, receiving the hospital in

Sassia. Here they became, in part, canons regular, and the knightly branch, in 1700, ceased to exist. It 1254 the Hospitallers of the Holy Ghost, a secular branch of the above, containing both brothers and sisters, were organized. Another congregation of canons of the Holy Ghost was confirmed in 1588. The congregation of the Holy Ghost was founded in Paris by Claude Desplaces in 1703, and in 1848, after many vicissitudes, it was united with the Congregation of the Immaculate Heart of Mary, an order founded in 1841, by Marie Paul François Libermann. The organization carries on work principally among the negroes of Africa.

HOLY-GHOST FLOWER OR DOVE-FLOWER, a name given to a Central American orchid, *Peristeria alata*, from the fancied resemblance of the flower to a white bird with expanded wings. This resemblance causes it to be regarded as a sacred plant by the natives.

HOLY GRAIL. See **GRAIL**, Vol. XI, pp. 34-36.

HOLY INNOCENTS' DAY. See **INNOCENTS' DAY**, in these Supplements.

HOLY LEAGUE, a name applied to various European alliances, as that of 1511, between the Pope Julius II, Spain and Venice, against France; or that of Nuremberg in 1538, between Charles V and the Catholic princes of Germany against the League of Schmalkald. For the league of 1576 against the Huguenots, see **FRANCE**, Vol. IX, p. 562.

HOLYOAKE, GEORGE JACOB, an English reformer; born at Birmingham, April 13, 1817. He taught mathematics at the Mechanics' Institute in his native city; acted as secretary to the British contingent that went to the assistance of Garibaldi; was for many years editor of *The Reasoner*; was chiefly instrumental in securing the passage of the bill legalizing secular affirmations; and took a prominent part in various public movements. He was one of the leaders in the co-operation movement in England, and wrote a work entitled *The History of Co-operation* (1875-78). Holyoake was the last person imprisoned in England on a charge of atheism (1841). He was president of the Carlisle Congress of the Co-operative Societies (1887). Among his writings are *The Logic of Life* (1861); *The Trial of Theism* (1877); *Among the Americans* (1881); and *Self-Help a Hundred Years Ago* (1888).

HOLYOKE, a city in central Hampden County, western Massachusetts, on the Connecticut River, and on the Boston and Maine railroad. It connected is also with Springfield by an electric street-railway. It has electric lights and rail-ways, water-works, and a very beautiful granite city hall, costing nearly \$500,000. Its manufactories have a capital of \$24,000,000, and their annual products are valued at \$26,000,000. They employ, on an average, 13,140 hands, and pay in wages, annually, \$6,200,000. Of its industries, the most important is the production of fine writing-papers. Its manufactories of this are the largest in the country, employing 4,000 persons, in 26 mills. Holyoke also has the largest blank-

book works in the country. Cutlery, machinery, screws and wire are important products. It was incorporated as a city in 1873. Population 1875, 16,260; 1890, 35,637; 1900, 45,712.

HOLYOKE, MOUNT, a ridge in central Hampshire County, Massachusetts, consisting of greenstone trap, very narrow and steep. It separates the townships of Hadley and Amherst from South Hadley and Granby. On the northern side, in the first-named township, lies Mount Holyoke College, the oldest college for the education of women in the United States, being founded in 1837. It has 34 instructors, 335 students and a library of 16,000 volumes. The scenery surrounding the grounds is very beautiful.

HOLY ROOD, the cross on which Christ was crucified. See **CROSS**, Vol. VI, pp. 610, 611.

HOLY THURSDAY. See **HOLY WEEK**, Vol. XII, p. 106.

HOME, DANIEL DOUGLAS, a Scotch-American Spiritualist; born near Edinburgh, Scotland, March 20, 1833. He removed to the United States in 1840. In his youth he claimed to have had spiritualistic visions, and at 17 years of age published himself as a medium. In 1853 Home went to New York to study medicine. He finished his course, but did not practice. Later he removed to London, where he remained for several years giving spiritualistic seances, and exhibited his art in Russia, Germany, Italy and France. In 1858 he married a Russian lady of wealth and station. In 1863 Home went to Italy to study art, and in 1866 a Mrs. Lyons made over to him \$165,000 with the proviso that he should add "Lyons" to his name. Some years afterward the donor demanded the return of her gift. Home refused compliance, the case came to trial, and was decided in favor of the plaintiff. In 1871 he married another Russian lady, but the union proved unhappy. Thereafter Home retired from public view, and died insane. While in Europe Home was befriended by many of the literary and scientific men and women of the time; among them, Mrs. Browning, Mary Howitt, Alexandre Dumas, Professor Crookes and Victorien Sardou, all of whom testified to the genuineness of the phenomena he produced. Robert Browning's *Mr. Sludge, the Medium*, is supposed to be a study of Home. He died June 21, 1886, in Auteuil, France.

HOMER, a city of Champaign County, central Illinois, 48 miles E.S.E. of Bloomington, on the Illinois Central, the Cleveland, Cincinnati, Chicago and St. Louis and the Wabash railroads. It has a flour-mill and is a shipping-point for fruit and grain. Population 1900, 1,080.

HOMER, a city and the capital of Claiborne Parish, northwestern Louisiana, a terminus of the Louisiana and Northwest railroad, on the D'Arbonne Bayou. It is in a large cotton-growing district, and grapes are cultivated extensively. Population 1890, 1,132; 1900, 1,157.

HOMER, a village of Calhoun County, central southern Michigan, on the Michigan Central, the Lake Shore and Michigan Southern and the

Cincinnati, Jackson and Mackinaw railroads, 22 miles W. of Jackson. It is the shipping point for a large grain district, and has manufactures of flour, agricultural implements, dairy products, oil-stoves, and bath-tubs. Pop. 1900, 1,097.

HOMER, a village of Cortland Co., N. Y., on the Delaware, Lackawanna and Western railroad, 27 miles S. of Syracuse, in a farming and dairying district; has foundries, flour-mills, and factories of wire-cloth, rotary-engines, wagons, and sleighs. Population 1900, 2,381.

HOMER, WINSLOW, an American artist; born in Boston, Feb. 24, 1836;

WINSLOW HOMER.

at 18 he went to work for a lithographer in Boston; in 1859 moved to New York, and was engaged as designer for a publishing house, at the same time studying art in the evening at the Academy of Design; first won public notice by two pictures on war subjects, entitled *Home, Sweet Home*, and *The Last Goose at Yuletown*. In 1865 he was elected academician, and two years later went to Paris to study. His pictures have the qualities of originality and individuality, and won the praise both of the critics and the public. Among the best known are *Prisoners from the Front*; *Snap the Whip*; *Eating Watermelon*; *Flowers for the Teacher*; *Undertow*; *Eight Bells*, which attracted much favorable attention at the Chicago Fair in 1893; and three marines, *Northeaster*, *Stormbeaten*, and *Wood's Island by Moonlight*, which gained the medal of honor at the exhibition of the Academy of Fine Arts, Philadelphia, in 1896.

HOME RULE, a title selected by an Irish political organization as definitive of its objects, and also applied to the British Parliamentary party representing that organization. Originating among the moderate spirits of the Irish agitators in the period following the repression of the Fenian rising of 1867, and fanned by the disestablishment of the Irish Church, the movement crystallized into action on May 19, 1870, when, at a meeting of prominent Irishmen in Dublin, a resolution was adopted "that the true remedy for the evils in Ireland is the establishment of an Irish Parliament with full control over Irish domestic affairs."

An organization entitled "The Home Government Association of Ireland" was formed, and a programme or platform adopted, which, while in the main more moderate than the Fenians desired, in some respects went beyond O'Connell's demand for repeal of the Union. The Parliamentary leader selected was Isaac Butt, an Irish barrister whose pleadings for the Fenian prisoners had brought him popularity, and won for him election to the presidency of the Amnesty Association. In 1871 the new movement succeeded in seating its Parliamentary candidates for the counties of Meath, Galway and Westmeath and for

Limerick borough, in which last-named constituency Isaac Butt was returned without opposition.

The year 1872 witnessed a further accession of strength and the adoption of "Home Rule" as the watchword. In November, 1873, a national conference, held in Dublin, attended by 900 delegates, resolved to reorganize under the name of Home Rule League. The party carried 60 Irish seats in the general election of February, 1874, and soon commenced to demonstrate at Westminster that its desires constituted a condition rather than a theory, and as evidence thereof opened the session with a Home Rule amendment to the Address, the amendment being defeated by 314 votes to 50.

The next three sessions of Parliament were occupied by motions for committees to inquire into the causes of Irish discontent, which shared the fate of the amendment to the Address. Then internal dissension weakened the Home Rulers, the obstructionist or extreme wing of the party, under Major Nolan and the future leader, C. S. Parnell (q.v. in these Supplements), desiring to block all Parliamentary legislation by persistent but dexterous obstruction until Ireland's grievances received attention and relief.

The younger man prevailed. At the end of 1877 the control of the Irish Parliamentary party was in Parnell's hands, and Butt's death in 1879 marked the close of the original and strictly constitutional phase of the Home Rule question. This may be called the first period of the Home Rule agitation, one which was marked by a gradual growth of the Irish Parliamentary party from a quartet of earnest men in 1870 to a compact voting-power of 60 members in 1874. Under Butt's leadership the policy of the party was simple and efficacious. On Irish questions it voted as a unit; in other matters, each member followed the lead of the party with which he was in sympathy. The principal achievement was to draw attention to Irish affairs by an annual motion, which was as regularly voted down. With the advent to Westminster of Joseph Gillis Biggar and Charles Stewart Parnell came a change to more aggressive tactics. General and systematic obstruction in the hands of 60 determined members grew in favor, and while it cost the Irish party the support of the advanced Conservative and Whiggish-Liberal members, it attracted Irishmen the world over, and appeased the home demand for activity.

In the interim between Butt's death and Parnell's formal election as leader, Parnell's was undoubtedly the hand which held the strings of the Irish party. William Shaw, a Liberal, was for a time in nominal control, but, backed by the influence of the agrarian agitation, and, strangest of all, as a Protestant supported by the entire body of the Catholic priesthood, Parnell placed eight fresh Home Rule members in Parliament in 1880, and before May of that year had passed, was formally chosen as the leader of the Parliamentary party. The land-agitation was the co-

hesive power which made him the great leader of the Celtic and Catholic peasantry. O'Connell rose to power by agitation for Catholic relief. His successor had as popular a platform in promising relief from the evils of absenteeism, rack-renting and eviction.

Home Rule, as urged by Parnell and his supporters, was hardly distinguishable from O'Connell's repeal of the Union. The Shaw faction withdrew into opposition in 1881, disapproving the Parnellites' persistent obstruction to coercive measures. Thenceforth until 1886 the agitation was directed by a mastermind in politics, by a man who, until his moral fall, controlled the varying forces and moods of his party with the military skill of an Alexander, the patience of a Fabius, and with the silent mastertactics of a Von Moltke. To his persistence alone is to be attributed William E. Gladstone's conversion to Home Rule.

From October, 1879, dates the formation of the Irish Land League by Michael Davitt, and the commencement of widespread anti-rent agitation. The winter was severe, and distress and evictions were general and frequent. Davitt and other leaders were arrested for agitating, but soon released on bail. In Parliament, Parnell and his followers brought to perfection their policy of obstruction, being supported by no inconsiderable faction of the English and Scotch members. An Irish Universities Bill was offered as a sop to Cerberus, carried with the co-operation of Mr. Shaw and the milder spirits of the Irish party, but fell far short of the reforms demanded. The anti-rent agitation and a demand for a general reduction of rents had at least the reason of apprehended distress to support it. But little could be done amid the glamour of Beaconsfield's theatrical return from the Berlin Congress. His "Peace with honor" and "Imperium et libertas" awoke the chauvinism of 1878 and kept his party in power until March, 1880. Then Gladstone faced obstruction, with 349 Liberal members supporting him, and 243 Conservatives to oppose his plans. Sixty Home Rulers were potent in debate and obstruction, but were unable, as at a later date, to turn the ministry out of office.

The Peace Preservation Act was to be discontinued, and a Relief of Distress Act to be passed. In this last a Compensation for Disturbance Clause was passed by the Commons by 303 votes to 237, but rejected in the House of Lords by 282 votes to 51. The extreme Irish party speedily took their places on the opposition side of the House of Commons, and passed the word to "distrust the Whigs." The Land League, with whose working machinery Mr. Parnell had come to power, began to be active, and commenced to enroll the peasantry under the banner of "Hold the rent." The Compensation for Disturbance Bill was but a reopening of old sores. It satisfied no one, and irritated many. The tenants were told to hold the harvest as well as the land, and to defy all legal process for recovery of rent or premises. Agrarian outrages increased apace, and "Griffith's valuation" of nearly a century before, which was

at least 25 per cent under the letting value of ordinary land, was decided upon by the Land League as the only valuation upon which rent should be paid. The assassination of Mr. Boyd, a land agent's son, the murder of Lord Mountmorris and the shooting of Mr. Hutchin's car-driver were some of the incidents of the agitation.

The Peace Preservation Act of 1870 was allowed to expire in June, and the autumn witnessed a carnival of inexcusable crime. It was impolitic crime, also, as it still further postponed all remedial agrarian legislation, and produced merely a demand for more coercion from the English majority in Parliament.

Mr. Forster, the Chief Secretary for Ireland, had to meet an indignant body of landlords clamoring for military and police protection, and even the precincts of Palace Yard at Westminster were invaded by Rachels mourning for their children, and refusing to be comforted by anything less than a military expedition. Between the obstructive Home Rulers and an indignant country the Gladstone government had not much choice. An ill-advised information for seditious conspiracy against Mr. Parnell, several of his party and some of the officials of the Land League was applied for by the crown officials, and the great state trial which ensued ended in a fiasco by a long-expected disagreement of the jury. Ireland looked on the result as a victory, and crowned Parnell and his co-defendants as victors in the fray.

In the Cabinet all was dissension and division as regards Irish policy. While Mr. Gladstone and Mr. Forster argued for heroic measures, Chamberlain, Bright, and the Birmingham school of Liberals as loudly proclaimed that force was no remedy. In Ireland, juries refused to convict on direct and conclusive evidence, lawlessness was prevalent and prolific in murder, and all legal authority was at an end.

Intimidation was widely prevalent, and gave a new word to the English language, in the treatment of Captain Boycott, Lord Erne's agent, near Lough Mask. Police protection was powerless, and the government supine until the tenant farmers of Cavan and Monaghan organized an expedition for the relief of Lough Mask House. Then, fearing a racial and religious conflict, an army of a thousand men was sent to relieve the obnoxious agent, and the "emergency" men of Ulster, generally provided by Orange lodges, were allowed to gather in Captain Boycott's crops. But his position was little better than before. He had to leave the farm, in which he had sunk much capital; and the impossibility of keeping intimidation in check with soldiery was strikingly demonstrated. Boycotting became general, and even steamship and railroad companies came under its ban.

The government had to decide between surrender and coercion, and Mr. Forster introduced the "Protection for Life and Property Bill" in the early days of 1881. It was a stringent and coercive statute, the worst feature of which was a "suspect" clause, superseding all *habeas corpus* proceedings, and enabling a timid official to tem-

porarily imprison any person he was afraid to try before a jury. The measure was met with a determined policy of obstruction. One sitting of the House of Commons lasted 41 hours. Obstruction was rampant until an exasperated majority compelled the Speaker to end the debate and order the first reading of the obnoxious bill. The next day, 36 Irish members defied the Speaker's authority, and one by one were suspended and removed from the House. New rules of procedure were passed to meet organized obstruction, and in March, 1881, the act became law. Gladstone endeavored to placate the Irish in April, with an Irish land bill, which cost him the support of the Duke of Argyll. It was a half-hearted, tentative measure, permitting a tenant to sell his interest, and enabling him to obtain a judicial fixing of his rent at a valuation which was to be inviolable for 15 years. It passed into law while the nation was mourning for Beaconsfield. The agitation still went on, and the Land League ruled Ireland more potently than did Dublin Castle. John Dillon was the first arrested of the Home Rule members, and many of his fellow-members were sent to join him in Kilmainham jail, while the "physical force" party in America inaugurated the gospel of dynamite in the principal cities of Great Britain. It only served to nerve a weak executive to more persistent coercion.

The political situation was a grave one for the government. The extremists, catering to the demand of Transatlantic supporters, repudiated the Land Act, and called on the tenants to resist eviction and hold the rent. Nothing more than "prairie value" was to be paid for the land, and "landlordism" was to become extinct in the future. The Catholic hierarchy, Sir Charles Gavan Duffy, and other prominent Irishmen supported Gladstone in his resistance to what he termed "the gospel of public plunder."

The government struck its blow in October, and imprisoned Mr. Parnell and many of his party in Kilmainham jail. This was met by a counter-movement—the "no-rent manifesto," adjuring the tenantry to pay no rent until the victims of British despotism were released. The rejoinder of the government was the suppression of the Land League on October 20th, as "an illegal and criminal association, intent on destroying the obligation of contracts and subverting law." Outbreaks of lawlessness and rioting in Dublin, Limerick and other places were suppressed, and a visible reaction against the "no-rent manifesto" began to develop. The action of Archbishop Croke, hitherto one of the principal supporters of the Land League, in condemning the refusal of rents, did much to smooth the path of the executive. The Land Commission commenced its sessions and adjudicated some 50,000 applications for reduction of rent. Ulster accepted the Land Act all but universally, and the severe reductions of rent, by the subcommissioners, filled the hearts of the tenantry with hope and carried dismay into the ranks of landlordism. But coercion was pres-

ent in prosecutions and arrests under the suspect clause, and police and soldiery were freely employed in aid of evictions. The widespread refusal of rents, however, produced much genuine distress among the Irish landlords, and, evoking sympathy in England, caused a Mansion House fund to be started in England for their relief.

The year 1882 opened peacefully, but it was the stillness before the storm. Parnell and many of his supporters were in Kilmainham jail; coercion was rigidly administered by Chief Secretary Forster, a sturdy Quaker of the old Puritan stripe; the harvest had been plentiful, and there was no distress. The spring brought a renewal of agrarian murders, and the actions of juries were unsatisfactory and opposed to evidence. Then the radical element in the Liberal councils prevailed, and Captain O'Shea negotiated the so-called "Kilmainham treaty," whereby, in return for the release of the imprisoned suspects, the cooperation of the Home Rulers was to be given to the pacification of Ireland. Forster, disgusted with a treaty with treason, resigned from the Cabinet, and his warnings were fully justified by the assassination of his successor, Lord Frederick Cavendish, and Under-Secretary Burke, in broad daylight, within Phoenix Park, and in sight of the viceregal lodge. For a time the assassins escaped. England was moved to the core, and Ireland recoiled from the inhumanity meted out to one who bore the olive branch of peace. Connaught soon imitated the example of Dublin; Mr. Bourke and a soldier escort, and Mr. Blake, Lord Clanricarde's agent, and his steward, were ambushed and shot to death. Assassination stalked in the footsteps of outrage, and provoked the most stringent of coercion acts, with the exception of Lord Grey's act. G. O. Trevelyan became Chief Secretary, the police were reinforced by patrols of marines, and convictions in the Maamtrasna and Lough Mask murder cases did much to inspire respect for the law.

The year saw the inauguration of the Irish National League, an active political organization founded in succession to the Land League, after the suppression of the latter by the British government. It was both political and agrarian in character, its main objects being the reform of the land laws, the weakening of the power of the landlords, the increase of peasant proprietors, and the creation of an independent or semi-independent government for Ireland, under the name of Home Rule. There were soon about two thousand branches of the league scattered throughout Ireland, each with its president, secretary and treasurer. In America there was an organization of a similar character, and another in England. Scotland, also, had a league, composed principally of Irishmen, which advocated the principles of the parent institution north of the Tweed.

A conflict of opinion between Parnell and Davitt showed that the former was the leader of the party, and shelved the more violent measures conceived by his more open and adventurous follower.

The year 1883 commenced with an era of comparative peace in Ireland. A revival of an antique method of legal procedure, in requiring sureties for good behavior of all prominent agitators, consigned Healy and Davitt, with many others, to temporary imprisonment. The invincibles, assassins of Lord Frederick Cavendish, were arrested, and five suffered the extreme penalty of the law, mainly on the evidence of the informer, James Carey, who, if possible, was more blood-guilty than they. The informer met the usual fate, at the hands of an Irish-American named O'Donnell. Again the physical force party in America tried the policy of dynamite. Ulster rallied to repel the separatists, and Parnell received a national tribute of £38,000.

The year 1884 found Parliament so occupied with the Franchise and Redistribution Bills that Ireland's grievances obtained little attention. More dynamite outrages occurred, only two of many perpetrators being brought to justice. Explosions in the Tower of London and at the House of Commons occurred in the early days of 1885. The possibilities of the Franchise Bill enabled Parnell to formulate his policy for the future. The absolute minimum of Irish demand was to be the restoration of Grattan's Parliament, but, as he significantly declared, "we have never attempted to fix the *ne plus ultra* of Ireland's nationhood, and we never shall." But the nearer reform came, the more fierce was the opposition to coercion. There were other forces besides the Home Rulers opposed to exceptional legislation. Gladstone was defeated on a budget proposal, and Lord Salisbury came to power, prepared to rule Ireland with the iron hand of coercion unless agrarian crime ceased. Lord Ashbourne's Land-Purchase Act passed, and the general election restored Gladstone to power in the early days of the following year.

More than memorable was the year 1886, marking, as it did, the conversion of W. E. Gladstone to the principles of Home Rule and the parting of the ways between the influential and patriotic Whigs on the one side and the followers of the "old Parliamentary hand" on the other. In April, Gladstone introduced his first Home Rule Bill.

The following were some among its chief provisions:

An Irish legislature to sit in Dublin, with the Queen as its head, to consist of 309 members, 103 in the first order (with property-qualification, and elected on £25 franchise), and 206 in the second order, the two orders to sit together, and, unless a separate vote is demanded, to vote together; if the two orders disagree, the matter to be vetoed for three years; if then carried by the second order, it was to be decided by a majority of both orders. The Lord-Lieutenant to be appointed by the crown, not as the representative of a party; his office not to be altered by the Irish legislature; he can assent to or veto any bill. The executive to be constituted as in England. All constitutional difficulties to be settled by the privy council, whose decision was to be final. The prerogatives of the crown to be untouched. All matters concerning peace or war, foreign and colonial relations, trade, navigation, post and telegraphs, coinage, army, navy and reserve forces to remain in the hands of the imperial Parliament. The Irish legislature not to establish or endow any religion, or to prohibit religious freedom. The customs and excise to

be levied by the British treasury. The rights of existing civil servants, judges, and other permanent officials and police to be safeguarded. The Irish legislature to raise and pay a police force. The Irish members not to sit at Westminster, except when summoned back for special purposes. This act not to be altered unless they are so summoned back (28 to the Lords, 103 to the Commons). Ireland to pay one fifteenth as her portion of interest on national debt, of army and navy and civil service charges, and £1,000,000 toward present Irish constabulary till superseded.

Imposing was the array against the bill. The heads of the great Whig houses—the Grosvenors, the Russells, the Cavendishes, the Greys, the Fitzwilliams—declared against the "disruption of the empire and the surrender of property to the apostles of public plunder." The statesmen were, to a man, against the measure. Lord Hartington, Lord Selborne, the Duke of Argyll, Lord Derby, Lord Northbrook, John Bright, Mr. Goschen, Sir Henry James, Mr. Chamberlain and Mr. Trevelyan turned from the ranks of the leader whom they had followed for years. The Liberal scientists, jurists and men of letters rallied to the defense of the empire, and numbered among them Lord Tennyson, Lord Wolesey, Lord Bramwell, Sir James Stephen, Matthew Arnold, Goldwin Smith, James A. Froude, W. E. H. Lecky, Professor Huxley, Professor Tyndall, Sir Frederick Leighton, Swinburne the poet, the Rothschilds and the Barings. In a word, every representative Liberal was found on the Unionist side.

The second reading of the measure was lost, June 7, 1886, by a vote of 341 to 311, no less than 93 Liberals voting in the majority. Every available method was used to increase the majority, and undoubted was the effect of the publication of the productions of Richard Pigott's facile pen. "Parnellism and Crime," as it ran day after day in the columns of the *Times*, was an engine of rare power wherewith to frighten doubtful members, and the silence of the Irish members lent force to the attack. The session ended, and Gladstone appealed to the country. The verdict was adverse, and the new Parliament held 316 Conservatives and 78 Liberal-Unionists, as opposed to 191 Home Rule or Gladstonian Liberals and 85 Irish Home Rulers. With Lord Randolph Churchill as leader of the House of Commons, a start was made with that twenty years' policy of resolute government outlined by Lord Salisbury, and reviled by the Gladstonians as a policy of "Manacles or Manitoba."

Parnell's Tenants' Relief Bill was rejected, and the "Plan of Campaign" was published in *United Ireland*, October 23, 1886. It was a system of procedure propounded by William O'Brien, and supported by the Land League. It was a recommendation to Irish tenants not to pay rent to landlords, but to pay officials representing the League what was deemed a fair rent, which would be handed over to the landlords, provided the latter accepted it as a payment in full. If refused, the money was to be used for the support of evicted tenants. The "Plan" was not long in being put in operation, and proved so embarrassing that the government proclaimed it as illegal.

In spite of this, however, it was long subsequently in operation in remote districts.

Early in the year 1887 an attempt was made, by means of the Round-Table Conference, to win back the Unionist Liberals to the Gladstonian fold. But the breach was too wide to bridge. In July came the passage of an Irish Land Bill, the proclamation of 18 counties under the Crimes Act, and with August and September the proclamation of the Land League, the Mitchelstown riot, which gave an exasperating party-cry to the Home Rulers. Gladstone's American admirers now presented him with a silver centerpiece in recognition of his efforts to secure Home Rule. In October occurred the semi-ludicrous incident of the struggle over Mr. O'Brien's clothing, and in December several Irish members of Parliament felt the force of the Crimes Act.

Little marked the opening of 1888, until a conflict between the police and the Nationalists occurred at Loughrea, in April, but June saw the ordering of a special commission of Parliament on the charges made in *The Times* articles on "Parnellism and Crime." The commission met for the first time, Sept. 17, 1888, and made such progress that on Feb. 27, 1889, the forgeries by Pigott were confessed, and *The Times* had withdrawn the charges made. Pigott, a fugitive in Madrid, committed suicide to avoid arrest on March 1st of the same year. When the commission finally presented its report in 1890, it practically found the Irish members guilty of handling pitch and playing with fire. Their association with and verbal approval of the acts of criminals formed the gravamen of the commission's findings.

Mr. Balfour's Land-Purchase Bill was introduced, as well as a Light Railroads Act, and John Dillon and O'Brien tried to force the Plan of the Campaign on the Ponsonby estate, in Tipperary. "New Tipperary" was built, and in its shanties the self-imposed martyrs waited for Gladstone's victory. In the middle of November came the exposure of the O'Shea divorce case. A long course of low intrigue, diversified by disguises, *aliases* and fire-escape flights was laid bare. The liaison had long been known to the English police, but was a revelation to many a Home Ruler. A majority of the Irish Parliamentary party refused to follow Parnell's rule, and elected Justin McCarthy as their sessional chairman. Ireland became the scene of a series of faction fights, in which vituperation contended with violence. The contending factions warred together in 1891. It was amusement for the contestants and spectators, but it was death for their cause. The priests, to a man, opposed Parnell, and by October had defeated his candidates everywhere in Ireland. In the midst of the turmoil Parnell died at Brighton, in the arms of the woman for whom he had sacrificed the brightest of Parliamentary careers, and whom he had married after the divorce decree was made absolute.

The year 1892 witnesses the amnesty debates

as regards the convicted dynamitards, and the introduction of an Irish Local Government Bill, which was spurned as a sham by the Nationalists. It was carried to a second reading by 339 to 247, but soon after was dropped. Mass meetings preceded the general election, which resulted in a Gladstonian majority of 40. Mr. Gladstone formed his fourth Cabinet at the age of 83, and nothing but the House of Lords stood in the way of Home Rule.

The expected measure was introduced. The second Home Rule Bill was introduced in the House of Commons, Feb. 13, 1893, by Mr. Gladstone, in perhaps the greatest speech that he ever made in all his sixty years of Parliamentary service. The interest centered not so much in the provisions of the bill, for in the seven years since the introduction of the bill of 1886 the English people had become accustomed to the idea of Home Rule for Ireland, as in the fact that a man of 84 made a speech of two hours' duration.

The bill which he outlined was recognized to be a great improvement on that of 1886. Then Home Rule was linked with a scheme of \$1,000,000,000 to buy out Irish landlords; in the new bill there was no hint of a penny for such a purpose. Then there was a fantastic plan of a big upper house with two orders, with Irish peers playing a dominant part; in the new bill there was a compact senate of only 48, all elective, and peers dropped out without a word of mention. The lower house, too, was cut down from an unwieldy body to 103, or 25 less than the New York state legislature.

The object of the bill remained, as in 1886, to establish a legislative body in Dublin for the conduct of both legislation and administration in Irish, as distinct from imperial, affairs. The bill, in detail, provided for a legislature for Ireland, consisting of the Queen and of two houses—the legislative council and the legislative assembly. This legislature, with certain restrictions, was authorized to make laws for the peace, order and good government of Ireland in respect of matters exclusively relating to Ireland, or some part thereof. The bill provided that the powers of the Irish legislature should not extend to the making of any law respecting the establishment or endowment of religion or prohibiting the free exercise thereof, or imposing any disability or conferring any privilege on account of religious belief, or whereby any person might be deprived of life, liberty or property without due process of law, or whereby private property might be taken without just compensation.

According to the bill, the executive power in Ireland continued vested in her Majesty the Queen, and the Lord-Lieutenant, on behalf of her Majesty, was to exercise any prerogatives or other executive power of the Queen the exercise of which might be delegated to him by her Majesty, and should, in the Queen's name, summon, prorogue and dissolve the legislature. An executive committee of the privy council of Ireland was provided for, which "should aid and advise in the government of Ireland." The Lord-Lieutenant, with the advice and consent of the executive council, was authorized to give or withhold the assent of her Majesty to bills passed by the houses of the legislature.

The legislative council, by the terms of the bill, consisted of 48 councilors. Every man was entitled to vote for a councilor who owned or occupied any land or tenement of a ratable value of twenty pounds. The term of office of the councilors was to be for eight years, which was not to be affected by dissolution, but one half of the councilors retired in every fourth year, and their seats were to be filled by a new election. The legislative

assembly was to consist of 103 members, returned by the Parliamentary constituencies existing in Ireland. This assembly, unless sooner dissolved, might exist for five years. The bill also provided for eighty Irish members in the House of Commons.

In regard to finance, the bill provided that, for the purposes of this act, the public revenue should be divided into general revenue and special revenue, and general revenue should consist of the gross revenue collected in Ireland from taxes; the portion due to Ireland of the hereditary revenues of the crown which was to be managed by the commissioners of woods, an annual sum for the customs and excise duties collected in Great Britain on articles consumed in Ireland; provided, that an annual sum of the customs and excise duties collected in Ireland on articles consumed in Great Britain should be deducted from the revenue collected in Ireland and treated as revenue collected in Great Britain; these annual sums to be determined by a committee appointed jointly by the Irish government and the imperial Treasury. It also provided that one third of the general revenue of Ireland, and also that portion of any imperial miscellaneous revenue to which Ireland might claim to be entitled, should be paid into the Treasury of the United Kingdom as the contribution of Ireland to imperial liabilities and expenditures; this plan to continue for a term of six years, at the end of which time a new scheme of tax-division should be devised.

The legislature, in order to meet expenses of the public service, was authorized to impose taxes other than those then existing in Ireland. Ireland should also have charged up against her, and be compelled to pay out of her own treasury, all salaries and pensions of judges and liabilities of all kinds which Great Britain had assumed for her benefit. The bill further provided that appeal from courts in Ireland to the House of Lords should cease, and that all persons having the right of appeal should have a like right to appeal to the Queen in council.

The term of office of the Lord-Lieutenant was fixed at six years. Ultimately the Royal Irish Constabulary should cease to exist, and no force other than the ordinary civil police should be formed. The Irish legislature should be summoned to meet on the first Tuesday in September, 1894, and the first election for members should be held at such time before that day as might be fixed by her Majesty in council.

The bill passed the Commons, September 1st, by a vote of 301 to 267, but failed in the Lords, September 8th, by a vote of 41 to 419.

Home Rule was dead thenceforth, until England, "the predominant partner," should reverse her judgment. The Irish party had their revenge in 1895, when, in a solid phalanx, they voted down a proposition to erect a statue to Oliver Cromwell. John Morley introduced a bill to carry out the recommendations of a committee on the land question to the effect that the term for which the rent was fixed (by statute) should be reduced from 15 to 10 years. The bill, however, on approaching the second reading, was dropped. In the general election of 1895, 70 anti-Parnellites and 12 Parnellites were part of the Liberal minority of 259, as against 411 Unionist members. The "predominant partner," however much disposed to local self-government, was firmer than ever against separation or Home Rule.

In February, 1896, John Dillon succeeded Justin McCarthy as the chairman of the party, and a national convention held in Dublin in September was more remarkable for violent internal dissensions than for actual results.

Considered as a theoretical political question,

the future of Irish government is a question beset with difficulties and conflicting theories.

Naturally, the bibliography of so far-reaching a subject is extensive as well as remarkable. A few of the more important and most recent works can alone be specified. They include,—

The Speaker's Handbook on the Irish Question; The Handbook of Home Rule; T. P. O'Connor, The Parnell Movement; A. M. Sullivan, New Ireland; Prof. A. V. Dicey, England's Case Against Home Rule; Justin McCarthy, The Case for Home Rule; R. B. O'Brien, Irish Wrongs and English Remedies; Joseph Chamberlain, Home Rule and the Irish Question; Ireland's Disease, translation from the French of Philippe Daryl; H. W. Hurlbut, Ireland Under Coercion; Dr. T. Dunbar Ingram, History of Legislative Union Between Great Britain and Ireland and Two Chapters of Irish History; W. E. Gladstone, Special Aspects of the Irish Question; Sir Frederick Pollock, Home Rule and Imperial Sovereignty; Clifford Lloyd, Ireland Under the Land League; Sir Charles Russell, New Views on Ireland; Duke of Argyll, Irish Nationalism; William O'Brien, Irish Ideas; Sir Henry James, The Work of the Irish Leagues; etc.

HOMESTEAD, a borough of Allegheny County, western Pennsylvania, on the Monongahela river, seven miles above Pittsburg, on the Pennsylvania railroad. It is the center of extensive iron, steel, and glass industries. The steel-works of Andrew Carnegie are situated here, where, from the 5th to the 10th of July, 1892, there occurred one of the most serious labor disturbances ever known in the United States, 3,421 men employed in the mills striking against a decrease in wages; and the attempt to fill their places with non-union men was followed by bloodshed and riot, and the whole organized militia of the state was called out to suppress the disorder. Some twenty men were killed during the disturbances, but the strike was not declared off until the 20th of November. Population 1890, 7,911; 1897, about 9,000. See also PINKERTON LAWS, in these Supplements.

HOMESTEAD LAWS. See HOMESTEAD, Vol. XII, pp. 122-24; and also EXEMPTION LAWS, in these Supplements.

HOMILETICS. See HOMILY, Vol. XII, pp. 125-26.

HOMINIDÆ. See MAMMALIA, Vol. XV, pp. 444-446.

HOMOPTERA. See *Hemiptera*, under INSECTS, vol. XIII, p. 153.

HOMOSPORY, a botanical term indicating that the sporophite produces but one kind of spore. All the lower plants are homosporous, as distinguished from certain fern-plants and all seed-plants, which are *heterosporous*.

HOMS, a Syrian town. See HEMS, Vol. XI, p. 649.

HONAN, PROVINCE OF. See CHINA, Vol. V, pp. 634, 635.

HONDT FAMILY, a family of Flemish artists and engravers. JOSSE, born at Wackene, Flanders, in 1546; died in London in 1610; map-engraver. He lived most of his life in England, to escape religious persecution.—HENDRY (the elder), born at Ghent in 1573; died at The Hague in 1610; son of Josse; painter of portraits of Wycliffe, Savonarola, Calvin, Melancthon, Knox and others.—HENRY (the younger), born in London in 1581; died in Amster-

dam in 1650. He painted the portraits of William of Orange and Queen Elizabeth of England.—ABRAHAM, animal-painter, was born at Rotterdam in 1638, and died in London in 1691.

HONDURAS, BRITISH, a crown colony on the Caribbean Sea, south of Yucatan, and 660 miles W. from Jamaica. For general description and history, see Vol. XII, pp. 132-134.

Area, 7,562 square miles. Population 1897, 34,277. Capital, Belize, with a population of 6,972. Schools, 46; pupils, 3,693; government grant, \$14,162. Detachments of the Second West India Regiment are stationed in the colony.

Imports in 1897, \$1,422,097; exports to Great Britain, \$769,867; revenue, \$314,017; expenditure, \$322,990.

The chief sources of revenue are customs duties, excise, licenses, land tax, etc., and the sale and letting of crown lands. The expenditures are mainly administrative and for the various services. Debt (1896), \$168,815.

In 1897, mahogany exported, 6,777,382 superficial feet; logwood, 20,018 tons; fruit (chiefly to New Orleans), \$125,000; sugar, 953 tons. The transit trade greatly increases the traffic of the ports, especially in india-rubber, sarsaparilla, coffee, etc.

In 1897, tonnage of vessels entered and cleared, 390,333.

Number of letters, newspapers, etc., passed through the post office, 1894, was about 120,000, about 80 per cent being international and 20 per cent inland.

United States gold was adopted as the standard of currency, Oct. 15, 1894.

HONDURAS, GULF OF, an inlet of the Caribbean Sea, between British Honduras, Guatemala, and the Republic of Honduras. It has a great many islands and reefs, particularly along its western shore.

HONDURAS, THE REPUBLIC OF, was established Jan. 11, 1839, before the dissolution of the Confederation of Central America in 1839. (For general description and history, see Vol. XII, pp. 129-32.) It is governed under a charter proclaimed in October, 1894. This gives the legislative power to a congress of deputies in the ratio of one to each 10,000 inhabitants. The executive authority rests with a President, nominated and elected by popular vote for four years. Area, about 43,000 square miles. Population 1897, 398,877, mainly of aboriginal Indians, but with a small proportion descended from Europeans, mostly Spanish. The capital is Tegucigalpa, with about 14,000 inhabitants.

The finances of the country are in great disorder, owing to prolonged civil strife, aggravated by wars with Guatemala and San Salvador. The revenue for 1895-96 was \$1,901,606; the expenditure, \$2,264,586. The foreign debt of Honduras consists of English loans of over \$16,000,000 and a French loan of \$11,000,000, or a total of \$27,000,000. No interest has been paid since 1872, and its accumulation has reached the amount of over \$59,000,000. The finances of Honduras have become further complicated by a bloody revolution in the summer of 1892. In 1896-97 the imports amounted to \$3,260,575, and the exports to \$2,647,248. In 1897 there were 237 post offices, 2,734 miles of telegraphs; and there is a railway from Puerto Cortés to La Pimienta (57 miles), and an interoceanic railway is projected from Puerto Cortés to Amapala, on the Pacific; also a line from Puerto Cortés by the north coast, through one of the best fruit districts of the republic.

The chief products of the country are bananas, tobacco, sugar, coffee, and maize. The mineral resources are great; gold, silver, copper, lead, and coal are found. There are 17 important mining companies at work. The annual value of the gold product is about \$200,000. Since Nov., 1894, the standard of currency has been the United States gold dollar.

On the 20th of June, 1895, a treaty between Honduras, Nicaragua and Salvador was signed, which provided for the temporary union of the three republics under the name of the Greater Republic of Central America, pending a union of all the Central American republics under the name of the Republic of Central America, which should be effected, if possible, within three years. The autonomy of each country in its local affairs was to be left undisturbed. Difficulties arose, however, when the attempt was made to put the scheme into operation, and in Nov., 1898, the union was declared dissolved.

HONEOYE FALLS, a village of Monroe County, northwestern New York, on the New York Central and Hudson River railroad, 15 miles S. of Rochester, on Honey Creek. The factories produce woolen goods, flour, farming-implements, strawboard, sashes, doors and blinds. The surrounding farms produce principally grain, fruit, potatoes and beans. Population 1890, 1,128; 1900, 1,175.

HONESDALE, an agricultural and manufacturing borough, and the capital of Wayne County, northwestern Pennsylvania, 23 miles N.E. of Scranton, on the Lackawaxen River, and on the Delaware and Hudson, and the New York, Lake Erie and Western railroads; also on the Delaware and Hudson canal. It manufactures green, cut, engraved and decorated glassware, silk and woolen goods, boots and shoes, canal-boats, electric elevators, axles, castings, emery and polishing wheels, and clothing. It is also a coal-depot, shipping annually two million tons. The first locomotive used in America made its trial trip from Honesdale on Aug. 8, 1829. The place is supplied with city water, electric and gas lights, and has a public library. Population 1900, 2,864. The surrounding country is well populated.

HONEY-ANT, a hymenopterous insect of the genus *Myrmecocystus*, common in the Southwestern states and in Mexico. Certain members of a colony store up honey in the abdomen during the summer. These individuals lose much of their activity, and food is regularly brought to them by the workers. In times of scarcity these fattened ants supply the others with food. Some naturalists assert that the honey is regurgitated; others state that the honey-bearers are devoured. The honey-bearers are modified workers, not a special caste. They are often dug up by the natives, and from them an agreeable drink is prepared. See HONEY, Vol. XII, p. 136.

HONEY-BUZZARD OR BEE-KITE (*Pernis apivorus*), a bird of the falcon family, found in many parts of Europe. The bird is insectivorous, seeking chiefly the larvæ of hymenopterous insects, such as bees and wasps. The nests of these are plundered by the bird, in search of larvæ, and sometimes the honey is said to be extracted from the cells. Another species is peculiar to Asia.

HONEYCOMB-MOTH OR BEE-MOTH, the popular name of two species of moths belonging to the genus *Galleria*. These insects live in the nests of bees, and they are especially common in the hives occupied by domesticated bees. The eggs are deposited in the honeycomb. The caterpillars destroy the comb by eating and by constructing in it long silk lined galleries. The caterpillar is cream-colored,

with brown head. The moth has gray fore wings, streaked with purplish brown. Two broods a year are developed, and winter is passed in the pupa state.

HONEYDEW, a viscid, saccharine exudation, often found in warm, dry weather on the leaves and stems of trees and herbaceous plants. Often, but not always, it is associated with the presence of insects which feed on the juices of plants, and its flow is ascribed to their punctures, but the rupture of the tissues from any other cause seems also to produce it, and warm, dry weather seems to produce in the sap that superabundance of sugar which is thus thrown off. Aphides themselves exude a fluid called honeydew, which probably differs considerably from the direct exudation of the plant, but mingles with it where they abound. Different kinds of manna are the dried honeydew of certain plants. But, generally, this exudation as it dries coats the surface of leaves and branches with a clammy film, on which molds and other small fungi soon grow, and thus the pores of the plant are clogged and its health is impaired. Gardeners are therefore careful to wash off honeydew. Orange and lemon plantations sometimes suffer great injury from the abundance of honeydew, as do the coffee-plantations of Ceylon.

HONEY GROVE, a city of Fannin County, northeastern Texas, on the Texas and Pacific railroad, 40 miles E. of Sherman. It is surrounded by farm and stock lands, and building-stone is quarried near here. It has flour and grist mills, a cotton-compress and gins. Population 1900, 1,483.

HONEY-LOCUST, a name given to species of the leguminous genus *Gleditschia*, notably *G. triacanthos*, which is a rather tall tree, with compound pinnate leaves and usually large compound thorns. The pods are linear and flat, often twisted or curved, and contain a sweetish pulp about the seeds.

HONEY-SUCKER. See **HONEY-EATER**, Vol. XII, p. 139.

HONGKONG, a crown colony of Great Britain, formerly a part of China. (See Vol. XII, pp. 141-42.) It is the great center for British commerce with China, and a military post of first importance. By the convention of June 9, 1898, China leased to Great Britain, for 99 years, a portion of the mainland opposite to the island of Hongkong, and the area of the colony is now about 400 sq. miles. The population of the former colony was, in 1891, 221,441, of whom 210,995 were Chinese; in 1898 it was about 248,710, of whom 13,700 were British and foreign. The population of the newly leased area is about 100,000 additional. The governor has a salary of \$32,000. In 1897 there were 109 schools (subject to government supervision), with 6,787 pupils, expenditure \$66,214; also private schools, with 2,000 pupils. In 1897 the revenue was \$3,352,366, the expenditure \$2,513,693. There is an imperial garrison of 2,800 men. Hongkong is the headquarters of the China squadron, numbering 34 vessels in 1898. In 1897 4,974 vessels, of 6,063,640 tons, entered the port.

HONOLULU, the capital of the Hawaiian or Sandwich Islands, on the southern coast of the island of Oahu, lat. 21° 18' N., long. 157° 55' W

It is beautifully situated and has a salubrious climate, the temperature ranging from 60° to 87° F. Its most interesting public buildings are the Palace, the Parliament buildings, the Roman Catholic Cathedral and the Bishop Museum. It has a public library, and is supplied with city water, electric lights and a telephone system. It is the seat of government and the commercial center of the islands; but it was not originally the capital, and its importance is of modern growth, being due to the fact that its harbor is the only really well-protected port in the archipelago. Steamers between San Francisco and Vancouver and Australia touch here regularly. Pop. 1900, 39,306. See HAWAII, in these Supplements.

HONORS OF WAR, certain privileges granted to a garrison when surrendering, either by the generosity of the conquering general or by stipulated agreement in the terms of capitulation. It is evident, therefore, that the degree of such honors may be varied indefinitely, according to circumstances. The highest honor that can be paid to an enemy is to allow them to march away with their arms, and with drums beating and colors flying. In other cases they are permitted to march out of their lines, either silently or not, and deposit arms, colors, etc., in a stipulated place, and then either march back as prisoners of war or to their own territory, after having given their parole not to take up arms again. Of the latter sort were the terms given the Confederate army at the surrender at Appomattox Courthouse, April 9, 1865.

HONVÉD, the Hungarian militia. The term (meaning land-defenders) was first used in the early history of Hungary to denote the national champions. It was revived in 1848 and applied to the army that fought against the Slavonic nations in the south, and when the war broke out with Austria, to the entire Magyar army. After the close of the revolution, upon the formation of the Austro-Hungarian monarchy, the Hungarian militia was called the Honvéd, out of feeling for national prejudice. In organizing the Honvéd the principle of universal military duty is applied. Active service for two years is required, then ten years' service in the reserve. On a war-footing the Honvéd numbers two hundred thousand.

HOOD, ALEXANDER, an English admiral; born in 1827, near Axminster; entered the service under the patronage of Admiral Smith; made lieutenant in 1746; in 1756 was given command of the *Prince George*; became admiral in 1782, and viscount in 1800; died May 3, 1814. During the War of Independence in America, he commanded under Kappel, Rodney and Howe, and in 1794-95, in the channel and at Gibraltar, gaining a victory over a French fleet in the latter year.

HOOD, JOHN BELL, an American soldier; born at Owingsville, Kentucky, June 1, 1831; graduated at West Point in 1853, and served against the Indians. When the Civil War broke out, he entered the Confederate army as lieutenant, and finally rose to the rank of lieutenant-general, with the command of an army. He served throughout the Virginia campaign and was wounded at Gaines's Mill, at Gettysburg, and at Chickamauga, where he lost a

leg. He commanded a corps under Gen. J. E. Johnston in the retreat to Atlanta, and in July, 1864, succeeded him in command of the army. On September 1st he was compelled to evacuate the city and leave the road free for Sherman's march to the sea. He yet made a bold attempt to cut Sherman's communications, and though worsted at Franklin on November 30th, pushed as far north as Nashville, but here he was defeated again by Thomas on December 16th, and at his own request he was

GENERAL JOHN B. HOOD.

relieved of command. His personal experiences were published posthumously as *Advance and Retreat* (1880). He died in New Orleans, Aug. 30, 1879.

HOODED SEAL (*Cystophora cristata*), a seal, often called bladder-nose, sometimes taken at Newfoundland and on the northern coasts of Europe, but nowhere abundant. In the male the skin of the nose can be inflated into a crest or hood, hence the name. The color is black above, lighter on sides and on the ventral surface. The male sometimes reaches a length of eight feet, and a weight of 800 pounds. The animal is valuable for its skin and oil. See SEAL, Vol. XXI, p. 581.

HOOGLY, a part of the river Ganges known as BHAGIRATHI; q.v., in these Supplements.

HOOF. See HORSE, Vol. XII, pp. 178, 195.

HOOK, JAMES CLARKE, an English painter; born in London, Nov. 21, 1819. He became a student at the Royal Academy in 1836; went to Italy to study in 1846; was elected to the Royal Academy in 1860. At first he painted religious or romantic subjects, but afterward turned his attention almost exclusively to marine pictures. Among his early works are *Rizpah*, which won him a traveling-scholarship in 1846; *Luff-Boy*; *Gathering Eggs*. Among his later ones, *The Saphire-Gatherer* (1875); *Seaside Ducks* (1877); *Friends in Rough Weather* (1878).

HOOKAH (a smoking-pipe). See PIPE, Vol. XIX, p. 111.

HOOKER, SIR JOSEPH DALTON, an English botanist, son of Sir W. J. Hooker (1785-1865), was born at Halesworth, in Suffolk, June 30, 1817; educated at the High School and University of Glasgow, graduating M.D. in 1839. He soon afterward joined the Antarctic expedition of the *Erebus* and *Terror*, upon which he gathered material for his *Botany of the Antarctic Voyage* (6 vols., 1847-60). Returning after four years' absence, he acted for some time as substitute for Professor Graham in the chair of botany at Edinburgh University; in 1846 was appointed botanist to the Geological Survey of Great Britain, and in the following year undertook a botanical expedition to the Himalayas, which lasted three years. In 1871 he made an expedition to Morocco, ascending the great Atlas, the summit of which had never before been reached by a European. In 1877 he accompanied Dr. Asa Gray in a scientific

tour through Colorado, Utah and California. On his return he presented to Kew a large collection of seeds and museum specimens, and a herbarium of about a thousand species, together with notes on the distribution of North American trees. He published *Himalayan Journals* (2 vols., 1854); *Genera Plantarum* (1862-83); *Students' Flora of the British Islands* (1870); *Tour in Morocco* (1878). He was president of the Royal Society from 1873 to 1878, director of Kew Gardens from 1865 to 1885.

HOOKER, THOMAS, an American colonial settler, one of the founders of Connecticut; born at Markfield, Leicestershire, in 1586; studied at Cambridge; became a fellow of Emmanuel College, and was for four years a curate at Chelmsford. Ejected for nonconformity in 1630, he lived in Holland until 1633, when he went to Massachusetts, and received a charge at Cambridge. In 1636 he removed with his congregation to Connecticut, and founded the town of Hartford, where he died, July 7, 1647.

HOOK-SQUID, a popular name for cephalopod mollusks of the family *Onychoteuthidae*, which have long tentacles armed with hooks and sometimes with suckers. The name is especially given to the genus *Onychoteuthia*. The tentacles of this animal have enlarged tips with recurved hooks, and suckers at the base of the hooks. In the related genus *Eupleuoteuthia* the suckers are wanting. These squids are found in most seas, warm and cold. Some individuals attain a length of six feet.

HOOPER, SAMUEL, an American merchant; born at Marblehead, Massachusetts, Feb. 3, 1808. After receiving a common-school education he entered the counting-house of his father, a West India merchant. In 1832 became a partner in the firm of Bryant, Sturgis and Company, Boston; in 1842 a member of the firm of William Appleton and Company; elected to the Massachusetts house of representatives in 1851; in 1857 to the state senate; in 1860 to Congress, being re-elected at every election thereafter until his death. In 1866 he gave Harvard College \$50,000 with which to found a school of mines. He died in Washington, District of Columbia, Feb. 13, 1875.

HOOPER, WILLIAM, a signer of the Declaration of Independence; born in Boston, June 17, 1742. Graduated at Harvard; studied law, and in 1767 settled in Wilmington, North Carolina; elected to the Continental Congress of 1774; re-elected in 1775, and at the expiration of his term, serving until 1777. He died at Hillsboro, North Carolina, October, 1790.

HOPESTON, a village of Vermilion County, eastern Illinois, on the Chicago and Eastern Illinois and the Lake Erie and Western railroads, 98 miles S. of Chicago. It has grain-elevators, brick and tile works, corn-canning, clothing and carriage factories, and considerable traffic in grain and hay. It is the seat of Greer College. Population 1890, 1,911; 1900, 3,823.

HOOSAC RIVER, a stream of eastern New York, which rises in Lanesboro township, Berkshire County, Massachusetts, flows north for about twenty miles, then turns northwest and flows through the

southwest corner of Vermont into New York, where it is known as the Hoosick. It enters the Hudson in the northern part of Rensselaer County, 14 miles above Troy. It affords abundant water-power, which is extensively utilized.

HOOSICK FALLS, a village of Rensselaer County, central eastern New York, 26 miles N.E. of Troy, on the Hoosick River, and on the Fitchburg railroad. It has manufactories of lumber, mowing machines, farming tools, saw and knitting mills and malleable iron-works. Population 1900, 5,671.

HOPE, a post village and railroad junction of Hempstead County, southwestern Arkansas, 112 miles S.W. of Little Rock, on the St. Louis, Iron Mountain and Southern and the Arkansas and Louisiana railroads. It has lumber and planing mills and a sewing-machine factory. It is an important shipping-point for cotton, lumber and hides. Population 1890, 1,937; 1900, 1,644.

HOPE, ALEXANDER JAMES BERESFORD, an English statesman and author; born in London, Jan. 25, 1820. Educated at Harrow and Cambridge; member of Parliament for Maidstone from 1841 to 1852, and again in 1857; for Stoke-upon-Trent in 1865; for Cambridge in 1868, and until his death. He took an active part in promoting artistic church architecture. He published *Letters on Church Matters* (1851); *The English Cathedral of the Nineteenth Century* (1861); and the novels *Strictly Tied Up* (1880) and *The Brandreths* (1882). During the American Civil War he was chairman of the Southern Independence Association. He died Oct. 20, 1887.

HOPE, ANTHONY. See HAWKINS, ANTHONY HOPE, under HAWKINS, SIR HENRY, in these Supplements.

HOPEDALE, a town of Worcester County, southeastern Massachusetts, on the Grafton and Upton railroad, 15 miles S.E. of Worcester. Pop. 2,087.

HOPETOUN, EARL OF, JOHN A. L. HOPE, G. C. M. G., P. C., and first Governor-General of the Australian Confederation, was born in Scotland, Sept. 25, 1860, and educated at Eton. In 1879, he passed at Sandhurst, but did not enter the army, having succeeded to the Earldom of Hopetoun in 1873. He was for some years junior whip in the House of Lords, a lord in waiting to Queen Victoria, and Lord High Commissioner to the Church of Scotland. In 1889 he succeeded Sir Henry Loch in the governorship of the colony of Victoria, and was made a G. C. M. G. In 1895, he resigned the governorship and returned to England, and in 1898 was appointed Lord Chamberlain of Her Majesty's household. In 1900, he was gazetted Gov.-Gen. of the Confederated Australian colonies.

HOPFEN, HANS, a German novelist; born in Munich, Jan. 3, 1835; studied law at Munich; lived in Venice, Paris and Vienna, where he was secretary of the German Schiller Institute. He wrote *Peregretta* (1864); the *Grey Friend* (1864); *Juschu, the Journal of an Actor* (1875); *Bavarian Village Tales* (1878); *My First Adventure* (1886); *Robert Lightfoot* (1890).

HOP-FLY (*Aphis* or *Phorodon humuli*), a species of aphid, or plant-louse, which is very destructive to hop-plants. This aphid is pale-green

in color. Both larvæ and the adults feed upon the plants.

HOPHRA, an Egyptian king. See EGYPT, Vol. VII, p. 743.

HOPKINS, EDWARD, an English statesman; born at Shrewsbury in 1600. He emigrated to Boston, Massachusetts, in 1637, and shortly afterward removed to Hartford. From 1640 to 1654 he was governor of the colony every even year, alternating with John Hayes. He then returned to England and became warden of the fleet, commissioner of the Admiralty and member of Parliament. At his death in March, 1657, he left \$3,500 to educational institutions in New England. Hopkinton, Massachusetts, was named after him.

HOPKINS, EDWARD JOHN, an English musician; born in Westminster, June 30, 1818. When 16 years old he was chosen organist of the Mitcham Church; in 1838, of St. Peter's, Islington; in 1841, of St. Luke's, Berwick Street; in 1843 of the Temple Church. Hopkins composed *Out of the Deep* and *God Is Gone Up*, both of which obtained prizemedals; *May Day*, a duet; *Welcome*, a trio; and was the author of *The Organ: Its History and Construction* (1855).

HOPKINS, EDWARD WASHBURN, an American Orientalist; born at Northampton, Massachusetts, Sept. 8, 1857; educated at Columbia College and in Leipsic; instructor at Columbia from 1881 to 1885; associate professor at Bryn Mawr College in 1885, and professor in 1892. He published *Mutual Relations of the Four Castes in Manu* (1884); *Essays on the Social and Military Position of the Ruling Caste in Ancient India* (1889); and *The Religions of India* (1895).

HOPKINS, ESEK, an American naval officer; born in Scituate, Rhode Island, in 1718. In 1775 he was commissioned by the Continental Congress commander-in-chief of the navy, and in February of the following year put to sea with the first squadron sent out by the colonies. He was officially complimented for his success in several engagements, but in 1777 was dismissed from the service for neglecting a summons to appear in Philadelphia. Subsequently he settled in Rhode Island, and several times was chosen a member of the general assembly. He died Feb. 26, 1802.

HOPKINS, JOHN HENRY, an Irish-American clergyman; born in Dublin, Jan. 30, 1792. In 1880 he moved to the United States with his parents; engaged, against his will, in the iron business; failed in business in 1817, and the next year was admitted to the bar; obtained a good practice in Pittsburg, Pennsylvania, but abandoned it for the ministry and was ordained a priest of the Episcopal Church in 1824, having been chosen rector of Trinity Church, Pittsburg, before taking orders. In 1832 he was consecrated the first bishop of Vermont, and became rector of St. Paul's, Burlington. In 1854 he established the Vermont Episcopal Institute at Burlington. Bishop Hopkins was also a musician, poet, artist and architect, having aided in the illustration of Alexander Wilson's *Ornithology* in his youth, and designed the church of which he was rector in Pittsburg. He was the author of *Christianity Vindicated*

(1833); *The Church of Rome in Her Primitive Purity* (1837); *Twelve Canzonets*, words and music (1839); *The "End of the Controversy" Controverted* (1854); *The Pope not the Antichrist* (1868). He was a supporter of the High Church movement. He was one of the first to introduce Gothic architecture into the United States. He died Jan. 9, 1868.

HOPKINS, JOHNS, an American philanthropist; born in Anne Arundel County, Maryland, May 19, 1795, of Quaker parents. He acquired a large fortune in business pursuits, most of which he devoted to philanthropic purposes. In 1873 he founded a hospital in Baltimore, devoting, in all, \$4,500,000 to the institution, which, by the terms of its establishment, was made free to all, independent of race or color. By will he gave \$3,500,000 to found the Johns Hopkins University, one of the most complete educational institutions in

the country. He also gave Baltimore a public park and an orphan asylum for negro children. He died in Baltimore, Dec. 24, 1873.

HOPKINS, LEMUEL, an American poet and satirist; born in Waterbury, Connecticut, June 19, 1750; studied medicine; practiced in Litchfield, 1776-84, and then moved to Hartford and became member of a coterie called "The Hartford Wits." With them he wrote the *Anarchiad*, a series of satirical essays, which advocated the framing of an efficient Federal constitution. He was also the author of a number of satirical poems and essays, among them *The Echo*; *The Political Greenhouse*; *New Year's Verses*; and is said to have written a version of the 137th psalm. He died April 14, 1801, in Hartford, Connecticut.

HOPKINS, MARK, an American educator; born at Stockbridge, Massachusetts, Feb. 4, 1802. He graduated at Williams College in 1824; tutor in that institution from 1825 to 1827; studied medicine and graduated at the Berkshire Medical School in 1829; began practice in New York City, but in 1830 was called to fill the chair of moral philosophy and rhetoric at Williams; two

years later was licensed to preach; in 1836 he took the chair of moral and intellectual philosophy, which was established for him, and succeeded Dr. Griffin as president of the college; resigned this position in 1872, but retained his professorship and the pastorate of the college chapel. In 1857 was elected president of the American Board of Foreign Missions. Dr. Hopkins was a very successful educator, and did much toward improving the material conditions and increasing the

intellectual prestige of the college with which he was connected during his entire life. Among his published works are *The Law of Love and Love as a Law* (1869); *An Outline Study of Man* (1873); *Evidences of Christianity* (1846); *Lectures on Moral Science* (1862); *Strength and Beauty* (1874); *Scriptural Idea of Man* (1883). Hopkins Memorial Hall at Williams College was built to commemorate his name. Dr. Franklin Carter has written his *Life* (1892). He died at Williamstown, Massachusetts, June 17, 1887.

HOPKINS, STEPHEN, a signer of the Declaration of Independence; born at Scituate, Rhode Island, March 7, 1707; moved to Providence in 1731, elected member of the assembly of the colony in 1732; was annually re-elected until 1738; re-elected again in 1741 and became speaker; governor, with a year's exception, from 1754-68; delegate to the Continental Congresses from 1774 to 1778. He wrote *History of the Planting and Growth of Providence* (1765). He died July 13, 1785.

HOPKINS, WILLIAM, an English geologist; born in 1793. He went into business, and not being very successful, in 1823 entered St. Peter's College, Cambridge. After graduation he became private tutor, and soon won a reputation as instructor of mathematics. His friendship with Professor Sedgwick led him to turn his attention to geology, and particularly to the mathematics of geology, in which field his investigations were largely carried on. He was elected president of the Geological Society in 1851-52, and, in the following year, of the British Association. He died Oct. 13, 1886.

HOPKINS, WILLIAM E., an American naval officer; born in Virginia in 1821. He entered the Naval Academy in 1839; graduated and served on the *Vandalia* in 1845; was attached to the Naval School in Washington, District of Columbia; commissioned lieutenant, 1854. During the Civil War he commanded in the Pacific squadron; was commissioned commander in 1863. In 1870 was made captain and given an appointment at Mare Island navy-yard, where he remained two years; was made commodore in 1881, and given charge of the New London naval station; retired in 1882. He died in San Francisco, Oct. 24, 1894.

HOPKINSON, JOHN, an English electrical engineer; born at Manchester, England, in 1849; educated at Owens College, Manchester, and at Trinity College, Cambridge; in 1872 moved to Birmingham and began the career of engineer; in 1878 went to London. He carried on exhaustive researches in the field of magnetism and electrostatics, the results of which have been published under the title of *Original Papers on Dynamo Machinery and Allied Subjects*. He is said to have been the first to express electrical phenomena graphically by means of curves.

HOPKINSON, JOSEPH, an American jurist; born in Philadelphia, Nov. 12, 1770; graduated at the University of Pennsylvania in 1786, and in 1791 was admitted to the Pennsylvania bar; in 1814 was elected a Representative to Congress; in 1828 was appointed United States judge for the eastern district of Pennsylvania. During the impeachment

JOHNS HOPKINS.

MARK HOPKINS.

proceedings in the United States Senate against Salmon Chase, Hopkinson was the defendant's counsel. Mr. Hopkinson was the author of the national song, *Hail Columbia*, which he wrote in 1798. He died in Philadelphia, Jan. 15, 1842.

HOPKINSVILLE, a city and the capital of Christian County, southwestern Kentucky, situated 71 miles N.W. of Nashville, Tennessee, on the Louisville and Nashville and the Ohio Valley railroads. The locality is very fertile, and produces tobacco, coal and iron. The city contains South Kentucky (Christian) College, two seminaries, a State insane asylum and manufactories of carriages and plows. It was almost wholly destroyed during the Civil War by the Confederates. Population 1890, 5,833; 1900, 7,280.

HOPLOPHORIDÆ. See *Glyptodon*, under MAMMALIA, Vol. XV, pp. 387, 388.

HOPPE-SEYLER, FELIX, a German physiologist; born in Freiburg, Prussia, Dec. 26, 1825; was a physician in Berlin, 1852-54; professor in Berlin, 1860; in Tübingen, 1861; in Strasburg, 1872; in 1877 editor of the *Zeitschrift für Physiologische Chemie*; published *Handbook of Physiological and Pathological Chemical Analysis: Medico-chemical Investigations; Physiological Chemistry*. For his investigations concerning the chemical composition of chlorophyll, see PHYSIOLOGY, Vol. XIX, p. 53.

HOPPIN, AUGUSTUS, an American author and illustrator; born in Providence, R. I., July 13, 1828. He graduated at Brown University in 1848, studied law and was admitted to the bar, but gave up practice and devoted himself to art. He illustrated *The Potiphar Papers: Nothing to Wear; The Autocrat at the Breakfast Table*, and other well-known works. He published *Carrot Pomade* in 1864; took a trip in Europe, and upon his return published a series of sketch-books written and illustrated by himself: *On the Nile* (1871); *Ups and Downs on Land and Water* (1871); *Crossing the Atlantic* (1872). Among other works are *Jubilee Days* (1872); *Recollections of Auton House* (1881); *Married for Fun* (1885). He died in Flushing, N. Y., April 1, 1896.

HOPPIN, JAMES MASON, an American educator; born in Providence, Rhode Island, Jan. 17, 1820; graduated at Yale in 1840; in 1842 at Harvard Law School, and in 1845 from Andover Theological Seminary. From 1850 to 1859 he was pastor of the Congregational Church at Salem, Massachusetts, and two years later became professor of homiletics in Yale; in 1879 became professor of the history of art at Yale. He was the author of *Notes of a Theological Student* (1854); *Old England* (1867); *Office and Work of the Christian Ministry* (1869); *The Early Renaissance* (1892).

HOPPIN, THOMAS FREDERICK, an American artist; born in Providence, Aug. 15, 1816; and studied in Paris under Delaroche. He designed the figures of St. Peter and St. Paul, in the window in Trinity Church, New York, and is said to have modeled the first statue cast in bronze in the United States.

HOPPS, JOHN PAGE, an English clergyman and author; born in London, Nov. 6, 1834. He was educated at the Baptist College, Leicester, and en-

tered the Baptist ministry in 1855; assistant at the Church of the Saviour, Birmingham, in 1858. In 1860 he became a Unitarian, and accepted a call from a Unitarian church in Sheffield; afterward held pastorates at Dunkinfield and Glasgow, and in 1876 became pastor of the Great Meeting, Leicester. From 1863 to 1887 he was the owner and editor of the *Truthseeker*, and afterward editor of the *Coming Day*. For thirty years he held Sunday afternoon meetings of working-people. He wrote almost thirty published works, among them *Seven Lectures for the People* (1861); *Verses by the Way* (1865); *The Life of Jesus, Rewritten for Young Disciples* (1869); *Hymns, Chants and Anthems* (1877); *The Revised New Testament* (1881). He also wrote a series of papers on the *Irish Question*, and published the most widely circulated statement of the Unitarian faith, 400,000 copies of which were distributed.

HOPS AND HOP CULTURE. See AGRICULTURE, Vol. I, p. 381; BREWING, Vol. IV, pp. 272, 273; and Vol. XII, pp. 156-158.

HOP-TREE, a name given to *Ptelea trifoliata*, a genus of the family *Rutacea*. It is a tall shrub or small tree, native throughout the middle and central United States, with leaves consisting of three ovate leaflets, terminal clusters of small, greenish-white flowers, and round-winged bitter fruit, which is used as a substitute for hops.

HOPWOOD, CHARLES HENRY, an English jurist and public man; born in England in July, 1829. He was called to the bar by the Middle Temple, in 1853; practiced on the northern circuit and in London, and was made Queen's counsel in 1874. He was elected member of Parliament for Stockport, 1874, and was returned again in 1880, but rejected in 1885. He was elected a bencher of the Middle Temple in 1874, and reader, 1885; was appointed recorder of Liverpool, February, 1886; re-elected to Parliament from the Middle Division of Lancashire in 1892. He was always an advanced Liberal in politics.

HOQUIAM, a post village of Chehalis County, Washington, on Hoquiam River, where it flows into Gray's Harbor. Its principal industries are lumbering, fishing and fish-canning, and fur trade. Aberdeen, the nearest railroad station, is on the Northern Pacific, 4 miles to the east. Population 1890, 1,302; 1900, 2,608.

HORE, ANNIE BOYLE, an English traveler and authoress, wife of Edward Coode Hore; born in Bloomsbury, London, April 8, 1853. In 1882 she commenced her travels in Central Africa, her first journey being from Saadani to Mambria, two hundred miles inland. In 1884 she attempted to reach Tanganyika by the Nyasso route, but was compelled to return, owing to the war between the Portuguese and the natives. A month later she joined her husband at Delagoa Bay, and together they reached Lake Tanganyika via Ujiji and Unyamwezi. She was the first white woman to reach Tanganyika. She spent four years on Kavala Island, teaching children the rudiments of Christianity and civilization. Mrs. Hore wrote an entertaining book of travels, *To Lake Tanganyika in a Bath Chair* (1887).

HORE, EDWARD COODE, an English seaman and

traveler; born in Islington on July 23, 1848, of Cornish parentage. He was apprenticed, at the age of sixteen, to the owner of a London ship, and visited nearly every part of the world. He rose to the rank of captain. In March, 1877, Captain Hore was appointed to the London Missionary Society's pioneer expedition in Central Africa. He lived on the shores of Lake Tanganyika for about ten years, surveyed its coast-line in a log canoe and discovered the Lukuga to be the true outlet of the lake. In 1882 he took the sections of a steel lifeboat on trucks from Saadani to Ujiji, a distance of 836 miles, in less than 100 days. In 1888 he finished the building of the steam-yacht, *The Good News*, on Lake Tanganyika. Captain Hore received a gold chronometer from the government of the French Republic for attention and assistance to the late Abbé Debaize; and in 1890 received the Cuthbert Peek grant from the Royal Geographical Society. He published *Tanganyika: Eleven Years in Central Africa*. In 1894 he was appointed by the London Missionary Society commander of the *John Williams*, to go to Polynesia.

HOREB, MOUNT. See SINAI, Vol. XXII, p. 88; ISRAEL, Vol. XIII, p. 396, note; and ELIJAH, Vol. VIII, pp. 135, 136.

HORICON, a village in Dodge County, southeastern Wisconsin, situated on Rock River and the Chicago, Milwaukee and St. Paul railroad. It has a wagon and windmill factory and two farming-tool works. Grain is raised in the surrounding country. Population 1900, 1,376.

HORITES OR HORIM. See IDUMEA, Vol. XII, p. 699; and TROGLODYTES, Vol. XXIII, p. 583.

HORIZON. See GEOGRAPHY, Vol. X, pp. 198, 199.

HORN, CAPE. See GEOGRAPHY, Vol. X, p. 186; and TIERRA DEL FUEGO, Vol. XXIII, p. 383-85.

HORN, CHARLES EDWARD, an English musician; born in London in 1786; studied music under his father and made his début as an opera singer in 1809, in London; came to the United States in 1827, and sang in opera; returned in 1831, and became director of music at the Olympic; in the following year came back to America and opened a music store in New York; was chosen conductor of the Handel and Haydn Society of Boston in 1847. He composed the opera *The Magic Bride*; the oratorios, *The Remission of Sins*; and *Daniel's Prediction*; and a number of popular songs, among them *The Deep, Deep Sea*; *Cherry Ripe*; and a duet, *I Know a Bank Whereon the Wild Thyme Blows*. His voice was a baritone of indifferent quality. He died in Boston, Oct. 27, 1849.

HORN, EDWARD TRAILL, an American Lutheran clergyman; born in Easton, Pennsylvania, June 10, 1850. He was educated at Pennsylvania College; graduated at the Philadelphia Theological Seminary in 1872; became pastor of Christ Church, Philadelphia, in 1872, and in 1876 was chosen pastor of St. John's in Charleston, South Carolina. He advocated the adoption of a common service for all English-speaking Lutheran Churches, and was made secretary of the joint committee which effected this reform in 1888. He published *The Christian Year*

(1876); *History of St. John's, Charleston* (1886); *The Evangelical Pastor* (1887); *Outlines of Liturgies* (1890).

HORN, GUSTAF CARLSSON, a Swedish general; born at Orbyhus, Oct. 22, 1592; studied at Rostock, Jena and Tübingen, and entered the Dutch Army under Prince Maurice of Orange. In 1624 entered the Swedish army and fought under Gustavus Adolphus in the Thirty Years' War; was taken prisoner in the battle of Nördlingen in 1634; was exchanged in 1642 and returned to Sweden; was made count and field-marshal in 1651. He died at Skara, May 10, 1657.

HORN OR HOORNE, PHILIPPE, COUNT OF, a Dutch soldier; born about 1520. He fought in the battles of St. Quentin and Gravelines. When Philip II attempted the reconstruction of the Flemish clergy and the inauguration of the Inquisition in the Netherlands, Horn, although a Catholic, with Egmont and William of Orange, opposed his policy, but refused to sign the "Compromise" or join the "Beggars." Despite this and other proofs of loyalty, Horn and Egmont were seized at Brussels by order of Alva in 1567, tried on a trumped-up charge, and executed June 5, 1568. See HOLLAND, Vol. XII, pp. 74, 75.

HORNADAY, WILLIAM TEMPLE, an American biologist and author; born near Plainfield, Indiana, Dec. 1, 1854; was educated at the Iowa Agricultural College, and afterward employed in the laboratory of Henry A. Ward, in Rochester, New York; in 1874-75 was sent by Ward to Florida and Cuba to collect specimens of natural history; in 1876, to the West Indies and South America; and in 1876-79, around the world; appointed chief taxidermist to the United States Museum at Washington in 1882; in 1886 was sent to Montana to get specimens of bison for the museum. He wrote *Two Years in the Jungle* (1885); *Canoe and Rifle on the Orinoco* (1885); *The Man Who Became a Savage* (1896); and also of a work on *Taxidermy* and a memoir on the *Extinction of the American Bison*.

HORNBLLENDE. See GEOLOGY, Vol. X, p. 228; MINERALOGY, Vol. XVI, p. 417; and ASBESTOS, Vol. II, pp. 675, 676.

HORNBLOWER, WILLIAM BUTLER, an American jurist; born in Paterson, New Jersey, May 13, 1851; educated at Princeton, and graduated at the Columbia Law School in 1875; practiced in New York; in 1890, was put upon the commission to revise the judiciary articles of the New York state constitution; was president of the Princeton Alumni Association and secretary of the New York Bar Association; author of *Conflict between Federal and State Decisions* (1880); *Lawful Status of the Indians* (1891). He was nominated in 1894 for a place on the United States supreme bench by President Cleveland, but for political reasons the Senate refused to confirm the nomination.

HORNBY, SIR GEOFFREY THOMAS PHIPPS, an English naval officer, born in 1825; entered the navy in 1837, and was present as a midshipman at the bombardment of Acre. He commanded the first flying squadron as captain, taking it around the world; succeeded Admiral Wellesley as rear-ad-

miral, attaining flag rank in 1869; made vice-admiral in 1875. He was commander-in-chief of the naval forces in the Mediterranean in 1878, when war was imminent between England and Russia. He was a lord of the admiralty under Lord Beaconsfield's administration; in 1881 was appointed president of the Royal Naval College, at Greenwich, for a term of three years. He died March 3, 1895.

HORNBY, JAMES JOHN, an English educator, son of Admiral Hornby; born in England in 1826; educated at Eton, and at Balliol College, Oxford, where, in 1849, he took a first-class in classics. In the same year he became a fellow of Brasenose College, and in 1854 tutor and principal of Bishop Cosen's Hall in the University of Durham. Returning to Oxford in 1864, he became classical lecturer at Brasenose, and in 1866 was senior proctor of the university. At the close of the latter year he was elected second master of Winchester School, which post he retained till his appointment as head-master of Eton in January, 1868. Dr. Hornby was appointed one of Queen Victoria's honorary chaplains in February, 1882, and made D.C.L. of Durham University the same year. He was appointed to the provostship of Eton, July, 1884.

HORN-CORALS, a name given to corals of the family *Antipatharia*, belonging to the order *Hexacorallia*. These colonies form a branching axial skeleton of a black, horny substance. The skeletons somewhat resemble the sea-fans in form, but these are formed by coral polyps of an entirely different order. See CORALS, Vol. VI, p. 372.

HORNE, RICHARD HENRY OF HENGIST, an English author; born in London, Jan. 1, 1803. He was educated in Sandhurst College, and, failing to get a desired military appointment in the East India Company's service, became midshipman in the Mexican navy; returned to England, and settled in London as man of letters; emigrated to the gold-fields of Australia in 1852 and remained until 1869. He published dramas, poems and historical works, among them *Cosmo de' Medici* (1837); and *Gregory the Seventh* (1840), tragedies; *Life of Napoleon* (1841); *Orion: an Epic Poem* (1843); *The South Sea Sisters* (1866). He died March 13, 1884.

HORNED SNAKE. See *Viper cerastes*, under VIPER, Vol. XXIV, p. 247.

HORNED TOAD, a popular name of lizards of the genus *Phrynosoma*, found in the Western states. It is often known as California toad. See LIZARD, Vol. XIV, p. 736.

HORNELLSVILLE, a city of Steuben County, southwestern New York, on the Canisteo River, and the New York, Lake Erie and Western and the Central New York and Western railroads, 58 miles S. of Rochester. It is well laid out, lighted with electricity and provided with a public library containing 11,000 volumes. The New York, Lake Erie and Western railroad has large shops here. It manufactures doors, sash and blinds, wire-fencing, boots and shoes, furniture, tanned leather, dynamos and electric motors and apparatus. Population 1890, 10,996; 1900, 11,918.

HORNER'S METHOD, in algebraic equations.

See ALGEBRA, Vol. I, p. 516; and EQUATION, Vol. VIII, pp. 500, 501.

HORNET. See WASP, Vol. XXIV, p. 392.

HORNSEY, an English town on the northern outskirts of London, with a population of about 12,000. It also gives its name to a parliamentary division of the county of Middlesex.

HORNSTONE. See GEOLOGY, Vol. X, p. 238; and MINERALOGY, Vol. XVI, p. 389.

HOROLOGY. See CLOCKS, Vol. VI, pp. 13-35; WATCH, Vol. XXIV, pp. 394-398; and STANDARD TIME, in these Supplements.

HOROPTER. See EYE, Vol. VIII, p. 826; and STEREOSCOPE, Vol. XXII, p. 538.

HOROSCOPE. See ASTROLOGY, Vol. II, p. 742; and MAGIC, Vol. XV, p. 206.

HORSA. See ENGLAND, Vol. VIII, p. 269.

HORSE DISTEMPER, a term which has erroneously been applied to certain diseases which come under the classification of *Influenza*; q.v., VETERINARY SCIENCE, Vol. XXIV, p. 203.

HORSE-FLY, a popular name of several dipterous insects of widely different genera, which are troublesome to horses. The *Tabanidæ* are the true horse-flies. The females have a long proboscis, which is used for drawing blood from beneath the skin. The name is also applied to the bot-flies (*Estridæ*), and to the forest-fly (*Hippobosca*) of the British Isles.

HORSE-GENTIAN, a name applied to species of *Triosteum*, a genus of the family *Caprifoliaceæ*, or honeysuckles. They are erect and coarse, leafy herbs, with oval or lanceolate leaves, flowers sessile in the axils of the leaves, and fleshy orange or red fruit crowned with the persistent calyx-lobes. A still more common name for the genus is feverwort. The root has been used in medicine and the seeds for coffee.

HORSE GUARDS. See ARMY, Vol. II, p. 578; and LONDON, Vol. XIV, p. 839, and GUARDS, THE, in these Supplements.

HORSEHEADS, a town of Chemung County, central southern New York, on the Northern Central and the Elmira, Cortland and Northern railroads, and on the Chemung canal. It contains a woolen-mill, saw-mill and a very large brickyard. Population 1890, 1,716; 1900, 1,901.

HORSE ISLAND, an island in Lake Ontario, and in Jefferson County, New York, two miles from Sackett's Harbor. It has a lighthouse. Area, 27 acres.

HORSEMANSHIP. See HORSE, Vol. XII, p. 199.

*HORSE-RACING.—*Running*. Since 1880 many and vast have been the changes brought about on the American running-turf. About the year named the sport was gaining immensely in popularity, and the racing associations and jockey clubs were reaching a stage of prosperity which enabled them to endow their stakes with large amounts of money. The breeding interest was greatly stimulated, and the quality of the American thoroughbred improved in a marked manner. In fact, there is little question that in the early eighties the thoroughbreds then in training were superior to those that have been raced in 1896. The substitution of bookmaking for pool-selling increased the revenues of the jockey clubs,

the profits derived from the holding of meetings were large, and new associations, good, bad and indifferent, sprang up on all sides. Among the most important of these were the magnificent private enterprises of the Morris confederacy at Morris Park, Westchester, New York, which has since passed into the ownership of the Westchester Racing Association, and the Washington Park Club of Chicago, which built and equipped a splendid racing property, and between 1884 and 1894 held a series of brilliant meetings. The latter club endowed a rich stake, which it named the American Derby, and within a year or two of its institution "Derby Day" became the occasion of the chief social festival of the year in Chicago. During the Columbian season—1893—this stake was worth \$50,000; forty-five thousand people turned out to see the race run, and when the victory was won the secretary of the association handed J. E. Cushing, owner of the winner, Boundless, a check for \$50,000—the largest sum of money ever paid, in the equivalent of cash, in America to the winner of a single race. As might be supposed, the profits accruing from the holding of racing-meetings attracted the attention of many unscrupulous people, and racing was carried on at various points, winter and summer, regardless of all else save the making of money. New Jersey, being easy of access to New York, was over-run with race-tracks, and latterly, at Guttenberg and Gloucester, racing was carried on summer and winter, rain or shine, without stopping, every week-day, for practically two years. The laws of almost all the states had not been framed in contemplation of any such procedure, but it was not long before this mad rush for wealth had its effect, first in New York. The legislature of that state passed the Ives Bill (now superseded by the Percy-Gray Law), which limited racing to thirty days in each year for each association, and prohibited the holding of meetings in the months of January, February, March, April, November and December. This effectually put a stop to winter racing in New York, but it was not until later that the people of New Jersey arose in their might, cast off the yoke the gamblers had placed upon them, elected officials hostile to racing, and since 1893 there has been no racing done in New Jersey. In Illinois history repeated itself. Continuous racing arrayed the people against the sport, and in 1895 the Civic Federation of Chicago caused the closing of the Hawthorne track. No racing was done in Chicago in 1895 and 1896. In various other commonwealths legislation hostile to racing has been accomplished, but the people in general are coming to recognize that the test of the race-course is necessary to the maintenance and improvement of the race-horse, and the indications are that in a few years wise restrictive measures will be framed for and in each state, permitting the reputable association to conduct honorable business, and shutting out such associations as aim only to make money, regardless of the horse and all else.

It is a question whether the American thoroughbred has been really improved during the past decade and a half. The tendency has been toward shorter races than were formerly favored, and hence

the horses have not been trained to compass distances of three and four miles. The records given below indicate that speed has increased, but it must be remembered that the courses have been materially improved. Toward the end of the last decade, and during the first two years of the present, prices of thoroughbreds were very high. W. O'B. McDonough paid \$150,000 for Ormonde, winner of the "triple event" in England. Charles Reed paid \$100,000 for the imported English horse St. Blaise, winner of the Derby, and other prices were paid in proportion. These long prices were superinduced by the amounts of money that could be won in races. In 1891 His Highness won upward of \$107,000, and in 1893 Domino placed to his owner's credit \$176,000 won in stakes alone. The revenues of the New York racing associations having been very greatly reduced by the operation of the Percy-Gray Law, and racing having been stopped altogether in Chicago, it is not now possible to win such large sums of money, and as the value of a race-horse is largely determined by that which he can win, prices of thoroughbreds have lately been markedly reduced. Owners, however, may race winter as well as summer, the establishment of two magnificent racing-plants in San Francisco insuring, in addition to the meeting at New Orleans, an abundant opportunity to race in a warm climate during the winter months. Since 1880 the American turf may be said to have risen and fallen. The Jockey Club, formed in 1894 for the purpose of governing Eastern racing, is proving itself a powerful body, infinitely superior to any or all of the governing committees that preceded it. Under its wise rule racing is sure to prosper in the East. This body differs materially from any other that has essayed to govern racing in America. It is modeled after the pattern of the English Jockey Club, and has been endowed with certain plenary powers by act of the legislature of the state of New York. Under the Percy-Gray Law, above referred to, a racing commission of three, appointed by the governor, practically controls all racing done in the state, and this commission works in harmony with the Jockey Club. This commission is supported by a tax levied on the various racing associations. In the West, racing is governed by the Western Turf Congress, a body composed of representatives of the leading racing associations not affiliated with the Jockey Club. The difference between this body and the Jockey Club consists in the fact that the members of the former directly represent racing associations, while the members of the latter do not, but are simply banded together without self-interest to serve to govern the turf honestly and progressively. As might be supposed from the composition of the Western Turf Congress, its machinery has been used on occasion to further the aims, objects and desires of certain of its members, not always for the good of the sport. Advanced sentiment has at length crystallized in the belief that a Western jockey club, to take the place of the Western Turf Congress, is a necessity. This new body will consist, not of presidents or controllers of Western racing associations acting as such, but of prominent

gentlemen of undeniable social standing, who are thoroughly capable of governing the turf, and whose only aim will be to furnish the public clean sport.

In 1881 the English Derby was won by the American-bred horse Iroquois, which also won the St. Leger. The same year another American-bred horse, Foxhall, won the Grand Prix de Paris in France, and the great autumn handicaps at Newmarket, England, the Cesarewitch and Cambridgeshire—a wonderful feat for a three-year-old. In the years immediately succeeding, the American horses did little in England, and were withdrawn. In 1895 Richard Croker, well known as chief of Tammany Hall, and Michael F. Dwyer took a stable of well-known performers to England, but bad luck attended the undertaking from beginning to end. Dobbins broke down, Stonenell and Banquet were claimed out of selling-races, Harry Reid was retained at a sacrifice and brought back home again, and altogether the campaign was far from successful. In 1896 Duke and Wishard took a large stable of American thoroughbreds, including the great handicap horse, Ramapo, to England. Pierre Lorillard took another large stable, chiefly two-

notoriously much higher in England than in America, the extreme limit of price in 1896 being, in England, \$26,500, and in the United States, \$9,000, these figures, of course, being reached at public auction.

In the Dominion of Canada, racing is, for the most part, conducted on a high plane, and it was not until 1895 that any attempt was made to conduct a continuous meeting at any Canadian point. That year some American promoters established themselves at Windsor, Ontario, just across the river from Detroit, Michigan, and brought the sport into great disrepute in that corner of the province. In the winter of 1895-96 the Dominion Parliament passed a law incorporating the Canadian Jockey Club, and granting that body certain powers, which it was hoped would be used for the suppression and prevention of continuous racing. Anticipations, however, have not been realized.

Some difference of opinion exists among the best judges as to the relative merits of the English and American thoroughbreds. In point of speed alone, however, the American horse may be said to lead. Following are the best running-records:

MILES.		TIME.
$\frac{1}{2}$	BOB WADE, 4, at Butte, Montana, Aug. 20, 1890.....	0:12 $\frac{1}{4}$
$\frac{1}{2}$	GERALDINE, 4, 122 lbs., at New York Jockey Club (straight course, partly downhill), Aug. 30, 1889.....	0:46
$\frac{1}{2}$	APRIL FOOL, 4, 122 lbs., at Butte, Montana, July 31, 1891.....	0:47

4	LUCRETIA BORGIA, 4, 85 lbs., at Oakland, Cal., May 20, 1897 (against time).....	7:11
4	TEN BROECK, 4, 104 lbs., at Louisville, Sept. 27, 1876 (against time).....	7:15 $\frac{3}{4}$

year-olds, and one or two other owners shipped smaller lots. A large number of yearlings, mostly the get of Hanover, were shipped to Richard Croker, and many nominations of American-bred colts and fillies made in the English classic races. In 1896 the American horses were much more successful than in 1895—three races out of six being won one afternoon at an important meeting by them. Mr. Lorillard's horses made such a favorable impression that a one-half interest in his entire stable in England was purchased by Lord William Beresford. From this time forward many American horses will be raced each year in England, and it is quite likely that the breeders of the United States may seek to establish a market for their yearlings there. Prices for good thoroughbred yearlings are

See also TROTting and PACING, in these Supplements. J. H. S. JOHNSTONE.

HORSE-RADISH TREE, the *Moringa pterygo-sperma*, a tree common in India and Arabia, and cultivated in various other tropical countries. The fruit is eaten as a vegetable or pickled, and its seeds are important as furnishing the commercial oil of ben. The fresh root has an odor and taste resembling that of the horse-radish.

HORSESHOE CRABS. See *Limulus*, under CRUSTACEA, Vol. VI, pp. 648-650, 662.

HORSE-SHOEING. See SHOES, HORSE, Vol. XXI, pp. 831, 832.

HORSES IN THE UNITED STATES. See AGRICULTURE and HORSE-RACING in these Supplements.

HORSE-TICK. See **FOREST-FLY**, in these Supplements.

HORSFORD, EBEN NORTON, an American chemist; born in Genesee, New York, July 27, 1818; studied engineering at the Rensselaer Polytechnic Institute, and was engaged on the geological survey of the state of New York. In 1840 he was appointed professor of mathematics in the Academy for Women at Albany, where he remained for four years. He afterward studied in Germany, under Liebig, and on his return to the United States, in 1847, was elected Rumford professor of science at Harvard. After sixteen years' service there, he resigned, to engage in chemical experiments and manufacturing, and became president of the Rumford Chemical Works, Providence, Rhode Island. He published *The Discovery of America by Northmen* (1888). He died in Cambridge, Massachusetts, Jan. 1, 1893.

HORSLEY, JOHN CALCOTT, an English artist; born in London, Jan. 29, 1817; entered the schools of the Royal Academy in 1831; elected an associate of the academy in 1855; academician, 1865. Drapery of the human figure became his hobby, and so earnest was his abhorrence of the nude that his prudery became satirized by the sobriquet "Clothes-Horsley." His quality as an artist is well attested by his appointment as a head-master of the School of Designs of Somerset House, the receipt of several prizes for cartoons exhibited at Westminster Hall, and the excellence of various works, both oil-paintings and etchings. Among his pictures are *Winning the Game* and *The Pride of the Village* (1839); *Lady Jane Grey and Roger Ascham* (1853); *Showing a Preference* (1863); *The Morning of St. Valentine* (1866); *Stolen Glances* (1874); *Fashions Change* (1878); etc. His cartoons adorn the House of Lords and the new Houses of Parliament.

HORSLEY, VICTOR ALEXANDER HADEN, an English surgeon, son of John Calcott Horsley; born April 14, 1857, at Kensington; educated at the Cranbrook School and the University College Hospital; was appointed on the surgical staff of the hospital; from 1884 to 1890, was professor-superintendent of the Brown Institution; from 1891 to 1893, Fullerian professor at the Royal Institution; in 1886, elected to the Royal Society. He experimented widely in brain physiology, and wrote several papers on the subject. Among his publications are *Injuries and Diseases of the Neck* (1886); and *Experiments on the Functions of the Cerebral Cortex* (1888).

HORTA. See **AZORES**, Vol. III, p. 172.

HORTON, a city of Brown County, northeastern Kansas, on the Chicago, Rock Island and Pacific railroad, 22 miles W.S.W. of Atchison. It is the site of the manufacturing and repair shops of this railroad for the entire system west of the Mississippi. It is the shipping-point for an agricultural and stock-raising region. Population 1890, 3,316; 1900, 3,398.

HORTON, SAMUEL DANA, an American publicist; born at Pomeroy, Ohio, Jan. 16, 1844. He was educated at Harvard and graduated from the Harvard law school in 1868; after studying abroad, began practice in Cincinnati, but spent most of his life abroad studying monetary questions. He was a delegate to the Monetary Conference of Paris,

1871, and to the conference of 1881. He advocated the maintenance of an international ratio between gold and silver. At the time of his death he was in Washington at the request of the administration, to consult about the financial situation. He published *Silver and Gold and Their Relation to the Problem of Resumption* (1876); *The Silver Pound and England's Monetary Policy Since the Restoration* (1887); *The History of the Guinea* (1887); and *Silver in Europe* (1890). He died in Washington, District of Columbia, Feb. 23, 1895.

HORUS. See **AMMON**, Vol. I, pp. 740, 741; and **EGYPT**, Vol. VII, p. 717.

HORVATH, MICHAEL, a Hungarian historian; born at Szentes, in the County of Csongrad, Oct. 20, 1809. He studied theology at the Seminary of Waitzen, took orders in 1830, in 1844 became professor of the Hungarian language and literature in Vienna, and four years later bishop of Csanad. During the Revolution of 1848 he received the appointment of Minister of Public Instruction and Worship. The defeat of the Hungarians drove him into exile. Under the amnesty of 1867 he was permitted to return. His most important work is his *History of Hungary* (8 vols., 1842-46). He died at Carlsbad, Aug. 19, 1878.

HOSACK, DAVID, an American botanist; born in New York, Aug. 31, 1769; educated at Columbia College and the College of New Jersey; received his M.D. in Philadelphia in 1791; studied in Edinburgh and London; in 1795 became professor at Columbia; at the College of Physicians and Surgeons in 1807; 1826 to 1830 held a professorship at Rutgers Medical College. He was the author of *Hortus Elginensis*; *Memoir of Hugh Williamson* (1820); *Essays on Medical Science* (1824-30); and *Theory and Practice of Physic* (1838). He died in New York, Dec. 23, 1835.

HOSEA, KING. See **ISRAEL**, Vol. XIII, p. 412.

HOSMER, HARRIET G., an American sculptress; born at Watertown, Massachusetts, Oct.

6, 1830; was educated at Lenox, Massachusetts, and early displayed a taste for art. She received a few lessons in modeling in Boston, then entered a medical college in St. Louis to study anatomy and dissection. Her first work in marble was a reduced copy of Canova's bust of Napoleon, which was fol-

HARRIET G. HOSMER.

lowed soon by an ideal work, *Hesper, or the Evening Star*. In 1852 she went to Rome and became a pupil of Gibson. After two years of study and modeling from the antique she produced the busts of *Daphne* and *Medusa*. Her first full-length figure in marble was *Enone*, completed in 1855, and this was followed, two years later, by *Beatrice Cenci Sleeping in Her Cell*. In the summer of 1865 she modeled *Puck*, of which many copies have been made. This was followed by *Will-o'-the-Wisp*. A colossal statue of *Zenobia*,

Queen of Palyrma, in Chains, was her next important work, followed by a statue of *Thomas H. Benton*, erected in St. Louis, Missouri, the *Sleeping Faun*, and a design of a memorial monument to Abraham Lincoln. In 1893 she completed her statue of *Queen Isabella of Spain*, ordered for the Columbian Exposition. Besides her skill in sculpture Miss Hosmer exhibited talents for designing and constructing machinery, and devising new processes, especially in connection with her own art, such as a method of converting ordinary Italian limestone into marble. She resided for many years in Rome, making occasional visits to the United States.

HOSMER, JAMES KENDALL, an American author; born in Northfield, Massachusetts, Jan. 29, 1834; was graduated at Harvard in 1855; professor at Antioch College, 1866-72; became professor of English and German literature in the University of Missouri in 1872; in 1874 became a professor in Washington University, St. Louis, Missouri. He published *The Color Guard* (1864); *Short History of German Literature* (1879); *Samuel Adams* in the American Statesman Series (1885); *The Life of Young Sir Henry Vane* (1888); *How Thankful Was Bewitched*, a novel (1895); and *The Life of Thomas Hutchinson* (1896).

HOSPINIAN, RUDOLPH, a Swiss theologian; born at Altdorf, Nov. 7, 1547; studied at Marburg and Heidelberg, and was pastor in the Swiss Reformed Church at different places. He wrote *The Strongholds of Christians* (1593); *Concordia Discors* (1609), which aroused the opposition of the Lutherans of Germany; and *History of the Jesuits* (1619), a portion of which was translated into English in 1678. He died March 11, 1626.

HOSPITALLERS, same as ST. JOHN, KNIGHTS OF. Vol. XXI, pp. 173-175.

HOSPODAR. See ROUMANIA, Vol. XXI, p. 18.

HOST (Lat., *hostia*, "a victim"), the name given in the Roman Catholic church to the consecrated bread of the eucharist, so called in conformity with the doctrine of that church that the eucharist is a "sacrifice," in the strict sense of the word, though, in the common language of Roman Catholics, "host" is used for the unconsecrated altar-bread, and even so occurs in the offertory of the Roman missal. The host in the Latin church is a thin wafer of unleavened bread, made of the finest flour, and bearing upon it the figure of the Crucifixion or some other emblematic device. In all ancient liturgical rites the consecrated host was broken before being consumed by the priest. In the Roman church the celebrant first breaks it in two, and then from one half detaches a fragment which he drops into the chalice. In the Greek and other Oriental churches, as well as in various Protestant communities, the eucharist is celebrated in leavened bread. The use of unleavened bread is founded on the belief that Christ could only have used such bread when instituting the eucharist at the Paschal feast. Luther followed the Roman church on this point, but did not break the host. See EUCHARIST, Vol. VIII, pp. 650-654.

HOSTRUP, JENS CHRISTIAN, a Danish poet and dramatist; born in Copenhagen, May 20, 1818; studied theology at the University of Copenhagen; devoted himself to literature until 1855, in which year he entered the ministry and had charge of a pastorate until 1881, when he retired and returned to Copenhagen. His first literary work, a comedy, entitled *Opposite Neighbors*, was written while he was a student. It is still acted in Denmark. Several other comedies followed, among them *Intrigues* (1845); *Soldier Larks* (1850); and *Master and Apprentice* (1852). After entering the ministry he wrote but little, and that which he did produce was quite different in character from the rollicking comedies of his youth. Among these later works are *Songs and Poems* (1872); and *Eve*, a drama (1880). He died in January, 1893.

HOT-AIR ENGINE. See AIR-ENGINE, Vol. I, p. 428; and STEAM-ENGINE, Vol. XXII, pp. 522, 523.

HOT-AIR HEATING. See FURNACES, in these Supplements.

HOTBED. See HORTICULTURE, Vol. XII, pp. 225, 226.

HOTCHKISS, BENJAMIN BERKELV, an American inventor; born in Watertown, Connecticut, Oct. 1, 1826; became a machinist, and in 1856 designed a field-gun on a new pattern. In 1860 he submitted to the United States government an improved system of rifled projectiles, which was largely used during the Civil War. In 1867 he introduced his revolving cannon to the European governments, and afterward devised a magazine-rifle and a quick-firing gun. He died in Paris, Feb. 14, 1885.

HOT-HOUSE. See HORTICULTURE, Vol. XII, pp. 221-225.

HOT SPRINGS, a city and the capital of Garland County, western central Arkansas, 50 miles W.S.W. of Little Rock, on the Hot Springs railroad. A United States army and navy general hospital and a Roman Catholic school and convent are located here. In the vicinity valuable mines of gold, silver and lead are worked. Near the city are 72 thermal springs, some of which reach 150° F., and these are visited by large numbers of health-seekers. Population 1890, 8,086; 1900, 9,973.

HOT SPRINGS, a town of Madison County, western North Carolina, on the French Broad River and the Southern railroad, 30 miles N.W. of Asheville. It is beautifully situated on the east slope of the Smoky Mountains, near Bald Mountain, Painted Rocks, the Chimneys and Mount Cowbell. Its mineral springs and good hotels make it a very popular resort.

HOT SPRINGS, a village and the capital of Fall River County, southwestern South Dakota, on Fall Creek and on the Burlington and Missouri River railroad. It is the distributing and shipping point for a large mining district, and ships considerable live-stock. It also has a large lumber business and manufactories of stucco. It takes its name from the hot sulphated calcic-

sodic springs which are here. Population 1890, 1,423; 1900, 1,319.

HOTTENTOT'S BREAD, a kind of yam (*Tesudinaria elephantipes*), native of South Africa. See **ELEPHANT'S FOOT**, in these Supplements.

HOUDIN, ROBERT, a French conjurer; born at Blois in 1805. He studied mechanics, and after winning a medal for his toys and automata at the Paris exhibition of 1844, opened a series of exhibitions, which he continued for ten years, retiring in 1855 with a large fortune. In 1856, at the invitation of the French government, he went to Algeria and entered into competition with the miracle-working priests. He was completely successful, and did much toward destroying their influence. He published in 1857 his *Life*, and in 1859 a book entitled *Confidences*. He died at Blois in 1871.

HOUGH, FRANKLIN BENJAMIN, an American author; born at Martinsburg, New York, July 20, 1820. Graduated at Union College (1843); at Cleveland Medical College (1848); practiced medicine in Somerville, New York (1848-52), and in Albany (1852-60). When the Civil War broke out Hough enlisted, served nine months, and then settled in Lowville, New York, and devoted himself to scientific and literary pursuits. He published *History of St. Lawrence and Franklin Counties, New York* (1853); *History of Duryea's Campaign* (1864); *Washingtoniana* (1865); *American Biographical Notes* (1875). Also, translated Badan's *Guerre de Crimée*. He died June 6, 1885, in Lowville, New York.

HOUGH, GEORGE WASHINGTON, an American astronomer; born in Montgomery County, New York, Oct. 24, 1836; graduated at Union College in 1856, and turned his attention to astronomy. In 1860 he became astronomer at Albany, New York, and in 1879 was made director of Dearborn Observatory, Chicago. His principal scientific work was the cataloguing of double stars, more than three hundred different stars having been discovered by him, and catalogued. He invented a barograph and a thermograph, used in the United States Signal Service, and a printing-chronograph. Among his writings are *Annals of Dudley Observatory* (1866-71); *The Galvanic Battery* (1870); and *The Total Eclipse of August 7, 1869* (1870).

HOUGHTON, a village and the capital of Houghton County, northern North Michigan, on Lake Portage and on the Duluth, South Shore and Atlantic railroad, 68 miles N.W. of Marquette. It is the center of the Lake Superior copper-mining district, the richest copper-producing region in the country. In 1891 this district yielded 114,222,709 pounds, or over two fifths of the entire product of the United States. Population 1900, 3,359.

HOUGHTON, HENRY OSCAR, an American publisher; born at Sutton, Vermont, April 30, 1823. Was apprenticed to a printer in Burlington, Vermont; afterward entered the University of Vermont, and graduated in 1846; for a time was reporter on the *Boston Traveller*; in 1849 estab-

lished a printing-office in Cambridge, Massachusetts, the successor to which is the Riverside Press; established the publishing-house of Hurd and Houghton in 1864; in 1878 the firm of Houghton, Osgood and Company, which was changed in 1880 to Houghton, Mifflin and Company, its present name. He died Aug. 26, 1895, in North Andover, Massachusetts.

HOUGHTON, RICHARD MONCKTON MILNES, LORD, an English author, born at Pontefract, June 19, 1809. He was educated at Cambridge, graduating in 1831. From 1837 to 1863 he represented Pontefract, first as a Conservative, but afterward as an Independent Liberal. In 1863 he was raised to the peerage. He championed oppressed nationalities, liberty of conscience and the rights of women; and secured the passage of a bill for the establishment of reformatories. He was a patron of men of letters, and a man of letters himself. He was said to have secured the laureateship for Tennyson, and to have been the first to recognize the genius of Swinburne. Among his works are *Memorials of a Town in Greece* (1833); *Poems of Many Years* (1838); *Life, Letters and Remains of Keats* (1848); *Monographs* (1873); and *Collected Poetical Works* (1876). He died at Vichy, Aug. 11, 1885.

HOULTON, a town and the capital of Aroostook County, northeastern Maine; on the Canadian Pacific and the Bangor and Aroostook railroads. The chief productions of the vicinity are potatoes, hay, starch, cedar shingles and hemlock bark. The Ricker Classical Institute (Baptist) is situated here. Pop. 1890, 4,015; 1900, 4,686.

HOUMA, a post village, capital of Terre Bonne Parish, southern Louisiana, on a branch of the Texas and Louisiana railroad, 70 miles S.W. of New Orleans. It has a convent and an academy. It is in an agricultural region, and manufactures sugar and molasses, and exports these products, and also rice and corn. Population 1900, 3,212.

HOUND-FISH. See **SHARK**, Vol. XXI, p. 774.

HOUR-GLASS, a device for measuring time (properly of one hour of time) by means of the passage of a given amount of fine sand through a small opening. It generally consists of two glass bulbs, one of which is partially filled with dry sand, of the same size and shape, joined by a narrow passage-way. The instrument is by no means accurate, as the sand is liable to become damp, and the bulbs and the passage-way joining them are subject to contraction and expansion on account of changes of temperature. There are also half-hour glasses, three-minute glasses, etc., which are often called hour-glasses. The hour-glass is said to have been invented in Alexandria in the third century, A.D., and at first was

HENRY O. HOUGHTON.

carried about as are watches nowadays. After the Reformation, hour-glasses were placed in many of the churches and used by the preachers to time their sermons, and even until recently in some out-of-the-way churches they have formed a part of the regular pulpit furniture.

HOURI, according to the Koran, a nymph of Paradise, whose companionship after death is to be one of the great felicities of the true believers. The houris are not of flesh and blood, but are composed of musk, incense, saffron and amber, and are gifted with immortal youth and charms that never lessen. Each Moslem is to possess 72. With the more cultured Mohammedans, however, the promised delights of these heavenly virgins are considered as allegories, picturing the spiritual happiness of the blessed.

HOURS. See CALENDAR, Vol. IV, p. 664.

HOUSATONIC RIVER, a river of western Connecticut and Massachusetts, which rises in the latter state, in Windsor Township, Berkshire County; follows a southerly course through Connecticut amid beautiful, wild scenery, and enters Long Island Sound, 13 miles S.W. of New Haven, after a course of 150 miles. Tide-water ascends the river for 14 miles.

HOUSE, EDWARD HOWARD, an American author; born in Boston, Sept. 5, 1836. From 1850 to 1853 he studied music; was part proprietor and musical and dramatic critic of the Boston *Courier* (1854-58); dramatic and musical critic on the New York *Tribune* (1859-70); special correspondent in Japan for the New York *Herald* (1874-76); professor of English language and literature at the University of Tokio, Japan, 1871-73. He was influential in securing the return, in 1882, of the indemnity paid by the Japanese government to the United States on account of the Simonoseki affair. He published *The Simonoseki Affair* (1874); *The Japanese Expedition to Formosa* (1875); *Japanese Episodes* (1881); *Yone Santo* (1888); *The Midnight Warning* (1893).

HOUSEMAID'S KNEE, the term commonly applied to an acute or chronic inflammation of the bursa or sac between the knee-pan and the skin. Housemaids were considered especially liable to it from their kneeling to scrub on hard floors. In its acute form it causes considerable pain, swelling and febrile disturbance, the swelling being very superficial and in front of the patella.

HOUSE OF COMMONS. See PARLIAMENT, Vol. XVIII, pp. 302-313.

HOUSE OF CORRECTION, a house established by law as primarily a place of confinement and discipline for incorrigible children who are not of sufficiently mature age that the law will permit them to be imprisoned in a jail. The laws regulating houses of correction vary in the different states, but generally it may be said that dependent or incorrigible children may be sent there for maintenance and discipline, and those who have committed felony, for punishment. In some states any one under 21 years of age may be sent to the house of correction instead of to jail or the penitentiary, at the discretion of the

court, when the offense of which he is convicted is slight, and it appears to the court that the youth may thus be redeemed from the criminal class.

HOUSSAYE, ARSÈNE, a French litterateur; born at Bruyères, March 28, 1815. He went to Paris, and in 1836 made his début into the literary world with two novels, *La Couronne de Bluets* and *La Pécheresse*. The friendship of Jules Janin and of Gautier, together with the collaboration of Sandeau, aided him to gain recognition. From 1844 to 1849 he was editor of the *Artiste*, and in 1861 became editor of the *Presse*. In 1849, through the influence of Mlle. Rachel, he was given the direction of the Comédie Française, which he held until 1856. During his administration the theater, which had been heavily in debt, was put upon a sound financial footing. He was decorated with the Legion of Honor in 1846, and made officer in 1858. Among his works are *Philosophes et Comédiennes* (1850); *Les Parisiennes* (1869); *Les Femmes du Diable* (1876), novels; *Poésies Complètes* (1851); *L'Histoire du Quarante et Unième Fauteuil de l'Académie Française* (1855); *Le Roi Voltaire* (1858); *L'Histoire de la Peinture flamande et hollandaise* (1846); *Confessions, Souvenirs d'un Demi-Siècle* (1891). He died in Paris, Feb. 26, 1896.

HOUSTON, a village and one of the capitals of Chickasaw County, northeastern Mississippi, on Hoolka Creek, 29 miles N.W. of West Point. The region produces cotton, corn, vegetables and live-stock. It has a normal school. Population 1890, 893; 1900, 677.

HOUSTON, a village and the capital of Halifax County, central southern Virginia, on Banister River and the Southern and the Norfolk and Western railroads, 48 miles S.S.E. of Lynchburg. It is the shipping-point for tobacco and stock, raised extensively in the vicinity, and has furniture and tobacco factories. Population 1890, 1,285.

HOUSTON, a city and the capital of Harris County, southeastern Texas. (See HOUSTON, Vol. XII, p. 318.) It is situated on eleven railroads, the most important of which are the Gulf, Colorado and Santa Fé, the International and Great Northern, the Missouri, Kansas and Texas and the Southern Pacific. Its importance in manufacturing has grown very much in the past few years. Its industries have a capital of \$3,500,000 and produce \$6,700,000 worth of products per annum; there is employed an average number of 3,000 men. These industries include oil-refining, brewing, cotton-baling, car-wheel making, furniture making, car repairing and building, three railroads having shops here. Its growth, however, is mostly due to its commercial advantages. It ships large quantities of the cotton and maize raised so extensively throughout the state, and considerable other farm and manufacturing products. The city suffered considerably from the cyclone which proved so destructive to Galveston September 8, 1900. Population 1890, 27,557; 1900, 44,633.

HOUSTON, DAVID CRAWFORD, an American military engineer; born in New York city, Dec. 5,

1835; graduated at West Point in 1856, and remained at the academy for a year as assistant professor; in 1857 was engaged in engineering work at Hampton Roads, and later at Sandy Hook. During the Civil War he served as engineer and received the brevet of colonel. After the war he continued his work as engineer, and in 1886 was made member of the board of engineers for fortifications and river and harbor improvements. He was made colonel in 1889. He died May 18, 1893.

HOUTZDALE, a post village of Clearfield County, western central Pennsylvania, on the Pennsylvania railroad, 15 miles S. of Clearfield. It has a lumber-mill, and much bituminous coal is mined in the vicinity. Population 1900, 1,482.

HOVELAQUE, ABEL, a French anthropologist; born in Paris, Nov. 14, 1843. He was one of the most industrious of the younger school of French scientists; from his early youth devoted himself largely to the study of anthropology, and became a prolific writer on topics connected with this branch of science. At the age of 23 he founded the *Revue Linguistique*, the first journal in France devoted to linguistics. From 1876 to 1890 he was professor of linguistic ethnology at the École d'Anthropologie, becoming its president in 1890. He was a member of the Anthropological Society, and as such published many articles in the periodicals, chiefly on cranial investigations, etc. Among his more important works are *Grammar of the Zend Language* (1869); *Our Ancestor*, a work on the beginnings of mankind (1877); *Languages, Races and Nationalities*; *The Avesta Zoroaster and Mazdeism* (1880); *The Negroes of Equatorial Africa* (1889); etc. He died in Paris. Feb. 22, 1896.

HOVENDEN, THOMAS, an Irish-American artist; born in Dunmanway, Cork Co., Ireland, Dec. 28, 1840. He received his early art education at the School of Design in Cork; went to New York in 1863, and studied at the National Academy; went to Paris in 1874, and studied under Cabanel and in the École des Beaux-Arts; returned to the United States in 1880; in 1882 was elected to the National Academy. Among his most noteworthy pictures are *The Two Lilies* (1874); *Pleasant News* (1876); *Loyalist Peasant Soldier of La Vendée* (1878); and *Breaking the Home Ties*, one of the most popular pictures at the World's Columbian Exposition, 1893. Died at Plymouth Meeting, near Norristown, Pa., Aug. 14, 1895.

HOVERING ACTS, a popular term rather than a legal appellation used to describe that class of legislative enactments by which any nation assumes control over the waters surrounding its shores for a distance greater than the usual and conventional marine league. England passed such a law in 1736 for revenue purposes, and thereby prohibited the transshipment of foreign and dutiable merchandise within four leagues of the coast. The United States Congress passed a similar statute in 1797, which provides for a forfeiture of the cargo of any vessel offending. While these essentially municipal statutes have received judicial sanction and indorsement, their

international standing is based on the acquiescence of nations affected by them and on comity of nations, rather than founded on any abstract legal right.

HOVEY, ALVAH, an American clergyman; born in Greene, New York, March 5, 1820. Graduated at Dartmouth in 1844; at the Newton Theological Institution in 1848; in 1848-49 was pastor of the Baptist church in New Gloucester, Maine, and from 1849 to 1855 was instructor, and from 1855 to 1868 held a professorship in Newton Theological Institution. In 1868 he was chosen president of the seminary. Among his writings are *The State of the Impenitent Dead* (1859); *The Miracles of Christ as Attested by the Evangelists* (1864); *The Scriptural Law of Divorce* (1866); *God with Us: or, the Person and Work of Christ* (1872); *Studies in Ethics and Religion* (1892); and he edited *The American Commentary on the New Testament* (1881-90).

HOVEY, ALVIN PETERSON, an American soldier; born at Mount Vernon, Indiana, Sept. 6, 1821; was apprenticed to a brickmaker, but studied law, and was admitted to the bar in 1843; received commission of first lieutenant in Mexican War; in 1851 was circuit judge of Indiana; entered the Union army in 1861 as colonel; made brigadier-general of volunteers, 1862; brevetted major-general, 1864; resigned in 1865 and was minister to Peru, 1865-70; in 1886 elected to Congress; governor of Indiana, 1888-90. He died in Indianapolis, Nov. 23, 1891.

HOVEY, CHARLES MASON, an American horticulturist; born in Cambridge, Massachusetts, Oct. 26, 1810. He edited the *American Gardener's Magazine* (1835); the *Magazine of Horticulture* (1835-69); and published *Fruits of America* (1854), the best work on the subject in its time. He was president of the Massachusetts Horticultural Society (1863-67). His grounds at Cambridge contained 168 specimens of trees. He died Sept. 2, 1887, in Cambridge, Massachusetts.

HOWARD, a city and the capital of Elk County, southeastern Kansas, on Elk River and the Atchison, Topeka and Santa Fé railroad, 60 miles E.S.E. of Wichita. It is in a farming and grazing district. It has a cigar factory. Population 1900, 1,207.

HOWARD, BLANCHE WILLIS. See TEUFEL, MRS., in these Supplements.

HOWARD, BRONSON, an American dramatist, was born in Detroit, Michigan, Oct. 7, 1842. After a preparatory school education, he went into journalism in New York, but in 1870 the success of his first play, *Saratoga*, determined his career. He produced, in rapid succession, *Diamonds* (1872); *Hurricanes* (1878); *The Banker's Daughter* (1878); *Wives* (1879); *Young Mrs. Winthrop* (1882); *One of Our Girls* (1885); *Met by Chance* (1887); *The Henrietta* (1887); *Shenandoah* (1889); and *Aristocracy* (1892)—all of which have been received with favor, and some of which have been reproduced in England. From 1875 on, Mr. Howard resided in New York and London.

HOWARD, CATHERINE, an English queen, the

fifth wife of Henry VIII of England; born in 1521, the daughter of Edmund Howard, son of the Duke of Norfolk. Henry was divorced from his fourth wife, July 9, 1540, and on the 28th of the same month married Catherine. At first the marriage was happy; but after a time the king's suspicions were aroused by stories concerning her life previous to the marriage, which led him to make investigation of her conduct after it. As a result, she was arraigned on the accusation of adultery, convicted, and, after a full confession before the House of Lords, was executed Feb. 13, 1542.

HOWARD, EDWARD, an English cardinal priest of the Roman Catholic Church, was born at Nottingham, England, Feb. 13, 1829. In his youth he served as an officer in the Second Life Guards, but when 26 years old became a priest; was consecrated archbishop of Neo-Cæsaria, in *partibus infidelium*, in 1872; created a cardinal priest by Pope Pius IX, March 12, 1877; in December, 1881, was nominated archpriest of the basilica of St. Peter's. Cardinal Howard's attainments as a linguist were remarkable. He spoke Arabic, Armenian and Russian fluently, besides the languages of western Europe. He died in Brighton, England, Sept. 18, 1892.

HOWARD, JOHN EAGER, an American soldier and statesman; born in Baltimore County, Maryland, Jan. 4, 1752. He fought in the battle of White Plains, New York, 1776, as captain in a Maryland regiment, and in 1777 distinguished himself at Germantown, where he commanded a regiment. At the battle of Cowpens, Jan. 17, 1781, Colonel Howard commanded the Continentals, and led them in a bayonet charge which decided the fortunes of the day. At Eutaw Springs he was severely wounded. After the war he was in Congress from 1787 to 1788, and governor of Maryland from 1789 to 1792. From 1795 to 1803 he was United States Senator from Maryland. He died in Baltimore, Oct. 12, 1827.

HOWARD, OLIVER OTIS, an American general; born at Leeds, Maine, Nov. 8, 1830. After graduating at Bowdoin College in 1850 and at West Point in 1854, he was made instructor in mathematics in the military academy. In 1861 he became colonel of a regiment of Maine volunteers; and at the battle of Bull Run, July 21st, of the same year, commanded a brigade, and was soon after made brigadier-general. At the

battle of Fair Oaks, June 1, 1862, he lost his right arm. General Howard took part in the battles of Antietam, Chancellorsville, Gettysburg, Lookout Valley, Missionary Ridge, Chattanooga; commanded the right wing of Sherman's army during its march to the sea and through the Carolinas; was made commissioner of the Freedmen's

Bureau, May 12, 1865, and held that office until June 30, 1872, when it was closed. In 1869 he was made president of Howard University, which had been established in Washington for the higher education of the negroes, but resigned in 1873. In 1877 he conducted a campaign against the Nez Percés Indians, and pursued them for thirteen hundred miles, as related in his book, *Chief Joseph*. He also defeated the Bannacks and Piutes in 1878. In March, 1886, he was promoted to be major-general, and succeeded General Hancock in command of the Division of the Atlantic. He retired in 1894.

HOWARD ASSOCIATION was founded in 1866, under the patronage of Lord Brougham, to promote the best methods of treatment and prevention of crime and pauperism. The principles of John Howard, the philanthropist, have shaped the policy of the association as a rule. It collects information at home and abroad bearing on the present systems of punishment and prevention of crime, and publishes this information from time to time in pamphlets. Its secretary, William Tallack, is the author of a book, *Penological and Preventive Principles* (second edition 1895), which has received high official recognition.

HOWARD CITY, a post-village and railroad junction in Montcalm County, central south Michigan, 33 miles N. of Grand Rapids, on the Detroit, Lansing and Northern and the Grand Rapids and Indiana railroads. Here furniture, butter tubs, lumber and shingles are manufactured. It is surrounded by rich farm lands; wheat and potatoes are the principal crops. Population 1900, 1,398.

HOWARD UNIVERSITY, an institution of learning established in Washington, District of Columbia, in 1867, with the object of giving to the emancipated slaves opportunities of obtaining a liberal and professional education. The university consists of academical, theological, law, normal, medical, dental and pharmaceutical departments; is non-sectarian, and admits students without respect to sex or color. The number of instructors in 1895 was 56, the number of pupils 587. There were 13,000 books in the library. The annual income was \$60,000. Tuition is free. The institution was named after General Oliver Otis Howard, who at the time of its foundation was at the head of the Freedmen's Bureau.

HOWE, EDGAR WATSON, an American author and journalist; born in Wabash County, Indiana, May 3, 1854. He received no school education after his ninth year, but was apprenticed to a printer. In 1878 he became proprietor and editor of the Atchison *Daily Globe*, of Atchison, Kansas. He published *The Story of a Country Town* (1883); *The Mystery of the Locks* (1885); *A Moonlight Boy* (1886); and *A Man Story* (1887).

HOWE, ELIAS, an American inventor; born at Spencer, Massachusetts, July 9, 1819. While working in a machine-shop at Lowell, Massachusetts, and afterward in one at Boston, he developed his invention of the sewing-machine, and, having constructed the first machine in May,

GEN. O. O. HOWARD.

1845, obtained a United States patent Sept. 10, 1846. He tried in vain to introduce his invention in England. On his return to Boston in 1849 he found that his patent had been infringed. For seven years he had to litigate to protect his patent rights, until the principal manufacturers, after being defeated in the courts, agreed to pay him royalties on the sewing-machines made by them. His yearly income from this source increased to \$200,000, and the total fortune derived from his invention amounted to \$2,000,000. He received, among other marks of distinction, the cross of the Legion of Honor of France. He died in Brooklyn, New York, Oct. 3, 1867.

HOWE, JOSEPH, a Canadian statesman; born in Halifax, Dec. 13, 1804. He was originally a printer. In 1828 he became editor and proprietor of the *Nova-Scotian*; in 1836 elected to Parliament; in 1840 a member of the provincial cabinet, but resigned in 1854 to superintend the construction of the first railroad in Nova Scotia; in 1863 became premier of the province. He opposed the absorption of Nova Scotia by the Dominion at first, but afterward obtained the best terms for his province, and accepted a place in the Dominion cabinet in 1869. In 1873 he was appointed lieutenant-governor of Nova Scotia. He died in Halifax, June 1, 1873.

HOWE, JULIA WARD, an American poetess; wife of Dr. Samuel Gridley Howe; born in New

York City, May 27, 1819. She took a deep interest in her husband's philanthropic labors, and was associated with him in editing the *Commonwealth*, an anti-slavery magazine. At the New Orleans World's Fair in 1885, Mrs. Howe was the chief of the women's department. She published *Passion Flowers* (1854); *Words for the Hour* (1856); *The World's Own* and *Hippolytus*, two tragedies; *Later Lyrics* (1866); and also a work entitled *Modern Society* (1881), and a *Life of Margaret Fuller* (1883). The most memorable of her poems is the *Battle Hymn of the Republic*. Mrs. Howe was a zealous worker in the cause of woman suffrage.

JULIA WARD HOWE.

HOWE, SAMUEL GRIDLEY, an American philanthropist; born in Boston, Nov. 10, 1801. After studying medicine he went to Greece in 1824, where he was placed at the head of the surgical service in the war for independence. In 1831 he went to Europe again to inspect schools for the blind, and upon his return in 1832 started a school for the blind in Boston, which afterward was known as the Perkins Institution. Dr. Howe was made superintendent, and held the office until his death. His greatest success was in the education of Laura Bridgman. He also assisted in founding a school for training idiots, which was organized as the Massachusetts School for Idiots. In 1871 he was sent by President Grant as a member of

the commission to visit San Domingo and report upon the advisability of its annexation to the United States. Dr. Howe published a *Historical Sketch of the Greek Revolution* (1828), and a *Reader for the Blind* (1839). His widow has written his biography. He died in Boston, Jan. 9, 1876.

HOWE, TIMOTHY OTIS, an American jurist and statesman; born in Livermore, Maine, Feb. 24, 1816. He was admitted to the bar in 1839; elected to the state legislature of Maine in 1840; moved to Green Bay, Wisconsin; in 1850 was elected judge in the circuit and supreme court of Wisconsin; in 1861 was elected to the United States Senate, and served until 1879; in 1881 was made Postmaster-General in Arthur's Cabinet. He died in Kenosha, Wisconsin, March 25, 1883.

HOWE, WILLIAM, VISCOUNT, an English general; brother of Admiral Howe; born Aug. 10, 1729; was educated at Eton, and joined the army; served under General Wolfe at Quebec; made colonel (1764); major-general (1772); commander-in-chief of the British forces in America in 1775, after General Gage's departure and until superseded by Clinton in 1778. (See UNITED STATES, Vol. XXIII, pp. 741-743.) Upon his return to England his conduct was upheld by Parliament after investigation, and he was made lieutenant-general in 1782; general, 1786; succeeded to the Irish peerage, 1799. He died July 12, 1814.

HOWELL, a village and the capital of Livingston County, southeastern Michigan, on the Detroit, Lansing and Northern railroad, 32 miles E. of Lansing. It is in an agricultural section; has foundries and machine-shops; and manufactures flour, condensed milk, sashes and doors. Population 1890. 2,387; 1900. 2,518.

HOWELL, JOHN CUMMING, an American naval officer; born in Philadelphia, Nov. 24, 1819; entered the navy as midshipman (1836); became lieutenant (1849); commander (1862); served in the North Atlantic blockading squadron in 1861; in the East Gulf squadron (1862-63), and again in the North Atlantic squadron in 1864-65; was fleet-captain of the European squadron (1868-70); commandant of the League Island navy-yard, at Philadelphia (1870-72); commissioned commodore (1872); commandant of the Portsmouth, N.H., navy-yard (1872-74); chief of the bureau of yards and docks (1874-78). He was made rear-admiral in 1877, and retired in 1881. Died in Folkestone, Eng., Sept. 12, 1892.

HOWELLS, WILLIAM DEAN, an American novelist; born at Martin's Ferry, Ohio, March 1, 1837. His father was the proprietor and publisher of several newspapers in Ohio, and he received his education in a printing-office. In 1851

WILLIAM D. HOWELLS.

he was compositor on the *Ohio State Journal*, and afterward in the same year worked on his father's latest venture, the *Ashtabula Sentinel*, which subse

quently was moved to Jefferson. In 1859 he was taken on the staff of the *State Journal*; and when Lincoln was nominated in 1869 Howells wrote his life, and received \$160 for the work, which enabled him to take a trip to Boston. Here he became acquainted with Lowell, Holmes and others. Previous to this he had published several poems in the *Atlantic Monthly*. In the following year he was appointed consul at Venice, where he remained until 1865, studying the Italian language and literature. The result of his residence there was the publication of his *Venetian Life* (1866) and *Italian Journeys* (1867), which first made known to the world his power of observation and his charm of style as a prose-writer. After his return home he was for a time on the staff of the *New York Tribune*, then of the *Times*, and in 1866 was made assistant editor of the *Atlantic Monthly*. Six years later he became its editor, a position which he held until 1881. In 1882-83 he made a second trip to Europe, and in 1886 took charge of the *Editor's Study* of *Harper's Monthly*, contributing to it a series of critical papers on contemporary literature, American and foreign, in which he defended the literary doctrines of the modern realists. In 1892 he was editor of the *Cosmopolitan*, but after that time devoted himself entirely to literary production. His works include *Their Wedding-Journey* (1871); *Poems* (1873); *A Chance Acquaintance* (1874); *A Foregone Conclusion* (1875); *The Lady of the Aroostook* (1879); *A Modern Instance* (1882); *The Rise of Silas Lapham* (1885); *Modern Italian Poets* (1887); *The Quality of Mercy* (1892); *On the Coast of Bohemia* (1893); *A Traveler from Altruria* (1894); *My Literary Passions* (1895); *Stops of Various Quills* (1895); *A Parting and a Meeting* (1896); and *The Day of Their Wedding* (1896). Besides the above he wrote several autobiographical sketches, and a number of parlor-farces remarkable for their elegant dialogue and subtle humor. Among these farces are *The Parlor-Car*; *The Sleeping-Car*; *The Elevator*; *Five O'Clock Tea*; *The Garroters*; *A Likely Story*; and *The Mousetrap*.

Mr. Howells professes to be a realist, and is an admirer of the modern school of poets and novelists in Europe, and especially the writers of Russia, Italy and Spain, many of whom he has made known in America by his critical works. As a novelist, he has a charming style, keen observation, and sympathetic humor. His realism, it may be stated, is not that of Balzac, Zola, or even of Ibsen, which often is degrading and horrifying instead of educational and improving, but is cleanly and uplifting in tendency. His realism is distinctly American, and his own, and the intelligent critic, or even ordinary reader, will never confound it with the noisome stuff which is called realism in the purlieus of Europe.

HOWLAN, GEORGE WILLIAM, a Canadian statesman; born in Waterford, Ireland, May 19, 1835. He emigrated to Prince Edward Island in 1839; was educated at the Central Academy there; became interested in the fishing trade; member of the executive council of the province in 1866; in 1873 deputy to the Dominion Parliament to settle

terms for union; in 1873 called to the Senate; resigned 1880, but was recalled in 1881.

HOWLAND, SIR WILLIAM PIERCE, a Canadian statesman; born at Pawling, New York, May 29, 1811. Moved to Toronto in 1830 and went into mercantile business; member of the Canadian Assembly (1857-68): Minister of Finance, (1862-63 and 1866-67); receiver-general (1864-65); Postmaster-General (1864-66); member of the Dominion Parliament (1867-68); lieutenant-governor of Ontario (1868-73); knighted (1879). For a time he was president of the Board of Trade of Toronto.

HOWITT, MARY. See Vol. XII, pp. 324, 325.

HOWITZER. See GUNNERY, Vol. XI, pp. 306, 310.

HOWLING MONKEY. See APE, Vol. II, pp. 153, 154.

HOWMAN, JOHN. See FECKENHAM, Vol. IX, p. 61.

HOWORTH, HENRY HOYLE, an English littérateur; born July 1, 1842, at Lisbon, Portugal. He was educated at the Rossall School, and admitted to the bar in 1867; elected to Parliament from South Salford in 1886, in 1893, and again in 1895. He published the *History of the Mongols* (1876-80), a work still in progress; *A History of Chinghiz Khan and His Ancestors*, based upon a newly discovered work in the Pekin library; *The Mammoth and the Flood* (1887); *The Glacial Nightmare and the Flood*; and *History of the Vicars of Rochedale*.

HOWSON, JOHN SAUL, an English theologian; born in Yorkshire, May 5, 1816; graduated at Trinity College, Cambridge, in 1837; ordained in 1845; principal Liverpool College (1849-65); vicar of Wisbech (1866-67); dean of Chester from 1867 till his death. He was the author of *Life and Epistles of Paul*, with W. J. Conybeare (1850-52); *Character of St. Paul* (1862); *Companions of St. Paul* (1871); *Evidential Value of the Acts of the Apostles*, first delivered as lectures in Philadelphia (1880). He spent the latter part of his life superintending the restoration of Chester Cathedral. He died Dec. 15, 1885.

HOYA, a genus of tropical plants of the family *Asclepiadaceæ*, having a five-cleft wheel-shaped corolla, and a five-leaved spreading fleshy corona. Some of the species are common in hothouses, notably *H. carnosa*, and from the appearance of their flowers they are called *wax-plants*.

HOYT, CHARLES H., an American playwright; born in Concord, New Hampshire, July 26, 1860; received his education at the high school of Charlestown, New Hampshire, and at the Boston Latin School; began newspaper-life at an early age, and succeeded Benjamin P. Shillaber as the humorous writer of the *Boston Post* in 1879. While doing this work and the dramatic criticism of the *Post*, he began to write plays, the first one being *Gifford's Luck*, which was put upon the stage in 1882. This was followed by *A Bunch of Keys* (1883); *A Rag Baby* (1884); *A Parlor Match* (1884); *A Tin Soldier* (1885); *A Hole in the Ground* (1887); *A Midnight Bell* (1887); *A Brass Monkey* (1888); *A Texas Steer* (1889); *A Trip to Chinatown* (1889); *A Temperance Town* (1891);

A Milk-White Flag (1893); *A Black Sheep* (1894); *A Contented Woman* (1895). Mr. Hoyt was something of a politician also, having been a member of the New Hampshire legislature in 1893 and 1895. He was one of the proprietors of Hoyt's Theater, in New York.

HOYT, JOHN WESLEY, an American educator; born in Franklin County, Ohio, Oct. 13, 1831. He was educated at the Ohio Wesleyan University, the Cincinnati Law School and the Ohio Medical College; made professor in the latter in 1853; professor at Antioch in 1855-56; in 1857 accepted the chair of chemistry in the Cincinnati College of Medicine; moved to Wisconsin, and was editor of the *Wisconsin Farmer* (1857-67); United States Commissioner to the Paris Exposition in 1867 and to the Vienna Exposition in 1873; knighted in 1874 by the Emperor of Austria; governor of Wyoming territory 1878-82; elected president of Wyoming University in 1887.

HUACAS, tombs of the Incas. See ARCHÆOLOGY, Vol. II, p. 340.

HUACHUCA, FORT, a United States military post, having a post-office and telegraph station of the same name, in the department of the Colorado, situated about 15 miles from the Mexican boundary, in a mountainous district of Cochise County, south-eastern Arizona. It is reached by daily buckboard from Huachuca, seven miles distant, on the New Mexico and Arizona railroad. The post is garrisoned by several companies of infantry and cavalry, whose principal duty it is to prevent outbreaks on the part of the warlike Apaches.

HUALLAGA, a river of Peru, rising in a swamp in the Huánuco district, in the cordillera of Peru, about the center of the republic. It flows northward through a heavily timbered and very rainy region, and makes it way, after a crooked course of over seven hundred miles, to the Marañon or Amazon River, which it joins at lat 5° 6' 20" S., long. 75° 34' 50" W. It is navigable for river-steamers for 285 miles, and canoes can ascend it 40 miles farther, to Tirgo Maria. During its annual floods, the water sometimes rises forty feet above its usual level.

HUAMANTLA, a town of the state of Tlascala, southeastern central Mexico, on the north slope of Mount Malintzi, 13,500 feet high, surrounded by magnificent scenery, in a very pleasant climate. It is connected with the City of Mexico by rail, and is about a hundred miles east of it. The country is rich, and produces principally maize. On Oct. 9, 1847, the Americans defeated the Mexicans here. Population, about 8,000.

HUAMANGA. See AYACUCHO, Vol. XVIII, p. 675.

HUBBARD, JOSEPH STILLMAN, an American astronomer; born in New Haven, Connecticut, Sept. 7, 1823. He graduated at Yale in 1843; studied astronomy and mathematics privately; in 1844 was appointed assistant at the high school observatory at Philadelphia; and was employed by John C. Frémont to edit his Rocky Mountain observations. In 1845 he was appointed professor of mathematics in the United States navy, and assigned to duty in the observatory in Washington. Here he made de-

terminations of the zodiacs of all known asteroids, except four published previously in Germany. Several of his papers on the results of different investigations were published under the name of *Washington Observations*. He died at New Haven, Aug. 16, 1863.

HUBBARD, WILLIAM, an American clergyman and historian; born in England in 1621. He emigrated with his parents to America in 1635; graduated at Harvard in 1642; was first assistant, then pastor, at Ipswich until 1703. He published *The Present State of New England* (1677); *Memoirs of Major-General Denison* (1684); *The General History of New England from the Discovery to 1680*. The government of Massachusetts paid him fifty pounds for the latter. It was reprinted for the Massachusetts Historical Society in 1815. He died in Ipswich, Sept. 14, 1704.

HUBERTSBURG, a village and castle, formerly a royal hunting-seat of Saxony, 25 miles from Leipsic, built in 1721 by Prince Frederick Augustus, afterward King Augustus III of Poland. It was much injured during the Seven Years' War; and there, Feb. 15, 1763, was signed the treaty by which that war was ended. Since 1840 the castle has served as a prison, a hospital, an asylum for the insane, and a refuge for idiot children.

HÜBNER, JOSEPH ALEXANDER, BARON, an Austrian diplomat; born in Vienna, Nov. 26, 1811. He was educated in Vienna, subsequently traveled in Italy, and on his return in 1833 entered the service of the government. His diplomatic career began at Paris in 1837. After several minor appointments, he was ambassador there from 1849 to 1859, and was at the head of the Austrian embassy at Rome from 1866 to 1867. Possessed of consummate ability and tact, he managed many delicate and difficult matters. He twice visited the United States, the second time in 1871. He published *Sixtus der Fünfte* (1871); *Ein Spaziergang um die Welt* (1873); and *Durch das Britische Reich* (1886). His works have been translated into English. He died July 30, 1892.

HÜBNER, RUDOLF JULIUS BENNO, a German painter; born at Oels, in Silesia, Jan. 27, 1806. He studied at Düsseldorf, to which school of painting he belonged. In 1841 he was appointed professor of painting in the academy at Dresden, and was director of the picture-gallery from 1871 to 1882. Among his pictures are *Job and His Friends*; *Charles V in San Yuste*; *Frederick the Great in Sans Souci*; *The Golden Age*; and *The Dispute between Luther and Dr. Eck*. He also designed glass-paintings, including some for the crypt of Glasgow Cathedral. He died at Loschwitz near Dresden, Nov. 7, 1882.

HÜBSCHMANN, JOHANN HEINRICH, a German philologist; born at Erfurt, July 1, 1848; educated at Jena, Tübingen, Leipsic and Munich; private instructor at Leipsic, and later was professor at Strasburg. He published *Zur Casuslehre* (1875); *Iranische Studien*; and *Grundzüge der Armenischen Etymologie* (1883); *Das Indogermanische Vocalsystem* (1885); *Etymologie und Lautlehre der Ossetischen Sprache* (1887).

HUCKLEBERRY, a name applied primarily to

the berries of *Gaylussacia*, the American whortleberry, but extended to include those of certain species of *Vaccinium*, otherwise the blueberries. Both the genera are shrubs of the family *Ericaceae*, or heaths, and are distinguished from the heaths proper by the inferior ovary, a distinction which many regard as sufficient to separate them as a distinct family (*Vacciniaceae*). *G. resinosa* is the common black huckleberry, while *V. Pennsylvanicum*, *V. Canadense*, *V. vacillans* and *V. corymbosum* furnish the more pulpy and blue huckleberries. Very large quantities are collected for the market, and attempts are being made to bring them into cultivation. See **BILBERRY**, in these Supplements.

HUDSON, a post village of southwestern Middlesex County, Massachusetts, 17 miles N.E. of Worcester, on the Assabet River, and on the Boston and Maine and the Fitchburg railroads. Shoes, worsteds, gossamer-rubber and tanned leather are manufactured. Population 1900, 5,454.

HUDSON, a village of Lenawee County, southeastern Michigan, on Tiffin River, and on the Cincinnati, Jackson and Mackinaw and the Lake Shore and Michigan Southern railroads, 26 miles S. of Jackson. It manufactures butter-tubs, spokes, carriages, pumps, plows, evaporated fruit and creamery products. A sanatorium is situated here, and there are mineral springs. Population 1900, 2,403.

HUDSON, a city and the capital of St. Croix County, western Wisconsin, on St. Croix River, 18 miles E. of St. Paul, Minnesota. It contains wheat-warehouses, flour-mills, saw-mills, railroad repair-shops, breweries, machine-shops, and manufactories of plows, wagons, chairs and other furniture, and brooms. Population 1895, 3,338.

HUDSON, CHARLES THOMAS, an English microscopist; born in London, in 1828. He entered St. John's College, Cambridge, in 1848, and was fifteenth wrangler in 1852. He was president of the Royal Microscopical Society in 1888, 1889 and 1890, and elected a fellow of the Royal Society in 1889. He was joint author, with P. H. Gosse of Hudson and Gosse's *Rotifera*, and was the discoverer of *Pedalion mirum*, and of numerous new genera and species of *Rotifera*.

HUDSON, ERASMUS DARWIN, an American surgeon; born in Torrington, Connecticut, Dec. 15, 1805; graduated at the Berkshire Medical School in 1827; from 1837 to 1849 was lecturing-agent for the Connecticut Antislavery Society; received an appointment from the government during the Civil War, to devise mechanical apparatus to be used in special cases of gun-shot wounds. From 1850 till his death he lived in New York, devoting himself to the construction of artificial limbs, etc. He was the author of *Medical and Surgical History of the War of the Rebellion* (1870-72). He died in Greenwich, Connecticut, Dec. 31, 1880.

HUDSON, ERASMUS DARWIN, JR., an American physician; born in Northampton, Massachusetts, Nov. 10, 1843. He graduated at the College of the City of New York in 1864, and at the College of Physicians and Surgeons in 1867; house-surgeon in Bellevue Hospital in 1867 and 1868; health-inspector of New York City in 1869 and 1870; from 1870 till his

death, attending physician for Trinity Chapel parish and Trinity Chapel Home; occupied a chair in the Women's Medical College of New York from 1872 to 1882; in the New York Polyclinic from 1882 to 1887. He was the author of *Diagnostic Relations of the Indigestions* (1876); *Doctors, Hygiene and Therapeutics* (1877); *Home-Treatment of Consumptives* (1886); and *Physical Diagnosis of Thoracic Diseases* (1887). He died May 9, 1887.

HUDSON, HENRY NORMAN, an American Shakespearean scholar; born in Cornwall, Vermont, Jan. 28, 1814. He graduated at Middlebury College in 1840, and afterward taught in Kentucky and Alabama. He published his first *Lectures on Shakespeare* in 1848; in 1849 he was ordained deacon in the Episcopal Church; in 1850-60 was rector in Litchfield, Connecticut; during the Civil War was army chaplain; for a time editor of the *Churchman*, the *American Church Monthly* and the *Saturday Evening Gazette*, afterward professor of Shakespeare at Harvard, and edited an edition of *Shakespeare* in 1850-57. He was the author of *A Chaplain's Campaign with General Butler* (1865); *Shakespeare: His Life, Art and Characters* (1872); and *Studies in Wordsworth* (1874). He died in Cambridge, Massachusetts, Jan. 16, 1886.

HUDSON, MARY CLEMMER, an American authoress and poetess; born in Utica, New York, in 1839. Her maiden name, and the one she wrote for many years under, was Mary Clemmer, and by it she was best known. Her first literary work was for the press. She was the friend of Alice and Phœbe Cary, and wrote their biographies. Monographs on Margaret Fuller, George Eliot, Charles Sumner, Longfellow and Emerson were from her pen. She wrote *Victoria* (1864); *Eirene* (1870); *Ten Years in Washington* (1871); *His Two Wives* (1874); and a volume of poems (1882). She was married, while very young, to the Rev. Daniel Ames, but was divorced in 1879, and married Edmund Hudson in 1883. Died in Washington, D. C., Aug. 18, 1884.

HUDSON, WILLIAM HENRY, an English author; born in London, May 2, 1863; was secretary to Herbert Spencer for five years; assistant librarian in Cornell University from 1890 to 1892; assistant professor of English literature at Leland Stanford University in 1892; published *The Church and the Stage* (1886); *An Introduction to the Study of Herbert Spencer* (1893); and *Introduction to the Philosophy of Herbert Spencer* (1894).

HUDSON'S BAY, a gulf or inland sea, in the northeast of North America, completely landlocked, except on the north, where Southampton Island and Fox Channel lie between it and the Arctic Ocean, and where Hudson's Strait, running five hundred miles southeast, connects it with the Atlantic. Including its southeastern extension, James's Bay, it measures about eight hundred miles in length and six hundred in greatest width, and has an area of three hundred thousand square miles. The eastern shore, called the East Main, is for the most part rocky, and is fenced with several small islands; the western shore, the West Main, is generally flat. This sea is the great drainage-reservoir of the Canadian northwest territories. In the summer months it is

a great whaling-field. Of late years a movement has been on foot for opening a direct communication from England with Manitoba and the northwest of Canada by way of Hudson's Bay and Strait. The scheme provides for a railway from Winnipeg to Fort Nelson, on the bay, a distance of 650 miles, of which 40 miles were constructed by the end of 1890. The chief objection to the project is that the strait is only navigable for about three months annually. This route would effect a saving of 775 miles, as compared with the route by way of Montreal, and of 1,130 as compared with that by New York.

HUEFFER, FRANCIS, a German musical critic and Provençal scholar; born at Münster, Westphalia, in 1845; studied at Berlin, Leipsic and Paris, and settled in London in 1869. He soon became an authority on music, was musical critic of the *Times*, and was recognized as the champion in Britain of Wagner and Wagnerian music at the time when the Wagnerian controversy was at its height. In 1869 he edited the works of the Provençal poet Guillem de Cabestan, and in 1878 published *The Troubadours: A History of Provençal Life and Literature in the Middle Ages*. Two works on Wagner were from his pen—one in 1874, the other in the Great Musician Series, in 1881. He died Jan. 19, 1889.

HUEHUETENANGO, a state of western Guatemala, bounded on the west and north by Mexico, on the east and south by Quiche and other smaller states of Guatemala. The surface is mountainous, but fertile, and it is drained by the rivers Dolores, Ixcan and Negro, and their tributaries. The chief occupation of the inhabitants is agriculture, the raising of sugar-cane, coffee, cotton, wheat, oats and fruit. There are gold, silver, iron, lead and salt mines, but the last two only are worked. The manufactures are of woolen and cotton goods.—HUEHUETENANGO, the capital of the state, is situated in the southeastern part, 106 miles N.W. of Guatemala City. Population 1890, 11,200; of the state, 136,114.

HUERTA, VICENTE GARCIA DE LA, a Spanish poet and critic; born at Zafra, in Estremadura, in 1730, and spent most of his life in Madrid, where he was head of the Royal Library. His poems were published in two volumes in 1778–79. He was the editor of the *Teatro Español*, a collection of the best of the older Spanish dramas. His own play, *Raquel*, founded on the story of the love of King Alfonso VIII for the Jewess Rachel, won him a great reputation, and is still considered one of the best dramas of modern Spanish literature. He died March 12, 1787.

HUET, CONRAD BUSKEN, a Dutch littérateur; born at The Hague, Dec. 28, 1826; studied for the ministry in Leyden and in Switzerland; preached for a time in Utrecht, and then in Haarlem; in 1862 left the ministry and devoted himself entirely to literary pursuits; became literary critic on *De Gids*; in 1867 he went to Batavia, on the Island of Java, and became editor of the *Java-Bode*, and afterward proprietor and editor of the *Algemeen Dagblad van Nederlandsch Indië*; returned to Europe in 1876, and settled in Paris. Among his works are *Litterarische Phantasien* (1868); *George Sand* (1877);

Oude Romans (1877); and *Potgieter* (1878). He died in Paris, May 1, 1886.

HUET, FRANÇOIS, a French religious reformer; born at Villeau, Dec. 26, 1814; for a time was professor in the University of Ghent; became in 1865 tutor of Prince Milan Obrenovitch of Servia. Huet instituted the religious movement called by himself Neo-Catholicism. He was the author of *Historical and Critical Researches on the Life of Henri de Gand* (1838); *History of the Life of Bordas Demoulin* (1861); and *The Religious Revolution in the Nineteenth Century* (1868). He died in Paris, July 1, 1869.

HÜGEL, KARL ALEXANDER ANSELM, an Austrian diplomatist and author; born at Ratisbon, April 25, 1796; studied law at Heidelberg in 1811, and entered the Austrian army in 1813; was employed on different foreign missions, and in 1824 retired and gave himself up to the study of the natural sciences. He published *Kashmir and the Empire of the Sikhs* (1840–42) and *The Basin of Cabul* (1851–52). He died in Brussels, June 2, 1870.

HUGER, BENJAMIN, an American soldier, born at Santee, South Carolina, in 1805; after graduating at West Pont, he became a captain of ordnance in 1832, and was made chief of ordnance to General Scott's army in the Mexican war. In 1855 he became major; but in 1861 entered the Confederate service as brigadier-general and rose soon to be major-general. As such he commanded at Norfolk when the national forces captured the place, May 10, 1862. Huger quickly withdrew, after having fired the navy-yard, the *Virginia*, *Merrimac* and some other vessels. Subsequently he led a division in the seven days' fight in front of Richmond. After the war he became a farmer in Virginia. He died in Charleston, South Carolina, Dec. 7, 1877.

HUGGINS, WILLIAM, an English astronomer and spectroscopist; born in London, Feb. 7, 1824, and educated at the City School and by private instructors, giving much attention to the experimental study of the physical sciences and of astronomy. In 1852 he was elected a member of the Microscopical Society, and was for several years engaged in the study of physiology, animal and vegetable, with the microscope. In 1855 he built a private observatory at Upper Tulse Hill, near London, and began what proved to be the principal work of his lifetime—his well-known spectroscopic observations and photographing of stellar spectra, the solar corona, etc. (See Vol. XVII, p. 711). He was president of the Royal Astronomical Society from 1876 to 1878, and President of the British Association for 1891.

HUGH CONWAY, the pseudonym of FARGUS, FREDERICK JOHN; q.v., in these Supplements.

HUGHES, BALL, an English sculptor; born in London, England, Jan. 19, 1806. He studied for seven years with a modeler and sculptor, and exhibited specimens of his work at the London Society of Arts, for which he received several silver medals. Among these achievements was an original composition, *Pandora Brought to Earth by Mercury*, which gained him a gold medal. He afterward made a number of ideal statuettes and many busts. In 1829

he removed to New York City, and began work by making a statute of Alexander Hamilton, which was placed in the rotunda of the Merchants' Exchange. He also made a monumental relief of Bishop Hobart, now in the vestry of Trinity Church. Later Mr. Hughes went to Dorchester, Massachusetts, where he modeled *Little Nell* and *Uncle Toby and Widow Wadman*, which are preserved in plaster at the Boston Athenæum. He died in Boston, Massachusetts, March 5, 1868.

HUGHES, DAVID EDWARD, an English-American inventor; born in London in 1831. He subsequently emigrated with his parents to the United States. In 1850 he was appointed professor of music at the college of Bardstown, Kentucky, and later professor of natural philosophy in the same institution. His first great invention was that of the printing-telegraph which bears his name, which in 1855 became a practical success. He failed to introduce the invention into England, but it was adopted in the United States, and by the French, Italian, Russian and other foreign governments. In 1878 Professor Hughes invented the microphone, and in 1879 the induction-balance. In 1880 he was elected a fellow of the Royal Society. In 1881 he represented Great Britain as one of the commissioners at the Paris Electrical Exposition.

HUGHES, HUGH PRICE, a Welsh Wesleyan preacher; born Feb. 7, 1847, at Carmarthen, South Wales. He was educated at University College, London, and the Richmond Theological College. His first appointment was at Dover, and he preached afterward at Brighton, Oxford and London. He was then appointed to the position of superintendent of the West London Mission. He was exceedingly zealous in all kinds of social reforms, and was the editor of the *Methodist Times*, an active worker in the cause of total abstinence, a permanent member of the Methodist Conference, and a leader in the so-called "forward movement" in the Methodist Church which aims at social as well as individual salvation. He published *Social Christianity* (1889); *The Philanthropy of God* (1890); *Ethical Christianity* (1892); and *Essential Christianity* (1893).

HUGHES, JOHN, an Irish-American Catholic archbishop; born at Annaboghan, County Tyrone, Ireland, June 24, 1797. He emigrated to the United States, worked first as a gardener, then studied theology at Mount St. Mary's College, Emmitsburg, Maryland, where he supported himself by taking care of the college garden, and afterward by teaching in the college. He was ordained priest in 1826, and had charge of churches in Philadelphia till 1838; founded St. John's Orphan Asylum, and established the *Catholic Herald*. In 1842 he became bishop of New York. He then organized the Roman Catholics against New York's public-school system, and instituted a system of parochial schools. In 1850 the diocese of New York had so increased by immigration that Hughes was made archbishop. Secretary Seward sent him and Thurlow Weed to Europe in 1861 to set before the foreign governments the true object in conducting the war, and during the draft riots in 1863 he urged upon the excited population of New York the duty

of submission to the United States government. Archbishop Hughes first attracted attention as a disputant in his controversy with the Rev. John Breckinridge upon the question, *Is the Protestant Religion the Religion of Christ?* carried on by an interchange of public letters afterward published in book-form (1833), and later by his dispute with Erastus Brooks respecting the tenure of church property in New York. He was active as an organizer. When he took charge of his bishopric of New York there were few churches and these heavily in debt, and fewer schools and colleges. He obtained priests from Europe, founded St. John's College at Fordham and a theological institute at Troy, started the erection of St. Patrick's in New York, and improved and systematized the parochial school system. He died Jan. 3, 1864.

HUGHES, THOMAS, an English author; born at Uffington, Berkshire, England, Oct. 20, 1823. He was educated at Rugby under Dr. Arnold, and at Oriol College, Oxford, graduating in 1845. Called to the bar in 1848, he became queen's counsel in 1869; member of Parliament from Lambeth from 1865 to 1868, and from Frome in 1869 to 1874. He early became associated with the work of social and sanitary reform

THOMAS HUGHES.

among the London poor, and with Charles Kingsley became a supporter of the Christian Socialists; took a prominent part in the debates relating to trades unions and the law of master and servant. His best-known work, *Tom Brown's School Days* (1856), is a truthful picture of life at Rugby, written from the author's own boyish impressions. It was followed by *The Scouring of the White Horse* (1858); *Tom Brown at Oxford* (1861); *Alfred the Great* (1869). In 1880 he assisted in founding a settlement in the United States, an account of which he published under the title of *Rugby, Tennessee*, (1881). He also wrote lives of *Daniel Macmillan* (1882) and *Bishop Fraser* (1887), edited Lowell's *Biglow Papers*, and wrote introductions to Whitman's and to Lowell's poems. He died at Brighton, March 22, 1896.

HUGO, VICTOR MARIE, a French poet; the foremost man of letters of his time, and the leader of the modern romantic school in France; was born at Besançon, Feb. 26, 1802, and died in Paris, May 22, 1885. His father was a distinguished general under Napoleon, and young Hugo in early life came almost wholly under the influence of his mother, who was a devout churchwoman and ardent

VICTOR HUGO.

Bourbonist. He was educated partly in Paris at the Feuillantines and at L'École Polytechnique and partly at Madrid, where his father held an appointment at the court of Joseph Bonaparte, then King of Spain. At an early age he began to pay his addresses to the muses, writing youthful tragedies and melodramas, and striving for poetic honors in academic competitions. In his twentieth year he published a collection of *Odes et Ballades*, and had already gained a prize for verse from the French Academy, and had thrice been victor at the floral games at Toulouse. At this time, such was his precocity that Chateaubriand hailed him as "a sublime child." His mother died at this epoch in his life, when fame was coming to him, and before he broke with his conservative past in politics and religion. At this period, also, he married, the King (Louis XVIII) brightening the future of the young couple with a pension of 1,500 francs, which he afterward doubled. The chaste, sobering influence of his mother being withdrawn, the youthful poet plumed his wing for fantastic flights in verse and for extravagant ventures in fiction. The fruits of this era of bombastic and turgid work are two romances, *Han d'Islande* (1823) and *Bug-Jargal* (1824), and, in politics of a quasi-revolutionary character, his drama of *Cromwell* (1827). In 1828 he published *Les Orientales*, a collection of poems in which he manifests his mastery of rhythm, and two years later came his great and successful drama, *Hernani*, the appearance of which brought on the long and vexed controversy between the classic and the romantic school of writers. Romanticism won, and became an accepted influence in French literature.

In 1830-31, Hugo, actuated by the success of Sir Walter Scott in British fiction, entered the field of the historical novel, and published his picturesque mediæval romance *Notre Dame de Paris*. This was followed by a sheaf of lyrical verse, which contains much of his best poetry, *Les Feuilles d'Automne* (1831), and one of his finest plays, *Marion Delorme* (1831), which was produced with great éclat at the Théâtre Français. In 1832 the play *Le Roi s'Amuse* (better known as *Rigoletto*), after falling under the ban of the public censor, was permitted to appear, though, as it contained passages of an antimonarchical character, its repetition on the stage was forbidden by the authorities. His next dramas were in prose—*Lucrèce Borgia* and *Marie Tudor* (1833), neither of which was creditable to the author's morals or to his regard for the truth of history. A third melodrama in prose, *Angelo*, appeared in 1835, together with a collection of admirable verse, *Les Chants du Crépuscule*. Two years afterward the latter was followed by perhaps his noblest effort in song, *Les Voix Intérieures*, made notable by fine poetic workmanship. In 1838 *Ruy Blas* appeared, and, next to *Hernani*, is the most successful of his writings for the stage. *Les Burgraves* and *Les Rayons et les Ombres*, a drama, and a collected volume of verse belong to this period, with two novels, *Le Dernier Jour d'un Condamné* (1828) and *Claude Gueux* (1834), written from the humanitarian standpoint as protests against the infliction of the death penalty.

For a number of years Hugo's muse was silent; for he had entered the field of politics, become a member of the French Academy, and was made a peer of France. In the upheaval of the times, a change now came over his political opinions, and though he ever remained loyal to Napoleon I, he ceased to be a Legitimist, and embraced the republic which followed the revolution of 1848. His increasing democracy showed itself in an ardent sympathy with social reform, though he frowned upon the excesses of the revolution, and at first he hailed the advent of Louis Napoleon. Afterward he became his satirist and bitter enemy. His apostasy at this time was due largely to his own personal vanity, and when the *coup d'état* of 1851 came, as it threatened his political eminence as the orator and oracle of democracy, he unsparingly denounced the Prince-President and lampooned him in his philippic, *Napoléon le Petit* (1852). Banishment followed, and from his refuge, first in Jersey and afterward on the neighboring island of Guernsey, he launched at the usurper's head his political satire, *Les Châtiments* (1853), and in his exile wrote the indignant narrative *L'Histoire d'un Crime*, which, however, was not published till 1877. Though prohibited by the government of the third empire, *Napoléon le Petit* and *Les Châtiments* found their way from Belgium into France, and there kept alive revolutionary sentiments, and a more or less passionate admiration among the people for the genius and patriotism of Victor Hugo.

From his seclusion Hugo watched closely the trend of political events in France, for he had no faith in the stability of the empire, and worked industriously, and with more leisure for meditative thought, upon the new products of his pen. In 1856 he published *Les Contemplations*, a group of elegiac and lyrical verse of much poetic beauty; and three years afterward came the bewitching volumes *La Légende des Siècles*. This was followed, after another lapse of three years, by his masterpiece, *Les Misérables*, a romance of modern life, which was instantly translated into ten different languages; *Les Travailleurs de la Mer* (1866), a prose idyll of fisher-folk life in Guernsey; and by *L'Homme qui Rit* (1869), a labored bit of historical fiction, designed to amuse but which often succeeds in wearying the reader. In addition to these works, he issued *Les Chansons des Rues et des Bois* (1865), a gathering of artistic poems in a light vein, and *William Shakespeare*, (1864), a rhapsodical introduction to an edition of the English poet's writings, translated by Hugo's son.

The fall of the empire at Sedan, in September, 1870, enabled Hugo to re-enter France, and, proceeding to Paris, he summoned the invading Germans to withdraw from the country. He remained within the city during the siege, a record of which is preserved in *L'Année Terrible* (1872), and for a time he was a member of the National Assembly. In the latter capacity he opposed the ratification of peace with Germany and the cession of Alsace and Lorraine. Being interrupted in the Assembly while defending Garibaldi, he resigned his seat, and after a futile effort to save the Column Vendôme from destruction during the Commune, he withdrew to Brussels, where he came into collision with the Bel-

gian authorities for harboring Communists, and was expelled the kingdom. On his return to Paris he contested a seat in the Assembly, but was beaten, though he was afterward made a Senator. In 1874 he published *Quatre-vingt-treize*, his last romance in prose, and in the following year a collection of his *Speeches and Addresses*. His later works embrace, besides *L'Histoire d'un Crime*, already mentioned, and a second series of *La Légende des Siècles* (1877), *L'Art d'Être Grand-père* a volume of charming domestic lyrics (1877); *Le Pape*, an anticlerical effusion (1878); *La Pitié Suprême* (1879); *L'Âne*, a satire against pedants (1880); *Torquemada*, a drama (1882); and *Les Quatre Vents de l'Esprit* (1881-83).

Most of these recent writings show that the literary cunning had passed from the hand of the great poet-novelist, but he has left much in proof of his genius, though not a little of that is sadly marred by his self-sufficiency and egotism. His death restored the luster of his fame among his countrymen, and with them, as with all admirers of genius, the best of his writings are sure of immortality. On his deathbed he refused the offices of an attending priest, a proof that in religious matters he had entirely broken with his early faith. On the 1st of June, 1885, he was buried with public honors in the Panthéon. By his will he left his manuscripts, including those of several unpublished works, to the *Bibliothèque Nationale*.

The *Letters of Victor Hugo*, edited by Paul Meurice, his literary executor, and embracing his correspondence with his father, his wife, his friends including letters to M. Sainte-Beuve, and others with his children, appeared in an English dress in 1896.

G. MERCER ADAM.

HULIN OR HULLIN, PIERRE AUGUSTIN, a French soldier; born in Paris, Sept. 6, 1758. He joined the army in 1771, siding with the revolutionists in 1789; became adjutant-general to Napoleon in 1796; general of a division in 1802; presided over the court-martial which condemned the Duke of Enghien to death in 1804; was military governor of Paris in 1812, and put down the conspiracy of Malet against Napoleon. When the Bourbons were restored he was banished, but allowed to return to Paris in 1819, where, in 1823, he published a defense of the action of the military commission in the affairs of the Duke of Enghien. He died in Paris, Jan. 9, 1841.

HULL, a town of Ottawa County, southwestern Quebec, Canada, on an island in the Ottawa River, opposite Ottawa City, with which it is connected by a suspension-bridge, and on the Canadian Pacific railroad. It has abundant water-power, and manufactures axes, lumber, matches, pails, paper and wooden-ware, and has carding and woolen mills. On April 26, 1900, it was visited by a most destructive fire. (See OTTAWA.) Population 1881, 6,890; 1891, 11,265.

HULL, EDWARD, an Irish geologist; born in Antrim, Ireland, May 21, 1829. He very early developed a taste for geological studies, to which he determined to devote his life. He was appointed on the Irish survey in 1869, and ulti-

mately became director of the survey. Later he was appointed professor of geology in the Royal College of Science, Dublin. In 1883 he visited Arabia, Petraea and Palestine, and made a geological and topographical survey of the Arabah Valley and adjoining territories between the Sinaitic peninsula on the south and southern Palestine on the north. His works include *The Coal-fields of Great Britain* (1865); *Sketch of Geological History* (1887); *Text-Book of Physical Geography* (1888); *Geology and Geography of Arabia Petraea, Palestine and Adjoining Districts* (1886); and *A Sketch of Geological History* (1887).

HULL, ISAAC, an American naval officer; born at Derby, Connecticut, March 9, 1773. In 1798 he became lieutenant, and served with credit in the West Indies and the Mediterranean; in 1806 was made captain, and just before hostilities broke out between the United States and England, took command of the *Constitution*. On Aug. 19, 1812, occurred his famous encounter with the *Guerrrière*, which resulted in the defeat of the enemy and the almost total destruction of the British ship. Hull was given a gold medal by Congress for his victory. Afterward he commanded a squadron in the Pacific, later in the Mediterranean, and for a time was head of the Boston and Washington navy-yards. He died in Philadelphia, Feb. 13, 1843.

HULL, WILLIAM, an American general; born at Derby, Connecticut, June 24, 1753. He studied law, and was admitted to the bar in 1775. He joined the American army at Cambridge as captain, fought at White Plains, Trenton and Princeton, and was then promoted to major. Afterward he was engaged at Ticonderoga, Stillwater, Saratoga, Monmouth and Stony Point. After the war he practiced law at Newton, Massachusetts, and was prominent in the Massachusetts legislature. In 1798 he was appointed judge of the court of common pleas, and in 1805 he became governor of Michigan territory. At the outbreak of the War of 1812 Hull commanded the Northwestern army, consisting of raw militia. He surrendered Detroit and the entire Northwest to the English, and for this he was court-martialed and sentenced to be shot, but President Madison pardoned him on account of past services. In 1824 he published the *Campaign of the Northwest Army*. His *Life* was published by his daughter, Mrs. M. Campbell. He died at Newton, Massachusetts, Nov. 29, 1825.

HULLAH, JOHN PYKE, an English musical composer; born at Worcester, June 27, 1813. He studied at the Royal Academy of Music, and in 1840 began popular singing-classes in London, continuing the work for over twenty years. He was for some time professor of vocal music in King's College, and from 1874 to 1882 was inspector of training-schools for the United Kingdom. His comic opera, *The Village Coquette*, was published in 1836. Of his songs, *The Three Fishers* and *The Storm* attained wide popularity. For a time he was musical critic on the *Globe*. He died in London, Feb. 21, 1884.

HUMBER, a river of northeastern England, separating York from Lincolnshire, formed by the union of the Trent and Ouse, in lat. $53^{\circ} 38'$ N., long. $1^{\circ} 42'$ W. It ranges from 2 to 4 miles in breadth and is navigable for vessels of the first class for 22 miles, as far as Hingston-upon-Hull. Its whole length is but 40 miles, yet, with its tributaries, it drains 9,550 square miles, nearly a sixth of England.

HUMBER, a river of Newfoundland, which rises in Adie's Pond, takes an easterly direction, but turns almost immediately southwest and flows through Deer Pond into the Bay of Islands, by Humber Arm. It receives the waters of Grand Lake. Its course, for most of the distance, is lined with forests, and molybdenum ores have been discovered near the mouth. It has not been possible to work them, however, as permanent settlements of Newfoundlanders on this coast are expressly forbidden by treaty.

HUMBERT I, RÉNIER CHARLES EMMANUEL JEAN MARIE FERDINAND EUGÈNE, King of Italy;

KING HUMBERT I.

born March 14, 1844. He attended his father, Victor Emmanuel, during the war of Italian independence in 1859. In 1866, when Italy fought with Austria, the prince took the field as commander of a division in General Cialdini's army, and was present at the disastrous battle of Custoza, June 23, 1866. After Rome was occupied in 1870 by the Italian troops, he took up his residence there, and on the death of his father, Jan. 9, 1878, succeeded to the throne of Italy. Later in the year an attempt was made to assassinate him, but failed. At Monza, July 29, 1900, another attempt, which unhappily succeeded, was made on the King's life, the assassin being an Italian anarchist known in Paterson, N. J., as Gaetano Bresci. During the cholera epidemic at Naples King Humbert exposed himself frequently in his endeavors to alleviate the sufferings of the sick and dying. By these and other acts of kindness the King won the affections of the Italian people. In 1868 he married Princess Marguerite of Savoy, and a son was born of this marriage in 1869, who succeeded to the throne as Victor Emmanuel III.

HUMBOLDT, a post village of Humboldt County, northwestern central Iowa, on the Des Moines River, and on the Minneapolis and St. Louis railroad, 15 miles N. of Fort Dodge. It is the seat of Humboldt College. Population (1900), 1,474.

HUMBOLDT, a city of Allen County, south-

eastern Kansas, on the Neosho River, and on the Atchison, Topeka and Santa Fé railroad, 38 miles W. of Fort Scott. It has various manufactories, including those of flour, cheese, woolen goods and wagons and carriages. It is in a productive agricultural and stock-raising section. Population 1890, 1,361; 1900, 1,402.

HUMBOLDT, a city of Richardson County, southeastern Nebraska, on the North fork of the Nemaha River, and on the Burlington and Missouri River railroad, 21 miles N.W. of Falls City. It has several flour-mills, and is in a farming and grazing section. Population 1900, 1,218.

HUMBOLDT, a town and railroad junction of Gibson County, northwestern Tennessee, 18 miles N.W. of Jackson, on the Louisville and Nashville and the Mobile and Ohio railroads. It has mills and a foundry, and educational institutions supervised by Odd Fellows. It is the center of a fruit, cotton and vegetable producing country, and has large nurseries. It has foundries, saw and planing mills, spoke, stave and box factories, cotton-gins and marble-works. Population 1900, 2,866.

HUMBOLDT RIVER, a stream of northwestern Nevada, rising in two forks in Elko County, and flowing generally west into Humboldt County, where it turns southwestward and empties into Humboldt Lake, after a course of 390 miles. This lake is nearly 4,000 feet above sea-level. The river follows the only valley in Nevada which runs east and west, although many run from north to south. It is followed throughout its entire course by the Central Pacific railroad. Its waters are remarkable for carrying a considerable amount of soda.

HUMILIATES. See HUMILIATI, Vol. XII, p. 356.

HUMMELSTOWN, a village of Dauphin County, southeastern central Pennsylvania, on the Philadelphia and Reading railroad and on the Union canal, 8 miles E. of Harrisburg. It has extensive limestone and brownstone quarries, several mills, a machine-shop, carriage factory and electric and water plants. Population 1890, 1,486; 1900, 1,729.

HUMPBACK WHALE. See WHALE, Vol. XXIV, p. 524.

HUMPHREY, HEMAN, an American clergyman and educator; born at West Simsbury, Connecticut, March 26, 1779. He studied theology at Yale College, and was a Congregational pastor at Fairfield, Connecticut, from 1807 to 1817, and then in Pittsfield. From 1823 to 1845 he was president of Amherst College, to the character, growth and prosperity of which he largely contributed. He was the author of *Tour in France, Great Britain and Belgium* (1838). He died in Pittsfield, Massachusetts, April 3, 1861.

HUMPHREYS, ANDREW ATKINSON, an Ameri-

can soldier and engineer; born in Philadelphia, Nov. 2, 1810; graduated at West Point in 1831.

GEN. A. A. HUMPHREYS.

In 1838 he became first lieutenant of topographical engineers. From 1845 to 1849 he had charge of the Coast Survey Office, and afterward began the topographic and hydrographic survey of the delta of the Mississippi. This work he resumed in 1857, after he had examined the river deltas in Europe and the means employed for protection against inundations. During the Civil War he became a major-general of volunteers, was

engaged at the battles of Fredericksburg, Chancellorsville and Gettysburg, and commanded a corps in the siege and capture of Petersburg, and in the pursuit and capture of Lee's army. In 1866 he was appointed chief of engineers of the United States army, with rank of brigadier-general, and engaged in engineering-work on the Mississippi. He retired in 1879, and died in Washington, District of Columbia, Dec. 27, 1883.

HUMPHREYS, DAVID, an American soldier; born at Derby, Connecticut, in 1752. In the Revolutionary War he was aide-de-camp to General Putnam, and then to General Washington. He distinguished himself at the siege of Yorktown in 1781. In 1784 he went to Paris and London as secretary of legation to Benjamin Franklin, John Adams and Thomas Jefferson, who negotiated treaties of commerce and amity with European powers. In 1790 President Washington appointed him minister to Portugal, where he remained till 1794. In 1797 he was sent to the court at Madrid as minister plenipotentiary, where he stayed till 1802. On his return from Spain he imported one hundred merino sheep, and for some time thereafter he engaged in the manufacture of woollens at Derby. In the War of 1812 he commanded the Connecticut troops as brigadier-general. He was noted as a poet and wit. He helped in producing the *Anarchoid* and other satiric verse; he also published *An Address to the Armies of the United States* (1772) and other poems. He died in New Haven, Feb. 21, 1818.

HUMPHREYS, MILTON WYLIE, an American educator; born at Greenbrier, West Virginia, Sept. 15, 1844; was educated at Washington University (now Washington and Lee University), leaving during the Civil War to serve as gunner in the Confederate army; became tutor and later professor in his alma mater; studied in Leipsic; made professor of Greek in Vanderbilt University (1875); professor of ancient languages in Texas University (1883); professor of Greek at the University of Virginia (1887); for a time was American editor of the *Revue des Revues*; published editions of *The Clouds of Aristophanes*; *The*

Antigone of Sophocles; *Ædipus Tyrannus* and the second book of *Thucydides*.

HUMPHRY, SIR GEORGE MURRAY, an English anatomist; born in Sudbury, England, July 18, 1820. Studied at the hospital in Norwich, at St. Bartholomew's, and received his M.D. from Cambridge (1856); was made professor of surgery at Cambridge (1883). He was the author of *A Treatise on the Human Skeleton* (1858); *On Myology* (1872); *Old Age and the Changes Incidental to It* (1889); *Hunterian Oration* (1879). After 1867 he was on the staff of the *Journal of Anatomy and Physiology*. Was knighted in 1891. He was recognized as the leading British authority in surgery. He died in London, Sept. 25, 1896.

HUNAN OR HOO-NAN, an inland province of China. See CHINA, Vol. V, p. 637.

HUNDRED DAYS, THE. See NAPOLEON, Vol. XVII, pp. 223-225; and FRANCE, Vol. IX, p. 618.

HUNERIC. See VANDALS, Vol. XXIV, p. 58.

HUNFALVY, PÁL, a Hungarian philologist, and the founder of philological studies in Hungary; born at Nagy-Szalok, March 12, 1810. He was educated at the University of Pesth and admitted to the bar in 1838; became professor of law at Kasmark University; deputy to the National Assembly in 1848; in 1856 founded a philological magazine, *Magyar Nyelorszet*. He published *Chrestomathia Fennica* (1861); *A Journey Across the Country of the Baltic* (1871); *The Language of the Kondawoguls* (1872); *Hungarian Ethnography* (1876); *Hungarians or Magyars* (1881). He died at Pesth, Nov. 30, 1891.

HUNGARIAN GRASS, the name given to a species of *Setaria*, much prized as a forage-grass on account of its luxuriant growth even upon sterile soils.

HUNGARIAN LANGUAGE AND LITERATURE. See HUNGARY, Vol. XII, pp. 374-380.

HUNGER. See NUTRITION, Vol. XVII, pp. 667, 668; and DIETETICS, Vol. VII, pp. 200 et seq.

HUNGERFORD, MRS MARGARET WOLFE (HAMILTON), an Irish authoress, born and educated in Ireland. Either anonymously or under the pen-name of "The Duchess" she wrote *Phyllis* (1877); *Molly Bawn* (1878); *Beauty's Daughters* (1880); *Portia* (1882); *Rossmoyne* (1883); *A Maiden All Forlorn* (1885); *A Mental Struggle* (1886), etc. Died at Bandon, Ireland, Jan. 24, 1897.

HUNKERS, a faction of the Democratic party of New York. See BARNBURNERS, in these Supplements.

HUNT, HELEN. See JACKSON, HELEN MARIA, in these Supplements.

HUNT, HENRY JACKSON, an American soldier; born in Detroit, Michigan, Sept. 14, 1819; graduated at West Point in 1839; served on the Canadian frontier, and distinguished himself in Mexico, where he was wounded twice. He became captain in 1852 and major in 1861, held an artillery command at Bull Run, and became aid to McClellan. In September, 1862, he was made

brigadier-general of volunteers. As chief of artillery of the army of the Potomac, he fought at Gettysburg, in the campaign from the Rapidan to Petersburg, and became brigadier and major general, United States army. He was president of the artillery board; was retired from active service in September, 1883, and became governor of the Soldiers' Home at Washington, District of Columbia. He died Feb. 11, 1889, in Washington.

HUNT, RICHARD MORRIS, an American architect; born in Brattleboro, Vermont, Oct. 31, 1828. He studied at the École des Beaux-Arts and in the office of Lefuel in Paris, through whom he was appointed an inspector of the construction of the building between the Louvre and the Tuileries, and placed in charge of the Pavillon de la Bibliothèque. In 1855 he returned to the United States, after which time he did much to elevate architecture, being largely influential in founding the American Institute of Architects. He received honors from several societies abroad; among them, the Queen's gold medal of the Royal Institute of British Architects in 1893, and the cross of the Legion of Honor. He built residences and buildings in all the large Eastern cities; among them, the pedestal of the Statue of Liberty, New York Tribune Building, the United States Naval Observatory, and the Administration Building at the World's Columbian Exposition, Chicago, 1893. Mr. Hunt had his headquarters in New York. He died in Newport, Rhode Island, July 31, 1895.

HUNT, ROBERT, an English engineer; born at Devonport, England, 1807; was the keeper of mining records at the Museum of Practical Geology, and was the first appointed professor of mechanical science to the government school of mines; organized the Miners' Association of Cornwall and Devonshire, for the purpose of giving scientific education to practical miners. He is best known by his work on *Photography*, published in 1842; *Researches on Light*; *The Poetry of Science*; and *Panthea; or, The Spirit of Nature* (1849); *Elementary Physics* (1851); and *Manual of Photography* (7th ed. 1857); and was the editor of three editions of *Ure's Dictionary of Arts, Manufactures and Mines*. He died Oct. 17, 1887.

HUNT, THOMAS STERRY, an American chemist and geologist; born at Norwich, Connecticut, Sept. 5, 1826. He studied chemistry under Professor Benjamin Silliman at Yale College. In 1847 he entered upon the duties of geologist and mineralogist in the geological survey of Canada, under Sir William Logan. While holding this position he was for some years professor of chemistry in McGill College, Montreal. In 1872 he became professor of geology in the Massachusetts Institute of Technology. He served on the international jury of the world's fairs of 1855 and 1867 in Paris; was made fellow of the Royal Society (1859), and received the cross of the Legion of Honor (1867). Professor Hunt published many important papers on chemistry, mineralogy and geology, which appeared in

the *American Journal of Sciences* and in other scientific periodicals of both Europe and America. Among his publications are *Chemistry of the Earth* (1869); *Mineral Geology and Physiography* (1886); and *Coal and Iron in Southern Ohio* (1881). He died in New York, Feb. 12, 1892.

HUNT, WARD, an American jurist; born at Utica, New York, June 14, 1810; graduated at Union College in 1828; studied law in Litchfield, Connecticut, and practiced at Utica. He was a member of the New York legislature (1839) and mayor of his native city (1844); was elected to the bench of the New York court of appeals (1865); and was appointed associate justice of the United States supreme court (1872); but retired on a pension (1882). He died in Washington, District of Columbia, March 24, 1886.

HUNT, WILLIAM HENRY, an American lawyer; born in Charleston, South Carolina, in 1824; was educated at Yale, and practiced law in New Orleans. In March, 1876, he was appointed attorney-general of Louisiana, and in the fall of the same year was the Republican candidate for the same office. There was a dispute over the election, and the Hayes administration recognized the Democratic contestants. In 1878

WILLIAM HENRY HUNT.

Mr. Hunt was appointed judge of the court of claims, and in March, 1881, he became Secretary of the Navy in the Garfield Cabinet. This position he held until 1882, when he was appointed United States minister to Russia. He died in St. Petersburg, Feb. 27, 1884.

HUNT, WILLIAM HOLMAN, a British figure-painter, and chief of the Pre-Raphaelite School in England, was born in London in April, 1827. He received his art education in the schools of the Royal Academy, and in the year following his admission (1846), he exhibited his first picture, *Hark!*—the figure of a child holding a watch to his ear. A more ambitious picture was produced two years later, *The Flight of Madeline and Porphyro*, from Keats's *Eve of St. Agnes*. At this period, Hunt, in conjunction with Dante Gabriel Rossetti, Sir John E. Millais and other enthusiastic young painters, inaugurated the "Pre-Raphaelite Brotherhood"—a movement in British art, the aim of which was to secure greater truth to nature, and a more vivid and unconventional realization in the treatment of imaginative subjects. The first-fruits of this new departure, so far as Hunt is concerned, was his *Rienzi Vowing to Avenge the Death of His Brother* (1849). Another picture, painted after the same manner, was *The Hireling Shepherd* (1852), and about this time he exhibited two subjects from Shakespeare: *Valentine Rescuing Sylvia from Proteus*, from *The Two Gentlemen of Verona*, and the tragic prison-scene, *Claudio and Isabella*, from *Measure for*

Measurc. *Our English Coasts* (known also as *The Strayed Sheep*), a remarkably fine landscape, with skillful sunlight effects and a sense of distance and atmosphere, was also the product of this period. Holman Hunt now turned his attention to religious art, and in 1854 produced a sensation with his impressive symbolical picture, *The Light of the World*. This was followed by *The Awakened Conscience* (1855), and by *The Scapegoat* (1856). In 1854 Mr. Hunt paid a visit to Palestine with the purpose of studying Eastern life, and giving local color to a series of pictures he designed to paint, treating of incidents in Bible history. *The Scapegoat*, just mentioned, is said to have been painted by the Red Sea, close to one of its salt-incrusted shallows, during his sojourn in the East. But the noblest fruits of his visit to the Holy Land were soon to appear in his famous pictures, which attracted hundreds of thousands to see them, and are notable examples of transcendentalism in modern art. These are *The Finding of Christ in the Temple* (1854), of which a smaller replica was produced in 1860; *The Shadow of Death* (1874), a prevision of the crucifixion; *The Triumph of the Innocents* (1875-85); and his more recent work, upon which he spent years of labor and study in the East, *The Flight Into Egypt* (1890); also his *Miracle of the Sacred Fire* (1899). Some of Mr. Hunt's works were exhibited at the Philadelphia Exposition of 1876, and attracted much notice; and a considerable collection, including many of his English subjects, was exhibited in the Fine Arts Society rooms, London, in 1886. One of the finest of his English studies is *The Choristers of Magdalen College, Oxford, Singing the May Day Hymn* (1889). In portrait-work he has also achieved some distinction, as in his study of *Dante Gabriel Rossetti*. As an instance of his marvelous color-work and technique, his *Isabella and the Pot of Basil*, a subject from Keats, may be mentioned.

G. MERCER ADAM.

HUNT, WILLIAM MORRIS, an American painter; born at Brattleboro, Vermont, March 31, 1824. In 1846 he entered the Royal Academy at Düsseldorf, for the purpose of studying sculpture. But after a few months he removed to Paris to become a pupil of Couture, and later of Millet, in painting. Having returned to America in 1855, he opened studios both in Boston and Newport, settling finally in Boston, where he taught painting with great success. His influence in art was considerable, and in a good direction. Among his paintings are *The Drummer-Boy*; *The Bugle-Call*; *The Prodigal Son*; two allegorical mural paintings for the state capitol at Albany, *The Flight of Night* and *The Discoverer*; and his famous *Bathers*. Died at Isles of Shoals, N. H., Sept. 8, 1879.

HUNTER, COLIN, a British artist; born in Glasgow, July 16, 1841. He attended the schools of his own town, but studied art directly from nature. He turned his attention principally to sea and shore pieces and exhibited at the Royal Academy. Among his paintings are *Travelers Waiting for Darkness*; *Give Way*; *Digging Bait*; *The Salmon-Fishers*; *In the Gloaming*; *The*

Woman's Part; and *Fishers of the North*; all of which were exhibited at the Royal Academy, of which he was made associate member.
